Software Acquisition Improvement

- ◆ Executive Summary
- ◆ Current State
- ◆ Future State
- ◆ Recommendation

Enabling Software Acquisition Improvement Executive Summary

* Failures

YR 2000: 84% of programs are late and over budget, and deliveries include only 61% of planned capabilities*

YR 2004: 40% (\$8 Billion) of DoD RDT&E Budget was spent on reworking software due to quality issues**

YR 2009: DOD's 95 major defense acquisition programs have an average cost growth of 26% and an average schedule delay of almost 2 years***

Improvement Recommendations

1. Reconstitute the Navy's in-house applied sw development expertise and Leadership
2. Utilize government and industry software development Integrated Product Teams

CURRENT STATE CHALLENGES

- ◆ Designing and implementing truly Open Architected systems
 - standardized interfaces, scalable, reliable, portable, modular
- ◆ Assessing, successfully utilizing, and rapidly integrating the most advanced software technologies and methodologies:
 - Model Driven Architectures, Service Oriented Architectures (SOA), multi-core parallel processing, automated code generation, cloud computing, next generation programming languages, and agile development processes.
- ◆ Integrating the mix of legacy and modern SW and HW components
 - new Commercial-Off-The-Shelf (COTS) SW & HW components and DoD/Navy developed highly specialized and unique components
 - Achieving integrated net-centric systems composed of hundreds-of-millions (possibly billions) of lines of code that can execute as systems-of-systems and fully meet mission level objectives and Key Performance Parameters (KPPS).
- ◆ Achieving Information Assurance (IA) and protection against SW based Cyber-Attacks while maximizing COTS utilization and Net-Centric communications.
- ◆ Maintaining government corporate knowledge of the system architecture, design and technology utilization as the responsibility for system and software development transitions among different private industry organizations during the program life-cycle.

SW Acquisition Approach Current State

- ◆ **Software size, complexity, and reliance is continuing to grow within DoD/Navy critical systems**
- ◆ **DoD/Navy is failing to consistently successfully acquire software intensive systems**
 - YR 2000: 84% of programs are late and over budget, and deliveries include only 61% of planned capabilities*
 - YR 2004: 40% (\$8 Billion) of DoD RDT&E Budget was spent on reworking software due to quality issues**
 - YR 2009: DOD's 95 major defense acquisition programs have seen their costs grow by an average of 26% and experienced an average schedule delay of almost 2 years***
- ◆ **DOD/Navy is losing its in-house applied software engineering and development expertise**

Current System Acquisition Strategy Roles and Responsibilities

CURRENT STATE CHARACTERISTICS:

- **Government relies primarily on Industry for: System Requirements Definition, System and Software Architecture, System and Software Design and Development.**
- **Non-open systems.**
- **Proprietary system artifacts.**

Current State Typical Software Acquisition Strategy

DoD/ASN/RDA Policies Call for Gov't SMEs to Define System Req's, Support Milestone Reviews, and Validate the SW Artifacts Developed by Industry

