CHARTER
BOARD OF ADVISORS TO THE PRESIDENT, NAVAL POSTGRADUATE SCHOOL

A. Official Designation: The Committee shall be known as the Board of Advisors to the President, Naval Postgraduate School (hereafter referred to as the Board).

B. Objectives and Scope of Activities: The Board, under the provisions of the Federal Advisory Committee Act of 1972 (5 U.S.C., Appendix, as amended), shall provide the Secretary of Defense, through the Secretary of the Navy and the President, Naval Postgraduate School, independent advice and recommendations on organization management, curricula, methods of instruction, facilities and other matters of interest to Naval Graduate Education Programs. The Secretary of the Navy or designated representative may act upon the Board's advice and recommendations.

C. Board Membership: The Board shall be composed of not more than nineteen members, who are eminent authorities in the field of academia, business, and the defense industry.

Board Members appointed by the Secretary of Defense, who are not full-time federal officers or employees, shall serve as Special Government Employees under the authority of 5 U.S.C. § 3109. Board Members shall be appointed on an annual basis by the Secretary of Defense, and shall serve terms of four years. Following their initial four-year tour Board Members may, at the discretion of the President, Naval Postgraduate School, be nominated for additional terms on the Board. The Board Membership shall select the Board's Chairperson and the Board Chairperson shall select the Board's Vice-Chairperson. The Board Chairperson, if reappointed, shall serve no more than two years as the Board Chairperson. Board Members shall, with the exception of travel and per diem for official travel, serve without compensation.

D. Board Meetings: The Board shall meet at the call of the Designated Federal Officer, in consultation with the Chairperson and the President Naval Postgraduate School. The estimated number of Board meetings is two per year.

The Designated Federal Officer shall be a full-time or permanent part-time DoD employee, and shall be appointed in accordance with established DoD policies and procedures. In addition, the Designated Federal Officer shall attend all Board and subcommittee meetings.

The Board shall be authorized to establish subcommittees, as necessary and consistent with its mission, and these subcommittees or working groups shall operate under the provisions of the Federal Advisory Committee Act of 1972, the Government in the Sunshine Act of 1976 (5 U.S.C. § 552b, as amended), and other appropriate federal regulations.

Such subcommittees or workgroups shall not work independently of the chartered Board, and shall report all their recommendations and advice to the Board for full deliberation and discussion. Subcommittees or workgroups have no authority to make decisions on behalf of the chartered Board nor can they report directly to the Department of Defense or any federal officers or employees who are not Board Members

E. Duration of the Board: The need for this advisory function is on a continuing basis; however, it is subject to renewal every two years.

F. Agency Support: The Department of Defense, through the Secretary of the Navy and the President, Naval Postgraduate School, shall provide support as deemed necessary for the performance of the Board's functions, and shall ensure compliance with the requirements of 5 U.S.C., Appendix, as amended.

G. Termination Date: The Board shall terminate upon completion of its mission or two years from the date of this Charter is filed, whichever is sooner, unless the Secretary of Defense extends it.

H. Operating Costs: It is estimated that the annual operating costs, to include travel costs and contract support, for this Board is $61,000.00. The estimated annual personnel costs to the Department of Defense are 0.5 full-time equivalents (FTEs).

I. Recordkeeping: The records of the Panel and its subcommittees shall be handled according to section 2, General Records Schedule 26 and appropriate DoD policies and procedures. These records shall be available for public inspection and copying, subject to the Freedom of Information Act of 1966 (5 U.S.C. § 552, as amended)

J. Charter Filed: February 29, 2008

DEPARTMENT OF THE NAVY
OFFICE OF THE SECRETARY
1000 NAVY PENTAGON
WASHINGTON, DC 20350-1000

SECNAVINST 5420.190A
NAVPGSCOL
9 May 2001

SECNAV INSTRUCTION 5420.190A

From: Secretary of the Navy

Subj: THE BOARD OF ADVISORS TO THE SUPERINTENDENT, NAVAL POSTGRADUATE SCHOOL

Ref: (a) The Federal Advisory Committee Act, Public Law 92-463 (1972)
(b) 41 C.F.R. 101-6.10
(c) SECNAVINST 5420.60H

1. Purpose. To reissue the operating procedures of the Board of Advisors to the Superintendent, Naval Postgraduate School (BOANPS) as a Secretary of the Navy Federal Advisory Committee. This instruction is a substantial revision and should be reviewed in its entirety.

2. Cancellation. SECNAVINST 5420.190.

3. Scope. The function of the BOANPS is solely advisory in nature. It is not empowered to make policy or management decisions. Reports and recommendations of the BOANPS shall be submitted to the Secretary of the Navy via the Superintendent, Naval Postgraduate School (NAVPGSCOL) and the Chief of Naval Operations for approval.

4. Mission. The Board advises the Superintendent, NAVPGSCOL, the Chief of Naval Operations, and the Secretary of the Navy on NAVPGSCOL graduate education programs by assessing the curricula, instruction, physical equipment, administration, state of morale of the student body, faculty and staff, fiscal affairs, and other program matters. The objective of the Board is to provide an avenue of communication by which a distinguished group representing a broad range of perspectives from individuals in academia, private industry, the national media, politics, and former military members may advise the Superintendent of the Naval Postgraduate School and the Secretary of the Navy on Department of the Navy (DON) graduate education programs. The varied backgrounds of the Board members provide a level of insight and experience, a degree of detachment, and a civilian sense of responsibility to the Secretary of the Navy that could not be achieved internally. The Board assesses the effectiveness

of the School in accomplishing its mission by regularly convening on a formal basis.

5. Membership. The BOANPS consists of 13 non-Federal government members to include a retired Marine Corps General Officer. Members are nominated and appointed according to DON committee management guidelines in references (a), (b), and (c). The members will be appointed by the Secretary of the Navy with concurrence by the Office of the Secretary of Defense, for a period not to exceed 4 years. Terms will be staggered to provide for rotation of members while maintaining adequate continuity of membership. Board members normally serve for no more than 4 years unless the Secretary reappoints them for an additional period of service. The Chief of Naval Research; the Director, Naval Training and Education Division (N79) from the Office of the Chief of Naval Operations staff; and the President, National Defense University will serve as additional standing members to this committee.

6. Chairperson. The Chairperson of the BOANPS will be selected from the BOANPS membership by a vote of the members. The Chairperson will select a Vice Chairperson. In the absence or unavailability of the Chairperson, the Vice Chairperson will act in his or her behalf.

7. Sponsor. The sponsor of the BOANPS is the Secretary of the Navy.

8. Designated Federal Officer. The Superintendent of the Naval Postgraduate School is the Designated Federal Officer (DFO) responsible for BOANPS oversight and shall provide the necessary financial and administrative support for the effective operation of the BOANPS.

9. Meetings. The BOANPS will normally conduct unclassified, semi-annual meetings open to the public at such times as specified by the DFO in coordination with the BOANPS Chairperson. A simple majority shall constitute a quorum for conduct of business of the committee. In pursuing its objectives, the BOANPS may operate in panels or subcommittees composed of selected members to conduct detailed examinations of matters related to DON graduate education programs.

10. Action. The Superintendent, Naval Postgraduate School will provide information and access to facilities and staff support as required for the accomplishment of the Board's work.

11. Reports. The reports of the BOANPS are exempt from report control by SECNAVINST 5214.2B.

WASC

December 20, 2006

Colonel David A. Smarsh
Acting President
Naval Postgraduate School
One University Circle
Hermann Hall, Mezzanine Room
Monterey, CA 93943-5002

Dear Colonel Smarsh:

At its December 12, 2006 meeting, a panel of the Proposal Review Committee considered the Naval Postgraduate School Institutional Proposal submitted in preparation for its next reaffirmation of accreditation review. The panel appreciates making yourself available by conference call and appreciated the opportunity to discuss the proposal with your colleagues, including Julie Filizetti, Association Provost for Academic Affairs, ALO; Christine Cermak, Executive Director, Information Resources and CIO; Fran Horvath, Director of Institutional Research; Rob Dell, Associate Professor of Operations Research; and Leonard Ferrari, Provost. As you know, your proposal has been approved.

The panel found the proposal responsive to WASC standards and reflective of the NPS's SWOT analysis, strengths, weaknesses, opportunities and future challenges in the creation of the master plan. While the panel viewed the written proposal as clear and precise, the depth of the School's deliberation and thoughtfulness was not truly evident until the conference call. Any questions that the panel had were more than adequately covered during the call, prompting the panel to suggest that in preparation for the reviews themselves, that NPS give attention to including the level of detail communicated in the conference call. It brought to light the depth of careful consideration and strategic planning that underlies the future direction of the institution.

The timeline for review will remain with the Capacity and Preparatory Review conducted in spring 2009 and the Educational Effectiveness Review in fall 2010 (specific dates are yet to be determined). The proposal now becomes the framework for the accreditation review process and represents a plan of action and commitment by the institution. The proposal will be shared with the visiting teams for both the Capacity and Preparatory Review and the

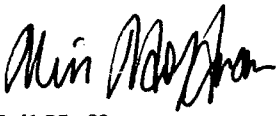
Educational Effectiveness Review, and with the Commission following each Review. It is understood that adjustments in the activities undertaken under the proposal will be made as implementation occurs. Major changes to the proposal, such as in the direction or focus of institutional activities for the accreditation review process, are to be approved in advance by Commission staff.

Please accept my congratulations on behalf of the Proposal Review Committee. Let me know if I can be of assistance as you implement your proposal and prepare for your Capacity and Preparatory Review.

Sincerely,



Neil Hoffman
Associate Director

Ralph A. Wolff

I have appointed a Steering Committee for the WASC re-accreditation process. The Steering Committee will serve from now until the accreditation review is completed following the WASC visit in Fall 2010. This committee will be guiding all the WASC efforts including examining data, drafting documents and working with WASC officials. The committee members act as representatives from each of their areas. Campus members are urged to contact their representative with any comments or questions regarding the WASC process at any point. Thanks for your cooperation.

Steering Committee Members:

Julie Filizetti, Co-Chair
Rob Dell, Co-Chair

2007 Learning Assessment Task Force Charter

The 2007 Learning Assessment Task Force will directly address theme two, integrating a campus-wide program of continuous improvement, from the recently accepted NPS Institutional Proposal for WASC (Western Association of Schools and Colleges) Accreditation. The proposal is available on the NPS intranet, http://intranet.nps.edu/WASC/docs/WASC_Final_Proposal.pdf and theme two is provided as an attachment.

The task force will form in February 2007 and finish by September 2007 (before the start of the 2008 fiscal year).

The task force will:

1. Participate in the NPS Office of Continuous Learning workshop on "Outcomes Based Faculty Development" as described in the attachment.
2. Catalog assessments conducted by each department. Task Force can use Appendix F of the Institutional Proposal as a starting point but should collect additional information.
3. Identify best assessment practices across departments.
4. Recommend a baseline set of assessments that should be required for each department.
5. Recommend how thesis quality should be addressed.
6. Recommend how frequently similar learning assessment reviews should be conducted and a long-term strategy for their implementation.

Dave Olwell, Chair of the Systems Engineering Department will chair the Task Force. The Task Force will report their findings to the WASC Steering Committee.

NPS INSTITTUTIONAL PROPOSAL

THEME TWO: Integrating a campus-wide program of continuous improvement

NPS has a number of mechanisms for assessing the effectiveness of its academic programs and support activities. It is not clear, however, that their use is as effective as it might be, in order to continuously improve the curricula and research programs. NPS curriculum reviews provide insight into how well the needs of sponsors and students are met. The educational outcomes are refined and validated during these reviews. Academic program reviews validate NPS academic quality. Surveys of students, faculty, alumni, and staff provide valuable information about educational quality and support services. And, faculty members use a variety of methods to assess student learning and achievement of educational outcomes. Nearly every student completes a thesis, or major project, as a culminating experience in his or her degree program. NPS is also expanding the faculty development program to address more effectively the issues of student learning, assessment, and innovation in teaching.

NPS programs are also accredited by AACSB, NASPAA and ABET. Departments and faculty members have developed ways to assess effectiveness in support of these other accreditation self-studies, or in ways to improve their own individual performance. As NPS moved into distributed learning, there have been improvements in the way faculty teach and enable learning in their classrooms, both on campus and in a distributed learning environment. However, currently there is no systematic way of identifying, validating, and sharing good practices. The feedback loop is not documented as effectively as it should. When those experiences are identified and collected, NPS will be far more effective as an institution.

In considering this theme, NPS will address the following questions:

- How are assessments used as a measure of NPS' effectiveness as an institution?
- How well does the faculty development program prepare faculty for the current and future learning environment?
- What isn't known about educational effectiveness and how might it be measured?
- How does NPS better integrate the curriculum and academic program reviews in a way that enhances both relevance and academic excellence?
- Is NPS prepared for the future in terms of students, technology, and innovations in learning?

NPS anticipates the following outcomes from this inquiry:

- The development of a more robust system of assessments and feedback to provide a more complete picture of effectiveness and an integrated framework for aligning resources to improve quality.
- A Faculty Development program that enables faculty to tap into the full system of assessments and understand how to improve student learning.
- Enhancements to current assessment tools and development of new assessment mechanisms.

The Millennial Learner Series
An Outcomes Based Faculty Development Project (WASC)

March –July 2007

Overview: The Millennial Learner Series will examine best practices and relevant educational benchmarks for excellence within the context of the unique attributes and expectations of the millennial learner. Discussions and practical exercises will highlight the changing roles of the teacher and learner; the use of technology to enable learning; standards for course design and expanded access and interaction with course content; and multiple measures that assess learning. Participants will disseminate information and enlist the support of colleagues to apply it to specific tasks that are aligned with the WASC accreditation process.

Learner Outcomes: Faculty Participants will:

- Examine current practices, WASC criteria, and student exit survey data to answer questions such as:
  - How do we define quality?
  - How does the term "intentional" apply to teaching, learning, and assessment?
  - How do you know your students are learning?
- Identify the ways in which WASC standards provide a framework for planning and implementing the educational mission of NPS and the Navy Education Strategic Plan.
- Develop common language and acceptance of a continuous improvement model to quantify and evaluate best practices for teaching, learning, and assessment.
- Identify observable attributes and develop definitions and measures that document quality learning, instruction, and assessment.
- Collect benchmark information from NPS schools about the type, frequency, and use of information obtained from program assessments.
- Recommend common standards for instructional best practices, student expectations, and assessments.

Participant Requirements: The members of the WASC 2007 Learning Assessment Task Force and representative faculty from each school/department will constitute a core team for this project. The core team members will participate in all four sessions and will be responsible for the completion of exercises planned for each session. This project will require an 8-10 hour time commitment over a period of five months General faculty members are also welcome to participate in individual seminars or the series.

Dates: Seminars will be conducted on Tuesday afternoons 1500-1630.

March 6, 2007	Session 1	Common Language
April 10, 2007	Session 2	Demonstrating Quality
May 8, 2007	Session 3	Learner Centered Course Development and Expectations
July 10, 2007	Session 4	Building Competencies of the Millennial Learner: Critical Thinking across the Curriculum

Deliverables:

1. Common descriptors & definitions that define quality with respect to best practices, teaching, learning, and assessment.
2. Rubrics to: measure quality; define common learner expectations; and to recommend minimum standards to measure thesis quality.
3. Information about current assessment practices used at NPS:

- Current list & process (departments/schools) of what is assessed and how the information is used.
- Standards for course review, refresh, and updating with advance distributed learning options.

Report of the Learning Assessment Task Force
2/19/2008
Background

The learning assessment task force (LATF) was chartered in March 2007 (Enclosure 1). Members were Dave Olwell, GSEAS, Chair; Brent Olde, GSOIS; James Suchan, GSBPP; and Anne Clunan, SIGS.

Report of the Learning Assessment Task Force
2/19/2008

Background

The learning assessment task force (LATF) was chartered in March 2007 (Enclosure 1). Members were Dave Olwell, GSEAS, Chair; Brent Olde, GSOIS; James Suchan, GSBPP; and Anne Clunan, SIGS.

The LATF met intermittently until September 2007. The results were briefed to the WASC steering group in October 2007.

The WASC steering group has requested a written summary. This report provides that summary.

Scope

The LATF focused on four study questions.

> "How do we know we are teaching the right material?"
> "How do we know we are teaching it well?"
> "How do we know our students are learning it?"
> "Are our feedback mechanisms adequate and do they work?"

Summary of findings

We found that the NPS biannual curricular review process in general was an excellent process for assuring that NPS was teaching the appropriate material to its students.

We found that there was a wide spread in practices that assessed teaching effectiveness at NPS, and that pockets of excellence could serve as exemplars for the rest of campus. In particular, we found that reliance solely on student opinion reports (SOFs) to assess faculty teaching effectiveness was a poor practice. NPS has not adopted earlier committee recommendations to improve the assessment of teaching effectiveness.

We found that there were several excellent practices in selected departments for the assessment of student learning. In particular, we single out ME and ECE for their thesis review and assessment process. We also found that the curricular review process gave insights into longitudinal student retention of material.

Finally, we found that those departments that were subject to external review, such as ABET or AACSB, had better feedback processes than those that did not. The emphasis on outcomes assessment of the various accrediting bodies was a useful prod to assure a formal feedback process.

The NPS curricular review process: teaching the right material

NPS publishes an instruction (1550.1D) on curricular reviews. Curricular reviews are to be conducted biannually. The reviews are conducted by the Navy official with oversight for a given curriculum, called the sponsor.

NPS is the Navy's corporate university. As such, it does not compete on the open market for students. Naval Officers are assigned to duty at the NPS to study a given curriculum. They are then (nominally) assigned to a billet upon graduation that uses the education they have received.

Billets with advanced education requirements (ESRs) are designated with 'P-codes'. Associated with each P-code is a set of educational skill requirements laying out the required competencies for that position. The ESRs are almost always a superset of the degree requirements. ESRs are set by the curriculum sponsor, who is also responsible for assuring that the correct billets have the associated P-code.

The ESRs are subject to careful scrutiny and revision if necessary at the biannual reviews. The NPS instruction specifically requires that the existing ESRs be validated against both Navy and joint needs, that new ESRs be proposed as necessary, and that the execution of the curriculum be assessed to see if it "supports customer needs."

Thus there is an excellent feedback loop provided by the Navy. The sponsor represents the commands that gain our graduates, and provides biannual feedback on their preparation for service.

After each curricular review, the NPS President and sponsoring flag officer receive a summary brief from the review team. Final decisions are rendered on any issues raised during the review. The results are summarized in letter form that includes a general overview, list of attendees, summary of action items, and restatement of ESRs. The action items are assigned to a responsible party with a due date. This provides a means for the Director of Programs to assure that the decisions are implemented.

There are two weaknesses with the current system. First, the curriculum sponsors tend to be graduates of the curriculum they oversee, and there is a certain amount of intellectual inbreeding that can result. Second, not all curricula receive the biannual curricular reviews, especially those that are sponsored by a non-Navy agency. In particular, while most of the Navy-sponsored, resident curricula are current in their curricular reviews, many of the DL and non-Navy sponsored curricula are delinquent. Some do not have sponsors and some have never been reviewed.

Assessment of Teaching Effectiveness

The primary tool used for the assessment of instructional effectiveness at NPS is the student opinion report (SOF). This report provides each student an opportunity to numerically rate each course against 16 attributes, and to also make comments. Numerical summaries are

provided to the academic chain of command while comments are returned only to the instructor.

As with any feedback system based on student opinion, there are issues with the SOF. They have been previously examined by faculty committees (see most recent report from August 2003, Prof. M. Fargues, chair, and an educational assessment committee chaired in April 2003 by Prof. C. Eoyang.) Issues of correlation with grades, rigor, non-resident status, and class hours have been raised as confounding issues that dilute the reliability of the SOF as an instrument. Nonetheless, they provide a consistent longitudinal framework for comparisons of faculty against other faculty, courses against other courses, resident against non-resident delivery means, and departments against other departments. They are the only formal institutional mechanism for assessing teaching effectiveness, and are used heavily in pay, promotion, and tenure deliberations.

The 2003 Fargues report recommended a balanced portfolio of teaching assessment tools, including student exit interviews, peer review, and alumni questionnaires. The committee also recommended the development of a teaching fellow program, to provide a pool of mentors to faculty in need of coaching. These recommendations were not uniformly adopted across campus, although pockets of excellence exist on campus.

The committee found several instances of departments supplementing the SOFs with other means to assess instructional effectiveness. These means included chair classroom visits, student sensing through formal and informal means, the use of peer review through a 'teaching buddy' program, and monitoring by course coordinators.

A few departments have regular programs of chair classroom visits. In these, the chair requests an invitation to observe a class, observes it at an agreed time, and then provides formal written feedback to the instructor. This is a best practice for several reasons. First, it signals that quality of instruction is a priority for the department. Second, the observation checklist provides a set of rubrics for faculty to consider when they conduct self-assessment. Third, it provides an independent context to balance the student opinion forms. Last, by preserving a written record, the visits can be used for faculty evaluation or to provide additional perspective in a promotion or tenure case.

An example chair observation sheet is attached at annex A.

Department evaluation committees also do teaching evaluations at P&T milestones. Those evaluations also include classroom visits.

Many departments have formal and informal student sensing mechanisms. These range from student interviews each quarter, to student interviews upon graduation, to monitoring of issues raised to education technicians, to simply asking students 'how it is going' daily upon encounters. These are recorded in a variety of means and with a varying consistency. To be effective as feedback systems, the student input must be captured, recorded, and the resulting action identified. At least one department keeps a working spreadsheet of student identified issues and their resolution.

The Fargues report specifically mentioned peer review. One department has implemented a teaching buddy program. This program requires two faculty members to partner for a quarter. They agree to review each other's syllabi and final examinations, and to observe at least one class taught by their buddy. The observations are shared only in the buddy team; they report to the chair only that they have complied with the program.

Course coordinators have an important role to determine that the content specified for the course is actually delivered. They do so by monitoring of course journals, required by the Faculty Handbook, and by discussions with instructors teaching the course. We found that the submission, archival, and analysis of course journals is not consistent across campus; this is an opportunity for improvement.

The advent of DL offers another, underutilized, opportunity for the assessment of teaching effectiveness. Courses delivered by video-tele-education and by Elluminate© are web archived and can be reviewed by teaching buddies or administrators. This offers another less intrusive means to observe classroom performance. Departments that review these archived sessions and provide feedback to instructors demonstrate another best practice.

We find that the Fargues report has not been adopted uniformly across campus.

The Eoyang committee report in April 2003 formally recommended that NPS "develop a university-wide framework for educational outcomes assessment and improvement." We do not find evidence that this has occurred.

In conclusion, this area retains strong potential for improvement.

Assessment of Student Learning

The assessment of student learning occurs repeatedly during courses. It also occurs at the end of degree work with the assessment of a student's thesis, and in the case of doctoral students, qualifying examinations.

There are techniques for using common assessment items longitudinally across course offering, and tracking student performance on those items to measure longitudinal changes in student learning. We did not find any evidence of a systemic use of these techniques on campus.

Course journals, which include student performance statistics and copies of examination and other assessment instruments, offer a rich lode for data-mining to assess student learning and its changes over time, if any. Again, we did not find any systemic use of course journals in this fashion.

The GSBPP is shifting, under the impetus of the AACSB, to an "Assessment of Learning" paradigm for student evaluation. Their approach is presented in Appendix B. The key point is that GSBPP is in the process of shifting from indirect measures of student learning, such as course grades, to direct measures, such as "performance on exams, exams for certification and

licensure, projects, student portfolios, case studies." Once implemented, this may be a best practice.

Other schools at NPS also assess student learning in courses. But there is no evidence of formal longitudinal or systematic assessment leading to feedback that drives change in course delivery.

MAE and ECE conduct exemplary thesis reviews and do have a formal program to capture observations and channel them back into the classroom. In ECE, each student's thesis research is independently assessed for accreditation purposes on the basis of five attributes:

(1) Originality,
(2) Technical merit,
(3) Defense relevance,
(4) Quality of thesis presentation and
(5) Quality of written thesis.

Written records are kept for ABET evaluation purposes. ECE uses these records as part of its biannual curriculum review process, and considers them quarterly.

The curricular review process mentioned earlier also provides a coarse longitudinal feedback. Curriculum sponsors are asked if graduates are well prepared for their duties, and one dimension of that is how well they have learned the material.

Doctoral programs have unique opportunities for assessment of student learning, as they have both written and oral comprehensive examinations. We found no evidence of a formal systemic mining of the history of those examinations for opportunities for improvement of student learning, although we believe that informal feedback does occur. This has strong potential for improvement.

Again, we find departments subject to external accreditation of their programs have more formal and effective processes in place.

Feedback Mechanisms

We attach at appendix C the schematic for the ECE feedback processes. Driven by ABET, these processes formally take the outcome assessments and incorporate them into revisions of content and delivery in the curriculum. The departments subject to external review (MAE, ECE, GSBPP) have more formal and effective feedback processes in place.

Other departments rely on the curricular review process as their impetus to incorporate feedback into revisions.

The assessments of content coverage, teaching, and learning that do occur on campus are useless without feedback systems that use the assessments to drive change. This applies at the department, graduate school, and institutional level.

Closing comments

NPS has reviewed assessment several times over the past decade. Both the Fargues and Eoyang committees recommended changes to improve NPS practice, yet neither set of recommendations appears to have been adopted. We have resisted the adoption of outcomes assessment as a routine way of doing business at NPS.

The professional societies have driven selected departments towards outcomes assessment by the threat of withholding accreditation of programs. This has resulted in good programs in ECE, MAE, and GSBPP, as well as departments such as SE that contemplate accreditation. The other departments have not felt such an impetus.

If NPS wishes to standardize across campus, it could select either the ABET or the AACSB standards and require the other departments to adhere to them. Or it could develop standards on its own, and promulgate them.

It appears evident that without the adoption of school wide standards and enforcement/incentives, as recommended by both of the 2003 committees, that uniformity will not be achieved.

Recommendations

We recommend that the following practices be adopted across campus.

1. Some form of annual peer review of teaching effectiveness be required of each department.
2. Chairs should visit at least one class per faculty member per year, and provide formal feedback. More frequent visits should be encouraged.
3. Each department should do an independent thesis evaluation of each thesis or capstone project and provide the results to the course coordinators and chair.
4. Chairs should assure that course journals are completed and used for assessment.
5. Chairs should maintain records that show rates of completion of peer reviews, class visits, theses evaluations, and course journals. Deans should require these rates be discussed in the chairs annual faculty appraisal.
6. Chairs should assure that these records are made available as feedback to curriculum and course committees.

WASC Report
GSBPP

The Graduate School of Business and Public Policy is slowly transitioning from a school that has focused its instructional energies on what we should teach to a school that's beginning to think systematically about how students learn, the best environment (residential and distance learning) under which students learn, and methods of measuring student learning. What's partially spurring this process is the American Association of Collegiate Schools of Business (AACSB) Assurance of Learning Standards (AOL) that have become integral to their accreditation process.

Currently, GSBPP is undergoing the NASPA accreditation process. Unlike AACSB, NASPA does not demand the same assurance of learning rigor as AACSB. In fact, the NASPA assessment standard states that "assessment procedures and measures make take any form appropriate to the program and its circumstances, but each program shall develop and use procedures for determining how well it carries out its mission. Like most NPS schools GSBPP uses the following assessment procedures. These procedures meet NASPA assessment criteria

- Input from current students
  --evaluation meetings with current students in the program
  --formal exit questionnaires
  --end of curricula exit interviews/critiques with graduating students
  --review of SOF data

- Input from curriculum sponsors
  --biennial curriculum reviews of all subspecialty programs
  --sponsor campus visits
  --informal curriculum reviews with sponsors

- Input from graduates/alumni
  --ad hoc contact with graduates
  --GSBPP alumni survey (planning stages)

- Input from Faculty
  --Faculty Instructional Committee monthly meetings
  --Supervision of course coordinators (review of course syllabi and course outlines)

These assessment inputs are all indirect measures of student learning. As will be discussed later, we are starting to develop direct measures to meet AACSB requirements.

Like other NPS schools, GSBPP and its academic concentrations (GSBPP does not have departments but concentration areas supported by and assessed by military sponsors) have

curriculum reviews, student exit interviews, and questionnaires to help determine student satisfaction with our programs and their perception of the quality of their educational experience. This report will not focus on these activities. What this report does concentrate on are the strategies that the business school has instituted to provide a better balance between what we teach and how students learn, the shifts in thinking about instruction that AOL is causing GSBPP to confront, and the plans that GSBPP has to implement AOL. We believe a number of these activities could be characterized as "best practices" that could be implemented in other NPS departments.

A. Course Merge Process

GSBPP students have exceedingly heavy course workloads; some quarters they take 5 or 6 courses totaling 17-19 credit hours. This workload is the result of JPME, certificate programs, and program sponsor requirements. Because of the large number of courses students take, it's imperative that course exams, papers, presentations, major quizzes, and so on are staggered throughout the quarter to insure that students can prepare for these tasks and, more importantly, learn during that process.

To make sure GSBPP faculty stagger their assignments, we conduct a "course merge" at the beginning of each quarter for students in quarters 1-4 of their program. Here's how the process works:

1. All faculty provide a detailed syllabus to the course merge coordinator a week before classes start
2. The coordinator creates a large matrix that maps course deliverables (exams, papers, etc.) for all courses in that quarter with their due dates
3. The Academic Associate for the MBA core analyzes the matrix to determine potential choke points. All instructors teaching in that quarter receive a copy of the matrix.
4. Instructors teaching students in the same quarter meet to resolve the chokepoints. The AA for the MBA core facilitates the meeting

Aside from staggering assignments to support student learning, this process, particularly the instructor meeting, provides opportunity for faculty to discuss points of connectivity between courses and joint assignments. For example, during a meeting among instructors teaching 3rd quarter students, the Operations Management and Managerial Communication instru7ctors fashioned a joint assignment that met the needs for instructors from both classes.

B. Vertical and Horizontal Integration

Many MBA programs are organized along functional area stovepipes: accounting, economics, management, operations/logistics, etc.. This method of organizing fragments information and learning, resulting in students becoming analysts who lack the breadth to see and assess organizational situations and problems from multiple perspectives. To combat the problem of information fragmentation that results from courses in functional area stovepipes, GSBPP has

restarted the process of integrating course concepts vertically (clusters of courses in different quarters that introduce concepts that build on each other or are used in different ways) and horizontally (courses in the same quarter)

We've embarked on this process so students can better develop their ability to integrate and synthesize information from different areas (e.g. financial management, economics, and managerial finance) to better understand complex organizational situations/problems and come to well-reasoned conclusions and solutions, testing them against the theories, principles, and models they've learned in a variety of courses.

Vertical Integration. GSBPP has first attempted to integrate vertically, that is between a cluster of courses from different functions that share some degree of commonality. For example, our Financial Reporting and Analysis, Managerial Finance, Cost Management, and Defense Budget and Financial Management Policy make up one cluster. We've determined there are three clusters in the MBA core (approximately the first four quarters of a six quarter program). What follows is a brief description of the process we've used to integrate vertically.

1. Course coordinators collect the syllabi from all faculty (permanent and adjunct) teaching a particular course. One important job of GSBPP course coordinators is to insure that there is at least a 70-80% overlap (a number have 100% overlap) in content and requirements between all segments of the same course. The course coordinator synthesizes the information from the syllabi into a series of themes and subthemes that characterize that particular course.

2. Course coordinators share this information with each other to map potential points of intersection and overlap between and among the courses. Course coordinators communicate this information map to all faculty teaching in the course cluster.

3. All faculty in the course cluster meet to discuss how they can reinforce similar concepts in different courses (e.g. net present value is treated from the perspective of bonds in course, capital budgeting in another, and from the public budgeting perspective in a third). Also, during these meetings cluster faculty discuss possibilities of shared cases, readings that build on each other, and other possibilities for integration.

This process serves as a catalyst for groups of cluster faculty to meet with each other to continue the process of vertical integration.

Students have noticed and commented on these integration attempts. They pointed out that they just can't flush concepts after they've learned them but must use and understand them from a different perspective in different courses. Also, students have stated that they're pleasantly surprised that faculty teaching different courses do spend time talking with each other. In other words, the vertical coordination and integration is something they notice.

What GSBPP has not done is systematically measure students' ability to integrate and synthesize information. A latter section describes the processes that GSBPP are starting to be able to do that.

Horizontal Integration. Integration across courses during a quarter is challenging. Approximately 5 years ago, when the MBA was first instituted, we attempted to integrate horizontally. That initiative lost momentum because it was time consuming and the rewards for horizontal integration didn't match the expenditure of time and energy.

GSBPP's plan is revitalize this attempt at horizontal integration. The catalyst for this revitalization is the Assurance of Learning process that GSBPP is just starting.

AACSB Assurance of Learning

AACSB represents the gold standard of business accreditation. Only about 35% of business schools have earned AACSB accreditation. Recently AACSB has instituted what they call Assurance of Learning (AOL) as an essential factor in accreditation maintenance. The AOL process focuses on assessment rather than evaluation. That represents a significant shift in thinking about instruction. GSBPP is starting this process.
What follows is a description of several large-scale shifts in thinking that GSBPP is beginning to wrestle with.

Shift Focus to Assessment Versus Evaluation

Assessment focuses on the student and learning environment; evaluation focuses on the professor and the teaching environment. To put it another way, assessment keys on what students are able to do at the end of the course, the quarter, and the program rather than what the instructor does.

SOF scores and the use of SOFs for pay and particularly for promotion and tenure decisions create a NPS instructional culture that keys on evaluation rather than learning. The challenge GSBPP is facing is how can it create an instructional culture that also focuses on students and the learning environment within a larger NPS environment that privileges evaluation. This challenge is particularly acute in our DL programs where competitive pricing, and the need to break-even on cost result in large class sizes, numerous offsite locations per cohort, and less than adequate communication technologies at the remote location. These three factors can create a student offsite environment that is not conducive to learning.

Recognize that Grades Alone Don't Measure Learning

Grades alone are no longer regarded as adequate indicators of student learning. AACSB AOL experts give several reasons for the limitations of grades: grades in one course or section may be recorded using different standards in another, and, more importantly, students who receive good grades (GSBPP and NPS have both suffered from significant grade inflation over the last two decades) may lack the knowledge, skills, and ability that one should have with an advanced degree. Shifting thinking from grades as a measure of student learning to more direct measures is a challenge to current GSBPP thinking.

Shift from Indirect Assessment to a balance of Direct and Indirect Assessment

In the AOL framework, direct assessment measures take precedence over indirect ones. GSBPP and NPS have prided themselves on our use of curriculum reviews, contact with officers for whom our former students work, student exit surveys, student interviews, student focus group sessions, and so on. AACSB views these data gathering efforts as indirect assessment measures because they acquire evidence about students' perceptions or feelings about learning and their learning environment. In contrast, direct assessment measures gather evidence about student learning and the learning environment such as performance on exams, exams for certification and licensure, projects, student portfolios, case studies. Furthermore, the unit of analysis for direct assessment is the individual student versus the team. Since GSBPP regularly uses teams for class projects and program projects, meeting direct assessment criteria will be a significant challenge.

Broad-Based Questions that Influence Assessment

Listed below are several broad-based questions that GSBPP is in the process of answering about student learning. These questions represent a process that we will follow to develop, monitor, evaluate, and revise the content and delivery of each of our degree programs and, most importantly, to assess the impact of our curricula on learning.

1. Learning Goals: What do we want our students "to be" or to "look like" when they graduate from our programs and go off to their next job? For each degree program we will generate approximately 5 or 6 learning goals that reflect the intellectual characteristics our sponsors want our graduates to have. Here's an example of one learning goal: Strategic thinking—ability to use concepts from courses with a strategic management focus to determine relevant from useless information, integrate that information, use appropriate decision making techniques and concepts from multiple business functions to make decisions in quickly-changing, unpredictable environments.

2. Learning Objectives: What should our students be able to **do** when they graduate from our programs? What behaviors have they exhibited or products they have produced that indicate they have met each learning goal? The following illustrates a learning objective: conduct a comprehensive analysis of a DoD organization including an analysis of key stakeholders and an assessment of its strengths, weaknesses, opportunities, and threats in a turbulent environment to reach a decision about a feasible short and mid-term direction for the organization.

3. Curriculum Alignment: Where in the curriculum (what courses) is this learning objective taught? What instructional methods are used to teach this objective?

4. Direct Assessment Measures: What measurement instruments are used to determine that students have met the stated learning objective? What are the rubrics used to measure variability in student learning? Why is the assessment instrument appropriate? A rubric is a scoring guide used to assess student performance on outcomes connected to a specific learning objective. Rubrics contain a scale along with a description of the features or characteristics of work at each point on the scale. Developing rubrics

requires time, careful thought, and practice. Also, we want to embed assessment in teaching and learning so that it's largely transparent. Furthermore, we'd like assessments to involve real tasks in a real or simulated environment that gives the task some degree of face validity.

5. Assessment Results**:** In a general sense, how well are students doing? Our goal is not a fine grained analysis of specific student results in each class that treats some aspect of a learning objective, but a way of determining if students are learning "much better," "good enough," or not "good enough" in relation to our learning objectives.

6. Actions Taken from Assessment Results: What have we learned from the assessment results? What are we going to do about it? When and how are we going to do it?

GSBPP recognizes that this assessment process outlined above represents a significant shift in thinking about instruction and learning. Furthermore, this process will need to engage large parts of the faculty, will require a decent amount of faculty time, and will require resources—financial and support staff. We believe, though, that there are significant institutional barriers that GSBPP will need to overcome to launch an effective assessment process. Those barriers include lack of rewards for faculty service, a focus on evaluating teaching effectiveness rather than determining student learning, scarce resources to sustain the assessment process, and lack of support staff to record, manage, and analyze assessment data.

Innovative GSBPP Instructional Practices

Faculty were surveyed to gather examples of innovative instructional practices. The following Appendix contains a representative sample of these practices. These responses have not been edited so that readers hear the "voice" of each faculty member describing the innovation.

Appendix A-1

Innovative Instructional Assignments
GSBPP

Learning by Doing

I adopted a learning by doing approach in the budget course I teach in our EMBA, MSA, MSCM and MSCM DL curricula. There are no exams in my course. Grades are assigned based upon students' relative success in completing a series of tasks, all of which utilize real time budget materials. I either provide the materials or direct the students to sites where they can access them for themselves. The materials are always taken from the budget that is currently being worked by Congress during the period the course is in session and involve the decisions taken by that same sitting Congress and its committees. These tasks range from modifying the most recent president's budget submission IAW criteria drawn from administration policy documents, to writing a memo for a member of Congress interpreting the most recent administration tax proposal and suggesting how that member might convey her/her position to constituents

Perhaps the most innovative piece of this approach is the use of what I call Research, Reporting and Writing (R2W) questions. Here's how it works.

Early in the course, students look at how the federal budget is organized (transportation, energy, defense, Social Security, etc) and pick a category (technically, a budget function) they would like to work with during the course. I try to give everyone their first or second choice, and it usually works. Once they have been assigned a budget function, they encounter a series of questions during the course that they must answer about that function. These four questions are attached. As you will note, in each case the students must access one or more data bases and then do some searching and thinking before writing up and submitting their answers. The questions are linked to readings and PPT presentations they are working with in the course. (The PPT presentations include a video introduction, a little music, then audio. i.e., my voice explaining each chart, all compressed for easy access using a software program called Articulate. I can show you what that looks like if appropriate, but I think you have seen it). The R2W questions build upon one another, expanding the students' understanding of a particular portion of the federal budget from both a policy and a process perspective. When they have completed the course, students see Congress and the federal budget through new eyes, and know where to go to find answers to budget questions.

Working with the Experts

We hold about five or six 2 hour VTC or in-person sessions presented by our senior FM practitioners from the Pentagon or at NPS for direct contact of those leading in executing in the field and our 5th qtr MBA(FM) students. This provides the students the opportunity to discuss

Plans and Execution challenges as well as near future changes anticipated as the students transform from the "books to the field implementation".

b. One of our VTC sessions has three or four MBA(FM) graduates reporting from the field on the curric coverage, or lack thereof, in preparing them for the jobs they were assigned. This has been very productive in timely adjustments to our course content based on their input and open discussions with participating students.

c. We have the classes broken into Service Unique teams to develop and present solutions to a 3% reduction in the current Budget Problem, which will be on their desk or email many mornings when they're in a budget billet.

Managing Expectations and Getting Students to Read the Material

- **Provided detailed writing guidance** so students understand the expectation for writing assignments (expectations management!) Copy attached.
- **Removed all my slides from blackboard**. I've noticed students like to substitute the reading assignments for my slides. Again, expectations management...I expect them to read the assignments that I select and be ready to discuss in class. In return, I've narrowed the focus of the readings to include only relevant readings and eliminated what I think is duplicative material. I've also identified those readings that are optional...for the over achievers, still good material but beyond the scope of classroom discussion.
- **Converted some written assignments to verbal exercises**. This way students must read the material, understand it (or question it in class), and verbalize their understanding of the material via thought-provoking questions that are discussed in class. This provides more depth to their knowledge base and appeals to those that learn by verbalizing vs writing.
    - These are graded exercises and I use the attached to record their participation level. It is arranged by seating position in the classroom. To manage the participation expectations, there is participation guidance in my syllabus.
    - I also use this tool to record daily participation (beyond the graded exercises).

My intent with those three actions (particularly the last two) is to force students to read the material and demonstrate their knowledge (or confusion) in class for a grade. I'm trying to eliminate students from taking the shortcut of using my slides as their knowledge base and then not engaging in class.

"Novel" Pedagogy used in MN3118: Strategies for Consensus-building in Post-Conflict Environments": Journal Entries

<u>Pedagogy</u>

The pedagogy for this course will be somewhat different from that you have experienced in other courses. A major objective of this course is to build your individual skills in negotiation, persuasion, problem solving, and consensus building. Given that objective, this course has a

significant experiential element. In other words, we will be doing exercises and role plays that will require you to actually put into practice the skills and concepts you will be reading about. You will also be asked to reflect (in Journal Entries) as to what you have learned through these experiences, both in terms of concepts and personal growth and development.

Journal Entries

Unlike the homework assignments which are prepared in advance of a specific discussion or exercise, Journal Entries are prepared following exercises and role plays. They are intended to allow you to reflect back on the experience and describe what you learned from the event. Throughout the list of scheduled assignments, you will find approximately seven (7) Journal Entry requirements. For each, I have outlined specific questions for you to address in these assignments. These questions may specifically pertain to the reading assignment for that day, or ask you to analyze the role play using multiple concepts and models. In general, there are four primary criteria used in grading the journal entries:

- Demonstrated understanding of the concepts, ideas, theories, models that were illustrated in the conduct of the exercise or role play.
- Analysis of factors that contributed the effectiveness of the role play or exercise.
- Quality of analysis of your own personal skills and abilities in specific exercise and role play (e.g., ways you were effective; ways you can improve effectiveness).
- Clarity of writing.

The Beer Game Simulation and Elluminate

I used Elluminate to run a classroom exercise, and the results were surprisingly good.

The exercise is called ‘the beer game’ and it teaches about supply chain dynamics (the ‘bullwhip effect’). It is always well-received by students in a face-to-face environment. The supply chain dynamics work between students, and frustration levels run high. In a classroom, the noise level often gets loud, and the instructor has to shout to be heard by the whole class. I often spend my time in a face-to-face class running between supply chain ‘teams’ and working out misunderstandings. But the play rules are complicated, and I’ve been frustrated with the game in a VTC environment because it is difficult to monitor and control. At least one VTC site always failed to complete the game, because they simply couldn’t follow the rules properly. Also, because of the need to more tightly control the game, I’ve had to discourage peer-to-peer communication, to make sure that everyone was following my direction.

I evaluated an internet version of the game in 2000, but rejected it as being not interactive enough, and losing the peer-to-peer interaction that is important between students. But the online game did have the strong advantage that it enforced play rules, and made it simpler for the students to avoid misunderstanding, and complete the game.

Elluminate allows me to have the advantage of the online game without sacrificing interaction. Students were able to communicate with each other using the ‘chat’ feature without disrupting game play. In the VTC environment, students would often ‘mute’ their interactions; they

would miss instructions, and give misleading information to each other. I was surprised at how much interaction there was with Elluminate – it reminded me of the face-to-face classes. But even better: I was able to monitor that interaction, to make sure they weren't misleading each other. I found Elluminate created an environment which was more interactive than VTC and facilitated give-and-take between students that is difficult to achieve, without disrupting the class, even in a face-to-face classroom.

Developing a Deep Interest in Economics

Some of the students in my class get quite excited about the power of economics in helping them understand the world, especially in helping them understand the effects of government policy. So in 2004, 2005, and 2006, I put a readings course together for 3 to 6 hand-picked students. My criteria were that they had to have earned at least a B+ in the econ course they had had with me and that they have a personal interview so I could assess the extent of their interest. I reached out to a number of the B+ and higher students and ended up taking every student who said yes.

I told them that because I was teaching the course out of hide (that is, I wasn't being paid for it), I didn't want to spend a lot of time grading them. Therefore I made the course Pass/Fail and told them they would pass if they showed up for every session, showed by their comments that they had read the paper, and did a reasonable job of presenting the paper they presented.

For the first meeting, I presented a paper from an economics journal (not one written by me) on an economic policy issue, so that they could see how it's done, and we discussed it. Then every other class after that, one of the students presented a paper from an economics journal, explicating it and criticizing it somewhat. Together we chose what papers to cover. The ground rules were that it had to be something most of the students were interested in (with "most" defined somewhat vaguely, but this didn't present problems) and the students were encouraged to present something on a topic they were particularly interested in. This last was important, especially for one student who was not as academically oriented as the others. Over the previous months, I had learned about his deep interest in, and knowledge about, cars, and so when he was having trouble choosing an academic paper to analyze, I suggested a paper in the Journal of Economic Perspectives that analyzed the effects of the Corporate Average Fuel Economy (CAFE) standards for cars and trucks. He attacked his topic with relish and did a very good job.

Over the quarter, the discussion got better and better as the students realized, in varying degrees, that they could be players in the academic economics realm. I will do it again if time permits.

Making Accounting Interesting

I just finished teaching GB4520 (Internal Control and Audit) this last term.

I used short video clips (usually 15-20 minutes long) that reinforced the concepts covered in the textbook.

For example, when discussing fraud in accounting and auditing situations, I showed video clips that discussed fraud and how to detect fraud in financial statement audits.

After presenting new material from the textbook chapters using PowerPoint slides and a discussion format, I showed the video clips that pertained to those certain topics, which helped the students understand the concepts better.

On a weekly basis, I also researched and found current scholarly articles that related to the topics being covered in the textbook, which helped reinforce the concepts also. I posted them on Blackboard (with a link to the Library) so that the students had an opportunity to read them prior to class. In class, we usually had lively discussions of the articles.

The students seemed to like this new approach that I used this term.

Hands-on Research Experiments: Food and Beer

In GB4044 Defense-Focused Managerial Inquiry, we have the students conduct a "Demonstration Project." This project allows the students to develop a research experiment (with our guidance), from start to finish. We use these projects as a focal point for discussions of concepts and principles throughout the course, while encouraging students to "have fun."

Thus far, the projects have involved food or drink. In the first class, which was seminar-sized (12 students), we conducted a class-wide study to determine: "Who produces the best-tasting fresh salsa commercially on the Monterey Peninsula?" The students contacted local producers and developed a research project—including a campus-wide taste-test in the academic quad, a survey of retailers, and a focus-group taste-test with local "experts" (e.g., a panel of chefs and restaurant owners)—concluding with a statistical analysis and summary of results for the local producers. In the second class, we conducted a similar experiment that focused on barbecue sauces manufactured in California.

The course has become increasingly popular, and in the most recent offering, we had over 90 students. We divided the students into two larger groups: one that investigated breakfast pastries (since we had class at 8 AM), and another that looked at various types of beer (since we met in the late afternoon). Further, these two larger sections were divided into five groups each, so that we could better manage the demonstration projects
and ensure that each student participated equally. From all accounts, the students have enjoyed the projects and benefited from their application in class to highlight important research concepts and principles.

Thin Client Servers

GSBPP is the only school at NPS using thin-client computers to provide a hands-on computing experience for courses that would otherwise have to do without. The thin-client architecture allows a classroom of students to share the software loaded on a single server using keyboards and monitors installed at each student's workspace. Without this centralized server approach, GSBPP's technical support personnel would not be able to keep up with the software installation and maintenance requirements. The need to provide computing technology to our

classrooms became even more urgent as the average class sizes of our MBA program outgrew the seating capacity of the conventional computer labs maintained by the university's central IT support organization.

Making Operations Management Concepts Concrete

1.I ask the students to create an exercise in Operations Management using their work experience as the theme of the exercise. Later, I edit/review/revise them and use as questions in the exam. The purpose is to show that the techniques taught in class are not abstract, but can be used to improve their performance at work. Some students get very creative writing interesting plots for these exercises.

2.I give a set of 5 readings, usually taken from McKinsey Quarterly or similar sources, in addition to one GAO report. After they have read them, I ask for their view of how the Supply Chain Management practices in DoD should be in the future. They post their thoughts in a Blackboard discussion board where they receive comments from their peers and reply to the comments. I have strict rules about what is an acceptable comment, to prevent the generation of superficial one-liners. They tend to be very excited about this assignment.

In both cases, Blackboard is a key instrument executing the assignment.

Integrating Personal Experience with Developing Theory

Individual Term Paper: Students select from their previous experience an incident where they were involved in or were close to an *unexpected emergency situation* where there was significant *disruption* to work routines and/or possibly loss of life—an experience where they were *thrown in over their head*. The assignment is to write about one such incident and to organize the paper in five parts. Parts are due throughout the quarter and reflect revisions of work from previous drafts.

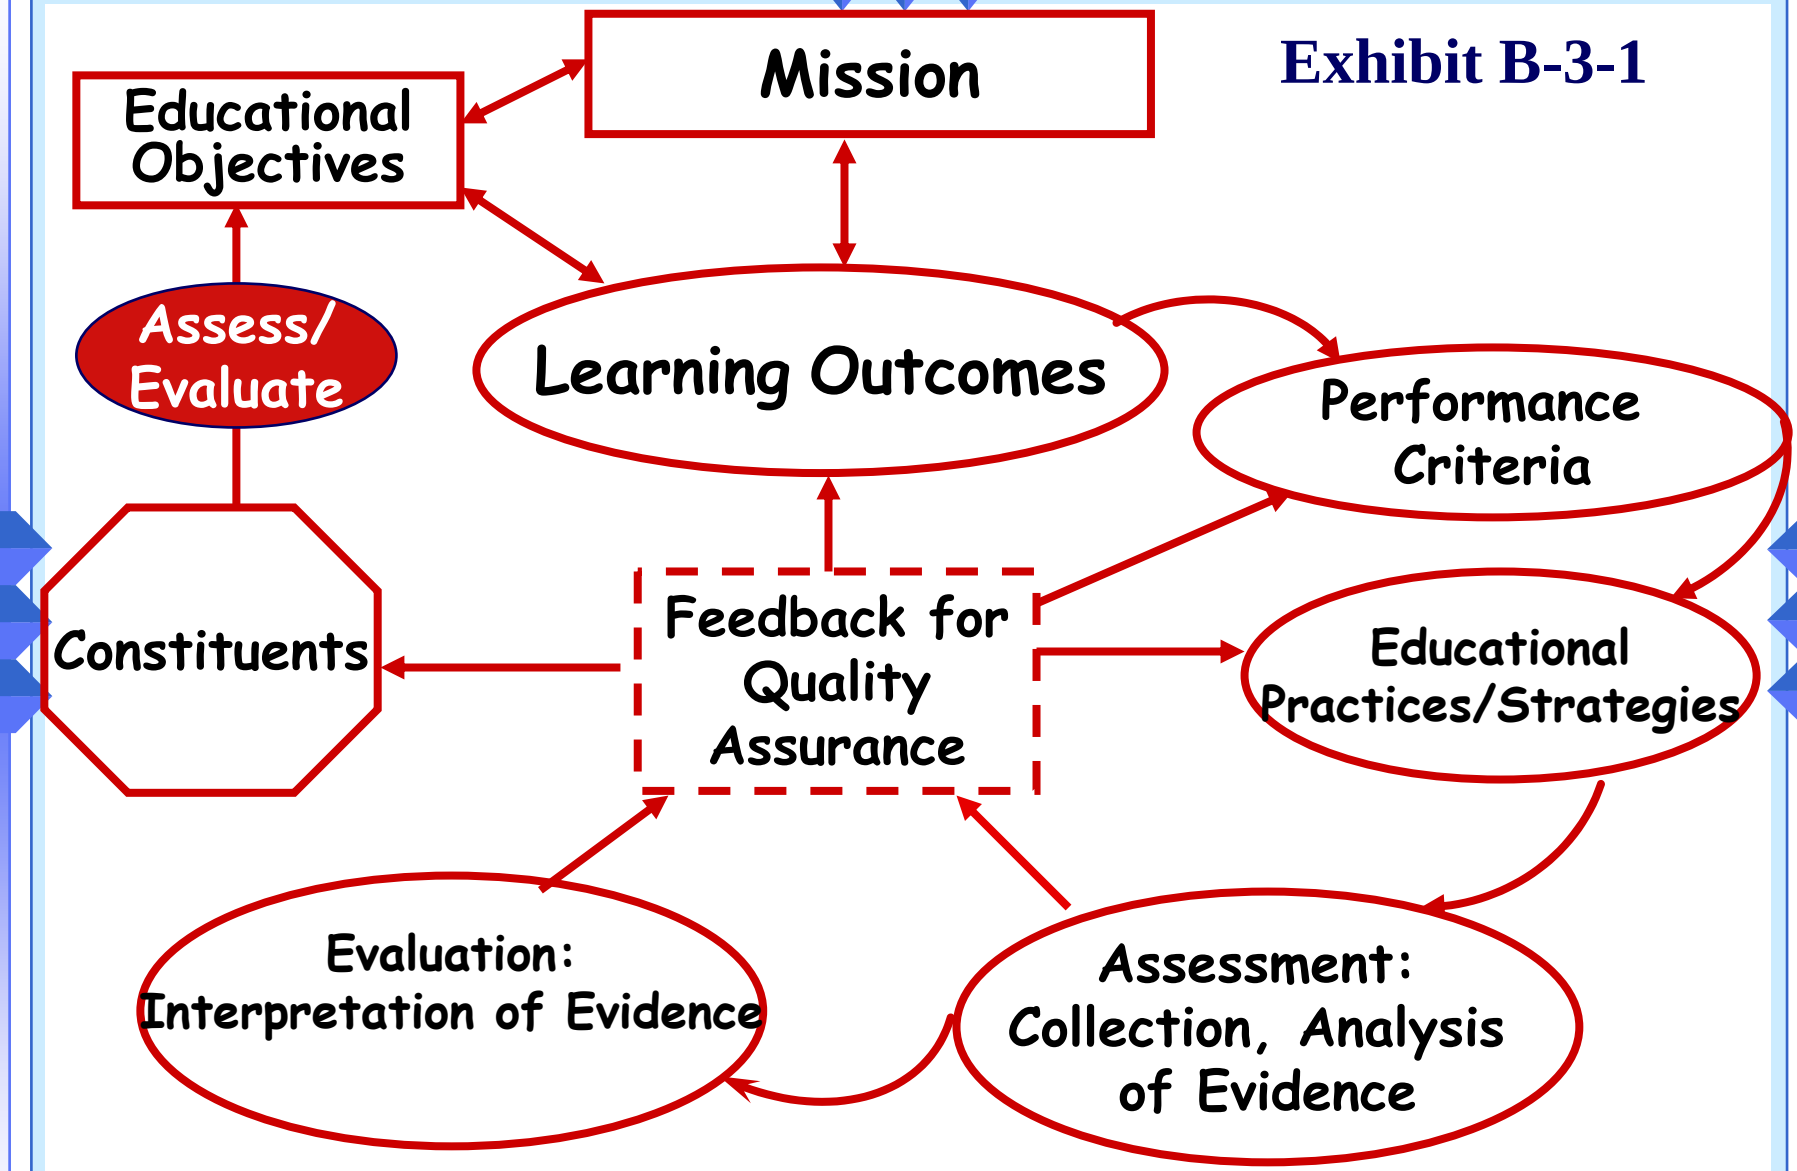
> Part 1 is a **summary of the incident**: what happened; where did it happen; who were the key players; what was their role; what was its magnitude, duration, and intensity; how many people were involved; and so forth.
>
> Part 2 articulates the **main concerns** of those involved. Ask what is the main issue of those involved. What is uppermost in their minds? What are they most concerned about?
>
> Part 3 describes the **resolution of the incident**. What mechanisms, processes, technologies, interventions, thought processes, innate characteristics, and so forth were used to help them deal with the incident?
>
> Part 4 **develops a theory** that explains how the organizational unit resolved its main concern. This is a conceptual building aspect of the paper. What are the key concepts that explain what is going on in the incident and how are those concepts related. This

part of the paper has very little (if any at all) description of the incident. Also, this should not include other theoretical models we discussed in class, but a theory of what is going on.

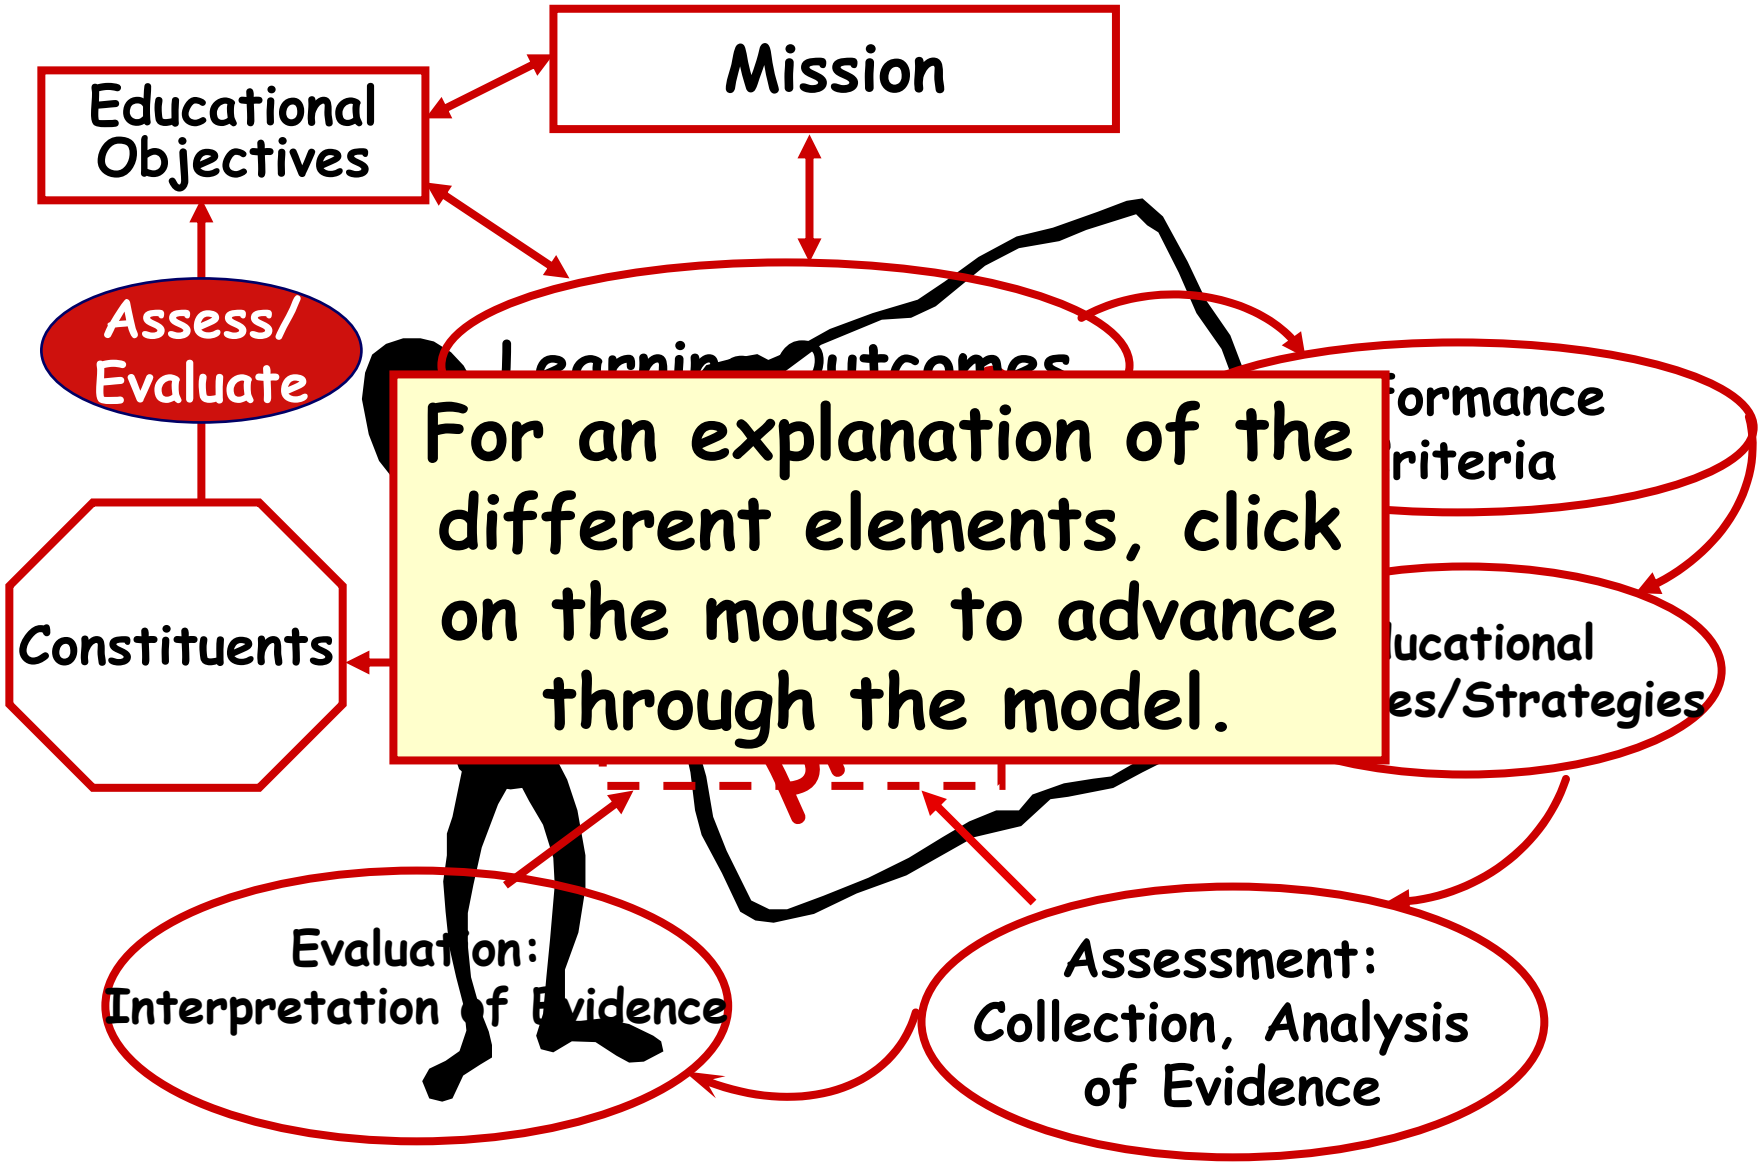
Part 5 **integrates other theoretical models** that are connected to their theory and is intended to complement the work already completed. They identify theoretical models discussed throughout the course and choose one or two that helps make sense of what is going on in their case. Part 5 is one aspect of the final exam.

The paper is an analytical tool that accomplishes several objectives for the class. First, it asks junior officers to reflect deeply on previous experience. This reflective process enables them to step back and critically assess their performance and competence in their work. Second, using newly acquired knowledge of models from the class, students begin to apply the concepts learned to concrete experience. Finally, The process helps them integrate knowledge and make connections across several social and behavioral domains, from motivation theory to organizational change and structure.