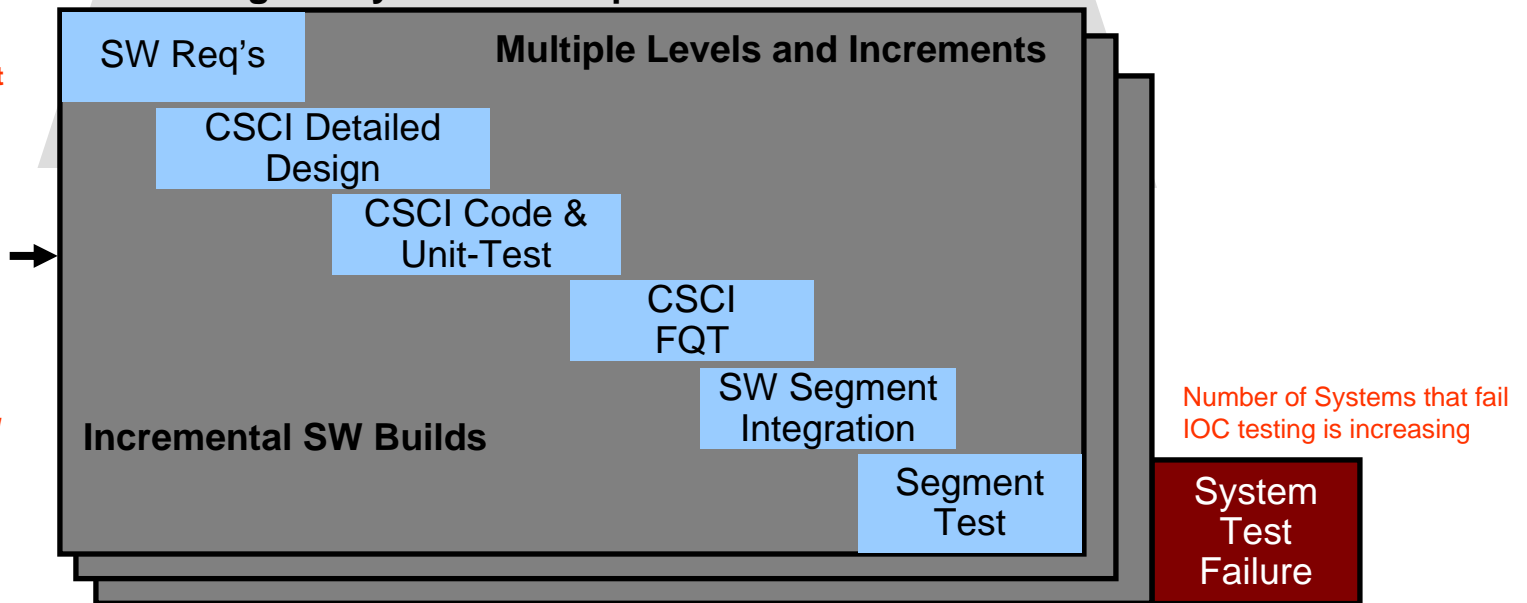

Software Development Activities Conducted Primarily During the System Development and Demo Phase

RISKS
Over-reliance on Industry for software Development

Gov't participation primarily via Milestone Reviews is not sufficient

Gov't sw engineer participation during sw development is minimal

Gov't is losing its applied software development expertise

*"The combination of personnel reductions and reduced RDT&E has seriously eroded the Department's domain knowledge and produced an over reliance on contractors to perform core in-house technical functions
-Department of the Navy Acquisition, D. Winter: SECNAV Memo Dated 10 Oct 08*

In-House Software Expertise Pipeline

"In order to acquire the DON platforms and weapons systems in a responsible manner, it is imperative the DoN maintain technical domain expertise at all levels of the acquisition infrastructure".

-Department of the Navy Acquisition, D. Winter: SECNAV Memo Dated 10 Oct 08

Future State Goal

Open Architecture based Product-Line Initiative

Current Platform Based Stove-Pipe Systems

Future Product-Line Systems

Objectives

- Transition from Stove-Pipes to Product Lines
- Reduce Cost
- Promote Competition & Innovation
- Deliver High Quality Reliable Systems

Architecture Characteristics:

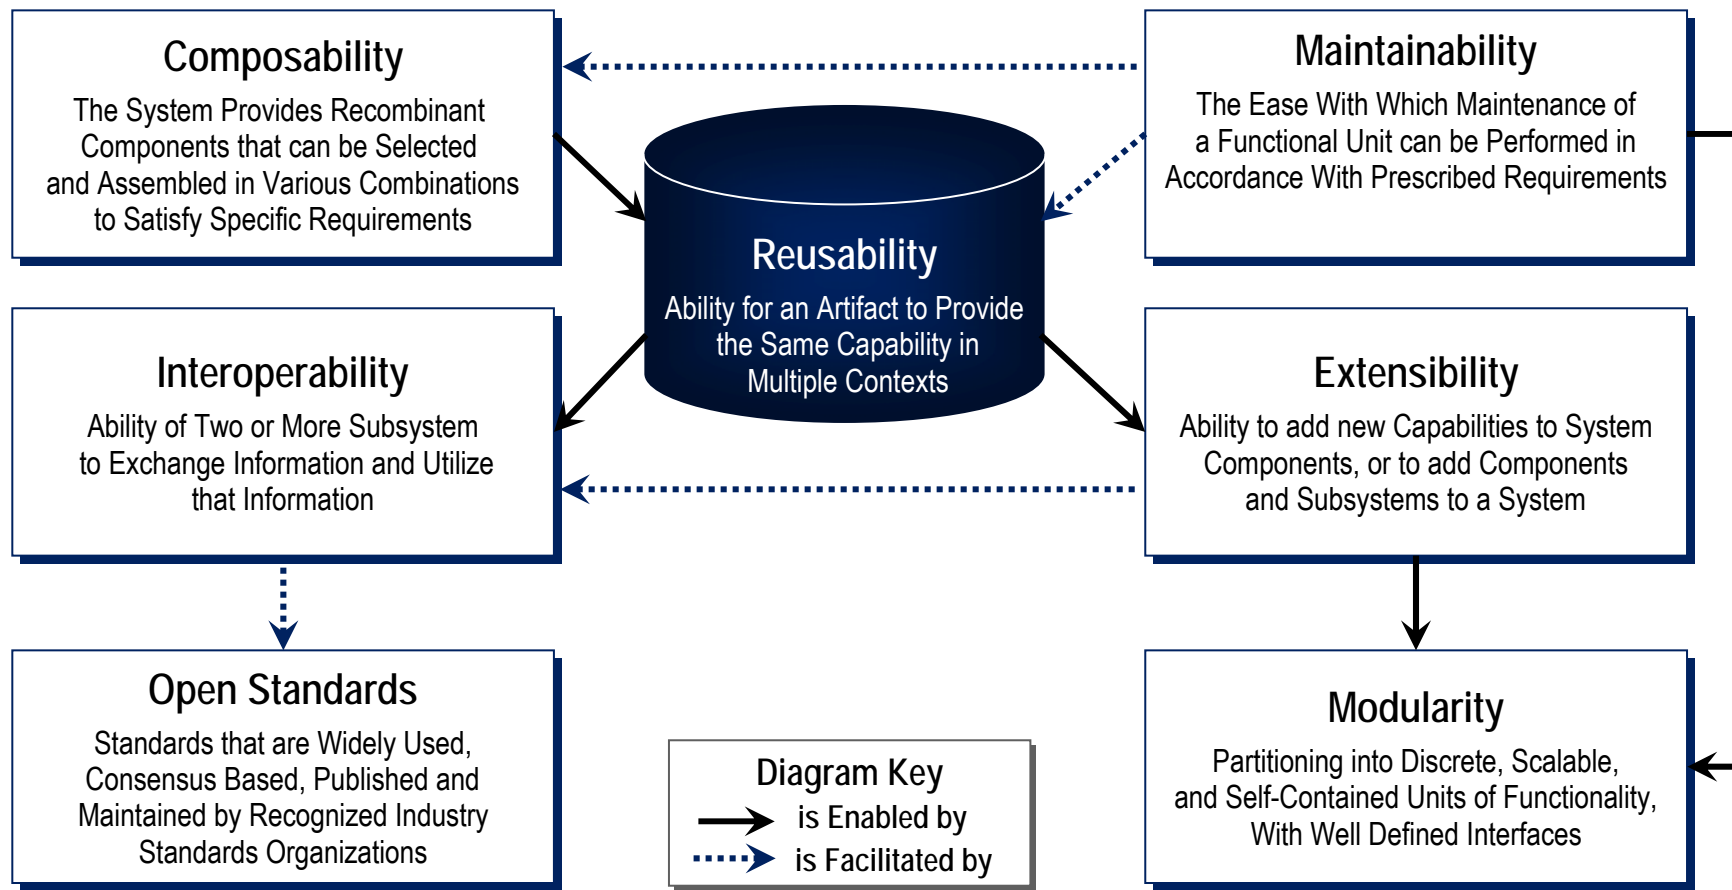

- ◆ Decouples Hardware from Software
- ◆ Utilizes Standards-based Interfaces to Network
- ◆ Componentizes Software Applications

Future State Challenge: Maintaining Corporate Knowledge of Objective Architecture

- ◆ How does the Navy maintain corporate knowledge and ownership of the Objective Architecture as the system evolves over time and is required to support numerous different platforms?