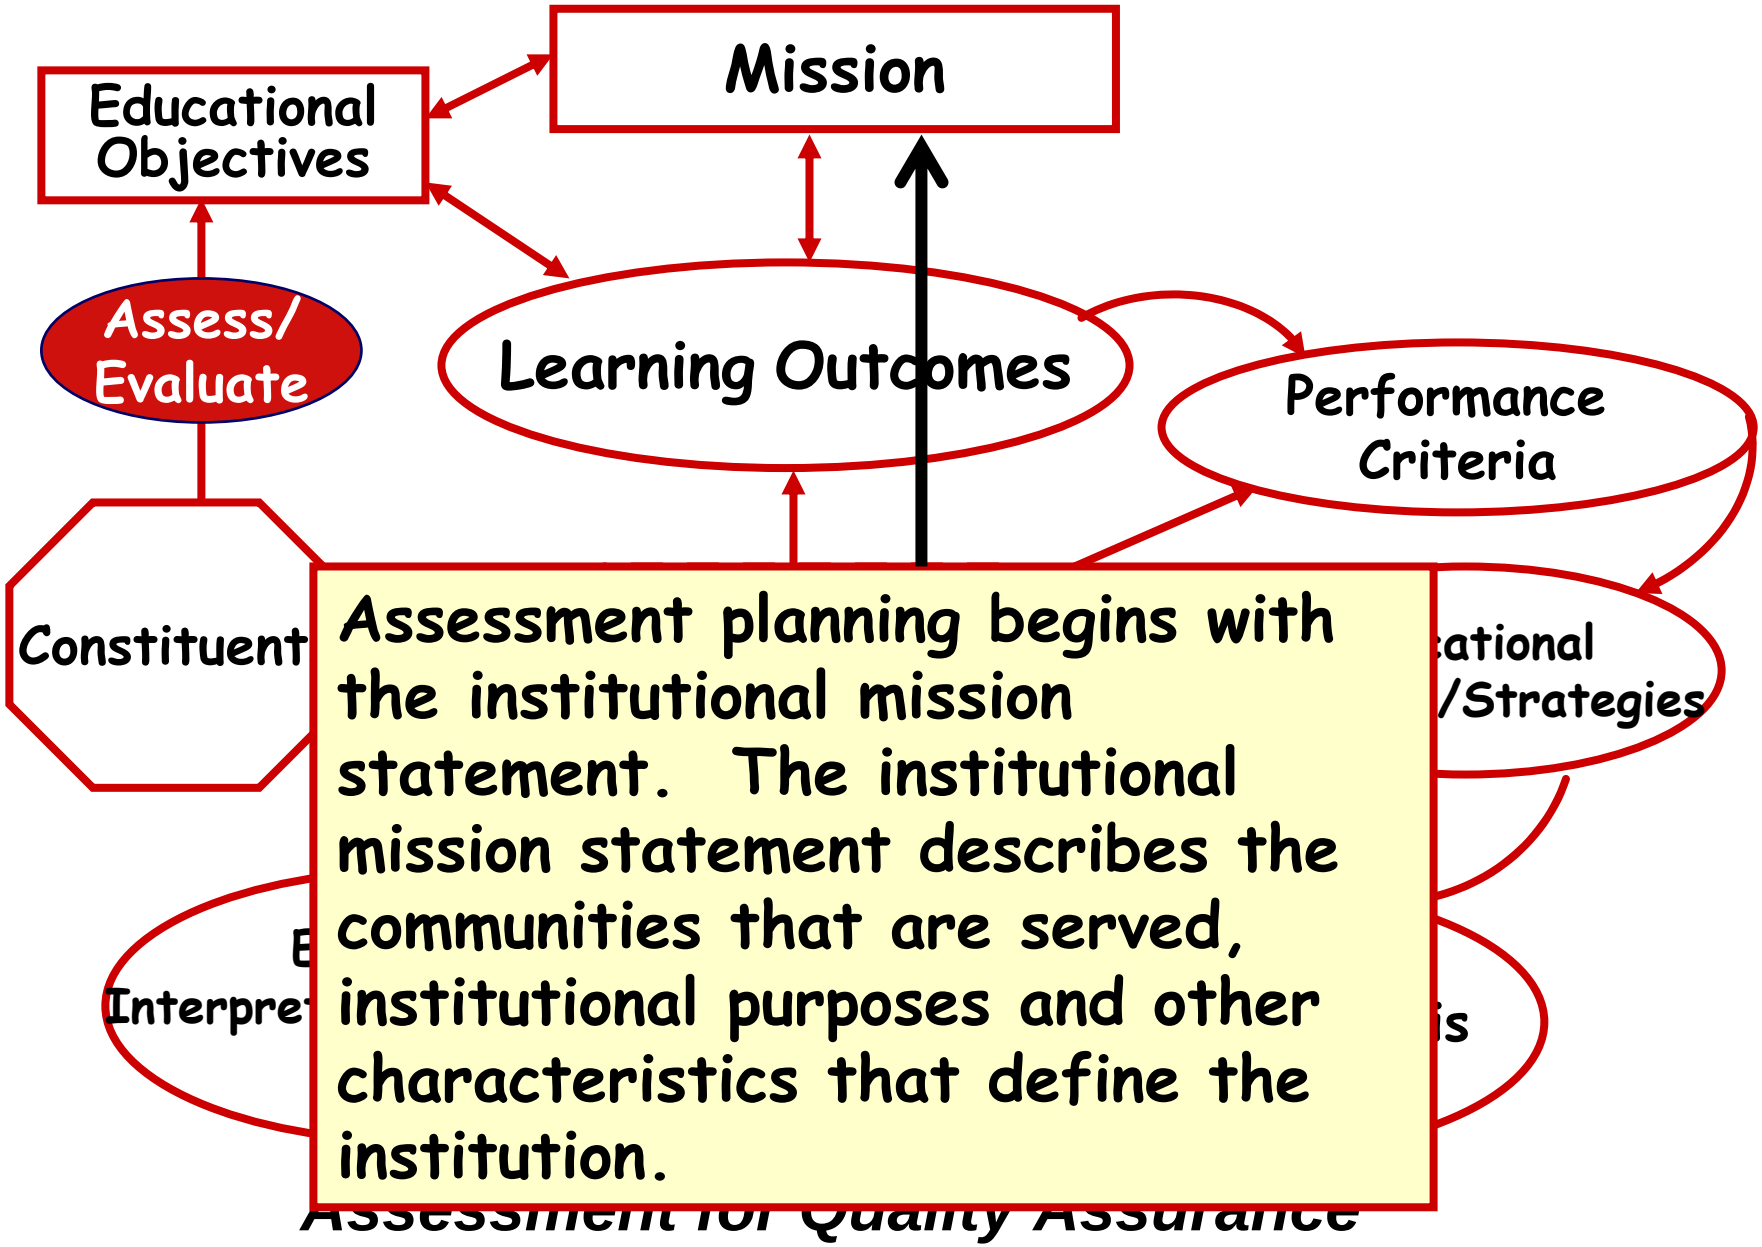
Appendix C- ECE process



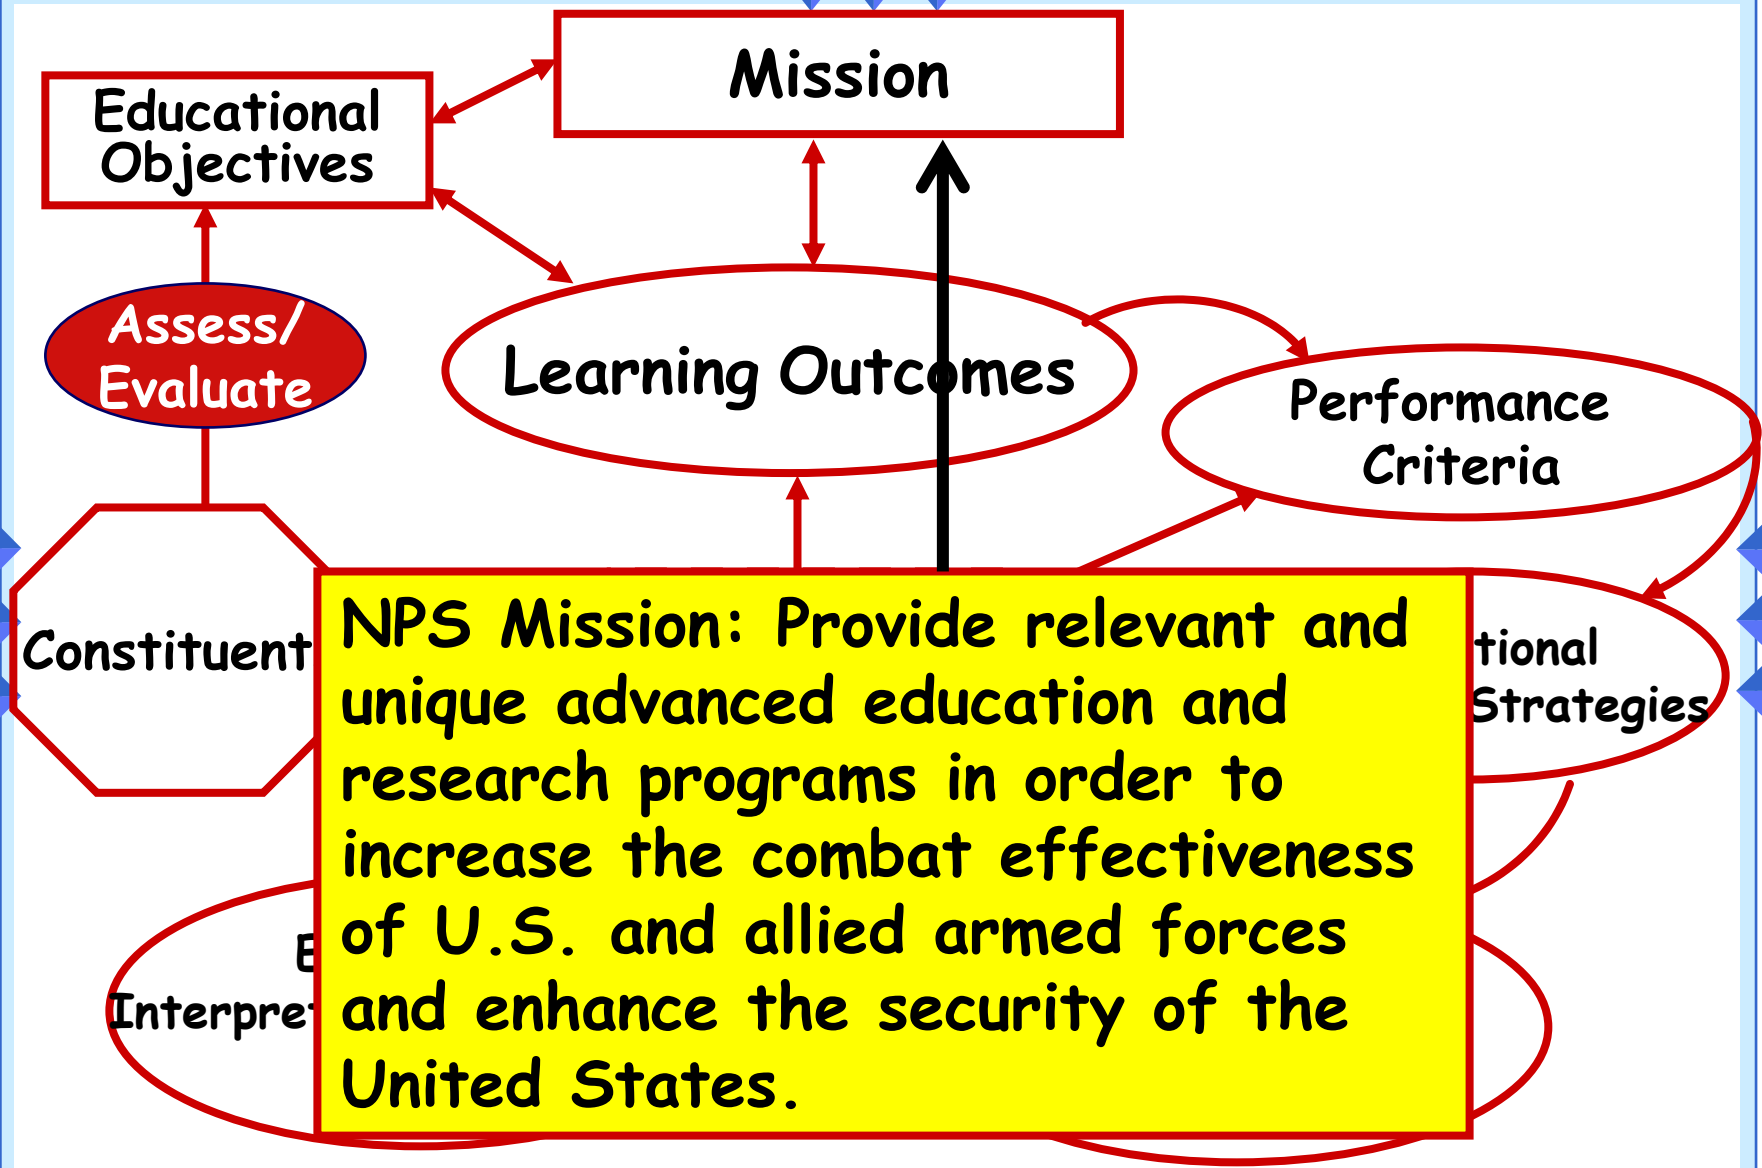
NPS MSEE Degree Program QA Process

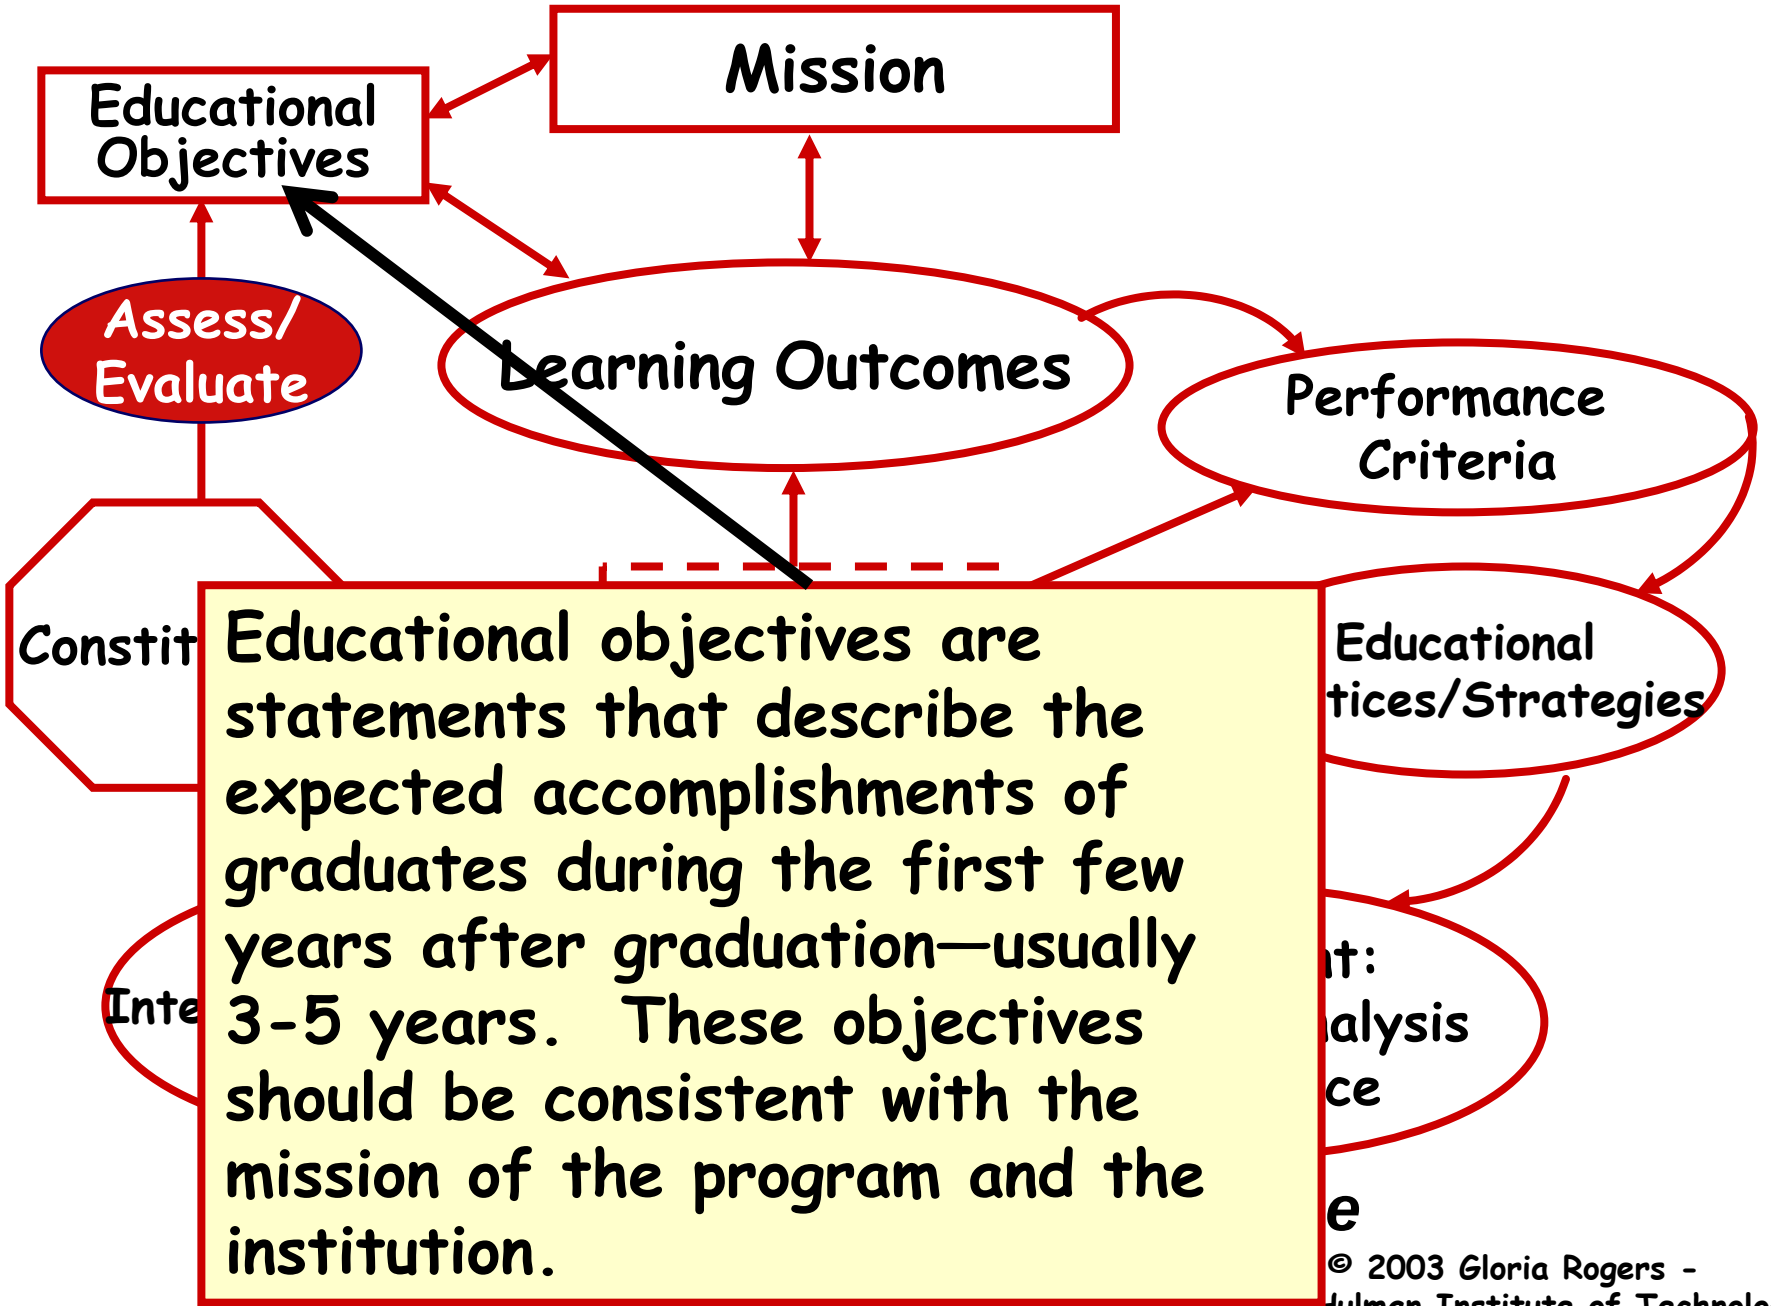


Assessment for Quality Assurance

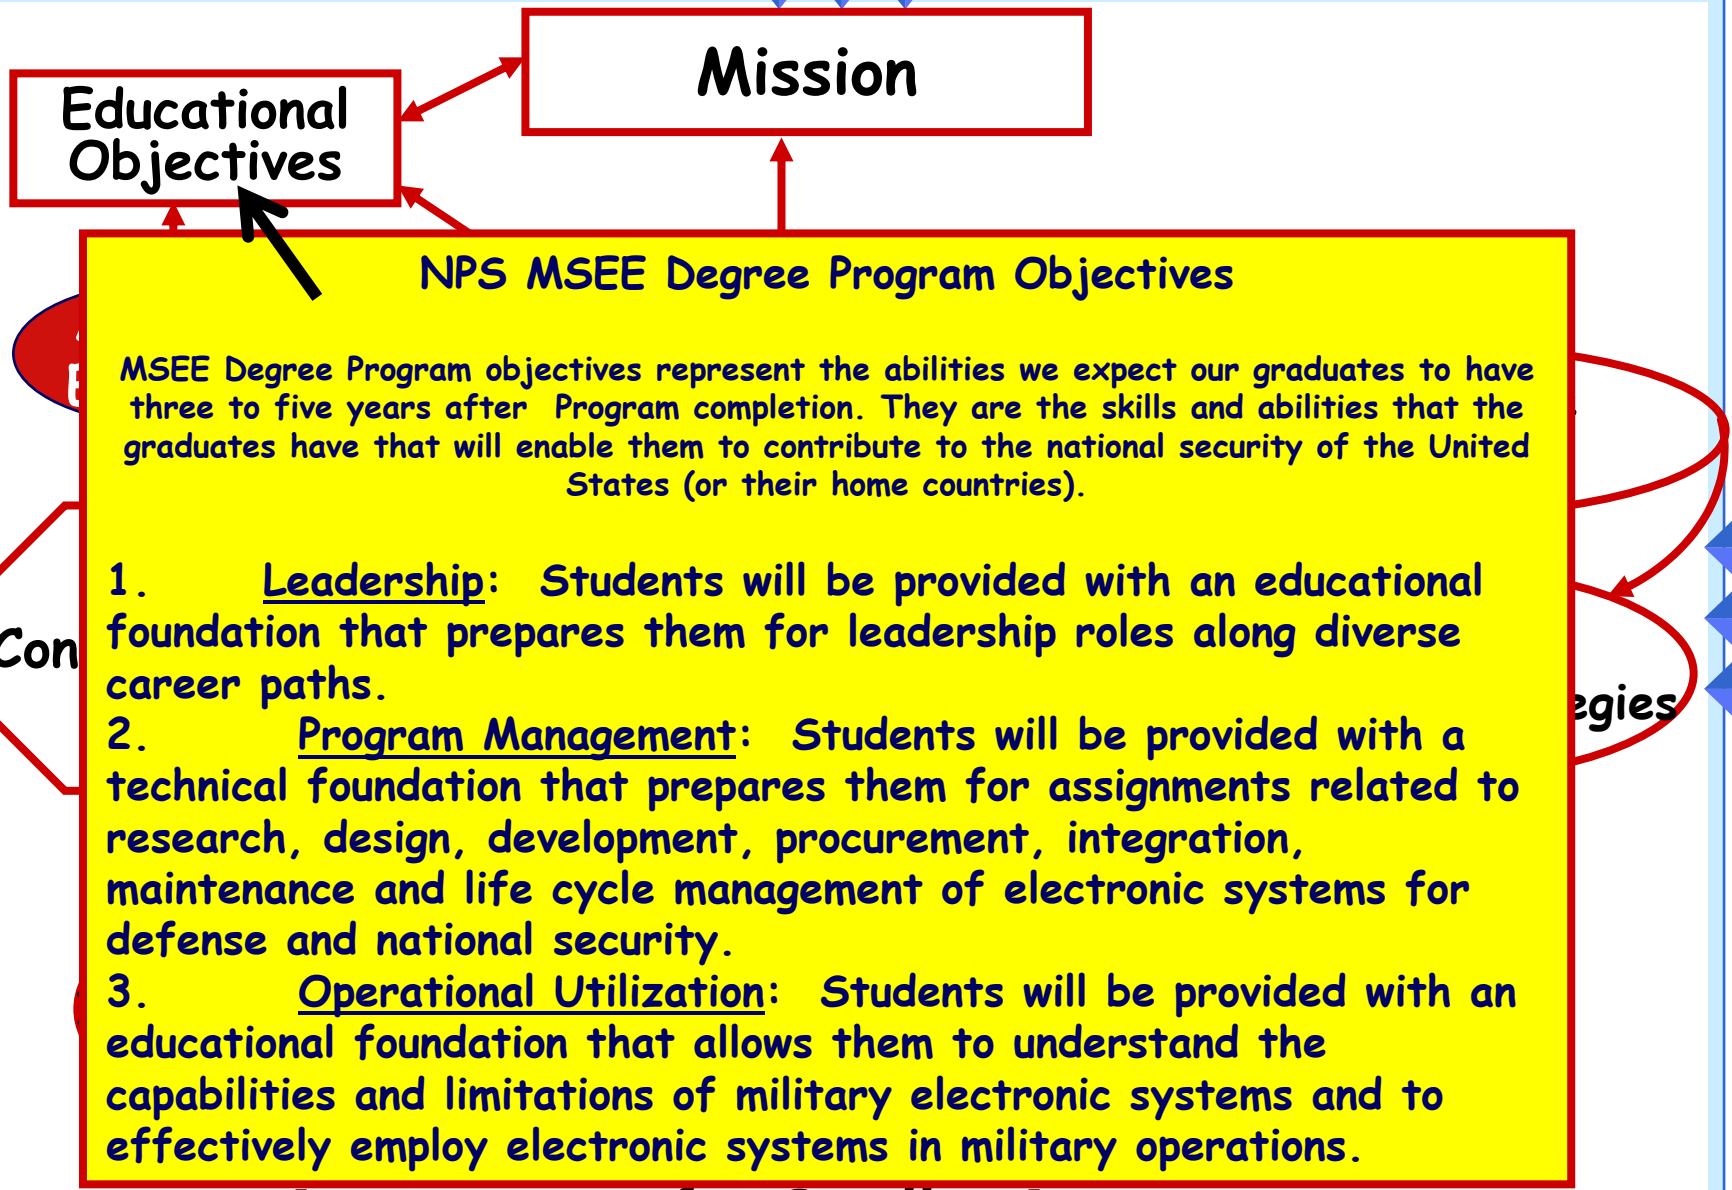


Assessment planning begins with the institutional mission statement. The institutional mission statement describes the communities that are served, institutional purposes and other characteristics that define the institution.

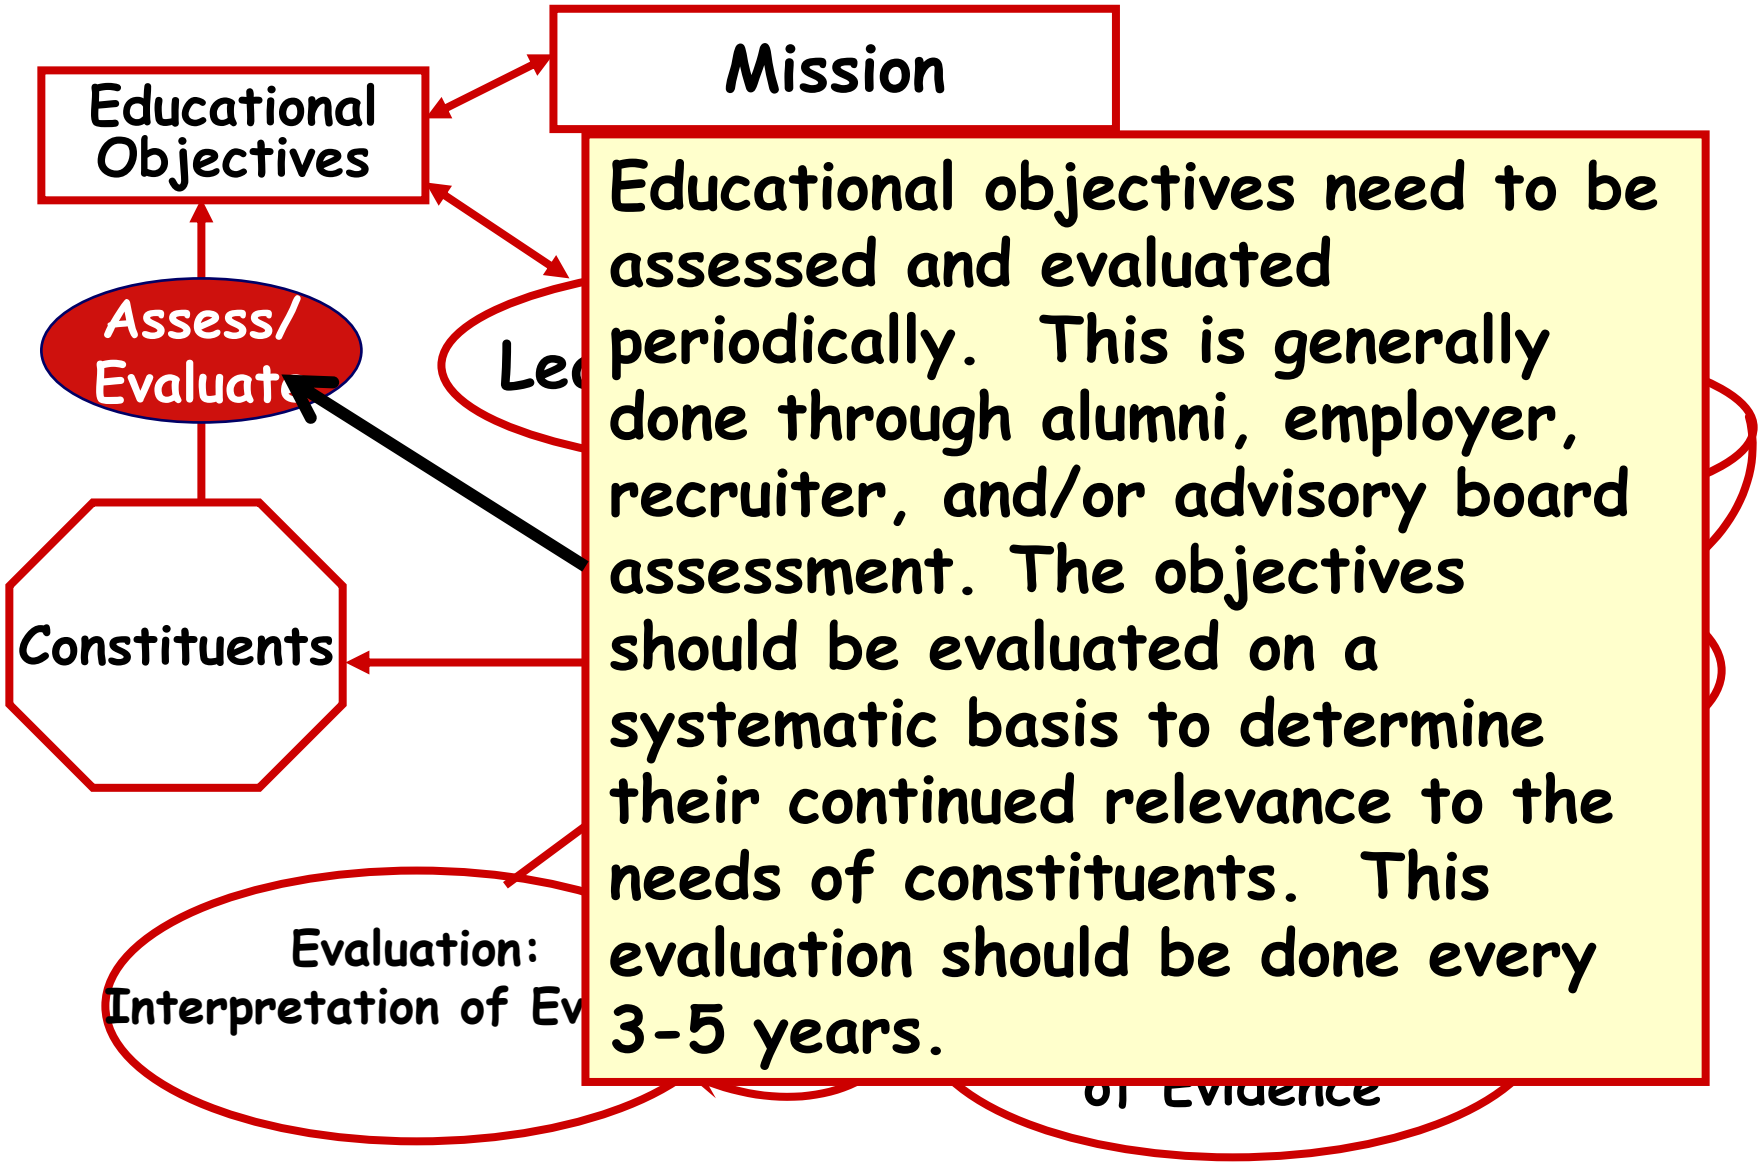




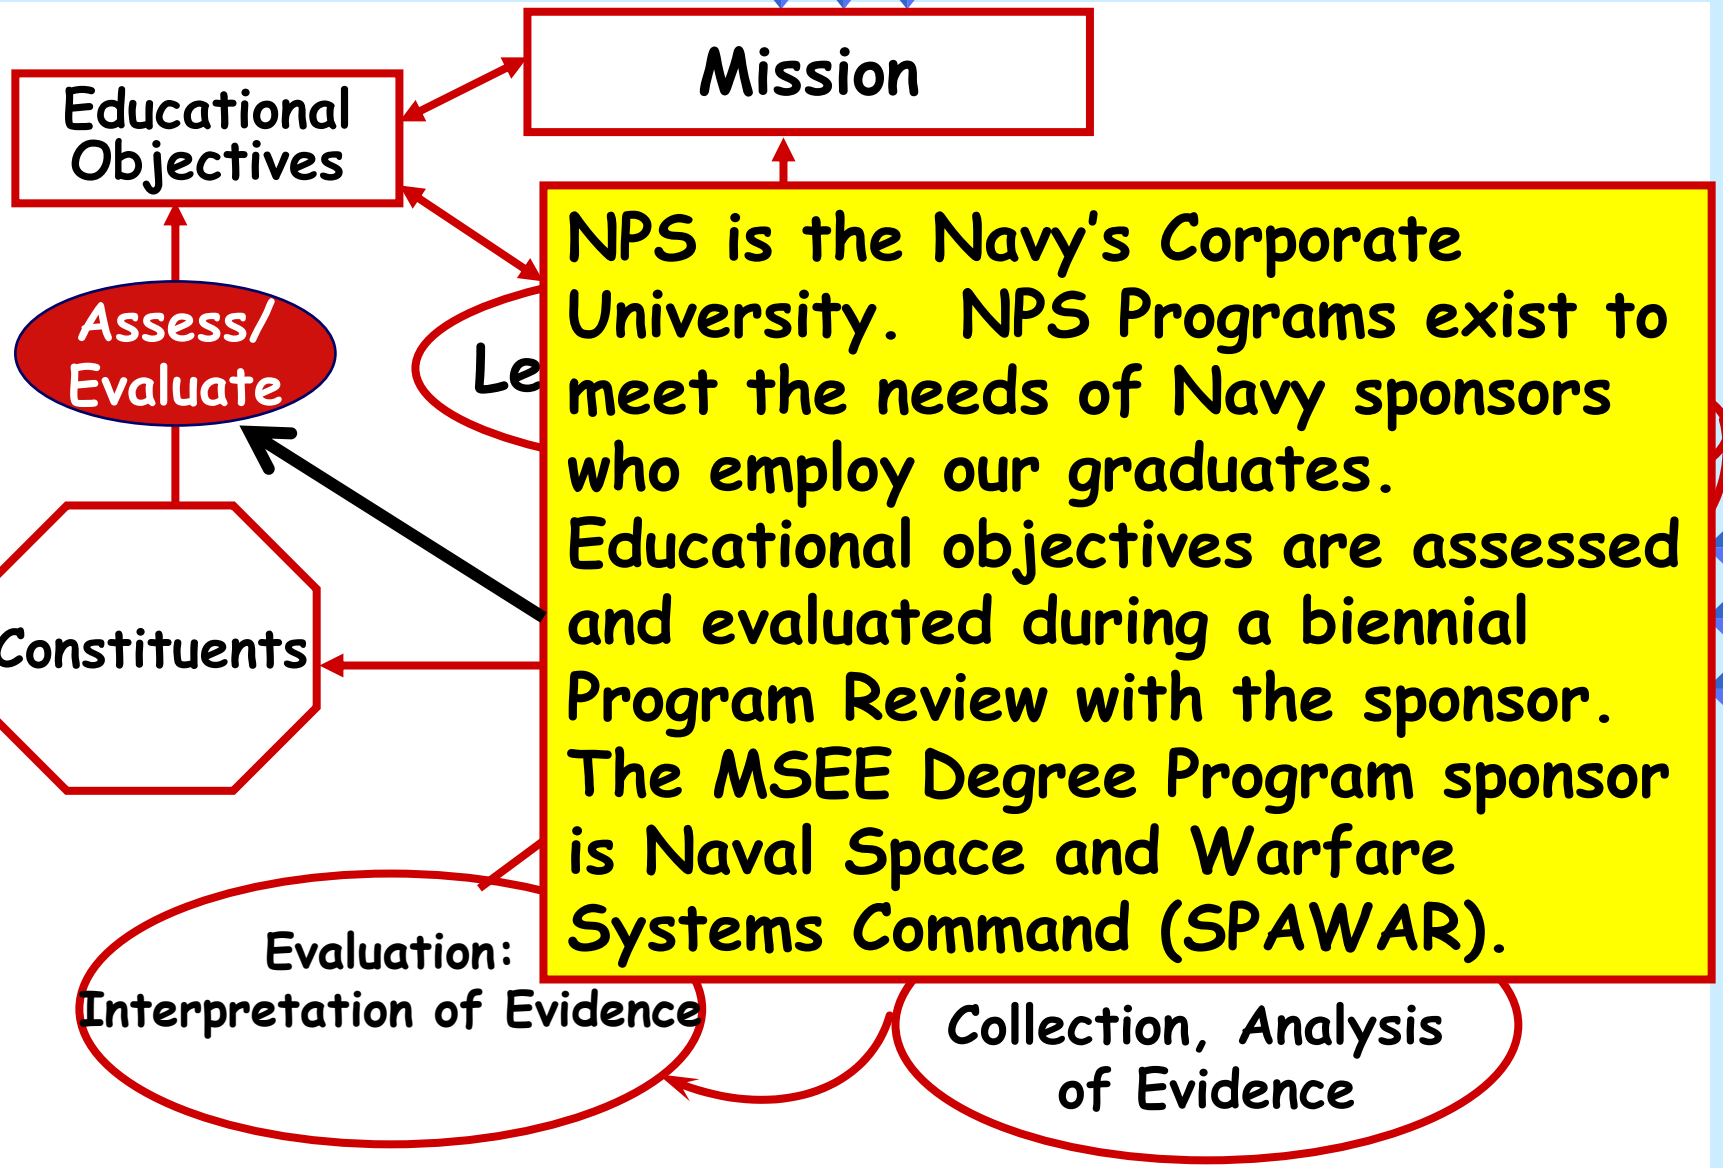
Educational objectives are statements that describe the expected accomplishments of graduates during the first few years after graduation—usually 3-5 years. These objectives should be consistent with the mission of the program and the institution.



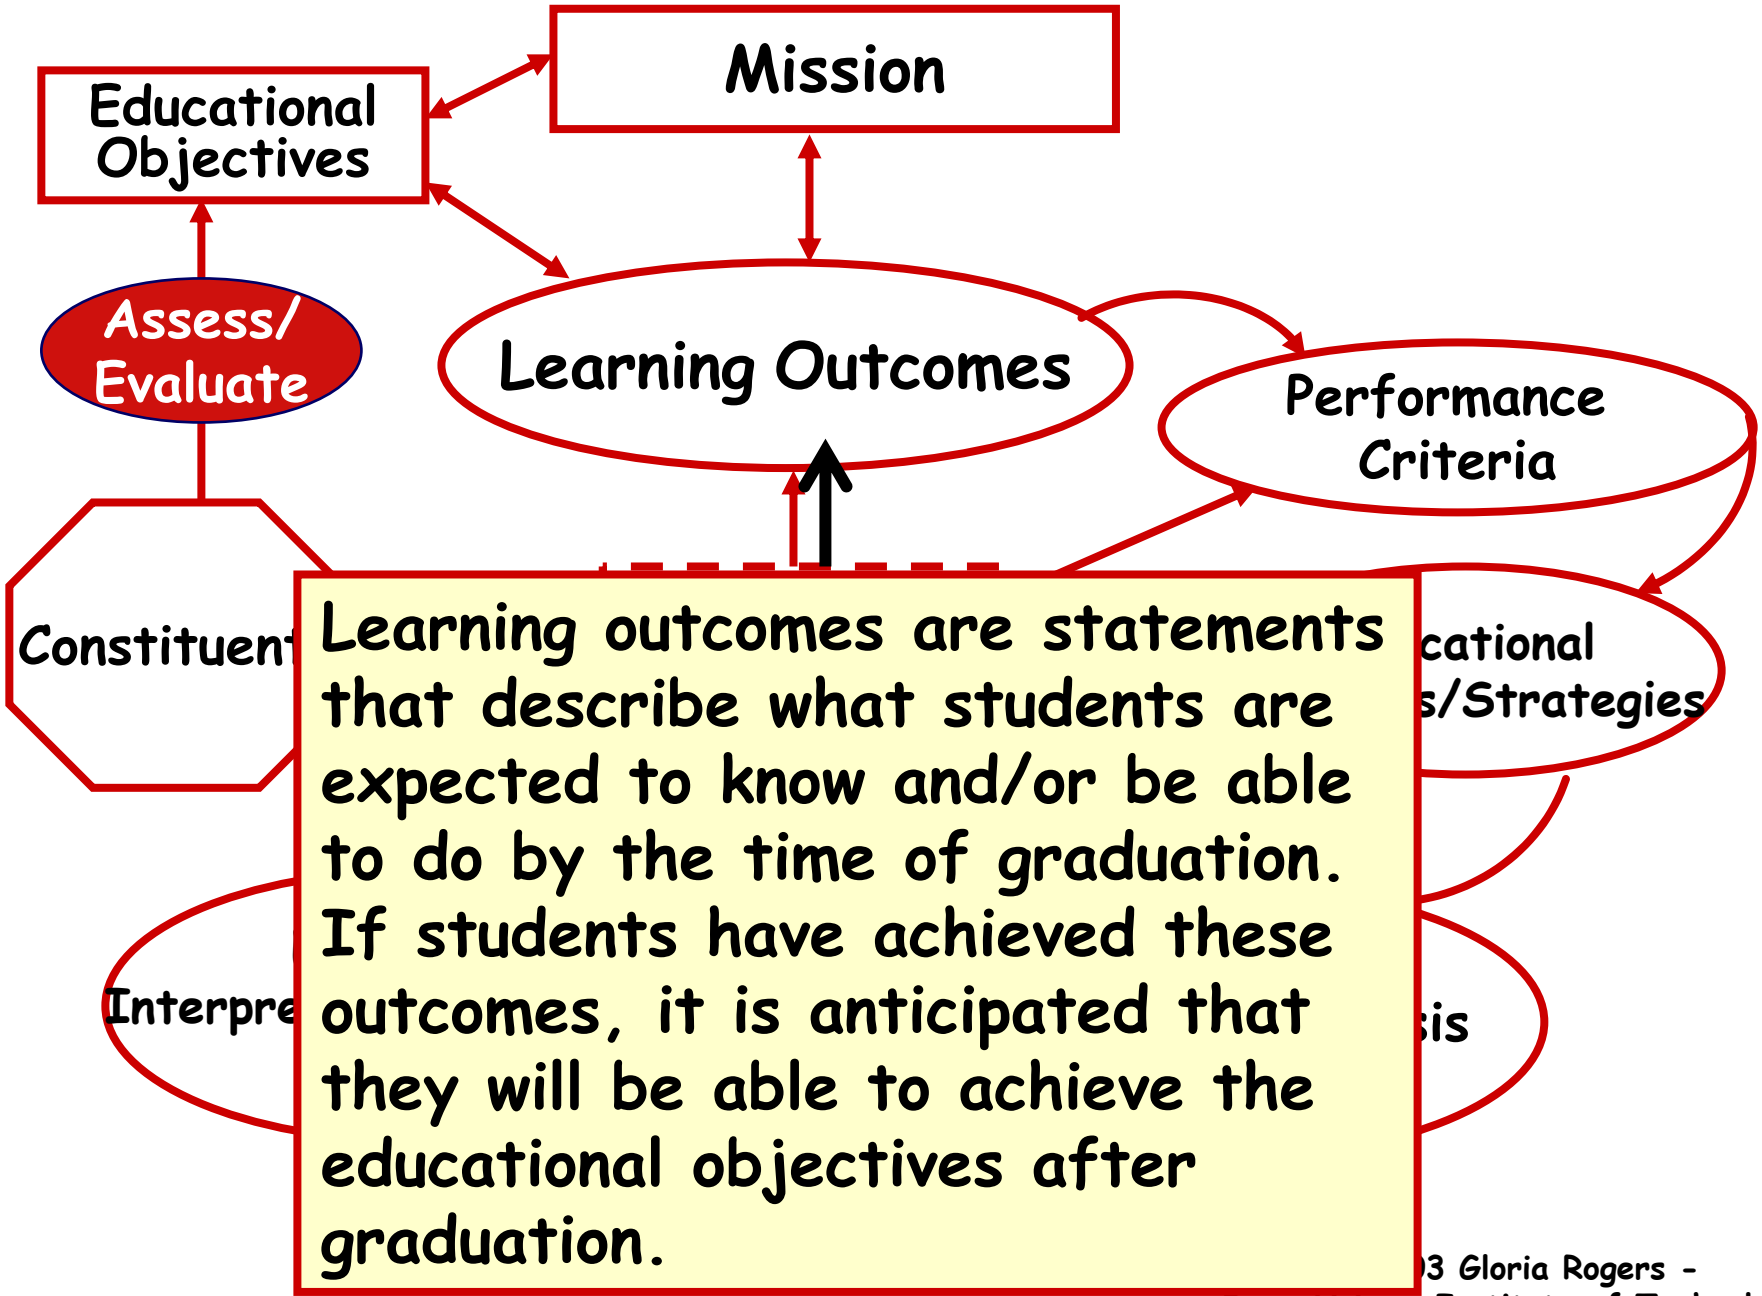
Assessment for Quality Assurance



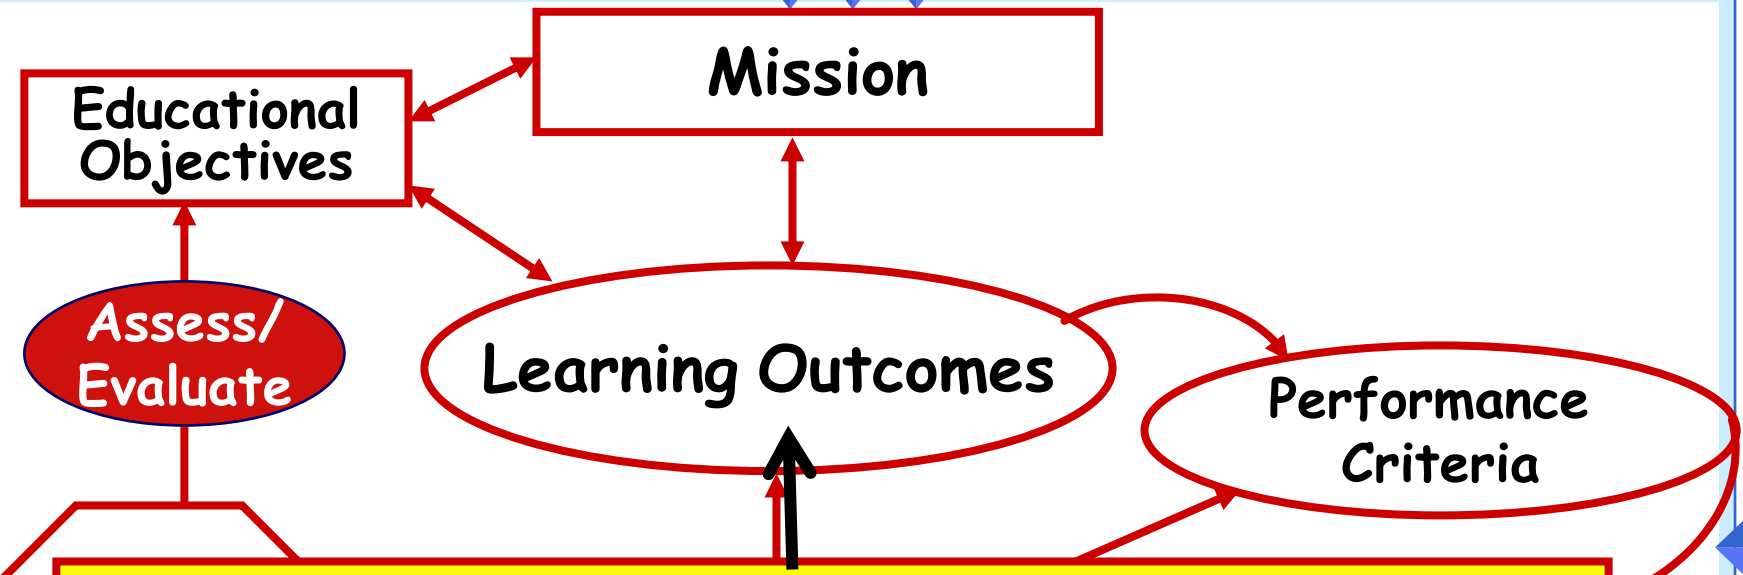
Assessment for Quality Assurance



Assessment for Quality Assurance



Learning outcomes are statements that describe what students are expected to know and/or be able to do by the time of graduation. If students have achieved these outcomes, it is anticipated that they will be able to achieve the educational objectives after graduation.

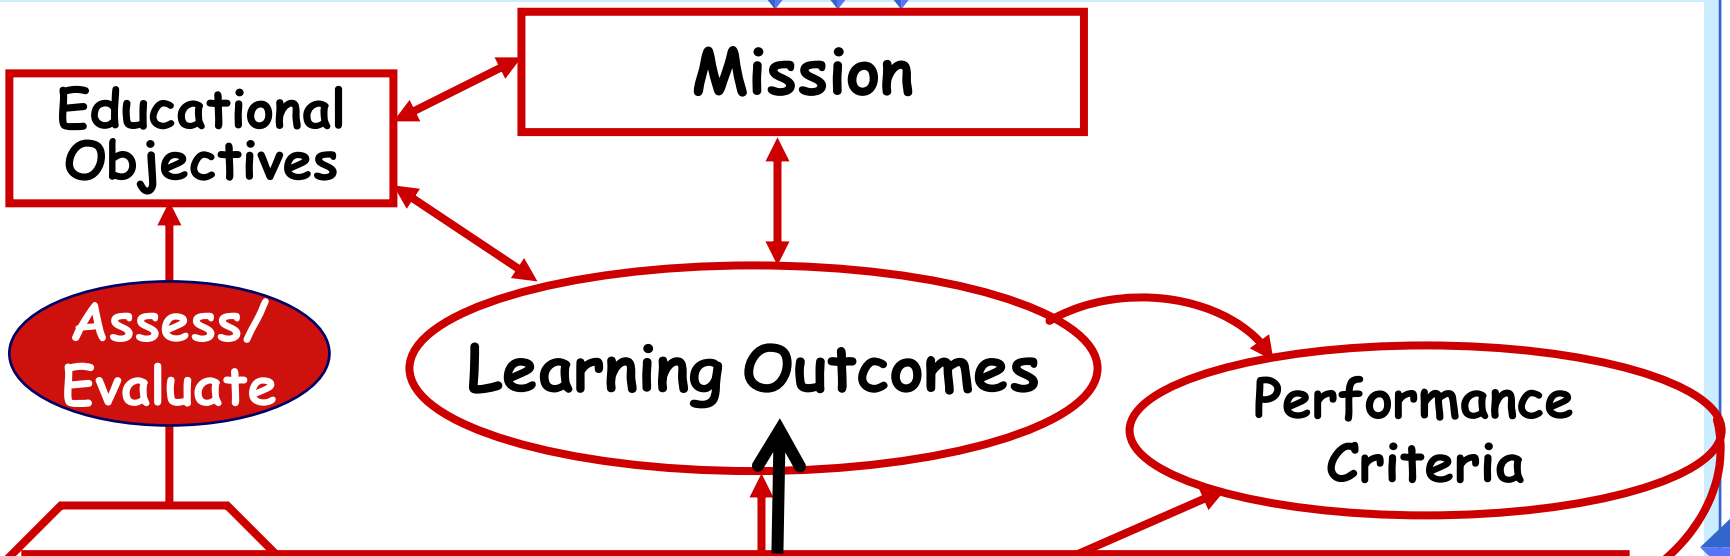


NPS MSEE Degree Program Outcomes

MSEE Degree Program outcomes represent the skills, abilities and knowledge students are expected to have at the time of graduation that will enable them to achieve the longer range program objectives.

1. Breadth: Students will possess and be able to apply knowledge and principles at a graduate level in two or more of the following areas: electronics, power, controls, signal processing, communications, computers, sensors or network engineering. Students will also possess and be able to apply knowledge of systems engineering principles.

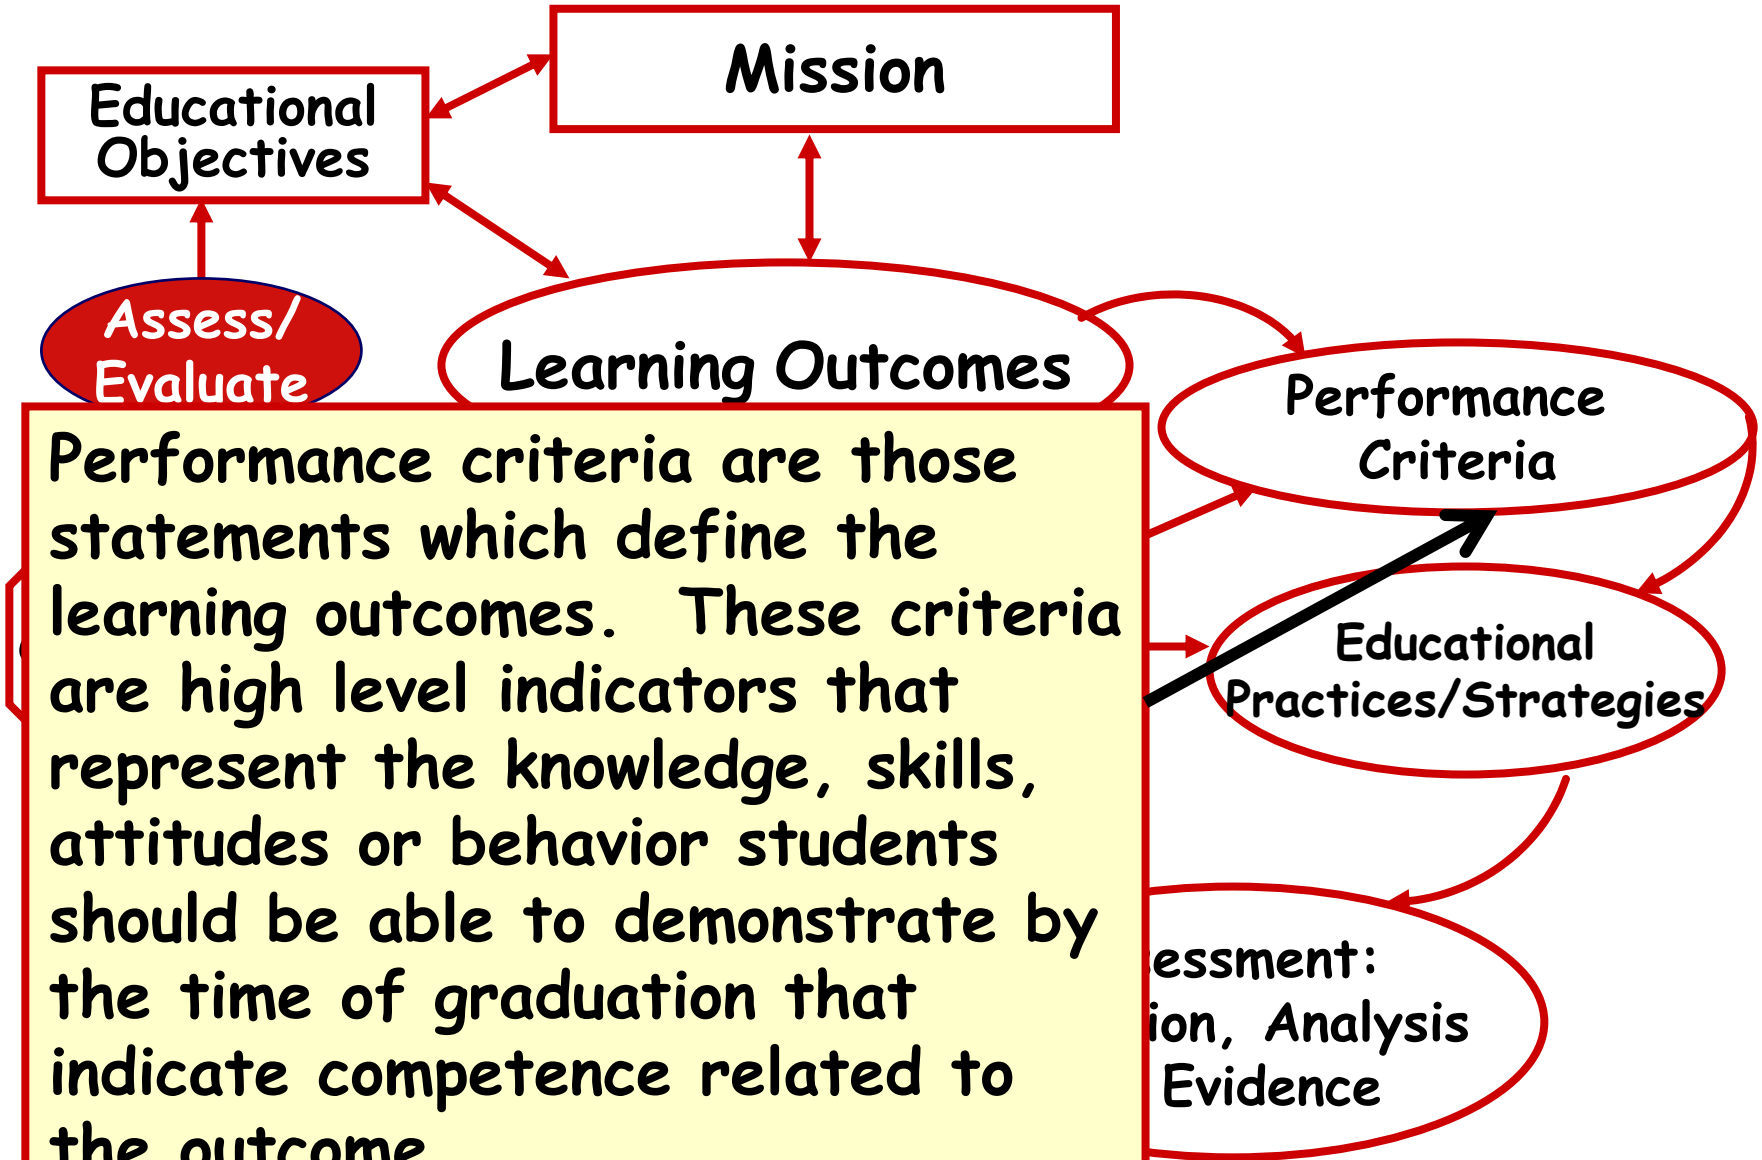
Continued on next slide …



2. Depth: Students will possess and be able to apply knowledge and principles at a graduate level in one or more of the following areas of electrical and computer engineering: electronics and power systems, control systems, signal processing systems, communication systems, sensor systems, computer systems or network engineering.

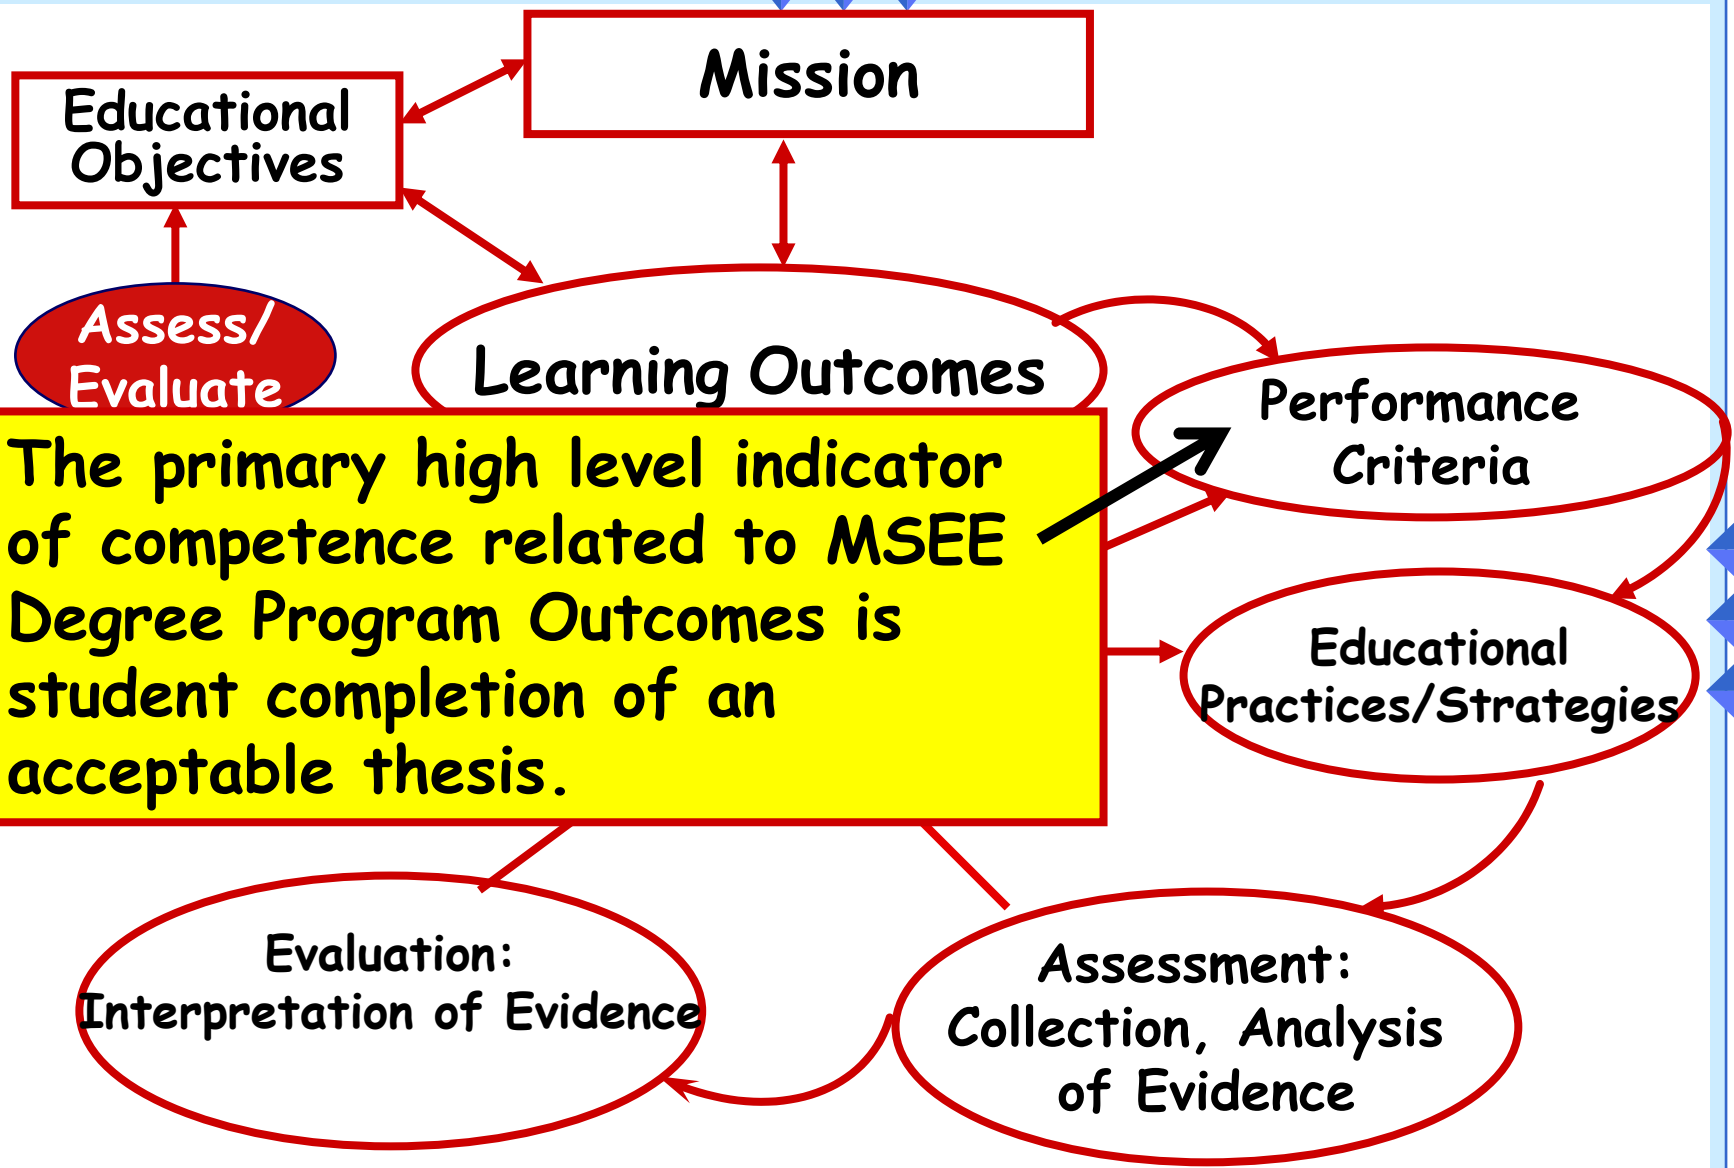
3. Independent Investigation: Students will develop the ability to conduct and report the results of a technically challenging, defense-relevant independent investigation.

4. BSEE Equivalency: Students will have BSEE degrees from ABET-accredited programs, or will have BSEE degree equivalency.

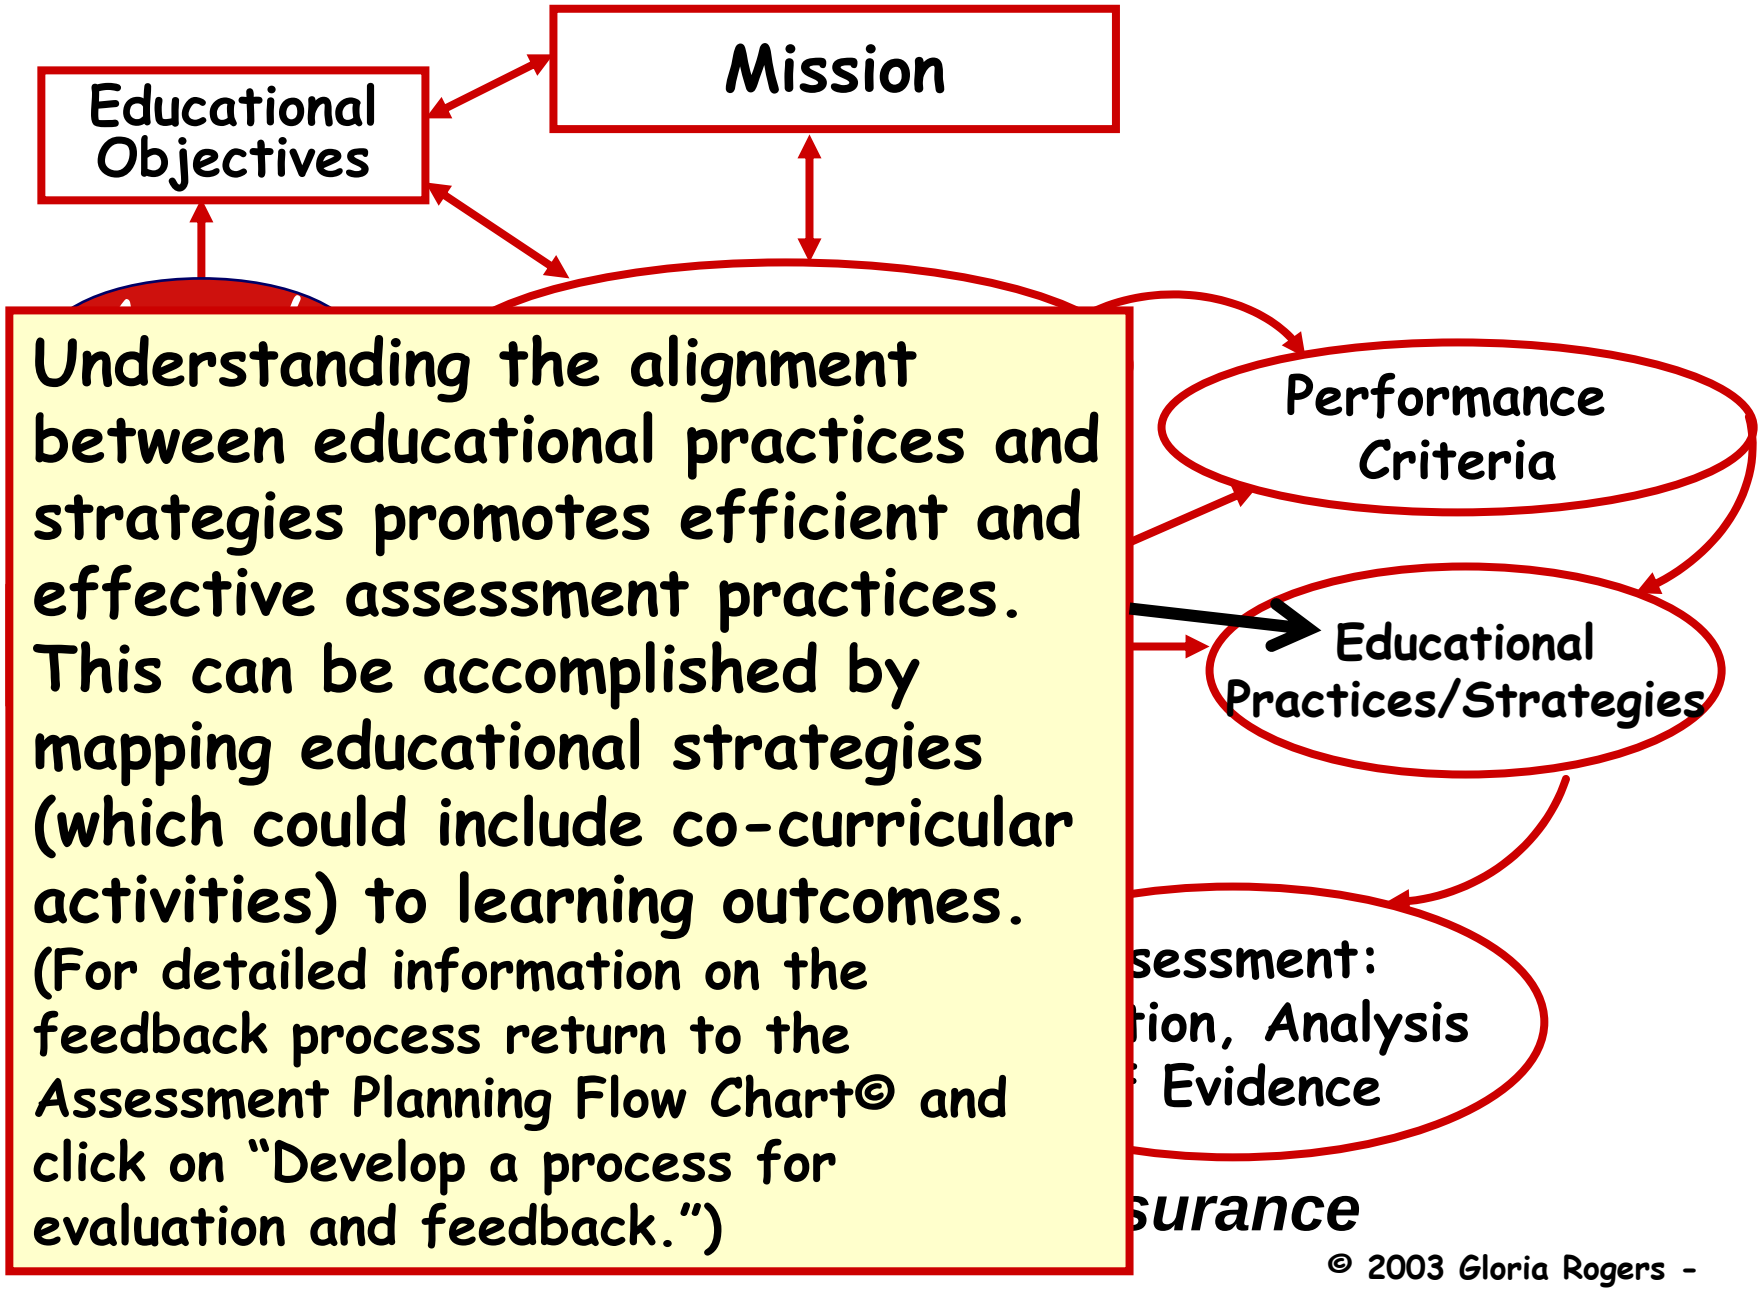


Performance criteria are those statements which define the learning outcomes. These criteria are high level indicators that represent the knowledge, skills, attitudes or behavior students should be able to demonstrate by the time of graduation that indicate competence related to the outcome.

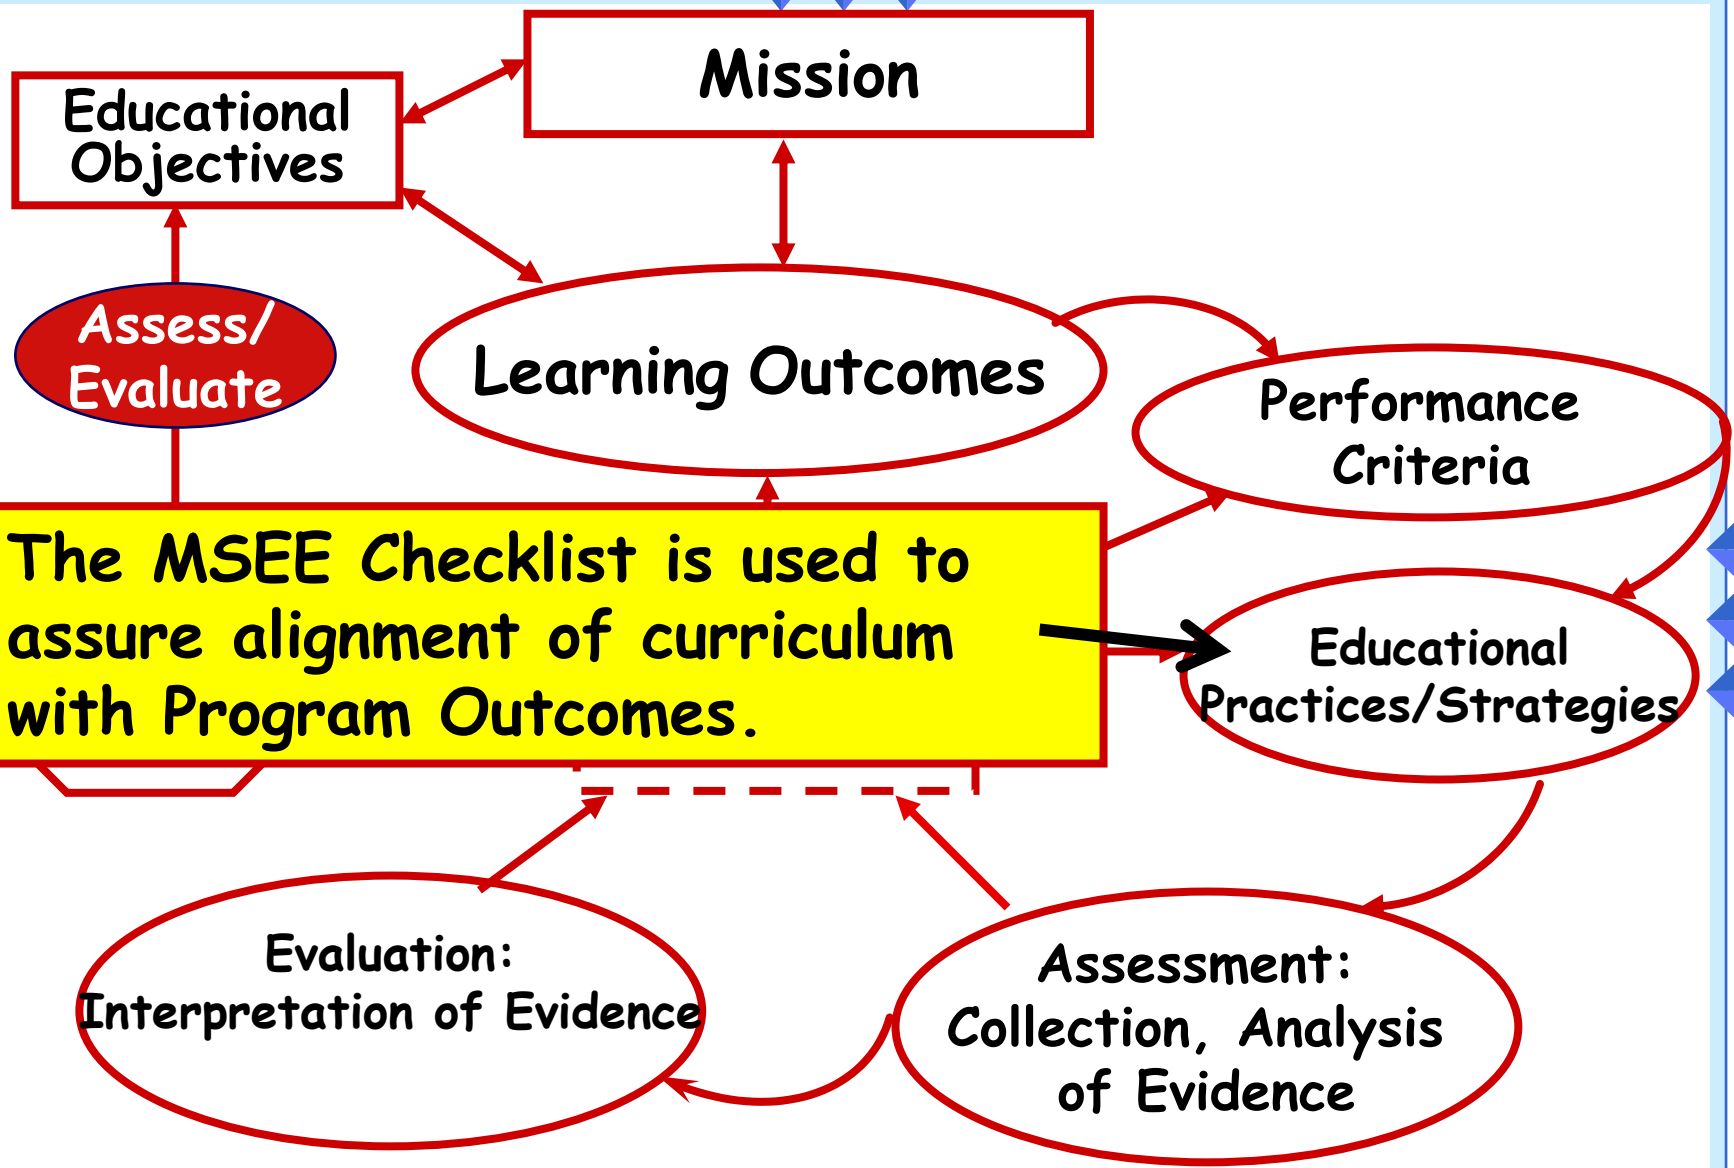
Assessment for Quality Assurance



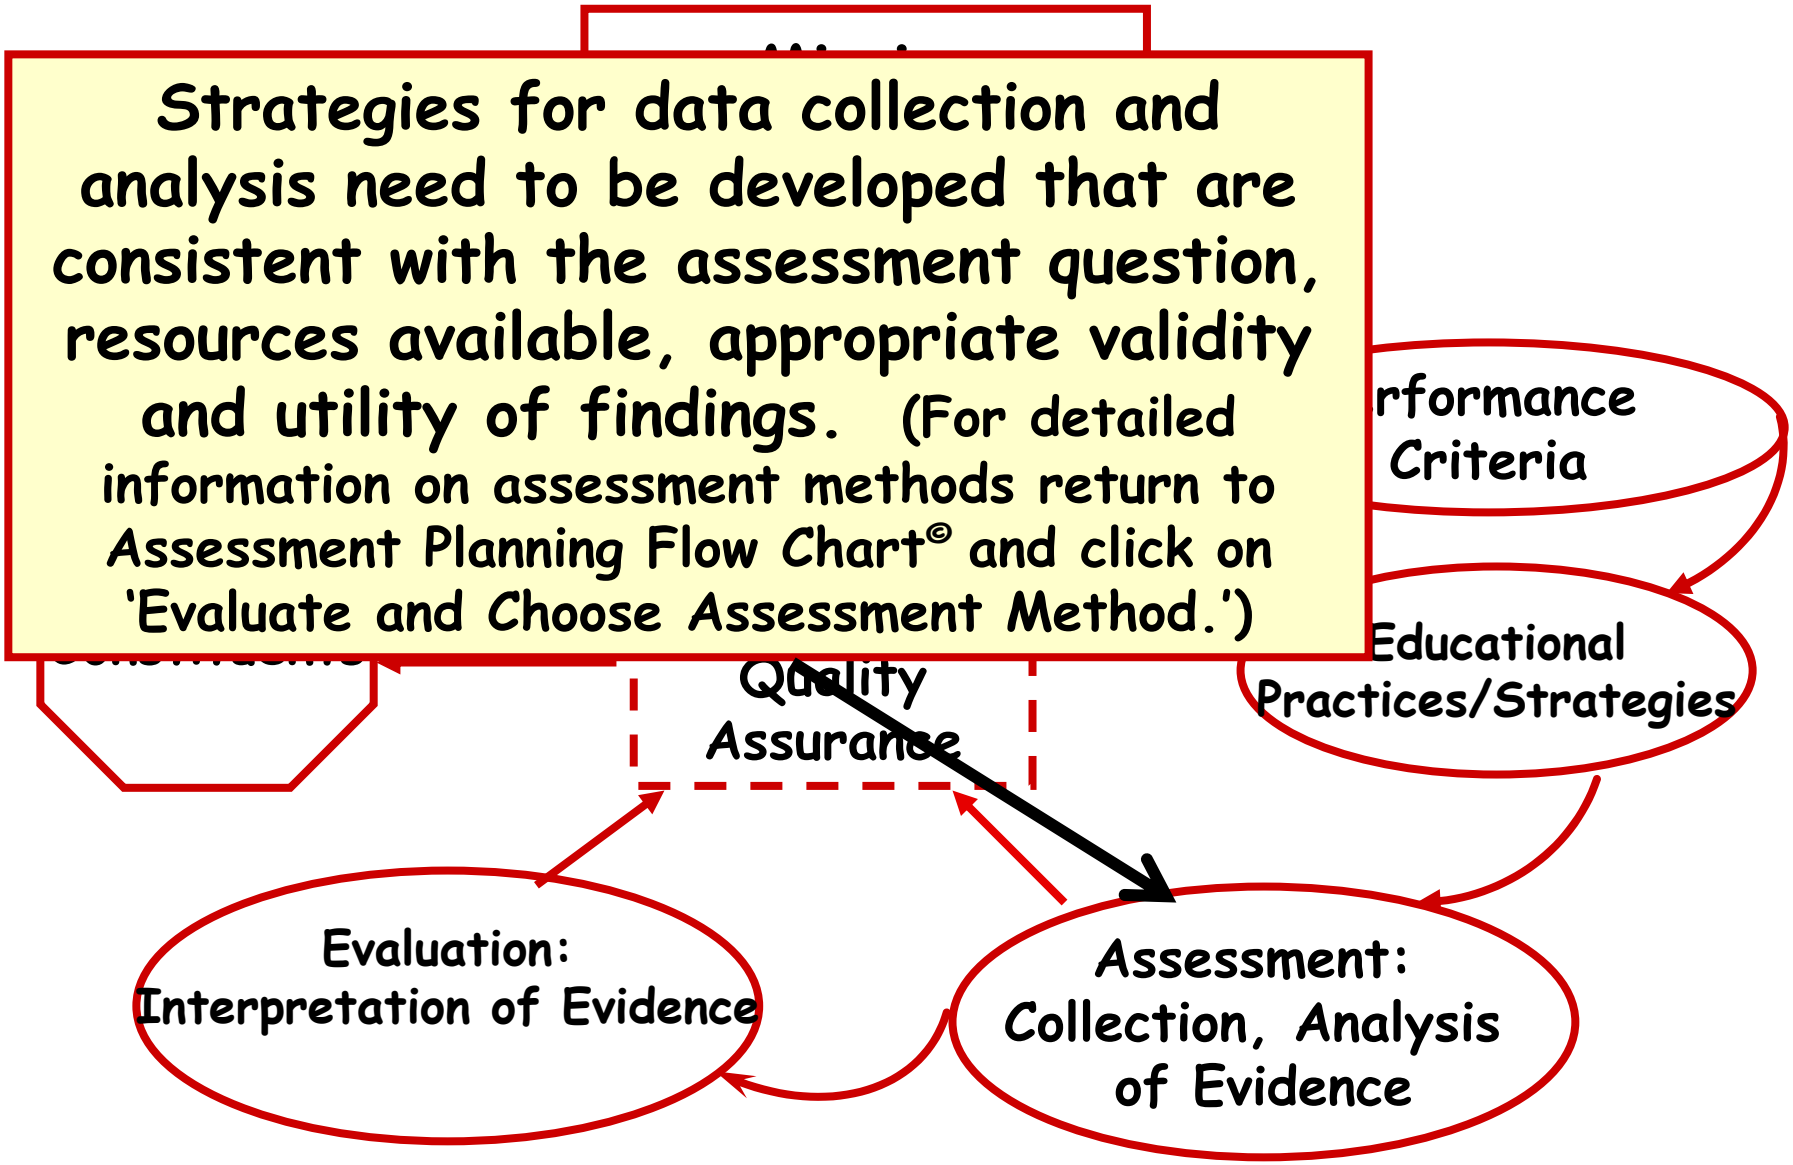
Assessment for Quality Assurance



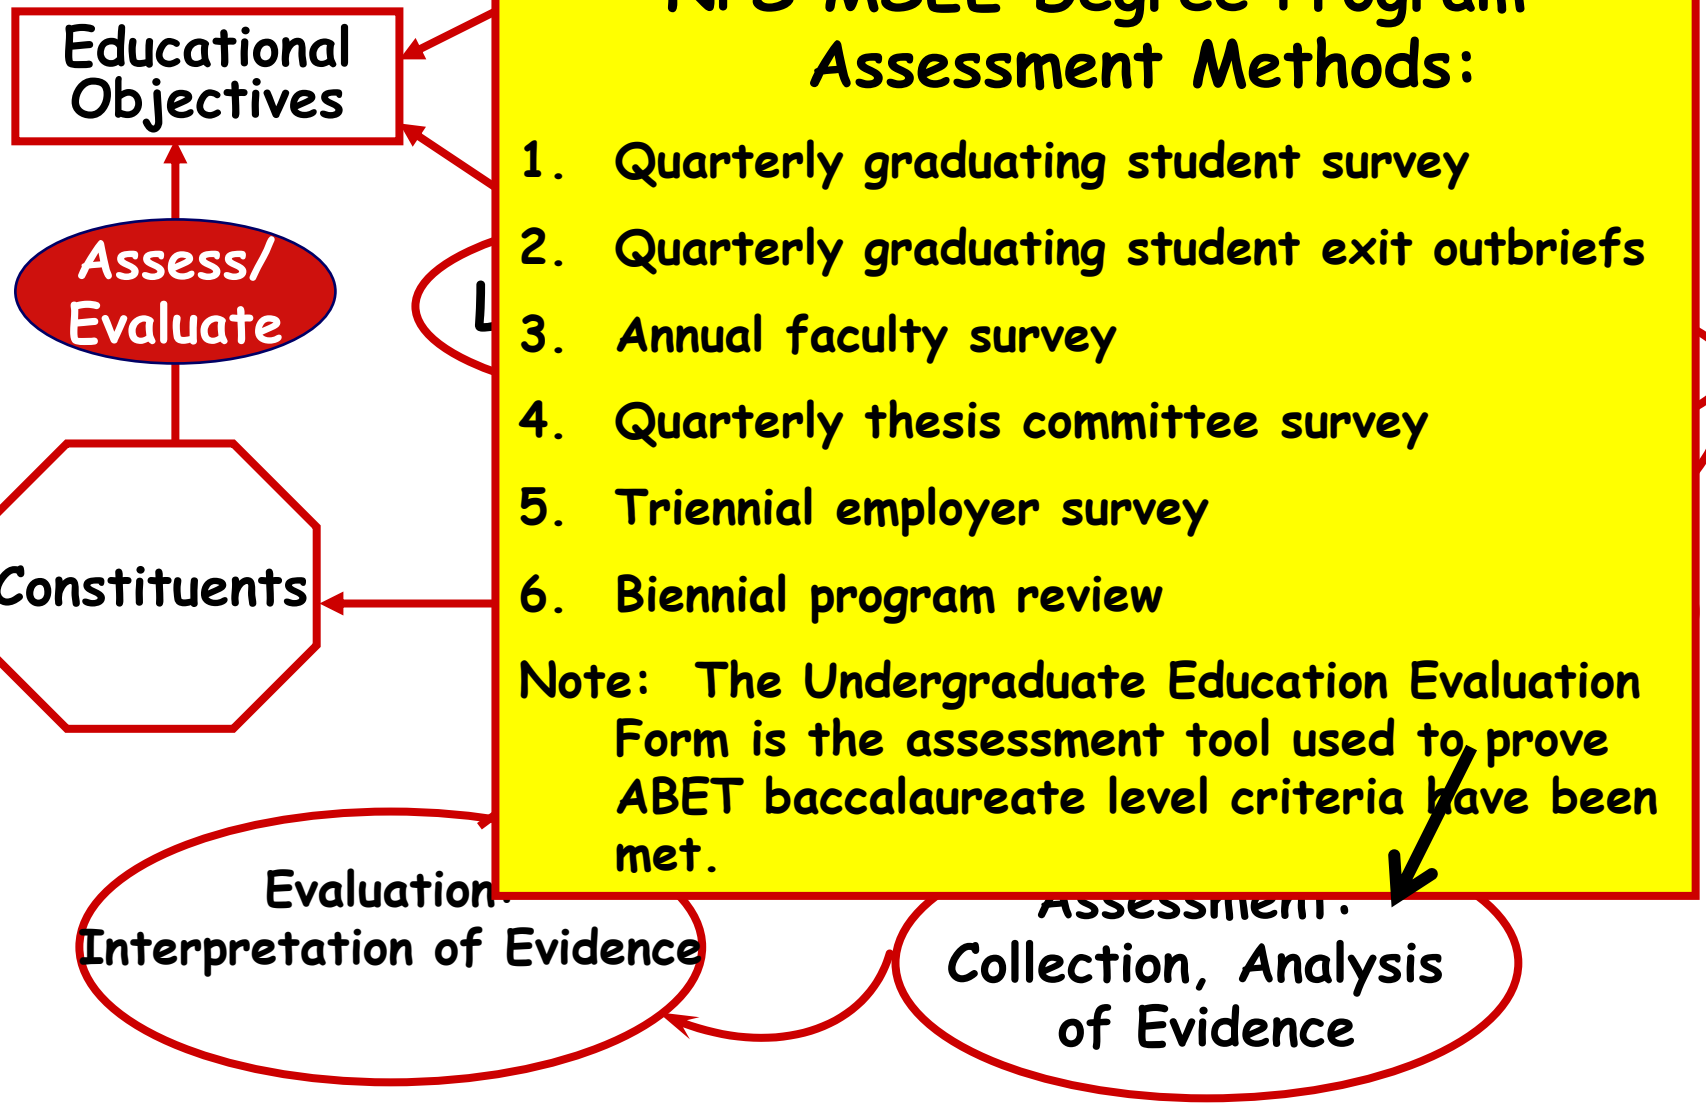
Understanding the alignment between educational practices and strategies promotes efficient and effective assessment practices. This can be accomplished by mapping educational strategies (which could include co-curricular activities) to learning outcomes. (For detailed information on the feedback process return to the Assessment Planning Flow Chart© and click on "Develop a process for evaluation and feedback.")