Future State Challenge: Open Architecture Software

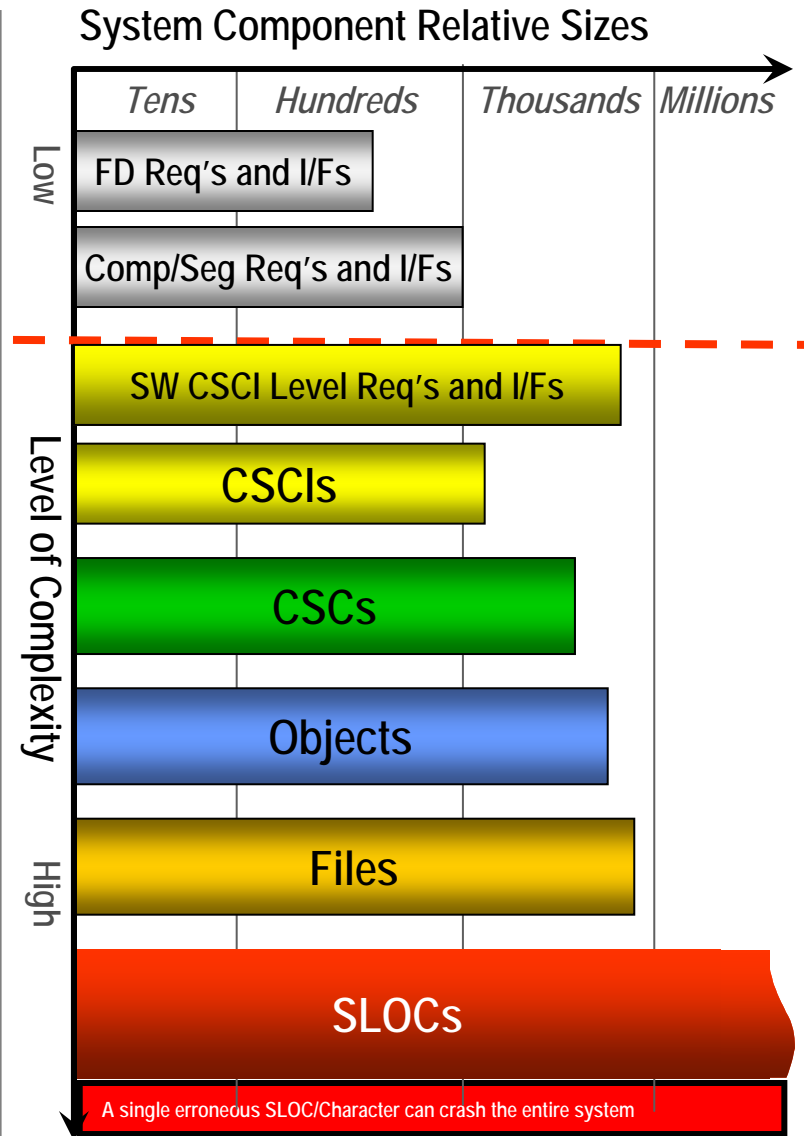

These OA "ILITIES" Cannot be Easily Verified by System Testing..... Government In-House SW Expertise Insight Into Design and Code is Required to Ensure Reusable Software

Designing and Coding for These "ILITIES" is the Key to Saving Significant \$\$\$\$\$\$\$

* Reference: OA Architectural Principles and Guidelines v 1.5.6, 2008, IBM, Eric M. Nelson, Acquisition Community Website (ACC) DAU Navy OA Website

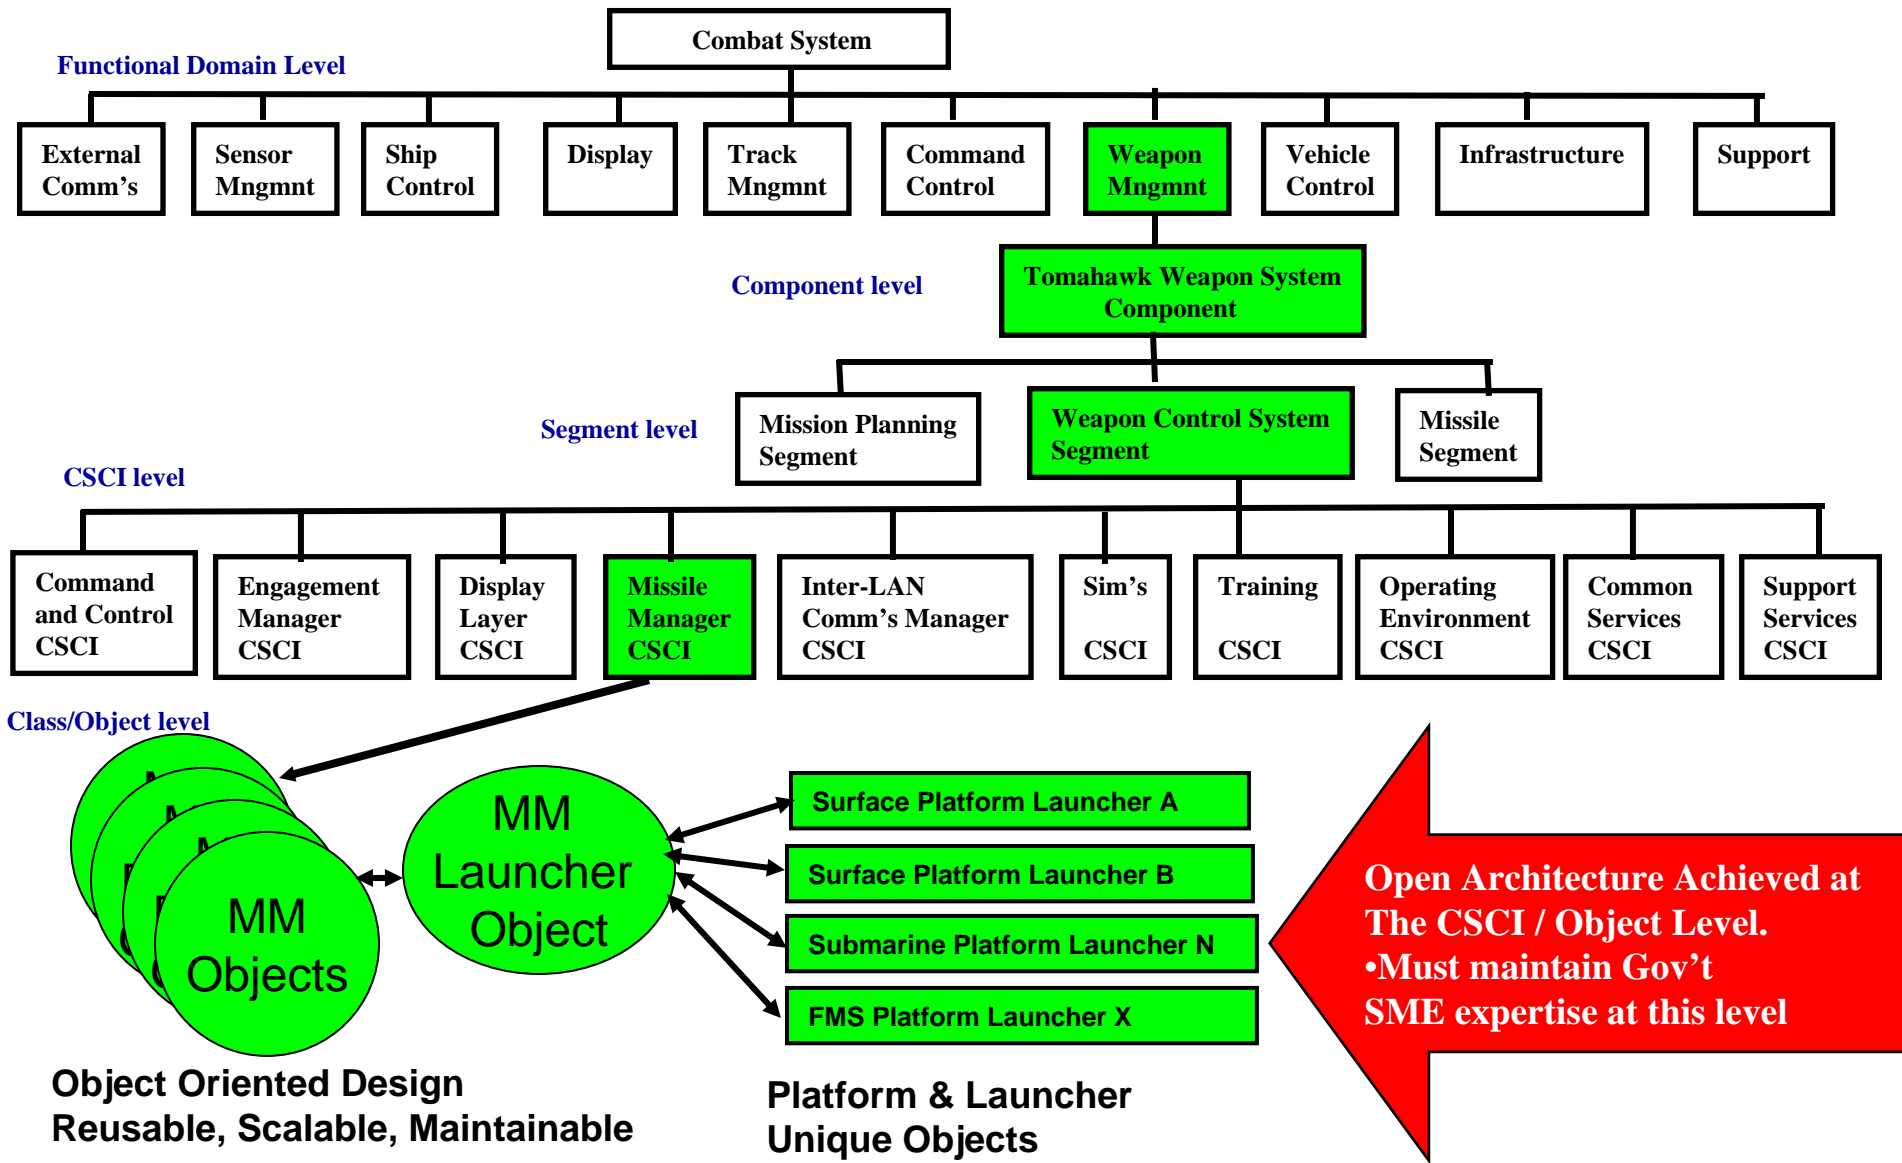

Future State Challenge: Components Size and Complexity

Devil is in the Details

OA Success Example

Open Architecture Achieved at the CSCI and Class Level

Alternative System Acquisition: Integrated Team Roles and Responsibilities

REQUIREMENTS	SYSTEM DEVELOPMENT	INTEGRATION / TEST
<p>Majority of Tech Work done by the Gov't</p> <ul style="list-style-type: none"> Gov't Leads AOAs / Industry may support. Gov't Leads Prototyping / Industry may support. Gov't Defines System Requirements Gov't Defines System/SW Architectures. Gov't Defines Interfaces (I/F). Gov't Determines what system components will be developed by Industry and In-house SMEs. 	<p>Majority of Technical work done by Industry</p> <ul style="list-style-type: none"> Gov't controls and manages Architectures and I/Fs Gov't leads sw design and development. Industry develops a majority of the sw components. Gov't develops a small subset of the critical sw. 	<p>Majority of Tech work by Gov't</p> <ul style="list-style-type: none"> Gov't leads System Integration Gov't leads System Test and cert Gov't and Industry fix SW Defects Gov't controls the Common Asset Library where final System Products are stored Gov't maintains the SW