Assessment for Quality Assurance



Assessment for Quality Assurance

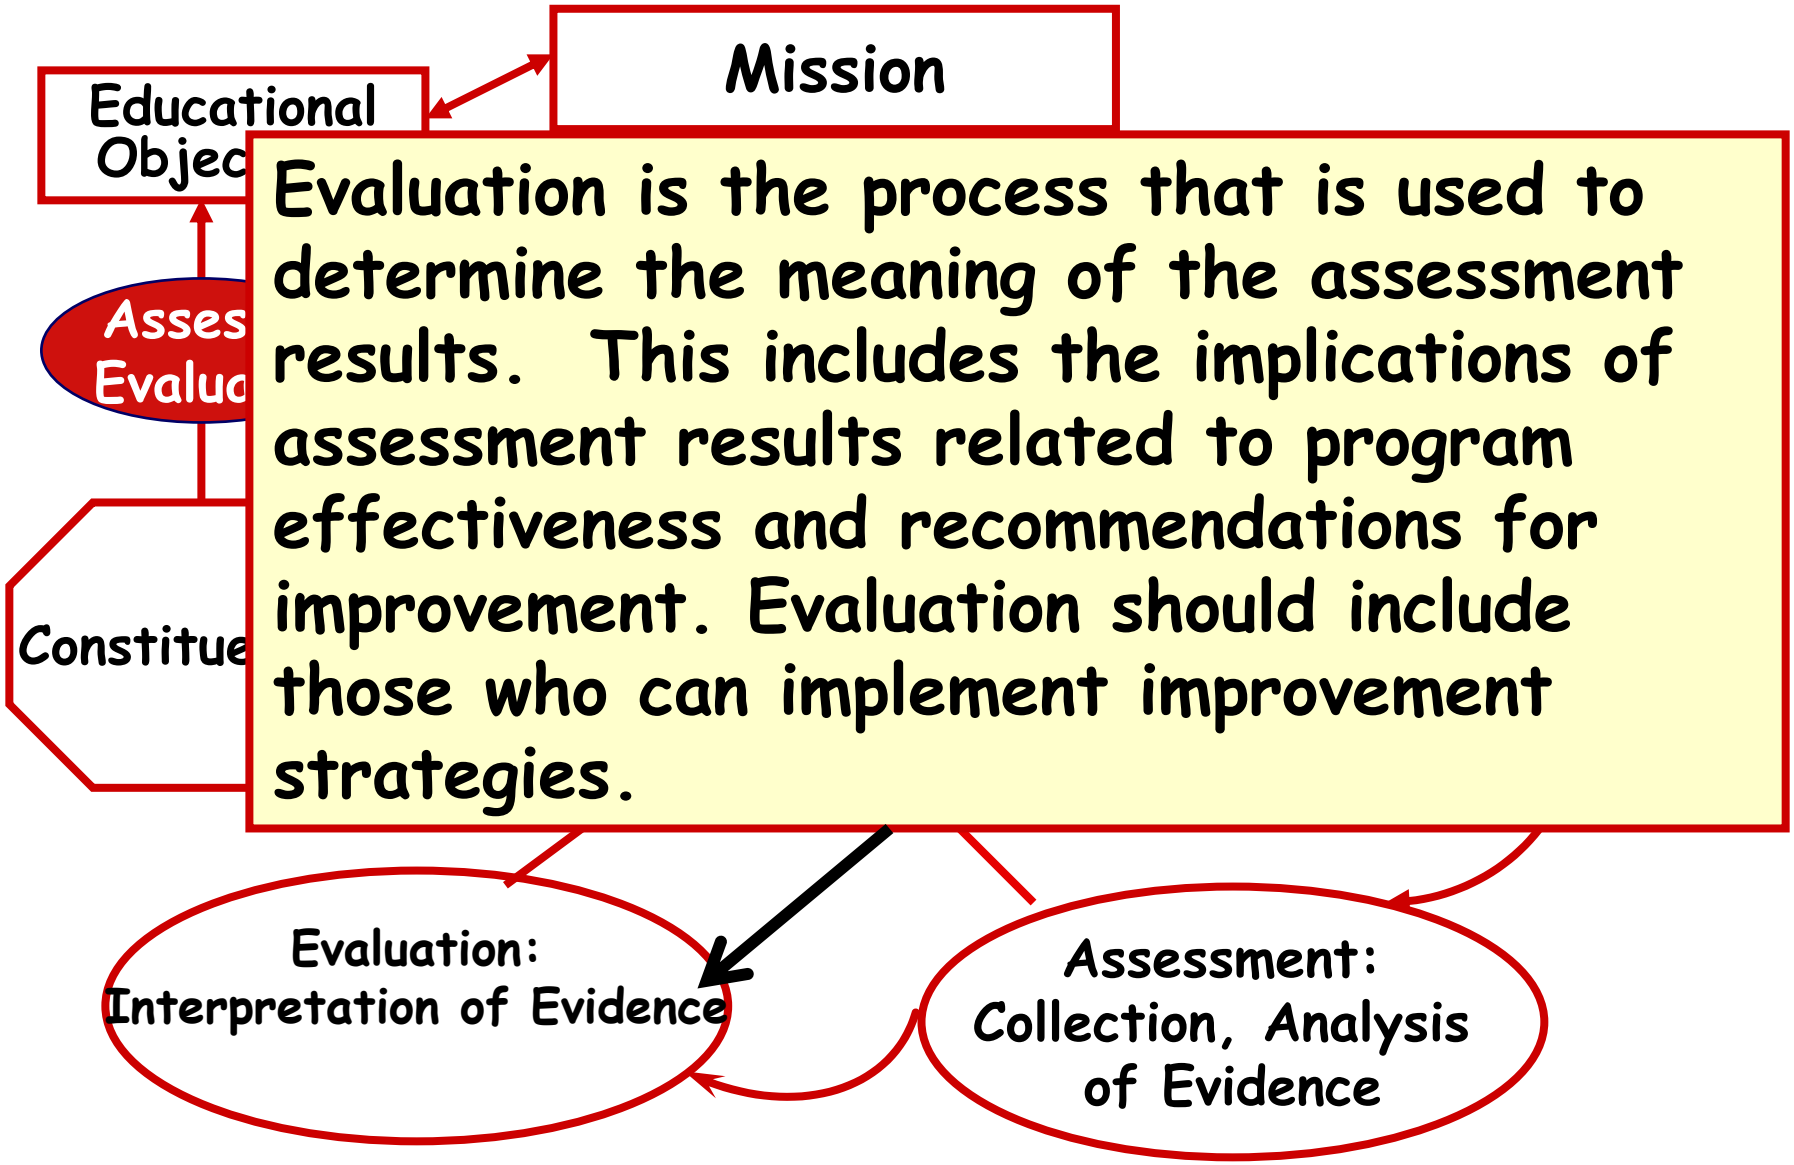


NPS MSEE Degree Program Assessment Methods:

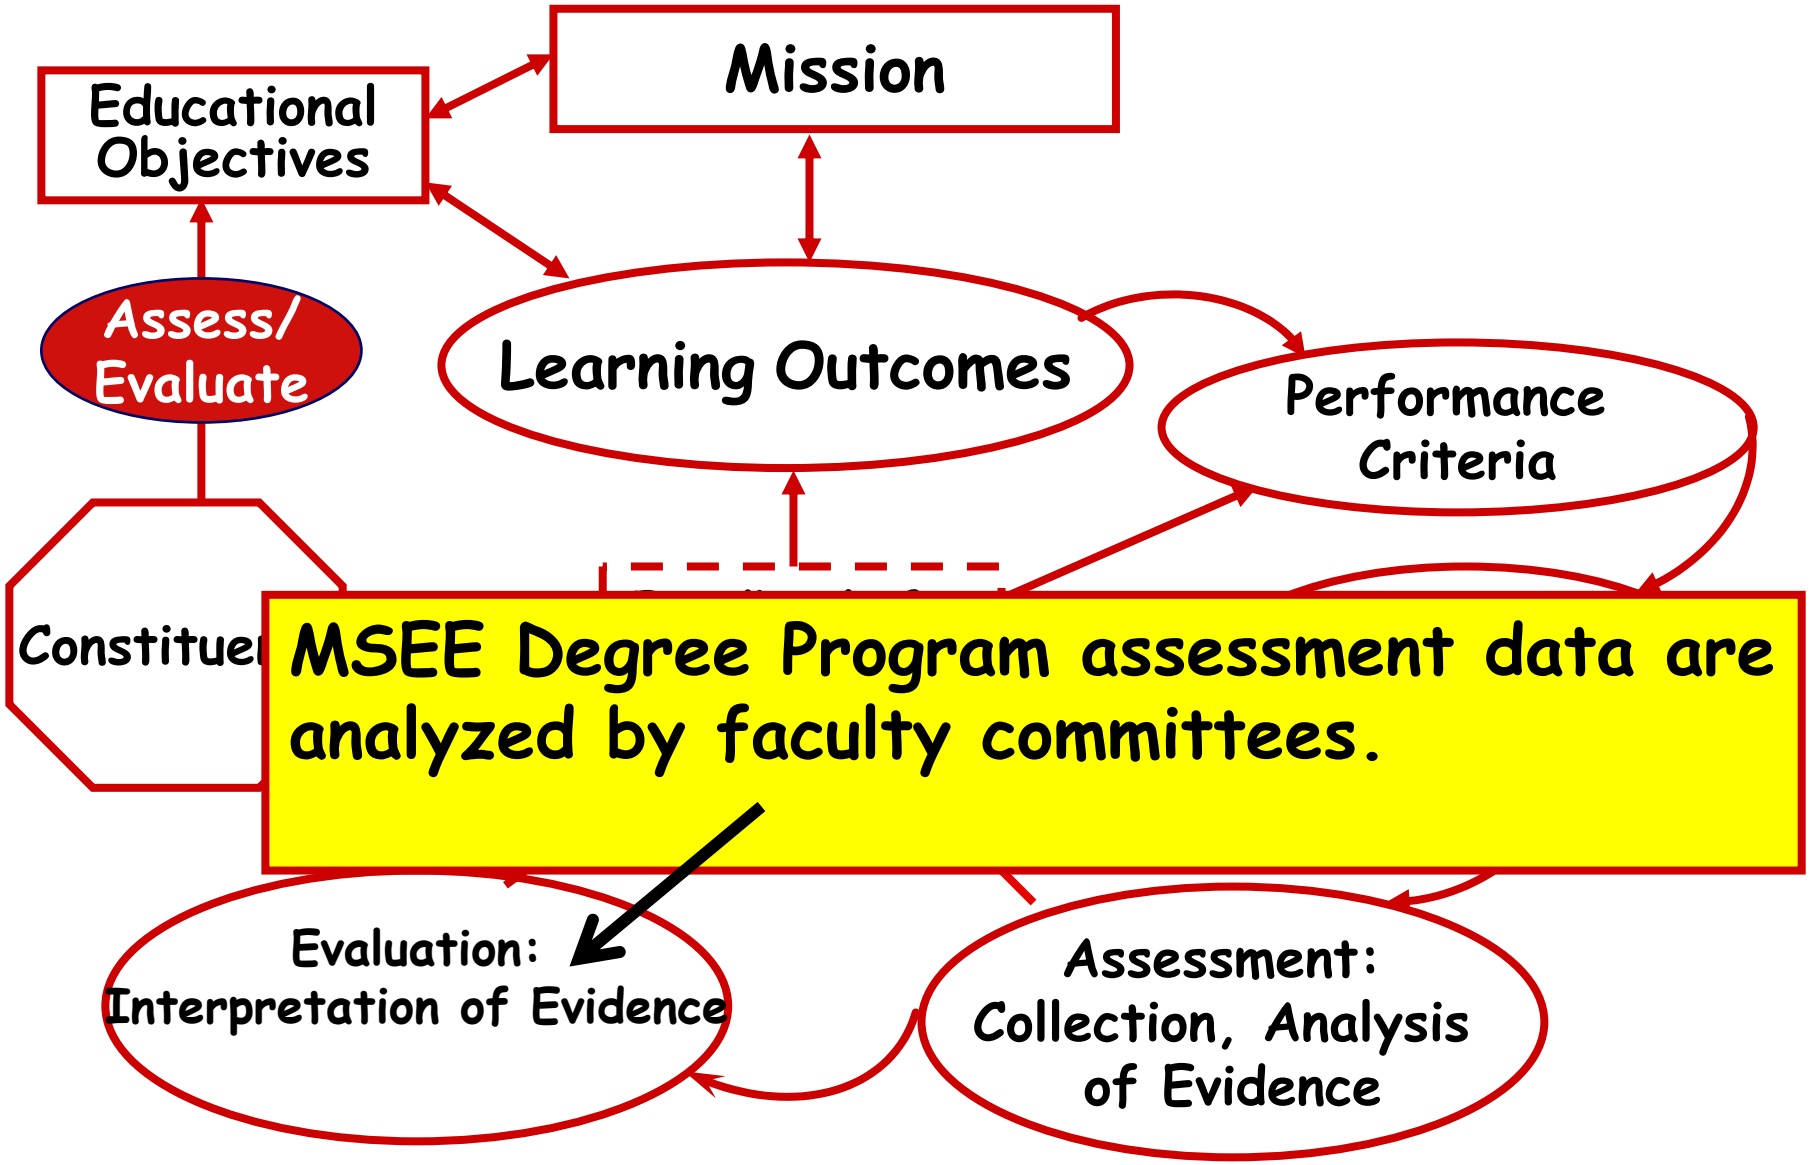
1. Quarterly graduating student survey
2. Quarterly graduating student exit outbriefs
3. Annual faculty survey
4. Quarterly thesis committee survey
5. Triennial employer survey
6. Biennial program review

Note: The Undergraduate Education Evaluation Form is the assessment tool used to prove ABET baccalaureate level criteria have been met.

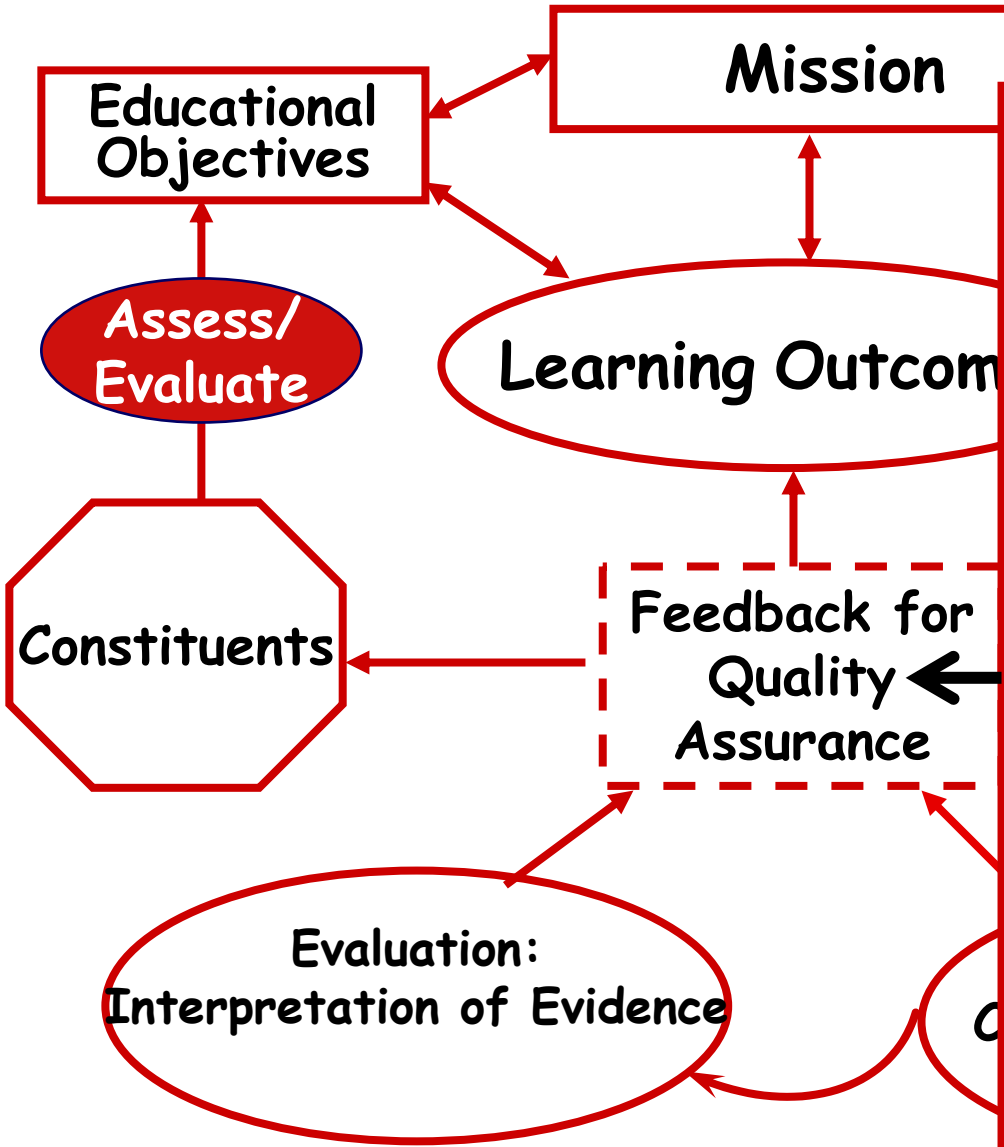
Assessment for Quality Assurance



Assessment for Quality Assurance



Assessment for Quality Assurance



The feedback process is critical to creating and maintaining a systematic quality assurance system. When successfully implemented, all elements of the quality assurance process interact with one another. (For detailed information on the feedback process return to the Assessment Planning Flow Chart© and click on 'Develop a process for evaluation and feedback.')

NPS Educational Effectiveness Task Force
(2007-present)

Dr. Robert Dell, Chair, Department of Operations Research, Graduate School of Operations and Information Sciences; Co-Chair, WASC Steering Committee

Lieutenant Colonel Bryan Hudgens, US Air Force**,** Lecturer, Graduate School of Business and Public Policy; AACSB Coordinator

Dr. Knox Millsaps, Chair, Department of Mechanical and Astronautical Engineering, Graduate School of Engineering and Applied Science.

Dr. Daniel Moran, Associate Professor of National Security Affairs, School of International Graduate Studies; Chair, Faculty Council

Dr. Doug Moses, Vice Provost for Academic Affairs; Co-Chair, WASC Steering Committee

Dr. David Olwell, Chair, Department of Systems Engineering; Graduate School of Engineering and Applied Sciences

Ms. Ali Rodgers, Faculty Development Director, Academic Affairs

Ad hoc:
Dr. Fran Horvath, Director of Institutional Planning and Advancement; WASC Accreditation Liaison Officer

July 6, 1999

Robert C. Chaplin, RADM

Superintendent

The Naval Postgraduate School

One University Circle, Room M-12

Monterey, CA 93943-5002

Dear Superintendent Chaplin:

At its meeting on June 23-24, 1999, the Commission considered the report of the evaluation team that visited your campus February 2-5, 1999. The Commission also had available to it the self study prepared by the Naval Postgraduate School in preparation for this visit and the Naval Postgraduate School's May 10, 1999 response to the team report. The Commission appreciated NPS's response to this report and the opportunity to meet with Richard S. Elster, Provost and Academic Dean; Gilbert Howard, Director of Academic Planning; M. R. Bills, Deputy to the Superintendent; and you. Your comments were very helpful.

The Commission commends the Naval Postgraduate School for utilizing an innovative non-traditional, topics-based accreditation review and self study. NPS elected in consultation with WASC to focus its self study on:

· Position(ing) NPS to meet the Challenges of the Revolution in Military Affairs;

- Increasing the efficiency and effectiveness of NPS through the Assessment of Institutional Performance;
- Develop(ing) NPS as a Department of Defense Technologically Integrated University of the Future

- Develop(ing) a consensus within each service on the importance of graduate education as an investment in human capital;

· Obtaining the resources needed to accomplish its mission;

- Recruiting, developing, and retaining high-quality staff and faculty; and

· assessment.

The self-study documentation also included a portfolio in which NPS addressed each of the nine WASC Standards.

The Commission was gratified that this approach resulted in active campus-wide commitment and involvement precipitating a highly effective analysis and critique of your planning themes as well as a positive and rewarding team review for WASC and the Naval Postgraduate School.

The Commission was pleased to observe your statement "applaud(ing) the efforts of WASC to move into new models of accreditation" and your "look(ing) forward to continuing to work with WASC in the future." The Commission observed that the evaluation team shared your enthusiasm for this new model approach when it stated that "the planning process stimulated by the WASC Self-Study and the NPS Strategic Plan has energized the campus, caused significant reorganization, and stimulated campus-wide discussions on teaching and assessment."

The evaluation team found much about the Naval Postgraduate School to commend. The team found NPS deeply concerned about its students; dedicated to research, teaching and student development and creating an active learning environment; enthusiastic and effective about faculty efforts to sustain curriculum innovation and improvement; expanding diversity; fostering respect, and committed to integrating technology into all aspects of the School and using it effectively in the delivery of instruction on- and off-campus. The team also found at NPS a bold sense of institutional confidence rooted in a record of academic excellence, "a superb faculty and very talented and motivated student body."

The Commission commends NPS for its efforts to respond to concerns identified by the previous visiting team and in the last Commission action letter . There has been demonstrable progress, and the Commission finds NPS a fundamentally sound institution that is fulfilling its mission effectively.

The evaluation team identified a number of important recommendations for further consideration by the institution. The Commission endorses those

recommendations. In addition, the Commission wishes to highlight a number of areas warranting special attention for the NPS community to address as it looks to the future.

Inclusiveness and Diversity: The Commission commends NPS for its commitment to diversity. However, the Commission shares the evaluation team's perspective that NPS could be more successful in the area of recruiting and retaining women and minority faculty and encourages NPS to bolster its efforts to recruit and retain qualified women and underrepresented minorities for its faculty. The Commission views campus climate playing a major role in attracting and retaining faculty, and expects NPS to examine how the social experiences that contribute to the high retention of its present faculty might be used to attract more minority and women faculty to its campus.

Program Assessment and Educational Effectiveness: While there is evidence of significant assessment activities underway on the campus, the Commission agrees with the team observation that NPS "must take further steps to improve its assessment process and to institutionalize a formal (systematic) academic program review process centering on external validation of academic quality." The team sees NPS as a "festival of opportunities to be taken . . . to cement its place in both naval and academic constellations . . . ensuring that its academic programs are clearly and firmly perceived as excellent." The Commission strongly endorses the team's analysis. The Commission sees the need for NPS to go the next step and make assessment an integral part of its institutional culture. NPS is thus encouraged to expand its assessment efforts and to integrate the results into all aspects of campus planning, with the goal of improving programs, teaching effectiveness and student learning. The Commission encourages NPS to build an assessment infrastructure that will permit it to systematically use the information that has been gathered. The expected outcomes of such an undertaking would be (1) greater collaboration among faculty, staff and administration in institutional direction and growth; (2) greater understanding of and appreciation for the effectiveness of co-curricular programs, faculty governance, organizational structures, and research activities; and (3) a fusing of financial realities with program needs in the decision-making process.

Technology and Learning Resources: The Commission suggests that the Naval Postgraduate School examine carefully how it will meet the special opportunities and demands of the transition to becoming a more technologically integrated "University of the Future" to meet the needs of the "Revolution in Military Affairs." This evolution will require evaluation by the faculty of traditional teaching methods and challenge the faculty to engage in dialogue

and educational innovation to explore how new computing/information technology and learning resources may serve the needs of on- and off-campus programs. As this transition occurs, the assessment plans developed by NPS should be directed to evaluate the educational effectiveness of these efforts.

The Commission endorses the team's recommendation that the Naval Postgraduate School sustain its commitment to "comprehensive training of new and existing faculty, to prepare them for the challenges and opportunities of the Revolution in Military Affairs and the special demands of the technologically integrated University of the Future. This includes the opportunities, demands, and special problems of distance learning technologies, as well as more traditional teaching processes."

Planning, the Curriculum and the Quality of Instruction: The Commission was most impressed with the strategic and curricular planning directions reflected in the NPS self study and expects NPS to sustain the momentum to operationalize and implement these academic and strategic initiatives. The Commission believes that NPS is at a critical juncture in that it is now poised to implement, at all levels within the campus community, a set of sanctioned and widely understood curricular and planning directions. The Commission encourages NPS to be mindful of the opportunity to monitor outcomes measures and resource requirements to accomplish the identified institutional goals and directions. The Commission expects the School to develop an effective system of data collection and analysis to support its planning initiatives and processes. By integrating assessment data into its decision-making process (including planning, resource allocations, and academic program reviews), NPS will allow faculty, staff and administration to continue being involved in discussing the School's direction and in setting policies.

The Commission endorses the team's recommendation that as the campus moves forward in the implementation of its planning strategies, it will need to assure that: it integrates technology into both academic programs and administrative services, and that it sets priorities, assigns resources appropriately, incorporates measurements, and assures widespread campus involvement. The Commission sees this approach maintaining the record of academic excellence and strong involvement of graduate students in research and scholarship that NPS has established.

The Commission acted to:

1. Reaffirm the accreditation of the Naval Postgraduate School.

2. Request **ten (10)** copies of a Fifth-Year report due March 1, 2004. Enclosed is a memorandum providing guidance on the format and content of the Fifth-Year report.

3. Schedule the next comprehensive visit for the spring of 2009. A draft of the self- study undertaken in preparation for the visit will be due October 15, 2008. The final self-study report will be due two months before the site visit.

Please contact me if you have questions or comments about this letter or the action of the Commission.

Sincerely,

Ralph A. Wolff

Executive Director

Academic Policies Survey Report, June 2008

Introduction

The Naval Postgraduate School (NPS) maintains a constant commitment to high quality education and research that fulfills a unique need – that of graduate education relevant to the mission of the Navy and Department of Defense (DoD). The School has consistently monitored the DoD uniqueness and relevance, as well as other important qualities over the years.[1]

As part of the NPS Western Association of Schools and Colleges (WASC) re-accreditation process, the *2008 Academic Policies Survey* was conducted to begin to document the special academic policies, processes and practices that exist within each of NPS's schools and academic departments. The survey asks for input from each department concerning practices in three broad academic areas:

- **Faculty Development**: What processes do you have in place designed to support and review faculty achievement?
- **Education Program Review**: What processes do you have in place designed to assure the quality and effectiveness of education programs?
- **Student Learning**: What processes do you have in place designed to document and improve learning achieved by students?

As part of the required WASC review process, this effort supports the self-study of NPS, broadly documenting how NPS operates and how effective education is achieved at NPS.

Methodology

The survey consisted of a 19 item open-ended questionnaire, representing the three broad academic areas, as identified above. The survey targeted input from deans and chairs of each NPS academic department; they were notified via email about the survey posting and for their valued input. They were given a two week response period. The total number of academic departments surveyed was 14, representing four schools. There was a range of 14-16 respondents per survey item, resulting in a response rate of 67-76 percent (2 respondents from 1 department). Each school and academic department represented in this study is listed below:

SIGS	National Security Affairs

Results

Analysis

A content analysis of the survey data was performed in two steps. First, responses for each question were grouped into two categories: *Yes* or *No.* Based on the total number of responses per category, a percentage of total respondents was calculated for each. Second, recurring issues were identified among the respondents; however, given the small number of chairs/deans surveyed, most responses reflected the unique academic processes or operations of those departments.

While most respondents provided extensive and detailed responses to the questions, few responses were brief and non-descriptive. A summary of results are provided in Appendix A; actual response data are provided in Appendix B.

Findings

An overall distribution of the three academic areas is represented in Table 1. Of the 19 survey items, four have a *No* response level of 33% or less.

Academic Policies Survey Report, June 2008

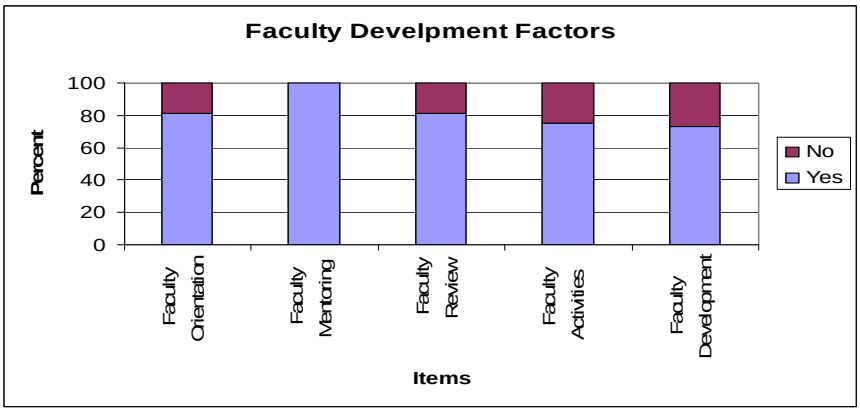
16. Student Feedback	100	0
17. Course Journals	73	27
18. Thesis Assessment	100	--
19. Distance Learning Assessment	33	67

A summary of the survey findings, as organized by the three academic areas, are as follows:

Faculty Development: What processes do you have in place designed to support and review faculty achievement?

There are five factors which address *Faculty Development* (faculty orientation, faculty mentoring, faculty review, faculty activities, and faculty development, Figure 1). For all five factors, the analysis show that the majority of respondents (73% and above) indicate their department has a strong system in place supporting faculty achievement.

Figure1

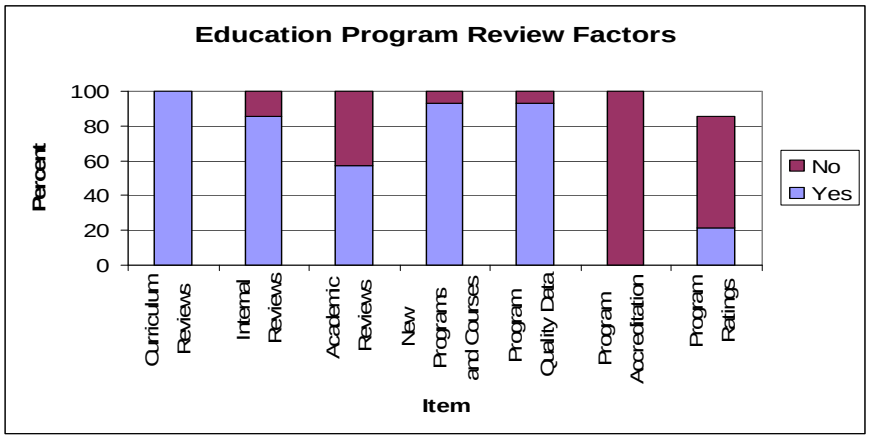


Academic Policies Survey Report, June 2008

Education Program Review: What processes do you have in place designed to assure the quality and effectiveness of education programs?

There are seven factors which address *Education Program Review* (Figure 2). The analysis found 4 of the 7 factors as being strong toward measuring the quality and effectiveness of their department's educational program. Specifically, the factors are curriculum reviews, internal reviews, new programs and courses, and program quality data. Two factors (program accreditation and program ratings) have different meanings. The "No" responses indicate no additional requirements for these factors. One factor (academic reviews) was in the middle.

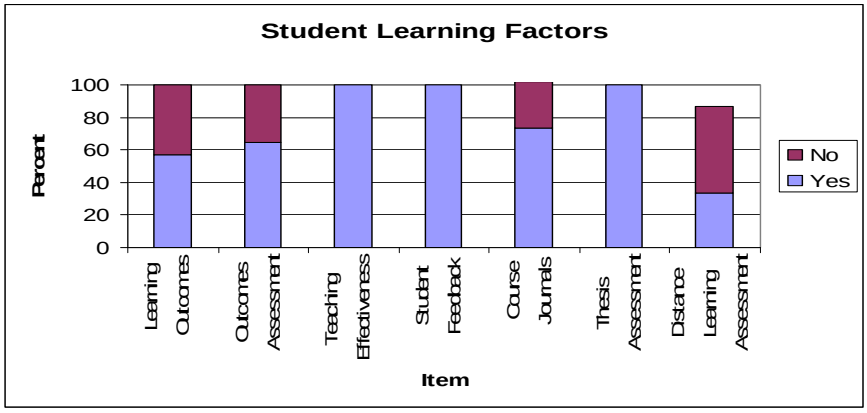
Figure 2



Student Learning: What processes do you have in place designed to document and improve learning achieved by students?

There are seven factors which address *Student Learning* (Figure 3). The analysis showed 4 of the 7 factors as a strong measure of student learning. Specifically, the factors are teaching effectiveness, student feedback, course journals, and thesis assessment. Two factors (learning outcomes and outcomes assessment) were in the middle. One factor (distance learning assessment) has a different meaning on its assessment. The "No" response indicates no additional requirement for this factor.

Figure 3



Conclusions and Recommendations

The *June 2008 Academic Policies Survey* addressed input from NPS's schools and academic departments regarding faculty development, education program review, and student learning. The academic components of the survey consisted of 19 factors. The outcome of this effort documented and examined the academic policies, processes, and practices, necessary for continued educational program development, and for accountability and accreditation.

Overall, 73% of respondents sited evidence of effective organizational structures and processes.

<u>Faculty Development</u>
Analysis showed strength among all NPS academic departments for having a process in place designed to support and review faculty achievement, for all five factors measuring this area.

<u>Education Program Review</u>
The majority of factors for this academic area show no weakness. Findings of two factors from this area are reflective of NPS review processes.

- Program accreditation is not a requirement for some academic programs, while some individual academic degree programs have separate accreditation by ABET, NASPAA or AACSB. Beyond these known accrediting bodies, no additional ones were identified from the survey.

- Program ratings are not as applicable. NPS is not comparable to other elite universities due to the unique DoD and military focus. However, when NPS is ranked among other top universities, the Public Affairs program has been rated within the top 50 universities nationally; the National Security Affairs Department was ranked ninth nationally in the area of International Affairs and Development in the Faculty Scholarly Productivity Index. The department of Applied Mathematics was noted in the American Mathematical Society (AMS) for its viable PhD program, and Operation Research was ranked fourth from 50 national universities.

Student Learning

- Learning Outcomes. Over half of the respondents (57%) have learning objectives for their department or degree program published either on the department website, in the course catalog, as an internal document, or specified in the syllabi produced by each faculty member. Since nearly half of the respondents (43%) do not have written learning outcomes, this factor is an area for consideration and enhancement among some departments.

- Outcomes Assessment. While the majority of respondents (64%) indicate their department has written procedures for determining if students have achieved learning outcomes, some departments (36%) require development within this area.

- Distance Learning Assessment. When asked if student evaluation processes are different for resident versus distance learning students, 67% indicated that they were not. Therefore, the “No” response indicates there are no major differences in the process of evaluating the two programs rather than a weak assessment.

Since some responses were not descriptive, assessment of these factors may not reflect actual departmental practices. It is well within our institutional interest to follow-up on these areas for further clarification and assessment.

Appendix A.

	Responses		Response Issues
Faculty Development:	**%** Yes	**%** No	
Faculty Orientation: *Does your department have an orientation program, formal or informal, for newly hired faculty? What steps are taken to assist new faculty toward success upon arrival at NPS?*	81% Formal 37.5% Informal 43.8%	19%	• Receive Formal briefing • Assigns Mentors • New Orientation Checklist • Meet with Chair; Set Goals
n=16			
Faculty Mentoring: *Is there a formal or informal program of faculty mentoring within your department? Please describe.*	100%		• All departments have a faculty mentoring system in place, with a good majority (approximately 75%) applying a formalized program, to include an annual report.
n=16			
Faculty Review: *Beyond the NPS institutional Promotion and Tenure (P&T) process, does your department have any systematic processes for the review and evaluation of faculty accomplishments? (e.g., Such processes might be related to teaching performance, research accomplishments, reappointment decisions, annual paystep actions, etc.) Please describe.*	81%	19%	• Most go beyond P&T process for the review and evaluation of faculty accomplishments. • Review Committee. Tenure based on research publications in top-tier journals, teaching evaluations; • Annual reviews – determine merit and pay-step action • 3rd year review for tenure-track.
n/a=1 n=16			
Faculty Activities: *All NPS faculty complete annual work plans, outlining planned activities for an upcoming year, and Faculty Activity Reports (FARs) summarizing accomplishments for the previous year. Beyond these two mechanisms, are there are additional systematic processes by which your department tracks faculty accomplishments? Please describe.*	75%	25%	• 69 -75% have an additional system for tracking faculty accomplishments: - Department newsletters (4); - Quarterly assessment reviews/updates to work plans (5); - Record keeping of faculty accomplishments and activities during the year (3)
n=16			
Faculty Development: *Please*	73%	27%	• Provide some additional process or

mention any other policies or processes, not mentioned above, that are practices in your department for supporting and assessing the success of your faculty.			emphasizes an approach for assessing success, i.e. faculty meetings (4).
n=15			
Education Program Review:			
Curriculum Reviews: *NPS has a long-established process of formal curriculum reviews with sponsors, which nominally occurs biannually. Does this process cover all of the degrees, curricula or programs in your department? How often, and by what means, are your curricula reviewed (formally or informally) in consultation with curriculum sponsors or stakeholders?*	100%		• All respondents have at a minimum, an annual, or biannual review with their sponsors and representatives
n=14			
Academic Reviews: *NPS has instituted a program of "Academic Program Review" (APR), the purpose of which is to support and facilitate external "peer" review of NPS degree programs by qualified academics. This APR program is not yet wide-spread across campus and so has touched few departments. Beyond APRs, does your department engage in any process, formal or informal, by which academics external to your department have provided assessments or critiques of your programs? External observers [e.g. visiting committees]?*	57%	43%	• Over half have some type of external assessment • Not much elaboration on responses
n=14			
Internal Reviews: *Do you also have periodic or ad hoc procedures for reviewing and adjusting the contents of your curricula internally, e.g. during annual course planning? If so please describe.*	93%	7%	• Most departments have an ongoing review and evaluation of curricula content

Academic Policies Survey Report, June 2008

n=14			
New Programs and Courses: *How does your department develop new curricula? New courses? In particular, does your department have an acknowledged curriculum committee (or analogous group) whose purpose includes the review and/or initiation of new curricula?*	93%	7%	• All Departments but one have at least a committee, counsel, group, or process for review of new curricula
n=14			
Program Quality Data: *Apart from SOFs, does your department regularly collect information (from students, alumni, faculty, sponsors, visitors, etc.) for the purpose of monitoring program quality? If so, please describe. How is this information used to validate or improve current programs?*	93%	7%	• Student data are collected for monitoring program quality o effectiveness of student performance in follow-on commands o various methods are specified for soliciting student feedback, i.e. interviews, surveys/questionnaires
n=14			
Program Accreditation: *Some individual academic units and degree programs at NPS have separate accreditations by ABET, NASPAA or AACSB. Those three are know and need not be repeated here. Beyond that, are there individual academic or professional accreditations or certifications that are available to academic programs within your department? Please identify the potential accreditation or certification and indicate its applicability to your program(s).*		100%	• No individual academic or professional accreditations or certifications within the department.
n=14			
Program Ratings: *Program ratings exist in various forms. There are program or school ratings that exist in the popular press (e.g., US News). Some*	29%	71%	• Public Affairs Program rated in top 50 by US News in past

professional societies assess and rate programs in their discipline. On occasion academic research studies conduct assessments or rating of schools or programs. Do you know of external assessments or ratings that are applicable to your department or programs? Please mention.			
n=14			
Student Learning:			
Learning Outcomes: *Apart from the ESRs negotiated with your curriculum sponsors, does your department have written learning outcomes for its degree programs? If so, where are they located? Are your programs designed to satisfy the requirements of external professional licensing or certification organizations? If so, please describe.*	57 %	43%	• Most of this group (6) have learning objectives for the department/degree program; published either on website, syllabi produced by each faculty member, or internal document. • Some (2) instructors identify learning objectives along with their courses as well as specify in course catalog. • 2 depts have external licensing or certification
n=14			
Outcomes Assessment: *Does your department have written procedures for determining if students have achieved the learning outcomes described in your answer to question 1? If so, where are they located? If these procedures are not written but there is a common practice, please describe.*	64%	36%	• Most respondents (9) indicated some kind of procedure for determining achievement of student learning outcomes; although some (4) referred to thesis, ABET, Exit Survey as their means to accomplishing this. One department identified a criteria check; another department relies on written and oral demonstration of learning outcomes.
n=14			
Teaching Effectiveness: *The NPS SOF process provides one indicator of teaching effectiveness. Beyond the SOFs, does your department engage in any systematic practices designed to appraise and/or improve*	100%		• Class visits, student interviews/talk, observe teaching by "outstanding" teachers and peer program (teaching buddies); • Guidance by course coordinators; share written comments by students/surveys

teaching? (Examples might include classroom visits, review of course syllabi, peer review of teaching by colleagues, student surveys, etc.). Please describe.			• Only one department responded for " PPT actions".
n=15			
Student Feedback: *Please describe formal or informal mechanisms within your department designed to capture student feedback concerning their experience in their graduate program. (Examples might include student interviews either during the program or upon graduation, periodic student surveys, meetings with academic associates or program officers, etc.)*	100%		• All respondents indicate they have a system to capture NPS experience; mostly student interviews, meetings, questionnaires, and representatives; held quarterly and at graduation. • Many respondents (9) have a formal system of gathering student feedback.
n=15			
Course Journals: *A "Course Journal" refers to an organized collection of course materials (e.g., course outline, syllabus, schedule, list of assignments) assembled at the completion of a course that provides a record of the course as taught. Submission of Course Journals by instructors and maintenance of the collection of Course Journals by the department was once common practice at NPS. Are Course Journals, or other similar sets of course records, submitted and maintained in your department, and used for assessment.*	73%	27%	• The majority of respondents (11) have a course journal; about one third (5) maintain journal data in an electronic format.
n=15			
Thesis Assessment: *How is the quality of theses or capstone projects ensured? Does your department have a systematic process that evaluates the quality and competencies demonstrated*	100%		• All have a "checks and balance" system, but some describe a more comprehensive process (9) vs. a simple description, i.e. "the chair reads all thesis"

in theses or capstones? If there are written procedures, where are they located? If there is a common practice, please describe.			• Reviews by Academic Associates/Program Officers/Chair; Thesis process is highlighted in lecture series • Recognition/awards for "quality work"
n=15			
Distance Learning Assessment: *Is the process of evaluating student learning different for resident versus distance programs? If so, please describe how.*	33%	67%	• 2 depts do not have DL courses • DL course require more instructor tracking and monitoring of student comprehension/learning.
n=15			

NAVAL
POSTGRADUATE
SCHOOL

Strategic Plan - 2008

Vision for a New Century

NAVAL POSTGRADUATE SCHOOL

STRATEGIC PLAN: *VISION FOR A NEW CENTURY*

INTRODUCTION

The Naval Postgraduate School (NPS) is a unique graduate school — an institution dedicated to providing education and research with a focus on relevance to the defense and security arenas and on recognizing and innovatively solving problems in support of our military forces, our country's global partners and our national security. While there are many civilian universities that provide graduate education, there are few that are dedicated to providing national security-related graduate educational programs for military officers, as well as federal, state and local government civilian employees and contractors. The Naval Postgraduate School is such a place.

MISSION STATEMENT

NPS provides high-quality, relevant and unique advanced education and research programs that increase the combat effectiveness of the Naval Services, other Armed Forces of the U.S. and our partners, to enhance our national security.

I. BACKGROUND

At NPS, four world-class Schools oversee fourteen academic departments that provide more than 42 master's and 18 doctoral degree programs and certificates to 1,800 resident students, including 300 international students, as well as approximately 900 distributed-learning students worldwide. Four Institutes, multiple secure research facilities and twenty-three Centers of Excellence add to the wealth of resources. Non-resident courses are delivered to students through online, web-enabled, video-tele-education systems and/or by visiting faculty. Continuous learning, refresher and transitional educational opportunities abound, and short-term executive education courses and a variety of short courses are also offered by NPS, both in Monterey and abroad.

Approximately 500 scholars and professionals, 10 percent of whom are military officers and half of whom are tenured or tenure-track, comprise the NPS faculty. To strengthen expertise and program relevance, and to expedite research successes at NPS, a robust mix of tenured faculty, lecturers and visiting professionals integrate teaching with research, demonstrating the immediate applicability of

"The Naval Postgraduate School is a national -- and international -- treasure. With its rigorous curriculum, talented faculty and a diverse student body that includes students from all the US armed forces, other federal agencies and more than 60 nations, NPS contributes greatly to enhanced joint, coalition and interagency effectiveness. Knowledge and imagination are the keys to dealing with the challenges of this new era, and here at NPS those keys are forged. The School rightly boasts an illustrious past, but I am convinced that its future burns even brighter."

Admiral Michael G. Mullen
Chairman of the Joint Chiefs of Staff
Former Chief of Naval Operations
NPS, Class of 1985
Operations Research

defense-related theories to defense-related solutions, many times resulting in patent-eligible technologies.

The NPS Board of Advisors functions as an eighteen-member federal advisory committee that provides guidance to NPS, and reports to the Secretary of the Navy, the Chief of Naval Operations and the Commandant of the Marine Corps on matters pertaining to the School and its graduate education and research programs.

Well-positioned to continue to develop as the nation's premier educational and research institution for defense and national security, *Vision for a New Century* details the School's strategic drivers and goals through 2012, and is designed to guide the university in making the critical choices necessary to maintain and enhance its leadership position and to increase its support of the U.S. military and of our nation's security.

"We strive to maintain an agile and flexible force that can not only contribute to winning our Nation's wars but also can assist in preventing future conflict to the extent possible—whether by dissuasion, deterrence, humanitarian action or disaster relief."

Honorable Donald C. Winter
Secretary of the Navy
Speech before House
Armed Services Committee
Feb. 28, 2008

II. STRATEGIC VISION AND GOALS

In October 2007, the U.S. Navy, the U.S. Marine Corps and the U.S. Coast Guard published an "historical first," an initiative titled *A Cooperative Strategy for 21st Century Seapower,* which outlines how these services will collaborate to assist the United States in preventing wars as well as winning them, and in protecting U.S. vital interests and global prosperity.

> "Guided by the objectives in the *National Security Strategy, National Defense Strategy, National Military Strategy and the National Strategy for Maritime Security,* the United States Navy, Marine Corps and Coast Guard will act across the full range of military operations to secure the United States from direct attack; secure strategic access and retain global freedom of action; strengthen existing and emerging partnerships and establish favorable security conditions."

At the heart of the success of this maritime strategy are adaptability and flexibility from the unified forces, and a blend of peacetime engagement and major combat operations capabilities. Mission-tailored force packages will require interoperability and integrated approaches, as well as enhanced cooperation with multinational partners that possess varying levels of technology; maritime domain awareness, and intelligence, surveillance and reconnaissance capacities must be increased; robust information-assurance measures must be secured to protect information from compromise; and a powerful fleet of ships, aircraft and joint forces that can project power ashore, selectively control the seas and protect both friendly forces and civilian populations from attack must be maintained.

Recognizing the challenges and opportunities proposed in the maritime strategy, particularly as mission-tailored joint forces are dispersed under a decentralized authority in multinational environments, NPS also recognizes the vital role it will play in supporting the ambitious vision of the Sea Services.

MAJOR CHALLENGES

- To provide graduate education to more Navy Unrestricted Line Officers and U.S. military officers, while the US military is engaged in wartime activities
- To enhance the quality and relevance of the NPS mission while urgent military needs compete for resources
- To engage other agencies of the U.S. government and other nation states in support of homeland, national and international stability and security

NPS VISION

As a naval/defense-oriented research university, the Naval Postgraduate School will operate as a geographically distributed educational system that provides a broad range of high-quality graduate education in support of national and international security.

Chartered originally to focus on science and technology, NPS has evolved from a single engineering department at the U.S. Naval Academy into an institution that serves naval, defense and national security related interests by providing current and future readiness, advances in technology, and educational and operational programs that directly support all facets of national defense and homeland security. In support of its mission and vision, NPS has identified four main goals in this strategic plan, *Vision for a New Century*, upon which the School will engage its primary efforts:

GOAL 1. NPS WILL SUSTAIN CONTINUOUS IMPROVEMENT IN THE QUALITY AND RELEVANCE OF OUR GRADUATE EDUCATION AND RESEARCH PROGRAMS.

NPS will continue to excel by offering a wide array of graduate and professional programs and research of national prominence; by recruiting, developing and maintaining a distinguished faculty; by producing exemplary graduates; by valuing the discovery, dissemination and application of new and significant

"NPS is the hidden jewel in the Federal crown of military and government education. Here is where you find cutting-edge technological research; advanced training in civil-military dynamics; the best and only master's program for government officials in Homeland Security operations; and critical real-time training exercises in peacekeeping and stabilization and reconstruction activities. Nowhere else does a single dollar of investment go so far in advancing America's agenda of peace through strength. I am proud of the work done by faculty, staff and students at this institution."

The Honorable Sam Farr
Congressman, 17th District of California

"We will build a Navy with appropriate force structure and develop the strategic lay down necessary to implement the Maritime Strategy, continue to be the dominant and most influential naval force, globally and across all maritime missions, and instill in our military and civilian force a focus on mission and individual readiness that is underpinned by a warrior ethos … We will prevent war, dominate any threat and decisively defeat any adversary, and to do this, we will remain a superbly trained and led team of diverse Sailors and civilians, who are grounded in our warrior ethos, core values and commitment to mission readiness and accomplishment. … We are indeed the fortunate few who have the privilege to serve in the United States Navy."

Admiral Gary Roughead
Chief of Naval Operations
2007-2008 CNO Guidance

knowledge; and by providing the educational and technological resources required for superior graduate-level education and research. NPS will improve its instructional programs and will achieve breakthroughs in its military and security-related research and applications of research, and rank among the most respected institutions of higher learning in the United States.

The quality of the NPS educational programs is only as good as the quality of its faculty. Cultivating and sustaining an intellectual community of scholars, scientists and engineers is a crucial institutional priority and will include opportunities for multi-disciplinary conversations, seminars and guest speakers, as well as funding for new program development and other academic community-building strategies.

NPS will make an institutional commitment to provide the infrastructure and resources required for the research-related support of the academic enterprise. Investment strategies will involve support for initiatives that exhibit excellence, maintain their centrality to the core mission of NPS, and are responsive to the emerging needs of the Navy and the Department of Defense. Partnerships with industries, peer institutions, research laboratories, Joint Service commands, and local and state governments will remain essential components of leveraging resources and ensuring access to the technology and intellectual capital required for the continued success of the School.

NPS must continue to assess its existing programs and determine their excellence through the Academic Review process, and by using benchmarking indicators. Quality indicators include not only those used at the local levels through comparisons with peer institutions, but also national-level metrics that include rankings, publications, citations, research dollars, postdoctoral appointments, doctoral degrees awarded, surveys of stakeholders, patents and licenses, honors and awards and endowed Chairs. Important indicators of performance include curricular reviews, faculty memberships on defense and homeland security boards, partnerships with other commands, continuing and executive education programs, distributed-learning programs, and recognition in national and international media.

GOAL 2. NPS WILL EXTEND EDUCATION TO THE TOTAL FORCE AND TO OUR GLOBAL PARTNERS.

NPS graduate educational and research programs will facilitate collaboration among all members of the Total Force, comprised of personnel from all military services, coalition allies and defense agencies, so that they may be able to quickly identify and address new defense and national security-related challenges. NPS will serve the Total Force at our campus in Monterey, through

our educational and research outreach activities, and by expanding distributed-learning programs to reach more Unrestricted Line Officers and other U.S. and international officers.

Because the Navy's operational tempo makes it difficult for URL officers to attend residential programs in Monterey, NPS — with its unique repository of scientific, technical, cultural, management and security expertise — has developed the ability to deliver programs to other operational units around the world. NPS will continue that practice, and will continue to serve the Total Force at its campus in Monterey, as well as its satellite campuses. Capitalizing on the faculty expertise at NPS and its partner universities, programs will be structured so that research will be conducted in collaboration with both university and laboratory personnel who are employed at federal laboratories, agencies or other institutions. Demand for these programs has already been identified in Dahlgren and Pax River, Va., and San Diego, Calif., therefore, NPS will focus its initial efforts in these two areas. To help fill graduate-level vacancies within the federal government, NPS will enroll U.S. civilians in Scholarship-for-Service educational programs that are focused on science, engineering, business, national security and technology of critical importance to the Department of Defense, its international partners and federal agencies. NPS will also increase the number of executive and non-degree educational opportunities, lending support to the National Capital Region by establishing an EMBA and related programs that are focused on government financial processes, including acquisition, procurement, accounting and regulations.

A leader in the nation's partnership-building programs, NPS has specialized in providing analytical decision-making and resources management for military officers from all services and civilian officials of the U.S. and 125 other countries. These programs assist foreign nations in resolving civil-military conflicts resulting from defense transformation, stability and support operations, counterterrorism and other security challenges; increase oversight and cohesion among Department of Defense international education providers; and promote efforts to advance U.S. State and Defense Department goals throughout the world. NPS will continue to provide new opportunities for U.S. military, civilian and international students and organizations such as those established with the National University of Singapore. Similar joint-degree program concepts will be extended to the Geneva Center for Security Policy, the Graduate Institute of International Studies and the University of Geneva in Switzerland, a world center for security and stability studies and humanitarian relief, and emerging opportunities for collaboration with Mexican, German and Canadian defense-related colleagues.

With its classified research capabilities, its diverse educational systems and its proven ability to apply interdisciplinary research to warfare development and operations, homeland security and defense, business practices and security policy issues, NPS can help the DoD and federal agencies by expanding its Scholarship-for-Service programs to all qualified U.S. citizens, and by offering career development opportunities in science, engineering, systems management and program management to national-security workers.

Dr. Leonard Ferrari
Provost, Naval Postgraduate School

"The battlefield of today and the battlefield of the future are going to continue to be uncertain, chaotic, plagued with fog and friction, and very dangerous. We need military leaders who can work and thrive in that particular environment. An NPS education, bolstered by student and faculty research, produces a graduate whose intellectual agility and flexibility will prove increasingly valuable to the Naval Services and the Joint Force in dealing with such uncertainty."

General Michael W. Hagee
Former Commandant of the Marine Corps
NPS, Class of 1969
Electrical Engineering

GOAL 3. NPS WILL BROADEN RESEARCH IN NATIONAL SECURITY.

A vigorous research program assures that students will be taught the most up-to-date and relevant information by NPS faculty, that the latest processes materials and technologies will be transferred to the Navy and Marine Corps to strengthen our nation's defense. Research also contributes to the School's national and international prominence, thereby facilitating recruitment of the best possible faculty and increasing the value of our degrees to NPS graduates. NPS will therefore broaden its research programs in national security by increasing the funding of basic research, expanding its interdisciplinary research and field experiments, and by developing strong partnerships with the Department of Homeland Security and other federal agencies, including the Department of Defense, the Department of Energy and the private sector. Specific areas of growth will be dependent on federal funding and NPS faculty priorities.

To improve several high-quality field experimentation programs, such as those focused on surveillance technologies, sensor development, networks, biometrics and wireless communications that have been developed at NPS within the last five years, NPS will integrate social, economic and political science faculty with science and technology faculty to conduct a series of international scenarios focused on national and homeland-security issues, including surveillance, communications, detection and interdiction.

To maintain leading-edge positions in technological expertise, applications to industry and to management development, partnerships with federal agencies will be strengthened by the number the Cooperative Research and Development Agreements signed by NPS and its industry partners.

GOAL 4. NPS WILL SEEK OPERATIONAL EXCELLENCE IN FINANCIAL, BUSINESS, ADMINISTRATIVE AND SUPPORT AREAS.

NPS is committed to the recruitment and development of a talented workforce of faculty, staff and administrators who will ensure that NPS is functioning efficiently and that modern technology and business practices are employed in all facets of operations. Valuing diversity, NPS will recruit from other higher-education institutions and government organizations, and will recognize its staff as professionals and active participants in societies related to their fields of expertise. NPS will also aggressively seek to strengthen and to increase its financial base, pursue the resources necessary to achieve its vision and develop business modelsw that enhance its stakeholders' return on investments.

NPS is committed to operational excellence, which encompasses the people, tools, systems, resources, decision-making and shared governance structures of the School. NPS will aggressively seek to strengthen and increase its financial base, pursue the resources necessary to achieve its vision and develop business models that enhance its stakeholders' return on investment. Revenue from tuition and other non-government sources will be increased.

NPS will invest strategically in its classrooms, its laboratories, its library and in technology. Operational plans will support the School's strategic goals, and NPS will make investments and decisions consistent with the School's mission and vision. As an institution, NPS will monitor its performance and report to its community and to its stakeholders, which will allow those invested in NPS to capitalize on their investment.

Services will be web-based when possible, including remote access for faculty and students based in other sites. Buildings and the surrounding grounds will provide an environment conducive to learning, and reflect the standards held by the Navy and the Department of Defense.

III. CONCLUSION

Founded in 1909, NPS is one of the oldest and most prestigious institutions belonging to the United States Department of Defense. Since its inception almost a century ago, NPS has been found to be worthy of the investment that both the Navy and the nation has made in it. The School has educated some of the most brilliant and effective leaders of our nation and of the world. Countless numbers of NPS graduates have made significant contributions to global stability and national security, and some remarkable breakthroughs in research at NPS have saved the lives of the men and women who so bravely defend their nations daily.

Ready to embrace the title of "flagship institution" that the Navy has guaranteed it, and to support the success of the maritime initiative, the world-class campus of the Naval Postgraduate School, a bulwark of research and higher education, is prepared to grow even more in terms of its production, programs and influence. This Strategic Plan, *Vision for a New Century*, provides an achievable blueprint for NPS to map its future, one which is certain to add to the School's record of achievement, success and support.

Our mission of research and education is fueled by the intellectual vitality and contributions of our faculty. How we can turn our attention to the strengthening of our intellectual community should be a central and visible feature of our progress in our strategic plan.

Daniel Oliver
President, Naval Postgraduate School

defense-related theories to defense-related solutions, many times resulting in patent-eligible technologies.

The NPS Board of Advisors functions as an eighteen-member federal advisory committee that provides guidance to NPS, and reports to the Secretary of the Navy, the Chief of Naval Operations and the Commandant of the Marine Corps on matters pertaining to the School and its graduate education and research programs.

Well-positioned to continue to develop as the nation's premier educational and research institution for defense and national security, *Vision for a New Century* details the School's strategic drivers and goals through 2012, and is designed to guide the university in making the critical choices necessary to maintain and enhance its leadership position and to increase its support of the U.S. military and of our nation's security.

"We strive to maintain an agile and flexible force that can not only contribute to winning our Nation's wars but also can assist in preventing future conflict to the extent possible—whether by dissuasion, deterrence, humanitarian action or disaster relief."

Honorable Donald C. Winter
Secretary of the Navy
Speech before House
Armed Services Committee
Feb. 28, 2008

II. STRATEGIC VISION AND GOALS

In October 2007, the U.S. Navy, the U.S. Marine Corps and the U.S. Coast Guard published an "historical first," an initiative titled *A Cooperative Strategy for 21st Century Seapower,* which outlines how these services will collaborate to assist the United States in preventing wars as well as winning them, and in protecting U.S. vital interests and global prosperity.

> "Guided by the objectives in the *National Security Strategy, National Defense Strategy, National Military Strategy and the National Strategy for Maritime Security,* the United States Navy, Marine Corps and Coast Guard will act across the full range of military operations to secure the United States from direct attack; secure strategic access and retain global freedom of action; strengthen existing and emerging partnerships and establish favorable security conditions."

At the heart of the success of this maritime strategy are adaptability and flexibility from the unified forces, and a blend of peacetime engagement and major combat operations capabilities. Mission-tailored force packages will require interoperability and integrated approaches, as well as enhanced cooperation with multinational partners that possess varying levels of technology; maritime domain awareness, and intelligence, surveillance and reconnaissance capacities must be increased; robust information-assurance measures must be secured to protect information from compromise; and a powerful fleet of ships, aircraft and joint forces that can project power ashore, selectively control the seas and protect both friendly forces and civilian populations from attack must be maintained.

Recognizing the challenges and opportunities proposed in the maritime strategy, particularly as mission-tailored joint forces are dispersed under a decentralized authority in multinational environments, NPS also recognizes the vital role it will play in supporting the ambitious vision of the Sea Services.

MAJOR CHALLENGES

- To provide graduate education to more Navy Unrestricted Line Officers and U.S. military officers, while the US military is engaged in wartime activities
- To enhance the quality and relevance of the NPS mission while urgent military needs compete for resources
- To engage other agencies of the U.S. government and other nation states in support of homeland, national and international stability and security

NPS VISION

As a naval/defense-oriented research university, the Naval Postgraduate School will operate as a geographically distributed educational system that provides a broad range of high-quality graduate education in support of national and international security.

Chartered originally to focus on science and technology, NPS has evolved from a single engineering department at the U.S. Naval Academy into an institution that serves naval, defense and national security related interests by providing current and future readiness, advances in technology, and educational and operational programs that directly support all facets of national defense and homeland security. In support of its mission and vision, NPS has identified four main goals in this strategic plan, *Vision for a New Century*, upon which the School will engage its primary efforts:

GOAL 1. NPS WILL SUSTAIN CONTINUOUS IMPROVEMENT IN THE QUALITY AND RELEVANCE OF OUR GRADUATE EDUCATION AND RESEARCH PROGRAMS.

NPS will continue to excel by offering a wide array of graduate and professional programs and research of national prominence; by recruiting, developing and maintaining a distinguished faculty; by producing exemplary graduates; by valuing the discovery, dissemination and application of new and significant

"NPS is the hidden jewel in the Federal crown of military and government education. Here is where you find cutting-edge technological research; advanced training in civil-military dynamics; the best and only master's program for government officials in Homeland Security operations; and critical real-time training exercises in peacekeeping and stabilization and reconstruction activities. Nowhere else does a single dollar of investment go so far in advancing America's agenda of peace through strength. I am proud of the work done by faculty, staff and students at this institution."

The Honorable Sam Farr
Congressman, 17th District of California

"We will build a Navy with appropriate force structure and develop the strategic lay down necessary to implement the Maritime Strategy, continue to be the dominant and most influential naval force, globally and across all maritime missions, and instill in our military and civilian force a focus on mission and individual readiness that is underpinned by a warrior ethos … We will prevent war, dominate any threat and decisively defeat any adversary, and to do this, we will remain a superbly trained and led team of diverse Sailors and civilians, who are grounded in our warrior ethos, core values and commitment to mission readiness and accomplishment. … We are indeed the fortunate few who have the privilege to serve in the United States Navy."

Admiral Gary Roughead
Chief of Naval Operations
2007-2008 CNO Guidance

knowledge; and by providing the educational and technological resources required for superior graduate-level education and research. NPS will improve its instructional programs and will achieve breakthroughs in its military and security-related research and applications of research, and rank among the most respected institutions of higher learning in the United States.

The quality of the NPS educational programs is only as good as the quality of its faculty. Cultivating and sustaining an intellectual community of scholars, scientists and engineers is a crucial institutional priority and will include opportunities for multi-disciplinary conversations, seminars and guest speakers, as well as funding for new program development and other academic community-building strategies.

NPS will make an institutional commitment to provide the infrastructure and resources required for the research-related support of the academic enterprise. Investment strategies will involve support for initiatives that exhibit excellence, maintain their centrality to the core mission of NPS, and are responsive to the emerging needs of the Navy and the Department of Defense. Partnerships with industries, peer institutions, research laboratories, Joint Service commands, and local and state governments will remain essential components of leveraging resources and ensuring access to the technology and intellectual capital required for the continued success of the School.

NPS must continue to assess its existing programs and determine their excellence through the Academic Review process, and by using benchmarking indicators. Quality indicators include not only those used at the local levels through comparisons with peer institutions, but also national-level metrics that include rankings, publications, citations, research dollars, postdoctoral appointments, doctoral degrees awarded, surveys of stakeholders, patents and licenses, honors and awards and endowed Chairs. Important indicators of performance include curricular reviews, faculty memberships on defense and homeland security boards, partnerships with other commands, continuing and executive education programs, distributed-learning programs, and recognition in national and international media.

GOAL 2. NPS WILL EXTEND EDUCATION TO THE TOTAL FORCE AND TO OUR GLOBAL PARTNERS.

NPS graduate educational and research programs will facilitate collaboration among all members of the Total Force, comprised of personnel from all military services, coalition allies and defense agencies, so that they may be able to quickly identify and address new defense and national security-related challenges. NPS will serve the Total Force at our campus in Monterey, through

our educational and research outreach activities, and by expanding distributed-learning programs to reach more Unrestricted Line Officers and other U.S. and international officers.

Because the Navy's operational tempo makes it difficult for URL officers to attend residential programs in Monterey, NPS — with its unique repository of scientific, technical, cultural, management and security expertise — has developed the ability to deliver programs to other operational units around the world. NPS will continue that practice, and will continue to serve the Total Force at its campus in Monterey, as well as its satellite campuses. Capitalizing on the faculty expertise at NPS and its partner universities, programs will be structured so that research will be conducted in collaboration with both university and laboratory personnel who are employed at federal laboratories, agencies or other institutions. Demand for these programs has already been identified in Dahlgren and Pax River, Va., and San Diego, Calif., therefore, NPS will focus its initial efforts in these two areas. To help fill graduate-level vacancies within the federal government, NPS will enroll U.S. civilians in Scholarship-for-Service educational programs that are focused on science, engineering, business, national security and technology of critical importance to the Department of Defense, its international partners and federal agencies. NPS will also increase the number of executive and non-degree educational opportunities, lending support to the National Capital Region by establishing an EMBA and related programs that are focused on government financial processes, including acquisition, procurement, accounting and regulations.

A leader in the nation's partnership-building programs, NPS has specialized in providing analytical decision-making and resources management for military officers from all services and civilian officials of the U.S. and 125 other countries. These programs assist foreign nations in resolving civil-military conflicts resulting from defense transformation, stability and support operations, counterterrorism and other security challenges; increase oversight and cohesion among Department of Defense international education providers; and promote efforts to advance U.S. State and Defense Department goals throughout the world. NPS will continue to provide new opportunities for U.S. military, civilian and international students and organizations such as those established with the National University of Singapore. Similar joint-degree program concepts will be extended to the Geneva Center for Security Policy, the Graduate Institute of International Studies and the University of Geneva in Switzerland, a world center for security and stability studies and humanitarian relief, and emerging opportunities for collaboration with Mexican, German and Canadian defense-related colleagues.

With its classified research capabilities, its diverse educational systems and its proven ability to apply interdisciplinary research to warfare development and operations, homeland security and defense, business practices and security policy issues, NPS can help the DoD and federal agencies by expanding its Scholarship-for-Service programs to all qualified U.S. citizens, and by offering career development opportunities in science, engineering, systems management and program management to national-security workers.

Dr. Leonard Ferrari
Provost, Naval Postgraduate School

"The battlefield of today and the battlefield of the future are going to continue to be uncertain, chaotic, plagued with fog and friction, and very dangerous. We need military leaders who can work and thrive in that particular environment. An NPS education, bolstered by student and faculty research, produces a graduate whose intellectual agility and flexibility will prove increasingly valuable to the Naval Services and the Joint Force in dealing with such uncertainty."

General Michael W. Hagee
Former Commandant of the Marine Corps
NPS, Class of 1969
Electrical Engineering

GOAL 3. NPS WILL BROADEN RESEARCH IN NATIONAL SECURITY.

A vigorous research program assures that students will be taught the most up-to-date and relevant information by NPS faculty, that the latest processes materials and technologies will be transferred to the Navy and Marine Corps to strengthen our nation's defense. Research also contributes to the School's national and international prominence, thereby facilitating recruitment of the best possible faculty and increasing the value of our degrees to NPS graduates. NPS will therefore broaden its research programs in national security by increasing the funding of basic research, expanding its interdisciplinary research and field experiments, and by developing strong partnerships with the Department of Homeland Security and other federal agencies, including the Department of Defense, the Department of Energy and the private sector. Specific areas of growth will be dependent on federal funding and NPS faculty priorities.

To improve several high-quality field experimentation programs, such as those focused on surveillance technologies, sensor development, networks, biometrics and wireless communications that have been developed at NPS within the last five years, NPS will integrate social, economic and political science faculty with science and technology faculty to conduct a series of international scenarios focused on national and homeland-security issues, including surveillance, communications, detection and interdiction.

To maintain leading-edge positions in technological expertise, applications to industry and to management development, partnerships with federal agencies will be strengthened by the number the Cooperative Research and Development Agreements signed by NPS and its industry partners.

GOAL 4. NPS WILL SEEK OPERATIONAL EXCELLENCE IN FINANCIAL, BUSINESS, ADMINISTRATIVE AND SUPPORT AREAS.

NPS is committed to the recruitment and development of a talented workforce of faculty, staff and administrators who will ensure that NPS is functioning efficiently and that modern technology and business practices are employed in all facets of operations. Valuing diversity, NPS will recruit from other higher-education institutions and government organizations, and will recognize its staff as professionals and active participants in societies related to their fields of expertise. NPS will also aggressively seek to strengthen and to increase its financial base, pursue the resources necessary to achieve its vision and develop business modelsw that enhance its stakeholders' return on investments.

NPS is committed to operational excellence, which encompasses the people, tools, systems, resources, decision-making and shared governance structures of the School. NPS will aggressively seek to strengthen and increase its financial base, pursue the resources necessary to achieve its vision and develop business models that enhance its stakeholders' return on investment. Revenue from tuition and other non-government sources will be increased.

NPS will invest strategically in its classrooms, its laboratories, its library and in technology. Operational plans will support the School's strategic goals, and NPS will make investments and decisions consistent with the School's mission and vision. As an institution, NPS will monitor its performance and report to its community and to its stakeholders, which will allow those invested in NPS to capitalize on their investment.

Services will be web-based when possible, including remote access for faculty and students based in other sites. Buildings and the surrounding grounds will provide an environment conducive to learning, and reflect the standards held by the Navy and the Department of Defense.

III. CONCLUSION

Founded in 1909, NPS is one of the oldest and most prestigious institutions belonging to the United States Department of Defense. Since its inception almost a century ago, NPS has been found to be worthy of the investment that both the Navy and the nation has made in it. The School has educated some of the most brilliant and effective leaders of our nation and of the world. Countless numbers of NPS graduates have made significant contributions to global stability and national security, and some remarkable breakthroughs in research at NPS have saved the lives of the men and women who so bravely defend their nations daily.

Ready to embrace the title of "flagship institution" that the Navy has guaranteed it, and to support the success of the maritime initiative, the world-class campus of the Naval Postgraduate School, a bulwark of research and higher education, is prepared to grow even more in terms of its production, programs and influence. This Strategic Plan, *Vision for a New Century*, provides an achievable blueprint for NPS to map its future, one which is certain to add to the School's record of achievement, success and support.

Our mission of research and education is fueled by the intellectual vitality and contributions of our faculty. How we can turn our attention to the strengthening of our intellectual community should be a central and visible feature of our progress in our strategic plan.

Daniel Oliver
President, Naval Postgraduate School

4 December 2002

MEMORANDUM OF AGREEMENT
FORMING AN EDUCATIONAL ALLIANCE
BETWEEN
THE DEPARTMENT OF THE NAVY
&
THE DEPARTMENT OF AIR FORCE

Introduction

On March 7, 2002 SECNAV and SECAF chartered a study to review graduate educational processes. As a result of that study, the Departments of Navy and Air Force hereby form an Alliance to ensure that the Naval Postgraduate School (NPS) and the Air Force Institute of Technology (AFIT) meet the advanced education requirements of the Armed Forces of the United States.

Goals:

This Alliance will ensure that NPS and AFIT are widely recognized, "world-class" institutions, focused to meet the advanced degree program requirements of the Department of Defense, owned and operated by the Department of the Navy and Department of the Air Force, respectively. NPS and AFIT will continue to reflect the heritage and character of their respective Services, meeting Joint and service-unique needs, minimizing redundancy, maintaining quality and realizing efficiencies and economies of scale.

The Alliance will leverage the complementarities of NPS and AFIT. For instance, NPS has strengths in space operations and AFIT has strengths in space science. The Alliance will leverage and strengthen such comparative advantages.

It will:

- ensure officers continue to receive high-quality, relevant and responsive graduate education aligned to defense needs
- prevent unnecessary duplication, while sustaining excellence at NPS and AFIT,
- ensure efficient operation of both institutions, while maintaining each as a "world-class" higher education

institution underpinned by its unique Service heritage and character

- in combination, provide a Joint educational environment in which officers from all of the Services will engage in education and research programs

Oversight of the Alliance.

The Alliance will be overseen by the NPS Board of Advisors (BOA) and the Air University's (AU) Board of Visitors (BoV). To implement the Joint Navy-Air Force Oversight of the Alliance, the BOA and BoV will interact with each other.

The NPS BOA will invite one or more members of the BoV to each of its meetings. The AU BoV will invite one or more members of the BOA to meetings at which AFIT or graduate education is to be discussed.

The Chairs of the BOA and BoV will hold a Joint meeting of the BOA and BoV whenever such a meeting will improve the Alliance.

Over time, and if appropriate, oversight of the Navy-Air Force Educational Alliance may transition to a single Board of Visitors, which will serve as the governing Board for both NPS and AFIT.

Initial Actions.

As a beginning, and to improve the quality of the education provided by the Alliance, the following actions are announced.

The Navy will:

- terminate Aeronautical Engineering curricula at NPS (curricula 610, 611 and 612); within the Alliance, only AFIT will offer an Aeronautical Engineering curriculum

The Air Force will:

- terminate the Meteorology curriculum at AFIT (curriculum GM); within the Alliance, only NPS will offer a Meteorology curriculum

- terminate Acquisition curricula at AFIT (curricula GAQ); within the Alliance, only NPS will offer an Acquisition curriculum

Both services will:

- establish Joint Oversight Boards for the Aeronautical Engineering, Meteorology, Acquisition, and Space curricula. The Chair of the Aeronautical Engineering Board will be a Navy Flag Officer. The Chair of the Boards for Meteorology and Acquisition will be an Air Force General Officer. The Chair of the Space Board will be a Flag/General Officer of the National Reconnaissance Office (NRO), Air Force, Army, Navy or U.S. Space Command. The Under Secretary of the Air Force/Director, NRO is the initial designee to Chair the Space Programs Joint Oversight Board. Each of these oversight bodies will make periodic reports to the BOA and the BoV. The Superintendent of NPS and the Commandant of AFIT will establish the Boards and ensure that the Boards have representative membership and hold periodic meetings.

- the Department of the Navy shall designate the Deputy Superintendent/Chief of Staff position at NPS to be filled by an Air Force Colonel, who will serve as the senior Air Force liaison officer at NPS. The Air Force shall designate the Vice Commandant/Director of Staff position at AFIT to be filled by a Navy Captain, who will serve as the senior Navy liaison officer at AFIT. Each service agrees to keep these billets filled by an O-6 Line Officer.

- the Department of the Navy and the Department of the Air Force should, after seats are filled at either NPS or AFIT in a particular field of study, give priority to sending their students to the other institution (NPS or AFIT), before sending those students to civilian universities. To implement this policy, NPS and AFIT will, in coordination with the staffs of the other services, to include the Marine Corps, Army and the Coast Guard, form a joint admissions and quota control process.

Follow-on Actions.

In order to further foster the Alliance, the Navy and the Air Force will:

- review current NPS/AFIT policies with the objective of establishing common policies, which represent the best practices at both institutions
- ensure the Assistant Secretaries for Financial Management program the resources needed to launch the alliance, annually review the resource issues of the alliance, and take all actions necessary to ensure t alliance has the resources required for success
- NPS/AFIT will develop a Memorandum of Understanding identify additional areas that support education and research collaboration

SECRETARY OF THE AIR FORCE

SECRETARY OF THE NAVY

MEMORANDUM OF UNDERSTANDING
BETWEEN
THE NAVAL POSTGRADUATE SCHOOL
AND
THE AIR FORCE INSTITUTE OF TECHNOLOGY

Background

On 4 December 2002 SECNAV and SECAF signed a Memorandum of Agreement (MOA) forming an Educational Alliance between the services. The Alliance purpose is to ensure the Naval Postgraduate School (NPS) and the Air Force Institute of Technology (AFIT) meet the advanced education requirements of the Armed Forces of the United States. The MOA directed NPS and AFIT to develop this Memorandum of Understanding (MOU) "to identify additional areas that support education and research collaboration." A MOU was implemented in March 2004 that ~~completed~~ laid out 25 specific action items. This MOU supersedes the March 2004 MOU and all updates.

Purpose of the Educational Alliance

The Services should seek the most effective means to provide relevant, quality, and timely research and graduate education. Increasing and affirming collaboration and cooperation between NPS and AFIT will enable the best return on the investment of time and resources necessary to accomplish this task. In addition, the evolution of joint warfighting and combat support in warfare is a driver to maintaining our improved working relationship, and promoting further synergy among faculty, staff and students in the graduate education and research environment.
~~In addition, the evolution of joint warfighting and combat support in warfare can be cited as a driver to establishing a better working relationship and understanding among faculty, staff and students in the graduate education and research environment.~~ Finally, the ability to leverage the graduate and continuing education programs, both resident and through distance learning, and to capitalize on faculty expertise and existing research facilities will be beneficial to all services. The educational alliance, properly structured and supported, will increase the flexibility and utility of the existing institutions, while helping minimize unnecessary duplication and overlap among individual programs.

This Memorandum of Understanding will

1. Update the March 2004 NPS AFIT MOU
2. Document the commitment of the President of NPS and the Commandant of AFIT for the Alliance
3. Describe the working relationship of the currently existing oversight boards
4. Ensure continued improvement in education and research collaboration through the collaboration and teaming of faculty and staff members.

Implementation

1. Under this Memorandum of Understanding, both institutions have agreed and established by charter the following oversight boards. Each board has a separate charter that describes the membership and meeting policy. Each board is expected to meet at least every two years at the discretion of the board chair, and to provide feedback to the institutions as necessary.

   - Joint Oversight Board for Aeronautical Engineering Education (JOBAEE). Chaired by the Deputy Commander for Research and Engineering, Naval Air Systems Command. This board provides guidance to the Aeronautical Engineering curriculum.

   - Joint Oversight Board for Acquisition Curriculum (JOBAC). Chaired by the Vice Commander, Air Force Materiel Command. This board provides specific guidance to the acquisition curriculum.

   - Joint Space Oversight Board (JSOB). Chaired by Director, National Reconnaissance Organization. This board formulates opportunities and initiatives to provide focused timely, graduate education to the space cadre.

   - Joint Meteorology Oversight Board (JMOB). Chaired by the USAF Director of Weather, this board will discuss and recommend changes to the curriculum for the graduate weather program.

2. Since 2004, the staff functional leads of all departments at NPS and AFIT have interfaced and collaborated with one another to discover and share best practices and new technologies that enhance the effectiveness of both institutions. These functional areas include (but are not limited to) admissions, registrar, institutional assessment, accreditation, Distance Learning, continuing graduate education, and student management. The staff functional leads shall remain in contact with each other and notify each other of legislation, policies and regulations that may affect one or both schools.

3. Specific Working Level Teams (WLTs) have been established to provide input to the President and the Commandant on the administration and support of graduate education in the following areas that are critical to the sustainment of the graduate education mission and enhance academic collaboration between the schools:

   - Public Affairs and Resource Marketing
   - Financial Affairs and Tuition
   - Research and Faculty
   - Systems Engineering Education

   Enclosure (1) to this MOU identifies the current WLT Co-Chairs and describes the goals, objectives, and tasks for each team. Each institution will provide the communication tools for team members from that institution to effectively

participate. Enclosure (1) may be modified as events dictate without requiring this MOU to be re-approved.

Institutional Autonomy

Both institutions shall retain independent control over their own admission requirements, degree completion, and rules and regulations of the institution and policies with respect to student conduct and performance except as subsequently modified by agreement to comply with best practices identified by the alliance.

Duration

This MOU will become effective upon execution of the agreement by the parties. It will be reviewed biennially in anticipation of the anniversary of signature, and updated as necessary to ensure it remains a living and viable implementation of the Secretaries' direction in the 2002 MOA.

_____	_____
PAUL G. THORNHILL, Brig Gen, USAF Commandant Air Force Institute of Technology	DANIEL T. OLIVER President Naval Postgraduate School
_____	_____
Date	Date

Enclosure (1)

Educational Alliance Working Level Teams

- ~~Admissions and Registrar~~
  - ~~Co-Chairs: NPS (Mike Anderson); AFIT (Dr. Paschall)~~
  - ~~Report due: 1 Mar~~

~~Chairs will keep current on the admissions and registrar practices of both institutions and to determine where best practices can be shared and incorporated to include:~~
~~- Joint admissions criteria that can be developed to allow placement of an individual at either school~~
~~- Define the collection, validation, and internal distribution processes for transcripts of potential students~~
~~- Consider the opportunity for code sharing on transcripts to enable ease of transfer of academic credit between institutions~~
~~- Make recommendations regarding a common academic schedule between the schools to accommodate a collaborative distance learning environment~~
~~- Recommend scheduling of courses to allow for students to use the other institution's academic year schedule to meet individual student's academic flow needs.~~

- Public Affairs and Resource Marketing:
  - Co-Chairs: NPS (Dr. Horvath); AFIT (Mr. Hancock)
  - Report due: 1 Mar

Chairs will collaborate ways to provide broader knowledge among the services of the availability of the Alliance to educate personnel from all branches to include:
- Ensure the Secretaries' direction that the departments "…give priority to sending their students to the other institution (NPS or AFIT), before sending those students to civilian institutions."
- Consider ways to better inform the sister service of the opportunity for education at both institutions.
- Explore joint exhibition opportunities

- Financial Affairs and Tuition:
  - Co-Chairs: AFIT (Ms. Marburger); NPS (Mr. Little)
  - Report due: 1 Mar

The chairs will review tuition setting and payment to assure equitable reimbursement between the services.

- Research:
    - Co-Chairs: AFIT (Dr. Ries); NPS (Dr. Fouts)
    - Report due: 1 Mar

This team will maintain open communications to promote collaborative research opportunities and share best practices.

~~▪ Distance Learning (DL) and Continuing Graduate Education:~~
    - ~~Co-Chairs: NPS (Ms. Moule'); AFIT (Mr. Reisner)~~
    - ~~Report due: 1 Mar~~

~~This team will review existing DL capabilities, and provide recommendation on the way ahead to maximize opportunity and capability both in the near term, and in the future for real-time and asynchronous knowledge delivery. A key enabler in providing the opportunity to share existing material, to allow non-resident exchanges between the institutions, and to allow proliferation of state of the art education to the warfighter and DoD workforce through the use of continuing graduate education (including certificates and short-course updates) is the agreement on a common distance learning framework.~~

▪ Systems Engineering:
    - Co-Chairs: AFIT (Dr. Badiru); NPS (Dean Kays)
    - Report due: 1 Mar

The Services have identified a need to improve the quality of Systems Engineering in the workforce. NPS and AFIT have independently set up Centers for developing this capability, and have been cooperating to improve sharing of knowledge between the Services. This team will support review of case studies for use by AFIT and NPS in the Systems Engineering studies area. ~~This team will support review of case studies for use by AFIT and NPS in the Systems Engineering studies area.~~ The team should look at potential joint cases, as well as other research, and design issues that can benefit the DoD. Each academic year, the team will also make recommendations for development of one or more joint thesis projects for NPS and AFIT students to pursue together.

Sec. 7041. Function

-STATUTE-

There is a United States Naval Postgraduate School, the primary function of which is to provide advanced instruction and professional and technical education and research opportunities for commissioned officers of the naval service in -

(1) their practical and theoretical duties;

(2) the science, physics, and systems engineering of current and future naval warfare doctrine, operations, and systems; and

(3) the integration of naval operations and systems into joint, combined, and multinational operations.

-STATUTE-
(a)(1) The President of the Naval Postgraduate School shall be one of the following:
(A) An active-duty officer of the Navy or Marine Corps in a

grade not below the grade of captain, or colonel, respectively, who is assigned or detailed to such position.

(B) A civilian individual, including an individual who was retired from the Navy or Marine Corps in a grade not below captain, or colonel, respectively, who has the qualifications appropriate to the position of President and is selected by the Secretary of the Navy as the best qualified from among candidates for the position in accordance with -

(i) the criteria specified in paragraph (4);

(ii) a process determined by the Secretary; and

(iii) other factors the Secretary considers essential.

(2) Before making an assignment, detail, or selection of an individual for the position of President of the Naval Postgraduate School, the Secretary shall -

(A) consult with the Board of Advisors for the Naval Postgraduate School;

(B) consider any recommendation of the leadership and faculty of the Naval Postgraduate School regarding the assignment or selection to that position; and

(C) consider the recommendations of the Chief of Naval Operations and the Commandant of the Marine Corps.

(3) An individual selected for the position of President of the Naval Postgraduate School under paragraph (1)(B) shall serve in that position for a term of not more than five years and may be continued in that position for an additional term of up to five years.

(4) The qualifications appropriate for selection of an individual for detail or assignment to the position of President of the Naval Postgraduate School include the following:

(A) An academic degree that is either -

(i) a doctorate degree in a field of study relevant to the mission and function of the Naval Postgraduate School; or

(ii) a master's degree in a field of study relevant to the mission and function of the Naval Postgraduate School, but only if -

(I) the individual is an active-duty or retired officer of the Navy or Marine Corps in a grade not below the grade of captain or colonel, respectively; and

(II) at the time of the selection of that individual as President, the individual permanently appointed to the position of Provost and Academic Dean has a doctorate degree in such a field of study.

(B) A comprehensive understanding of the Department of the Navy, the Department of Defense, and joint and combined operations.

(C) Leadership experience at the senior level in a large and diverse organization.

(D) Demonstrated ability to foster and encourage a program of research in order to sustain academic excellence.

(E) Other qualifications, as determined by the Secretary of the Navy.

(b) The Secretary shall detail officers of the Navy and the Marine Corps of appropriate grades and qualifications to assist the President in -

(1) the advanced instruction and professional and technical education of students and the provision of research opportunities for students; and

(2) the administration of the Postgraduate School.

-HEAD-
Sec. 7043. Provost and Academic Dean

-STATUTE-
(a) There is at the Naval Postgraduate School the civilian position of Provost and Academic Dean. The Provost and Academic Dean shall be appointed, to serve for periods of not more than five years, by the Secretary of the Navy. Before making an appointment to the position of Provost and Academic Dean, the Secretary shall consult with the Board of Advisors for the Naval Postgraduate School and shall consider any recommendation of the leadership and faculty of the Naval Postgraduate School regarding an appointment to that position.

(b) The Provost and Academic Dean is entitled to such compensation for his services as the Secretary prescribes, but not more than the rate of compensation authorized for level IV of the Executive Schedule.

REFERENCES IN TEXT

Level IV of the Executive Schedule, referred to in subsec. (b), is set out in section 5315 of Title 5, Government Organization and Employees.

-MISC2-

AMENDMENTS

2004 - Pub. L. 108-375, Sec. 557(b)(3)(B), substituted "Provost and Academic Dean" for "Academic Dean" in section catchline.

Subsec. (a). Pub. L. 108-375, Sec. 557(b)(3)(A), amended subsec. (a) generally. Prior to amendment, subsec. (a) read as follows: "There is at the Naval Postgraduate School the civilian position of Academic Dean. The Academic Dean shall be appointed, to serve for periods of not more than five years, by the Secretary of the Navy

upon the recommendation of the Postgraduate School Council consisting of the Superintendent, the Deputy Superintendent, and the directors of the Technical, Administrative, and Professional Divisions of the school."

Subsec. (b). Pub. L. 108-375, Sec. 557(b)(4), substituted "Provost and Academic Dean" for "Academic Dean".

1997 - Subsec. (b). Pub. L. 105-85 substituted "level IV of the Executive Schedule" for "grade GS-18 of the General Schedule under section 5332 of title 5".

1980 - Subsec. (b). Pub. L. 96-513 substituted "authorized for grade GS-18 of the General Schedule under section 5332 of title 5" for "provided for grade 18 of the general schedule of the Classification Act of 1949, as amended".

1966 - Subsec. (b). Pub. L. 89-536 substituted for a limit of $13,500 per annum a rate of compensation comparable to grade 18 of the general schedule of the Classification Act of 1949, as amended.

1958 - Pub. L. 85-861, among other changes, increased the maximum compensation of the Academic Dean from $12,000 to $13,500 a year.

-CHANGE-

CHANGE OF NAME

Pub. L. 108-375, div. A, title V, Sec. 557(b)(1), (2), Oct. 28, 2004, 118 Stat. 1915, provided that:

"(1) The position of Academic Dean of the Naval Postgraduate School is redesignated as Provost and Academic Dean of the Naval Postgraduate School.

"(2) Any reference to the Academic Dean of the Naval Postgraduate School in any law, rule, regulation, document, record, or other paper of the United States shall be deemed to be a reference to the Provost and Academic Dean of the Naval Postgraduate School."

-MISC3-

EFFECTIVE DATE OF 1980 AMENDMENT

Amendment by Pub. L. 96-513 effective Dec. 12, 1980, see section 701(b)(3) of Pub. L. 96-513, set out as a note under section 101 of this title.

TITLE 10 - ARMED FORCES
Subtitle C - Navy and Marine Corps
PART III - EDUCATION AND TRAINING
CHAPTER 605 - UNITED STATES NAVAL POSTGRADUATE SCHOOL

-HEAD-
Sec. 7045. Officers of the other armed forces; enlisted members: admission

-STATUTE-
(a)(1) The Secretary of the Navy may permit officers of the Army, Air Force, and Coast Guard to receive instruction at the Naval Postgraduate School. The numbers and grades of such officers shall be as agreed upon by the Secretary of the Navy with the Secretary of the Army, the Secretary of the Air Force, and the Secretary of Homeland Security, respectively.

(2)(A) The Secretary may permit an enlisted member of the armed forces to receive instruction at the Naval Postgraduate School through attendance at an executive level seminar.

(B) The Secretary may permit an eligible enlisted member of the armed forces to receive instruction at the Postgraduate School in connection with pursuit of a program of education in information assurance as a participant in the Information Security Scholarship program under chapter 112 of this title. To be eligible for instruction under this subparagraph, the enlisted member must have been awarded a baccalaureate degree by an institution of higher education.

(C) The Secretary may permit an eligible enlisted member of the armed forces to receive instruction from the Postgraduate School in certificate programs and courses required for the performance of the member's duties.

(D)(i) The Secretary may permit an eligible enlisted member of the armed forces to receive graduate-level instruction at the Naval Postgraduate School in a program leading to a master's degree in a

technical, analytical, or engineering curriculum.

(ii) To be eligible to be provided instruction under this subparagraph, the enlisted member must have been awarded a baccalaureate degree by an institution of higher education.

(iii) Instruction under this subparagraph may be provided only on a space-available basis.

(iv) An enlisted member who successfully completes a course of instruction under this subparagraph may be awarded a master's degree under section 7048 of this title.

(v) Instruction under this subparagraph shall be provided pursuant to regulations prescribed by the Secretary. Such regulations may include criteria for eligibility of enlisted members for instruction under this subparagraph and specification of obligations for further service in the armed forces relating to receipt of such instruction.

(E) In addition to instruction authorized under subparagraphs (A), (B), (C), and (D), the Secretary may, on a space-available basis, permit an enlisted member of the armed forces who is assigned permanently to the staff of the Postgraduate School or to a nearby command to receive instruction at the Postgraduate School.

(b)(1) Except as provided under paragraph (3), the Department of the Army, the Department of the Air Force, and the Department of Homeland Security shall bear the cost of the instruction received by members detailed for that instruction by the Secretary of the Army, the Secretary of the Air Force, and the Secretary of Homeland Security, respectively.

(2) In the case of an enlisted member permitted under subsection (a)(2)(E) to receive instruction at the Postgraduate School on a space-available basis, the Secretary of the Navy shall charge that member only for such costs and fees as the Secretary considers appropriate.

(3) The requirements for payment of costs and fees under paragraph (1) shall be subject to such exceptions as the Secretary of Defense may prescribe for members of the armed forces who receive instruction at the Postgraduate School in connection with pursuit of a degree or certification as participants in the Information Security Scholarship program under chapter 112 of this title.

(c) While receiving instruction at the Postgraduate School, members of the Army, Air Force, and Coast Guard are subject to such regulations, as determined appropriate by the Secretary of the Navy, as apply to students who are members of the naval service.

(d) The Secretary may not award a baccalaureate, masters, or doctorate degree to an enlisted member based upon instruction received at the Postgraduate School under subsection (a)(2)(C).

-MISC1-

HISTORICAL AND REVISION NOTES

Revised section	Source (U.S. Code)	Source (Statutes at Large)
7045	34 U.S.C. 1076e.	July 31, 1947, ch. 420, Sec. 6, 61 Stat. 706.

The section is enlarged to cover officers of the Air Force under authority of Sec. 305(a) of the National Security Act of 1947, as amended (5 U.S.C. 171e).

In subsection (a) the words "at the request of the Secretary of the Army and the Secretary of the Treasury" are omitted as surplusage. The words "to receive instruction" are inserted after the listing of the services and the words "attendance and" are omitted. The word "grades" is substituted for the word "ranks".

In subsection (c) the words "rules and" are omitted. The words "who are officers of the naval service" are substituted for the words "of the United States Navy", since officers of the Marine Corps are occasionally ordered to attend the Postgraduate School on the same basis as officers of the Navy.

AMENDMENTS

2006 - Subsec. (a)(2)(C). Pub. L. 109-364, Sec. 543(a), substituted "armed forces" for "Navy or Marine Corps".

Pub. L. 109-163, Sec. 526(a)(1)(B), added subpar. (C). Former subpar.(C) redesignated (D).

Subsec. (a)(2)(D). Pub. L. 109-364, Sec. 543(b)(2), added subpar. (D). Former subpar. (D) redesignated (E).

Pub. L. 109-163, Sec. 526(a)(1)(A), (C), redesignated subpar. (C) as (D) and substituted "subparagraphs (A), (B), and (C)" for "subparagraphs (A) and (B)".

Subsec. (a)(2)(E). Pub. L. 109-364, Sec. 543(b)(1), (c)(1), redesignated subpar. (D) as (E) and substituted "(C), and (D)" for "and (C)".

Subsec. (b)(2). Pub. L. 109-364, Sec. 543(c)(2), substituted "(a)(2)(E)" for "(a)(2)(D)".

Pub. L. 109-163, Sec. 526(a)(2), substituted "subsection (a)(2)(D)" for "subsection (a)(2)(C)".

Subsec. (d). Pub. L. 109-163, Sec. 526(b), added subsec. (d).

2003 - Subsec. (a)(2). Pub. L. 108-136, Sec. 532(a), amended par. (2) generally. Prior to amendment, par. (2) read as follows: "The Secretary may permit an enlisted member of the armed forces who is assigned to the Naval Postgraduate School or to a nearby command to receive instruction at the Naval Postgraduate School. Admission of enlisted members for instruction under this paragraph shall be on a space-available basis."

Subsec. (b). Pub. L. 108-136, Sec. 532(b), designated first sentence as par. (1) and substituted "Except as provided under paragraph (3), the Department" for "The Department" and "members" for "officers", designated second sentence as par. (2) and inserted "under subsection (a)(2)(C)" after "permitted" and "on a space-available basis" after "instruction at the Postgraduate School" and struck out "(taking into consideration the admission of enlisted members on a space-available basis)" before period at end, and added par. (3).

2002 - Subsec. (a)(1). Pub. L. 107-296, Sec. 1704(b)(5)(A), substituted "Secretary of the Army, the Secretary of the Air Force, and the Secretary of Homeland Security" for "Secretaries of the Army, Air Force, and Transportation".

Subsec. (b). Pub. L. 107-296, Sec. 1704(b)(5), substituted "Department of Homeland Security" for "Department of Transportation" and "Secretary of the Army, the Secretary of the Air Force, and the Secretary of Homeland Security" for "Secretaries of the Army, Air Force, and Transportation".

1998 - Subsec. (c). Pub. L. 105-261 struck out "the" after "are subject to".

1997 - Pub. L. 105-85, Sec. 551(b)(1), substituted "Officers of the other armed forces; enlisted members:" for "Officers of Army, Air Force, and Coast Guard:" in section catchline.

Subsec. (a). Pub. L. 105-85, Sec. 551(a)(1), designated existing provisions as par. (1) and added par. (2).

Subsec. (b). Pub. L. 105-85, Sec. 551(a)(2), substituted "officers detailed" for "the students detailed" and inserted at end "In the case of an enlisted member permitted to receive instruction at the Postgraduate School, the Secretary of the Navy shall charge that member only for such costs and fees as the Secretary considers appropriate (taking into consideration the admission of enlisted members on a space-available basis)."

Subsec. (c). Pub. L. 105-85, Sec. 551(a)(3), substituted "members" for "officers" in two places and "such regulations, as determined appropriate by the Secretary of the Navy," for "same regulations".

1980 - Subsec. (a). Pub. L. 96-513, Sec. 513(23), substituted references to Transportation Department and Secretary for references to Treasury Department and Secretary, respectively.

Subsec. (b). Pub. L. 96-513, Sec. 513(23)(A), substituted reference to Transportation Secretary for reference to Treasury Secretary.

EFFECTIVE DATE OF 2002 AMENDMENT

Amendment by Pub. L. 107-296 effective on the date of transfer of the Coast Guard to the Department of Homeland Security, see section 1704(g) of Pub. L. 107-296, set out as a note under section 101 of this title.

EFFECTIVE DATE OF 1980 AMENDMENT

Amendment by Pub. L. 96-513 effective Dec. 12, 1980, see section 701(b)(3) of Pub. L. 96-513, set out as a note under section 101 of this title.

Sec. 7047. Students at institutions of higher education: admission

-STATUTE-
(a) Admission Pursuant to Reciprocal Agreement. - The Secretary of the Navy may enter into an agreement with an accredited institution of higher education to permit a student described in subsection (b) enrolled at that institution to receive instruction at the Naval Postgraduate School on a tuition-free basis. In exchange for the admission of the student, the institution of higher education shall be required to permit an officer of the armed forces to attend on a tuition-free basis courses offered by that institution corresponding in length to the instruction provided to the student at the Naval Postgraduate School.

(b) Eligible Students. - A student enrolled at an institution of higher education that is party to an agreement under subsection (a) may be admitted to the Naval Postgraduate School pursuant to that agreement if -

(1) the student is a citizen of the United States or lawfully admitted for permanent residence in the United States; and

(2) the Secretary of the Navy determines that the student has a demonstrated ability in a field of study designated by the Secretary as related to naval warfare and national security.

-STATUTE-
(a) Authority. - Under regulations prescribed by the Secretary of the Navy, the President of the Naval Postgraduate School may, upon the recommendation of the faculty of the Naval Postgraduate School, confer appropriate degrees upon graduates who meet the degree requirements.

(b) Limitation. - A degree may not be conferred under this section unless -

(1) the Secretary of Education has recommended approval of the degree in accordance with the Federal Policy Governing Granting of Academic Degrees by Federal Agencies; and

(2) the Naval Postgraduate School is accredited by the appropriate civilian academic accrediting agency or organization to award the degree, as determined by the Secretary of Education.

(c) Congressional Notification Requirements. - (1) When seeking to establish degree granting authority under this section, the Secretary of Defense shall submit to the Committees on Armed Services of the Senate and House of Representatives -

(A) a copy of the self assessment questionnaire required by the Federal Policy Governing Granting of Academic Degrees by Federal Agencies, at the time the assessment is submitted to the Department of Education's National Advisory Committee on Institutional Quality and Integrity; and

(B) the subsequent recommendations and rationale of the Secretary of Education regarding the establishment of the degree granting authority.

(2) Upon any modification or redesignation of existing degree granting authority, the Secretary of Defense shall submit to the Committees on Armed Services of the Senate and House of Representatives a report containing the rationale for the proposed modification or redesignation and any subsequent recommendation of the Secretary of Education on the proposed modification or redesignation.

(3) The Secretary of Defense shall submit to the Committees on Armed Services of the Senate and House of Representatives a report containing an explanation of any action by the appropriate academic accrediting agency or organization not to accredit the Naval Postgraduate School to award any new or existing degree.

Sec. 7049. Defense industry civilians: admission to defense product development program

-STATUTE-

(a) Authority for Admission. - The Secretary of the Navy may permit eligible defense industry employees to receive instruction at the Naval Postgraduate School in accordance with this section. Any such defense industry employee may only be enrolled in, and may only be provided instruction in, a program leading to a master's degree in a curriculum related to defense product development and systems engineering. No more than 125 such defense industry employees may be enrolled at any one time. Upon successful completion of the course of instruction in which enrolled, any such defense industry employee may be awarded an appropriate degree under section 7048 of this title.

(b) Eligible Defense Industry Employees. - For purposes of this section, an eligible defense industry employee is an individual employed by a private firm that is engaged in providing to the Department of Defense significant and substantial defense-related systems, products, or services. A defense industry employee

admitted for instruction at the school remains eligible for such instruction only so long as that person remains employed by the same firm.

(c) Annual Determination by the Secretary of the Navy. - Defense industry employees may receive instruction at the school during any academic year only if, before the start of that academic year, the Secretary of the Navy determines that providing instruction to defense industry employees under this section during that year -

(1) will further the military mission of the school;

(2) will enhance the ability of the Department of Defense and defense-oriented private sector contractors engaged in the design and development of defense systems to reduce the product and project lead times required to bring such systems to initial operational capability; and

(3) will be done on a space-available basis and not require an increase in the size of the faculty of the school, an increase in the course offerings of the school, or an increase in the laboratory facilities or other infrastructure of the school.

(d) Program Requirements. - The Secretary of the Navy shall ensure that -

(1) the curriculum for the defense product development program in which defense industry employees may be enrolled under this section is not readily available through other schools and concentrates on defense product development functions that are conducted by military organizations and defense contractors working in close cooperation; and

(2) the course offerings at the school continue to be determined solely by the needs of the Department of Defense.

(e) Tuition. - The President of the school shall charge tuition for students enrolled under this section at a rate not less than the rate charged for employees of the United States outside the Department of the Navy.

(f) Standards of Conduct. - While receiving instruction at the school, students enrolled under this section, to the extent practicable, are subject to the same regulations governing academic performance, attendance, norms of behavior, and enrollment as apply to Government civilian employees receiving instruction at the school.

(g) Use of Funds. - Amounts received by the school for instruction of students enrolled under this section shall be retained by the school to defray the costs of such instruction. The source, and the disposition, of such funds shall be specifically identified in records of the school.

A, title V, Sec. 525, Jan. 6, 2006, 119 Stat. 3245; Pub. L. 110-417, [div. A], title V, Sec. 542, Oct. 14, 2008, 122 Stat. 4456.)

-MISC1-

AMENDMENTS

2008 - Subsec. (a). Pub. L. 110-417 substituted "125" for "25".

2006 - Subsec. (a). Pub. L. 109-163 inserted "and systems engineering" after "curriculum related to defense product development" and substituted "25" for "10".

2004 - Subsec. (e). Pub. L. 108-375 substituted "President" for "Superintendent".

2003 - Subsec. (c). Pub. L. 108-136 substituted "Determination" for "Certification" in heading and struck out ", and certifies to the Committee on Armed Services of the Senate and the Committee on Armed Services of the House of Representatives," after "determines" in introductory provisions.

PROGRAM EVALUATION AND REPORT

Pub. L. 106-398, Sec. 1 [[div. A], title V, Sec. 535(b)], Oct. 30, 2000, 114 Stat. 1654, 1654A-113, provided that:

"(1) Before the start of the fourth year of instruction, but no earlier than the start of the third year of instruction, of defense industry employees at the Naval Postgraduate School under section 7049 of title 10, United States Code, as added by subsection (a), the Secretary of the Navy shall conduct an evaluation of the admission of such students under that section. The evaluation shall include the following:

"(A) An assessment of whether the authority for instruction of nongovernment civilians at the school has resulted in a discernible benefit for the Government.

"(B) Determination of whether the receipt and disposition of funds received by the school as tuition for instruction of such civilians at the school have been properly identified in records of the school.

"(C) A summary of the disposition and uses made of those funds.

"(D) An assessment of whether instruction of such civilians at the school is in the best interests of the Government.

"(2) Not later than 30 days after completing the evaluation referred to in paragraph (1), the Secretary of the Navy shall submit to the Secretary of Defense a report on the program under such section. The report shall include -

"(A) the results of the evaluation under paragraph (1);

"(B) the Secretary's conclusions and recommendation with respect to continuing to allow nongovernment civilians to receive instruction at the Naval Postgraduate School as part of a program related to defense product development; and

"(C) any proposals for legislative changes recommended by the Secretary.

"(3) Not later than 60 days after receiving the report of the Secretary of the Navy under paragraph (2), the Secretary of Defense shall submit the report, together with any comments that the Secretary considers appropriate, to the Committee on Armed Services of the Senate and the Committee on Armed Services of the House of Representatives."

10 USC Sec. 7050 02/01/2010

-EXPCITE-

TITLE 10 - ARMED FORCES
Subtitle C - Navy and Marine Corps
PART III - EDUCATION AND TRAINING
CHAPTER 605 - UNITED STATES NAVAL POSTGRADUATE SCHOOL

-HEAD-

Sec. 7050. Grants for faculty research for scientific, literary, and educational purposes: acceptance; authorized grantees

-STATUTE-

(a) Acceptance of Research Grants. - The Secretary of the Navy may authorize the President of the Naval Postgraduate School to accept qualifying research grants. Any such grant may only be accepted if the work under the grant is to be carried out by a professor or instructor of the School for a scientific, literary, or educational purpose.

(b) Qualifying Grants. - A qualifying research grant under this section is a grant that is awarded on a competitive basis by an entity referred to in subsection (c) for a research project with a

scientific, literary, or educational purpose.

(c) Entities From Which Grants May Be Accepted. - A grant may be accepted under this section only from a corporation, fund, foundation, educational institution, or similar entity that is organized and operated primarily for scientific, literary, or educational purposes.

(d) Administration of Grant Funds. - The Secretary shall establish an account for administering funds received as research grants under this section. The President of the Naval Postgraduate School shall use the funds in the account in accordance with applicable provisions of the regulations and the terms and condition of the grants received.

(e) Related Expenses. - Subject to such limitations as may be provided in appropriations Acts, appropriations available for the Naval Postgraduate School may be used to pay expenses incurred by the School in applying for, and otherwise pursuing, the award of qualifying research grants.

(f) Regulations. - The Secretary shall prescribe regulations for the administration of this section.

DEPARTMENT OF THE NAVY
CHIEF OF NAVAL OPERATIONS
2000 NAVY PENTAGON
WASHINGTON DC 20350-2000

IN REPLY REFER TO

1524
Ser N00/100105
31 Oct 08

MEMORANDUM FOR DIRECTOR NAVY STAFF
DEPUTY CHIEF OF NAVAL OPERATIONS
TOTAL FORCE (CNO N1)
DEPUTY CHIEF OF NAVAL OPERATIONS
FLEET READINESS AND LOGISTICS (CNO N4)

Subj: NAVY-WIDE EDUCATION GOVERNANCE

Encl: (1) Reporting Relationships and Policy Coordination

1. In response to feedback from the 16 April 2008 Graduate Education Review Board (GERB), I approve and direct the implementation of the following organization, funding, and policy framework outlined in enclosure (1).

a. Organization

(1) The Chief of Naval Operations (CNO) will serve as the reporting senior of the Superintendent, United States Naval Academy (USNA); the President, Naval War College (NWC); and the President, Naval Postgraduate School (NPS).

(2) The Vice Chief of Naval Operations (VCNO) will serve as Executive Agent for these institutions and serve on education governance boards established by the Secretary of the Navy (SECNAV) or higher authority. He will be responsible for ensuring policy is integrated across the Navy and ensuring education strategy is appropriately resourced.

(3) The Deputy Chief of Naval Operations (Total Force) (CNO (N1)) will be responsible for advanced education policy, requirements, and mission funding.

(4) The Deputy Chief of Naval Operations (Fleet Readiness and Logistics) (CNO N4) will be responsible for installation funding of all education institutions including Military Construction (MILCON), Special Projects, and Base Operating Support.

(5) Superintendent USNA, President NWC, and President NPS will address routine education matters through CNO N1 and CNO N4 as appropriate.

b. Funding

(1) Mission resource sponsorship for USNA will be realigned from the Director, Navy Staff (DNS) to CNO N1. USNA's Budget Submitting Office (BSO) will shift from Director, Field Support Activity (FSA) (BSO 11) to the Chief of Naval Personnel (CNP) (BSO 22).

(2) Base Operating Support (BOS) levels for NWC, NPS, and USNA will be programmed to equivalent service levels during the Program Review Fiscal Year 2011 process.

c. Policy and Oversight

(1) The GERB will be replaced by the Advanced Education Review Board (AERB) which will be charged with providing oversight of Navy's education strategy, policy, resources, and execution.

(2) VCNO will chair the AERB. CNO N1 will prepare a governing instruction and serve as the Executive Secretary of the Board.

(3) AERB membership will expand to include the Superintendent, USNA.

2. The VCNO is directed to implement the following:

a. Realign resources.

b. Develop a plan for appropriate education installation infrastructure and common service levels.

c. Replace the GERB with the AERB.

d. Publish an AERB instruction.

e. Direct annual programming guidance and priorities associated with mission funding, MILCON, Special Projects, and Base Operating Support for educational institutions.

Subj: NAVY-WIDE EDUCATION GOVERNANCE

3. Actions will be completed by 31 December 2008. Resource issues that require longer to complete will be addressed in execution plans due 30 November 2008. Such plans should ensure completion of resource realignments by 1 October 2009.

PROVOST'S NEWSLETTER

Naval Postgraduate School / December 2006 / Volume 1 / Issue 1

Message from the Provost

NPS Provost Leonard Ferrari

Over the past few months, I have heard from faculty and staff about the issues they see as critical to the campus. During the Provost search and again through the WASC survey and the Ad Hoc Committee on Business Practices, one issue that comes up again and again is communications. Faculty, staff and students would like to be better informed about events, accomplishments and issues that affect their professional lives. This newsletter, which will be distributed on a monthly basis, will provide information about the important events and issues surrounding Academic Affairs. Here you will see updates on the WASC accreditation efforts, student data profiles, achievements within the schools and exciting new research involving campus personnel. I hope you will find this newsletter interesting and informative. I welcome comments and suggestions for content and improvement.

Did You Know?

Did you know that NPS is the first of our nation's military graduate institutions to receive accreditation?

What is WASC?

The Western Association of Schools and Colleges (WASC) is the regional organization that certifies the accreditation of NPS by verifying — through thorough inquiries — that NPS has a clear mission, can demonstrate fiscal stability, and maintains high levels of academic quality, institutional integrity and educational standards.

Accreditation: Timeline

The accreditation process involves three stages:

- Proposal
- Capacity Review
- Educational Effectiveness Review

The Proposal outlines what will be examined during both the Capacity and the Educational Effectiveness Reviews. The Capacity Review evaluates the ability of NPS to successfully carry out its mission, and involves a site visit by a WASC team in spring 2009, and the submission of a 30-page document to WASC. The Educational Effectiveness Review assesses student learning at NPS, and includes a 50-page submission to WASC in advance of the team's visit in fall 2010.

WASC UPDATE

The WASC website, found on the NPS Intranet at http://intranet.nps.edu/WASC was launched in June 2006. An announcement of the launch was sent campus-wide, and all NPS personnel were invited to visit the site, which highlights all aspects of accreditation at NPS, and hosts all documents related to the process, including the proposal and the WASC Handbook.

The Strengths, Weaknesses and Opportunities (SWOT) survey was distributed campus-wide in summer 2006. Data collected from the completed surveys were evaluated and analyzed by the WASC Steering Committee, and incorporated into the three major themes outlined in the WASC proposal.

(Continued on other side)

PROPOSAL SUBMISSION

On October 15, 2006, NPS submitted its proposal to WASC. The document is currently being reviewed; feedback is expected in mid-December.

Currently, the formation of task forces that will begin to expand upon each theme outlined in the proposal, and to collect and analyze data related to the accreditation process, is underway.

To participate in the WASC process, or to receive further information about WASC, please contact the Steering Committee Member representing your area noted below:

WASC STEERING COMMITTEE MEMBERS

- Alan Richmond, Institutional Advancement

Details on the WASC Survey

In July 2006, the WASC survey was distributed campus-wide, via email and the WASC website, to the faculty and the staff of NPS. The survey took the form of open-ended SWOT questions (Strengths, Weaknesses, Opportunities and Threats). As the major themes were developed for the WASC proposal, the survey results provided evidence and guidance as to the campus community's viewpoints.

Survey responses were highest in the following areas, organized by the WASC theme they support:

Theme One: Strategic planning for the next NPS centennial

Strengths: military relevance and problems of national importance that are tackled by NPS, the high-quality of faculty, students, staff and research at NPS, and the many opportunities and services offered by NPS to military students and their families.
Opportunities: partnerships with industry, universities, other federal, non-DoD, local and international agencies
Threats: long term planning difficult because of lack of Navy support, ignorance of NPS value, lack of students, and diminishing faculty quality.

Theme Two: Integrating a campus-wide program of continuous improvement

Strengths: knowledgeable, dedicated, talented and highly-motivated faculty coupled with adaptive, leading-edge research produced by NPS agility, responding to stakeholder needs
Opportunities: academic programs such as Distance Learning and Homeland Security, the capacity to expand in areas related to funding outside of the Navy, and growth in research grants.
Threats: a lack of students and weak admissions criteria.

Theme Three: Supporting an evolving academic enterprise

Strengths: high quality and dedicated staff and strong IT staff support.
Weaknesses: budgeting, contracting and hiring processes, problems with leadership, issues of governance, poor facilities, lack of communication and bureaucratic gridlock.
Opportunities: improved communications in the areas of alumni relations, branding, institutional advancement, and expansion of the NPS Foundation.
Threats: need for infrastructure support, continuing budget uncertainties.

For more details on the results of the survey, go to the WASC web site, http://intranet.nps.edu//WASC and go to the Preparation link.

PROVOST'S NEWSLETTER

Naval Postgraduate School / January 2007 / Volume 2 / Issue 1

Message from the Provost

On December 26, 2006, in addition to my duties as Provost, I was honored to be asked to serve as Acting President of the Naval Postgraduate School until a permanent President is appointed.

On behalf of the faculty, staff and students of NPS, I would like to extend our sincere gratitude to Colonel David Smarsh, who assumed the responsibility of Acting President following the departure of Rear Admiral Richard Wells in June 2006. Colonel Smarsh joins a list of distinguished officers who have brought both honor and leadership to the Naval Postgraduate School, and we all appreciate his efforts.

In the next year, NPS will develop a new vision as the campus moves forward on a new strategic plan. This includes a stronger focus on NPS as a research institution. Part of this effort will be an increase in the number of Ph.D. students. Progress will continue in the efforts to increase budget and financial transparency and to improve the efficiency of the administrative infrastructure. At the same time, we will continue to strive for academic excellence, remaining true to our core mission of providing relevant education and research to our country's defense forces.

More than ever, we need engagement from our entire campus to make these initiatives successful. We have established new committees and recharged standing committees and asked that they consult with the campus in their work and regularly report on progress.

METOC Teams Optimize Stealth for Sub-Launched Covert Operations

Did You Know…

That 34 graduates of NPS have become astronauts?

WASC Update

The Naval Postgraduate School completed the first stage of its reaccreditation review on October 15, 2006, when it submitted its proposal to WASC. In December, Colonel David Smarsh was notified via a telephone interview that the WASC Proposal Review Team had enthusiastically endorsed the proposal. As a result, the Steering Committee is now moving forward, developing the two-year self-study by determining themes and specific directions for investigation, data collection and analysis. For continuing updates, see http://intranet.nps.edu/WASC/index.html

Academic Strategic Vision Committee Formed

The Provost has established an Academic Strategic Vision Committee which is charged with recommending goals and priorities for strategic investments to ensure continuously improving academic quality. The framework is NPS as a research institution. The Committee, chaired by Tom Housel, Professor of Information Sciences, includes:

- Vali Nasr, Professor, National Security Affairs
- Douglas Fouts, Assoc. Dean of Research and Professor, Electrical Engineering
- Frank Barrett, Assoc. Professor, GSBPP
- Phil Durkee, Chair and Professor, Meteorology
- Chris Olsen, Chair, Faculty Council and Professor, Physics
- Jim Eagle, Chair and Professor, Operations Research

Faculty Development

The Instructional Design and Development and Faculty Development team successfully conducted the 14th session of the Interactive Distributed Learning (IDL) course, which has helped over 200 faculty members to design, develop, and deliver courses within the distributed learning environment. At the IDL Faculty Showcase on December 8, 2006, thirteen faculty presented a sample of their coursework, which illustrated the impressive quality of the Distributed Learning courses offered at NPS.

Academic Council News

- The **National Security Affairs (NSA)** Department has changed the name of the degree formerly offered as Regional Studies to a Master of Arts in Security Studies, also noting the parenthetical name of the region studied
- The names of the degrees for the Information Warfare (595) and Electronic Warfare (596) curricula have been changed to a Master of Science in Information Warfare Systems Engineering and in Electronic Warfare Systems Engineering, respectively
- Processes for requesting and granting thesis extensions has been changed substantially to provide more authority at the departmental level and more flexibility for students
- The NSA Department and the Center for Homeland Defense and Security received approval, subject to approval of new courses, for a Certificate Program in Homeland Defense and Security. Students will enroll in the new program in January 2007

Partnerships

On December 15, 2006, NPS and Old Dominion University (ODU) discussed research with MOVES and education as possible areas for collaboration.

NPS and the University of California at Santa Cruz (UCSC) held discussions on December 18, 2006 regarding future partnerships in the areas of research, education and infrastructure.

New Programs Funded

- Congress provided NPS funding for Ph.D.s in support of Homeland Defense. NPS will be working with the University of Colorado.
- Congress also funded NPS to increase Ph.D.s in science and technology in association with UC Santa Barbara.
- The Faculty Council has formed a Ph.D. committee to advise the Provost on the administration of both of these programs. Bill Colson, Distinguished Professor of Physics, chairs.
- Recent funding by OSD has been provided to define projects in Maritime Security and Awareness in locations such as Southeast Asia. The Provost attended meetings at the National University of Singapore on December 6-9, 2006 with members of NPS faculty and administration. The next workshop will be at NPS in June-July 2007.

New Graduating Student Survey

Feedback from students has been integral in helping to monitor and to evaluate the Naval Postgraduate School's effectiveness. In 2006, the Graduating Student Survey (formerly the Exit Survey) was redesigned to be more responsive to continuous improvement and accreditation data collection needs. The Graduating Student Survey was first conducted in September 2006, and will be administered to every graduating student each quarter.

Of 396 surveys distributed, there were 275 total respondents (69% response rate).

Students agree that:

- NPS successfully achieves its mission, supporting teaching and research to enhance the combat effectiveness of all forces
- Faculty are highly qualified, dedicated to teaching and student success, involved students in participatory learning experiences, and are available for assistance outside the classroom
- Services by the Dudley Knox Library provide strong support for both coursework and research needs.
- Support Services, such as registrar/scheduling, student services, program officer and the program office staff provide sufficient support to enable students to meet their educational goals
- They would recommend the university to other military officers or defense civilians

Students felt NPS should focus on:

- Parking and facilities, especially laboratories and maintenance
- Use of feedback mechanisms
- Communications, especially in explaining policies and procedures available to all students

School-specific reports will be provided to each of the Deans. More information about the results of the survey can be found on the NPS WASC Accreditation web site (http://intranet.nps.edu/WASC/index.html) or from the Office of Institutional Research at x2228.

For further information about the items in this newsletter, or to obtain hardcopies, please contact either Dr. Fran Horvath at rfhorvat@nps.edu, 831-656-2228 or Mr. Alan Richmond at abrichmo@nps.edu, 831-656-3649

PROVOST'S NEWSLETTER

Naval Postgraduate School / February 2007 / Volume 2 / Issue 2

Message from the Provost

As a result of many conversations I have had with faculty, students, and staff over the past year, it is clear that the campus is focused on improving and increasing its status as a research university. While there are many civilian universities which provide graduate education in business and technical fields, there are few which are dedicated to programs for military officers, DoD/federal government civilian employees, and defense contractors seeking a defense and national security relevant graduate education in both technical and non-technical fields. Even rarer is an institution dedicated to providing research-oriented curricula where the focus is on recognizing and solving new problems, innovation, and outside-the-box thinking, all in support of our military forces and national security. NPS is such a place.

A vital and growing applied and basic research program with expanded funding and an increased of Ph.D. students invigorates our academic programs with the intellectual excitement of scientific inquiry and experimentation.

Did You Know… Physics Prof. Chris Olsen's new book is becoming an academic best seller. "Remote Sensing from Air and Space" covers optical, thermal, radar and lidar applications that are not found in current remote sensing textbooks.

How does this help NPS? Expanding our research program:

- *Improves the quality of education for our military officers*
- *Benefits the Navy and other armed services through a commitment to leading edge research*
- *Broadens our base of support and increases our funding base*
- *Raises our national and international profile and visibility*
- *Builds closer relationships with other research universities*
- *Permits NPS to grow through strategic investments and partnerships*
- *Supports our teaching mission with the employment of teaching assistants for laboratory and discussion course sections*
- *Leverages our resources, employing economies of scale in academic programs and reduces costs per student*

What activities are moving NPS toward these goals?

- *The new Academic Strategic Vision Committee is refocusing our planning efforts*
- *Partnerships with UC Santa Barbara, Virginia Tech, University of Mary Washington, and other institutions are taking shape; NPS is pursuing new graduate education funding opportunities through these partnerships*
- *New Ph.D. programs are being planned which will include an increase in U.S. civilian enrollment in support of Navy and DoD workforce needs*

What can the NPS Community do to help?

- *Support the faculty working to achieve these goals*
- *Become involved in efforts to increase research quality which in turn results in more relevant and innovative educational programs for our students and better support for our military forces*

Improving Facilities: Public Works Projects

These last two years have been critical ones for NPS with the completion of several important facilities projects which are bringing the campus closer to accomplishing its Master Plan, the Regional Shore Infrastructure Plan (RSIP). Last year, the Glasgow Extension was completed after four years in the making, and is now home to the Computer Science Department and the Cebrowski Institute. A ribbon-cutting celebration will be scheduled in the near future to cap off this project which was coordinated by Public Works. A smaller Glasgow Extension, along with an addition of the perimeter road, and refurbishment of the Glasgow parking area is planned for later this year.

Last year, Public Works also completely rebuilt the steam distribution system. This critical project moves NPS towards the goal of a healthier environment in all academic and administrative buildings. To assist in this endeavor, a new Energy Management Control System will help better deliver heat to all spaces.

Finally, the total renovation of the Herrmann Hall Wings is nearing completion. The wings are anticipated to be open for business in the beginning of May 2007 complete with 140 new rooms and suites with landscaped gardens throughout the area. A model suite will soon be available for all to view. This year will also bring a lot of smaller renovation projects for lab areas within the academic buildings.

For more information, contact Pete Dausen at 656-3037.

Robert E. Ball, distinguished Professor Emeritus of Mechanical and Astronautical Engineering, received the American Institute of Aeronautics and Astronautics Summerfield Book Award for his pioneering textbook titled *The Fundamentals of Aircraft Combat Survivability Analysis and Design, Second Edition.* Dr. Ball received the award at the 45th Annual Aerospace Sciences meeting in Reno, Nevada, on January 9, 2007.

Dr. Ball is described as "the father of aircraft combat survivability education," a field that addresses active and passive man-made threats to the successful operation of military and civil aircraft and missiles, and how to design air vehicles to minimize the effectiveness of such threats.

Dr. Rudolph Darken, Associate Professor of Computer Science, Associate Director of Research for the Center for Homeland Defense and Security, and the Director of the Defense Modeling & Simulation Institute, talked about the Institute's work in open-source development for gaming and simulation at the Marina Technology Cluster meeting on February 8, 2007.

Dr Darken discussed how some of the experts in gaming think open source impacts the industry and how small businesses can develop training applications for the government.

Dr. Darken's research has been focused on human factors and training using virtual environments and computer gaming media.

Naval Postgraduate School / March 2007 / Volume 2 / Issue 3

Campus News

The Navy's Graduate Education Quota Conference convened on March 8 to formulate the FY2008 Graduate Education Quota Plan. By March 28, N12 will forward quota conference results to PERS-440 (detailers) and Major Area Sponsors for comments.

Leonard Ferrari gave the keynote speech at the Higher Education and Research Leadership Summit on March 29. The summit was attended by high level administrators from UC Santa Cruz, CSUMB, MIIS, and many others. Dr. Ferrari's speech proposed a broad initiative in homeland security and research which could be a collaborative effort from all institutions.

MOVES faculty, students and staff demonstrated the latest developments in advanced visualization technology during the March 1 open house. The showcase included 20 thesis projects of use to the warfighter, including a tactile vibrator vest for pilots to counter optical and motion illusions, a helicopter cockpit simulator with surround-screen projection and 3D visual simulations of terrorist attack scenarios on Pearl Harbor. Several of the products developed at NPS are now being used in the fleet and field.

U.S. Navy Photo by Javier Chagoya

Chief of Naval Operations ADM Michael Mullen addressed senior officers and civilians on March 5 as part of the 10-day Navy Corporate Business Course, which focused on the latest business practices in strategic planning, goal setting, strategic communications, effects-based thinking, risk management, strategic financial management and business ethics.

Faculty News

Distinguished Professor **Brij Agrawal** of the Department of Mechanical and Astronautical Engineering has won the prestigious 2007 Naval Postgraduate School Richard W. Hamming Faculty Award for Achievement in Interdisciplinary Activities. The founder and director of the world class NPS Spacecraft Research and Design Center received the honor at the NPS Quarterly Awards Ceremony on March 13.

Distinguished Professor **Ed Thornton** of the Oceanography Department received a Sanctuary Reflection Award March 2 from the Monterey Bay National Marine Sanctuary and the Association of Monterey Bay Governments. Professor Thornton has conducted extensive field research of nearshore hydrodynamics and sediment transport. His studies in Monterey Bay have been widely acclaimed for their value to both the Navy and to environmentalists.

Lecturer and retired **Air Force Col Rene Rendon** of the Graduate School of Business and Public Policy is principal co-author of the only book on best practices and lessons learned in U.S. military program management, *U.S. Military Program Management: Lessons Learned and Best Practices.* More than half of the chapters are written by GSBPP faculty members, who are experienced military acquisition and contract management practitioners.

Professor of Mechanical and Astronautical Engineering **Michael Ross** and his NPS Guidance, Navigation and Control Laboratory team have won two National Reconnaissance Office Director's Innovation Initiative Awards, which includes $700,000 that will allow them to test applications of Ross' revolutionary theory that, to be effective, space robots must be smart and free.

Associate Research Professor of Information Sciences **Shelley Gallup, Jr.** received the DON Information Management/Information Technology Excellence Award for 2006 on behalf of NPS's FORCEnet Innovation and Research Enterprise (FIRE) team. A groundbreaking collaborative web portal, FIRE supports knowledge management and decision-making for real-time planning, execution, analysis and reporting of large-scale Navy and DoD experiments.

For photos and complete reports of these Faculty Highlight items, please view the link located at: ***http://www.nps.edu/PAO/PhotoGallery/index.asp***

Spotlight on…
Dudley Knox Library

2006 proved to be an exciting and eventful year for the Library.

A new web presence was launched by the Dudley Knox Library (DKL) in September [http://www.nps.edu/library], culminating a successful year-long collaboration between DKL and ITACS to implement a web content management system as a pilot project for the entire NPS campus. Under the new web content management system, librarians and library staff are able to utilize software tools to organize, manage, update, and publish content directly to the web.

This past year, the Library unveiled several new web services that improve the discovery of and access to information licensed for NPS use by the Library. These services include: A-Z browsing of e-journals; links to full-text articles directly from database searches; and patron-initiated interlibrary loan/document delivery services. A printer management system was implemented to more effectively distribute print jobs across Library printers and to report usage patterns. Reference librarians continued to build a cadre of services to reach out to patrons. "Ask a Librarian" and virtual reference services were popular with distance learners as well as with students and faculty on campus. New library instruction courses were offered and classes quickly filled to capacity. Many have been turned into online tutorial and demos to provide information in different formats for various learning styles.

The Library continued to provide 24/7 access to information from the patron's desktop—wherever that may be in the world — and supported a programmatic shift from print to online access to journals, books, and databases. As such, DKL revised its strategy for licensing e-content to assure that campus needs for instructional and distance education uses of materials were a consideration in licensing. Librarians also worked with faculty and students to select appropriate resources for the collection. Donors and Departments provided gifts and additional funds to extend the Library's budget for collection development. DKL also began an intensive project to provide better metadata for improved access to unique NPS publications such as student theses and NPS reports, additionally providing access to full-text wherever possible.

Patron uses of all library services continue to climb at a rate that is higher than national averages for other academic libraries.

Announcements

During April, NPS hosted:

- Board of Advisors April 17-18
- President Bob Dynes of UC and Chancellor George Blumenthal of UCSC to discuss collaborative efforts

Dr. Bob Beck, Dr. Rudy Darken and Ms. Kari Miglaw will be spearheading efforts to celebrate the NPS centennial in 2009. Parties interested in supporting the event are urged to contact them!

Naval Research Science & Technology for America's Readiness (N-STAR) Conference

The Office of Naval Research with NPS sponsored a 3-day conference April 17 – 19 specifically for NPS students and faculty. This marked the first time in NPS history that a majority of the Naval Warfare Centers (9) reached out to NPS to strengthen the bond between faculty, students and the Naval Science & Technology (S&T) community to improve technology transition. Over 90 oral and 70 poster presentations were made by Warfare center personnel and NPS faculty and students.

Dedication of the Glasgow Annex

April 9 marked the dedication ceremony of the Glasgow Annex, a 32,000 square foot, 90-room, high-tech facility that is the new home of both the Cebrowski Institute for Innovation and Information Systems Superiority and Computer Science department located within GSOIS. The event marked the first official appearance by new NPS President Daniel Oliver.

(Left to right) Compute Science Dept. Chairman/Cebrowski Institute Director Dr. Peter Denning, GSOIS Dean Dr. Peter Purdue, Representative Sam Farr (California, 17th District), NPS President Dan Oliver and City of Monterey Mayor Chuck Della Sala. ***U.S. Navy photo***

New Distributed Learning Program

NPS has just introduced a brand new Distributed Learning Certificate and Masters Degree program for electronic warfare engineers stationed at the Naval Air Warfare Center Weapons Division (NAWCWD), Point Mugu, CA. The program, titled Master of Science in Electronic Systems Engineering (MSESE), was developed at the request of NAWCWD. Students enrolled in the program will gain a solid theoretical foundation for electronic warfare systems engineering to include electronic attack, electronic protection and electronic support. Applications for enrollment in this new program will be accepted after April 20, 2007, and classes will begin in September.

WASC Update

The 2007 Learning Assessment Task Force will directly address theme two from the recently accepted NPS Institutional Proposal for the Western Association of Schools and Colleges (WASC) Accreditation. The proposal is available on the NPS intranet at: http://intranet.nps.edu/WASC/docs/WASC_Final_Proposal.pdf.

The task force, comprised of **Dr. Dave Olwell,** Chair, **Dr. Anne Clunnan, Dr. Brent Olde** and **Dr. Jim Suchan,** will participate in the NPS Office of Continuous Learning workshop on "Outcomes Based Faculty Development"; catalog assessments conducted by each departments; identify best assessment practices across departments; recommend a baseline set of assessments that should be required for each department; recommend how thesis quality should be addressed; and recommend how frequently similar learning assessment reviews should be conducted and a long-term strategy for their implementation.

The WASC Resource Committee, headed by **Dr. Fran Horvath**, will be starting the data collection efforts for the Capacity Study due in 2009.

Dr. Christine Cermak, Dr. Man Tak-Shing, Dr. Knox Millsaps, and **Dr. Julie Filizetti** gave presentations at the Annual WASC Conference held in San Jose in mid-April.

DLCC Hosts Its Spring Conference

From March 20-22, the Distance Learning Coordination Committee (DLCC) hosted its annual spring conference and follow-on Military Education Coordination Council (MECC) with the theme *Culture and Language at a Distance*. The agenda was designed to establish an understanding of the importance of language and cultural competency in the modern strategic environment, as well as distributed solutions for meeting language and culture training and education requirements. Attendees included deans and directors of DL programs for all U.S. intermediate and senior-level professional military education institutions -- the nation's war colleges, command and staff colleges, the Air University, the National Defense University, and the three colleges of the National War College (NWC). Distance learning practitioners and language and cultural competency experts also participated. NPS is not a voting DLCC member as the school does not teach JPME directly, but remains an active DLCC associate in partnership with the Naval War College, which teaches JPME at its NPS campus.

Dr. Ken Pisel, the committee's chair, opened the conference by stating that "the vast majority of service members can't take the time away from their operational duties to attend in-residence programs, so we have to use distance learning technologies to give them the cultural baseline they need before, and even as, they deploy. Eighty-five percent of NWC students, for example, now earn JPME via distance learning, versus only 15 percent from in-residence classes." **Capt. Tim Doorey**, senior intelligence officer at NPS, gave the opening address on the importance of cultural competency in the modern strategic environment.

The MECC is an advisory body to the Director, Joint Staff, on education issues, and its purpose is to address joint scholarship and key educational issues of interest to the joint education community, promote cooperation and collaboration among the MECC member institutions and coordinate joint education initiatives.

FYI

The Yellow Cab Company of Monterey is allowed on base for drop off and pick-up. Please call 394-1234 for a cab. Remember Cabs are required to be searched (passenger and trunk area) and the trusted agent policies remain in effect.

Campus Announcements

NPS joins the Department of Defense and the Department of the Navy in honoring the fallen…

On Monday, May 28th, our country recognizes Memorial Day, formerly known as Decoration Day, first celebrated on May 30, 1868, when flowers were placed on the graves of both Union and Confederate soldiers at Arlington National Cemetery. The day has grown to include and to honor not just Civil War soldiers, but all those who have died while serving our nation.

Inspired by the poem, *In Flanders Fields,* in 1915 Moina Michael wrote this stanza, which elevated the poppy to its status as the symbol of this somber day, and provided a timeless tribute to those remembered:

We cherish too, the poppy red
That grows on fields where valor fed,
It seems to signal to the skies
That the blood of heroes never dies.

A resolution was passed in December 2000 supporting a National Moment of Remembrance nested within Memorial Day, in which all Americans are encouraged "To voluntarily and informally observe in their own way a moment of remembrance and respect, pausing from whatever they are doing to listen to „Taps" or to observe a moment of silence. "

NPS joins the Department of Defense and the Department of the Navy in remembering and honoring the men and women who have given their lives in service to our nation.

NPS will once again present the "Memorial Day Concert on the Lawn: A Day of Remembrance" which over 7,000 people are expected to attend. This is our biggest Open House of the year, and possibly the only one that enables the community to have gate access and to learn more about the educational and research activities at NPS. All NPS Schools will be given high priority visibility and acknowledgement throughout the event.

The music performances and non-profit fair begin at 10 AM while historic tours and scientific demonstrations begin at 11 AM. Guests are encouraged to arrive by noon so they won't miss the tours or the main events.

New Digital Media Production and Photo Studio

NPS is creating a professional Digital Media Production and Photo Studio in Herrmann Hall. The Studio will be a dedicated space to conduct interviews with visiting dignitaries and to enable NPS to provide television quality video news releases and to produce a monthly thirty-minute television program, "NPS in Review." The program, which will air on the local PBS station and the Government Channel, not only will provide a new information venue into the local community, but also will be a program that will hopefully be added to the Pentagon Channel, thereby creating for NPS a new audience of 20 million viewers worldwide, and another opportunity to highlight the important work being conducted at NPS.

Faculty News

Assistant Professor **Jessica Piombo** was selected by the International Republican Institute (IRI) to be part of an international delegation to monitor Nigeria‟s April 21st presidential and parliamentary elections. The IRI is a non-profit, non-partisan organization committed to advancing freedom and democracy worldwide. The delegation was led by **Ambassador Pierre-Richard Prosper**, former U.S. Ambassador-at-Large for War Crimes; **The Honorable Andras Byurk,** of Hungary, Member of the European Parliament; and **Abbe Apollinaire Muholongu Malumalu,** President of the Independent Electoral Commission of Democratic Republic of Congo. The other delegates were comprised of ambassadors, high-level government officials, and scholars. Delegates were deployed throughout the country to monitor polling stations and to identify and evaluate strengths and weaknesses in Nigeria‟s elections system. Their observations will lead to a report providing an overall assessment of the electoral event. IRI has monitored more than 130 elections in more than 40 countries.

Internationally renowned aeronautical engineer **Dr. E. Roberts "Bob" Wood,** professor emeritus at NPS, has been named an honorary fellow of the American Helicopter Society (AHS) International. The prestigious induction took place at the AHS 63rd Annual Forum and Technology Display Grand Awards Banquet, May 2 in Virginia Beach, Va. The vertical flight society, which has over 6,000 members worldwide, grants honorary fellow status to two members a year whose career leadership and innovation have significantly advanced the interests of the vertical flight industry.

Campus Visitors

COS Col. Dave Smarsh (left) and **Assistant Dean of SIGS Gary Roser** (third from left) were among the NPS leaders and faculty who briefed Malaysian officials on May 2 during a fact-finding trip led by Ministry of Defense Deputy Secretary **General Dato Jesbil Singh** (second from left). Other officials in the delegation were **Gen. Ismail Samion (center), National Defense University of Malaysia (NDUM) vice chancellor, Prof. Wan Mahzom Shah (far right), NDUM deputy vice chancellor, and Abdul Razak Ahmad (right), deputy director in the Malaysian Ministry of Higher Education**.

Ms. Nancy Bennett, Governor Schwarzenegger‟s Deputy Director of the San Francisco office, visited with **Dr. Leonard Ferrari, Dr. Christine Cermak, Dr. Fran Horvath** and **Mr. Alan Richmond** at their invitation. The visit provided an opportunity to showcase NPS activities, including a visit to the Space Systems area with Professor Rudy Panholzer and to the MOVES Institute for a technology update. Dr. Ferrari also briefed Ms. Bennett on the National Security Institute that he is forming. **Ms. Janis Cortese** of the Corporation for Education Network Initiatives in California (CENIC), one of our key partners in high-bandwidth networking on a regional, national and international level, joined in the visit. The purpose of the visit was a prelude to a visit by the Governor at a future date.

Cisco Senior VP **Mr. Brad Boston** met with **Dr. Leonard Ferrari, Dr. Dan Boger.**, **Mr. Bill Warner** and **Admiral Merrill Ruck (ret.),** to discuss the quality of NPS research and to provide opportunities for ongoing partnership development.

Mr. Brad Boston and **Mr. Bobby Johnson,** CEO of Foundry Networks, joined the President‟s Circle of the NPS Foundation.

Naval Postgraduate School / June 2007 / Volume 2 / Issue 6

Provost's Message

Congratulations to CHDS, and special thanks to all who supported this significant achievement

I am pleased to announce the formation of the Monterey component of the National Security Institute (NSI). The NSI is a collaboration of the Lawrence Livermore National Laboratory (LLNL), the University of California Santa Barbara (UCSB), and the Naval Postgraduate School. Its focus is on research and graduate education supporting national defense and homeland security. By joining the respective strengths of the partners in research and education, we have a synergistic combination of personnel and facilities. Other national and international institutions may affiliate with the NSI on specific collaborative projects. By combining the exceptional talents of the personnel and outstanding facilities of these national institutions, we aim to leverage the existing expertise and experience as we seek to combine DoD–focused research and development for the national defense with Federal/State/Local-focused research and development for homeland security.

The Executive Board of the NSI consists of the NPS Provost, the UCSB Executive Vice-Chancellor (Dr. Gene Lucas), and the LLNL Director of Homeland Security Programs (Dr. T.R. Koncher). The Interim Executive Director of the NSI is Dr. Leonard Ferrari of NPS. The Technical Directors are Prof. Bill Colson of NPS, Dr. Craig Smith of LLNL, and Prof. Hua Lee of UCSB. At NPS Dr. Terry Pierce will coordinate the NSI education activities in support of Homeland Security, Ms. Paula Philbin will coordinate external relationships, and Ms. Wendy Walsh will coordinate other non-education Homeland Security programs. Distinguished Professor Emeritus John Powers will provide planning support. Some of the NPS researchers affiliating with the NSI at Monterey include:

- Distinguished Professor Dave Netzer – Technology insertion in field demonstration experiments
- Professor Alex Bordetsky (IS) – Innovative networks
- Distinguished Professor Bill Colson (PH) – Directed energy systems
- Professor Bret Michael (CS) – Software engineering in systems
- Professor Chris Olsen (PH) – Remote sensing
- Research Associate Jim Ehlert (IS) – Persistent surveillance
- Professor Phillip Pace (EC) – Innovative electronic defense

This listing is illustrative, not comprehensive. Other NPS and partner collaborators are invited to join the NSI's efforts.

I look forward to the accomplishments of this Institute as we move forward together with our partners to enhance the defense and security of the United States.

Campus Announcements

New Program

NPS has received preliminary approval from WASC for CHDS to offer the Master of Arts in Security Studies (Homeland Defense and Security) at a new site in West Virginia. A proposal was reviewed by a WASC Committee, which responded positively to CHDS work in educational effectiveness, use of technology, and program design. The committee also noted the collaborative nature of the program and the service to our nation in providing education in support of homeland security. Final approval by the WASC Executive Committee is expected in June. Congratulations to CHDS, and special thanks to **Julie Filizetti**, **Ted Lewis, Lauren Wollman**, **Bill Pelfrey**, **Fran Horvath** and **Megan Heath** for their support on this significant achievement.

Dedication of Herrmann Hall Wings

The opening of the visitors' quarters of Herrmann Hall's east and west wings was celebrated with a dedication and ribbon-cutting ceremony that was held on June 11. The new facilities, which include 142 total rooms, 68 suites and 15 VIP suites, are all equipped with kitchenettes, high-speed Wi-Fi internet access, televisions with premium cable channels, DVD players and free movies that can be checked out at the registration desk. The newly renovated rooms in both wings will be occupied by international students, foreign dignitaries as well as Department of Defense active duty and civilian personnel.

Congratulations to…..

…all of the 314 students who graduated from NPS on June 15. VCNO ADM Patrick Walsh was the keynote speaker at the ceremony.

..the NPS campus community, which hosted over 3,000 participants at the Memorial Day *Concert on the Lawn!*

… JD Fulp, the Schieffelin award winner!

…Professor **Thomas Bruneau,** who co-edited a book that was published in June. Titled *Reforming Intelligence: Obstacles to Democratic Control and Effectiveness*, the book is a collection of case studies written by intelligence experts that collectively outlines the best practices for intelligence services in the United States and other democratic states. Chapters in the book were also written by **NSA Chair Douglas Porch,** Visiting Professor **William Lahnehan**, Lecturer **Kenneth Dombroski,** Professor **Mikhail Tyspkin,** and faculty member **Cristiana Matei.**

…GSOIS Professor **Dan Nussbaum,** who is currently serving as president of the Society of Cost Estimating and Analysis. The professional society, which is dedicated to improving cost estimating and analysis in government and industry and enhancing the professional competence of its members, has over 1,400 members and 16 chapters nationwide.

…GSBPP sponsored its *4th Annual Acquisition Research Symposium: Creating Synergy for Informed Change*, which provided a forum for the presentation and promotion of acquisition research carried out under the NPS Acquisition Research Program.

Naval Postgraduate School / July 2007 / Volume 2 / Issue 7

Message from the Provost

Earlier this month, I was asked to give the graduation speech for the Temasek Defense Systems Institute, a joint NPS-National University of Singapore program. Here are excerpts from that speech…

As the Navy's university, NPS will continue to respond with our best efforts — for as long as the need persists

We have entered an amazingly complex era of technology expansion and globalization that many hope will raise the quality of life for all of humanity. There are also many others who believe, open market globalization will lead to catastrophic worldwide problems. You, the graduates, have arrived at this point in your lives and at a time in history where it is more important than ever, that you use your great skills and the knowledge that you have worked so hard to acquire to help guide the course of humankind. You live in a nation that has achieved remarkable success…economically, politically and socially in a very short period of time. A nation which used the tools of systems engineering to develop a society that ensures that its entire population participates in its successes.

What do I mean by the great issues of our time? Let me list a few:

- Global warming…unfortunately, the debate has become far too political…is this trend a natural earth cycle or is it being driven by human behavior? More importantly, do we have the ability to reverse this trend? How long do we have? We all have a stake in answering these questions correctly and we must work together to seek answers and solutions. These are scientific inquiries that need to be answered by a rigorous scientific and systems engineering analysis.
- Poverty…many believe we finally have the means to end worldwide, abject poverty. Yet, there are those, including the Nobel Prize winning American economist, Dr. Joseph Stiglitz, who believe that the open market form of globalization has increased the numbers of people on earth living in abject poverty and that this increase is particularly acute in the developing nations. If this is true, then how will this impact global stability?
- Terrorism…this movement takes many forms... a few days ago it was Glasgow, Scotland. We must work together to understand the root causes that turn men and women into suicide bombers and murderers. The link to poverty has been stated by former US Secretary of State Colin Powell who said, "The war against terror is bound up in the war against poverty."
- National and transnational conflicts…what can we say about Darfur, where at least 200,000 people are believed to have died, with more than 2.5 million more displaced from their homes across Sudan and eastern Chad? And what of the secular violence in Iraq?

I raise these issues because you, the graduates of two great universities from two great nations, are special and the directions you choose, will shape the future of both our nations and maybe the world. The recent, great explosion in technology gives us new powers to raise our own quality of life and to benefit all humanity, but it also gives us the power to inflict catastrophic damage to the environment and great human suffering...economically, politically and socially.

Let me end with a quote from Dr. Paul Farmer, a great American humanitarian and research physician who has dedicated his life to finding solutions to communicable diseases and providing healthcare for some of the world's most impoverished peoples. He simply states, "the only real nation is humanity."

Thank you for letting me share these few thoughts with you on this auspicious occasion. Good luck to all of you.

Learning Object Repository

(http://www.dtic.mil/whs/directives/corres/pdf/132226p.pdf): DoD Instruction 1322.26 states that training and distributed learning are to be shared as broadly as possible except where limited by law, policy, or security classification.. In support of this directive, as a new service for faculty, the Office of Continuous Learning (OCL) is building a Learning Object Repository (LOR), which will provide opportunities to easily reuse, repurpose or reengineer learning resources. The LOR system will be connected to the Advanced Distributed Learning DL registry which will render instructional materials and digital media available for search and reuse, and meta-tag the course materials to be placed in the repository, beginning with the interactive media elements (IMEs) that faculty have developed either in an IDL/online IDL course or through the course proposal process. Please contact Ernest Koh (Manager, Instructional Design & Development) at ekoh@nps.edu or at ext. 2175 if you have any questions.

Conferences

The Partnership for Peace Consortium held its first Educators Program at the NATO Defense College in Italy. The goal of this program was to create an open forum for dialogue and sharing among nations about learning and teaching. Best practices, methods for interactive instruction, and the use of technology to support education for reform were examined and applied to simulations, case studies, and action planning exercises. The initial Educators Program was well received by participants from nine partner countries. The consortium plans to offer the Educators Program and support to individual partner countries on an ongoing basis. NPS was instrumental in planning and implementing this event and was represented by: **Dr. Donald Abenheim, Ms. Maureen Bowman, Mr. Tom Hazard, Dr. Ben Roberts, Mr. Alan Richmond, and Ms. Ali Rodgers.**

The Remote Sensing Center will be hosting a Synthetic Aperture Radar (SAR) conference on August 9th at MBARI. Contact Richard Olsen at ext. 2019 for more information.

Faculty Spotlight

Peter Denning, chairman of the Naval Postgraduate School Department of Computer Science and director of the Cebrowski Institute, has been named one of two inaugural National Science Foundation Computer and Information Science and Engineering (CISE) Distinguished Education Fellows.

The new fellowships are part of the agency's Pathways to Revitalized Undergraduate Computing Education (CPATH) program to improve the quality of undergraduate computer science education nationwide. The awards are made to national leaders in computing science who have achieved distinction, are committed to transforming undergraduate computing education and have specific innovative ideas for how to do so.

CISE Assistant Director Jeanette Wing presented Denning with the prestigious award, accompanied by a two-year $250,000 grant, at a ceremony at NSF headquarters in Arlington, VA.

John Arquilla will participate in an important panel session for the Monterey Museum of Art in conjunction with a major exhibition called: Seeing Ourselves: Treasures from the George Eastman House. The panel will discuss the power of images to form public opinion and memories of war.

Glen Woodbury has been appointed Director of the Center of Homeland Defense and Security and began his position as of 1 July.

Richard Hoffmann has been re-appointed Director of the Center for Civil-Military Relations.

FACULTY HANDBOOK

Naval Postgraduate School
Monterey California

June 2006

NPS MISSION

The mission of the Naval Postgraduate School is to provide advanced professional studies at the graduate level for military officers and defense officials from all services and other nations. The school's focus is to increase the combat effectiveness of the armed forces of the United States through high-quality education and research programs that support the unique needs of the defense and national security establishment.

PREFACE

This handbook is a compilation of policies and practices affecting the faculty at the Naval Postgraduate School. While it attempts to accurately depict these policies and practices, it must be recognized that that these subject change over time and different administrators.

This handbook sets forth the school policies and procedures relating particularly to the faculty. Requirements for degrees or descriptions of curricula are found in the policy manual of the academic council and in the school catalogue. Other school instructions have been referenced, and are duplicated only when essential. The *Policy Regarding Appointment, Promotion, Salary and Tenure of Office of Civilian Members of the Faculty* is found in Appendix A.

Guiding the faculty at the Naval Postgraduate School is a continuous process. Faculty should be aware that, over time, this *Faculty Handbook* and its policies may be revised at any time as required.

It is noted that the Graduate School of Business and Public Policy (GSBPP) has no departments. The responsibilities and actions described in this Handbook for Chairs will be performed by the Dean of the GSBPP (or delegated representatives).

Richard Elster
Provost/Academic Dean

SECTION I. THE NAVAL POSTGRADUATE SCHOOL

The Naval Postgraduate School (NPS) was established in 1909 to meet the advanced educational needs of naval officers in marine engineering, wireless communications engineering, and weapons development. Since that time, the academic programs of the School have continued to meet the changing needs of the Navy, the Department of Defense, and the Department of Homeland Security. The student body includes U.S. military officers from each of the Services, U. S. government civilians, state and local government civilians, defense industry civilians, and international officers from many allied nations. The programs of study depend on the academic disciplines of the academic departments and Schools, as well as the interdisciplinary strengths from the NPS Research Institutes.

Through the years, the School has carefully nurtured quality educational standards to meet the needs of its select student body. Unlike most graduate schools, NPS has a well defined mission that allows it to tailor graduate programs to meet specific professional military demands in a quality educational experience. NPS offers graduate programs, both on and off campus, as well as a wide range of executive education and certificate programs.

The broad mission responsibility of the Naval Postgraduate School toward the advanced education of naval officers and for conducting relevant research is reflected in its chartered mission in SECNAV Instruction 1524.2A:

> The NPS exists for the sole purpose of increasing the combat effectiveness of the Navy and Marine Corps. It accomplishes this by providing post-baccalaureate degree and non-degree programs in a variety of subspecialty areas not available through other educational institutions. The NPS also supports the DoN through continuing programs of naval and maritime research and through the maintenance of an expert faculty capable of working in, or as advisors to, operational commands, laboratories, systems commands, and headquarters activities of the Navy and Marine Corps.
>
> Since the U.S. emphasizes joint and coalition warfare, carrying out the above mission means reaching out to all US services and defense and national security enterprises, their supporting industrial base, and our allies.
>
> The contributions of a degree-granting, research-oriented NPS to the Nation's overall combat effectiveness reflect:
>
> - Its ability to develop and offer unique curricula e.g., undersea warfare; electronic [information] warfare; weapons engineering; command, control, and communication; and naval intelligence.
> - The ability to conduct classified instruction and research.
> - Its flexibility in tailoring general educational subjects to the particular interest of the military, e.g., organization, space technology, and manpower management.
> - The ability to structure curriculum and course sequences to meet professional need and maintain officer warfare specialty with minimum time away from professional responsibilities.

- Its ability to meet DoN requirements rapidly and effectively, by creating and adapting relevant programs, and terminating obsolete programs.
- The benefits of bringing together officers from all services, our Allies, and key civilians from the national security community, increasing the professional dialogue among officers and civilians engaged in related efforts to solve significant defense and national security problems.
- The cultivation of a unique pool of specialized faculty whose teaching and research expertise is particularly relevant to the national defense infrastructure.

This mission of the Naval Postgraduate School establishes the continuing requirements for the combination of excellence of instructional and research programs and responsiveness to change and innovation in the technology and management of the Navy and the Department of Defense.

The unique mission of the NPS and the special character of the student body demand a premium on excellence of instruction. To be effective instructors, faculty must not only be fully up-to-date in their areas of expertise, but they must also be aware of current and future defense and national security applications. Most programs of study at the School have a Flag Officer, General Officer or senior official (called a “program sponsor”) who oversees the career and utilization assignments of NPS graduates. Both formal and informal dialogue between NPS and these program sponsors provide an invaluable constructive mechanism to determine evolving educational needs.