Integrated Gov't and Industry Development Teams Accountability

- ◆ Well defined and documented roles and responsibilities
- ◆ Common set of well documented cost, schedule, and performance expectations
 - Cost and schedule Variance (CPI/SPI) Thresholds and Goals
 - Quantified Key Performance Parameters and Software Quality goals
- ◆ Common set of well documented system development processes and metrics
 - Business Processes and Technical Processes
- ◆ Integrated Master Schedule (IMS) with well defined and agreed to interdependency products and associated delivery dates
- ◆ Proactive and attentive integrated team management of cost, schedule and technical performance
 - Frequent regular periodic team communication and risk assessment / management
- ◆ Gov't test team is independent from government sw development team
 - Separate management chains
 - Test team has direct line of reporting to the Program Office
- ◆ Utilization of Milestone Reviews with Independent Competency Experts

Recommendations Summary

- ❖ Reconstitute the government in-house Software Expertise Pipe-line
- ❖ Work with Navy senior leaders to define the vision, roles and responsibilities of in-house software development organizations
- ❖ Develop and execute the transition plan(s) to accomplish the vision

Develop and maintain in-house technical experts who can lead and participate within integrated government and industry software development teams that utilize best-practice based technical and business processes to provide high quality and reliable War-fighter systems that fully meet cost, schedule, and technical performance requirements

Back-Up

- ◆ References
- ◆ Open Architecture Characteristics
- ◆ Current Typical SW Acquisition Strategy
- ◆ Devil is in the Details (System Decomposition)

System Acquisition / Development Key Elements for Success

3 Key Execution Elements

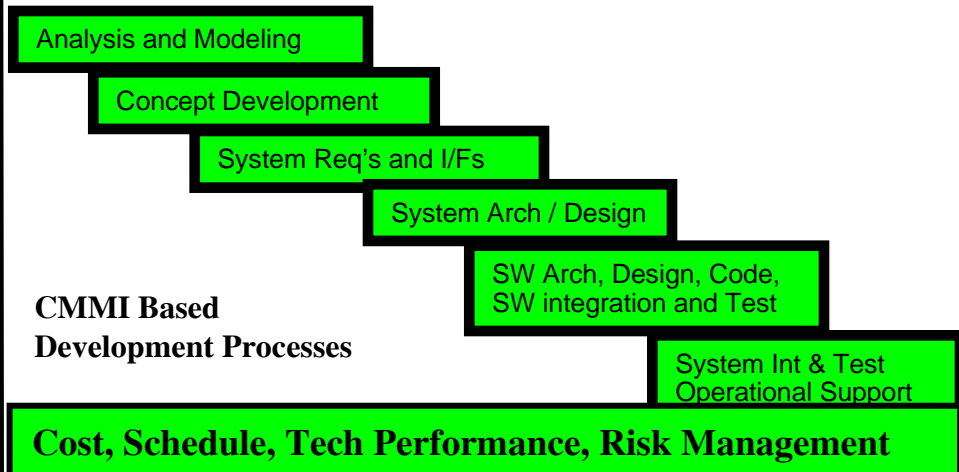

Government In-House Expertise Pipeline

Metrics Based Business Processes

Integrated Gov't and Industry Development Team

Future State Gov't and Industry SW Development

Gov't develops a small subset of the sw components to invest in the gov't acquisition workforce at no additional cost to the programs

Gov't contracts out modular components to promote competition between large and small industry partners

Common, Reusable, Scalable, Modular

**Government in-house engineers will develop (architect, design, code, test) a subset of the software
Industry software engineers will still develop a majority of the software components**