The primary instructional objective of the NPS graduate programs is to meet the “educational skill requirements” specified by the program sponsors. The awarding of degrees is a by-product of this effort, but an essential one. It is highly desirable to the Services and individual students that the scholarly achievements of the students be rewarded by conferring the appropriate academic degree. The courses of study, although tailored to meet the particular needs of the sponsors fulfill faculty-established standards for academic degrees.

For the purpose of awarding degrees, NPS is accredited by the Western Association of Schools and Colleges (WASC). Additionally, the Electrical Engineering, Mechanical Engineering, and Astronautics programs are accredited by the Accreditation Board for Engineering and Technology (ABET) and the management programs are accredited by the National Association of Schools of Public Affairs and Administration (NASPAA) and by the Association to Advance Collegiate Schools of Business (AACSB).

In keeping with its mission, the School fosters a research program to benefit the students' educational programs, to stimulate and encourage individual professional development, to attract and retain a talented faculty, and to examine frontiers of knowledge in response to the defense and nationals security needs of the Nation. The School enjoys a comparative advantage in its ready access to the entire Defense and National Security establishments including laboratories, offices, and operating forces.

The Naval Postgraduate School's excellent relations with the Office of Naval Research, naval laboratories, and sponsors of curricula benefit the research programs. In general, individual and group research projects, which may be interdisciplinary, are reimbursably supported by the Navy, by other Department of Defense agencies, and by other branches of the government, including the National Science Foundation, the Department of Energy, the Department of Homeland Security, and the National Aeronautics and Space Administration. Research support from private industry may also be sought through the establishment of a Cooperative Research and Development Agreement (CRADA)).

In addition, a NPS Institutionally Funded Research Program (NIFR), supported by Navy operating funds, encourages the development of new research ideas that can be proposed subsequently to potential sponsors for reimbursable support. A special benefit of the School's research program is the opportunity for all students

to gain research experience by performing supervised thesis or group project study, including classified work, in basic or applied areas of interest to the Navy and other Defense and national security organizations.

Return to TableOfContents Return to Index

SECTION II – STUDENTS

THE STUDENTS

The Naval Postgraduate School student body consists primarily of U.S. Naval Officers, but also includes other U.S. military officers, U.S. Government civilian employees, and international officers and civilians. Officers must have demonstrated both intellectual and leadership potential to warrant the government's investment in their higher education. They are mature, career-oriented individuals who realize that the graduate education programs provide the technical and managerial expertise needed in demanding billets to solve operational problems, and to employ modern weapons systems. Their goal is to qualify as a subspecialist and to complement their primary (warfare or staff) specialty.

In general, four or more years will have elapsed since the student's undergraduate education. These years will have been spent undergoing training and acquiring operational experience in a warfare specialty. In some cases, the return to an academic environment requires an extensive review to re-establish the student's academic proficiency. Further, officers may have developed new interests as a result of their career experience and may be pursuing advanced education in fields other than those of their undergraduate majors in order to meet Navy needs.

These unique characteristics of incoming students require that academic programs be adapted appropriately. Flexibility in academic course sequencing permits adjustments in the course selections offered individuals. Officers who validate sufficient courses may devote the time released to more advanced study, thesis or project work, or may complete the curriculum early. This academic tailoring is warranted due to the significant investment that the mature and experienced students represent. Each must be provided the opportunity for maximum personal development within a quality educational environment.

Return to TableOfContents Return to Index

EDUCATIONAL POLICY

On 24 May 1986 the Chief of Naval Operations issued a policy statement on graduate education. Because of its importance, the policy statement is reproduced here in its entirety.

Graduate Education Policy

> **General:** Because we face ever increasing complexities in technological, managerial, and political/economic fields which affect the Navy, we need officers with a solid intellectual capacity and the vision to capitalize on evolving technology and developments. This requires officers capable of original thought and the capacity to synthesize broad areas of knowledge to analyze complex issues, and appreciate the distinction between what is theoretically possible and actually achievable. Investment in graduate education must be pursued as a priority, even in the face of fiscal austerity and competing demands for our junior officers.

Subspecialty system: Subspecialty requirements are the primary means of defining Navy's needs for graduate education programs. Requirements will be validated every other year in a zero-based review that ensures: (1) requirements are not overstated, (2) each subspecialty has a pyramidal structure that fosters a healthy career progression, and (3) subspecialty billets are distributed throughout sea and shore activities to derive maximum benefit from the subspecialist inventory.

The number of unique subspecialty fields is to be held to a minimum, as is the number of supporting curricula. As a general rule, we will consider consolidating or eliminating other subspecialties to avoid proliferation and ensure efficiency of the system before a new subspecialty is added.

Officer participants: The fully funded graduate education programs are intended primarily for lieutenants and lieutenant commanders who have demonstrated superior professional performance and the intellectual capability to complete a rigorous academic program. These academic programs are designed to equip officers with enhanced intellectual and analytical capacity and make them more skillful warriors and specialists. Our goal is to increase the fraction of the officer corps with a graduate-level subspecialty.

Education: The intention of graduate education is to prepare an officer for a long career of contributions. Therefore, the tendency to train officers for their next assignment must be balanced by graduate education which furthers their ability to contribute. Program length will normally be two years or less to limit costs.

Officers selected for fully funded graduate education will usually be assigned to study at the Naval Postgraduate School (NPS). NPS programs will be maintained with a predominant emphasis on scientific and engineering subjects. NPS will also provide a program of continuing education so prospective students can improve their knowledge and graduates can maintain currency. For those curricula not offered at NPS, officers will be sent to quality civilian or DoD institutions approved by the appropriate program sponsor. This effort is also managed by NPS.

Other programs, either full time (such as the Advanced Education Program) or off duty, will be supported for officers who desire graduate education but are unavailable for fully funded education because of career patterns or personal desires.

Utilization: Officers with subspecialty codes will be assigned to a subspecialty billet as soon as practicable after their designation. URL officers will normally be assigned to an operational billet after graduation, but should be assigned subsequently to a subspecialty billet at their first shore tour following graduation. Officers should expect to serve multiple tours in their subspecialty fields during their careers.

Review: Several reviews are in place and will continue to ensure graduate education programs directly support the Navy's needs. These include a biennial review of each curriculum by the sponsor, a biennial flag level validation of all subspecialty billets, and an annual flag level review of Navy's graduate education chaired by the Vice Chief of Naval Operations. In addition, a Board of Advisors appointed by the Secre-

tary of the Navy will assess annually the effectiveness with which NPS is accomplishing its mission.

Return to TableOfContents Return to Index

SECTION III - SCHOOL STRUCTURE

The Naval Postgraduate School is a shore activity in an active operational status under a President under the command of the Chief of Naval Operations. The Naval Postgraduate School is subject to the area coordination authority of the Combatant Commander, US Pacific Fleet.

ORGANIZATION AND ADMINISTRATION

The organization of the School combines the administration of the traditional academic functions of a university with the functions of a military activity. A brief description of the positions of the academic officials follows. A complete assignment of duties of all officials of the School is set forth in the NPS Instruction 5400.2.

Return to TableOfContents Return to Index

The President. The President of NPS is a flag officer of the line (or a civilian with a PhD in an area represented in the NPS curricula) and is the Chief Executive of the Naval Postgraduate School. (The former title of this position was the “Superintendent”; this title may still be evident in some NPS documents.) The President is responsible to the Chief of Naval Operations for the fully-funded graduate education within the Navy conducted at both the Naval Postgraduate School and civilian universities. The determination of policy stems from the command authority of the NPS President, who is responsible for the accomplishment of the School's mission.

Return to TableOfContents Return to Index

The Provost/Academic Dean. The Provost/Academic Dean is the chief educational officer of the School and is responsible to the President for all academic matters. In the absence of the President, the Provost/Academic Dean acts in his/her behalf for those matters not related to the functions of the military chain of command. The Provost/Academic Dean's responsibilities include formulating and implementing academic policies consonant with accreditation standards and the needs of the Navy; maintaining high performance standards of the faculty; reviewing and planning for all education areas and their professional application; and liaison in educational affairs with appropriate agencies, activities, and societies.

The Provost/Academic Dean is appointed by the Secretary of the Navy for a term not to exceed five years upon recommendation of the NPS President, after consultation with a faculty committee appointed by the President for that purpose. Reappointments are possible.

Return to TableOfContents Return to Index

Dean of a Graduate School. There are four graduate Schools at NPS:

- The Graduate School of Engineering and Applied Science (GSEAS)

- The Graduate School of Business and Public Policy (GSBPP)
- The Graduate School of Operational and Information Sciences (GSOIS)
- The School of International Graduate Studies (SIGS)

Under the Provost, the Deans of the Graduate Schools (together with the Dean of Research, the Associate Provost for Academic Affairs, and the Dean of Students) administer the NPS academic programs by planning and overseeing the programs, the resources needed to support the programs, and the distribution of those resources. The Deans of the Graduate Schools are also responsible for insuring that policies and procedures are in place to carry out the academic programs efficiently. The Deans of the Graduate Schools:

- Work with the Department/Group Chairs (or the Associate Deans in the GSBPP) to plan, conduct, and administer educational programs.
- Supervise the Chairs of the Academic Departments and Groups.
- Recommend individuals to the Provost for appointment to the faculty, after receiving the recommendation of the Department/Group Chairs.
- Recommend individual faculty to the Provost for promotion, tenure, and merit pay raises where such a recommendation has been made by the Department/Group Chairs (or Dean of the GSBPP).
- Develop and administer programs for faculty orientation, development, and mentoring.
- Develop, in conjunction with the Chairs (or Dean of the GSBPP) and the Dean of Research, research plans and encourage the development of research programs.
- Prepare and submit budget, manpower, and facilities requirements in accordance with the Planning, Programming, and Budgeting System (PPBS) procedures.
- Manage all resources assigned, including budgets, manpower, and physical facilities.
- Coordinate the development of new curricula with the Director of Programs and the Associate Provost for Academic Affairs.
- Support Chairs or Dean of the GSBPP in developing and implementing personal development programs for staff members.

The Dean of a Graduate School is appointed by the President on the recommendation of the Provost for a specific term not to exceed three years. Reappointments are possible.

Return to TableOfContents Return to Index

Dean of Students. The Dean of Students is responsible for the administrative structure supporting the students as military officers and as residents. This includes such things as orientation, student services, military matters, and residences in military housing. The Dean of Students is a military officer assigned by the Navy.

Return to TableOfContents Return to Index

Director of Programs. The Director of Programs is responsible for the administration of the curricular operations of the School. The Director of Programs reports to the Provost/Academic Dean on academic matters and to the NPS President on military matters. His/her responsibilities include:

- The planning, development, and evaluation of curricular programs (including those conducted at civilian institutions) as specified by the Chief of Naval Operations, in coordination with the Deans.
- Exercising operational and supervisory authority over the Program Officers and students assigned thereto, including the establishment of common policies and procedures for the Curricular operation.
- Ensuring through periodic reviews that the stated objectives of each curriculum are current and that they reflect the educational skill requirements of the various sponsors.
- Ensuring continuing liaison with curriculum sponsors.
- Acting as Resource Manager for billets, personnel, and dollar assets assigned to the Programs Division.
- Maintaining Average-on-Board (AOB) statistics and current Prospective Rotation Dates (PRD) on students.
- Coordinating, as required, with the Chief of Naval Operations and the Commander, Bureau of Personnel (BuPERS), on student input procedures.

The Director of Programs is a military officer assigned by the Navy.

Return to TableOfContents Return to Index

Associate Provost for Academic Affairs. Under the Provost, the Associate Provost for Academic Affairs establishes policies and procedures to promote high quality instruction to meet the needs of various curricula and administers the instructional support functions. The Associate Provost for Academic Affairs:

- Insures an effective evaluation of instruction is carried out and that timely follow-up is taken on identified needs.
- Develops and conducts a program for instructional improvement.
- Recommends individuals to the Provost for appointment as Academic Associates and coordinates with the Director of Programs in the supervision of the Program Officer/Academic Associate teams.
- Coordinates with the Director of Programs and the School Deans in the development of new curricula.
- Supervises academic support activities including the Registrar functions, the Admissions office, course scheduling, and the preparation and distribution of the School catalog.
- Together with the Office of Institutional Research supervises the preparation of academic statistical data for internal and appropriate external distribution.
- Is the Secretary of the Academic Council and advises the Academic Council on curricular matters and academic standards, as requested.

- Serves as a position manager and a resource manager for all codes under the Associate Provost for Academic Affairs.
- Prepares and submits budget, manpower, and facilities requirements for assigned areas of responsibility in accordance with the Planning, Programming, and Budgeting Systems (PPBS) procedures.

The Associate Provost for Academic Affairs is appointed by the President on the recommendation of the Provost for a specific term not to exceed three years. Reappointments are possible.

Return to TableOfContents Return to Index

Associate Provost/Dean of Research. The Associate Provost/Dean of Research administers the NPS research program. In this capacity, the Associate Provost/Dean of Research is responsible for planning the research program, preparing budgets for the support of the program, maintaining contact with sponsors and potential sponsors to obtain this support, and proposing and administering policy and procedures to carry out the research program. Under the Provost, the Associate Provost/Dean of Research:

- Develops and implements policies governing research at NPS.
- Administers NPS research funds and oversees the proposal process, the expenditures of funds, and the reporting of results.
- Coordinates liaison with Department of Defense research and development facilities, the National Science Foundation, other government agencies which engage in research, and private contractors performing research.
- Supervises the Directors of the NPS Institutes.
- Supervises the Deputy Associate Provost for Research and the Director of Intelligence Research.
- Supervises Center Directors with a direct reporting relationship to the Dean of Research (e.g., the Center for Interdisciplinary Remotely Piloted Aircraft Studies, Center for Defense Technology and Education for the Military Services).
- Chairs the Research Board.
- Supervises the Director, Research and Sponsored Programs Office.
- Compiles and publishes an annual summary of the NPS research program; prepares other reports as required; and provides data, briefings, and other research-related support.
- Administers other research-related programs at the Naval Postgraduate School.
- Oversees coordination with the Comptroller's Office on budget displays and financial matters related to research funds at NPS.
- Identifies and develops additional research contacts and coordinates faculty research initiatives.
- Approves research proposals, encourages the development of research programs, and evaluates the results of research programs annually.
- Provides thesis processing for printing, posting, and distribution of theses.

- Prepares and submits budget, manpower, and facilities requirements for assigned areas of responsibility in accordance with the Planning, Programming, and Budgeting Systems (PPBS) procedures.

The Associate Provost/Dean of Research is appointed by the President on the recommendation of the Provost/Academic Dean for a specific term not to exceed three years. Reappointments are possible.

Return to TableOfContents Return to Index

Associate Deans. Associate Deans are generally military officers chosen to assist the Provost and Deans in the performance of their duties. (In the Graduate School of Business and Public Policy (GSBPP), civilian faculty members are also chosen as Associate Deans.)

Associate Deans are appointed by the Provost for a specific term not to exceed three years, upon recommendations from the appropriate Dean. Reappointments are possible.

Return to TableOfContents Return to Index

Directors of Research Institutes. Research Institutes exist at NPS for the purpose of studying high visibility problems of interest to the Department of Defense, other government agencies, and the services. The Institutes act as an administrative center, drawing upon the expertise of student-faculty teams to accomplish the research goals. There are currently three research institutes at NPS:

- The Wayne E. Myer Institute for Systems Engineering
- The Cebrowski Institute for Information Innovation and Superiority
- The MOVES (Modeling of Virtual Environments and Simulation) Institute.

Under the Associate Provost/Dean of Research, the Institute Directors administer the research programs of the Institute by planning and administering the programs, the resources needed to support the programs, and the distribution of those resources. The Institute Directors are also responsible for insuring that policies and procedures are in place to carry out the research programs efficiently. The Institute Directors:

- Plan, conduct, and administer the Institutes' research programs.
- Coordinate all research done by NPS faculty and students done for the Institute.
- Supervise the personnel assigned to the Institute.
- Recommend individuals for appointment to the Provost (via the Associate Provost/Dean of Research),
- Recommend to the Provost (via the Associate Provost/Dean of Research) individual Institute members for promotions and merit pay raises and augment the Faculty Promotion Council when their Institute's promotion cases are presented and discussed.
- Develop and administer programs for Institute employee orientation, development, and mentoring.

- Prepare and submit budget, manpower, and facilities requirements in accordance with the Planning, Programming, and Budgeting System (PPBS) procedures via the Associate Provost/Dean of Research.
- Manage all resources assigned to the Institute, including budgets, manpower, and physical facilities.

The Director of an Institute is appointed by the NPS President upon the recommendation of the Provost and Associate Provost/Dean of Research for a specific term, not to exceed three years. Reappointments are possible.

Return to TableOfContents Return to Index

Chair of Academic Departments and Interdisciplinary Groups. The Chair of an Academic Department or Group plans and administers the educational, personnel, and financial activities of his/her respective Department/Group. (In the GSBPP, the Chair's duties are done by the Dean or are delegated to Associate Deans.) The responsibilities of the Chair include:

- Organizing and supervising their Departments/Groups to carry out the educational policies of the School and to accomplish the objectives of the various curricula.
- Planning and supervising research programs in their Departments/Groups to support the mission of the School, and coordinating these with the appropriate Dean.
- Planning the academic program (in coordination with the appropriate dean) for their Departments/Groups.
- Representing their Departments/Groups in academic and administrative matters, including the annual Promotion and Tenure (P&T) activities.
- Recruiting qualified academic personnel for their Departments/Groups, within authorized allowances, and recommending their appointment to the appropriate Dean and the Provost.
- Recommending faculty for promotion, tenure, and merit pay raises to the Provost via the appropriate Dean in accordance with established procedures.
- Providing professional evaluation of academic personnel and performance ratings of Civil Service personnel assigned to their Departments/Groups. (In this sense, they are "supervisors" as the term is used in Civil Service matters.)
- Guiding course development and the preparation and maintenance of a journal for each Department/Group course that is taught, as well as coordinating and submitting textbook requirements for their Departments/Groups.
- Evaluating instruction of their Department/Group courses to insure that they are presented effectively and in accordance with the approved syllabi, coordinating Department/Group grading practices, and ensuring that grades for each student are submitted to the Registrar within prescribed time limits.
- Maintaining familiarity with related activities at civilian educational institutions and technical and industrial organizations, so that curricula and courses are kept abreast of educational and technical advances.

- Submitting budget estimates for their Departments/Groups to the appropriate Dean or the Provost/Academic Dean; developing plans to procure equipment for their Departments/Groups, including laboratories; and administering the maintenance and custody thereof.
- Controlling the safe operation, development, and security of the spaces of their Departments/-Groups and of all machinery, equipment, and materials therein.
- Developing and implementing personnel development programs for personnel in their Departments/Groups. Establishing and overseeing a mentoring program for faculty. Establishing and monitoring a program to ensure that their faculty remain current on Navy technology and procedures.
- Designating and supervising Associate Chairs to assist with Department/Group administrative duties.
- Working with the Program Officers in maintaining liaison with sponsors, developing new programs, and in the sponsor evaluation and modification of programs.

The Chairs of Academic Departments and Groups are appointed by the President upon the recommendation of the Dean of the appropriate Graduate School and the Provost for specific terms not to exceed three years. Reappointments are possible. The Chairs are under the operational and supervisory authority of the Dean of the appropriate School.

Return to TableOfContents Return to Index

The Faculty. The Faculty are members of the staff, military and civilian, engaged in teaching, the supervision of laboratory periods, research, supervision of theses, and other academic duties. They are assigned to specific academic Departments/Groups or Institutes and their responsibilities, under the cognizant Department/Group Chair (or Dean of the GSBPP) or Institute Director, include:

- Teaching effectively the courses assigned to them in accordance with the approved syllabus for the course.
- Maintaining a course journal in the Department/Group files for each course taught.
- Directing and supervising student research activities, including theses and group projects.
- Performing research in support of educational objectives
- Performing assigned administrative tasks.
- Recommending beneficial changes to curricula and courses and to laboratory development.
- Submitting grades to the Registrar at the end of each quarter, as specified by procedures promulgated by the Dean of Instruction.
- Keeping their Department Chair (or Dean of the GSBPP) informed of their professional activities.
- Maintaining professional proficiency by a program of personal scholarly activity, by participation in professional societies and meetings, and by outside contacts.
- Keeping themselves cognizant of the special needs of the Navy in advanced education and in the areas of their professional specialties.

- Training staff assigned to them so that the staff can most effectively aid the School's education program.
- Attending official functions, as required.

Some faculty members hold dual appointments. In such cases, one of the Department/Group Chairs (or Dean of the GSBPP) is assigned the primary responsibility for supervisory tasks such as mentoring and making recommendations for pay raises and promotion. The Department/Group/GSBPP is called the "home" Department/Group of the faculty member.

Return to TableOfContents Return to Index

Support Faculty Support faculty are non-tenure track faculty who provide a professional-level service function that supports the teaching and research mission of NPS and the administrative duties central to these functions. Support faculty can perform a wide range of activities such as distance learning instruction, research, public service, academic support duties in such areas as student services, student recordkeeping, library functions, and administrative oversight of the business and academic operations of NPS.

Support Faculty positions generally require a Master's degree in an appropriate field, relevant experience, and personal skills specific to the particular appointment. Support faculty appointments are made by the Provost after a written application from the appropriate Dean, Institute Director, or Associate Provost, containing a position description (including the proposed position title); a description of the duties of the position; a clear description of why the duties cannot be done by a Federal civilian staff member, a contractor, or a term employee. Terms for Support Faculty shall not exceed three years, with reappointment possible with satisfactory performance. (Formal evaluation must be done before requesting a reappointment.) Only the Provost can approve the establishment or filling of a Support Faculty position. Positions must be approved in writing by the Provost *before* recruiting can begin.

There are two types of support faculty:

- Academic Support Faculty. Academic support faculty provide professional support in the instructional or research activities of NPS.
- Administrative Support Faculty. The administrative support faculty provide professional support to students and faculty , and perform administrative duties that relate directly to management policies and procedures, or the general business and administrative operations of NPS. Administrative Support Faculty report directly to a Dean, an Institute Director, Associate Provost or the Provost. They are not members of a specific Department/Group.

Return to TableOfContents Return to Index

Program Officers/Academic Associates. The Program Officer/Academic Associate team is an organizational entity unique to the Postgraduate School. The team is responsible for developing, maintaining, and updating curricula to accommodate the needs and academic requirements of the Navy and the Department of Defense and for monitoring the planning and progress of individual students through a program of study.

A military officer of suitable experience and rank is assigned as the Program Officer, serving as the executive director of the office. One or more assistant program officers may also be assigned to a Program Office and responsibility for a curriculum may be delegated to an assistant.

The part-time duty as the Academic Associate is assigned to a civilian member of the faculty thoroughly familiar with the Naval Postgraduate School, the Navy, DoD, and other sponsoring agencies. Where the Program Office supports multiple curricula, more than one Academic Associate may be appointed and assigned responsibility for specific curricula. (On occasion, the Academic Associate may be a military officer.)

The Program Officers are responsible to the Director of Programs for the overall operation of their respective Program Offices. The Academic Associates are responsible to the Associate Provost for Academic Affairs, through their Department or Group Chair, for the integrity of the academic features of the Program Office operation. As a consequence of this parallel arrangement, the Program Officers and Academic Associates are close professional associates and their relationship should develop accordingly.

Academic Associates are appointed to this duty by the Provost, on the recommendation of the Associate Provost for Academic Affairs and the Director of Programs, for specific terms not in excess of three years. (Reappointments are possible.) The budgeted time allotted to perform the duties of Academic Associate are determined by the Associate Provost for Academic Affairs.

General responsibilities associated with the Program Offices are described below. Specific responsibilities of the individuals are covered in either Naval Postgraduate School Instructions or policy directives. Their general responsibilities are:

- Curriculum Sponsor Liaison. The Program Officer/Academic Associate team works with program sponsors and consultants to define pertinent sponsor needs, including professional objectives; to delineate projected utilization of program graduates; and to consult with Department/Group Chairs (or Dean of the GSBPP) and faculty to propose useful courses and curricula. These plans and projections consider the impact of developing technology, evolving bodies of knowledge, and changing mission of the Navy and other sponsors. They are prepared, reviewed, and updated during sponsor reviews of curricula.
- Curriculum Development and Management.
    - The Program Officer/Academic Associate team, working with the NPS faculty and staff, develops and maintains a statement of professional objectives for each curricular program under their purview. Consistent with these objectives, they establish and keep current appropriate standard curricula.
    - Ensuring that the curriculum meets the professional needs of the Navy or other sponsors rests primarily with the Program Officer. Ensuring that each student's curriculum meets curriculum degree requirements and that the selection and sequence of courses are in accordance with Department/Group or degree requirements rests primarily with the Academic Associate.
    - The Program Officer/Academic Associate team develops and maintains procedures for effectively monitoring programs for their continuing adherence to professional and academic requirements. These procedures may be partially standardized for all programs. The Program Officer holds primary responsibility for collaborating with the Naval Postgraduate School staff, sponsors, and OPNAV and for adopting general procedures to meet the particular needs of individual programs. The Academic Associate is responsible for maintaining liaison with academic Departments/Groups, sustaining the relevance of current course content, and fostering faculty participation in the development of useful new courses and programs.

- In the development of new curricula or major revision of existing ones, the Program Officer/Academic Associate team includes each concerned academic Department or Group in the deliberations leading to formulating each proposal.
- Both the Program Officer and Academic Associate are knowledgeable with respect to "transfer field" programs, i.e., other graduate programs appropriately related to those under their purview. They should also be familiar with Navy-related programs offered at civilian educational institutions which might be effectively utilized by sponsors.

- Supervision and Counseling of Students. The Program Officer/Academic Team reviews the records of all students assigned to their curricula and, in consultation with each student – and based on his/her academic background – develops a program of study within the framework of the established curricula. Student academic progress is monitored and program changes or intercurricular transfers made, when deemed necessary, within the limitations of curricular quotas, Navy policies, and academic feasibility. Both members of this team are responsible for the overall quality of a student's program.

  Both members of the team counsel all students in the curricula under their purview. The Academic Associate is responsible for academic counseling of the students.

  The Program Officer, in accordance with prescribed policies and procedures, exercises supervision and direction of students assigned to his/her office. He/she performs requisite administrative duties pertaining to these students, evaluates their performance, and counsels them on pertinent military matters, as necessary.

- Resource Management. The Program Officer is responsible for managing the resources which directly support his/her office and for the preparation and submission of budget requirements.

Return to TableOfContents Return to Index

Executive Director for Information Resources and Chief Information Officer. The Executive Director for Information Resources and CIO plans and manages the computing and information services at the School and is responsible for the coordination of strategic information resources at NPS including Information Technology and Communication Services (ITACS) and Institutional Research.

The Executive Director is appointed by the President on the recommendation of the Provost for a specific term not to exceed three years. Reappointments are possible. The Executive Director and CIO reports to the NPS President and is a member of the Superintendent's Executive Council.

Information Technology and Communication Services (ITACS). The Executive Director is responsible for the development and implementation of the IT Strategic Plan and for advising NPS leadership on all matters relating to IT policy, direction, and operations, including

- IT services (academic and administrative),
- network operations and services,
- administrative systems,

- vendor relations, including procurement of IT equipment and services, as well as IT policies (e.g., wireless technology)
- communications about ITCS within NPS and external communications,
- voice and video services,
- IT security,
- IT budgeting and planning, and
- Software acquisition, licensure and support

The Executive Director and CIO oversees a number of consortium memberships that involve inter-institutional collaboration on IT priorities and interests, and serves as the NPS liaison to those organizations. For example:

- Navy/Marine Corps Internet (NMCI)
- Internet2
- Local Department of Defense consortium
- Monterey Peninsula I-Net participation (high-speed, local access network)
- CENIC participation (high-speed, statewide backbone)
- DREN (Defense Research and Engineering Network)

The Executive Director is also responsible for ensuring NPS compliance with Navy, Department of Defense, and General Services Administration policies regarding IT.

Institutional Research. The Executive Director and CIO oversees the Office of Institutional Research, the single point of contact for all internal and external requests for official information about the institution. As such, the Executive Director is responsible for collecting, organizing, and verifying institutional data, and reporting those data to the university community and to external audiences. The Executive Director is also responsible for developing a program of research about the institution, including student surveys, assessment projects, strategic planning, and special studies, as needed.

The Executive Director serves as an institutional liaison on accreditation matters, and assists with academic program evaluation and new program applications. The Executive Director also assists in supporting strategic planning in a variety of ways that includes preparation of common data templates for discussion and decision regarding goal-setting and performance evaluation.

The Executive Director and CIO is appointed by the NPS President to a term not exceeding three years upon the recommendation of the Provost. Renewals are possible.

Return to TableOfContents Return to Index

Executive Director for Facilities and Support Services. The Executive Director for Facilities and Support Services (F&SS) is responsible for the coordination of all installation management and support services at NPS to include

- facilities management, campus planning, and environmental management,
- retail services (NEX) and banking services (NFCU),
- e-business,
- police services and fire protection and prevention,
- housing management,
- morale, welfare and recreation support, including golf course, food and beverage, sailing club, etc.,
- safety management,
- contracting services,
- personal property and transportation services,
- mail services,
- BQ operation,
- logistics and warehousing operations
- legal services
- chaplaincy, and
- human resources.

Most of these support services are administered from the Commander, Navy Region Southwest. The Executive Director interfaces with this organization on these areas of operation.

The Executive Director is also the liaison for NPS and acts on behalf of the NPS President with the City of Monterey, Monterey County, the State of California, and other outside agencies.

The Executive Director also serves as the Chair of the Facilities Subcommittee that acts as an information and advisory body for the SSPG in all areas of installation management.

The Executive Director for F&SS is appointed by the NPS President to a term not exceeding three years upon the recommendation of the Provost. Renewals are possible. The Executive Director of F&SS reports jointly to the NPS President and the Provost in the performance of duties.

Return to TableOfContents Return to Index

APPOINTMENTS AND REAPPOINTMENTS OF PROVOST, DEANS, AND CHAIRS

Appointment and Reappointment of the Provost. If possible, the process leading to the appointment or reappointment of a Provost should begin approximately eighteen months prior to the end of the incumbent's term to allow for the lengthy search, screening, review, and approval phases that may be required.

If a new Provost is to be appointed, the President should appoint a committee to assist in the search and screening processes. The Faculty Council should be asked to provide a list of nominees to be included on this committee. The committee should establish a mechanism to provide an opportunity for the faculty to evaluate and comment on those candidates who are to be considered seriously for the appointment.

If the reappointment of the incumbent Provost is to be considered, the President should establish a mechanism to obtain a broad sampling of faculty input to the decision.

Appointment and Reappointment of Deans. The process of selecting a new Dean or of reappointing an incumbent shall begin as early as possible, preferably one year prior to the expiration of the incumbent's term. A faculty committee shall be constituted to facilitate input to the decision process, to communicate that input in writing and in oral discussions to the President and the Provost, and to provide such other assistance as the President and the Provost may request. This committee shall consist of at least five faculty members, of whom at most one is a Department/Group Chair, appointed by the Provost in consultation with the Executive Board of the Faculty Council. Any faculty member shall be free to discuss candidates with any member of the committee.

If a new Dean is to be selected, the committee shall assist in the search for and in the evaluation of candidates. Input from the faculty shall be solicited and reported to the President and the Provost. If the reappointment of the incumbent Dean is to be considered, the committee shall solicit and report input from the faculty.

This process shall be used in connection with the appointment of anyone other than the Academic Dean, whether full-time or part-time, who has the title of Dean and who exercises responsibility and authority for such academic matters as instruction, research, and faculty personnel decisions. It need not be used in appointments of administrative leaders who have no such decision-making authority. (The Director of Programs and Dean of Students, as military officers, are selected by the NPS President through a separate nomination process conducted by the Navy Bureau of Personnel.)

Appointment and Reappointment of Chairs. Whenever possible, appointment and reappointment decisions should be made on the recommendation of a consensus of the tenured and tenure-track members of the Department or Group. The process should begin, not later than one year prior to the termination of the current appointment, with a meeting between the current Chair and the appropriate Dean to assess the Chair's and the Administration's desires on reappointment. The Department/Group faculty should be advised beforehand of this meeting and invited to submit comments to the Dean of the appropriate graduate school. During this meeting, it would be appropriate for the Dean to review the goals of the Department or Group with the Chair, to assess the performance of the Chair in achieving those goals, and to establish a dialogue on emerging directions for the Department/Group.

If the current Chair desires reappointment, the Dean should then gather information from all of the Department/Group faculty. The Department/Group faculty will determine the most appropriate procedure to insure frank and candid input. For example, some faculty may prefer to supply their comments to fellow faculty members, while others may prefer to interact directly with the Dean. The Dean may wish to appoint a committee to collect and summarize faculty comments. The Chair should have ample opportunity to discuss the general findings of his/her evaluation by the faculty with the Dean prior to a final reappointment decision by the Administration.

If a new Chair is to be appointed, the search should begin sufficiently early to provide ample time to review candidates. At the beginning of the process, appropriate administrative officials should meet with the Department/Group faculty to discuss desired qualifications in the candidates and elements of the search and ap-

pointment process. The search process should be clearly understood by all. The primary responsibility for the search process should reside with the tenured and tenure-track faculty of the Department/Group. They should have an opportunity to hold individual or group discussions with the candidates, to review the candidates' resumes and submit evaluations, and to discuss the candidates as a group to establish a Department/Group consensus if possible. Recommendations by a Department/Group for a Chair appointment should include a statement about the faculty's consensus, if one exists. If a Department/Group Search Committee is appointed to facilitate the search process, its recommendations should follow those stated by the Department/Group as a whole. Recommendations by a Department/Group for a Chair appointment which are not acceptable to the administration should be discussed with both parties present before an alternative appointment is made.

Return to TableOfContents Return to Index

NAVAL POSTGRADUATE SCHOOL
BOARDS AND COUNCILS

A description of some of the boards and councils of the Naval Postgraduate School that affect the Faculty follows (in alphabetical order):

Academic Council. The quality and rigor of any academic program is set forth by the faculty of the institution. The functions of the Academic Council include establishing scholastic standards (as detailed in the *Policy Manual of the Academic* Council), considering all new curricula and major revisions to existing curricula, considering for approval all new courses and significant changes in course descriptions or unit value, and evaluating all candidates submitted for award of degrees. New degree programs must be submitted for approval by the Council well *in advance* of the enrollment of students in the program. Certificate programs must be approved by the Council in order to appear on the transcript. New courses will not be scheduled unless approved in advance by the Council. Courses with significant change in description or units will not be scheduled unless approved in advance by the Council. No curriculum shall be given degree credit nor any degree candidate awarded a degree unless recommended by the Council.

The Academic Council is composed of the Provost (as Chair), the Dean of Students, the Director of Programs, the Chair of the Faculty Scholarship Committee, a representative from each of the academic Departments and Groups, and the Associate Provost for Academic Affairs (as Executive Secretary). The representative from each academic Department/Group will be a member (not the Chair) of the Department/Group, elected by the Department/Group members, subject to approval by the Chair of the Department/Group. The Department/Group also elects an alternate representative, subject to the approval of the Chair. Both representatives and alternates serve concurrent three-year terms. An elected representative is *not* eligible to serve two successive terms. Terms of the Council members are staggered so that approximately one-third of the elected membership rotate each year. One member is a student representative chosen as prescribed by the Officer Student Advisory Committee.

The requirements for the various degrees offered and all written academic policies are described in the *Policy Manual of the Academic Counci*l.

Board of Advisors The NPS Board of Advisors is a panel of eminent civilians and distinguished retired military officers who advise the Secretary of the Navy and the Chief of Naval Operations on the strategy and operations of NPS. The Board members are appointed by the Secretary of the Navy and the Board meets twice annually.

Deans Promotion Council (DPC). This body evaluates and recommends candidates for promotion and award of tenure. It consists of the Provost as Chair, the Deans of the Graduate Schools, the Dean of Research, the Associate Provost for Academic Affairs, the Dean of Students, and the Faculty Chair (as an observer).

Department/Group Evaluation Committee (DEC) . This faculty committee (appointed by the Department/Group Chair, Dean of the GSBPP, or Institute Director) makes an objective evaluation of the credentials of a given candidate for promotion and/or tenure to the respective Department, Group, GSBPP, or Institute faculty and Chair (or GSBPP Dean). The DEC must be composed of at least three faculty, one of whom must be a representative from a Department, Group, GSBPP, or Institute not containing the candidate (i.e., an "outside" member), and all of whom must be of rank higher than that of a candidate for promotion (or all of whom must be tenured for a candidate for tenure). In the case of candidates with joint appointments, it may be appropriate to have a jointly constituted DEC, or, alternatively, independent DECs may be formed to represent the separate viewpoints.

Department/Group Faculty Promotion Council (DFPC). This Council participates in the promotion and tenure cases at the Department/Group level. It consists of all members of the faculty of the respective Department or Group considering a candidate for promotion or tenure who have rank higher than that of a candidate for promotion (or who are tenured in the case of a candidate for tenure). The DFPC will have access to the full confidential dossier on the candidate as considered by the DEC, including all external appraisal letters. The DFPC meets as a body to discuss the case and makes a vote on the case. (The Chair does not vote at this point, but records and reports the results of this vote to the Faculty Promotion Council.)

Faculty Council and Committees. The Faculty Council and its Committees function in an advisory capacity to the Provost, the Dean of Students, Director of Programs, and the Deans in administrative or academic matters involving policy, regulations, procedures, or other concerns deemed worthy of attention by the Faculty Council or the cognizant committee. The composition of the Faculty Council and Committees is prescribed by the *Faculty By-Laws*. Matters meriting attention are normally submitted to these officials by the cognizant representative.

Faculty Executive Board. This board (consisting of the Faculty Chair, the Faculty Chair-elect, the past Faculty Chair, the Faculty Secretary, and four elected members from the Faculty Council) establishes the agenda for Faculty Council meetings, is cognizant of the activities of all Faculty committees, deals with matters relating to the professional status of the Faculty as a group, and meets regularly with the Provost and other members of the administration. The Faculty Executive Board may, on occasion, approach the President and/or the Provost directly.

Faculty Promotion Council (FPC) Before a faculty member is recommended for promotion or tenure, this council performs a review of the candidate's professional qualifications. This council consists of the members of the Deans Promotion Council augmented by the Chairs of the Departments and Groups, the Director of DRMI, the Faculty Chair, and the Chair of the Faculty Professional Practices Committee (as an observer). If a promotion is desired for a member of an Institute, the Institute Director will augment this Council for discussions of the case and may vote on the case.

IT Task Force The Information Technology Task Force is an advisory body for all information technology and communications policies and plans. The task force is chaired by the Executive Director of Information Resources and CIO, and is comprised of faculty representing each of the major academic areas, as well as student council, and administrative areas.

Professional Practices Committee The Professional Practices Committee is a standing committee of the faculty. It exists to ameliorate professional disputes between individual faculty (or groups of faculty) and the administration or disputes between faculty. In unusual circumstances, it also may represent faculty members in promotion and tenure procedures. It consists of three tenured faculty members, elected for staggered three-year terms at the annual Faculty election in November.

Research Board. The Research Board serves as an advisory arm to the Associate Provost/Dean of Research. Board members represent their respective academic departments/groups/school. The Board reviews research policies and procedures and provides recommendations and guidance regarding the School's overall research programs to the Associate Provost/ Dean of Research. The Research Board consists of the Dean of Research (who serves as Chair); the Associate Dean of Research; Director, Research and Sponsored Programs Office; two Faculty Council Representatives; and faculty representatives from each academic unit (i.e., the Departments, Groups, and Institutes). Board members are appointed by the Provost, normally for three-year terms.

SECTION IV – FACULTY POLICIES

The Faculty of the Naval Postgraduate School operate under a personnel management policy established by the Secretary of the Navy, *Policy Regarding Appointment, Promotion, Salary and Tenure of Office of the Civilian Members of the Faculty*. Those matters covered by the policy will not be duplicated in this section. Amplification of subjects will occur as necessary.

The current faculty salary schedule is found at the NPS Human Resources site.

Return to TableOfContents Return to Index

FACULTY APPOINTMENTS

Faculty appointments for untenured faculty are made for a specified term. (Tenured faculty members serve without term limits.) The "total length of service" is the cumulative length of terms spent in a particular rank at NPS plus any accepted periods before coming to NPS. Each Faculty member receives an appointment letter from the Provost's Office specifying the position title and the expiration date of the term of the appointment.

No NPS employee may claim to be a faculty member who has not received an appointment letter. Also, it is important that faculty represent themselves with the proper title to students, colleagues, and people outside NPS.

Return to TableOfContents Return to Index

EQUAL EMPLOYMENT OPPORTUNITY/AFFIRMATIVE EMPLOYMENT

It is the policy of the Naval Postgraduate School that all persons are afforded equal employment opportunity for employment, advancement, retention, benefits, and treatment regardless of race, color, sex, religion, national origin, age, or handicapping condition. EEO is promoted through a continuing Affirmative Employment Program in all situations where minorities, women, and handicapped individuals are under-represented or underutilized. As a model employer, the Naval Postgraduate School ensures a work environment free of discrimination and harassment of any kind. Treatment of all individuals with dignity and respect regardless of their rank or grade is essential at the Naval Postgraduate School. It is a work environment free from sexual harassment, fraternization, and discrimination in both policy and practice, equal opportunity for advancement to an individual's maximum potential, and fair and impartial review of complaints of discrimination.

Faculty and Chairs are the key to an effective program. Faculty members must be cautious regarding social relationships with students. Personal relations between NPS faculty and students that are unduly familiar may not respect the differences in status and may call into question the objectivity of the faculty member. Active participation in meeting established EEO goals and objectives will ensure Equal Employment Opportunity at NPS to ultimately achieve a balanced workforce.

EEO responsibility is one of the factors considered in annual performance ratings for administrators and in consideration for awards. Criteria for advancement within management and supervisory positions include demonstrated performance in meeting EEO objectives. NPSINST 12713.4 provides additional guidance.

The NPS President is the Equal Employment Officer of the School. Further information about the program is available from the Human Resources Office/Command Equal Employment Opportunity Office.

Return to TableOfContents Return to Index

CIVIL SERVICE STATUS OF CIVILIAN FACULTY

A brief statement of the Civil Service status of the faculty is given in *Policy Regarding Appointment, Promotion, Salary and Tenure of Office of the Civilian Members of the Faculty*. The phrase "Excepted Employee" or "Excepted Civil Service" is sometimes used when referring to the Civil-Service status of faculty members. This phrase means that, under authorities granted by the Office of Personnel Management, appointments may be made in the interest of good Civil Service administration whenever the duties or compensation of the position are such, or qualified persons are so rare, that the position cannot be filled through open competitive examination.

The Code of Federal Regulations, 5 CFR 213, provides the rules and regulations establishing the Excepted Service. Section 5 CFR 213.3108 (b) specifically assigns the Faculty of the Naval Postgraduate School to Schedule A of the Excepted Service. Schedule A is defined as positions other than those of a confidential or policy-determining character for which it is impracticable to examine. NPS Faculty appointments are designated as AD ("administratively determined"). Civil Service provisions which pertain to such matters as veteran preference, performance ratings, annual and sick leave, health benefits, retirement and insurance benefits apply to permanent civilian members of the faculty.

In summary, the civilian members of the faculty are employed as civilian employees of the Department of the Navy in the "Excepted Service" and they are subject to the Civil Service laws, regulations, and directives applicable to all Navy Civilian Personnel, unless specifically exempted.

Return to TableOfContents Return to Index

TENURE-TRACK FACULTY

Tenure-track faculty are those faculty appointed as Assistant Professor, Associate Professor, or Professor. Faculty appointments for tenure-track faculty are normally for a ten-month academic year. The two-month intersession period can be used for a variety of activities including reimbursable activities such as research or presenting short courses, classroom instruction when requested by the Department/Group Chair/GSBPP Dean, NPS administrative activities, or leave without pay.

Initial appointments of tenure-track faculty will be in an Academic rank and step determined by the President upon recommendation by the Provost and appropriate Dean. The offer letter for each new faculty member provides this information. The initial appointment for Assistant Professors and Associate Professors is usually for a period of three years. (The initial year is a probationary period for all Federal employees.) At the end of the second year of the initial period, and annually thereafter until a tenure decision is made, an assessment of the faculty member's work is performed by colleagues of the ranks higher than the rank of the individual reviewed, a verbal review is given to the faculty member by the Chair (or Dean of GSBPP), and a statement and explanation of the Chair's (or GSBPP Dean's) decision on whether or not to renew the individual's ap-

pointment is provided to the Dean and Provost. In the event that a Chair recommends notification of intent not to reappoint for a tenure-track faculty member, written notice of the intention is given to the faculty member and a final one-year appointment is made. (Occasionally the initial appointment of a tenure-track faculty member may be at the Instructor level, pending receipt of the PhD degree [or equivalent].)

New faculty appointed at the rank of Professor may be considered for tenure at the time of initial appointment or at a subsequent period as mutually agreed by the candidate, the Department/Group Chair, the appropriate Dean, and the Provost. If tenure at appointment is desired, the recruiting committee of the Department compiles documentation demonstrating the candidate's productivity and letters of reference. The Department Promotion Council considers the case and votes on its approval. The Chair reports the results of the vote in his/her recommendation to the Dean and the Provost. (In the GSBPP, the Dean makes a recommendation to the Provost.) The Chair or GSBPP Dean (or his/her designee) presents the case for award of tenure to the Faculty Promotion Council. Following successful consideration of the case, the offer letter may indicate that the candidate will be awarded tenure after completion of the mandatory one-year government probationary period, pending certification of continued productivity at NPS during that initial period by the Department/Group Chair (or GSBPP Dean).

Return to TableOfContents Return to Index

PROMOTIONS AND AWARD OF TENURE

Note: For the Promotion and Tenure of Faculty (both tenure-track and non-tenure-track faculty) in the Graduate School of Business and Public Policy (GSBPP), the Dean assumes the same role as the Department/Group Chairs in the other Graduate Schools. In promotions of nontenure-track faculty in the Institutes, the Institute Director has the responsibilities of the Chair and augments the Faculty Promotion Council (Deans and Chairs) for the presentation and discussion of the case.

A. **Regular Procedures**

Prior Teaching Service: Normally award of tenure is considered after six years of postdoctoral teaching experience. Up to three years of prior postdoctoral teaching experience may be transferred to NPS. Newly hired Faculty need to consult with their Chair upon arrival at NPS to request a transfer of prior service. All new faculty members need to send a memo to the Provost (via the Department/Group Chair and the School Dean) making a request for prior credit (if any) and identifying the latest date for consideration of their tenure at NPS. This memo must be sent within three months of arrival at NPS.

Tenure considerations normally occur after six years of teaching experience. It is the practice at NPS to "start the tenure clock" on the first July 1 on or after the faculty member's NPS starting date. Notification of the tenure decision is not later than July 1 six years from this date. The tenure decision and notification will be earlier if prior teaching credit is requested and approved (as described in the prior paragraph) or an earlier date is agreed upon by the faculty member, the appropriate Chair (or GSBPP Dean), the appropriate Dean, and the Provost.

On rare occasions, a faculty member may be considered for tenure earlier than the sixth year of accepted prior service plus tenure-track service at NPS ("early tenure"). Such consideration for early tenure may be brought forward to the Faculty Promotion Council only with the specific prior written approval of the Provost.

An individual may be considered for tenure by the Faculty Promotion Council only once. A negative conclusion of a tenure case will result in notification of non-reappointment without any possibility of a repeat review process. (This also applies to “early tenure” cases.)

The Provost publishes two documents for the upcoming promotion cycle, Promotion Guidelines and Promotion Procedures. These documents guide the Promotion and Tenure process for the year.

The Chair of the Department/Groups or Institute Director indicate the names of candidates being considered in the review.

Next, there is a review of professional qualifications by a Department Evaluation Committee (DEC), appointed by the Chair for this purpose. The DEC consists of at least three faculty members who are senior to the candidate's current position; one member must be from outside the candidate's Department/Group. The DEC submits its report to the Department Faculty Promotion Council (DFPC). The specific procedure for this colleague-review is at the discretion of the individual Department/Group, within policy guidelines provided annually by the Provost to ensure equitable treatment of all faculty.

The Department Faculty Promotion Council (DFPC) convenes to consider the case of each candidate within their purview and makes a recommendation on each case by secret ballot. The Chair of the Department/Group (or GSBPP Dean) does *not* vote in this secret ballot; he/she votes later in the process as a member of the Faculty Promotion Council. The results of the secret ballot are advisory to the Chair/GSBPP Dean and must be included (along with any comments from the DFPC discussion) in the Chair’s (or GSBPP Dean's) recommendation for each individual case.

The Department/Group Chair makes a recommendation to the Provost via the Division Dean. (The Dean of the GSBPP makes a recommendation to the Provost.) This recommendation is supported by appropriate documentation specified by the Provost and must include the written report of the candidate's DEC and all reference letters received.

Annually during the winter quarter, there is a series of meetings of the Faculty Promotion Council (FPC) to consider all recommendations. The participants in the meetings shall have reviewed electronic copies of the Department/Group DEC and Chair's recommendations, as well as access to the documentation for all candidates. At these meetings, a representative of the individual's DEC or the Department/Group Chair/GSBPP Dean answers questions about the candidate's qualifications. After full discussion, the participants in the meetings (with the exception of the Chair of the Professional Practices Committee) individually make their recommendations regarding all candidates to the Provost.

The Provost considers the recommendations and then meets with the Deans Promotion Council (DPC) for further considerations. (The NPS President is invited to attend these DPC meetings.)

Finally, the recommendations of the Provost are presented to the President in the presence of the Deans Promotion Council (DPC).

There may be cases in which faculty members are denied promotion or tenure after having been positively recommended by the faculty of the Department/Group/School, by the Chair (or Dean of the GSBPP), and/or by the Faculty Promotion Council. In that case, the Provost and the appropriate Dean will meet with the Faculty Promotion Council of that Department or Group to discuss the reasons for denial. If they feel that the decision process was flawed, the candidate, colleagues, and/or Chair (Dean of the GSBPP) may request the assistance of the Professional Practices Committee in appealing the adverse decision,. The Professional Prac-

tices Committee shall determine whether such an appeal is justified and, if so, shall make recommendations to the Provost as to how resolution could be pursued.

B. **Alternative Tenure Procedure**

There may be cases in which faculty members have not been recommended or have been recommended negatively by their DEC or their Department/Group for promotion and/or tenure. In most cases, the case is withdrawn from further consideration.

In some cases, the Chair (or Dean of the GSBPP) may forward the case with a description of the recommendation according to the regular procedure or the individual faculty member (or colleagues, with the member's consent) may request that the Faculty Professional Practices Committee consider the member's qualifications and determine whether to recommend promotion or tenure. If the Committee decides to recommend a candidate in such a case, it pursues the following procedures.

The Professional Practices Committee prepares a recommendation and supporting documentation similar to those developed by the Department Chair/GSBPP Dean in the regular procedures.

At the meetings where other candidates are considered, the Chair of the Professional Practices Committee presents the candidate for consideration and discussion. Thereafter, the alternate procedures are the same as the regular procedures.

C. **Alternative Promotion Procedure.** Associate Professors who have served more than 10 years in that rank at NPS and who have not been formally considered for promotion by their academic unit (Department/Group or GSBPP), or who have been turned down for promotion by their academic unit, may apply for a special promotion review for advancement to Professor. The special promotion review will follow these guidelines: a DEC will be formed to perform the usual DEC functions of data gathering, review and recommendation; the Department Faculty Promotion Council will meet to discuss the case and to vote; the Chair/Dean of GSBPP will make a recommendation; the case will come to the Faculty Promotion Council and the Deans' Council, and to the Provost and then the President for final decision. Note that under the special promotion review process, a special promotion case *must* go forward to the President for decision.

If the promotion is not granted, the faculty member must wait a minimum of five years to reapply for promotion to Professor via the special process; however, the faculty member's department/school may initiate a regular promotion review at any time.

D. **Evaluation Criteria for Promotion and Tenure**

Faculty at NPS are judged in two general categories for Pay, Promotion and Tenure: 1) internal service to NPS and 2) external visibility which demonstrably enhances NPS's reputation in either the academic community or DoD (or both). Tenure-track faculty at NPS are expected to be strong contributors to high quality, relevant instruction and to be active in their profession and service to DoD. Adequate performance in these areas does not automatically qualify an individual for merit increases, promotion, or tenure. For example, doing an adequate, even exemplary, job of teaching 1000-3000 level courses, but making only a minimal impact on the world outside NPS, should not qualify a faculty member for advancement. Impact on the outside world can be achieved in any area of faculty performance, including instruction. The quality and quantity of performance above acceptable will determine the rate at which an individual progresses through the academic ranks. Promotion to Professor additionally requires that the person demonstrates consistent leadership in at least one area of faculty activity and has meritorious performance in both internal and external service. Fur-

ther guidance on the evaluation of the scholarly products of faculty is found in the *"Marto" Report* and the *Report of the Committee on Nontraditional Productivity***.** Judging an individual's qualifications for advancement should be on the basis of his/her meritorious performance. By this is meant performance in both internal and external service that are worthy of note. Listed below are some *typical* examples of internal and external activities that indicate such meritorious performance. The implication is not that a person should pick "one from column A and two from column B" and get promoted, but that the successful faculty member should be engaged in a significant amount of meritorious work.

Representative Internal Activities

- Demonstration of quality and flexibility in instructing graduate-level and applications-oriented courses
- Introduction of new material in curricula and development of new courses, particularly special topics courses with DoD relevance
- Development or implementation of creative teaching methods (such as computer-aided instructional materials) to improve upon student learning efficiency
- Development of extensive instructional material
- Leadership in developing and/or refining curricula
- Development of instructional laboratories, including specifying equipment and designing experiments
- Service as academic associate, associate Chair, Institute Director, Chair of a school-wide committee, etc.
- Contributions to interdisciplinary research projects
- Direction of high-quality research efforts by thesis or project students
- Direction of DoN-relevant theses or group projects
- Tutoring students who need remedial work
- Teaching capstone courses in applied areas
- Teaching in operations oriented curricula

Representative External Activities

- Creation of products of direct use to Navy operations, both shore and sea-based
- Publication of research results in refereed archival journals and conference proceedings at a regular rate
- Service in a professional society through elected offices, committee work, conference planning, editorial work, peer/proposal review, etc.
- Participation in fleet exercises
- Participation in a Navy, multi-laboratory research project
- Publication of a textbook that receives acceptance external to NPS
- Offering on-campus and off-campus short courses to DoD personnel

- Creation of instructional material that receives significant use outside NPS, (e.g., textbooks, course notes, teaching methodologies, etc.)
- Acting as a consultant for operational commands and other DoD organizations
- Service in high-level position in DoD
- Publication of technical reports, either unclassified or classified, from a DoD or non- DoD research program (For this work to be a significant factor in promotion and tenure actions, timely external peer review is essential.)
- Contribution of chapters in research monographs
- Presentation of research results to operational commands and other DoN, DoD or Homeland Security organizations
- Participation in research with operational units, laboratories, systems commands, and headquarters of the Navy and Marine Corps (or other services)
- Service to DoD or Homeland Security by participation in workshops, on panels, advisory boards, and liaison with laboratories.

Return to TableOfContents Return to Index

NONTENURE-TRACK FACULTY

As a complement to the tenure-track faculty, the nontenure-track faculty increases institution flexibility and provides a means for responding to a number of program needs that may be difficult to satisfy in the short term within the administrative parameters of the regular faculty.

All nontenure-track appointments are temporary and offers of employment and renewal letters (if any) explicitly state this fact. Such appointments may or may not be renewable depending upon conditions set forth below.

Terms of Appointment. All nontenure-track appointments are normally for one year, renewable for additional one-year periods up to the maximum allowed length of service. All appointments are contingent on the availability of funds, with a salary dependent on the work performed and the qualifications of the incumbent.

Academic Support Faculty. . Academic faculty are nontenure-track faculty members performing predominantly administrative duties in support of the instruction and research mission of NPS. Academic Support Faculty are appointed by the Provost for fixed terms, not exceeding three years with the possibility of renewal, pending satisfactory performance and continued need for the position.

Administrative Support Faculty. Administrative faculty are nontenure-track faculty members performing predominantly administrative duties with little instruction or research responsibilities. Administrative faculty are appointed by the Provost for fixed terms, not exceeding three years with the possibility of renewal, pending satisfactory performance and continued need for the position.

Research Faculty. Research faculty devote their activities primarily to sponsored research and advising thesis or project students. Generally, research faculty should not teach more than two courses (or sections of a course) in an academic year.

Titles for Nontenure-track Faculty. The following titles apply to nontenure-track faculty.

- **Lecturer**. A Lecturer is a non-tenure track appointment. The Lecturer title applies to faculty whose primary duty is instruction in a specific field that is more limited than that generally covered by a Tenure Track faculty member. (Occasionally Lecturers may be appointed to administrative positions, when appropriate.) This is a temporary position and appointments are usually of one to three years duration, with the possibility of renewal. Appointments generally expire at the end of the Summer quarter.

  Lecturers should have a relevant terminal degree, or a Master's degree, and outstanding instructional capability, and/or significant practitioner experience.

  Departments and Schools are expected to conduct a search before filling Lecturer positions. The search range should be appropriate to the position and need not be national in every instance. The Department/Group Chair (or Dean of the GSBPP) forwards an appointment request package consisting of the position announcement, locations of the position announcement, a listing of applicants, the justification for the choice made, the applicant's resume, and any other pertinent materials. The appropriate Dean must review all appointment requests and forward their recommendations to the Provost for action.

  Because Lecturers are faculty who focus on teaching, their performance expectations differ from those of tenure-track faculty. Instructional excellence, in a classroom or administrative role, must be paramount in their evaluations. Disciplinary research may certainly contribute to the excellence of their teaching and thesis advising, but it should be evaluated in that context rather than as a contribution to the discipline. Similarly, service either within NPS or externally to professional societies, should be evaluated with respect to its contribution to teaching effectiveness.

  The performance expectations for Lecturers are:

  - Effective performance of instructional activities (teaching, advising)
  - Maintenance of currency of academic and/or professional knowledge and qualifications

  Lecturers may be reappointed for terms not to exceed 3 years. There is no limitation on the number of times a Lecturer may be reappointed. Reappointment depends primarily on the continuing need for the explicit teaching duties being performed and on the competency of the faculty member. Reappointment requests are to be approved by the appropriate Dean before being forwarded to the Provost.

  Before the sixth-year of service is completed, the recommendation for reappointment as Lecturer must be accompanied by a written report of a Faculty Review Committee (at least two of whose members are tenured faculty from that School), appointed by the Chair, that has completed an in-depth review of the candidate's performance. The Committee should also certify the continuing need for the position.

  A Lecturer may be promoted to a Senior Lecturer position. The promotion process is the same as that for all other faculty, but focuses on the achievements of the candidate in the area of instruction. Since there is no limitation on how long a Lecturer may occupy a position (other than a continuing need for the position and adequate performance of duties), there is no re-

quirement that a Lecturer be promoted to a Senior Lecturer position in order to continue to hold a position at NPS.

- **Senior Lecturer**. A Senior Lecturer is a non-tenure track appointment. The title is reserved for senior faculty with superb instructional capabilities and who possess specialized knowledge relevant to NPS. (Occasionally Senior Lecturers may be appointed to administrative positions, when appropriate.) This is a temporary position and appointments generally do not exceed a 3-year term, with the possibility of renewal. A senior lecturer should have a terminal or master's degree, and appropriate specialized operational, industrial, government, or application skills and experiences.

  Departments and schools are expected to conduct a search before filling Senior Lecturer positions. The search range should be appropriate to the position and need not be national in every instance. The Department/Group Chair (or GSBPP Dean) forwards an appointment request package consisting of the position announcement, locations of the position announcements, a listing of applicants, the justification for the choice made, the applicant's resume, and any other pertinent materials. The appropriate Dean must review all appointment requests and forward their recommendations to the Provost for action.

  The performance expectations for Senior Lecturers include:

  - Effective performance of instructional activities (e.g., teaching, advising, laboratory development)
  - Maintenance of currency of academic and/or professional knowledge and qualifications
  - Participation in the NPS/Department/School communities
  - Intellectual contributions, including contributions to learning and pedagogy, to practice, or to an academic discipline.

  Senior Lecturers may be reappointed for terms not to exceed 3 years. There is no limitation on the number of times a Senior Lecturer may be reappointed. Reappointment depends primarily on the continuing need for the explicit teaching duties being performed and on the competency of the faculty member. Reappointment requests are to be approved by the appropriate Dean before being forwarded to the Provost.

  Before the sixth-year of service anniversary is reached (during year five), the recommendation for reappointment as Senior Lecturer must be accompanied by a written report of a Faculty Review Committee (at least two of whose members are tenured faculty from that School), appointed by the Chair, that has completed an in-depth review of the candidate's performance. The Committee should also certify the continuing need for the position.

- **Research Assistant Professor**, **Research Associate Professor**, **Research Professor**. These positions are nontenure-track appointments reserved for research faculty with a PhD or equivalent degree, or equivalent experience. Other than the fact that these are nontenure-track appointments, the ranks are equivalent to the tenure-track professorial ranks. The maximum length of service for a Research Assistant Professor is seven years (with a one-year notification of non-reappointment at the end of the sixth year); the other two ranks do not have length-of-service limitations. All Research Faculty positions are explicitly dependent on the availability of research funds.

- **Administrative Associate** An Administrative Associate is a faculty member predominantly engaged in administrative duties in support of the education and research mission of NPS. A Research Associate typically has a Masters degree or a PhD in a field applicable to NPS. Administrative Associates are appointed by the Provost to terms not exceeding three years. Renewals are possible, pending satisfactory completion of duties and availability of funding.

- **Research Associate**. A Research Associate works under the direction of a faculty member to support the reimbursable research activities at NPS. A Research Associate typically has a Masters degree or a PhD in a field applicable to the research. Research Associates are appointed by the Provost to terms not exceeding three years (pending availability of reimbursable funding) upon the recommendations of the Principal Investigator(s), the Department/Group Chair (or GSBPP Dean) or Institute Director and the appropriate Dean. Renewals are possible, pending satisfactory completion of duties and availability of reimbursable funding.

- **Research Assistant**. A Research Assistant is a nontenure-track faculty member with a Bachelors degree who assists in the performance of research duties under the direction of the Principal Investigator. (It is noted that there is also a GS-series of positions with the same title as "Research Assistant". Employees in this GS series are *not* faculty members.)

- **Visiting Instructor**, **Visiting Assistant Professor**, **Visiting Associate Professor**, **Visiting Professor**. These are short-term, nontenure-track positions. The maximum length of service for Visiting Instructor is three years unless the incumbent is pursuing a PhD degree at NPS. In the latter case, this length of service for a Visiting Instructor may be extended to a maximum length of service of seven years. The Visiting Professorial ranks have a maximum length of service of seven years (with a one-year notification of non-reappointment at the end of the sixth year). Due to their short-term nature, promotions are not done for the Visiting ranks.

- **Sponsored Chair**. The Sponsored Chair nontenure-track faculty positions are reimbursably funded by outside government agencies or corporate sponsors (through the NPS Foundation). The Chair positions bring eminent visitors to the NPS campus for the purpose of interacting with NPS students and faculty. A Sponsored Chair appointment is typically one year in duration with renewals possible subject to the mutual agreement of the incumbent, NPS, and the sponsor. Initial appointments are made through a search process established by the sponsor and NPS (usually through a Memorandum of Agreement).

- **Visiting Scholar**. The tile of Visiting Scholar is used at NPS for some international scholars at NPS working under a J-1 visa. Applications for this designation should be initiated by the visitor in consultation with the Chair or Director of the entity being visited for transmittal to the Provost via the Chair/Director and appropriate Dean.

- **Courtesy Appointments**. Occasionally it may benefit both a visitor and NPS if the visitor has an NPS faculty title. In such cases, the visitor may request a courtesy appointment from the Provost via the appropriate Chair/Director and Dean. The request should specify the appointment title, term and present the reasoning for the benefit of title to the appointee and to NPS. If approved, an appointment letter will be returned from the Provost. Visitors without such an appointment letter must not describe themselves as NPS faculty members.

Recruitment. All faculty hiring at NPS is by selection of the best qualified person from a pool of available applicants generated by an open recruitment process. Research Associates may be recruited through recruiting activities carried out by the principal investigator of the research project (in consultation with the Department/Group Chair, GSBPP Dean, or Institute Director). Recruiting for all other positions requires the

involvement of the Department's/Group's, GSBPP's, or Institute's Recruiting Committee. In addition, all recruiting requires the approval of the Department/Group Chair, GSBPP Dean, or Institute Director and must meet EEO policies and procedures. (The NPS EEO Office is ready to help.) This recruitment process also applies to the movement of a faculty member from one nontenure-track category to another, or to the tenure track. See NPSINS 12713.4A for more information.

Nontenure-track Faculty Promotions. . Faculty in no-tenure track positions can be promoted to higher nontenure-track ranks if their contributions qualify them for such advancement. The procedures for promotion of nontenure-track faculty are similar to that for tenure-track faculty described elsewhere. The Department, Group, GSBPP, or Institute forms a Department Evaluation Committee (DEC) to objectively evaluate the candidate's documentation package. The evaluation is done to match the candidate's work profile (i.e., with appropriate emphasis on the contribution to match the expectations of the position). Nontenure-track instruction faculty are evaluated on their internal and external instruction contributions, as well as their service contributions to the School and, where appropriate, external agencies. Research faculty are evaluated primarily on the basis of their research contributions.

Reappointment. At the end of each appointment, renewals of nontenure-track faculty are accomplished by a request from the Chair (or GSBPP Dean) to the Provost (via the appropriate Dean) including a statement on the quality of performance, Department/Group/GSBPP needs, and availability of funding.

Performance Reviews. In addition to renewal requests, performance reviews by Department/Group/GSBPP committees are required every three years. If the Chair (or GSBPP Dean) decides to recommend termination of employment based on the quality of a faculty member's performance, a six-month terminal appointment will be made. Shorter appointments, if any, may be made if the termination of employment is based on Department/Group/GSBPP needs or the unavailability of funding.

Salary Schedule and Equivalent Rank. NPS faculty are on a Salary Schedule established by Department of the Navy and approved by Congress. This schedule is set up around ranks with the various titles of Professor or Instructor. To avoid disrupting the linkage of nontenure-track faculty to this schedule, NPS qualifies the position title with the statement, "with the equivalent rank of _____ Professor," for the purpose of salary determination where needed. The rank equivalence is shown in the following table. This equivalence is for pay purposes only.

Title	**Equivalence for Pay Purposes**
Lecturer Research Associate Administrative Associate Visiting Instructor Visiting Scholar	Instructor
Lecturer Research Associate Administrative Associate Research Assistant Professor Visiting Assistant Professor Visiting Scholar	Assistant Professor
Senior Lecturer Research Associate Research Associate Professor	Associate Professor

Visiting Associate Professor Visiting Scholar	
Senior Lecturer Research Associate Research Professor Visiting Professor Visiting Distinguished Professor Visiting Scholar	Professor
Courtesy Appointment	Not Applicable (paid by "home" institution)

MILITARY FACULTY

Active-duty military members are often appointed as faculty members at the Naval Postgraduate School. Military members with an earned doctorate in the discipline are eligible for the titles of Assistant Professor, Associate Professor, or Professor with the possibility of promotion by the same procedures used for civilian tenure-track faculty. Individuals without the earned doctorate are eligible for the following titles, as appropriate,

- **Military Lecturer.** This title is used for military faculty typically holding a masters degree.
- **Military Assistant Professor**. To be considered for this rank, the individual must be a proven subspecialist, serving in the area of his/her masters degree.
- **Military Associate Professor**. The title of Military Associate Professor is reserved for officers with extensive academic or academically-relevant experience.
- **Military Professor**. The title of Military Professor is reserved for officers with more extensive academic or academically-relevant experience.

All military faculty members need to be appointed by the Provost, upon the application by the Department/Group Chair and the recommendation of the appropriate Dean. (The application should specify the individual, a short summary of qualifications, the appropriate title, and the term of the appointment.)

Return to TableOfContents Return to Index

MILITARY FACULTY PROMOTIONS

Military faculty holding the PhD degree (or equivalent experience) may receive professorial rank when assigned to NPS and may be promoted by the same procedures applied to civilian tenure-track faculty. Military faculty without the doctorate (or equivalent experience) are assigned to the Military Lecturer, Military Assis-

tant Professor, Military Associate Professor, or Military Professor rank, depending on qualifications. Since military assignments to NPS are typically for periods of only three years, it is unlikely that an individual can make sufficient contributions to warrant promotion in that short period. In the exceptional case where a person's contribution to the NPS instruction program is sufficient to warrant such promotion, the procedure is the same as for civilian non-tenure-track faculty.

Return to TableOfContents Return to Index

NOTIFICATION OF PROMOTION RESULTS TO FACULTY CANDIDATE

The Department/Group Chair (or GSBPP Dean) shall advise each faculty candidate of the recommendations that the Chair (or GSBPP Dean) proposes to make to the Provost regarding promotion and/or tenure for that person before the Chair (or GSBPP Dean) submits such recommendations to the Provost. Notification of final decisions by the NPS President will be made in writing by the Provost to all faculty members who are promoted, granted tenure, or awarded step increases in salary. Further, if tenure is not awarded, written notification of an intention of non-reappointment will be provided to the affected faculty member. If a Chair's (or GSBPP Dean's) recommendation for promotion and/or award tenure is not approved in an individual case, the reasons for such non-approval will be communicated to the Chair (or GSBPP Dean) by the Provost and discussed by the Chair (or GSBPP Dean) with the faculty member concerned.

Return to TableOfContents Return to Index

PAY-STEP INCREASES

Annually, the appropriate Dean allocates available pay steps to each Department/Group (or to the GSBPP). The Chair (or GSBPP Dean) assigns these pay steps to faculty members in recognition of especially meritorious performance during the preceding year. The Chair (or GSBPP Dean) may also request additional consideration for individual faculty members from the Provost (via the appropriate Dean). The Provost makes final recommendations to the President.

Return to TableOfContents Return to Index

MENTORING

A mentoring program has been established as part of the faculty development effort at NPS. Each faculty member who has not reached the highest rank of their respective tenure-track or nontenure-track ladder is to be mentored by a Faculty Mentoring committee. This committee is appointed by the Department/Group Chair (or GSBPP Dean) in consultation with the faculty member. This mentoring committee is charged with performing an annual review of all aspects of the faculty member's performance (including instruction, scholarly activity, service activities, etc.) The committee is expected to evaluate the quality of the faculty member's products and to compare the faculty member's productivity with that expected from a successful faculty member of the same rank. Annually, the Mentoring committee provides the candidate with a written evaluation (with a copy provided to the Department/Group Chair and the Dean of the appropriate Graduate School). Informal feedback should also be provided to the candidate at other times, as appropriate.

NON-CITIZEN FACULTY MEMBERS

Use of non-citizen faculty members provides opportunities for the employment of high quality professionals, often in areas of national shortage. It is prudent, however, to establish policy to control the overall levels of non-citizen faculty members. The following guidelines apply:

- Tenured Faculty. Non-citizens of the United States may not be granted tenure at the Naval Postgraduate School. Non-citizen faculty who reach the tenure decision point will be judged for tenure at the normal time. If the decision is positive to grant tenure, the individual will continue on a year-to-year appointment until either a) citizenship is granted, upon which occurrence tenure will be granted, or b) citizenship is denied or the individual decides not to apply for citizenship, upon which occurrence the individual will not be reappointed (with one year's notice).
- Tenure-Track Faculty. The individual is expected to pursue citizenship diligently and to acquire it at the earliest opportunity. Failure to do so is grounds for non-reappointment after the usual notification period.
- Nontenure-Track Teaching Faculty. Within each Department/Group, the number of non-citizen teaching faculty who are not on the tenure-track will be controlled so that no more than approximately 10% of the teaching budget is allocated for their services.
- Nontenure-Track Research Faculty. Department/Group Chairs will ensure that no more than approximately 30% of their Department/Group research labor is used on employment of non-citizens.
- Chairs. Non-citizen percentage controls do not apply.

To avoid problems, before recruiting or recommending employing non-citizens, the Chair should consult with the Office of Academic Administration, the NPS Security manager and the HRO Director.

It should be noted that dual citizenship is not allowed for faculty holding security clearances. Removal of a security clearance makes a faculty member ineligible for further employment.

Visa Requirements. Non-citizen faculty members are required to have a visa to cover their period(s) of employment at the School. An important consideration in applying for a visa is the time requirement. For example, a minimum of one year is required to receive an H-1 visa. Briefly, the types of visas used at NPS are:

- H-1 visa: for aliens of distinguished merit and ability coming to the U.S. to perform work requiring that level of ability:
  - For temporary stays, issued for one year at a time.
  - Extensions may be possible for as long as 6 years.
  - Holder may apply for admission as a permanent resident while in the U.S. in H status. No intervening residency in the home country is required.
  - Visa-holder's pay is subject to Social Security tax withholdings.

- J-1 visa: for temporary admittance as a participant in the NPS visitor exchange program designated by the Department of State. Holders of a J-1 visa should apply to the Provost (via the appropriate Chair/Director and Dean) for a title of "Visiting Professor" (or "Visiting Assistant Professor", "Visiting Associate Professor"), "Research Scholar", or "Short-term Scholar" as authorized by the Department of State. The Director of Academic Planning coordinates all requests for J-1 visa status.
    - Issued for one year (with renewals possible for a total of three years) or for up to three years. (Note: At the time of writing [June 2006], indications are that the time limits will be increased from three years to five years.)
    - Two-year residency in home country is required after a J-1 stay in the U.S. before applying for immigration.
    - Visa-holder's pay is not subject to Social Security tax withholdings.

Return to TableOfContents Return to Index

CHAIR PROFESSORSHIPS

A limited number of Chair Professorships have been established at NPS for the purpose of attracting high-quality academicians or practitioners with the ability to contribute significantly to the academic programs at NPS. Such Chairs are faculty positions and, as such, exist only within an academic unit (Departments, Groups, Schools or Institutes). Incumbents are assigned the rank of Visiting Associate Professor or Visiting Professor, as appropriate, since the appointments are of fixed duration. As with any faculty position, appointment as a Chair Professor requires approval by the appropriate Dean, Provost, and President, with a signed appointment letter being sent by the Provost.

Establishment of a Chair requires a formal agreement between NPS and an external sponsor. These agreements are Memoranda of Understanding (MOU) between NPS and the sponsor outlining the purposes of the Chair, the duties of both parties, and the duties of the chairholder. NAVPGSCOLINST 3900.3F describes the policies and procedures associated with Chair professorships. The Associate Provost and Dean of Research provides oversight of the Chair Professorships at NPS. The Research and Sponsored Programs Office can provide information on the preparation of an MOU to support the establishment of a Chair position.

There are several different funding arrangements possible for chairholders, but a common arrangement for civilian faculty is the Intergovernmental Personnel Act (IPA) agreement (see NPSINST 12334.1B.pdf for details). The Research and Sponsored Programs Office handles preparation and routing of all MOU and IPA agreements for Chair Professorships.

Return to TableOfContents Return to Index

EMERITUS FACULTY

Retired tenured faculty members can receive emeritus faculty status. The proper title will be as a suffix following the highest rank achieved as an active faculty member (e.g., Professor emeritus, Associate Professor emeritus). The conferring of emeritus status is in recognition of service to the Naval Postgraduate School and to its students.

Eligibility. All tenured faculty members may receive emeritus status upon application to the Provost after retirement.

Administrative Policies. The following administrative policies apply:

- Facilities. Emeritus faculty members are eligible to use the recreation facilities (gym, etc.), the library, computing facilities, and the facilities of the Commissioned Officers and Faculty Club.
- Identification Cards. Upon retirement, emeritus faculty will receive an identification card to assure use of the NPS facilities.
- Security Clearance. Emeritus faculty actively engaged in teaching or sponsored research at NPS may be able to retain their security clearances at NPS. Check with the NPS Security Manager.
- Faculty Membership. Emeritus faculty are "Associate members" of the faculty with all of the privileges of regular members (primarily privileges of the floor and service on committees) but not the right to vote or to hold office.
- Research Proposals. Emeritus faculty may file research proposals that support the School's mission. These proposals will follow the usual procedures including obtaining the required approval signatures.
- Office Space, Secretarial Support, and Other Resources. When available, office space and resource support will be assigned to those emeritus faculty desiring it. The allocation of resources to emeritus faculty members will be done by the Chair of the Department/Group (or the GSBPP Dean). Priority will be given to emeritus faculty engaged in teaching, with secondary priority to those engaged in sponsored research.
- Benefits. Benefits (health insurance, life insurance, retirement annuities, etc.) for retired faculty members are governed by Civil Service regulations and policies. Retired faculty should consult the Office of Personnel Management for more information.
- Mail. Emeritus faculty may receive official professional mail at their Department/Group.
- Computer Accounts. Emeritus faculty are able to keep their NPS computer and email accounts, if desired.
- Parking. Emeritus faculty in a teaching status are eligible for a faculty parking sticker (The Office of Academic Planning provides the approval.).

Return to TableOfContents Return to Index

FACULTY PROFESSIONAL RESPONSIBILITIES

The faculty member is guided by the deep conviction of the worth and dignity of the advancement of knowledge. This mandates a personal responsibility to live up to full intellectual potential and to develop a solid base of professional activities. He/she recognizes that an academic career is a full-time job.

As a teacher, the professor has responsibilities to students to encourage their free pursuit of learning, emphasizing a role as intellectual guide and counselor. The best scholarly standards must be maintained, bearing in

mind the School's educational mission and the officers' future requirements. The professor earns the respect of students and of colleagues as regards his/her teaching activities, both in and out of the classroom.

As a scholar, the faculty member develops and maintains a reputation among professional peers outside the School through such activities as publication; consulting; active participation in learned societies; interaction with other Navy, DoD, or Federal activities; etc. The scholar recognizes a responsibility to contribute actively to the body of knowledge encompassed by his/her field.

As a member of the faculty, the professor has the obligation to exercise good academic citizenship by full participation in the governance of the faculty, including the acceptance of committee duties, etc. The faculty member also recognizes personal responsibilities to the administrative operation of the School by direct participation and by adherence to stated regulations.

Finally, as a member of the Naval Postgraduate School and of the Navy community, the faculty member has a special responsibility to insure that all professional activities are consistent with the mission of the Navy. The faculty member is aware of the importance of graduate education to the Naval and military officers and other students of NPS and is thus committed to achieving educational objectives useful to the student throughout his/her career.

Return to TableOfContents Return to Index

SECTION V – SCHOOL POLICIES AND PROCEDURES

ACADEMIC WORKLOAD

The full-time academic workload encompasses many activities and is a different mix for each faculty member. These activities may include classroom instruction, distance learning instruction, laboratory instruction, preparation of course or laboratory materials, preparation of web-based learning materials, thesis or group project supervision, performance of research, curriculum design, student advising, NPS administration, advising Navy and other government activities, and myriad other tasks. Each quarter, faculty members are required to inform their Chair (or the GSBPP Dean) in writing of the activities that they will be performing during that quarter in the form of a "Workload Agreement". The Chair (or GSBPP) signs the form if the stipulated workload is appropriate and approved. The appropriate Dean arbitrates any disputes regarding appropriate workloads.

Quarters containing the two-month faculty intersession can be spent in diverse ways. The intersession period can be used for a variety of activities including reimbursable research, classroom instruction (when requested by the Department/Group Chair), reimbursable short-course instruction, NPS administrative activities, or leave without pay. The third month of the intersession quarter can be used for annual leave, reimbursable research, or for academic duties determined in cooperation with your Chair (or GSBPP Dean). The Workload Agreement is used to delineate the expected duties (if any) during any quarters with intersession periods.

Return to TableOfContents Return to Index

ACADEMIC COUNSELING

Academic counseling of students is the responsibility of the Program Officers, Academic Associates, and the individual members of the faculty. The counseling program is designed to encourage students to seek assistance when advice is desired or when the first indications of academic difficulties develop. At the beginning of each quarter, each faculty member should post office hours, notify their classes of the schedule, and encourage students to arrange appointments in cases of schedule conflicts. Office hours should be maintained conscientiously and should be distributed over the week to accommodate the students.

Return to TableOfContents Return to Index

ASSESSMENT AND ACCREDITATION

In order to promote high quality graduate education, NPS is an institution committed to continuous evaluation and improvement. This commitment begins at the course level with faculty receiving informal feedback from students and using this information for course and program improvement. It continues in a more formalized manner through the various faculty and student surveys, thesis and project evaluations, and student portfolios collected by some departments. Programmatic and school level evaluation by external reviewers is carried out through three main processes: the Curricular Review, the Academic Program Review, and Accreditation Reviews.

- **Curriculum Review**: Each curriculum is structured around a set of Educational Skill Requirements (ESRs) which are developed by an external program sponsor at the flag- or general-officer level to meet specific sponsor educational needs. Every two years, each curriculum is reviewed by the sponsor for currency of the program. In addition, there is a biennial flag-level validation of all Navy subspecialty billets. Specific guidelines for conducting curricular reviews can be found in the NPS Instruction 1550.1C.
- **Academic Department Review.** On a 6-year cycle, each department/group/academic curriculum committee will examine the state of its department and degree program(s) with a self-study and create a strategic plan that will provide the foundation for further evaluation from an external review board. This external review board will be invited to NPS by the appropriate Dean and Chair, after nominations are received by the appropriate Dean from the Chair. The purpose of this review is directed not to the curricular program and defense relevancy but to the quality of the academic and degree program, to improve quality of every department, and to provide guidance for administrative decisions in support of continual improvement. The recommendations from the external review board form the foundation for improvement.
- **Accreditation Review**. The culmination of the assessment efforts, which started at the course level and progressed through the curricular, departmental and school levels, is programmatic and institutional accreditation. NPS maintains accreditation by the Western Association of Schools and Colleges (WASC). Additionally, the Electrical Engineering, Mechanical Engineering, and Astronautics programs are accredited by the Accreditation Board for Engineering and Technology (ABET) and the management programs are accredited by the National Association of Schools of Public Affairs and Administration (NASPAA) and by the Association to Advance Collegiate Schools of Business (AACSB). These reviews ensure that NPS and the accredited programs meet the requirements of the accrediting agency.

Return to TableOfContents Return to Index

COMMENCEMENT EXERCISES

All faculty members who are not on leave or travel are expected to attend the commencement exercises in academic regalia or military uniform, as appropriate. Military faculty members who hold a PhD degree are authorized to wear academic robes. The detailed instructions for commencements are published a week before each event. Consult your Department's Administrative Support Assistant or your Chair if you have questions.

Return to TableOfContents Return to Index

CONFERENCES

The school hosts classified and unclassified conferences on a wide variety of topics related to the school's mission. All conferences must have prior approval of the Dean of Research, acting on behalf of the President.

Conferences are scheduled and coordinated through the NPS Conference Coordinator. Conference sponsors are required to permit NPS students and faculty to attend conference sessions, free of charge, on a space-available basis. Advance programs are often available from the Conference Coordinator. All faculty are encouraged to take advantage of the conference program and to make appropriate opportunities known to their students. Faculty wishing to hold a conference or workshop at NPS can obtain guidelines from the Conference Coordinator. See the Conference Coordinator web site for more information.

Return to TableOfContents Return to Index

CONSULTING AND OTHER OUTSIDE EMPLOYMENT

NPS, recognizing that outside consultation in the field of a faculty member's expertise has the potential for enhancing the professional competence of a faculty member, allows consulting activity which does not interfere with the performance of all duties at NPS. Consulting activities not in excess of an average of one day per work week (in aggregate) are considered in conformity with this rule. The faculty member, in accepting a consulting agreement does so as an addition to his/her full-time employment by the School and not as a substitute for a portion of it.

The NPS policy on consulting should be reviewed. A faculty member is required to obtain approval from the Provost (or the President, for military faculty) *in advance* of any proposed engagement in extra-School employment for remuneration. This is done by completing a request for advance approval of outside employment or professional activity in accordance with NAVPGSCOLINST 5370.3E**.** The completed application is to be submitted to the Provost via the Department/Group Chair (or GSBPP Dean), the appropriate Dean, and the Staff Judge Advocate. (Military faculty follow the same procedure.) Approval (or non-approval) will be indicated in writing in a memo to the faculty member from the Provost. Approval encompasses the fiscal year of the submission and the following fiscal year. Any continuing consulting beyond that period must be resubmitted for review and approval.

Faculty must review the provisions of the Secretary of the Navy instruction 5370.2 (series) on "Standards of Conduct and Government Ethics" and NAVPGSCOLINST 5370.3E for their own legal protection. Some of the basic principles set forth in the "Standards of Conduct" instruction have been listed in the section on "Ethics and Standards of Conduct".

Faculty members who propose to do consulting which entails travel should make proposed travel requirements known to the Provost at the time that the notice is given of the consulting agreement and should inform the Provost of subsequent changes in travel requirements. A faculty member's primary responsibility is to the Naval Postgraduate School and this commitment must not be compromised. With proper approval of the basic consulting relationship, permission need not be sought for each journey outside the immediate area. Any problems which may arise as a result of this outside-of-area consulting should be treated in the same manner as one would handle a delay in his/her return from annual leave (i.e., notification of the Chair [or the GSBPP Dean] and arrangements to contact any students affected by the late return).

The ultimate responsibility for adhering to the provisions of the DoD directives cited above rests with the individual faculty member. Sanctioning of consulting activity does not imply immunity from the conditions of these directives. There is a continuing obligation for the faculty member engaged in consulting to review the nature of the employment to ensure his/her continued compliance with applicable directives.

Return to TableOfContents Return to Index

COOPERATIVE RESEARCH TOURS AT NAVAL LABORATORIES

Cooperative tours at Navy research facilities during the intersession period provide many civilian faculty members the opportunity to do research at Navy/Government laboratories and to keep abreast of current Navy research problems in their fields of interest. Arrangements for a cooperative tour may be initiated by the individual faculty member through his/her Department Chair (or the GSBPP Dean) and the Dean of the appropriate graduate school.

Return to TableOfContents Return to Index

COPYRIGHTS

The literary property rights of government officers and employees are not affected by their government employment, providing their literary product has *not* been produced as part of their official duties. (For clarification, see Digest of Opinions, Judge Advocate General of the Armed Forces, Volume 9, page 163, 1959-1960). All publications not required of a faculty member specifically as a part of his/her teaching or research assignment (as recorded in the quarterly workload agreement) will be recognized as having been prepared on his/her own time and not as part of official duties. The referenced JAG opinion is directed solely to the question of copyright entitlement. It does not alter the policy of the Naval Postgraduate School that use of NPS support labor to prepare manuscripts to be commercially marketed is not authorized.

Return to TableOfContents Return to Index

COURT LEAVE

California law does not exempt teachers from jury duty and most NPS faculty can expect to be called to serve. When that happens, the faculty member should notify his/her Department/Group Chair. Further, he/she should, as quickly as possible, communicate with the jury commissioner to request special consideration, if required (e.g., if the proposed service time conflicts with administering final exams). While experiences vary from court to court and from time to time, most faculty members who have been called feel that the local court officials have been helpful in adjusting periods of service to coincide with intersession periods, to fall on particular days of the week on which the professor was free, and to avoid previously planned travel.

Individuals called for jury duty are placed in a “court leave” status. (Please provide your Department’s faculty timekeeper with a copy of the summons to jury duty.) This court leave does *not* count against annual leave because the individual has been administratively authorized to perform the duty. A Federal employee who receives regular compensation and benefits while performing jury service, may not be paid a fee for attendance as a juror. Federal employees are entitled to be reimbursed for mileage for each mile actually traveled in attending court as a juror after the first day, in-going only. Requests for this reimbursement should be completed at the appropriate Court. Individuals called for court duty while on annual leave should inform the Director of Academic Planning's Office (through their Department Administrative Support Assistant) so that they can be placed in court leave status instead. The change of status will not occur unless notice is given. (Faculty members on unpaid leave will not be recalled to duty and placed on court leave.) For complete information, see NAVPGSCOLINST 7410.3**.**

Return to TableOfContents Return to Index

DISTINGUISHED VISITORS AT CONFERENCES

Faculty who are coordinating conferences or symposia should report any distinguished conference visitors (who are not coming to do any business with NPS) to the Conference Coordinator. The Conference Coordinator reports such visitors to the Protocol Office in case the NPS President wishes to meet with such visitors.

Return to TableOfContents Return to Index

ETHICS AND STANDARDS OF CONDUCT

In addition to the expected ethical standards of all faculty in academia, NPS faculty members, as government employees, are held to high federal standards of ethics and conduct. The goal is to avoid even the appearance of impropriety.

The faculty member must, for his/her own legal protection, review the provisions of the Secretary of the Navy Instruction 5370.2 (series) on "Standards of Conduct and Government Ethics" and NAVPGSCOLINST 5370.3E**.** Some of the basic principles set forth in the "Standards of Conduct" instruction include:

- Government facilities, property, and employee labor may not be used for other than officially approved purposes or for private gain (i.e., they cannot be used for consulting activities).
- A government employee may not engage in any activity, with or without compensation, which might result in a conflict of interest or the appearance of conflict of interest.
- With the exception of military reserve pay, government employees may not receive basic pay from more than one position in the government for more than an aggregate of 40 hours of work in one calendar week (Sunday through Saturday). (This is considered "dual compensation" and is forbidden by law.)
- Government employees may not receive any salary or supplementation of salary from a private source as compensation for their government service.
- A government employee may not use, directly or indirectly, "inside information" to further a private gain for his- or herself or for others.
- A government employee is prohibited from using his/her grade, rank, title or position in connection with any commercial enterprise or in endorsing any commercial product. This does not preclude author identification for materials published in accordance with DoD procedures.
- A government employee may not engage in outside employment or other outside activity, with or without compensation, that may reasonably be expected to bring discredit on the government or the Department of the Navy.

Carelessness in the formulation of agreements or thoughtless actions by either the faculty member or his/her employer can lead to the embarrassment of the School and the possible assessment of civil penalties against or criminal prosecution of the individual faculty member.

The conflict of interest statutes have been interpreted as applying not only to the individual government employee but also to members of the individual's immediate family. Officers on active duty and retired officers who are members of the faculty, are additionally constrained by laws and regulations related to their military service. Further information on ethics and standards of conduct are available from the NPS Legal Counsel in the Judge Advocate General's office or from the NPS Human Resources Office.

Return to TableOfContents Return to Index

FACULTY AWARDS

Faculty are eligible for consideration for the following awards.

- **Rear Admiral John Jay Schieffelin Award for Excellence in Teaching**. The award is made annually to recognize permanent faculty members who, through wide consensus, excel as teachers. The phrase, "excellence in teaching," refers to that complex of personal and professional qualities and actions on the part of the teacher which make themselves felt primarily at the interface of personal contact between student and teacher; help transmute the student's encounters with the subject matter into insight, enlightenment, and love of learning; elicit from the student responses in thought, feeling, and action which enhance his/her capacity for self education, and manifest themselves in an effective individual style which authentically reflects the teacher's own unique personality, experience, character, and convictions.

  A committee appointed by the Provost conducts a ballot polling of students and graduates to determine the recipient of the award. Usually, the polling begins in January so as to be completed by early June.

  Normally, the award is presented at the June graduation ceremony. The award consists of a certificate and a monetary emolument based on moneys from the Rear Admiral John Jay Schieffelin Award fund and the civil service award system.

- **Honorary Title of Distinguished Professor or Distinguished Senior Lecturer**. The criteria for the honorary title of Distinguished Professor or Distinguished Senior Lecturer are:

  - In general, a candidate should be recognized as a "Senior Statesman" among his/her colleagues.
  - The recipient's career should be distinguished by a combination of the following factors: (1) continued effective service to NPS and the faculty who have aided the growth or enhanced the stature of the Naval Postgraduate School *and* (2) research or scholarly contributions while at NPS which have had significant impact on the candidate's field.

The Provost annually seeks applications from the faculty. Candidates are prioritized by the Dean's Council and the Provost recommends the recipients to the President, who makes the final selection.

In recognition of this honor, the recipient receives a silver medallion on a neck ribbon to be worn with academic regalia. The recipient is also entitled to the honorary address, "Distinguished Professor" or "Distinguished Senior Lecturer" in appropriate circumstances.

- **Carl E. and Jessie W. Menneken Faculty Award for Excellence in Scientific Research**. This award is presented annually to an NPS faculty member who has demonstrated outstanding effort and achievement in research in science or engineering. The award recognizes meritorious research having identifiable impact on Navy or other Department of Defense technology. The award is especially for the encouragement and benefit of younger or junior faculty members. Selection is made annually from nominations received by a committee appointed by the Dean of Research.
- **Richard Hamming Teaching Award.** Mrs. Wanda Hamming, widow of Professor Richard Hamming, has provided resources to establish the Richard W. Hamming Teaching Award. The purpose of the Award is to recognize a current or recently retired faculty member:
  - Who does an excellent job in classroom teaching as evidenced by the students' mastery of the course material,
  - Whose thesis or group project supervision is recognized to be excellent,
  - Whose contribution to the NPS student's education extends beyond the classroom

  The Hamming Teaching Award is administered by the Faculty Council of the Naval Postgraduate School. A committee formed by the Faculty Council Executive Board considers all nominees and make a recommendation. The President of the Naval Postgraduate School makes the final selection of the winner.

  The award consists of a plaque and a cash award.

- **Hamming Interdisciplinary Achievement Award**. Mrs. Wanda Hamming, widow of Professor Richard Hamming, has provided the NPS Foundation with the means to fund an annual award for achievement in interdisciplinary activities. Members and Friends of the NPS Foundation have also contributed to this award.

  This award recognizes innovative accomplishments that support and enhance interdisciplinary activities at NPS. Such contributions might include creative course materials in interdisciplinary courses or particularly effective mentoring of students in interdisciplinary courses or curricula. Research that advances interdisciplinary solutions to contemporary military problems and issues will enhance the nomination. Favorable consideration is given to efforts that involve NPS students in a collaborative manner and to efforts that show evidence of having been particularly stimulated and nurtured by the NPS environment.

  The award is open to all faculty instructor positions, both tenure track and non-tenure track.

  A faculty committee, constituted annually by the Provost and the Chair of the Faculty, collaborates with the Foundation in selecting the award recipient. Under suitable conditions, the award

may be shared between two (or more) recipients, particularly if there is collaborative work. The award need not be made every year.

The award is an engraved plaque and a substantial monetary award.

Return to TableOfContents Return to Index

FACULTY LABOR PLAN

At the beginning of the fiscal year (or academic year), each Department/Group Chair develops and submits a Faculty Labor Plan for the Department/Group. This plan identifies the number of days in each quarter that each faculty member will spend supported by NPS funds and reimbursable funds. It is important for each faculty member to understand and discuss this plan with the Chair in order to identify the expectations for teaching and other instructional activities and the amount of reimbursable activity expected. Major changes and updates to the plan need to be discussed with and agreed to by the Chair.

Return to TableOfContents Return to Index

FACULTY PERFORMANCE APPRAISAL

Besides the Promotion and Tenure (P&T) process, all NPS Faculty are subject to an annual performance appraisal. This Appraisal system meets the government standards for annual appraisals. NAVPGSCOLINST 12430.2F establishes the basic framework for the civilian faculty performance appraisal program in accordance with Title II, Civil Service Reform Act, Public Law 94-454. This program is intended to supplement, but not replace, the pay, promotion, and tenure procedures.

Each year faculty members receive a copy of the appraisal standards for the forthcoming year. All faculty members are appraised against these established performance standards annually. The appraisal period is from 1 May to 30 April of the following year. Faculty members receive appraisals of “Meritorious” or “Not Successful” in elements applicable to their position, as well as a summary rating. A first-time rating of “Not Successful” in any element initiates a remedial process that allows a Faculty member to improve his/her performance. Faculty members may grieve performance appraisals and other matters relating to the appraisal program in accordance with .NAVPGSCOLINST 12430.2F.

Return to TableOfContents Return to Index

HALL OF FAME/ DISTINGUISHED ALUMNI PROGRAM

Through the NPS Hall of Fame and Distinguished Alumni programs, NPS recognizes graduates and other individuals who have reflected great credit upon NPS and its academic mission. NAVPGSCOLINST 1650.2 contains detailed information on these award programs, along with nomination forms.

- **Hall of Fame**. Membership in the NPS Hall of Fame recognizes the accomplishments of distinguished alumni and friends who have made significant contributions to society, their nation, and to NPS. This honor generally requires far-reaching contributions of national or interna-

tional service at the very highest levels, coupled with significant advocacy of NPS. The award may be granted posthumously. Alumni status is *not* required for this award.

Nominations are collected by the NPS Alumni Relations Office (ARO) using a form found in . NAVPGSCOLINST 1650.2. A selection board (described in the NPS Instruction) reviews the candidates and makes a recommendation to the NPS President and Provost. (The President and Provost may also designate awardees without the selection board's review.) Induction into the NPS Hall of Fame preferably takes place at an appropriate ceremony at NPS.

Hall of Fame inductees receive a NPS Hall of Fame medal and have their portrait placed in the Hall of Fame display.

- **Distinguished Alumni Program**. This program recognizes alumni who have made distinguished contributions to a branch of learning associated with national security, have rendered distinguished service to the national security, or have made a distinguished professional achievement that reflects credit on the recipient and NPS. Alumni automatically eligible for the award include those who have attained Flag or General rank or who have been appointed at a Senior Executive Service level (or equivalent in their nation). The award may be granted posthumously.

  Nominations are collected by the NPS Alumni Relations Office (ARO) using a form found in . NAVPGSCOLINST 1650.2. A selection board (described in the NPS Instruction) reviews the candidates and makes a recommendation to the NPS President for final approval and selection. Induction of Distinguished Alumni preferably takes place at an appropriate ceremony at NPS.

  Distinguished Alumni receive a framed certificate signed by the President and Provost. Their names are added to a wall plaque displayed on campus in a position of honor that is accessible to students, faculty, and staff.

Return to TableOfContents Return to Index

HUMAN SUBJECTS IN RESEARCH

Due to past abuses nationally and internationally, the use of human subjects in research is tightly controlled. At NPS the use of human subjects in research (or laboratory) experiments is not allowed without permission from the NPS Institution Review Board (IRB). If you or students plan to use human subjects in your class or your research, see NAVPGSCOLINST 3900.4 and consult the Research and Sponsored Programs Office for processes to receive approval *before* beginning the experiments.

Return to TableOfContents Return to Index

IDENTIFICATION CARDS

The Common Access Card (CAC) is a DoD-wide identification card issued to DoD employees. The NPS Human Resources Office (HRO) is the approving authority to authorize the issuance of a CAC for faculty and staff Federal civilian employees. (Military Faculty are authorized by the PSD Monterey ID office.) Federal civilian personnel fill out Parts 1 and 2 of DD Form 1172-2 and obtain verification and approval from the

HRO. (Citizenship will need to be verified with birth certificate, passport or naturalization certificate.) With the completed approved form, the PSD ID Office issues the CAC.

Some contractors are eligible for a CAC (Common Access Card). The same procedures are followed, but the approving authority for most contractors is the Dean of Research.

NPS has established the Biometric Identification System (BIDS) card to control base access and to provide identification cards for personnel associated with NPS who are not eligible for a CAC. The following fall into this system (with the approving authority noted in parentheses):

- Emeritus Faculty (Director, Academic Planning)
- Visiting civilian faculty (Director, Academic Planning)
- Postdoctoral researchers (Director, Research and Sponsored Programs Office)
- Contract researchers (Director, Research and Sponsored Programs Office)
- Exchange Scientists and Engineers (Director, Research and Sponsored Programs Office)
- Visitors under the Intergovernmental Personnel Act (IPA) (Director, Research and Sponsored Programs Office)
- Visitors on sabbatical at NPS (Director, Academic Planning)
- Civilian employees from other US government agencies detailed to NPS (Director, Academic Planning)

Personnel initiate the request on NPS PD Form 001 (Application for BIDS Card Enrollment) in Parts I and II. The approval authority (noted above) verifies and approves the application. The office that issues the card for faculty is the Police Vehicle Registration office just outside the Del Monte Avenue entrance to NPS.

Note that internationals in these categories must also have a visit request made before their arrival.

Detailed information can be found in NAVPGSCOLINST 5512.2

Return to TableOfContents Return to Index

INTEGRITY OF RESEARCH

Reports in the national press of scientific misconduct remind us that the maintenance of high standards in the conduct of research is the shared responsibility of all participants: the investigators, the institutions, our professional organizations, and the government. NPS strives to ensure that good research practices are adhered to and that our reward system appropriately recognizes research quality, integrity, and mentoring. All faculty must work with vigor to reduce the occurrence of practices that undermine the integrity of the research process and its results. Misconduct in research (such as fabrication, falsification, and plagiarism) and questionable research practices (such as inappropriate authorship, misuse of student talents, or faulty data handling) are not tolerated at NPS. We insist on truthful reporting of results with enough thoroughness that others are able to reproduce and build on experiments and that significant errors are corrected when recognized. Individual researchers at NPS share a collective responsibility for ensuring integrity in NPS research. They are expected to

take action when they become aware of inappropriate research conduct and to support and protect those individuals who, in good conscience, report suspected misconduct in research

Return to TableOfContents Return to Index

LONG-TERM TRAINING AND EDUCATION PROGRAM

Section 16 of the *Policy Regarding Appointment, Promotion, Salary and Tenure Of Office Of Civilian Members of the Faculty* provides the basic policy of this program. It is the policy of the Navy Department to provide long-term training essential to the accomplishment of its mission. “Long-term” training refers to training consisting of 120 consecutive training days or more, in either Government or non-Government training facilities and in management or within specialization subject matter categories. This training and education must have high potential value to the Navy Department and must be related to specific functions and responsibilities, either current or those of the future. The training must relate to the employee's performance in the present assignment or in planned future assignments. The employee must have demonstrated aptitude for the training and have reached a point in career development where the training opportunity is appropriate.

This program comes under the purview of the Office of Personnel Management and specifics may be found in the Civilian Personnel Instruction (CPI410). A long lead time between application and implementation is required since the requests for training must be centrally approved. Training for the sole purpose of obtaining a degree or for personal benefit is not authorized under this program. Faculty members interested in exploring the full aspects of this program should contact their Department Chair (or the GSBPP Dean).

Return to TableOfContents Return to Index

MEMORANDA OF AGREEMENT or UNDERSTANDING

Occasionally faculty members will want NPS to enter into a formalized agreement with an Instruction or Research Sponsor. Usually such agreements are done with a joint Memorandum of Agreement (MOA) or a Memorandum of Understanding (MOU). Only the NPS President is authorized to enter into such agreements; faculty are *not* authorized to sign or enter any such agreement. (The Associate Provost/Dean of Research can sign MOAs which serve the purpose as substituting for a research proposal.) Information on the purpose and preparation of such agreements is within the purview of the NPS Research and Sponsored Programs Office. See NPSINST 5760.2A.pdf for detailed information and contact the Research and Sponsored Programs Office for guidance and help when you are ready to begin the process of formulating a MOU or MOA.

Return to TableOfContents Return to Index

NEPOTISM

In accordance with federal law, federal government officials (including the NPS faculty) may not grant improper preference, assistance, or advancement to an individual related by blood or marriage. Among the prohibited practices are

- Participating in or advocating any personnel action (including hiring, promoting, etc.)
- Supervising work activities or job performance of a relative (including temporary workers, student workers, etc.)
- Making any Institutional decision of direct benefit to a relative (officials must recuse themselves from participating in such a decision)
- Conflicts are best resolved by management, using reassignments or transfers. NPSINST 12310.1 describes a reassignment/termination procedure if a conflict cannot be resolved.
- Conflicts of interest based on nepotism need to identified to the Human Resources Office by the Chair/Director via the appropriate Dean when the a personnel action is proposed. The HR Director reviews any proposed operational changes proposed by the managers to eliminate the possibility of improper influence. The Provost or NPS Chief of Staff has the final review and approval authority.

It is important to avoid the appearance of nepotism. Non-supervisory faculty need to be especially aware of possible conflicts of interest when they are the principal investigators (PI) of a reimbursable project.

See NPSINST 12310.1 for more information.

Return to TableOfContents Return to Index

ON-CAMPUS ATTENDANCE

It is recognized that faculty can perform many of their duties either on or off campus; for this reason work hours are flexible. In order to allow interaction with our students, however, faculty members are normally expected to be available on campus to students for discussions and advising. In addition, they are expected to attend most Department/Group/GSBPP meetings, meetings of assigned committees, and graduation ceremonies. They must inform their Department/Group Chair (or GSBPP Dean) of any significant amounts of time spent off-campus during normal working hours. If off-campus time is determined to be 25% or more, a “telework agreement” must be established and approved by the Provost upon request with recommendation of the Department/Group Chair (or GSBPP Dean) and the appropriate Dean. The Human Resources Office is available to provide information on establishing a telework agreement.

Because of student interactions, committee work, and other professional responsibilities, faculty members are expected to be resident at NPS while in pay status, except for sabbatical periods or periods of leave. If work is to be performed off-campus, it must be directly supportive of the faculty member's NPS responsibilities. There must be no detrimental effect on the faculty member's colleagues or students and the work must be documented in the faculty workload and evaluation process in the same manner as work performed on-campus. If reimbursable funding is involved, the sponsor must know of the plan to perform work elsewhere and must approve it.

Meeting these conditions does not guarantee that off-campus work will be approved. There must be a strong justification, such as the availability of special facilities or the opportunity to work with professional col-

leagues. Extended periods of off-campus work must be approved by the Chair (or GSBPP Dean) and the appropriate Dean. If any research funds are involved, approval must also be obtained from the Dean of Research. This approval policy does not apply to off-campus work periods of thirty days or less that have been included in an approved research proposal; nor does it apply to occasional work performed at home. The policy is directed toward those unique situations, either planned or unanticipated, where a faculty member wishes to perform work off-campus over an extended period while in pay status.

Return to TableOfContents Return to Index

ORIENTATION AND INDOCTRINATION

All new NPS employees are required to undertake an online orientation to government and NPS employment. This material is available from a link on the NPS Human Resources web site. (Users must enter from an NPS computer.)

All new faculty members should participate in the NPS faculty orientation program. This program consists of familiarization briefings on various activities at the School, the structure and operation of DoD and the Navy, and potentially useful information for the new faculty member. These orientation programs are held every six months.

The Naval Postgraduate School occasionally arranges for indoctrination visits aboard Navy ships for faculty members. All civilian and military faculty are encouraged to participate in this program, especially those who have never been aboard a Navy ship. The purpose of these visits is to introduce faculty members to technical, tactical, and managerial problems associated with operating forces. This is expected to result in more relevant application in the academic environment at the Naval Postgraduate School.

Return to TableOfContents Return to Index

POLITICAL ACTIVITIES

In 1939, Congress approved landmark legislation known as the Hatch Act which limits the political activities of federal employees. In passing the Hatch Act, Congress determined that partisan political activity by these employees must be limited for public institutions to function fairly and effectively. Through the years, various challenges to the Hatch Act have served to reaffirm this basic premise. In 1993, however, Congress made significant changes to the activities that can be engaged in by government employees. Detailed information on the provisions of the Hatch Act and its revisions are available in the Human Resources Office or in the Legal Office.

The following list contains examples of permissible political activities for covered employees.

- ☺ May register and vote as they choose
- ☺ May be candidates for public office in nonpartisan elections
- ☺ May assist in voter registration drives
- ☺ May express opinions about candidates and issues
- ☺ May make campaign speeches for candidates in partisan elections

- ☺ May contribute money to political organization or attend political fund raising functions
- ☺ May attend and be active at political rallies and meetings
- ☺ May join and be an active member of political clubs or parties
- ☺ May sign nominating petitions
- ☺ May campaign for or against referendum questions, constitutional amendments, municipal ordinances
- ☺ May campaign for or against candidates in partisan elections
- ☺ May distribute campaign literature in partisans elections
- ☺ May hold office in political clubs or parties and be delegates to party conventions

Among the *prohibited* activities are...

- ☹ May *not* be a candidate for public office in partisan elections
- ☹ May *not* use their official authority or influence to interfere with an election
- ☹ May *not* collect political contributions from government employees unless both the donor and the solicitor are members of the same federal labor organization or employee group and the one solicited is not a subordinate employee
- ☹ May *not* knowingly solicit or discourage the political activity of any person who has business with the agency
- ☹ May *not* engage in political activity while on duty, in any government office, while wearing an official uniform, or while using a government vehicle

Return to TableOfContents Return to Index

REMOVING GOVERNMENT PROPERTY FROM NPS

From time to time faculty may wish to remove government-owned property from the NPS campus. This could be, for example, a computer to perform NPS duties at home or equipment for an off-campus experiment. Removal of such property requires that the faculty member have a “property pass”. These “property passes” are available from a member of your department’s staff. (Check with your Department Chair [or GSBPP Dean’s Office] or Administrative Support Assistant to see who issues the property passes in your department or the GSBPP.) Property passes may be issued for up to one year in duration. Also, Faculty may be required to return any equipment on short notice during an equipment inventory. Faculty are also responsible for the return of equipment upon separating from NPS. Campus Police are empowered to do spot checks of vehicles on or leaving the NPS campus. Property passes are required to be shown in government equipment is found in the vehicle. NAVPGSCOLINST 4340.1 contains the details and requirements of the NPS property pass system.

Return to TableOfContents Return to Index

RESEARCH AT NPS

General. The basic goals of the Naval Postgraduate School's research are:

- To create opportunities for individual faculty members to engage in original research directed toward advancing the frontiers of knowledge and application, thereby maintaining the currency of knowledge which is essential to the conduct of graduate education and the guidance of graduate thesis work;
- To enrich the instructional program by encouraging faculty members and associated students, through personal involvement, to become acquainted with the scientific and technological problems facing the national security community and with the key personnel responsible for the programs attacking these problems; and
- To perform research on defense-related problems that support the mission of the Department of the Navy, the Department of Defense, the Department of Homeland Security, and other national agencies. Working on these problems provides mutual benefit to the faculty member, to the students, to NPS, and to the research sponsor.

A strong faculty research program is a necessary and integral part of graduate education. As an institution whose prime mission is advanced education, it is essential that NPS should have a research program "to sustain academic excellence" by having faculty personally involved in the advancement of knowledge. (For the approved policy, see Section 11 of the document, *Policy Regarding Appointment, Promotion, Salary and Tenure of Office of Civilian Members of the Faculty*.

The individual faculty member, in initiating and prosecuting a research project, accepts not only a personal responsibility to the sponsor and NPS to conduct the agreed-upon research as effectively as possible, but also to strive for a project that is true research in the context of the stated goals and is not solely routine data-taking or testing. The probability that results will either be published in the professional journals or contribute to a significant improvement in DoN/DoD or other agency capabilities should be reasonably high.

To achieve appropriate momentum and progress in a research project, faculty members may be released from teaching during any academic year up to one-half time, during which their salaries are paid out of research funds. (Thesis or group project supervision is construed as teaching in this connection). Professionals of academic stature may be employed as non-tenure-track research faculty to assist the principal investigator.

Sponsored Research Program Proposals. NPS policies on Sponsored Program activities at NPS can be found at the NPS Research and Sponsored Programs Office web site.

To solicit external support for a sponsored project, a faculty investigator submits an official proposal to a potential sponsor over the signature of the Dean of Research (acting "by direction" for the President). More information on the proposal format and budget page formats are available from the NPS Research and Sponsored Programs Office web site.

The head of the academic unit (i.e., the Department, Group, GSBPP, or Institute) first reviews the proposal and determines if the content of the program is compatible with the goals of the academic unit, if the scheduled faculty release time is acceptable, and if the necessary academic-unit services and facilities are available to the program. After resolving any issues, the head of the academic unit endorses the proposal, if it is ac-

ceptable, and forwards it to the appropriate Dean and the Research Program Supervisor who review the proposal. The proposal is then sent to the Dean of Research for final approval and mailing to the sponsor.

If the proposal is accepted by the sponsor, all project funds are accepted by the Comptroller in the name of the NPS President. Final approval for any obligation against the funds of a sponsored research project is dependent upon the nature of the obligation, but, consistent with the individual responsibility assumed by the faculty member in proposing and accepting the project, no one other than that faculty member, as principal investigator (or a designated individual [or individuals]), may initiate any obligations against the project funds. Obligations cannot occur on a project unless an "Approved Expenditure Control Page" has been approved by the Director, Research and Sponsored Programs Office, and returned to the Principal Investigator. The Comptroller, the Research and Sponsored Programs Office, the Sponsored Project Financial Analysts (SPFAs), and the Deans provide assistance to the faculty investigator in the management of project funds within the framework of Naval Postgraduate School policies.

Faculty members may be retained during their intersession period to work on approved sponsored research projects, if their salaries are paid out of project funds. Other supporting personnel may be employed as necessary to assist faculty and any thesis students associated with the project. Arrangements for scheduling and executing supporting labor activities must be made through the Department Chair and the appropriate Dean.

NPS Institutionally Funded Research (NIFR) Program funds for meritorious work are available. These funds are used to help new faculty initiate research projects (described in the next section) or to provide support for post-doctoral programs, technology transfer activities, and research infrastructure. A limited amount of funds are also available for new research initiatives by established faculty members. The Associate Provost/Dean of Research annually issues guidelines describing the investment strategy that will be followed in allocating each year's NIFR funds. The minimum expected output from a NIFR project is a technical report describing the results of the research.

The Research Initiation Program. The Research Initiation Program (RIP program) is that part of the NPS Institutionally Funded Research (NIFR) program used to provide support for new tenure-track faculty who are initiating research programs at NPS. This support is to enable them to conduct their research to a stage which would establish the merits of the program and to demonstrate its potential in a manner that could attract the support of a potential sponsor. The minimum expected output from a RIP project is a technical report describing the results of the research.

Return to TableOfContents Return to Index

SABBATICALS

The basic policy regarding sabbaticals is found in Section 15 of the *Policy Regarding Appointment, Promotion, Salary and Tenure Of Office Of Civilian Members of the Faculty*. (Note that sabbaticals are not considered "leave", but are a flexible assignment away from the NPS campus.) The following policies and procedures are an amplification and implementation of the basic policy.

The purpose of a sabbatical is for a faculty member to have a period of professional rejuvenation. Experience shows that the sabbatical is most effective if the person is physically away from the home institution and the local area, and NPS encourages this type of sabbatical.

Only *tenured faculty* are eligible for sabbaticals. There is no fixed period before a faculty member is eligible for a sabbatical or that must occur between sabbaticals. In general, the minimum time interval may be expected to approximate the traditional six years; but it may be shorter. The anticipated professional benefit from the sabbatical is more important than timing.

To integrate sabbaticals into the fiscal-year planning cycle at both the Departmental and School levels, applications for the next fiscal year will be considered once a year, with applications due on 1 April (nominally). Applicants will be informed of approval or disapproval by 15 May. Any faculty member wishing to be considered for a sabbatical should make written application on a form available from the Office of the Provost.

The application should describe fully the professional benefit to be derived from the sabbatical, activities planned during any annual leave periods, any anticipated financial arrangements, and an itinerary. The cognizant Department/Group Chair (or GSBPP Dean) and Dean append comments and recommendations to the application.

Applications are evaluated by a Sabbatical Leave Advisory Committee composed of faculty members appointed by the Provost. This Committee prepares a written appraisal of the professional benefit that may be expected from the proposed sabbatical leave and ranks the proposals. These are forwarded to the Provost (via the appropriate Dean) along with a priority ranking of all applications which are favorably recommended by the Committee.

The primary criterion for granting sabbatical leave is the demonstrated potential for the enhancement of the value of the faculty member to the educational program of the Naval Postgraduate School through advancement of his/her capabilities as a scholar. Representative plans for a sabbatical leave might include such things as preparation to teach in a new academic area, scholarly research and investigation, the writing of scholarly materials, formal study of new developments in one's area of specialization, familiarization with DoD activities, or study and research in the company of scholars at other institutions. In all cases, the period is to be a means of broadening one's intellectual horizons rather than a continuation of current activities.

Sabbaticals must be scheduled to minimize the disruption to the faculty schedule. Sabbatical periods should match, as closely as possible, the quarterly academic calendar at NPS. This is so that the faculty member will be available for a full quarter of work at NPS before beginning a sabbatical and after ending a sabbatical. Once a sabbatical is approved, faculty members must meet their Chair (or GSBPP Dean) to schedule the year’s activities and to identify the Intersession period and sources of funding.

Sabbaticals include five months at full pay (i.e., one-half of an academic year); NPS does not provide any other funding for sabbaticals. A faculty member on sabbatical is expected to devote time and efforts primarily to the planned purpose of that sabbatical. No additional compensation from any source may be received during the paid portion of the sabbatical leave. (This would constitute a salary or supplementation of salary as compensation for the performance of the member's government service [18 U.S. Code 209].) Faculty members are encouraged to take full-year sabbaticals; shorter sabbaticals should be in integer multiples of one quarter. Funding for any remaining time beyond the five-months supplied by NPS is the individual's responsibility. Combinations of annual leave, research support, or other reimbursable support can be used to extend the sabbatical period (e.g., annual leave could extend a five-month sabbatical to six months). NPS direct support cannot be used to extend a sabbatical. Any use of research funds requires the consent of the sponsor. The Dean of Research approves any requests to use Direct-Funded Research (DFR) funds; the project sponsor approves the use of reimbursable-research funds either when expressly stated in the approved proposal or in a separate communication to the Dean of Research. Funding arrangements with non-NPS entities requires noti-

fication to your Department/Group Chair (or GSBPP Dean) via the forms used for Outside Employment and Consulting.

It is NPS policy that faculty are personally responsible for travel undertaken while receiving sabbatical pay, including travel to and from the sabbatical location. If, while at a sabbatical location, a faculty member must undertake travel related to a sponsored research project, then the travel may be taken using research funds, but the travel must occur during a period when the faculty member's salary is being paid by the same research project. Scheduling of such periods is accomplished by a cooperative effort of the faculty member, the faculty member's Department/Group Chair (or Dean of the GSBPP), and the Research Office. Such periods of off-campus research will not be counted as part of the five-month, full-pay sabbatical periods (but faculty on sabbatical still need to return shortly before the start of an NPS academic quarter.).

Faculty members completing a sabbatical leave submit a written report describing sabbatical activities to the appropriate Dean (via the Department/Group Chair). After acceptance of the report, faculty members completing a sabbatical leave receive one merit pay step in the following annual merit pay considerations. Otherwise, Faculty members on sabbatical are considered for pay increments, promotions, and tenure in the usual way.

During the academic quarter after return from sabbatical leave, a faculty member should report to colleagues on scholarly activities during that period. In this way, the diverse benefits of many sabbaticals may help enrich the scholarship of the entire faculty.

A faculty member who accepts sabbatical leave assumes a moral obligation to continue their service at the Naval Postgraduate School for a two-year period following return from such leave.

Return to TableOfContents Return to Index

SECURITY

Security of information (including computer security) and its physical control are the direct and personal responsibility of every person in the Department of Defense. The *Naval Postgraduate School Security Guide* and the NPS Information Assurance policy describe the responsibilities and procedures for the School's Information Security Program. They are considered part of the required reading for all faculty members. Faculty members with an SCI (Secure Compartmented Information) clearance have more requirements imposed on them. Check with the Special Security Officer (SSO) for details.

Publishing Unclassified Material. The School and the Navy recognize the need for academic freedom to publish and encourages faculty members to disseminate the results of their work, subject to compliance with applicable directives. It is the policy of NPS that individual faculty members be responsible for certifying that all unclassified material prepared for dissemination is in compliance with applicable directives. SECNAVINST 5720.44A requires that material relating to a number of subjects be submitted through the Office of the Chief of Naval Operations to the Assistant Secretary of Defense (Public Affairs) for security review and approval for release. Prior to disseminating unclassified material, faculty are responsible for obtaining information on currently applicable directives and certifying compliance therewith. Instructions on current procedures are available from the Security Manager’s Office.

Clearances. Faculty are eligible for security clearance when actively engaged in:

- Teaching a classified course
- Conducting classified research
- Advising classified theses
- Performing mission-essential duties that require access to classified material

Non-U.S. citizens are not eligible for a security clearance. Questions regarding security clearance procedures should be referred to the NPS Security Manager (Code 043).

Classified Materials. The regulations governing access to and custody of classified information, papers and materials are prescribed in OPNAVINST 5510.1 (series). Those provisions having the most common applications to the faculty, together with local instructions, are set forth in the *Naval Postgraduate School Security Guide*.

Visitors. Visits to NPS by professional colleagues to speak and lecture are encouraged. However, there are certain restrictions that apply.

- Visits to NPS by citizens of hostile countries, for any reason, require prior approval from higher authority. Informal invitation is not authorized. Consult with your Department Chair (or your GSBPP Dean) and the Security Manager before issuing any invitation to visit NPS.
- Visits to NPS by other foreign nationals are authorized *after* notifying the Security Manager.
- Discussions with visitors must be conducted at an unclassified level and may contain only information that is in the public domain.

Reporting International Contacts. Faculty at NPS are required to report all contacts that meet the following specifications to Security Manager or the Naval Criminal Investigative Service by memo or phone:

- Any unofficial contact with a member of any foreign diplomatic establishment.
- Any recurring contact with any non-U.S. citizen in which financial ties are established.
- Any contacts that try to obtain access to classified or sensitive material or involving subversive activities or terrorism.

Faculty with access to classified material are required to report all foreign travel. Faculty with access to sensitive (SCI) information are covered by separate reporting requirements. The Special Security Officer provides guidance for these individuals.

Return to TableOfContents Return to Index

STANDARDS OF ATTIRE

Faculty are encouraged to maintain a neat, professional appearance, especially when in class or instructional laboratories or when meeting with outside visitors.

Return to TableOfContents Return to Index

STUDENT/FACULTY RELATIONS

A hallmark of the NPS experience is the close professional relationships that develop between students and faculty. There are no graduate teaching assistants at NPS; faculty work directly with students in the classroom, the laboratories, and on thesis and project work. Interactions between students and faculty outside of the classroom are encouraged. However, faculty have the power to affect the future careers of their students favorably or adversely. Because of the need to avoid the appearance of favoritism and to avoid exploitation and harassment of students, it is necessary to avoid unduly familiar relationships, such as:

- Dating, cohabitation, and intimate or sexual relations between faculty and student, or
- Private business partnerships.

Penalties for civilian faculty can range from counseling, letters of caution or reprimand, suspensions, and maybe dismissal. Depending on the severity of the situation, penalties for military faculty members are administered under the Uniform Code of Military Justice (UCMJ). More information may be found in NPSINST 5730.2A

Return to TableOfContents Return to Index

TRAFFIC REGULATIONS

Parking and traffic regulation are given in NPSINST 55605C. They are summarized below.

- Persons operating motor vehicles on NPS property must register their vehicles with the Security Police and have a current vehicle Station Pass affixed. To receive the Station Pass, all vehicles must carry a minimum of $15,000/$30,000 public liability insurance and $5,000 property damage insurance.
- The maximum speed on NPS property is 20 mph unless otherwise posted. Speed limits are radar enforced.
- The operation of vehicles on NPS property is in conformance with the regulations of the California Motor Vehicle Code. Special restrictions regarding operation of motorcycles and scooters are contained in NPS Instruction 1020.1 (series), including completion of a motorcycle driving safety course offered periodically. All bicycle riders are required to wear safety helmets.
- Cell phone use while driving on campus or in housing areas is prohibited.
- Faculty are eligible for parking permits. Questions of eligibility are handled by the Office of Academic Planning in the Provost's Office. Parking assignments and regulations are explained to all personnel when they register their vehicles with the Security Police. Carpooling is strongly encouraged. In addition to conserving energy, it allows NPS to provide preferential parking spots to members of carpools.
- All vehicular and pedestrian traffic, whether military or civilian, comes to a complete stop for the duration of Morning Colors (0800) and Evening Colors (Sunset).

Questions on traffic and parking may be addressed to the NPS Security Police.

Return to TableOfContents Return to Index

TRAVEL

The Naval Postgraduate School encourages faculty professional travel which has clear potential value to the School and has been duly approved by the Department Chair (or the GSBPP Dean). Reasons may include:

- improvement of curricula and courses
- conducting research
- recruiting of faculty or staff
- familiarization visits to Navy installations and discussion of Navy problems
- advancement of professional proficiency and reputation of the faculty.

The last purpose is served, for example, by presentation of a scholarly paper at a professional society meeting or conference and by participation in the affairs of a professional society via officership or membership on an official committee of the Society.

The NPS Travel Office web site provides information about official travel. It should be consulted for more explicit details associated with travel. Further information about travel can be found in NPSINST4650.4F.

Payment for travel services is usually through the government credit card held by the traveler. (See the Travel card link for more detailed information about the government credit card.) Gifts of travel (e.g., plane tickets for officers in a professional society to attend meetings) are covered by special reporting rules. See the NPS Travel Office web site for information.

Travel arrangements at NPS are done through the web-based Defense Travel System (DTS). Training sessions for users are held periodically. (See the NPS Travel Office web site for information and schedule.) The NPS Travel web site, your Administrative Support Assistant (ASA), or Department/Group Chair (or your GSBPP Dean) can answer many of your questions.

When making travel arrangements that includes government lodging, the traveler needs to specify a "GS equivalence" for his/her academic rank. The following table lists equivalences. (This table is for travel purposes only!)

Academic Rank	**GS Equivalence for travel**
Non-tenure track faculty (all ranks)	GS-12
Assistant Professor	GS-13
Associate professor	GS-14
Professor	GS-15

It is the Department of the Navy and NPS policy that official travel shall be limited to that necessary to carry out the mission of this command effectively and efficiently. Travel meeting these criteria must be performed by the most economical means available by the minimum number of personnel for the minimum time consistent with the requirement of the mission.

Travel funds are public monies and are limited. Their judicious utilization and conservation is a responsibility of each faculty member and each Department/Group Chair (or the GSBPP Dean). To maximize the total professional benefits from the funds available for travel, the following precepts govern faculty travel:

- commercial air travel must be by tourist class (First-class travel is specifically prohibited except in very rare cases. Prior approval is required.)
- utilization of military aircraft is recommended where practicable
- limitation of a trip to the sensible minimum time required to accomplish the purposes of the trip
- consolidation of trips, where feasible
- use of BOQ facilities whenever available and practicably located
- where there exists a choice of meetings at which to present a paper or to serve some other appropriate purpose, favoring the geographically closer meeting (if no appreciable loss of benefit to the Naval Postgraduate School is incurred).

As a general rule, annual leave taken while on official travel should not exceed the number of work days associated with the travel.

Travel arrangements for faculty candidates and new-hired faculty coming to NPS are handled through the Office of the Provost.

Foreign Travel. Since NPS Faculty are representatives of the US government when they travel and since foreign governments need to be aware of US government representatives within their borders, foreign travel of NPS Faculty has special requirements. These requirements also apply to contractor personnel traveling under DoD sponsorship. The following is a summary of the requirements. The *DoD Foreign Clearance Guide* is the governing document for entry requirements for each country. Foreign travel for the government can be complicated; seek guidance from your Department office staff or the NPS Travel Office as early as possible for your foreign travel!!

Entry Clearance. The NPS Travel Office will assist the traveler to obtain entry clearance, based on information provided by the traveler. Early notification is required in order to meet deadlines. There are three types of entry clearances:

- Country Clearance. Country clearances are the most common type of clearances for faculty. A country clearance may be required for either official travel or unofficial travel (e.g., entering a country while on a leave portion of an official trip).
- Special Area Clearance. Certain countries have been identified as “special areas”. Special clearance approvals are required for entry into these countries.
- Theater Clearance. Visits to overseas military activities require clearance from the applicable military unified Commander (e.g., PACOM, CENTCOM, etc.)

Contractor Personnel. While the NPS is responsible for ensuring the individuals have the necessary travel clearance, the individuals are responsible for obtaining passports and visas.

Individual Force Protection Plan (IFFP). An IFFP is *required for civilian personnel on official foreign travel* and for all military personnel for both official and unofficial travel. Requirements for the IFFP vary by country and area being visited (e.g., some areas require a "buddy" [or two-person] rule). Help is available from the NPS Security Manager's office. Note that the entry clearance must be received *before* applying for approval of the IFFP, so allow adequate lead time. NAVPGSCOLINST 4650.1 includes the IFFP form as enclosure (1).

Security Manager. Travelers need to notify the NPS Security Manager of any foreign travel *not less than 30 days before travel*. Information on foreign travel is available at the NPS Security Manager (Code 043) web site.

Start working on the process as soon as you think the travel might be a possibility.

Return to TableOfContents Return to Index

URINALYSIS SCREENING/TESTING

Faculty holding security clearances of "Top Secret" or above are subject to random, mandatory urinalysis testing. Selected faculty will be called by an HRO representative on the day of the testing with guidance on where to report and when. Strict procedures are followed to ensure fair sampling and to maintain a chain of custody throughout the collection and evaluation process. More information is available from the Human Resources Office (HRO).

Return to TableOfContents Return to Index

WORKING WITH NON-GOVERNMENT ORGANIZATIONS (NGOs)

NPS has the statutory authority to work with activities outside of the federal government. The two mechanisms for doing so are through a Cooperative Research and Development Agreement (CRADA) or a Technical Service Agreement (TSA). If NGO funding is to be provided to NPS, the appropriate agreement must be executed *prior* to the commencement of the activity. The CRADA delineates the responsibilities of the partners and address the intellectual property issues relating to patents, copyrights, and licenses. The TSA is used for certain services provided to a NGO and in cases where there is no discovery (research) being performed.

NPS can also loan equipment to a NGO or receive equipment on a loan basis from a NGO. This activity is covered by a Limited Purpose CRADA.

All of these agreements are drafted by the Research and Sponsored Programs Office, in consultation with the faculty member. Further information is available from the Research and Sponsored Programs Office.

Return to TableOfContents Return to Index

VISITS BY DISTINGUISHED PERSONS

Each year many distinguished individuals visit the NPS campus. The office of the NPS President needs to be informed of such visits to ensure maximum impact from such visits and to coordinate schedules. Examples of distinguished persons include:

- Flag or general officers
- Senior Executive Service (SES) employees
- Titled positions (e.g., Service Secretary, Assistant Service Secretary, Deputy Assistant Secretary)
- High-ranking military officers or civilian employees holding major command or project/program sponsor positions
- US Senators, members of Congress, and principal staff members to a member of Congress or a congressional Committee
- Influential non-US government officials, such as state and local government officials, community leaders, high-ranking corporate officials
- Senior, prestigious academicians
- Foreign officials of similar positions, and
- Others as designated by the NPS President.

Generally, if you have any questions about eligibility of a visitor, you should consult the NPS Protocol Office, Code 003.

Notification of visits by distinguished visitors need to be emailed to the Protocol Office (Code 003) with copies to the Flag Lieutenant (Code 001) and the Security manager (Code 261). The Protocol Officer will coordinate the schedule for distinguished visitors to NPS.

Faculty may be asked to serve as the "Action Officer" for the visit in order to develop the itinerary, to arrange transportation and accommodations, and to propose scheduled events, as well as

- act as the principal point of contact with the visitor or their office staff
- obtain and provide a biography of the visitor for posting in the NPS events calendar
- arrange for reserved parking
- meet and brief the visitor on the visit arrangements and itinerary and to escort the visitor during the visit
- handle other details of the visit (e.g., arranging for the handling of classified material through the Security Manager's office).

Visitor Information Sheet. The Action Officer needs to provide a Visitor Information Sheet to the Protocol Officer at least 5 days in advance of the visit. The format of this sheet is provided in NAVPGCOLINST 5050.2F as enclosure (3).

Return to TableOfContents Return to Index

SECTION VI - SCHOOL PROCEDURES

ACADEMIC CERTIFICATE PROGRAMS

An “Academic Certificate” program is a coherent sequence of courses that is sufficient to master a well-defined body of knowledge or technical expertise at a level beyond the baccalaureate. An Academic Certificate may be issued only by the Registrar and shall be recorded on the NPS transcript. Academic Certificates are the only certificates to be recorded on the NPS transcript.

An Academic Certificate program must include at least 12 credit hours of work, 9 of which must be at the graduate level, and all of which must be NPS courses. Courses in an Academic Certificate may be applied to a degree at NPS; there is no bar on “double counting” for degree purposes. Courses may *not* be double counted for multiple certificates.

Students admitted to an Academic Certificate program must meet the general admissions requirements for NPS and any prerequisites for the courses in the certificate program. An Academic Certificate program must be completed within 3 years of admission to the program. A student must maintain a 3.0 GQPR in the certificate courses to be awarded a certificate.

All Academic Certificate programs must be approved by the Academic Council.

Proposals for new Academic Certificate programs must include a list of required courses and rationale for offering the certificate. Proposals must be submitted to the Academic Council six months *in advance* of the anticipated date of first student's completion of the new certificate program. Proposals for new Academic Certificate programs shall describe how the program accords with recognized standards and best practices (for example, the “Good Practices for Electronically Offered Degree and Certificate Program” promulgated by the Regional Accreditation Commissions). In particular, a proposed Academic Certificate program shall describe the learning outcomes for the certificate, and the manner in which the outcomes constitute a coherent and self contained body of knowledge.

A proposal for an electronically offered Academic Certificate shall include an evaluation strategy for sustained, evidence-based and participatory inquiry to assess whether the program is achieving its objectives and for continual improvement. The strategy shall include provisions for:

- Documented assessment of student achievement by comparing student performance to intended learning outcomes,
- Measures to determine overall program effectiveness,
- Evaluation in the context of the regular evaluation of all academic programs.

Proposals for an Academic Certificate must be endorsed by the appropriate department chairs (or Chairs of an interdisciplinary Curriculum Committee appointed by the Provost) and Deans for appropriate content and for supportability, especially with respect to funds, space and facilities, and faculty availability.

CLASS SCHEDULES

The Naval Postgraduate School operates under a quarter system, with each term of instruction lasting 12 weeks. The last week of each quarter is set aside for examinations. In addition, there are two two-week recesses during the academic year, one over Christmas and one during June-July.

Classes are scheduled from 0700 through 1750. The Class Scheduler, under the Director of Academic Administration., is responsible for developing the schedule for each quarter from the student programs, within the limitations imposed by facilities. The responsibilities of the Class Scheduler, the Department and Group Chairs (or the GSBPP Dean), and the Program Officers in the scheduling process are set forth in NPSINST 5010.3.

Because of the complexity of composing workable schedules, requests for special scheduling consideration in the development of class schedules are entertained only in circumstances justifiable on the basis of direct benefits to NPS. Requests are entered in the Python scheduling system by the faculty. (The requests should state the basis for the requested exceptions.) The Department/Group Chair (or GSBPP Dean) reviews the requests and submits a list of approved requests to the Scheduler in the Office of the Associate Provost for Academic Affairs. The requests should state the basis for the requested exceptions. While the Scheduler will make every effort to meet special scheduling requests, they cannot be guaranteed.

Once the class schedule for a quarter is published, changes in the published schedule will be considered only for specific and pertinent reasons which include: resolution of hour or room conflict, provision of a more adequate classroom or laboratory, correction of radical imbalances in class sizes, or change of instructor assignment to scheduled courses to provide better instruction or to consolidate faculty schedules. Other alterations in published schedules for faculty and/or student convenience are discouraged.

All requested changes in the published schedule are to be communicated directly in writing to the Class Scheduler by the Department/Group Chair concerned (or the GSBPP Dean). When time is of the essence, the change requests may be made by the Chair/Dean by phone with subsequent confirmation in writing. Requests justified on basis other than those specifically mentioned above will be referred by the Scheduler to the Associate Provost for Academic Affairs for approval.

DEGREES

While the NPS President is empowered by Congress to grant degrees, the Academic Council makes the degree recommendations to the President. The membership of the Academic Council is described elsewhere. The *Policy Manual for the Academic Council* describes the policies and procedures of the Council.

Nominations for degrees are initiated by the Program Officer and reviewed and endorsed by the Academic Associate, the Department/Group Chair, and the Academic Council.

In some cases a program may be interdisciplinary in nature and result in an interdisciplinary degree. In that case the Provost may appoint an Academic Curriculum Committee to oversee the development and health of the program. The Chair of the Academic Curriculum Committee reviews and endorses the nomination for degrees instead of a Department/Group Chair (or GSBPP Dean).

Return to TableOfContents Return to Index

DISTANCE-LEARNING PROGRAM

NPS supports a variety of delivery methods that expand learning beyond the traditional classroom: online web-based technologies, outreach programs, and video tele-education.

Online web-based technologies. The Office of Continuous Learning (OCL) assists faculty to coordinate and administer innovative and cost-effective efforts to identify, package and deliver the intellectual capital of NPS to the Navy and DoD decision-makers and other component personnel who are not able to attend NPS on a full-time residential basis. OCL supports the various NPS academic schools, research and education centers in their efforts to expand their outreach well beyond the population of residential graduate students. OCL assists the academic departments at NPS to design web-based online course content. This varies from supplementing residential courses to fully online courses accessible via the Internet. Further information about this program is available from the Office of Continuous Learning.

Outreach Programs. As a part of its overall distance learning strategy, NPS, through the Office of Continuous Learning, established outreach offices in San Diego, Norfolk, and the National Capitol Region. These offices help facilitate the distribution of graduate education to the fleet and assist with delivering accredited graduate education to the vast number of Navy personnel in fleet concentration areas who will not be able to attend NPS in residence. The Outreach offices maintain liaisons with all Navy commands in the area, ensuring feedback on the programs being offered, as well as identifying future trends. The offices establish relations with other universities in the area, seeking synergy and economy in the delivery of graduate education.

Video tele-education. NPS currently supports seven MS degree programs and one PhD program through Video Tele-Education (two-way videoconferencing). Officers and civilians from the Navy, other services, and other DoD agencies eligible for one of these programs can take some or all of their coursework in facilities located at their place of work (as well as performing their thesis work there).

Return to TableOfContents Return to Index

FINAL EXAMINATIONS

Final examinations may be given *only* during the twelfth week of each quarter**.** Final examinations are not to be given at any other time, as this disrupts learning in other courses that the officer-student is taking. Examination Schedules are prepared and distributed by the Class Scheduler. To facilitate common examinations for students in different segments of the same course, the Examination Schedule provides a common examination period, or contiguous examination periods, for all segments of the same course. If a final exam will not be given in a course, the Instructor needs to enter that information into PYTHON as a special scheduling request for the Scheduler.

Return to TableOfContents Return to Index

GRADING SYSTEM

Students' performances are evaluated on the basis of a quality point number assigned to each letter grade achieved in a course. Faculty are required to submit grades via Python during the grading period after each quarter. Late grades must be submitted to the Registrar's Office by hand.

The Academic Council has established the following grading system at NPS:

Performance	Grade	Quality point value
Excellent	A	4.0
	A–	3.7
	B+	3.3
	B	3.0
	B–	2.7
	C+	2.3
	C	2.0
	C–	1.7
	D+	1.3
	D	1.0
Failing	X	0.0
Incomplete	I	
Withdrew, passing	W	
Nongraded	N	
Passed	P	
Failed	F	
Thesis	T	

Courses may be designated for Pass/Fail grading when requested by the academic Department/Group and approved by the Academic Council. This designation has been applied to seminar courses, etc. Additionally, a student may elect to take a course in the P/F mode if approval is granted by both his/her Program Officer and the appropriate Department/Group Chair (or the GSBPP Dean). The P/F option is allowed only for courses which are not required to satisfy degree or curriculum requirements. However, hours earned by the grade "P" are counted toward fulfilling course hours specified by the degree requirements.

A grade of Incomplete (I), if not removed within twelve weeks following the end of quarter for which it was received, will be replaced by the Failing grade (X). Exceptions must be individually approved by the Academic Council.

When the quarter hour value of a course is multiplied by the quality point number of the student's grade, a quality point value for the student's works in that course is obtained. The sum of the quality points for all courses divided by the quarter hour value of all courses gives a weighted numerical evaluation of the student's performance, termed the Quality Point Rating (QPR). Quality point ratings may be computed for all courses taken at NPS or for just the graduate-level courses ("graduate QPR" or GQPR).

A student may repeat a course for the purpose of improving the student's grade when the grade received originally was either "D" or "X", provided such course repetition is taken at the Naval Postgraduate School. Approval must be granted by both the Program Officer and the Department Chair (or GSBPP Dean) of the student's curriculum. For record purposes, both the original and the repeated course are shown on the transcript. For QPR computation the credit hours of the course are counted once, and the quality points earned are the average of the two.

Return to TableOfContents Return to Index

INDEPENDENCE OF STUDENT WORK

Student work (and faculty guidance) is subject to an Academic Honor Code.

All work submitted by a student for a grade in any course shall be the work of that student alone, unless prior *explicit* permission has been given by the instructor to do otherwise. It is the instructor's responsibility to establish and clarify the ground rules that apply to all graded exercises, including homework, projects, lab reports, papers and examinations. If any doubt exists concerning the degree of independence of student work that is expected, it should be assumed that the work is to be independent and it is the responsibility of the student to resolve the question prior to undertaking the work. The primary objective of this shared responsibility between instructor and student is to prevent misunderstandings.

If an instructor suspects that a violation has occurred, the instructor may wish to discuss this with the student(s) involved, require reexamination, or take other appropriate measures designed to prevent any future violations. If the instructor feels there is substantive evidence that a violation has occurred, the instructor is advised to discuss the circumstances and evidence with the Department/Group Chair (or GSBPP Dean). In cases where the evidence seems conclusive to the instructor and Chair/GSBPP Dean, the matter will be brought to the attention of the appropriate Program Officer for further investigation and possible action. The grade assigned in the course is the prerogative of the instructor; however, the instructor should apply grade penalties only for confirmed violations.

Return to TableOfContents Return to Index

PYTHON ONLINE REGISTRATION SYSTEM

NPS uses the PYTHON online registration system to administer course offerings, class scheduling, faculty teaching assignments, textbook requirements, special scheduling requests, grading, and recordkeeping. Fac-

ulty can go online (using their NPS login name and password from any NPS computer) to interact with the PYTHON system. The Administrative Support Assistant in your Department/Group/GSBPP/Institute office can answer most questions about the PYTHON system.

Return to TableOfContents Return to Index

QUESTIONNAIRES AND SURVEYS

Any surveys or testing of groups, other than that associated directly with concurrent courses in the educational program of the students, must be approved jointly by the Associate Provost for Academic Affairs, the Dean of Students, and the NPS Institution Review Board (contact through the Dean of Research).

Requests for approval of such group testing should be accompanied by:

- sample copies of the tests or questionnaires;
- statement of the purpose of the testing;
- description of the proposed uses of the testing data, a statement of the proposed schedule of the tests, identification of the student and/or faculty group affected, and responsibility for administration of the test; and
- proposed custodianship of the testing data, together with description of measures to protect privileged or sensitive information.

All other group-testing, either newly proposed or proposed for continuation, must be submitted for approval in accordance with the above procedure.

Return to TableOfContents Return to Index

REPORTING OF REGISTRATION AND GRADES

The procedure for faculty reporting of registration, changes in registration, grades, and changes in grades, are described in NPSINST 1520. Everything but a change of grade is handled within the NPS PYTHON online course administration tool.

Although no school guidelines have been stated for grading practices, some criteria for valid grade changes have been set forth in NPSINST 1520 to provide consistent practices by all instructors and fair and equal treatment for all students. The procedures for, and time devoted to, preparation and submission of course grades should allow opportunity for impartial judgment of the marks assigned. The judgment completed before the submission of the grades should be done with sufficient care so as to be defensible and not subject to later appeal on grounds of misjudgment. Consequently, reasons for changes in grades should be submitted only for reasons from the following categories:

- Arithmetic errors in calculating grades. The discovery of a computation error in determining grades should lead to recomputation of all grades in the class to double-check the grade calculations and grade assignments.
- Clerical errors. Typically this may be an error in transcribing grades from one list to another.

- Make-up of Incomplete. The grade of Incomplete (“I”) may be assigned if a significant, identifiable part of the course has not been completed. The make-up work should be judged with the same standards as used for the regular quarter's work. This request must be submitted to the Registrar's Office within twelve weeks following the end of the quarter for which the grades were given.

Return to TableOfContents Return to Index

SHORT-COURSE PROGRAM

In addition to curricular programs, the Naval Postgraduate School conducts short-course programs for offering graduate-level material to Navy officers and DoD employees. These short courses are for information only; they are not graded and do not carry any academic credit.

Short Courses can be funded either with NPS funding, tuition payments, or reimbursable funding.

Short courses can be supported with funds from a sponsor (or multiple sponsors) or by tuition (registration fee) payment. A proposal must be submitted for each short course delivered. Instructions for preparing proposals for development and delivery of short courses are available from the NPS Research and Sponsored Programs Office.

Return to TableOfContents Return to Index

SMOKING AND BEVERAGES IN CLASSROOMS AND LABORATORIES

Navy Regulations prohibit smoking at any time in any of the School buildings or laboratories.

Smoking is not permitted, of course, in any area where flammable materials are being used, or in the vicinity of stored flammable materials.

Beverages in classrooms and laboratories are prohibited by School Regulations. Many classrooms are carpeted and have upholstered furniture. The limited janitorial services are unable to cope with overturned coffee cups, sticky soft drinks, etc.

Return to TableOfContents Return to Index

STUDENT COMMENT ON INSTRUCTION

Student comment on the effectiveness of each faculty member's instruction is obtained in part by means of the Student Opinion Form (SOF), which is uniformly administered at the end of each regular course.

SOFs are accomplished toward the end of the quarter through the NPS PYTHON online course management system and in a manner designed to ensure a response from each of the students and to preserve the anonymity of each student.

Responsibility for the content of the questionnaires rests with the Faculty Scholarship Committee. Administrative control is exercised through the Associate Provost for Academic Affairs' Office.

For each class, only numerical data summaries are forwarded to the Department/Group Chair (or GSBPP Dean), who uses them to evaluate the instructional competence of the Department, Group, or GSBPP faculty, respectively. Original forms with comments are available (only) to the instructor in PYTHON. The Department/Group Chair (or GSBPP Dean) utilizes the summary information to assist in discharging the Chair's/GSBPP Dean's responsibilities for improvement of instruction. The Chair/Dean consider the summary data, or any part thereof, as privileged information. In addition, the Associate Provost for Academic Affairs can provide to the Group Chairs numerical summaries of SOF data of faculty members who are members of academic departments when those faculty have taught courses that are the responsibility of the Group. The Department/Group Chair (or GSBPP Dean) adds numerical summaries of SOF data for every course taught by a faculty member to that faculty member's documentation when he/she is a candidate for promotion and/or tenure. These summaries are made available to the members of the candidate's Department Evaluation Committee (DEC), the Department Faculty Promotion Council (DFPC), the Faculty Promotion Council (FPC), the Deans Promotion Council (DPC), and the President. Release of SOF data to other parties will not be made without the consent of the faculty member concerned.

Student comment-on-instruction questionnaires – properly structured, properly solicited, and properly used – have proven to be a substantial contribution toward the general improvement of instruction at the Naval Postgraduate School.

Return to TableOfContents Return to Index

WEB PAGES

Faculty are allowed to initiate and maintain web pages for official purposes, directly related to the NPS mission of graduate education (including research). However, web pages serving as official NPS pages are required to follow guidelines and requirements published in NPSINST 5230.1D. This instruction identifies the roles of various functionaries and the requirements for NPS web sites (e.g., the Public Affairs Officer [PAO] needs to approve all material available to the public on NPS web sites).

Some of the features of NPS web sites include:

- Disclaimers and official warning notices regarding access to government computers must be incorporated into the web site.
- Security requires that all web servers need to be identified to the NPS IT organization and accredited and approved for hosting.
- NPS has approved templates (webhelp) for high-level web pages officially representing NPS,
- Sensitive information, such as privacy-protected information or limited distribution published materials, requires password protection and encrypted transmission.

- Classified postings require special approval and access; check with the NPS Security Manager for information and approval.

In all cases it is recommended that the faculty member contact ITACS before going public with his/her web site. Faculty are also eligible to serve on the NPS Web Committee that recommends web policy and format.

All IT services are provided free of charge to faculty members and students engaged in official School work. The computers cannot be used for private consulting work.

Return to TableOfContents Return to Index

SECTION VII. FACULTY BENEFIT PROGRAMS

The specific provisions of the following Federal employee benefit programs can be found on the Department of Navy "Employee Benefits Information System (EBIS)" website at www.donhr.navy.mil. The following summaries are for general information only. Faculty members should contact the "Benefits Line" at 1-800-320-2917 or go the EBIS website if they need updated and specific information. In addition, the Faculty Retirement, Insurance, and Special Functions Committee continually reviews programs which affect the faculty.

Return to TableOfContents Return to Index

FEDERAL EMPLOYEES' GROUP LIFE INSURANCE

Faculty members, except under temporary appointment, may participate in the Federal Employees' Group Life Insurance (FEGLI) Program. The program provides term insurance in a basic amount, roughly equivalent to a faculty member's salary, and additional optional insurance in varying amounts, which may be an additional $10,000 and/or some multiple of one through five of the basic salary, and/or optional family coverage, whichever is elected. Basic life insurance and the $10,000 additional option include double indemnity for accidental death and payment for accidental loss of one or more limbs or eyesight. The cost of the optional additional insurance is based on the employee's current age. The employing agency contributes one-third of the cost of basic insurance; employees pay the whole cost of optional insurance. Contact the Benefits Line (1-800-320-2917) about the current costs of the basic and optional insurance. Faculty who are on Leave Without Pay status (e.g., an unpaid intersession) are responsible for making payments during this period. Deductions will be automatically made after returning to Pay status or, alternatively, the faculty member may make alternative arrangements with the Timekeeping Division of the Comptroller's Office before going on Leave Without Pay.

After retirement, and upon the retiree's sixty-fifth birthday, members may retain at least one- quarter of the value of their basic life insurance without cost. Other options for retaining insurance amounts through the continued payment of premiums after retirement are also available. In order to continue life insurance options after retirement, the employee must have carried the same type of insurance for at least five years prior to retirement.

Return to TableOfContents Return to Index

HOSPITALIZATION AND MEDICAL EXPENSE INSURANCE

Provision is made for the participation of members and their families in the Federal Employee's Health Benefits Program. Two types of plans are available: Government-wide plans, under contract between the Office of Personnel Management and several insurance providers, and employee organization plans, available to members who have signed contracts for coverage with various health insurance providers. Payment is by payroll deduction, with the employee paying part of the cost and the agency paying a varying amount depending on the plan selected (with the Government contributions not to exceed 75 percent of the total enrollment costs). Faculty who are on Leave Without Pay status (e.g., an unpaid intersession) are responsible for making pay-

ments during this period. Deductions will be automatically made after returning to Pay status or, alternatively, the faculty member may make alternative arrangements with the Timekeeping Division of the Comptroller's Office before going on Leave Without Pay.

The provisions of the different insurance carriers vary in detail and the plan which best fits the needs of the individual and his family should be selected. Enrollment is optional and can be canceled at any time since coverage is voluntary. Applications for group coverage are received by the carriers only on first employment or during the "open season" periods set by OPM (usually once a year, starting about the middle of November). Members with temporary appointments of a year or less are not eligible for participation. Health insurance may be continued into retirement, provided the retiree has been covered under the Federal Program (not necessarily the same plan) for the five years immediately preceding retirement. This is an important consideration when planning for retirement.

Insurance terminates after 365 days in a non-pay status.

Return to TableOfContents Return to Index

INJURY COMPENSATION AND MEDICAL CARE

The Federal Employees' Compensation Act is administered by the Office of Workers' Compensation of the U.S. Department of Labor. The Act provides benefits to Federal employees for continuation of pay for traumatic injuries, compensation for wage loss, medical care, and other assistance for job-related injury or death. An employee is entitled to first aid and medical care for an injury sustained while in the performance of official duty. The medical care is to be provided by any duly qualified local physician or hospital of the employee's choice. Federal Employees' Health Benefits Program plans will not pay medical expenses resulting from a work-related injury or disease. An employee is required to give his or her official superior (supervisor) written notice of the injury within two working days after the injury in the performance of duty. Compensation may be denied if notice of injury is not given within 30 days, or if the supervisor does not have actual knowledge of the injury. Forms CA-1 (traumatic injury) and CA-2 (occupational disease) are provided for giving written notice. These provisions do not apply to dependents of Federal civilian employees. and are available at http://www.cnrsw.navy.mil/hrocnrsw/injury.htm.

Return to TableOfContents Return to Index

LEAVE

Members of the civilian faculty earn annual leave while they are in a pay status, the number of days depending upon their years of service. In addition, they earn 13 days of sick leave each year. The amounts earned are reduced proportionately for any part of the year a member is in a non-pay status. The law granting these types of leave is administered by the Office of Personnel Management (OPM) and members of the civilian faculty are governed by the OPM's regulations applying to the associated benefits. Consult the Human Resources Office for information.

The Federal Civil Service status of the civilian faculty of the Postgraduate School causes less flexibility in the faculty member's use of the Christmas and June recess period and of the "tenth month" intersessional period of his/her academic year than that existing in civilian universities. Civil Service Regulations recognize only

two possible types of employee status: (a) work status or (b) leave status (annual, sick, holiday, military, administrative, court, or leave without pay). This means that a faculty member must be in one or the other status during the periods such as the Christmas or June recess or the intersessional period. During time in periods of this sort, when faculty members are not in leave status, they are therefore required to be engaged in, or available for, work for the School. Some faculty members customarily spend such non-leave time on research, professional writing, course writing, or similar scholarly activities with the concurrence of their Department/Group Chair (or GSBPP Dean). Other faculty members may be designated by their Department/Group Chair (or GSBPP Dean) to undertake other necessary tasks for the Department/Group or the School, such as preparation of laboratories and apparatus for the quarter, teaching of refresher courses, Department/Group/School administrative work, etc. Faculty members who do not expect to be available for non-teaching duties during these periods must submit leave requests for the days of nonavailability.

Civil Service Regulations require that each faculty member must be provided an opportunity during any calendar year to take the annual leave earned during that year. Such leave may not be taken only during an unpaid intersessional period, and the period when it is taken is subject to the approval of the Department/Group Chair (or GSBPP Dean) or Institute Director. There are two-week breaks in June/July and December. Faculty members may take annual leave during these periods; otherwise, normal work attendance is expected.

Civilian faculty members may be granted annual leave for emergency reasons at any time. Faculty members should notify their Chair (or GSBPP Dean) as soon as possible about the circumstances requiring emergency annual leave. Except in cases of emergency, civilian faculty members may not be granted extended leave during the academic session when such leave would interfere with the academic schedule.

Return to TableOfContents Return to Index

MEDICARE

Medicare, the program to provide medical insurance to the elderly, consists of two parts: Part A, which provides hospitalization, and Part B, medical benefits. Part A is funded by Social Security taxes and is available to anyone receiving Social Security benefits without additional payment of premiums; Part B requires individual election and payment of a premium. Social Security withholdings include a l.3% contribution to the hospitalization insurance. Although Federal employees making regular contributions to the Civil Service Retirement System CSRS) are exempt from paying Social Security retirement tax, the exemption does not extend to the hospitalization insurance. A withholding of l.3% of basic pay up to the maximum taxable base set by Congress is made from the salaries of these employees.

Return to TableOfContents Return to Index

MILITARY LEAVE

Civilian faculty members participating in a reserve program of the Armed Forces are expected to arrange to take their annual training duty during their intersessional period, if possible. In those cases where training can be performed only during the academic session, the faculty member should secure approval for military leave in advance of entering into a training duty commitment. The leave application should be forwarded to the appropriate Dean via the cognizant Department/Group Chair. (GSBPP faculty submit their request directly to the GSBPP Dean.) All reservists of the Armed Forces or members of the National Guard except temporary,

intermittent, and part-time employees, are entitled to leave of absence from duties, without loss of pay for not more than 15 days in any calendar year, for active duty or for training.

Return to TableOfContents Return to Index

RETIREMENT PROGRAM

Faculty members employed under appointments of more than one year beginning prior to 1 January 1984 participate in the Civil Service Retirement Systems (CSRS). Faculty members first hired to appointments of more than one year on or after 1 January 1984 are covered under the newer retirement system, the Federal Employees' Retirement System (FERS). The Thrift Savings Plan (TSP), a Federal 401K, is available for employees participating in both CSRS and FERS. Both systems provide retirement and disability benefits for the member and survivor benefits for the member's family. Active duty military time is creditable toward eligibility for retirement under certain circumstances. Specific details on an individual's retirement can be obtained from the Benefits Line (1-800-320-2917) and EBIS.

Under both the CSRS and FERS retirement systems, the annuity is reduced if (a) the member's civilian service includes service for which no retirement deductions were deposited, (b) the member withdrew his/her contributions to the retirement fund after terminating a past period of federal service and has not made a redeposit, or (c) the member elects a survivor annuity. A member may withdraw his/her contributions to the fund if employment in the Civil Service is terminated for a period of at least 31 days and if he/she is not eligible for retirement at the time of separation. A member of the Retirement Fund is guaranteed a return from the fund which is at least equal to his/her contributions. However, no interest is paid on these refunded contributions.

Faculty planning retirement should contact the Benefits Line (1-800-320-2917) to request to be assigned a Retirement counselor no later than six months before retirement to establish completeness of records of Federal service (including military service) and an estimate of retirement benefits. This six-month lead time allows for obtaining needed records, documentation of previous pay (if relevant), and arrangement for payment of any deposits necessary to allow full credit. The NPS Human Resources Offices sponsors occasional on-campus retirement seminars. Early attendance is strongly suggested for any faculty member considering retirement.

Return to TableOfContents Return to Index

SOCIAL SECURITY

Faculty members covered by the Federal Employees' Retirement Systems (FERS) or serving in certain types of Federal appointments (i.e., limited to one year or less, intermittent employees) pay the full cost of Social Security. Those members covered by the Civil Service Retirement Systems (CSRS) pay the l.3% Medicare tax **(**see earlier section on Medicare) in addition to contributions to the CSRS.

Return to TableOfContents Return to Index

SECTION VIII – SCHOOL FACILITIES

ACADEMIC FACILITIES

Library. The Dudley Knox Library's collections and services are maintained by the following organizational units: Reader Services, Research Reports, Acquisitions, Bibliographic Control, and Systems. The functions and scope of each are briefly described below:

- **Reader Services (Open Literature).** The Reader Services Division is the public-service unit within the Library which supports students and faculty by providing access to unclassified library resources in hard copy, electronic databases, and microfilm. These resources include books, journals, abstract literature, newspapers, electronic databases, and U.S. Government Printing Office publications, the latter received by virtue of the Library's depository status. It also provides reference assistance including online literature searches and bibliographic instruction, manages circulation of library materials including course reserve items, maintains current and bound journals, processes interlibrary loans, and controls microfiche and microfilm files and equipment. Readers Services also conducts library tours, manages student photocopiers, and the Library's group study rooms.
- **Research Reports and Classified Materials (Classified and Unclassified Research Documents). T**his unit is the Library's repository for classified (Secret, Confidential) and unclassified documents received in hard copy and microform. It provides bibliographic access to all hard copy reports held by the division. It also provides access to the technical reports database of the Defense Technical Information Center (DTIC) and various products on CD-ROM, and it houses a classified word processing facility.
- **Acquisitions. (Collection Acquisitions).** This unit orders and receives Library materials in all formats, working closely with Library staff and Library Liaison Officers from the Library Council.
- **Bibliographic Control..** This unit supports instructional and research programs of NPS by cataloging, classifying, and processing all types of informational materials, in a variety of formats, to be entered into BOSUN, the Library's online catalog, and to be made available to Library users. Materials include NPS theses and reports a well as a wide range of materials from other sources.
- **Systems (Library Automation)..** The Systems Office manages new technology for automating the Library's collections and services. BOSUN (Bibliographic Online System Utilis Nautis), the Library's online catalog for open literature, is one major responsibility of this unit. Another system, STILAS (Science and Technology Information Library Automated System), is soon to be introduced for online access to the Library's classified documents collection.

Library cards are issued to faculty members at the Library circulation desk once they have received their identification cards. Questions regarding Library usage should be referred to the Reference Librarian.

Computing Services. The Computing Service organization supports a broad range of computing and information services on a variety of server systems attached to the campus backbone network. The organization maintains clusters of network-connected workstations in the other academic buildings. Some are arranged as electronic classrooms with 25 to 35 identical computers, either PCs, Macintoshes or HP workstations. Others contain SUN workstations and IBM graphics terminals which are intended for individual use by students and faculty. The organization also provides high-speed gateways to global networks.

All of the services and facilities are described in a handout, *Introduction to Computing Services* available in Ingersoll 146, Consulting Office. This room also contains copies of all of the Computing Services publications, newsletters, etc., and reference sets of manuals and other documentation of available operating systems and major software packages.

OTHER ACADEMIC FACILITIES.

The evolution of the instruction and research programs of the Naval Postgraduate School has resulted in a number of special facilities, most of which are used in support of both instruction and research programs. Some of these facilities are listed below.

Anechoic Acoustic Chambers
CAD/CAE Facility
Flash X-Ray Facility
Human Factors Engineering Laboratory
Hybrid Computer and Simulation Laboratory
Laser, Electro-optic, and Fiber Optic Laboratories
Learning Resource Centers (instructional computer facilities)
Metals Creep Laboratory
Microprocessor Laboratories
Ocean Acoustic Wave Facilities
Radar and EW Laboratory
Secure Computing Facility
Cryptologic Research Laboratory
Ship Electric Power Laboratory.
VLSI Design Facility
Wargaming Facility

Return to TableOfContents Return to Index

PERSONAL SERVICE FACILITIES

Commissioned Officers and Faculty Club. The use of all of the social and recreational facilities of the Commissioned Officers and Faculty Club is extended to civilian members of the faculty. There is no club membership fee. The Club's facilities include the main dining room, cocktail lounges, and several rooms available for private parties on a reservation basis.

Bookstore. The Navy Exchange Bookstore (located in the main Exchange building) offers a complete range of textbooks, magazines/periodicals, computer software, and personal office supplies (e.g., pens, pencils, etc.). Faculty civilians are eligible to use *only* this portion of the Navy Exchange.

Food Services. The Commissioned Officers' and Faculty Club provides cafeteria service for breakfast and lunch from on Monday through Friday. A coffee and light-meal facility is located near the Library parking lot, and in the Navy Exchange complex.

Post Office. A branch of the U. S. Post Office is located just inside the Del Monte Avenue gate. It is open from 0930 to 1530 Monday through Friday.

Navy Exchange Facilities. Civilian faculty members and their dependents are not allowed to use Navy Exchange facilities unless this privilege is based on prior or present military service or family members in the service. Exceptions to this rule are for the Bookstore and eating facilities operated by the Navy Exchange.

Return to TableOfContents Return to Index

RECREATION FACILITIES

The Naval Postgraduate School's Monterey Pines18-hole golf course is available to faculty members upon payment of greens fees or a monthly membership fee. A driving range and putting green are also located on the golf course site.

Other physical recreation facilities include a gymnasium (requiring a nominal membership fee) with exercise equipment, basketball court, racquetball, a softball field, tennis courts, and picnic grounds.

The Recreation Office, located near the Quarterdeck of Herrmann Hall, has current folders and maps for the many camping areas, motels, and recreational and entertainment facilities in California. Civilian faculty members may obtain recreation passes for the use of all recreation facilities for themselves and their immediate dependents from this Office.

POLICY
REGARDING APPOINTMENT, PROMOTION, SALARY, and TENURE of OFFICE of the CIVILIAN MEMBERS of the FACULTY

NAVAL POSTGRADUATE SCHOOL
Monterey, California - 93943-5000

24 October 1989

This revised Policy Regarding Appointment, Promotion, Salary and Tenure of Office of the Civilian Members of the Faculty at the Naval Postgraduate School has been approved by the Secretary of the Navy. The effective date of the revised Policy regarding Civilian Members of the Faculty is 1 November 1989.

The Faculty Salary Schedule is published separately and revised as changes occur.

Superintendent

TABLE OF CONTENTS

POLICY REGARDING

APPOINTMENT, PROMOTION, SALARY, AND TENURE OF OFFICE

of the

CIVILIAN MEMBERS OF THE FACULTY

at the

NAVAL POSTGRADUATE SCHOOL

1. Scope. This policy statement applies to all civilian members of the faculty of the Naval Postgraduate School, Monterey, California.

2. Status of Civilian Members of the faculty. Civilian members of the faculty are appointed by the Superintendent, Naval Postgraduate School in the excepted service, which is authorized by Title 5, Section 213.3108 B and Title 10, Section 7044 of the U. S. Code. Under Schedule A excepted appointment, members of the faculty are covered by the Office of Personnel Management Regulations, which apply to veterans' preference, performance ratings, annual and sick leave, health, retirement, and insurance benefits.

3. Faculty Salary Schedule. The salary for the civilian members of the faculty is determined by the Secretary of the Navy as authorized by Section 7044, Title 10, U. S. Code, and is promulgated by the Office of Civilian Personnel Management (SECNAVINST 12534.1A, 11 May 1988). The faculty salary schedule is modified on a comparative basis with changes authorized by the Congress for federal employees paid under the Classification Act. The term “Academic Rank” refers to the academic grade (Professor, Associate Professor, etc.) of an individual; and the term “Step” refers to the salary level within the category (Step 27, 28, etc.).

4. Academic Session. Faculty of the Naval Postgraduate School have a year-round responsibility to maintain professional proficiency, cognizance of the needs of the Navy with regard to postgraduate education, and a maximum usefulness in fulfilling the mission of the School. The academic session is, however, of ten months' duration, in accord with usual academic practice. The Superintendent shall specify the ten-months academic session for each faculty member. During this period the faculty member is in a duty status, employed in tasks assigned by the Superintendent, except when absent on approved earned annual or sick leave, leave without pay, sabbatical leave, or approved consulting activity. A portion of the faculty, as determined by the Superintendent to be essential, may be employed in teaching classes or other

occupations related to the instruction of students during the remaining two months of each calendar year (Intersessional Period). Other faculty members who are to be employed in the next academic session will be retained during these two months on the rolls in a nonpay status. They will be free during that time to pursue study, research, other professional developments, or other occupations compatible with their status as faculty members of the Naval Postgraduate School.

5. Appointment. Initial appointment to the faculty will be made upon recommendation of the Academic Dean after discussion with the Department Chairman or other appropriate administrative officer. and approval by the Superintendent.

a. Primary Criteria. In evaluating the record and potential of candidates for appointment, the following criteria will receive primary consideration:

(1) Professional Competence, as evidenced by the candidate's educational record, by scholarly activities such as publications, research, and papers presented at professional meetings, and by reputation among peers in the field of specialization.

(2) Teaching Ability, as evidenced by recommendations from former supervisors.

(3) Personal Attributes, such as initiative, cooperation, and breadth of intellectual interests.

b. Special Criteria. Appointments to the several ranks will be based on the following specific qualifications:

(1) Instructor. Appointment to the rank of Instructor will require a master's degree, or other appropriate preparation for the performance of assigned responsibilities.

(2) Assistant Professor. Possession of a doctor's degree or the equivalent professional experience; high standards of scholarship; promise of growth and development in the candidate's professional field.

(3) Associate Professor. Possession of the doctor's degree or the equivalent professional experience; definite record of scholarship and growth; superior personal traits; and at least five years of significant teaching and research experience at the college level, or equivalent professional service.

(4) Professor. Possession of a doctor's degree or the equivalent professional experience; superior teaching ability; unquestioned evidence of high professional qualifications including professional publications; superior personal traits; and at least six years experience in the rank of Associate Professor in accredited institutions of higher learning or equivalent professional service.

(5) Chair, Associate or Assistant Dean. The Superintendent is authorized to designate, with the advice and recommendation of the Academic Dean, members of the civilian faculty to serve as representatives of the Superintendent and the Academic Dean in the administrative positions of Chair, Associate Dean, or Assistant Dean.

(6) Academic Dean. Section 7043 of 10 U. S. Code, as amended by Public Law 89-536 of 11 August 1966 and Public Law 96-513 of 12 December 1980, authorizes the civilian position of Academic Dean. Appointments to this position are made by the Secretary of the Navy on the basis of recommendation by the Postgraduate School Council. The Academic Dean is selected from candidates whose previous association with educational institutions or programs has demonstrated a high caliber of prestige on a national scale.

(7) Distinguished Visiting Professor. The Superintendent is authorized to employ Distinguished Visiting Professors who shall be eminent scholars on a national or international scale selected because of prominence in their fields of academic specialization. The function of a Distinguished Visiting Professor is essentially one of bringing to the Postgraduate School advice and expertise, through consultation, lectures and/or teaching assignments, from the highest academic levels in specific fields of learning. Accordingly, Distinguished Visiting Professors are appointed for a period not to exceed one year. A subsequent appointment of one year may be granted if the Superintendent believes such an appointment will be of advantage to the Postgraduate School. The number of Distinguished Visiting Professors shall not exceed two at any one time.

(8) Adjunct Professor. The Superintendent is authorized to employ faculty members on a temporary appointment. Such appointees must possess the necessary qualifications for appointment as instructor, assistant, associate, or full professor. They will be appointed for definite periods and will be differentiated from the regular faculty appointments by the title Adjunct Professor. Adjunct Professors are paid using the same pay scales as an instructor, assistant, associate, or full professor, as appropriate.

c. Exceptions. Criteria for appointment or promotion may be waived in unusual circumstances when, in the opinion of the Superintendent, doing so would operate to the distinct advantage of the Naval Postgraduate School.

6. Salary. The salary of a civilian member of the faculty is determined by the Superintendent in accordance with the faculty salary schedule cited in Section 3. Recommendations for salary increase are submitted at the same time and in the same manner as recommendations for promotion cited in Section 7a.

a. Appointment. Initial appointments of faculty members will be in an academic rank at a step as determined by the Superintendent.

b. Promotion. With every promotion to another pay category on the Faculty Schedule, a civilian member of the faculty shall receive a salary increase equivalent to at least one pay step.

c. Merit Step Increases. Step increases for each civilian member of the faculty within a salary category will be based on the criteria in paragraph 7a together with the length of service in academic rank and the guidelines in NAVPGSCOLINST 12534.1 and 12430.3. Civilian members of the faculty may receive none, one, or two steps at the discretion of the Superintendent. Faculty members whose performance has been rated as outstanding by their Department Chairman and approved by the Provost may, at the discretion of the Superintendent, be granted salary increases of three or four steps. The number of three or four step increases shall not exceed, in any one year, 5% of the total of the civilian members of the faculty.

d. Intersessional Pay. Those civilian members of the faculty required by the Superintendent to perform academic duties during all or part of the two-months intersessional period will be paid additional compensation based on their ten-month salary rate.

e. Chair, Associate or Assistant Dean. Civilian members of the faculty who are appointed to positions of Chair, Associate or Assistant Dean will be paid at a salary step in the Administrative Faculty Salary category, as determined by the Superintendent. The step selected shall not exceed by more than three steps the salary step at which the faculty member was paid in the Professor or lower academic rank. When the appointment as Chair, Associate or Assistant Dean is terminated the faculty member will revert to the salary step that would have been reached had there not been service in an administrative capacity.

7. Reappointment, Promotion and Tenure. The initial appointment of all Federal Civil Service employees encompasses a one-year probationary period. This is applicable to the civilian members of the faculty at the Naval Postgraduate School. The Postgraduate School will accept a maximum of three years of prior experience as

a full-time teaching faculty member in an accredited collegiate institution in the consideration of individual tenure-track faculty members for promotion and tenure. The Postgraduate School may consider other significant professional experience in lieu of teaching experience in making promotions and in granting tenure. Additional limitations on appointment and reappointment of civilian members of the faculty are outlined below.

a. Promotion. The term "promotion" refers to a change in academic rank. In addition to the criteria below, promotion requires that a faculty member have a performance rating of record of "Fully Successful" or above. Promotion proceedings will occur annually. Promotions are made upon recommendation of the Academic Dean after consideration of the candidates by the Department, Faculty Promotion Council, and the Dean's Council, and approval by the Superintendent. The Promotion proceedings consider two general categories of performance:

Internal Service -that faculty activity which contributes to supporting the high quality of the School's academic environment, and

External Service - that faculty activity which enhances the School's contributions especially to the DON, but also to the DOD and/or the Academic Community.

In evaluating the record and potential of candidates for promotion in the above categories, emphasis will be placed on the following criteria:

Instructional Activity and Teaching Effectiveness as evidenced by: the vitality of classroom presentation, the thoroughness of preparation, demonstrated interest in students, capacity to impart knowledge and understanding and to stimulate the intellectual curiosity and growth of the student, developing and teaching courses (including short courses) with significant Navy content, development of other new course materials, direction of student thesis research, and by producing instructional material for use outside of the Naval Postgraduate School, and conducting off campus courses and instructional seminars.

Scholarly Activity as evidenced by: research directed toward the development of new knowledge, including efforts in areas related to DON/DOD, the application of knowledge to the solution of problems, including those of DON/DOD, by publication of significant new research results in peer-reviewed scholarly journals, and by the preparation, editing or revision of text books and monographs which represent major and significant new contributions in their areas or disciplines.

In addition, the following criteria will also be considered in judging a candidate's potential for promotion:

DON/DOD Service, as evidenced by: serving on DON/DOD boards and panels, providing consulting support to headquarters organizations and operational commands, and assistance to the Naval Postgraduate School organizations.

Professional Service Activity, as evidenced by: professional activities external to the Naval Postgraduate School such as: conference planning, committee work, offices in professional organizations, editorial work, refereeing or reviewing papers, book reviewing, lecturing and consulting work.

Administrative Activity, as evidenced by: service on faculty or administrative committees, on departmental committees and assignments, and by service in an administrative appointment such as academic associate, associate chair, or chair.

Personal Attributes, such as integrity, sense of public trust, industry, cooperation, initiative and breadth of intellectual interests.

In applying these criteria the determining factor for promotion to Associate Professor shall be possession of the qualifications necessary to achieve effective leadership in carrying out the mission of the Naval Postgraduate School. Promotion to Professor requires that the person demonstrate consistent leadership in at least one area of faculty activity, and have meritorious performance in both internal and external service in carrying out the mission of the Postgraduate School.

b. Tenure. The term “tenure” refers to appointment without a definite term of office. Except for possible termination due to a reduction-in-force or separation for cause (see section 8), a civilian faculty member with tenure may serve until retirement. The primary criteria for the granting of tenure are the same as those stated above for consideration for promotion. However, tenure is conferred in expectation of continuing significant contributions to future requirements of the Naval Postgraduate School. The award of tenure will be based on a continuing expected need for the particular capabilities of the faculty member and also the need to insure continued ability of the Naval Postgraduate School to recruit new faculty who can have a reasonable expectation of achieving tenure. Tenure will not be granted at any rank below that of Associate Professor. The granting of salary increases or promotions in rank shall not be interpreted to imply the intention of the Naval Postgraduate School to grant tenure to any faculty member. Note: Tenure as used in this policy statement refers to academic tenure; it does not encompass “status” as used in the competitive civil service.

c. Terms of Appointment. A new appointee to the faculty of the Naval Postgraduate School will normally be given a three-year appointment, the first year being a probationary period as referred to at the beginning of this section. At the end of the second year, the appointee will be considered for an extension of the term of appointment for an additional year. This will, thereafter, be repeated annually until the sum of his or her accepted prior experience and the length of the appointments at the Postgraduate School reaches seven years. If any appointment is not extended, then it will be understood to terminate upon completion of the stipulated term. Consideration for award of tenure will be given not later than the end of the sixth year of total experience (accepted prior experience plus experience at the Naval Postgraduate School. Final award of tenure occurs after seven years of total experience. A partial year's appointment does not count in the total years' service referred to in this paragraph. (See paragraph 8a.)

(1) Instructor. An Instructor may be considered for promotion to Assistant Professor at any time the requirements for appointment to that rank have been met.

(2) Assistant Professor. An Assistant Professor will be given first consideration for promotion to Associate Professor not later than the end of five years of total experience (accepted prior experience plus experience at the Naval Postgraduate School). An Assistant Professor promoted to Associate Professor may be considered for permanent tenure at that time.

(3) Associate Professor. An Associate Professor appointed from outside the School will be considered for tenure not later than the end of the sixth year of total experience (accepted prior experience plus experience at the Naval Postgraduate School). An Associate Professor will be given first consideration for promotion to Professor between the seventh and the tenth years of experience as Associate Professor (accepted prior experience plus experience at the Naval Postgraduate School). No time constraints apply for any subsequent consideration for promotion from Associate Professor. In exceptional cases warranted by unique and significant outstanding performance, an Associate Professor may be considered for promotion earlier at the discretion of the Academic Dean.

(4) Professor. A Professor appointed from outside the School will be considered for tenure not later than the end of the sixth year of total experience (accepted prior experience plus experience at the Naval Postgraduate School).

(5) Chair, Associate or Assistant Dean. A Chair, Associate Dean, or Assistant Dean is appointed for an initial term of not more than three years. At the expiration of his or her term, the individual may be reappointed for an additional term, or terms, of not more than five years or revert to faculty status.

(6) Academic Dean. The initial and subsequent appointments of the Academic Dean shall be for five years or less, as prescribed by law.

d. Military Service.

(1) Service of a faculty member on active duty in the Armed Forces of the United States subsequent to appointment at the Naval Postgraduate School will be counted year for year as service on the civilian faculty for the purpose of determining eligibility for advancement.

(2) A faculty member on active duty with the Armed Forces will, when eligible, be considered with other eligible candidates and may be selected for promotion. Promotion in absentia will be effective as of the date it would have been made notwithstanding the absence for military duty.

8. Termination.

a. Nonreappointment. If reappointment is not to be made, faculty members with more than two years of service at the Naval Postgraduate School will be given notice at least one year prior to the termination of the appointment; faculty members with less service will be given notice at least six months prior to the termination of the appointment. Notice of non-continuation beyond the probationary year will be given at least three months prior to the end of the year. Non reappointments of faculty members who are eligible for veterans' preference and have completed one year of continuous employment, including non reappointment to positions of Department Chair, Associate Dean, and Assistant Dean, will be made in compliance with the applicable procedures of Chapter 752 of the Federal Personnel Manual and appropriate sections of Navy Civilian Personnel Instruction 752.

b.Reduction in Force. A reduction in the instructional staff may be required by such reasons as a lack of federal funds, or change in mission, organization or workload. In such event, and where possible, every effort will be made to honor the conditions of non-reappointment as in (a) above.

c. Separation for Cause. Any member of the faculty may be separated for such cause as will promote the efficiency of the service. Such separation will be effected in accordance with the applicable civil service and Navy regulations.

d. Resignation. Civilian members of the faculty are expected to furnish the Superintendent at least six months notice of intention to resign.

9. Effective Date of Promotions and Other Personnel Actions. Tenure-track faculty promotions, reappointments, and salary increases will normally become effective on the first pay period after 1 July.

10. Physical Examination. Applicants for a position as a civilian member of the faculty may be asked to undergo a physical examination prior to acceptance for employment. Such an examination, if requested, would be for the purpose of ascertaining as nearly as possible that no health conditions exist which would prevent the proper discharge of the duties which are expected in employment or which would be a hazard to the applicant or others.

11. Research and Professional Advancement. Faculty members are encouraged to conduct research, write educational and professional articles and textbooks, and to attend and participate in conferences of learned societies. The primary objective, as well as the governing factor of such research and professional activity, must be the resulting enrichment and improvement of education at the Naval Postgraduate School. Valuable accomplishments of this nature shall be taken into account in recommendation for promotion.

12. Leave, Health Benefits, Incentive Awards and Life Insurance. Civilian members of the faculty are entitled to such benefits on the same basis as employees in the competitive civil service.

13. Retirement. Civilian members of the faculty hired after 1 January 1984 are covered by the Federal Employees Retirement System (except that those appointed for one year or less are covered only by the Social Security Act). Permanent faculty hired before that date are covered by either the Civil Service Retirement Act or the Federal Employees Retirement System depending on the member's chosen option. Standard Form 105, “Certificate of Membership”, outlines the coverage and specific provisions of the retirement system and is issued to each member of the faculty at the time of appointment. More complete details concerning retirement are contained in Chapter 831 of the Federal Personnel Manual.

14. Absence for Study and Research. Special leave without pay for study and research may be granted at the discretion of the Superintendent to civilian members of the faculty when such leave would result in the improvement of education at the Naval Postgraduate School. The number of members of the professional staff to be granted special leave at any one time shall be so limited as to avoid interference with the regular work at the Naval Postgraduate School.

15. Sabbatical Leave. In recognition of the scholarly work accomplished by the Naval Postgraduate School, sabbatical leave for study and research may be granted to civilian members of the faculty by the Superintendent when such leave would result in the improvement of education at the Naval Postgraduate School. Unless otherwise specifically provided, such leave shall be granted at full pay for one-half the academic session. The number of members of the professional staff to be granted sabbaticals at any one time shall be so limited as to avoid interference with the regular work at the Naval Postgraduate School. A civilian member of the faculty who accepts such leave assumes an obligation to continue service at the Naval Postgraduate School for a two-year period following return from the sabbatical.

16. Long-Term Training and Education Program for Civilian Employees. Civilian members of the faculty are eligible for participation in the Navy Department program designed to provide Navy employees with opportunity for comprehensive training or education consistent with significant changes in their responsibilities. This long-term program provides tuition, travel, per diem, transportation of family and household effects and salary. Acceptance of this opportunity for training or education obligates the civilian member of the faculty to remain an employee for a period three times the length of the period of training or education.

17. Consulting. Faculty members of the Naval Postgraduate School may be permitted to engage in outside employment or professional activity that enhances their professional competence. Any outside activity must be limited in scope so as not to interfere with the full and energetic execution of the member's primary responsibility in meeting all assigned professorial duties. A faculty member, in accepting an agreement for extramural professional activity, does so as an addition to full-time employment by the School and not as a substitute for a portion of it. The outside work must not interfere with the efficient performance of the members' duties as employees of the Naval Postgraduate School. Applicable regulations governing outside employment of government employees apply, in particular, SECNAVINST 5370.2 (series) on "Standards of Conduct and Government Ethics". Local procedures will provide for the reporting and approval of such activity by the faculty member and limit the amount of outside employment a faculty member may engage in to no more than an average of one day per week when not in a leave status.

INDEX

NAVAL POSTGRADUATE SCHOOL
Monterey, California - 93943-5000

July 2006

This revised Policy Regarding Appointment, Promotion, Salary and Tenure of Office of the Civilian Members of the Faculty at the Naval Postgraduate School has been approved by the Secretary of the Navy. The effective date of the revised Policy regarding Civilian Members of the Faculty is July 2006.

The Faculty Salary Schedule is published separately and revised as changes occur.

Policy Regarding

APPOINTMENT, PROMOTION,
SALARY, AND TENURE OF OFFICE

TABLE OF CONTENTS

APPOINTMENT, PROMOTION, SALARY, AND TENURE OF OFFICE

Of the

CIVILIAN MEMBERS OF THE FACULTY

At the

NAVAL POSTGRADUATE SCHOOL

1. Scope. This policy statement applies to all civilian members of the faculty of the Naval Postgraduate School, Monterey, California.

2. Academic Dean/Provost. Section 7043 of Title 10 U. S. Code, authorizes the civilian position of Academic Dean/Provost. Appointments to this position are made by the Secretary of the Navy. Before making an appointment to the position of Provost and Academic Dean, the Secretary consults with the Board of Advisors for the Naval Postgraduate School and must consider any recommendation of the leadership and faculty of the Naval Postgraduate School. The Academic Dean/Provost is selected from candidates whose previous association with educational institutions or programs has demonstrated a high caliber of prestige on a national scale. The title Provost will be used in this document to refer to the Academic Dean/Provost. The Provost is the Chief Academic Officer of the Naval Postgraduate School.

3. Civilian Faculty. Civilian members of the faculty are appointed by the President, Naval Postgraduate School, in the excepted service, as authorized by Title 10, U.S. Code, Section 7044, and Title 5, Code of Federal Regulations, Section 213.3108 (b) .Under Schedule A Excepted Appointments, members of the faculty are covered by the Office of Personnel Management Regulations.

4. Faculty Appointments. Initial appointment to the faculty will be made by the President upon recommendation of the Provost after discussion with the appropriate faculty, Chair, and Dean. There are two appointment series for faculty: Tenure-track and Non-tenure-track. Tenure-track faculty appointments are those appointments which have or may lead to appointment with no definite term of office; non-tenure-track appointments are those with definite terms of office with no promise of renewal of appointment. The initial appointment of all Federal civil service employees encompasses a one-year probationary period; this is applicable to the civilian members of the faculty.

a. Primary Criteria. In evaluating the record and potential of candidates for appointment, the following criteria will receive primary consideration:

(1) Professional Competence, as evidenced by the candidate's educational record; by scholarly activities such as publications, research, papers presented at professional meetings, and contributions to the DOD; and by reputation among peers in the field of specialization.

(2) Teaching/Research Ability, as evidenced by recommendations from former supervisors, peers, students, or other appropriate evidence.

(3) Personal Attributes, such as initiative, cooperation, and breadth of intellectual interests.

b. Tenure-track Appointments. Appointments to the several tenure-track academic ranks will be based on the following specific qualifications:

(1) Assistant Professor. Appointment to the rank of Assistant Professor will require possession of the Doctorate degree, high standards of scholarship, promise of growth and development in the candidate's professional field.

(2) Associate Professor. Appointment to the rank of Associate Professor will require possession of the Doctorate degree, a definite record of scholarship and growth, superior personal traits, and at least five years of significant teaching and research experience at the college level, or equivalent professional service.

(3) Professor. Appointment to the rank of Professor will require possession of the Doctorate degree, superior teaching ability, unquestioned evidence of high professional qualifications including professional publications, superior personal traits, and at least six years experience in the rank of Associate Professor in accredited institutions of higher learning, or equivalent professional service.

c. Non-tenure-track Appointments. The President is authorized to employ non-tenure-track (adjunct) faculty members on temporary appointments to support the teaching, research, or academic administrative needs of the School. Adjunct faculty must possess appropriate academic and experiential qualifications for the positions to which they are appointed. Titles for adjunct faculty include: Lecturer, Senior Lecturer, Research Assistant, Research Associate, Research Assistant Professor, Research Associate Professor, Research Professor, Adjunct Assistant Professor, Adjunct Associate Professor, Adjunct Professor, Professor-of-the-Practice-of-(specified area). Specific title used depends upon the appointee’s qualifications and position. Adjunct faculty appointments are term limited and are not tenure accruing positions. Qualifications required of adjunct faculty are similar to those for tenure track faculty but may be weighted more towards practical experience than is the case for tenure track appointments; this is particularly so for Professor-of-the-Practice appointments. Administrative faculty appointees, Lecturers and Senior Lecturers must possess at least a Master’s degree in an appropriate area of study. Research Assistants will usually be part-time appointees who are also enrolled in a masters or doctoral program at NPS.

The President is also authorized to employ as Distinguished Visiting Professors faculty who are nationally or internationally recognized eminent scholars or experts in areas of DOD interest. The function of a Distinguished Visiting Professor is essentially one of bringing to NPS advice and expertise, through consultation, lectures and/or teaching assignments, from the highest academic and professional levels. Accordingly, Distinguished Visiting Professors are normally appointed for a period not to exceed one year. Subsequent appointments may be granted if the President believes such appointments will be of advantage to the Naval Postgraduate School.

Nontenure-track faculty are paid using the same pay scales as an instructor, assistant, associate, or full professor, as appropriate.

d. Exceptions. Criteria for appointments may be waived in exceptional circumstances when doing so would operate to the distinct advantage of the Naval Postgraduate School. Waivers may be granted only by the President upon the recommendation of the Provost.

5. Executive Faculty Appointments. The President is authorized to designate, with the advice and recommendation of the Provost, members of the civilian faculty to serve in the executive positions of Dean and Associate Provost. These positions report directly to the Provost.

6. Promotion and Tenure, Tenure-track faculty. Tenure-track faculty are subject to both promotion and tenure review processes.

a. Promotion. The term "promotion" refers to a change in academic rank from Assistant Professor to Associate Professor or from Associate Professor to Professor. In addition to the criteria below, promotion requires that a faculty member have a performance rating of record of "Meritorious". Promotion proceedings will occur annually. Promotions are made by the President upon recommendation of the Provost, after consideration of the candidates by the Department or School, the Faculty Promotion Council (as defined in the Faculty Handbook), and the Deans' Council (as defined in the Faculty Handbook). The Promotion proceedings consider two general categories of performance:

Internal Service -those faculty activities which contribute to supporting the high quality of the School's academic environment, and

External Service - those faculty activities that enhance the School's contributions especially to the DON, the DOD, National Security and Homeland Defense, and/or the Academic Community.

In evaluating the record and potential of candidates for promotion in the above categories, emphasis will be placed on the following criteria:

Instructional Activity and Teaching Effectiveness: Evidenced by the vitality of classroom presentation; the thoroughness of preparation; a demonstrated interest in students; the capacity to impart knowledge and understanding and to stimulate the intellectual curiosity and growth of the student; developing and teaching courses (including short courses) with significant Navy/DOD content; development of other new course materials; direction of student thesis research; production of instructional material for use both inside and outside of the Naval Postgraduate School; and conducting off-campus courses and instructional seminars.

Scholarly Activity: Evidenced by research directed toward the development of new knowledge, including efforts in areas related to national security; the application of knowledge to the solution of problems, including those of DOD and other national

security organizations; by publication of significant new research results in peer-reviewed scholarly journals; and by the preparation, editing or revision of text books and monographs which represent major and significant new contributions in their areas or disciplines. Scholarly activity includes the Scholarship of Discovery, the Scholarship of Integration, the Scholarship of Application, and the Scholarship of Teaching.

In addition, the following criteria will also be considered in judging a candidate's potential for promotion:

DON/DOD Service: Evidenced by serving on DON/DOD or other national security organizations boards and panels, providing consulting support to headquarters organizations and operational commands, and assisting Naval Postgraduate School organizations.

Professional Service Activity: Evidenced by professional activities external to the Naval Postgraduate School such as: conference planning, committee work and offices in professional organizations, editorial work, refereeing or reviewing papers, book reviewing, lecturing and consulting work.

Administrative Activity: Evidenced by service on faculty or administrative committees; service on departmental committees, and service in an administrative appointment such as academic associate, associate chair, chair, dean etc.

Personal Attributes: To include integrity, sense of public trust, industry, cooperation, initiative and breadth of intellectual interests.

In applying these criteria the determining factor for promotion to Associate Professor shall be possession of the qualifications necessary to achieve effective leadership in carrying out the mission of the Naval Postgraduate School. Promotion to Professor requires that the person demonstrate consistent leadership in at least one area of faculty activity, and have meritorious performance in both internal and external service in carrying out the mission of the Postgraduate School.

b. Tenure. The term "tenure" refers to appointment without a definite term of office to the academic unit to which the faculty member is assigned. Except for possible termination due to a reduction-in-force or separation for cause (see section 10), a civilian faculty member with tenure may serve until retirement. The primary criteria for the granting of tenure are the same as those stated above for consideration for promotion. However, tenure is conferred in expectation of continuing significant contributions to future requirements of the Naval Postgraduate School. The award of tenure will be based on a continuing expected need for the particular capabilities of the faculty member and also the need to insure continued ability of the Naval Postgraduate School to recruit new faculty who can have a reasonable expectation of achieving tenure. Tenure will not be granted at any rank below that of Associate Professor. The granting of salary increases or promotions in rank shall not be interpreted to imply the intention of the Naval Postgraduate School to grant tenure to any faculty member. (Note: Tenure as used in this policy statement

refers to academic tenure; it does not encompass "status" as used in the competitive civil service.)

7. Terms of Appointment. A new tenure-track appointee to the faculty of the Naval Postgraduate School will normally be given a three-year appointment, the first year being a probationary period as referred to at the beginning of this section. At the end of the second year, the appointee will be considered for an extension of the term of appointment for an additional year. This will, thereafter, be repeated annually until the sum of his or her accepted prior experience (a faculty member may be granted up to three years of in-rank credit for service as a tenure track or tenured faculty member at another major, research university) and the length of the appointments at the Postgraduate School reaches seven years. Each extension decision will be based upon a formal performance review using the criteria of section (a). If any appointment is not extended, then it will be understood to terminate upon completion of the stipulated term.

a. Assistant Professor. An Assistant Professor will be given first consideration for promotion to Associate Professor not later than the end of six years of total experience. An Assistant Professor promoted to Associate Professor must be considered for permanent tenure at that time. If tenure is not granted then the faculty member may not be promoted to Associate Professor

b. Associate Professor. An Associate Professor appointed from outside the School will be considered for tenure not later than the end of the sixth year of total experience (accepted prior experience plus experience at the Naval Postgraduate School). An Associate Professor will be given first consideration for promotion to Professor between the seventh and the tenth years of experience as Associate Professor (accepted prior experience plus experience at the Naval Postgraduate School). No time constraints apply for any subsequent consideration for promotion from Associate Professor. In exceptional cases warranted by unique and significant outstanding performance at NPS, an Associate Professor may be considered for promotion earlier at the discretion of the Provost.

d. Professor. A Professor appointed from outside the School will be considered for tenure not later than the end of the sixth year of total experience (accepted prior experience plus experience at the Naval Postgraduate School). Under exceptional circumstances, as determined by the Provost, a Professor may be appointed with tenure. Such an appointment will be made only after the candidate has been reviewed and approved by the appropriate tenured faculty, the full Faculty Promotion Council, and the Deans' Council.

Consideration for award of tenure will be given not later than the end of the sixth year of total experience (accepted prior experience plus experience at the Naval Postgraduate School). A partial year's appointment, that is an appointment that begins after the first of July in any academic year, does not count in the total years' service referred to in this paragraph. Tenure is awarded by the President upon the recommendation of the Provost after consideration of the candidate by the department/school, the Faculty Promotion Council, and the Deans' Council. A faculty member who fails to receive tenure will be given a one-year terminal appointment.

8. Military Service. It is the policy of the Naval Postgraduate School that civilian faculty who are recalled to active duty will not be disadvantaged by virtue of such service.

a. Service of a civilian, tenure-track faculty member called to active duty in the Armed Forces of the United States subsequent to appointment at the Naval Postgraduate School may be counted year for year as service on the civilian faculty for the purpose of determining eligibility for advancement.

b. A civilian, tenure-track faculty member on active duty with the Armed Forces will, when eligible, be considered with other eligible candidates and may be selected for promotion. Promotion in absentia will be effective as of the date it would have been made notwithstanding the absence for military duty.

9. Non-reappointment, Termination. Tenure-track faculty are subject to non-reappointment or termination actions as follows.

a. Non-reappointment. If reappointment is not to be made, tenure-track faculty members with more than two years of service at the Naval Postgraduate School will be given notice at least one year prior to the termination of the appointment; faculty members with one to two years of service will be given notice at least six months prior to the termination of the appointment; and faculty members with less than one year of service will be given notice at least three months prior to the termination of the appointment. Notice of non-continuation beyond the probationary year will be given at least three months prior to the end of the year. Non-reappointment of faculty members who are eligible for veterans' preference and have completed one year of continuous employment, including non-reappointment to administrative positions, will be made in compliance with applicable Civilian Personnel Instructions.

b. Non-award of promotion and/or tenure. Promotion and tenure decisions rest upon the professional judgments of each of the many individuals involved in the process. The process is designed so that the individual professional judgments can be exercised in a fair and equitable manner. At each stage of the deliberations, there is provision for the presence of an objective observer to assure that the process is indeed fair and equitable. Appeals of the final decision may be entertained only if there is demonstrable evidence that there has been an error in process.

A faculty member whose promotion or tenure has initially been denied at the department or school level may file a written appeal with the Provost. The Provost, after making a preliminary review of the matter, may grant the appeal, remand the matter back to the originating academic unit for further consideration, or deny the appeal. If the appeal is granted, the case is considered along with all other promotion and/or tenure cases for action during the appropriate tenure/promotion cycle. If the Provost denies the appeal, the faculty member, colleagues, and/or Department, Chair or School Dean may request the assistance of the Faculty Professional Practices Committee (see Faculty Handbook) in appealing on the

basis of process errors. The Professional Practices Committee shall determine whether, in its view, such process errors are significant and recommend to the Provost how such process errors may be remedied. The Provost makes the final decision on the appeal, and may choose to follow the recommendations of the Professional Practices Committee or may decide not to do so in whole or in part. The Provost will inform the appellant of the decision. Upon receipt of the Provost's final decision, the appellant may request a further review by the President. The President may decline the request. If the President chooses to consider the appeal, he or she may make any inquiries he or she deems appropriate. Following the examination of the case the President may grant or deny the appeal. The President's decision is final.
A faculty member whose promotion or tenure has been supported by his or her department or school but which is then denied by the Provost may file a written appeal with the President who will then perform the functions assigned to the Provost in the previous paragraph. At the end of the process the President's decision will be conveyed to the appellant and is final.

A faculty member whose promotion or tenure is denied by the President after a positive recommendation by the Provost may file a written appeal with the President. The President may take any action he or she deems appropriate. The President's decision will be conveyed to the appellant and is final.

c. Reduction in Force. A reduction in the number of faculty may be required by such reasons as a lack of federal funds, or by a change in mission, organization or workload. In such event, and where possible, every effort will be made to honor the conditions of non-reappointment as in (a) above.

d. Separation for Cause. Any member of the faculty may be separated for such cause as will promote the efficiency of the service. Such separation will be effected in accordance with the applicable civil service and Navy regulations.

10. Resignation. Civilian members of the faculty are expected to furnish the President at least six months notice of intention to resign.

11. Faculty Salary Schedule. The salary for the civilian members of the faculty is determined by the Secretary of the Navy as authorized by Title 10, U.S. Code, Section 7044, and is promulgated by the Deputy Assistant Secretary of the Navy (Civilian Human Resources) (SECNAVINST 12534.1C, 18 October 2005, and appropriate updates). The faculty salary schedule is modified on a comparative basis with changes authorized by the Congress for federal employees paid under the General Schedule. The term "Academic Rank" refers to the academic grade (Professor, Associate Professor, etc.) of an individual; and the term "Step" refers to the salary level within the category (Step 27, 28, etc.). In addition, locality-based comparability payments have been extended to the Naval Postgraduate School Faculty Schedule.

a. Academic Session. Faculty of the Naval Postgraduate School have a year-round responsibility to maintain professional proficiency, remain cognizance of the needs of the Navy with regard to postgraduate education, and to contribute strongly to fulfilling the mission of the School. The academic session is, however, of ten months' duration, in

accordance with usual academic practice. The President shall specify the ten-month's academic session for each faculty member. During this period the faculty member is in a duty status, employed in tasks assigned by the President, except when absent on approved earned annual or sick leave, leave without pay, sabbatical leave, or engaged in an approved consulting activity. A portion of the faculty, as determined by the President to be essential, may be employed to perform academic duties during the remaining two months of each calendar year (the Intersessional Period,). Other faculty members who are to be employed in the next academic session will be retained during these two months on the rolls in a non-pay status. They will be free during that time to pursue study, research, other professional developments, or other occupations compatible with their status as faculty members of the Naval Postgraduate School.

b. Intersessional Period Those civilian members of the faculty required by the President to perform academic duties during all or part of the Two-Month Intersessional period will be paid at the same rate as during their Academic Session.

12. Salary determination. The salary of a civilian member of the faculty is determined by the President in accordance with the faculty salary schedule cited in Section (11). The Faculty Schedules have been capped at a level equal to that of Level IV of the Executive Schedule .The Department of Navy may approve rates above those listed on the schedule.

a. Appointment. Initial appointments of faculty members will be in an academic rank at a step as determined by the President.

b. Promotion. With every promotion to another academic rank a civilian member of the faculty shall receive a salary increase equivalent to at least one pay step.

c. Merit Pay Step Increases. Upon the recommendation of the Provost the President may authorize within-rank step increases for civilian faculty on an annual basis, subject to budgetary constraints. Such step increases will recognize excellence in faculty performance and will be based upon recommendations from the appropriate chairs and deans and the approval of the Provost.

d. Executive/Administrative Appointments. Civilian members of the faculty who are appointed to the various executive administrative positions will be paid at a salary step in the Administrative Faculty Salary category, as determined by the President. The Faculty member will retain all merit pay step increases and performance ratings earned while on the Administrative Faculty Schedule.

13. Effective Date of Promotions and Other Personnel Actions. Tenure-track faculty promotions, reappointments, and salary increases will normally become effective on the first pay period after 1 July.

14. Research and Professional Advancement. Faculty members are encouraged to conduct research, write educational and professional articles and textbooks, and to attend and participate in conferences of learned societies. The primary objective, as well as the governing factor of such research and professional

activity, must be the resulting enrichment and improvement of education at the Naval Postgraduate School, and contributions to the improvement of the national security of the United States. Valuable accomplishments of this nature shall be taken into account in recommendation for promotion and tenure.

15. Leave, Health Benefits, Incentive Awards and Life Insurance. Civilian members of the faculty are entitled to such benefits on the same basis as employees in the competitive civil service.

16. Retirement. Civilian members of the faculty hired after 1 January 1984 are covered by the Federal Employees Retirement System (except that those appointed for one year or less are covered only by the Social Security Act). Either the Civil Service Retirement Act or the Federal Employees Retirement System, depending on the member's chosen option covers permanent faculty hired before that date. Standard Form 105, Certificate of Membership, outlines the coverage and specific provisions of the retirement system and is issued to each member of the faculty at the time of appointment. More complete details concerning retirement are contained in the Federal Personnel Manual.

17. Absence for Service, Study and Research. Special leave without pay for study, research, or service may be granted at the discretion of the President to civilian members of the faculty when such leave would result in the improvement of education at the Naval Postgraduate School.

18. Sabbaticals. In recognition of the scholarly work accomplished by the Naval Postgraduate School, sabbaticals for study and research may be granted to civilian members of the faculty by the President when such a sabbatical would result in the improvement of education at the Naval Postgraduate School. Unless otherwise specifically provided, such a sabbatical shall be granted at full pay for one-half the academic session. The number of members of the professional staff to be granted sabbaticals at any one time shall be so limited as to avoid interference with the regular work at the Naval Postgraduate School. A civilian member of the faculty who accepts a sabbatical assumes an obligation to continue service at the Naval Postgraduate School for a two-year period following return from the sabbatical.

19. Long-term Training and Education Program for Civilian Employees. Civilian members of the faculty are eligible for participation in Navy Department programs designed to provide Navy employees with opportunity for comprehensive training or education consistent with significant changes in their responsibilities. This long-term program provides tuition, travel, per diem, transportation of family and household effects, and salary. Acceptance of this opportunity for training or education obligates the civilian member of the faculty to remain an employee for a period three times the length of the period of training or education.
Individuals who are employed as Research Assistants (RA) in a part-time capacity may enroll in NPS degree programs and receive a degree from NPS. RAs will be required to pay a tuition to offset a portion of the programmatic costs, at a level determined by the President, and will be required to remain an employee of the DOD for a period equal to the of the education period. Tuition fees may be paid by appropriate research sponsors.

20. Consulting. Faculty members of the Naval Postgraduate School may be permitted to engage in outside employment or professional activity that enhances their professional competence. Any outside activity must be limited in scope so as not to interfere with the full and energetic execution of the member's primary responsibility in meeting all assigned professorial duties. Applicable regulations governing

outside employment of government employees apply, in particular, DOD 5500.7-R – The Joint Ethics Regulations (JER) on Standards of Conduct and Government Ethics. Local procedures will provide for the reporting and approval of such activity by the faculty member and limit the amount of outside employment a faculty member may engage in to no more than two days in any two-week pay period when not in a leave status. A faculty member, in accepting an agreement for extramural professional activity, does so as an addition to full-time employment by the School and not as a substitute for a portion of it.

NPS Curricula: An Overview

Author: Kamil Marcinka, eDataTech
Date: November 8, 2007

Purpose

This document contains an overview of the relationships between Schools, Departments, Curricula and Subspecialty Codes, Tracks and Degrees. The research was conducted as part of development of the *Curriculum Management System* project, SOW item #3.1.

Acknowledgements

Thanks to all of the NPS staff members who contributed information during the effort of preparing this document: Mike Andersen, CDR Mary Blankenship, Tracy Hammond, Daphne Kapolka, Alan Pires, and Minerva Scheffel.

Special thanks to Daphne for her critical role in providing valuable insights and editorial suggestions throughout the process of writing this document.

Background

The mission of NPS is to provide graduate-level education for US Navy officers as well as to support the unique educational needs of other US service components, DoD civilians, and allied nations.

The educational goals for the US Navy students at NPS are defined in terms of the *subspecialty codes* (a.k.a. *p-codes*). A p-code is a four-digit designator that the US Navy uses to identify curricula and tracks. The first two digits of a p-code identify a curriculum and the last two digits identify a track. Appended to a p-code can be a one-letter designator that identifies the degree type earned (MS, PhD, etc.).

The subspecialty codes and their associated curricula are typically sponsored by high-ranking Navy officers who understand the needs of the US Navy. Subspecialty codes are defined in terms of Educational Skill Requirements (ESRs) and, in cooperation with NPS staff, translated into curricula that satisfy those requirements. Curricula sponsors participate in curriculum reviews as well as provide support and financial backing for their programs.

In this respect, there is a fundamental difference in the education model between civilian institutions and NPS. The education goal at a civilian institution is an academic degree, and a curriculum defines the requirements for obtaining a degree. At NPS, the goal is to obtain a subspecialty code, and an NPS curriculum defines the requirements for a given subspecialty code. In order to earn a subspecialty code, the student must also earn an academic degree, but that is only one component. The other component involves fulfilling the core set of subspecialty requirements that reflect the needs of the military.

In summary, to fulfill subspecialty code requirements, a student at NPS is required to complete a *curriculum*. An NPS curriculum has two components:

1) A core set of courses and other objectives that directly reflect the ESRs for the given *subspecialty code*. They bear no direct relationship to the academic degree requirements, although some of the subspecialty code requirements may also happen to satisfy some of the degree requirements. This set of requirements serves the needs of the US Navy.

2) A set of courses and other requirements for a *graduate academic degree* that the student must also earn in order to be granted a subspecialty code. This set of requirements is governed by the civilian education accreditation criteria.

A curriculum has one or more tracks, each of which defines a different specialization and, possibly, a different degree. For a given curriculum, the first two digits of the subspecialty code will be the same regardless of the chosen track; the last two digits may be different depending on the track.

Thus, different students may satisfy a curriculum and obtain the same subspecialty code while earning different degrees. Conversely, students completing different curricula or tracks may be earning the same academic degree while obtaining different subspecialty codes.

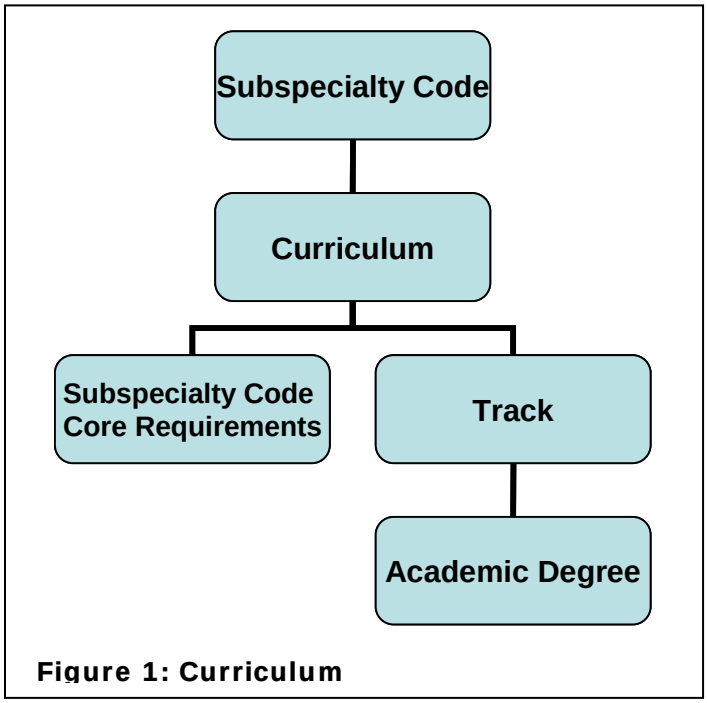

Figure 1: Curriculum

Program Offices and Academic Departments

The function of Program Offices is to work with the curricula sponsors to define the ESRs, review and maintain the curricula, add and delete courses, etc. Program Offices also work with the academic departments to ensure that the coursework meets the subspecialty code requirements. The Program Offices also assign tracks based on students' needs and interests, and oversee the students' education progress. Upon completion of all subspecialty code requirements, the Program Offices have the authority to grant p-codes.

Academic Departments closely correspond to their counterparts in the civilian institutions. They are education providers and they have the authority to set degree requirements and to nominate students for academic degrees. Additionally, they must ensure they offer all of the courses required for obtaining the different p-codes.

Hierarchy Summary

A *school* has two types of *departments*:

- Program Offices
- Academic Departments, Academic Groups, Committees

A *Program Office* is a non-academic department within a school that manages the curricula.

A *curriculum* is a set of requirements for obtaining a *subspecialty code*. Each curriculum has one or more *tracks*.

A *track* reflects an area of specialization and determines the academic degree that the student will earn while obtaining a *subspecialty code*.

An *academic department/group/committee* is an education provider and/or degree nominating authority.

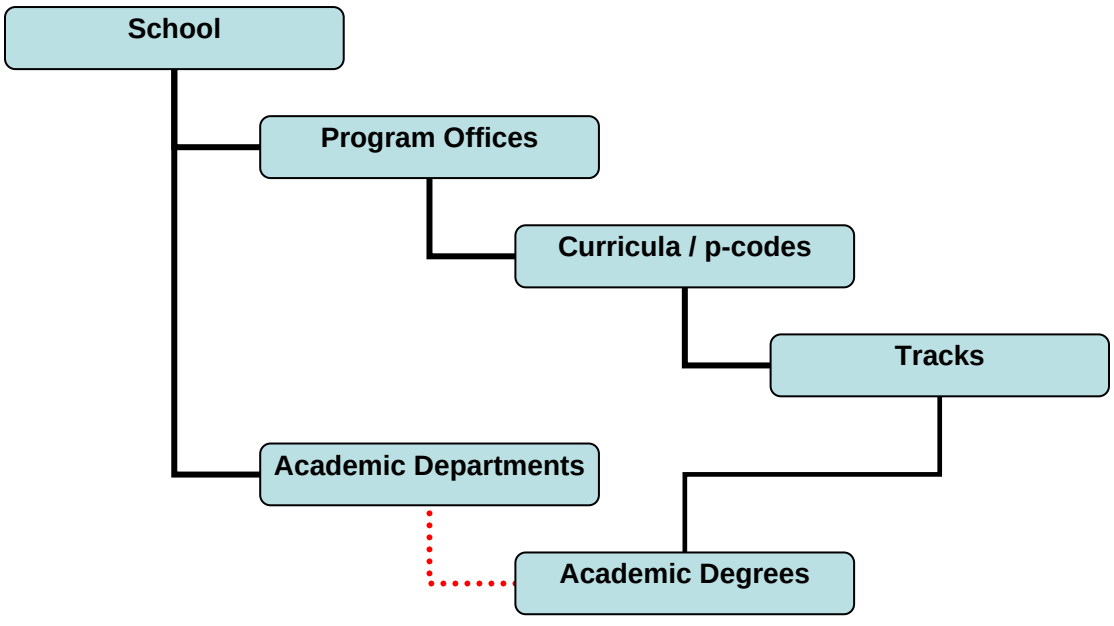

Figure 2: Hierarchy

Examples

The curriculum titled *Undersea Warfare*, under the School of Engineering and Applied Sciences, defines the requirements for earning a subspecialty code 6301. Within this curriculum there are fourteen tracks altogether; ten of the tracks involve earning a

Master's Degree with various specializations, and four of the tracks involve earning a PhD.

The curriculum titled *Computer Science*, under the Graduate School of Operations and Information Sciences, defines the requirements for earning a subspecialty code 6203. Within this curriculum there are two tracks; one track involves a Master's Degree in Computer Science, and the other involves earning a PhD in Computer Science.

Exceptions

NPS operates under the business model based on the needs of the US Navy. Other US military branches and International students at NPS work within the same framework, but they do not earn subspecialty codes, as these are not used outside the US Navy. These students typically take one of the existing NPS curricula which can be adjusted based on the students' needs and interests. Also, some of the NPS curricula have been developed to specifically serve the needs of the military branches other than the US Navy.

Curriculum Management System project

The Registrar's Office relies heavily on a spreadsheet titled *Master Curricula Chart*. Currently, this document is maintained manually by making changes directly to the spreadsheet.

The objective of CMS SOW item #3.1 is to automate the process of generating the Master Curricula Chart. In order to do so, it is necessary to complete the following steps:

1. Identify the information in the spreadsheet that is currently not tracked within the PYTHON database. So far, the only relationship that has been identified as missing is the link between Academic Departments and Academic Degrees (shown in red in Figure 2)
2. Modify the PYTHON database and implement the additional relationships
3. Develop a tool that will allow the Registrar's Office to maintain data relevant to the spreadsheet
4. Develop a tool to generate the Master Curricula Chart from the data in the database

NPS Graduating Students Survey

Introduction

Information for Graduating Students

1. Introduction. Answering these questions will provide you the opportunity to evaluate and comment on your educational experiences at NPS. These results will be used to improve the experience for future students. Please read the statements below and indicate if you agree to participate in the survey.

2. Background Information. The NPS Office of Academic Affairs and the Office of Institutional Research are conducting this study.

3. Procedures. Please click on the most appropriate answer for each survey question. Mandatory questions are marked with an asterisk. These questions MUST be answered for the survey to be submitted correctly.

4. Compensation. No tangible reward will be given. A copy of the results will be available upon request.

5. Points of Contact. If you have any further questions or comments after the completion of the study, you may contact the research supervisor, Dr. Fran Horvath (831)656-2228, rfhorvat@nps.edu

NAVAL POSTGRADUATE SCHOOL, MONTEREY, CA PRIVACY ACT STATEMENT

1. Purpose: Survey data will be collected to evaluate the benefits and effectiveness of the education programs at the Naval Postgraduate School.

2. Use: This data will be used for statistical analysis by the Naval Postgraduate School and potentially by the Departments of the Navy and Defense, and other U.S. Government agencies, provided this use is compatible with the purpose for which the information was collected. Use of the information may be granted to legitimate non-government agencies or individuals by the Naval Postgraduate School in accordance with the provisions of the Freedom of Information Act.

3. Disclosure/Confidentiality:
a. I have been assured that my privacy will be safeguarded. The database created from the survey data will not contain individual identification information. In all cases, the provisions of the Privacy Act Statement will be honored.
b. I understand that a record of the information contained in this Consent Statement or derived from the experiment described herein will be retained permanently at the Naval Postgraduate School or by higher authority. I voluntarily agree to its disclosure to agencies or individuals indicated in paragraph 2 and I have been informed that failure to agree to such disclosure may negate the purpose for which the experiment was conducted.
c. I also understand that disclosure of the requested information is voluntary.

PARTICIPANT - VOLUNTARY CONSENT TO BE A RESEARCH PARTICIPANT IN: NPS Alumni Survey

1. I have read and understand "Information for Participants" above.
2. An explanation of the purposes of the research and a description of procedures to be used have been provided to me.
3. I understand that this project does not involve more than minimal risk. I have been informed of any reasonably foreseeable risks or discomforts to me.
4. I have been informed of any benefits to me or to others that may reasonably be expected from the research.
5. I understand the data will be kept confidential and reported only on a summary level. I have read and understood the “Privacy Act Statement.”
6. I understand that my participation in this project is voluntary, refusal to participate will involve no penalty or loss of benefits to which I am otherwise entitled. I also understand that I may discontinue participation at any time without penalty or loss of benefits to which I am otherwise entitled.

NPS Graduating Students Survey

* 1. By clicking on the "yes" button below, I am agreeing to participate in this survey.

- ◯ Yes
- ◯ No

Begin the Survey!

* 1. Instruction and research at NPS had the ultimate goal of enhancing combat effectiveness of the US and Allied armed forces.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 2. The University administration is committed to supporting teaching and research for the purpose of enhancing combat effectiveness of the US and Allied armed forces.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 3. The unique defense-oriented environment made my graduate education at NPS more relevant than it would have been at a civilian university.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 4. My curriculum was related to national security or defense needs.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 5. My education at NPS is relevant to my future assignments and responsibilities.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 6. Completing a thesis, group project or capstone project was a valuable component of my NPS education.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 7. My thesis or capstone research project at NPS made a useful contribution to combat effectiveness or another national security need.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 8. My coursework and research at NPS were closely integrated.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 9. NPS is always working to improve instruction and research.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 10. I understood the body of knowledge and skills I was expected to master for my degree program.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 11. My academic background was adequate preparation for successful completion of my program.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 12. The tests that I took at NPS were fair and relevant.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 13. The grades I received at NPS accurately reflected the level of my performance.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 14. Refresher courses at NPS were sufficient to prepare me for subsequent course work.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 15. My NPS program provided me with sufficient electives to pursue my special military career interests.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

16. NPS provided opportunities for learning outside the regular curricular program.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 17. Diversity in service, culture, ethnicity, and gender enriched my NPS education.

	Strongly disagree	Disagree	Agree	Strongly agree	n/a or don't know
Service	◯	◯	◯	◯	◯
Culture	◯	◯	◯	◯	◯
Ethnicity	◯	◯	◯	◯	◯
Gender	◯	◯	◯	◯	◯

* 18. NPS represented itself accurately in promotional materials and representations about the school.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 19. I was aware that NPS had an appeals process for student academic complaints.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 20. NPS faculty in my program were dedicated to teaching.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 21. NPS faculty members involved me in active and participative learning experiences.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 22. NPS faculty in my program were dedicated to my success as a student.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 23. NPS faculty in my program were generally available to provide additional assistance outside the classroom when I needed it.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 24. NPS faculty in my program utilized student feedback to improve the educational program.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 25. My faculty appeared to be well qualified for the defense-related teaching and research done in my curriculum or program.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 26. I received the faculty advice and guidance that I needed to successfully complete my thesis, group project or capstone research project.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 27. NPS personnel facilitated my transition to student life.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 28. NPS staff provided sufficient support to enable me to meet my educational goals.

	Strongly disagree	Disagree	Agree	Strongly agree	n/a or don't know
Registrar	◯	◯	◯	◯	◯
Scheduling	◯	◯	◯	◯	◯
Student Services	◯	◯	◯	◯	◯
Program Officer	◯	◯	◯	◯	◯
Program Office Staff	◯	◯	◯	◯	◯
Thesis Processing	◯	◯	◯	◯	◯
Lab Techs	◯	◯	◯	◯	◯

* 29. NPS library resources met all my course work and research needs.

	Strongly disagree	Disagree	Agree	Strongly agree	n/a or don't know
Books	◯	◯	◯	◯	◯
Databases	◯	◯	◯	◯	◯
Journals	◯	◯	◯	◯	◯
Facilities (computers, study rooms, carrels)	◯	◯	◯	◯	◯
Reference Assistance & Instruction	◯	◯	◯	◯	◯
Restricted Resources and Services	◯	◯	◯	◯	◯
Services (circulation, interlibrary loan, course reserve, printing, etc)	◯	◯	◯	◯	◯

* 30. NPS computer services met all my course work and research needs

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

31. I would recommend NPS to other military officers or defense civilians for their graduate education

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 32. Commuting and parking were not a problem at NPS.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 33. The CLASSROOM and other NON-LABORATORY facilities for my program had the following characteristics:

	Strongly disagree	Disagree	Agree	Strongly agree	n/a or don't know
Accessible	◯	◯	◯	◯	◯
Adequate in number	◯	◯	◯	◯	◯
Good Working Condition	◯	◯	◯	◯	◯
Equipped w/ Current Technologies	◯	◯	◯	◯	◯
Well Maintained	◯	◯	◯	◯	◯
Responsive to Course & Research Needs	◯	◯	◯	◯	◯

NPS Graduating Students Survey

* 34. The overall quality, appearance and currency of the NON-LABORATORY facilities in my program left me with a favorable, positive impression.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

* 35. The LABORATORY facilities for my program had the following characteristics:

	Strongly disagree	Disagree	Agree	Strongly agree	n/a or don't know
Accessible	◯	◯	◯	◯	◯
Good Working Condition	◯	◯	◯	◯	◯
Equipped w/ Current Technologies	◯	◯	◯	◯	◯
Focused on Combat Capabillities	◯	◯	◯	◯	◯
Well Maintained	◯	◯	◯	◯	◯
Responsive to Course & Research Needs	◯	◯	◯	◯	◯

36. The overall quality, appearance and currency of the LABORATORIES in my program left me with a favorable, positive impression.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly Agree ◯ n/a or don't know

* 37. Adequate health services were available for my family and me while at NPS.

◯ Strongly disagree ◯ Disagree ◯ Agree ◯ Strongly agree ◯ n/a or don't know

38. Please use this space to comment on anything you experienced during your enrollment at NPS, including topics not covered in this survey.

The End.

Thank you and congratulations! We wish you a very bright future.

NPS Student Survey

Introduction

You have been selected to participate in a survey of new Naval Postgraduate School (NPS) students. The purpose of this survey is to assess various aspects of academic life at NPS, including your quality of life, the physical environment and support services, and policies and requirements set forth by NPS. The results of the survey will be used by the NPS Dean of Students, the Director of Institutional Research, and other members of the NPS administration to improve NPS. This is your opportunity to provide NPS with frank feedback on what works well and what does not.

No tangible compensation will be given for participation in the survey. If you agree to participate, you are free to withdraw at any time without prejudice. Upon completion of the research, a copy of the final report will be available from Dr. Fran Horvath, Director of Institutional Research. Your participation in this survey is voluntary, although your input is extremely valuable for the improvement of NPS.

Please note that all survey records and data will be kept strictly confidential. Your participation in the survey and your responses to the survey will not be disclosed outside of the research team. Survey results will only be reported in the aggregate so that individual responses cannot be determined. Upon completion of the survey, all records identifying your participation in the survey will be destroyed.

If you have any questions or comments regarding this survey, please contact Professor Ron Fricker, 831-656-3048 (rdfricker@nps.edu) or LT Brent Olde (NPS IRB chair), 831-656-3807 (baolde@nps.edu).

Quality of Life

We begin with some questions about your experience in-processing (i.e., enrolling) at NPS. Please consider how these services provided by NPS contribute to both your learning experience and your activites outside of academics.

1. In general, how do you rate your satisfaction or dissatisfaction with the IN-PROCESSING procedures at NPS?

- ◯ Very Satisfied
- ◯ Satisfied
- ◯ Neutral
- ◯ Dissatisfied
- ◯ Very Dissatisfied

NPS Student Survey

2. How do you rate the IN-PROCESSING provided by each of the following support services (briefings, orientation, materials, service, etc.):

	Very Dissatisfied	Dissatisfied	Neutral	Satisfied	Very Satisfied	N/A*
Registrar	◯	◯	◯	◯	◯	◯
Program Office	◯	◯	◯	◯	◯	◯
Student Services	◯	◯	◯	◯	◯	◯
Sponsor Program	◯	◯	◯	◯	◯	◯
Information Technology (ITACS)	◯	◯	◯	◯	◯	◯
Chaplain Services	◯	◯	◯	◯	◯	◯
Medical Services	◯	◯	◯	◯	◯	◯
Morale, Welfare and Recreation (MWR)	◯	◯	◯	◯	◯	◯
Military Housing	◯	◯	◯	◯	◯	◯

OPTIONAL: We appreciate any specific feedback on the above items.

*Please respond "N/A" for any items which are not applicable or you do not know.

Quality of Life

In the previous question we asked you about the in-processing support you received. Now we would like to know about the service you have received AFTER in-processing.

3. Following in-processing, how do you rate the SERVICE provided by the following organizations at NPS:

	Very Dissatisfied	Dissatisfied	Neutral	Satisfied	Very Satisfied	N/A*
Registrar	◯	◯	◯	◯	◯	◯
Program Office	◯	◯	◯	◯	◯	◯
Student Services	◯	◯	◯	◯	◯	◯
Sponsor Program	◯	◯	◯	◯	◯	◯
Information Technology (ITACS)	◯	◯	◯	◯	◯	◯
Chaplain Services	◯	◯	◯	◯	◯	◯
Medical Services	◯	◯	◯	◯	◯	◯
Morale, Welfare and Recreation (MWR)	◯	◯	◯	◯	◯	◯
Military Housing	◯	◯	◯	◯	◯	◯

OPTIONAL: We appreciate any specific feedback on the above items.

*Please respond "N/A" for any items which are not applicable or you do not know.

NPS Student Survey

Quality of Life - Work Load

4. To what level do you agree or disagree with the following statements:

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	N/A*
I am able to pursue interests outside of my studies.	◯	◯	◯	◯	◯	◯
I have sufficient time to spend with my family and/or friends.	◯	◯	◯	◯	◯	◯
My academic workload is high.	◯	◯	◯	◯	◯	◯

OPTIONAL: We appreciate any specific feedback on the above items.

*Please respond "N/A" for any items which are not applicable or you do not know.

Physical Resources

In this section we would like your opinions on physical resources that support your academic studies. We will ask you about the NPS library, laboratories, classrooms, and other facilities.

5. Please rate your satisfaction or dissatisfaction with the campus workspace(s) available to you (e.g., cubicle, office, library study room, etc.)

- ◯ Very Satisfied
- ◯ Satisfied
- ◯ Neutral
- ◯ Dissatisfied
- ◯ Very Dissatisfied
- ◯ N/A*

OPTIONAL: We appreciate any specific feedback on the above items.

*Please respond "N/A" if this item is not applicable or you do not know.

Physical Resources - Library

NPS Student Survey

6. Please rate your level of satisfaction or dissatisfaction with the following LIBRARY resources:

	Very Dissatisfied	Dissatisfied	Neutral	Satisfied	Very Satisfied	N/A*
Books	◯	◯	◯	◯	◯	◯
Databases/Searches engines	◯	◯	◯	◯	◯	◯
Journals	◯	◯	◯	◯	◯	◯
Facilities (computers, study rooms, carrels)	◯	◯	◯	◯	◯	◯
Reference assistance and instruction	◯	◯	◯	◯	◯	◯
Restricted resources and services	◯	◯	◯	◯	◯	◯
Services (circulation, interlibrary loan, course reserve, printing, etc)	◯	◯	◯	◯	◯	◯

OPTIONAL: We appreciate any specific feedback on the above items.

*Please respond "N/A" for any items which are not applicable or you do not know.

Support Services - Laboratory

7. Do you personally use a laboratory for any reason in your curriculum (e.g., computer laboratory, research laboratory, etc.)?

◯ Yes
◯ No

Physical Resources - Laboratory Facilities

NPS Student Survey

8. The LABORATORY facilities for my program are...

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	N/A*
... conveniently located.	◯	◯	◯	◯	◯	◯
... in good working condition.	◯	◯	◯	◯	◯	◯
... equipped with current technologies.	◯	◯	◯	◯	◯	◯
... appropriate for military research.	◯	◯	◯	◯	◯	◯
... well maintained.	◯	◯	◯	◯	◯	◯
... equipped with sufficient resources.	◯	◯	◯	◯	◯	◯
... responsive to course and research needs.	◯	◯	◯	◯	◯	◯

OPTIONAL: We appreciate any specific feedback on the above items.

*Please respond "N/A" for any items which are not applicable or you do not know.

Physical Resources - Classrooms

9. The CLASSROOMS for my program are...

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	N/A*
... conveniently located.	◯	◯	◯	◯	◯	◯
... in good working condition.	◯	◯	◯	◯	◯	◯
... equipped with current technologies.	◯	◯	◯	◯	◯	◯
... clean.	◯	◯	◯	◯	◯	◯
... comfortable.	◯	◯	◯	◯	◯	◯
... large enough.	◯	◯	◯	◯	◯	◯

OPTIONAL: We appreciate any specific feedback on the above items.

*Please respond "N/A" for any items which are not applicable or you do not know.

Support Services - Wireless Usage

10. While on the NPS campus, do you use wireless access?

◯ Yes
◯ No

Support Services - Wireless Access

NPS Student Survey

11. While on the NPS campus, is the wireless access sufficient everywhere you need it?

- ◯ Yes
- ◯ No

Support Services - Wireless Locations Needed

12. If you could add or improve wireless capability to one location on campus where it is currently insufficient, where would it be?

Building

Please Select:

Other (please specify)

Support Services - Warfighting Community

During the course of their time here at NPS, many students feel it is important to maintain links to their warfighting or professional community either through E-mail connectivity or research. These communities are typically your sponsoring agency, research organizations you are collaborating with, end-users of your NPS research/coursework, etc.

13. How important do you feel it is to maintain contact with your warfighting or professional community while here at NPS?

- ◯ Very Important
- ◯ Important
- ◯ Neutral
- ◯ Unimportant
- ◯ Very Unimportant
- ◯ N/A*

14. Please rate your satisfaction or dissatisfaction with NPS' resources for maintaining contact with your warfighting or professional community?

- ◯ Very Satisfied
- ◯ Satisfied
- ◯ Neutral
- ◯ Dissatisfied
- ◯ Very Dissatisfied
- ◯ N/A*

OPTIONAL: We appreciate any specific feedback you have on the above items.

*Please respond "N/A" for any items which are not applicable or you do not know.

Teaching and Learning

You are almost finished. Just a few questions below about academics at NPS.

NPS Student Survey

15. As you think about the INSTRUCTORS you have had thus far at NPS, please indicate your level of agreement or disagreement with the following statements:

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	N/A*
My instructors expectations are consistent with what a graduate education should entail.	◯	◯	◯	◯	◯	◯
My instructors actively engage me in the learning process.	◯	◯	◯	◯	◯	◯
My instructors provide useful feedback about my performance.	◯	◯	◯	◯	◯	◯
My instructors provide real world examples during class.	◯	◯	◯	◯	◯	◯

OPTIONAL: We appreciate any specific feedback on the above items.

*Please respond "N/A" for any items which are not applicable or you do not know.

Teaching and Learning - Academic Program

16. Now, thinking about your academic program in general, please indicate your level of agreement or disagreement with the following statements:

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	N/A*
My academic program is challenging.	◯	◯	◯	◯	◯	◯
My academic program actively engages me in the learning process.	◯	◯	◯	◯	◯	◯
The NPS faculty in my academic program encourage me to participate in defense-related research.	◯	◯	◯	◯	◯	◯
My academic program challenges me to meet high expectations.	◯	◯	◯	◯	◯	◯
The expectations of the faculty in my academic program are consistent with the program's graduation requirements.	◯	◯	◯	◯	◯	◯

OPTIONAL: We appreciate any specific feedback on the above items.

NPS Student Survey

*Please respond "N/A" for any items which are not applicable or you do not know.

Policies and Requirements

17. Please indicate the degree to which you agree or disagree with the following statements below about NPS POLICIES and academic REQUIREMENTS.

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	N/A*
I was made aware of NPS' policy on student conduct and behavior (Student Information Handbook).	○	○	○	○	○	○
I was made aware of NPS' grievance procedures for students.	○	○	○	○	○	○
The academic advising I receive at NPS provides useful information.	○	○	○	○	○	○
My academic advisor provides relevant information about academic requirements.	○	○	○	○	○	○
I am clear about the graduation requirements for my program.	○	○	○	○	○	○

OPTIONAL: We appreciate any specific feedback on the above items.

*Please respond "N/A" for any items which are not applicable or you do not know.

End of Survey

18. Is there anything else you would like to tell us about your experiences at NPS?

Thank you

Thank you for taking the time to complete this survey. Your input will help NPS continue to improve the academic environment and student support services for both current and future students.

If you have any questions or comments regarding this survey, please contact Professor Ron Fricker, 831-656-3048 (rdfricker@nps.edu).

NPS Mid-Term Resident Student Survey

Introduction

You are invited to participate in a survey of students at approximately the mid-point of their academic program at the Naval Postgraduate School (NPS). The purpose of this survey is to assess various aspects of academic life at NPS, including your quality of life, the physical environment and support services, and policies and requirements set forth by NPS. The results of the survey will be used by the NPS Dean of Students, the Director of Institutional Planning and Communication, and other members of the NPS administration to improve NPS. This is your opportunity to provide NPS with frank feedback on what is working well and what is not.

Your participation in this survey is strictly voluntary. No tangible compensation will be given for participation in the survey. If you agree to participate, you are free to withdraw at any time without prejudice. Upon completion of the research, a copy of the final report will be available from Dr. Fran Horvath, Director of Institutional Planning and Communication.

Please note that all survey records and data will be kept strictly confidential. Your participation in the survey and your responses to the survey will not be disclosed outside of the research team. Your survey responses will be merged with demographic data provided by the NPS Registrar for purposes of analysis. However, survey results will only be reported in the aggregate so that individual responses cannot be determined. Upon completion of the survey, a complete copy of the data will be maintained by Dr. Horvath, but all other records identifying your participation in the survey will be destroyed.

If you have any questions or comments regarding this survey, please contact Professor Ron Fricker, 831-656-3048 (rdfricker@nps.edu) or LT Brent Olde (NPS IRB chair), 831-656-3807 (baolde@nps.edu).

Quality of Life

We begin with some questions about your non-academic experience so far at NPS.

1. Please indicate your opinion of the following statements:

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree
I am able to pursue interests outside of my studies.	◯	◯	◯	◯	◯
I have sufficient time to spend with my family and/or friends.	◯	◯	◯	◯	◯
My academic workload is high.	◯	◯	◯	◯	◯

Quality of Life

2. Please indicate your level of satisfaction or dissatisfaction with the service provided by the following organizations:

	Very Dissatisfied	Dissatisfied	Neutral	Satisfied	Very Satisfied	N/A
NPS Dental	◯	◯	◯	◯	◯	◯
Presidio of Monterey Medical	◯	◯	◯	◯	◯	◯
TRICARE Prime Local Providers	◯	◯	◯	◯	◯	◯
TRIWEST Administration	◯	◯	◯	◯	◯	◯
Morale, Welfare, and Recreation (MWR)	◯	◯	◯	◯	◯	◯
Chaplain Services	◯	◯	◯	◯	◯	◯

Teaching and Learning

NPS Mid-Term Resident Student Survey

This section deals with your academic experience at NPS.

3. The unique defense-oriented environment at NPS makes my graduate education more relevant to my career than it would be at a civilian university.

◯ Strongly Disagree ◯ Disagree ◯ Neutral ◯ Agree ◯ Strongly Agree

4. My NPS program provides me with enough electives to pursue my special military career interests.

◯ Strongly Disagree ◯ Disagree ◯ Neutral ◯ Agree ◯ Strongly Agree

5. The grades I receive at NPS accurately reflect the level of my performance.

◯ Strongly Disagree ◯ Disagree ◯ Neutral ◯ Agree ◯ Strongly Agree

6. SGLs provide beneficial educational opportunities, expanding on what I learn in my academic program.

◯ Strongly Disagree ◯ Disagree ◯ Neutral ◯ Agree ◯ Strongly Agree

Teaching and Learning

7. I believe diversity in each of the following categories enriches my NPS education:

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree
Service	◯	◯	◯	◯	◯
Culture	◯	◯	◯	◯	◯
Ethnicity	◯	◯	◯	◯	◯
Gender	◯	◯	◯	◯	◯

Teaching and Learning

The next few questions deal with refresher courses at NPS.

8. My academic background was adequate preparation for my program.

◯ Strongly Disagree ◯ Disagree ◯ Neutral ◯ Agree ◯ Strongly Agree

9. Did you take a refresher course (or quarter)?

◯ Yes ◯ No

Teaching and Learning (Refresher Courses)

Please indicate your opinion on the following statements regarding the refresher class (or quarter) you have taken at NPS.

NPS Mid-Term Resident Student Survey

10. The refresher course (or quarter) was necessary for success in my academic program.

◯ Strongly Disagree ◯ Disagree ◯ Neutral ◯ Agree ◯ Strongly Agree

11. The refresher course (or quarter) at NPS was sufficient to prepare me for my course work.

◯ Strongly Disagree ◯ Disagree ◯ Neutral ◯ Agree ◯ Strongly Agree

Teaching and Learning (Refresher Courses)

If you DID NOT take a refresher course, please indicate your opinion on the following statement:

12. A refresher course (or courses) would have helped me in my academic program.

◯ Strongly Disagree ◯ Disagree ◯ Neutral ◯ Agree ◯ Strongly Agree

Teaching and Learning

13. As you think about the INSTRUCTORS you have had thus far at NPS, please indicate your opinion of the following statements:

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree
My instructors expect me to produce graduate level work.	◯	◯	◯	◯	◯
My instructors actively engage me in the learning process.	◯	◯	◯	◯	◯
My instructors provide useful feedback about my performance.	◯	◯	◯	◯	◯
My instructors relate material to national security and defense topics.	◯	◯	◯	◯	◯
Instruction and research at NPS has the ultimate goal of enhancing US and Allied combat effectiveness.	◯	◯	◯	◯	◯

Teaching and Learning

NPS Mid-Term Resident Student Survey

14. Now, thinking about your ACADEMIC PROGRAM in general, please indicate your opinion of the following statements:

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree
My academic program is challenging.	◯	◯	◯	◯	◯
My academic program actively engages me in the learning process.	◯	◯	◯	◯	◯
The expectations of the faculty in my academic program are consistent with the program's graduation requirements.	◯	◯	◯	◯	◯

Policies and Requirements

This section contains questions regarding your familiarity with NPS policies and requirements.

15. Are you aware of NPS policies on student conduct and behavior as listed in the Student Information Handbook?

◯ Yes ◯ No

16. Do you understand the graduation requirements for your curriculum?

◯ Yes ◯ No

17. Do you find the academic advising you receive to be useful?

◯ Yes ◯ No ◯ Have not received academic advising

18. Are you aware that there is a student grievance procedure at NPS?

◯ Yes ◯ No

Physical Resources

In this section we would like your opinions on physical resources that impact your academic studies. We will ask you about the NPS library, laboratories, classrooms, and other facilities.

NPS Mid-Term Resident Student Survey

19. The following LIBRARY resources meet my academic needs:

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	N/A or don't know
Books	◯	◯	◯	◯	◯	◯
Databases/Search Engines	◯	◯	◯	◯	◯	◯
Journals	◯	◯	◯	◯	◯	◯
Visual/Audio Media	◯	◯	◯	◯	◯	◯
Facilities (computers, study rooms, carrels)	◯	◯	◯	◯	◯	◯
Reference Assistance & Instruction	◯	◯	◯	◯	◯	◯
Restricted Resources and Services	◯	◯	◯	◯	◯	◯
Services (circulation, interlibrary loan, course reserve, printing, etc)	◯	◯	◯	◯	◯	◯

Physical Resources

We would now like to ask about the condition of classrooms and laboratories at NPS.

20. Have you had class in Ingersoll Hall?

◯ Yes

◯ No

Physical Resources

21. The CLASSROOMS in Ingersoll Hall are:

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	N/A
In good working condition	◯	◯	◯	◯	◯	◯
Equipped with current technologies	◯	◯	◯	◯	◯	◯
Clean	◯	◯	◯	◯	◯	◯
Comfortable	◯	◯	◯	◯	◯	◯
Large enough	◯	◯	◯	◯	◯	◯
At a comfortable temperature	◯	◯	◯	◯	◯	◯

Physical Resources

22. Have you had class in Spanagel Hall?

◯ Yes

◯ No

Physical Resources

NPS Mid-Term Resident Student Survey

23. The CLASSROOMS in Spanagel Hall are:

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	N/A
In good working condition	◯	◯	◯	◯	◯	◯
Equipped with current technologies	◯	◯	◯	◯	◯	◯
Clean	◯	◯	◯	◯	◯	◯
Comfortable	◯	◯	◯	◯	◯	◯
Large enough	◯	◯	◯	◯	◯	◯
At a comfortable temperature	◯	◯	◯	◯	◯	◯

31. The CLASSROOMS in Glasgow Hall are:

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	N/A
In good working condition	◯	◯	◯	◯	◯	◯
Equipped with current technologies	◯	◯	◯	◯	◯	◯
Clean	◯	◯	◯	◯	◯	◯
Comfortable	◯	◯	◯	◯	◯	◯
Large enough	◯	◯	◯	◯	◯	◯
At a comfortable temperature	◯	◯	◯	◯	◯	◯

Physical Resources

32. Have you had class in Bullard Hall?

- ◯ Yes
- ◯ No

Physical Resources

33. The CLASSROOMS in Bullard Hall are:

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	N/A
In good working condition	◯	◯	◯	◯	◯	◯
Equipped with current technologies	◯	◯	◯	◯	◯	◯
Clean	◯	◯	◯	◯	◯	◯
Comfortable	◯	◯	◯	◯	◯	◯
Large enough	◯	◯	◯	◯	◯	◯
At a comfortable temperature	◯	◯	◯	◯	◯	◯

Physical Resources

34. The LABORATORY facilities (science/engineering or computer laboratories) I use most often are located in:

- ◯ Spanagel Hall
- ◯ Bullard Hall
- ◯ Watkins Hall
- ◯ Halligan Hall
- ◯ Ingersoll Hall
- ◯ Root Hall
- ◯ Glasgow Hall
- ◯ I do not use science/engineering or computer laboratories.

Other (please specify)

NPS Mid-Term Resident Student Survey

35. The LABORATORY facilities (science/engineering or computer laboratories) in the building indicated above are:

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree	N/A or don't know
Conveniently located	◯	◯	◯	◯	◯	◯
In good working condition	◯	◯	◯	◯	◯	◯
Equipped with current technologies/software	◯	◯	◯	◯	◯	◯
Appropriate for military research	◯	◯	◯	◯	◯	◯
Clean & well maintained	◯	◯	◯	◯	◯	◯
Sufficient for my course & research needs	◯	◯	◯	◯	◯	◯

Physical Resources

36. Please rate your level of satisfaction or dissatisfaction with the CAMPUS WORKSPACES available to you:

	Very Dissatisfied	Disatisfied	Neutral	Satisfied	Very Satisfied	N/A
Departmental cubicles/carrels	◯	◯	◯	◯	◯	◯
Departmental offices/workspace	◯	◯	◯	◯	◯	◯
Departmental laboratories	◯	◯	◯	◯	◯	◯
Copier facilities	◯	◯	◯	◯	◯	◯
Library Individual Study Spaces	◯	◯	◯	◯	◯	◯
Library Group Study Rooms	◯	◯	◯	◯	◯	◯
Library Collaborative Use Rooms	◯	◯	◯	◯	◯	◯
Library Open Areas	◯	◯	◯	◯	◯	◯
Lockers	◯	◯	◯	◯	◯	◯

Physical Resources

37. Would you regularly use a shuttle bus service to commute between La Mesa or Fort Ord housing communities and NPS?

◯ Yes

◯ No

38. Rate your level of satisfaction or dissatisfaction with parking at NPS:

◯ Very Dissatisfied ◯ Dissatisfied ◯ Neutral ◯ Satisfied ◯ Very Satisfied ◯ N/A

Support Services

In the last section of this survey, we will ask your opinion on support services, organizations, and personnel at NPS.

NPS Mid-Term Resident Student Survey

39. Please indicate your level of satisfaction or dissatisfaction with the following:

	Very Dissatisfied	Dissatisfied	Neutral	Satisfied	Very Satisfied	N/A
Python	◯	◯	◯	◯	◯	◯
Quarterly Class Offerings	◯	◯	◯	◯	◯	◯
Class Scheduling (time/day)	◯	◯	◯	◯	◯	◯
Student Services Office	◯	◯	◯	◯	◯	◯
Dean of Students Office	◯	◯	◯	◯	◯	◯
Program Officer	◯	◯	◯	◯	◯	◯
Education Technician (Ed Tech)	◯	◯	◯	◯	◯	◯

Lifecycle Management Plan

March 2008

Background:

- In 2004 NPS began substantial investment in educational technology.
- Progress to date:
  - All classrooms equipped with a basic multi-media presentation system.
  - Auditoriums upgraded
  - Eight residential Video-Tele-Education facilities
    * *includes one VTC Conference Room in Root Hall*
  - Multiple special purpose conference/VTC rooms.

- The Lifecycle Management Plan (LMP) has been in place for four years:
  - Classrooms categorized to reflect baseline requirements.
  - Categories based on a model developed at the University of Wisconsin, but customized for NPS needs.
    - Appendices A-1 and A-2

- The plan (continued):
  - Identifies life-cycle in years
  - Identifies replacement cost
  - Amortizes over life-cycle
  - Specifies a replacement cycle
  - Calculates annual recap cost based on amortization and replacement cycle.

- Three facets to academic facilities:
  - Labor
  - Educational Technology
  - Environment

- Labor

  - One Director
  - 5 Educational Technology specialists:
    - 2 Audio-visual technicians
    - 2 Video-teleconferencing specialists (VTC & VTE)
    - 1 Audio-visual technical engineer

- Labor (continued)
  - 5 specialists:
    - 2.5 FTE support 7 VTE Classrooms & the PCR during videoconferences
    - 2.5 FTE support the following;
      - 119 facilities (classrooms, labs, LRCs, auditoriums, conference rooms, and study rooms)
      - Outdoor events (NPS, La Mesa, others)
      - MWR spaces & functions
      - AV equipment for loan

- Labor (continued)
  - AV Techs support over 500 AV requests per year:
    - Classroom support
    - Conferences, seminars, short courses, workshops by outside groups
    - Concerts on the Lawn
    - International Day
    - Special off campus events for tenants & others
    - Award, retirement and other ceremonies
    - MWR Dinners, Weddings, Parties
    - See Appendix B for annual labor costs.

- Educational Technology
  - Multi-media presentation systems
  - Public Address (PA) systems
  - Computers
  - Instruction consoles
  - Custom equipment installations
    - Multiple visual displays
    - Videoconferencing systems

- Educational Technology

  - Replacement cost (Installed Assets): $3,294,177
  - Portable equipment: $ 172,575
  - Video Bridge: $ 250,000
  - Total: **$3,716,752**

    **Includes all VTE classrooms, Portable Equipment and Video Bridge*

  - Recapitalization cost (FY08): **$587,516**

    **Based on amortized life cycle*

    - Appendix C1: Life Cycle Assumption
    - C2: Replacement Cost Example
    - D1: Annual Recapitalization Summary
    - D2: Portable Equipment Breakout

- Environment
  - Window coverings
  - Blackboard/Whiteboard
  - Desks
  - Chairs
  - Lighting
  - Room surfaces (carpet, paint, ceiling tiles)

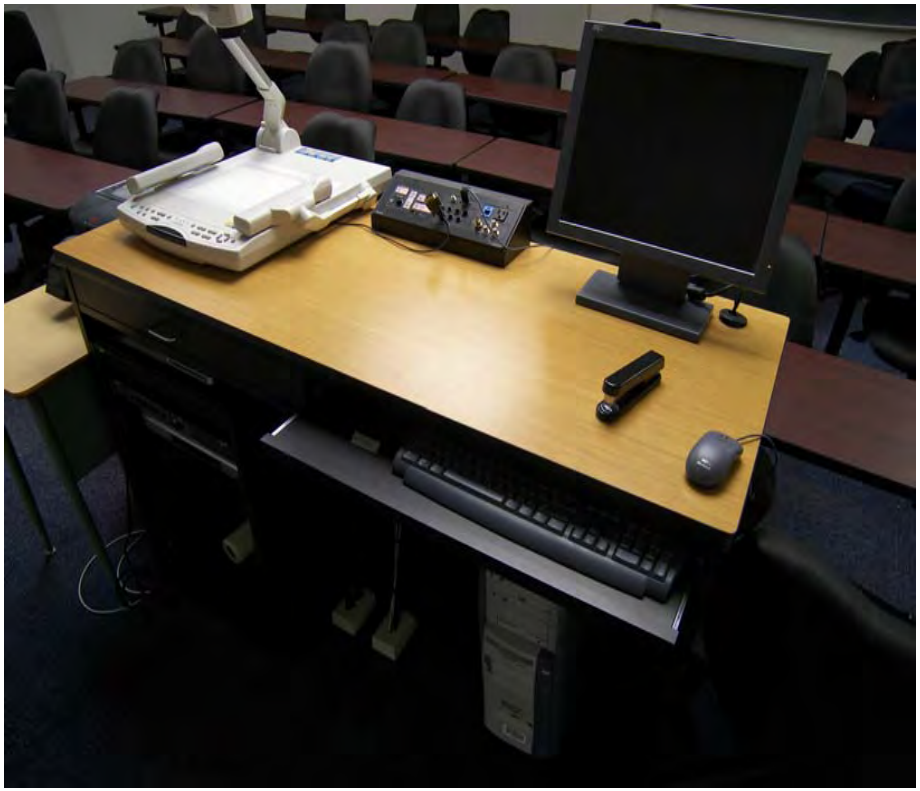
- Environment (continued):
  - Estimated replacement cost of environmental assets: **$ 1,616,806**
  - Estimated annual recap cost: **$ 75,282**
    - Appendix E: Environment Lifecycles
    - Appendix F: Environment Recap Budget

- Avoid large lump sum investments in the physical environment
  - Plan for periodic refurbishment
  - Amortize based on designated life-cycles
  - Establish a renovation cycle to maintain quality
  - Spread the burden over years

NPS Classrooms - some improvements.

Spanagel 138

NPS Classrooms - some improvements (continued)

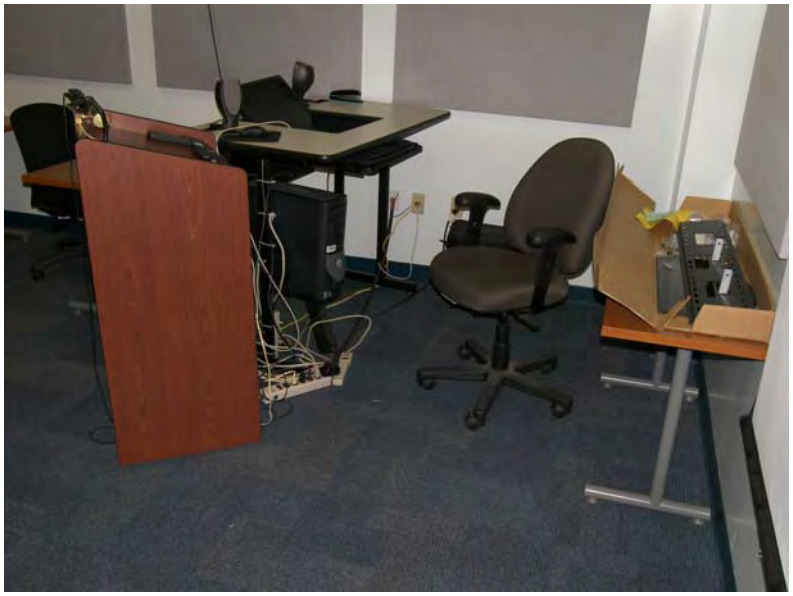


NPS Classrooms - some improvements and continuing issues

NPS Classrooms - some continuing issues

NPS Classrooms - some continuing issues

NPS Classrooms and Conference Rooms - some continuing issues.



Glasgow 286

Support

- Current Status:
  - If a piece of equipment fails, we want to repair or replace it a soon as possible.
  - Routine maintenance performed as manpower and spaces are available.
  - 60% of our projectors currently monitored over the LAN. Potentially 100% of our projectors can be monitored over the LAN.
    - Lamps changed prior to failure
    - Some problems can be detected before failure

- Weaknesses:
  - Not always quick: Help may not arrive until after class is over.
  - Unfunded: The technology infusion that began in 2004 has not been programmatically funded for ongoing maintenance or equipment replacement.
    - AV OPTAR is $35k and has remained static for the last 15 years.
    - Funding sources and amounts vary from year to year.
      - No money for spare lamps or parts after initial purchase
      - No money for repairs

Support (continued):

Improved Maintenance

- Scheduled filter and console electronics cleaning with system check
- The most recent standard projector features a self-cleaning filter.
  - A clogged filter shortens the service life of a projector and the lamp, and can cause temporary shut down.

Appendix A-1

Facilities Profile

Room Type	Function	Quantity	Description
Type 1	**Baseline Classroom or Conference Room**	70	Traditional classroom or conference room with multi-media projection system and instuctor computer. This is the minimum baseline technology for all traditional classrooms
Type 2a	**Laptop Ready Classroom**	1	Baseline classroom with AC electrical and LAN ports run to each seat for connecting laptops.
Type 2b	**Computer Equipped Classroom or Lab**	10	Baseline classroom with networked PCs and AC at each student seat
Type 3a	**VTE Classroom**	5	Video tele-education classroom. Traditional style classroom augmented with videoconferencing technology, specialized video display system, instructor PC, document camera, vcr, microphones, loudspeakers, and audiovisual routing matrix.
Type 3b	**VTE Studio**	3	Video tele-education teaching studio. Enhanced version of Type 3a VTE Classroom, but without seats for local students. Used for VTE programs with only remote students.
Type 4a	**LRC Windows**	15	Public Learning Resource Centers. Equipped with networked computers for student use, instructor computer, networked printer. Commonly used as a computer classroom on an irregular basis.
Type 4b	**LRC Unix/Linux**	3	Public Learning Resource Centers. Equipped with networked computers for student use, instructor computer, networked printer. Commonly used as a computer classroom on an irregular basis.
Type 5a	**VTC Suite**	1	Small meeting room with videoconferencing capability. (Meyer Institude VTE, Root 277A suite)
Type 5b	**VTC Conference Rooms**	3	PCR, CEE Classrooms
Type 6	**Glasgow 102 & 109, IN122**	3	Auditorium with built-in multimedia presentation and public address systems.
Type 6	**King Hall**	1	Large venue facilities used for conferences, all hands meetings and teaching. Equipped with multi-media projection system, PA system. Normally requires technician assistance prior to or during use.
Type 6	**M.E. Auditorium**	1	Mid-size Auditorium used for conferences, all hands meetings and teaching. Equipped with multi-media projection system, PA system. Normally requires technician assistance prior to or during use.
Type 7	**Study Room**	3	Small study space (3 or 4 student) with display system.

THE INFORMATION REVOLUTION

PLANNING FOR | INSTITUTIONAL CHANGE

THE NPS INFORMATION TECHNOLOGY STRATEGIC PLAN

NAVAL POSTGRADUATE SCHOOL | FY 2003

CONTENTS

INTRODUCTION

NPS MISSION

PROVIDE RELEVANT AND UNIQUE ADVANCED EDUCATION AND RESEARCH PROGRAMS IN ORDER TO INCREASE THE COMBAT EFFECTIVENESS OF U.S. AND ALLIED ARMED FORCES AND ENHANCE THE SECURITY OF THE UNITED STATES.

IT AS MISSION CRITICAL

The Joint Vision of NPS outlines the future goals for the institution within the context of national priorities and defines academic goals through excellence in scholarly accomplishment and peer recognition. It requires that our faculty and staff are experienced in using modern technologies for teaching and learning. We must nurture and sustain efforts in high performance computing, multi-media technology, educational technology, and the technology of distance education.

The NPS mission underscores the importance of advanced education and research to the future security of the U.S. and the world. Advanced education and research in the 21st century is rooted in and enhanced by Information Technology (IT) as an enabling tool for scientific discovery, learning, and communication.

Never has the university had a greater opportunity to fulfill its mission of education, research and service to the Department of Defense. The NPS Strategic Plan defines a number of issues that will drive change nationally and that will affect NPS directly. One of the five "guiding principles" in the plan focuses on the need to "invest in technology to fulfill our mission." Finally, the NPS Strategic Plan identifies Information and Technological Superiority as one of the six institutional priority areas, although IT is also clearly represented in the other five priority areas.

The recent NPS self-study report to the Western Association of Schools and Colleges reflects an overall commitment to improvement and innovation. One of the most salient themes within the report refers to computing and information services:

> *A first class communications network is an essential part of the IT infrastructure required to achieve preeminence … None of our forward-looking plans would be possible without reliable and high-performance communication links within the campus and with external sites.*

Defining IT as a strategic resource and as mission critical is appropriate. The use of IT is ubiquitous in everyday life in the U.S. The latest report from the National Telecommunications and Information Administration, A Nation Online: How Americans are Expanding their Use of the Internet (February, 2002), shows that the "growth of Internet use in the U.S. is currently two million new Internet users per month." More than 50 percent of Americans are now online. Ninety percent of children between the ages of 5 and 17 now use computers. Residential use of broadband service more than doubled (from 11 to 20 percent of Internet

users) from 2000 to 2001. As a result, the report concludes that the U.S. is "truly a nation online."

Research universities, in partnership with the Department of Defense, have led the development and use of computing and advanced networks from the beginning. Recognized as a vital enabling strategy, universities have wired and wireless campuses, seeing access to this valuable technology as important to research, instruction, and service; the three cornerstones of a research university mission.

Information Technology is now used in classrooms to enhance the learning experience in the finest universities in the U.S. Faculty members enrich lectures with examples that students can experience in ways never before possible. The experience of virtual experimentation is available to students where previously certain experiments were too expensive or too dangerous to duplicate or to allow students to perform at all. Collaboration with colleagues at other institutions has been made easier and more effective with video-conferencing. Development of both online and video-conferencing based educational courses and resources has given access to students who otherwise could not attend residential campus environments. In the case of the military, providing education and training opportunities to military personnel stationed at remote locations is often essential to their effectiveness in performing their given missions.

IT AS COMPETITIVE NECESSITY

Defining IT as a mission critical strategic resource is appropriate, especially at the Naval Postgraduate School. As our colleagues at UCLA have said in their Information Strategic Plan, "Successful planning, implementation and innovation of IT has become a competitive necessity for higher education (2001)." Every goal and strategy defined in the NPS Strategic Plan is dependent either directly or indirectly on IT. Our students are already IT aware when they begin their studies, and they expect their expertise to increase significantly as a result of their education here. Our faculty members are hired from the best universities in the world and arrive at NPS with research and educational programs that require advanced networking infrastructure, sophisticated user support, and access to high performance computing. Our administrative systems are linked with the Department of Navy systems, which are increasingly upgraded to more efficient system architectures and performance standards.

In order to provide the kind of environment that supports our current academic mission and vision, we must plan collaboratively and mark our progress carefully. The IT Task Force was formed at the beginning of

"SUCCESSFUL PLANNING, IMPLEMENTATION AND INNOVATION OF IT HAS BECOME A COMPETITIVE NECESSITY FOR HIGHER EDUCATION."

2001 STRATEGIC PLAN UNIVERSITY OF CALIFORNIA, LOS ANGELES

last year by the Superintendent and Provost to develop an IT Strategic Plan that supports the NPS Strategic Plan. The goals of the IT Strategic Plan are:

- Improve technological support for the core mission of teaching and research;
- Improve the educational experience of students by incorporating technology into instruction, where appropriate;
- Improve communication about IT as a strategic NPS priority.

After defining the above goals, the IT Task Force posed this question to focus our overall strategy: "What are the factors or areas of IT that are so critical to our success that failure to accomplish any one of them puts our other goals at risk?"

After substantial discussion and consultation with several sectors of the university community, the IT Task Force outlined five elements necessary for successful achievement of the above goals. It is appropriately these five elements that constitute the core areas of the strategic plan:

1. Network Infrastructure Issues: Campus intranet, data and network security, world wide remote access, internet accessibility, and connectivity to other high-speed networks (e.g. Internet2, the University of California system backbone). Also included are issues relating to supercomputing access and support. Information network extends beyond the traditional concept of simple connections between computers to include the applications, data repositories, and interoperability with the Navy Marine Corps Intranet and other allied networks, along with the required system support, and other hardware and software that allow faculty, staff and students to access and backup the information, applications, or services they need.

2. Academic Applications and Services: IT services provided, equipment acquisition, maintenance and replacement, software license acquisition, maintenance and upgrades, and customer support. Includes support of instructional technology in local and remote settings.

3. Administrative Applications and Services: Current status, review of future options (near-term and longer view), comparability with other institutions, customer support, and compatibility with other Navy requirements.

4. Management and Resources: Management, resources, security, planning, professional development, user training and orientation.

5. Communication, Partnerships, and Outreach: Including internal communications and external visibility.

PHYSICAL INFRASTRUCTURE

The NPS network infrastructure must be updated. The current backbone of the NPS network, installed a few years ago, is built using 3Com ATM switches. 3Com has abandoned the ATM market. Replacement parts for 3Com ATM equipment are difficult to find and soon will be impossible to find. The longer NPS depends on this unsupported 3Com equipment, the greater the exposure to an extended service interruption while searching for 3Com spare parts. In addition, plans must be formulated based upon regular monitoring of network usage, traffic patterns, and projection models of future demand. Issues of speed, responsiveness, reliability, and capacity must all be considered. Redundancy is required for maximum reliability and network efficiency.

The backbone switch centers of the NPS network (Ingersoll, Spanagel, and Herrmann) require replacement with current enterprise level technology (gigabit Ethernet). The ATM backbone technology installed a few years ago is no longer supported. Portions of the existing architecture are scheduled for replacement this year to improve performance and slightly reduce out-year replacement costs.

Recommendations

1. Up-to-date maps of network infrastructure conduits (voice, video, and data) will be maintained by Public Works. The logical network diagrams will be maintained by the Network Operations Center (NOC). All plans for renovation or construction will include consultation with the NOC to ensure IT requirements are included in the planning cycle.

2. NPS will replace its in-ground conduit and fiber plant. The replaced fiber will last approximately 20 years (one-time cost).

3. The network backbone will be upgraded to replace ATM technology with gigabit Ethernet (one-time costs), and network architecture will be changed so that every major building will have connections with two other buildings on campus.

INTERNET ACCESS

NPS connectivity to the rest of the world needs to be planned as well. Whereas the Defense Research and Engineering Network (DREN) provides adequate service for DoD connectivity, it does suffer slowdowns and inefficiencies in connectivity to the commercial internet that create problems for the NPS mission. It is clear that expanded capacity and speed are an immediate strategic priority.

As NPS expands its role in Internet2, the primary connection to this architecture will require the equivalent of OC-48 (2.5 Gbps speed - this is the speed of the University of California backbone). Even more important than speed is redundancy. NPS needs parallel router connections with the outside world. Both routers should connect to an Internet Service Provider (ISP–PacBell Internet, for example) and DREN. By implementing this change, speed and capacity would be increased, as would reliability of access to the outside world.

Firewalls control access and provide security to the environments in which they are installed. By their very nature, they provide a barrier that makes

THE BENEFITS OF MOBILE, UNTETHERED NETWORK CONNECTIVITY PROMISES SOME OF THE SAME ADVANTAGES FOR E-MAIL AND OTHER APPLICATIONS THAT THE CELL PHONE DID FOR TELEPHONE SERVICE.

access more difficult but provides a level of assurance to the network. In a university environment this can be a particularly difficult situation. While the underlying principle of academic instruction and research is collaboration, peer review and the ability to replicate findings, firewalls place limitations on these activities. The NPS firewall is a mandated necessity because the network is in a dot mil (.mil) domain. The educational institution domain designation called dot edu (.edu) provides less restrictions than the .mil domain and may address some of the access problems encountered at NPS.

As a result, NPS will move to operationalize the .edu designation for NPS. Connecting with the University of California system backbone would ensure access to current network technology over the long term. Appropriate network speed and capacity for a research university such as NPS would be assured. The .edu designation would be available in addition to the existing .mil designation, which would continue and provide for future connection to the Navy Marine Corps Intranet (NMCI).

Recommendation

4. Connection to the internet should be expanded to multiple routers, accessing, minimally, DREN and a commercial ISP. This would permit use of the .edu designation as well as continuing with the required .mil utilizing the 802.1x VPN technology implemented within the network fabric.

WIRELESS NETWORKING

Wireless network technologies and standards are becoming available and will play an important role in complementing the existing and future networks at NPS. The benefits of mobile, untethered network connectivity promises some of the same advantages for e-mail and other applications that the cell phone did for telephone service.

Wireless networks also have the potential to dramatically increase the number of network connections. There is a growing need to provide network connectivity not only to every classroom, but to every seat in the classroom. Just as information technology is used to facilitate business processes and decision-making throughout all branches and levels of organizations, it is also being used to facilitate the instruction of many different academic courses throughout universities. NPS must participate actively in this substantive change and provide an educational experience that makes effective use of wireless capabilities. Wireless technology has helped to advance the information revolution in that universities are seeing a pedagogical shift from using information technology in limited courses to using IT in virtually all courses. Wireless networking is not considered to be a replacement for a well-wired campus with wired access speeds continuing to stay significantly faster than wireless technologies. As applications that require higher bandwidth become commonplace, wireless network technology may not be able to provide a suitable network connection.

Thus, wireless should be seen as an augmentation to the physical wire plant, extending the network for general-purpose network access into zones of transient use (such as common areas), and enabling applications that require the mobility offered by wireless but do not require the bandwidth or reliability of wired connections.

Wireless networking is the most cost effective and operationally

augmentation-responsive technology available today and is in keeping with the strategic vision of every major university in America.

Recommendation

5. Institutionalize and continue expansion of the existing wireless capability at NPS.

REMOTE ACCESS

In addition, issues surrounding remote access must be considered within any discussion of network infrastructure. Remote access can be defined as the ability to use the resources of the NPS campus network from a site other than the campus proper. This applies to the student housing areas at La Mesa and the Ord Military Community, distance learning environments including ships and shore stations worldwide and for faculty and students while traveling. This may include expansion of the network to include the local housing areas, addition of wireless access points, high speed dial-in access or access through commercial internet service providers.

In order to ensure that the network remains secure while still providing for unfettered remote access, a comprehensive program of network monitoring and reporting must be in place.

Recommendations

6. Access to the NPS network must be expanded to ensure that the local student housing areas as well as remote sites supporting distance learning and travel are supported.

7. Monitoring of remote access capability will be reported on the intranet web site.

NAVY AND MARINE CORPS INTRANET

The Navy and Marine Corps Intranet (NMCI) is a program underway in the Department of the Navy to provide networked services into a single entity. The program is designed to present an efficient model of services and access enterprise-wide. NMCI will serve as a single network across all of the Navy's shore-based sites. The program has been outsourced to EDS Corporation. Designed as a way of streamlining the number of applications used and supported, the challenges in implementation lie in legacy application integration, security, and remote access capability.

NPS is currently enrolled in NMCI with several hundred seats, largely in administrative areas. The program is scheduled to be operational at NPS in October, 2003.

In May 2002, NPS requested a site visit by NMCI officials to explore the program's viability for a research university environment. Two NMCI administrators and two EDS staff visited the campus and met with faculty and administrators. The team concluded that the research and education environment was not a likely candidate for NMCI application for two reasons:

(1) The academic environment is based on experimentation, testing, and development of new operating systems, software, and middleware. This

IN ORDER TO ENSURE THAT THE NETWORK REMAINS SECURE WHILE STILL PROVIDING FOR UNFETTERED REMOTE ACCESS, A COMPREHENSIVE PROGRAM OF NETWORK MONITORING AND REPORTING MUST BE IN PLACE.

NPS HAS ADMINISTRATIVE SYSTEMS TO SUPPORT THE ACADEMIC MISSION THAT ARE NOT DUPLICATED ELSEWHERE IN THE NAVY, AND INCORPORATION OF THOSE SYSTEMS MUST BE ASSURED BEFORE NMCI ENROLLMENT CAN BE CONTRACTED.

requires putting things on the university network that would violate NMCI integrity; and,

(2) academic work is fundamentally based on peer review and collaborative work. As a result, NPS faculty and students engage in research projects with other universities, research centers and laboratories and access databases and research sources that would undermine NMCI standards.

The visit yielded intriguing possibilities for the NPS staff using administrative systems, however. The decision was made to initiate a six-month engineering study, conducted by a joint NMCI and NPS team. The study will examine how many NMCI seats will truly be appropriate at NPS, at what level of enrollment, and at what cost. The initial estimate is for 400 seats in the FY04 and FY05 timeframe.

NMCI offers an interesting opportunity to benefit from the Navy's streamlining of its reliance on legacy administrative applications. However, the NMCI program must be rigorously evaluated. NPS has administrative systems to support the academic mission that are not duplicated elsewhere in the Navy, and incorporation of those systems (e.g. student systems and research administration systems) must be assured before enrollment can be contracted. The engineering study will address these and other issues important to making the best recommendation to NPS leadership.

Recommendations

8. A six-month engineering study will be conducted by a team of NMCI and NPS IT staff to determine appropriate numbers and levels of NMCI enrollment for administrative staff at NPS. The report will be used by the NPS NMCI Performance Evaluation Team to provide a formal recommendation about NMCI expansion at NPS.

9. A team of NPS faculty, staff and students (NPS NMCI Performance Evaluation Team) will be designated by the Provost to review and performance test NMCI capabilities for a period of six months.

INTERNET2 AND TECHNOLOGICAL INNOVATION

Recent application for membership in Internet2 has brought with it a great deal of excitement on campus. Faculty and students are eager to be part of this state-of-the-art network with colleagues at other research universities and federal agencies. Being part of the group that will be inventing the future Internet is an exhilarating prospect and provides important momentum to NPS IT development, and it will be important to keep this momentum strong into the future. Internet2 membership represents an institutional commitment to have faculty involved in the development of internet technology and IT staff involved in the development of IT and internet-related policies.

Recommendation

10. Assign central IT operations with responsibility for Internet2 membership support.

Equally important, central IT should be involved in developing, testing, and experimenting with a wide variety of technological products and processes.

NETWORK INFRASTRUCTURE

NPS excellence is tied inextricably to its intellectual vitality. The IT division must support that vitality by supporting emerging technologies and expressing willingness to pilot new technologies with faculty members. IT excellence is based on change, innovation, experimentation, and imagination. The central IT division in a research university should provide leadership in the testing and demonstration of emerging technologies. A few examples of emerging technologies include: wireless environments, video streaming, security assessments, quality of service, high performance computing research and education, and voice over I/P (internet protocol).

IT EXCELLENCE IS BASED ON CHANGE, INNOVATION, EXPERIMENTATION, AND IMAGINATION. THE CENTRAL IT DIVISION IN A RESEARCH UNIVERSITY SHOULD PROVIDE LEADERSHIP IN THE TESTING AND DEMONSTRATION OF EMERGING TECHNOLOGIES.

Recommendation

11. Central IT services at the Naval Postgraduate School will be integrally involved in testing and evaluating emerging technologies.

Since video is an essential dimension of electronic communications and features prominently in a number of core mission areas for the university, it should be included in planning for IT network infrastructure.

Recommendation

12. Video will be included as an important component of network infrastructure and IT service planning.

Security and privacy of data and the network are conventional areas of responsibility for a central IT department. Regular security audits are included in those responsibilities and university leadership are apprised of audit outcomes.

Recommendations

13. IT security policies and procedures must be evaluated on an ongoing basis to keep pace with new technologies, new methods of penetrating existing systems, innovative safeguards, etc. The results of those evaluations will be reported in the IT annual report.

14. Conduct security audits on a regular basis.

15. Identify a crisis response team to address possible technology-based attacks.

AVAILABILITY OF SERVICES

Information and systems required by NPS staff, faculty, students and other customers will be made available to those users wherever they may be located, and whenever such access is needed. The current backup systems installed on the campus are no longer adequate to backup the volume of critical research and administration data stored on the central servers and client workstations.

Recommendation

16. Develop a central plan for systems and data redundancy and backup.

2 ACADEMIC APPLICATIONS AND SERVICES

IT support for the academic enterprise in a research university environment is challenging. Faculty and students are constantly using and developing new technologies. Keeping up with academic needs is daunting and yet absolutely essential.

Support for selected equipment and software is part of any central IT department's work. Equally important is providing current technical expertise and an IT culture of continuous learning and skills development. Help to meet this challenge is available in various forms from a variety of sources. Research universities around the U.S. have developed multi-tiered models of staff support for faculty and students. National organizations have developed certification programs, skills training and development courses and programs. And, sensitive to the important issue of cost control in an area of continuous customer need, industry vendors have negotiated with higher education for reduced costs with multiple site licenses.

CLASSROOMS

Providing quality educational programs represents the core mission of NPS. Quality educational experiences at the graduate and professional level require access to technology tools, electronic information resources, high-bandwidth applications, and a variety of research and instructional applications.

To date, classroom and technology upgrades have been done on an ad hoc basis, as resources permitted and priorities indicated. Classroom technology upgrades were not part of a university-wide planning process.

It became evident that the institution needed a systematic process of classroom technology renewal. Classrooms must have the technology required by curriculum and faculty and students, and that technology must be maintained and updated at regular intervals. In addition, classroom technology issues must be integrated within a larger Information Technology planning process to insure technical interoperability and compatibility, and to leverage resources to maximize efficiencies.

Recommendations

17. The FY2000-2007 Laboratories, Library, LAN and Classrooms Funding Plan should be accelerated. This planning process has been successful in providing a systematic way of acquisition, maintenance, and replacement of IT-related equipment. With a modest increase in funds, a larger number of classrooms could be equipped with network access and multimedia capabilities.

DISTANCE LEARNING

NPS Schools and Departments have embarked on a path that will lead to greatly expanded outreach to students who will not have the opportunity to spend lengthy periods of time in residence at NPS. Key to this endeavor is the establishment of, and on-going support for, a robust Distributed Learning Program. Web technology now has the capability to provide learners with a variety of virtual learning environments and functionality, with more choices/options for obtaining relevant information and knowledge. When

combined with traditional delivery methods, it holds the promise of reducing seat time at both resident and satellite sites. The long-term objective is to shorten residency requirements, accommodate changing demographics and make critical/relevant Graduate Education readily available to Naval Forces worldwide, and have every Naval officer obtain a graduate degree, that is relevant to DoN needs, before reaching the 06 promotion point.

Recommendations

18. NPS should invest in systems and processes that enable delivery of classes to off-campus students.

19. Distance Learning students will have access to the same services as resident students.

IT SERVICES TO SUPPORT INSTRUCTION

IT support for the academic enterprise in a research university environment is challenging. Faculty and students are constantly using and developing new technologies. Keeping up with academic needs is daunting and yet absolutely essential.

Support for selected equipment and software is part of any central IT department's work, but providing technical expertise and opportunities for ongoing skills development and training are equally as important, if not more so. Research universities around the U.S. have developed multi-tiered models of staff support for faculty and students. National organizations have developed certification programs, skills training and development courses and programs. And, sensitive to the important issue of cost control in an area of continuous customer need, industry vendors have negotiated with higher education for reduced costs with multiple site licenses.

SUPPORT FOR SELECTED EQUIPMENT AND SOFTWARE IS PART OF ANY CENTRAL IT DEPARTMENT'S WORK, BUT PROVIDING TECHNICAL EXPERTISE AND OPPORTUNITIES FOR ONGOING SKILLS DEVELOPMENT AND TRAINING ARE EQUALLY AS IMPORTANT, IF NOT MORE SO.

Recommendations

20. Increase the number of IT staff to support instruction. IT staff should be available to ensure that equipment is in working order for lecture and laboratory times. According to peer institutions, NPS should have one technician to maintain and help support every five interactive classrooms. An audio-video engineer should be available on an on-call basis for particularly complex problems that might arise.

21. Establish IT "design teams" to work with faculty in the development of IT-based materials for instruction. At NPS, staff members from the DLRC work as members of design teams to identify resources on the Web that might be appropriate for faculty to incorporate into courses. The faculty training offered via DLRC courses will continue to offer assistance in placing material on the Web. The design teams can also assist faculty in dealing with copyright issues and provide guidance on how to operationalize a faculty member's vision for a course (using original design, available software, and resources that include images or materials from archives). In the future, searchable archives of DoD and government owned learning objects (Sharable Content Objects) will form the building blocks of new courseware.

22. A clearinghouse for instructional IT materials and methods is being developed, including an ongoing series of brown bag lunches in which faculty, students, and staff share their findings about instructional technologies. This is an area in which the NPS Library has provided a key partnership with the Office of Continuous Learning.

23. Partner with the Library and Office of Continuous Learning to develop data-rich portals, interactive websites, data delivery systems.

IT SERVICES TO SUPPORT RESEARCH

Two tiers of IT support are required for research at NPS: (1) a common level of support campus-wide that includes a highly professionalized IT staff that provide information and service about information and communications technology and (2) highly specialized, high-end applications support for research computing.

Recommendations

24. Increase the number of IT staff to support research.

25. Provide the following expertise and knowledge to support faculty research about information technology:
- Advanced computation (e.g. computer modeling and simulation, high-performance computing, wireless systems, distributed processing).
- Data visualization, mining, management, storage and retrieval.
- Data and network security.

IT INFRASTRUCTURE TO SUPPORT RESEARCH

Infrastructure must be planned and coordinated in such a way as to provide a reliable and responsive university-wide network for instruction and administrative purposes, but also to provide high-speed network access to support research computing.

Exploration of partnerships with other institutions and consortia can further expand the reach of the NPS network. Membership in Internet2 is an example. Joining the CalRen2, the University of California network reaching from UC Berkeley to UC San Diego is another example. Participating in Monterey Peninsula I-Net, a local consortium of organizations, schools, and higher education institutions is yet another example.

Finally, NPS faculty collaborate with various Navy sponsors and with graduates. One of NPS strategic goals includes NPS in the top 50 research universities in the country by the year 2020. Providing state of the art collaboration technology is essential to this goal.

Recommendations

26. Provide planning and coordination in support of the academic, research and administration network requirements.

27. Provide leadership in partnering with other institutions and consortia to further expand the reach of the NPS network.

28. Provide a vehicle for collaboration with our graduates.

3 ADMINISTRATIVE APPLICATIONS AND SERVICES

ENVISIONING CHANGE

Administrative systems provide electronic ways to perform the day-to-day business activities of a university. NPS is in a somewhat unique situation, relative to other universities, since many of its administrative requirements are mandated by the Department of Defense. Meeting the requirements of larger government systems while providing optimal service to our local constituencies is a challenge. The first step in addressing that challenge is to define the environment we would like to see at NPS:

- A collaborative environment where faculty, students and staff have ready access to the information and tools necessary to do their job efficiently and effectively.

- A university portal with web-enabled services and applications that support faculty, students and staff in work supporting the university mission of education, research and service to the Department of Defense.

- A workplace that is committed to the highest level of customer service and quality of work.

- A presence on the Navy Enterprise Portal for library services and distributed learning.

DEFINING WHAT IS NEEDED

Today's NPS web environment is a disparate collection of school, departmental and research web sites. These web sites provide static web pages with infrequent updates and content maintenance. Navigating the current web environment can be difficult and time-consuming.

Today's NPS business applications and databases are stand-alone legacy systems. These applications require multiple logins and duplicate data entry. The databases are not integrated nor do they comply with emerging DoD XML standards. In some cases this has led to data redundancy and a lack of confidence in data reliability.

Several options were reviewed: Enterprise Resource Planning (ERP) systems, database architecture systems, web-based systems, and user-interface-based systems. Systems at other universities were considered: Naval Academy, NAVAIR, SPAWAR, UC San Diego, Baylor University, Cal Tech, Claremont Graduate University, and UC Santa Cruz. From those reviews, a number of conclusions were reached about how to move from the current environment to the NPS vision.

There is a need for a new information architecture that goes beyond the functions of the current NPS Intranet. Consolidating the disparate applications and information at NPS enables a new operating environment where faculty, staff and students have the information and tools necessary to support implementation of the Functionality Assessment Team (FAT) recommendations, handle the increase in the number of resident and distance learning students, and generally perform the daily business functions of the university in a more efficient and effective manner.

NPS must put in place a new web-based information architecture that will leverage innovative technology to provide a robust, self-service working environment to our constituents.

ADMINISTRATIVE APPLICATIONS AND SERVICES

NPS IS IN A SOMEWHAT UNIQUE SITUATION, RELATIVE TO OTHER UNIVERSITIES, SINCE MANY OF ITS ADMINISTRATIVE REQUIREMENTS ARE MANDATED BY THE DEPARTMENT OF DEFENSE.

A recent report summarized administrative systems in use at NPS (KPMG Consulting LLC, 2002):

Standard Accounting and Reporting System (STARS). This is a DoD mandated, interactive real-time accounting system used for processing and reporting of funds.

Funds Administration and Standardized Document Automation (FASTDATA). This is a Navy mandated legacy system that will eventually be replaced.

Travel Manager. This is a web-based system designed to facilitate travel arrangements, interfacing with SATO and FASTDATA. This is a Navy legacy system.

ANSERS. A contracting system. It is a Navy legacy system.

PARIS/XP. This is a purchase card reconciliation system. NPS is the only Navy shore activity using PARIS.

Departmental Online Reporting System (DORS). This is an NPS developed system used to provide a consolidated view of labor, travel and purchases and account balances for both reimbursable and direct funded activities/departments. It is a data mart/warehouse retrieving data from ETAC et.al.

Electronic Time and Attendance Certification (ETAC). This is an NPS developed system used to certify CIVPERS payroll and allocate an individual's labor hours by JONs. Uploading labor from ETAC into STARS is done manually.

Defense Civilian Pay System (DCPS). This is the standard DoD civilian pay system.

Standard Labor Data Collection and Distribution Application (SLDCADA). This is a NAVSEA developed system selected as the DoN standard. It provides inputs into DCPS which feeds STARS.

Defense Property Accountability System (DPAS). A Navy mandated system. DPAS is used for property inventory, property accountability, property valuation, equipment utilization and preventive maintenance scheduling.

Product Yet To Have An Official Name (PYTHON). This is an NPS-developed and maintained administrative system containing student, staff and faculty information.

MOVING TO AN INTEGRATED SYSTEMS ENVIRONMENT

The development of a new information architecture requires adherence to the Department of Defense guiding principles for administrative systems: quality, timely customer services; integrated, standard systems that comply with applicable accounting principles and internal controls; robustness based

on efficient, standard, shared information systems; reliable, flexible, scalable, interoperable and secure operations; recognition of the DFAS corporate data environment; standards-based architecture; stewardship accountability; single entry of data; user-friendly interfaces; module reusability; rapid technology update capability and; compliance with laws and regulations.

NPS has further elaborated the above principles:

- Organized structured and unstructured information – Information will be logically organized and categorized based on user needs and habits. Information can be structured (i.e. Course Catalog) or unstructured (i.e. Threaded Discussion) and will be captured in a centralized document repository for search and archive.

- Current and relevant content – Content will be fresh and relevant to the user based on the user's job description, work habits and life interests.

- Data in a context that is meaningful to the user – data will be delivered to the user using web interfaces based on the job description and need.

- User-friendly navigation – logical flow based on established standards of usability and accessibility, including the use of content analysis and a content map.

- Back-end data integration – Seamless integration across all university assets and resources pointing to authoritative data sources.

- Single sign on (SSO) is defined as a capability providing authenticated access to multiple web-enabled resources using a single password. This approach also implies a single or unified security administration mechanism, and the associated development and operational cost and resource savings.

DEFINING THE NPS PORTAL

An NPS Portal is central to the new information architecture. The Portal's web browser interface will serve as the entry point for faculty, students, and staff to access information, tools and training particular to their roles and work habits.

The NPS Portal will serve as an integration mechanism that aggregates applications, content, and data. It will connect us with everything we need and with everyone we need. The NPS Portal will support many internal sub portals based on business unit, role and individual. The initial enclaves of sub portals will be:

- Business to Faculty and Staff Portal (Employee) - Provide targeted information and tools to all members of NPS Faculty and Staff based on role with in the organization. Provide discovery mechanism to help members select the components that they want.

- Business to Student Portal (Student Services) - Provide targeted

THE NPS PORTAL WILL SERVE AS AN INTEGRATION MECHANISM THAT AGGREGATES APPLICATIONS, CONTENT, AND DATA. IT WILL CONNECT US WITH EVERYTHING WE NEED AND WITH EVERYONE WE NEED.

THREE MAJOR ELEMENTS MUST BE INVOLVED IN THE ADMINISTRATIVE APPLICATION TRANSFORMATION:

1. PROCESSES AND POLICIES
2. PEOPLE
3. TECHNOLOGY

information, applications and services applicable to all students. Provide discovery mechanism to help members select the components that they want.

• Business to Recruit Portal (New Student, Faculty, Staff) – Provide targeted information applicable to potential faculty, students and staff as a recruiting mechanism.

• Business to Department Portal (Financial Systems) – Provide an "ERP like" business portal to make current and relevant financial information readily available to managers across the university.

• Knowledge Portal – Provide knowledge capture and transfer of the expertise between NPS staff, faculty and students.

Three major elements must be involved in the administrative application transformation:

A. Processes and Policies – NPS is beginning a business process and procedure redesign effort to improve performance of administrative processes. We can use this opportunity to integrate these processes into the information architecture. Over the next decade the NPS staff will fundamentally change the way they perform their work. The process improvement and web integration efforts are key to the transition to an information-based work environment, where staff can easily find the information they need to do their jobs.

B. People – The effectiveness of the new information architecture lies in the acculturation of the NPS workforce. It also lies in the workforce's baseline technical, interpersonal and managerial competencies. To successfully employ the web architecture we must recognize that the interactions between our people on a day-to-day basis are an important determinant of the success of our organization. We must recognize the need for appropriate investment of staff resources to design and implement the new web architecture.

C. Technology – Technology should be used to move manual administrative work online. It is time to web-enable NPS campus services and applications. As an example, PYTHON allows students to routinely access grades, schedules and other student information via the Internet. This model can be used throughout the organization to provide similar functionality, content and information to faculty and staff.

<u>Recommendations</u>

29. Prioritize administrative applications with regard to content, services and applications for a phased web implementation.

30. Web-enable business applications with back-end integration. Ensure that user interfaces are intuitive and easily navigable.

31. Develop a portal model that migrates from static web pages to a database-driven environment.

32. Develop a prototype corporate portal template, based on best practices in industry and higher education.

MANAGEMENT AND GOVERNANCE

In order to fulfill its role as a mission critical resource, IT must offer service at the highest level of excellence. To do so, the IT division should be managed with the highest degree of accountability and responsiveness to institutional goals.

Several changes in IT structure and process should be considered. It should be noted that a few of the suggestions listed below have been implemented or are being implemented. They are included on the list as they are important elements of a larger strategy to generate and sustain the momentum for change.

Recommendations

33. Institute management practices that include: an updated organizational chart with clear reporting responsibilities; updated position titles and descriptions; communications plan; routine and documented budget process; central compilation of all IT-related policies; publication that describes services.

34. Establish an IT planning process to centrally control acquisition and life cycle maintenance of hardware and software.

35. Centrally coordinate software licensing in IT to exploit economies of scale. Publish available software inventory on Intranet.

36. Feature IT prominently in macro-level planning initiatives, having IT serve as an integrator of area plans and as an institutional priority in the university-wide plan.

37. Include IT leadership at the highest-level institutional meetings.

38. Develop an IT strategic plan that supports the larger academic plan of the institution and other institution-wide strategic initiatives. IT goals should be aligned with NPS key initiatives and goals. The strategic plan should be followed by a number of operational plans that can provide blueprint-level outlines for action in the short and medium term. All plans should have concomitant resource plans, which are updated and presented to NPS leadership at appropriate times for review.

39. An annual report on IT operations should be made to NPS leadership and to all internal NPS constituencies. Report should include:
- Measurement of progress on plan.
- Achievement of milestones.
- Identification of potential obstacles to next stage of implementation.
- Update on budget and expenditures.
- Update on IT information from peer institutions.
- Information about emerging technologies that will affect NPS.
- Information about customer satisfaction with IT services.

40. Institutionalize faculty, student, and staff input and guidance to IT-related issues through standing committees. The IT Strategic Planning Task Force can serve as the over-arching university-wide advisory body on IT matters. Subgroups addressing administrative systems, the network, and academic IT services

IN ORDER TO FULFILL ITS ROLE AS A MISSION CRITICAL RESOURCE, IT MUST OFFER SERVICE AT THE HIGHEST LEVEL OF EXCELLENCE. TO DO SO, THE IT DIVISION SHOULD BE MANAGED WITH THE HIGHEST DEGREE OF ACCOUNTABILITY AND RESPONSIVENESS TO INSTITUTIONAL GOALS.

should be established and charged with a formal advisory role. Departmental representation is essential and participation a priority.

41. Include an IT review of all proposals for institutional funding to realize economies of scale and that technology investments are consistent with support and maintenance policies (e.g. POM review process).

42. Encourage partnerships between IT and other NPS departments in order to leverage opportunities and resources (e.g. library, advancement, multi-media services, distance learning, etc.).

43. Evaluate customer service through regular surveys.

44. Seek out partnerships and consortial arrangements with peer institutions to better leverage IT investments, benefit from experience of other institutions, and become visible national IT leaders.

45. In order to ensure efficient IT planning, formally include IT requirements planning in any and all plans for renovations or new construction at NPS.

46. Undertake a benchmarking study as soon as possible to determine a peer group of institutions and similar IT operations that can be used as a baseline to compare planning processes, staffing levels, use of new technologies, and resources.

47. In order to ensure alignment of IT plans with academic goals, ask individual colleges and institutes to include IT needs and priorities in their annual reports to the provost.

HUMAN RESOURCES

The functioning of any IT organization is directly proportional to the talent and skill levels of the staff. As a result, the recruitment and retention of talented staff must be one of the highest priorities.

IT is defined by change and innovation – staff supporting IT at a research university must be highly skilled, and interested in engaging in high-level work with sophisticated customers. They also must be involved in ongoing programs of professional development. In addition, staff should participate in national organizations of IT professionals in order to engage in the leading issues in IT and to make contacts with colleagues at other institutions. Those contacts can provide important benchmarking information, advice about lessons learned, best practices, etc.

Some of the most talented IT staff left in the last seven years to take more lucrative positions in Silicon Valley. Those who remained at NPS have not attended many continuing education programs, conferences, vendor-sponsored certifications, or other programs providing IT training or instruction. Technical expertise must be developed in the organization and that expertise must be maintained through continuous education programs structured by IT leadership. These professional development opportunities will be powerful recruitment and retention strategies. Other recruitment and retention strategies should be explored, including higher pay scales for mission-critical positions, incentive pay, merit-based pay, etc.

The Campus Computing Project's latest report, Campus Computing 2001, shows the results of the 12th annual survey of computing and information technology in U.S. higher education. Two of the five most urgent strategic issues facing IT involved human resources. One priority issue was providing for the professional development of IT personnel and the other issue had to do with the challenges of retaining IT personnel. Even with the recent economic downturn, it is estimated that "almost half of the new IT jobs will remain vacant…because of a lack of applicants with the requisite technical and non-technical skills" (Information Technology Association of America, www.itaa.org).

Investing in human resources is the most important element in the management of IT. In order to accommodate current and projected needs in all three major areas of IT service (administrative, academic, and infrastructure), a number of human resource initiatives should be considered.

Recommendations

48. The need to increase the number of IT staff members is documented in the FY 2003 FA study. Areas requiring additional support include network engineering, administrative systems, and academic services for research and instruction. Specific suggestions for staff ramp-up are made in the IT Resource Summary.

49. Recruitment and retention of the most talented IT professionals should be a high NPS priority. A plan for recruitment should be developed immediately. This plan should include an organizational structure that is consistent with the best IT organizations at peer universities. Career paths and compensation levels should be developed as well.

50. A program of professional development should be established in order to ensure core competencies are developed and maintained. In addition, opportunities for continuing education should be made available. These will serve as important recruitment and retention benefits.

51. The entire IT organization should be reviewed from a Human Resource perspective. Each professional IT position should have a concomitant title and career path.

52. Compensation levels for IT professionals should be reviewed for market competitiveness. Incentive and merit-based pay are possibilities to consider.

CUSTOMER FOCUS

Customer orientation is a difficult priority when resources are diminished and expectations increase. Staff members are busy with crisis management and have little or no time for collecting information about customer needs, priorities, or satisfaction. Unfortunately, this creates a cycle of dissatisfied customers, and staff are unable to turn the tide. The cycle then leads to an "us versus them" orientation that is not constructive. Sufficient resources must be provided to rebuild customer trust and relationships. Leadership must direct the required change in culture.

THE CAMPUS COMPUTING PROJECT'S LATEST REPORT SHOWS THE RESULTS OF THE 12TH ANNUAL SURVEY OF COMPUTING AND INFORMATION TECHNOLOGY IN U.S. HIGHER EDUCATION. TWO OF THE FIVE MOST URGENT STRATEGIC ISSUES FACING IT INVOLVED HUMAN RESOURCES.

STAFF MEMBERS ARE BUSY WITH CRISIS MANAGEMENT AND HAVE LITTLE OR NO TIME FOR COLLECTING INFORMATION ABOUT CUSTOMER NEEDS, PRIORITIES, OR SATISFACTION. UNFORTUNATELY, THIS CREATES A CYCLE OF DISSATISFIED CUSTOMERS, AND STAFF ARE UNABLE TO TURN THE TIDE.

The following recommendations address customer service:

Recommendations

53. The culture of the IT organization should reflect a customer orientation. Customers should be defined by two general categories: (1) U.S. Navy and (2) NPS internal constituent groups. Customer opinions and advice should be sought regularly. A variety of approaches might be employed:
- Formal committees.
- Informal but regular meetings with constituent representatives.
- Ensure alignment with Navy directions (system changes).
- Seek corporate partnerships to:
  - Tap industry opinion about future technology directions.
  - Get assistance for IT issues.
  - Collaborate on demonstration projects important for Navy objectives.
  - Enlist support for key IT initiatives at NPS.

54. Since IT involves time-sensitive skill sets, it is equally important that the central IT organization help in developing a program of workshops, training classes, seminars and online resources for the larger NPS community. This effort should be coordinated with Human Resources.

IT RESOURCE REQUIREMENTS

The Information Technology Strategic Plan recommends significant investment in Naval Postgraduate School IT operations in order to provide technological support for mission critical functions of research and instruction and service to the Navy and the Department of Defense. Historically underfunded, the central IT operation is currently unable to meet the rising expectations of NPS constituents: faculty, students, and staff. In order to bring NPS IT to a level comparable with peer institutions and to participate in national IT leadership initiatives (e.g. Internet2), a substantial increase in IT support is required.

A recent series of site visits provided comparative data to illustrate this point. The following is a summary of central IT resources per faculty member (in the case of SPAWAR, Pt. Loma, 1/3 of the staff total was used as a comparable figure for faculty total):

UCSC	$33,750	UCSD	$25,000
Cal Tech	$32,600	Claremont Grad. Univ.	$20,769
SPAWAR	$25,000	Naval Postgrad. School	$10,000

Three models of IT support are presented for consideration:

MODEL 1: Status Quo

Costs

Financial

Operating budget	$600,000
Labor budget	$3,500,000
Annual central IT budget	$4,100,000

Other

Little ability to implement IT Strategic Plan. Concerns about IT largely not addressed. Issues about IT continue to increase. Realization of academic quality undermined. Morale diminished. Academic aspirations lowered.

Benefits

Maintain low resource requirement for central IT division.

MODEL 2: Beginning the Transformation

Costs

Financial

Six-year IT Resource Unfunded Request Summary (in $000s)

	FY04	FY05	FY06	FY07	FY08	FY09
Personnel	1,400	1,700	2,100	2,400	2,700	3,000
Non-Personnel	2,775	1,450	1,670	1,300	2,250	1,800
Total	4,175	3,150	3,770	3,700	4,950	4,800

Two areas of investment are recommended: human and financial resources:

1. Human resources:

- 15 staff by June 2004 (12 technical, 3 non-technical).
- 15 staff by June 2007 (12 technical, 3 non-technical).

Includes enhanced network support, Internet2, wireless environment, video element of voice and data network, security enhancement, communication and outreach, administrative system replacement/upgrade.

2. Financial resources:

- One-time infrastructure and administrative system costs:
  - In-ground wiring replacement (conduit at capacity, currently experiencing root and asphalt compression in places) (life cycle estimate = 20 years).
  - Router/switch replacement on national standard replacement cycle (every 3-4 years).
  - Development of video capability on voice and data network.
  - Administrative systems replacement/upgrade – installation or development of system integration, interfaces, and enhanced executive reporting.

- Ongoing required non-staff resources:
  - Additional annual by June 2003.
  - Additional annual by June 2007.

Includes:

- Expansion of internet connectivity.
- Annual security audit, crisis response team.
- Improvement of faculty, staff, and student satisfaction with IT services.
- Communication and outreach.
- Support of Internet2 initiative.

HISTORICALLY UNDER-FUNDED, THE CENTRAL IT OPERATION IS CURRENTLY UNABLE TO MEET THE RISING EXPECTATIONS OF NPS CONSTITUENTS. IN ORDER TO BRING NPS IT TO A LEVEL COMPARABLE WITH PEER INSTITUTIONS AND TO PARTICIPATE IN NATIONAL IT LEADERSHIP INITIATIVES, A SUBSTANTIAL INCREASE IN IT SUPPORT IS REQUIRED.

PROGRESS TOWARD THESE GOALS WILL BE ACCELERATED AND SUBSTANTIAL ACCOMPLISHMENT WILL ALSO BE SEEN IN THE FOLLOWING: VISUALIZATION SUPPORT, LIBRARY KNOWLEDGE PORTAL, HIGH PERFORMANCE COMPUTING, VIDEO NETWORK CAPABILITY AND DISTANCE LEARNING SUPPORT.

– Mapping of infrastructure, network monitoring software.
– Training.
– Instructional design teams to support IT and multimedia use in instruction and distance education.
– Routine acquisition and replacement of IT equipment and software for instructional purposes.
– Implementation of first stages of NPS Portal architecture for administrative applications and services.
– Development of wireless campus.
– Implementation of management, governance, and other policies and processes per higher education IT standards and best practices.
– Increased recognition by media and stakeholders of IT excellence at NPS.

MODEL 3: Accelerating the Transformation

Costs

Financial

Six-year IT Resource Unfunded Request Summary (in $000s)

	FY04	FY05	FY06	FY07	FY08	FY09
Personnel	1,400	3,100	4,900	5,200	5,400	5,800
Non-Personnel	2,975	1,650	1,870	1,700	2,550	2,200
Total	4,375	4,750	6,770	6,900	7,950	8,000

Two areas of investment are recommended: human and financial resources:

1. Human resources:

• 15 staff by June 2004 (12 technical, 3 non-technical).
• 15 staff by June 2005 (12 technical, 3 non-technical).
• 15 staff by June 2006 (12 technical, 3 non-technical).
• 15 staff by June 2007 (12 technical, 3 non-technical).

Includes support for enhanced network support, Internet2, wireless environment, video element of voice and data network, security enhancement, communication and outreach, and administrative system replacement/upgrade.

Progress toward above goals will be accelerated and substantial accomplishment will also be seen in the following: visualization support, library knowledge portal, high performance computing, video network capability and distance learning support.

2. Financial resources:

• One-time infrastructure and administrative system costs:
– In-ground wiring replacement (conduit at capacity, currently experiencing root and asphalt compression in places)(life cycle estimate = 20 years).
– Router/switch replacement on national standard replacement cycle (every 3-4 years).
– Development of video capability on voice and data network.
– Administrative systems replacement/upgrade – installation or development of system integration, interfaces, and enhanced executive reporting.

• Ongoing required non-staff resources:
  – Additional annual by June 2003.
  – Additional annual by June 2007.

Includes:
  – Expansion of internet connectivity.
  – Annual security audit, crisis response team.
  – Communication and outreach.
  – Support of Internet2 initiative.
  – Mapping of infrastructure, network monitoring software.
  – Training.
  – Instructional design teams to support IT and multimedia use in instruction and distance education.
  – Routine acquisition and replacement of IT equipment and software for instructional purposes.
  – Implementation of first stages of NPS Portal architecture for administrative applications and services.
  – Development of wireless campus.
  – Implementation of management, governance, and other policies and processes per higher education IT standards and best practices.

Assumes substantial acceleration toward achievement of the above milestones. Also provides for significant progress toward high-end network support for Internet2 participants and academic applications in specific departments: astronautics/aeronautics, electrical and computer engineering, computer science, meteorology, oceanography, mechanical engineering.

Expect the following performance measures to be realized:

• Widespread acknowledgement of NPS as technological leader on the central coast.
• Significant improvement in results of IT satisfaction surveys of NPS faculty, students, and staff.
• Active engagement in video network roll-out.
• NPS contributes regularly to local area access television channels.
• NPS contributes to the national Research Channel.
• NPS produces annual video of IT-related highlights.
• Demonstrated improvements in NPS network reliability, speed, and capacity.
• Frequent media coverage of research and instruction innovations.
• Frequent presentations by NPS IT staff in professional association conferences, workshops, seminars, etc.
• Featuring of NPS leadership in publications highlighting IT leadership: Military Technology, EDUCAUSE, SCUP.
• NPS leadership invited to do keynote addresses at IT-related conferences: Sun Microsystems Education and Research Conference, Cisco Summit, IBM Higher Education Leadership Conference, etc.
• NPS becomes the Network Operations Center for the Monterey Peninsula I-Net.
• Monterey Peninsula secures a regional GigaPop site.

5 COMMUNICATION, PARTNERSHIP, AND OUTREACH

COMMUNICATION

Since IT is a strategic institutional priority, communication about IT matters must be frequent, timely and accessible to all members of the NPS community. In addition, external communications about IT events and news should be part of the IT communications strategy, and an integral part of the larger advancement strategic plan for NPS. IT-related communications should be managed by the central IT office in order to ensure most efficient and accurate dissemination of information. The following recommendations focus on improvement of IT communications.

Recommendations

55. Increase the frequency and expand the modalities of communications about NPS IT. All means of communication will be explored for appropriate use: electronic, existing committee structures, web capabilities, video, face-to-face meetings and presentations, leadership speeches and presentations, publications, program agendas for important campus visitors, NPS reports, etc. Regular opportunities for effective communication within NPS and with NPS friends and stakeholders off-campus about IT will be identified and coordinated with Institutional Advancement.

56. Communicate IT commitment to consultation, information-sharing, and reflective practice, in order to better support collaboration and effective decision-making.

57. Include IT Services in larger NPS advancement efforts. Since IT itself is a mode of communication as well as a strategic resource priority within the institution, IT services will be part of larger advancement efforts. For example, website development will be defined as a priority for both IT and advancement.

58. Develop a publication describing IT services at NPS.

59. An important element of a communication and outreach approach is training. IT is an invaluable institutional resource, but it requires a commitment to training in order to fully maximize its potential. As a result, NPS will develop an IT training program for campus constituencies.

- Content will be determined through consultation with campus constituencies.
- Mode of delivery will include a mix of different types of learning modalities. For example, delivery options will include asynchronous learning opportunities, hands-on, in-class opportunities, electronic tutorials, workshops, etc.
- Training will be coordinated centrally and be responsive to the needs of individual schools, departments, institutes, programs, and administrative units.
- Training will be coordinated with Human Resources in order

to ensure links with institution-wide policies and with other training opportunities.

PARTNERSHIP AND OUTREACH

In order to leverage institutional resources most effectively, NPS must forge partnerships with peer institutions, IT companies, and local communities. Partnerships and alliances permit applying a multiplier to the IT activities and resources at NPS, increasing the political and economic influence of NPS, and raising visibility about NPS IT in general. Toward this end, the following recommendations are proposed.

Recommendations

60. Coordinate IT-related corporate vendor relations within central IT services. Relationships with companies should be developed that go beyond transaction-based contracts. Longer term multi-dimensional relationships will be explored. NPS leadership will be involved in initiating contacts with leaders of partner companies. Benefits include:

- Continuity of service over a longer time.
- Investment in NPS academic mission.
- Higher volume transactions resulting in lower costs.
- Additional voices to promote and advocate for NPS priorities.

61. Establish consortial relationships with local Department of Defense organizations to coordinate IT training for IT professional staff. A number of local organizations have expressed interest in this kind of cooperative effort, that can result in lowered costs and access to higher level professional development opportunities.

62. Establish consortial relationships to access high speed networks within the state. Fleet Numerical Meteorology and Oceanography Center, CSU-Monterey Bay, and Monterey Bay Aquarium Research Institute (MBARI) have expressed interest in such arrangements. Lowered costs for access to higher speed and capacity networks than NPS could afford individually can result.

63. Make outreach to local communities a part of the central IT agenda. Participation in local and regional networks (e.g. I-Net) can leverage NPS IT investments and provide increased visibility for the NPS mission.

64. Identify budget shortfalls each year so that opportunities to extend programmed budget with research related resources are possible.

COMMUNICATION ABOUT IT MATTERS MUST BE FREQUENT, TIMELY AND ACCESSIBLE TO ALL MEMBERS OF THE NPS COMMUNITY. IN ADDITION, EXTERNAL COMMUNICATIONS ABOUT IT EVENTS AND NEWS SHOULD BE PART OF THE IT COMMUNICATIONS STRATEGY, AND AN INTEGRAL PART OF THE LARGER ADVANCEMENT STRATEGIC PLAN FOR NPS.

CONCLUSION

URGENCY TO CHANGE

Information Technology is a strategic institutional resource, and has an impact on every dimension of the Naval Postgraduate School mission. Research, education, and service to the Navy and the Department of Defense are all affected by the currency, reliability, and support of Information Technology.

The central IT division has an important responsibility to provide the tools and services necessary to support NPS mission, and should be resourced to fulfill this responsibility. NPS leadership has asked for an IT Strategic Plan that will provide for a way to realize that responsibility. The urgency for change is voiced by every constituency at NPS because of the very nature of the change that is required. No class is taught without IT, no research is performed without IT, and no administrative system is managed without IT.

NPS must move now from a perspective that Information Technology is limited in importance to defining Information Technology as virtually limitless in its application. Rather than seeing IT as a series of problems about which faculty, students and staff voice concerns, NPS must see IT as a trigger for profound institutional change.

THE NPS IT STRATEGIC PLAN

The changes recommended for IT operations at NPS in this report are substantial, and must be accomplished over time. The optimal way of making the necessary changes is through a systematic planning process that is reviewed and evaluated on an annual basis. Goals and objectives have been identified and implementation strategies for each of the major IT areas have been defined – all focused on improving IT operations and services in a way that is consistent with overall NPS mission.

It must be underscored that incremental improvements will be made over time, but jump-starting a new institutional perspective will take a public, visible, and consistent refocusing of priorities and resources.

IMPLEMENTATION AND ACCOUNTABILITY

Implementation will begin October 1, 2002 and will end September 30, 2007. Annual reports on progress will be shared with the NPS leadership and the entire NPS community. These will include action plans for the coming year, updated based on emerging trends and technologies, ongoing consultation and advisement by the IT Task Force, and possible new, unforeseen opportunities. Annual action plans will include updated costing estimates and implementation timelines.

OUTCOMES

The vision for IT at NPS is to enable NPS to realize its goal to become one of the top research universities in the U.S. by the year 2020. This environment will have a centrally coordinated IT service organization that provides high-level support for research and instruction as its core mission.

The NPS IT environment will be characterized by:

• INNOVATION – Provide support for faculty and student leadership in the testing and demonstration of emerging technologies. Recognition that IT excellence is rooted in a commitment to change, innovation, experimentation, and imagination.

• TALENT - Enable leading-edge research by support for sophisticated communications and computing. This means highly skilled technical support for visualization, streaming video, instructional multimedia applications, security testing and evaluation, wireless landscapes, high performance computing, etc. Access to talented, knowledgeable technical staff, who participate in ongoing professional development programs and engage in national professional associations to maintain skill currency and contacts with colleagues at peer institutions.

• ACCESS TO ADVANCED TOOLS – Ubiquitous access to state of the art communications infrastructure that integrates voice, video, and data capabilities that is renewed and upgraded at regular cycles. Access to current technology in equipment and software.

• COMMITMENT TO SERVICE – Dedication to serving faculty, students, and staff that is visible through degree of effort, courtesy of interactions, regular seeking of constituent advice and input, and routine assessments of how well service is being provided.

• INTEGRATED, EFFICIENT ADMINISTRATIVE SYSTEMS – Enable administrative leaders to develop, maintain, and upgrade administrative systems that maximize institutional effectiveness and efficiency. Working with administrative leaders to provide systems that are characterized by single point data entry, internal consistency and integration, flexibility, relational database structure, useful management reporting systems, and customer orientation.

• LEADERSHIP – Provide leadership of IT services through strategic planning, informing the university of emerging technological directions and opportunities, managing and leading institutional change, annual reporting to the community about IT operations and services, development of partnerships and alliances with other institutions and agencies to maximize technological currency and minimize costs, and to make an articulate, persuasive case for IT resources on a regular basis.

RECOMMENDATIONS FOR FUTURE WORK

This IT Strategic Plan articulates needed initiatives, actions and resources to execute critical NPS responsibilities. It further provides a repeatable process for annual review of NPS needs and priorities.

Recommended areas of future development include:

- Measurement of progress and problems in execution.
- Establishing a connection between the Strategic Plan and budgeting process.
- Conducting further strategic planning on how a "Net-Centric NPS" approach might better engage and integrate NPS capabilities into Navy and Defense operations.

THIS IT STRATEGIC PLAN ARTICULATES NEEDED INITIATIVES, ACTIONS AND RESOURCES TO EXECUTE CRITICAL NPS RESPONSIBILITIES. IT FURTHER PROVIDES A REPEATABLE PROCESS FOR ANNUAL REVIEW OF NPS NEEDS AND PRIORITIES.

ITTF Agenda 12-11-08

IT Task Force
Proposed Agenda

January 10, 2008

Meeting location: PCR
Meeting time: 11:00 a.m.

1. Recent storm and Disaster Recovery Planning -- Jim Hall
2. Navy IT Consortium -- Terri Brutzman
3. Network Upgrade-- Joe LoPiccolo
4. AV systems installations over the break -- Tracy Hammond
5. ITACS organization -- Joe LoPiccolo
6. Profile corruption issues -- Terri Brutzman
7. Annual Accountability Report -- Christine Cermak
8. Ingersoll renovation update -- Joe LoPiccolo
9. Other?

IT Task Force
Proposed Agenda

February 7, 2008

Meeting location: PCR
Meeting time: 11:00 a.m.

1. Password protocol update – C. Cermak

2. Profile corruption issue – update – T. Brutzman

3. Multi-functional devices – return on investment update – J. Sedillos

3. Network Upgrade—J. LoPiccolo

4. Project management training – A. Pires

5. V-Brick demonstration – J. LoPiccolo

6. Other?

IT Task Force
Proposed Agenda

March 20, 2008

Meeting location: PCR
Meeting time: 11:00 a.m.

1. CENIC conference and CENIC president's visit to campus March 18, 2008 – C. Cermak

2. Navy Higher Education IT Consortium – C. Cermak

3. Network Upgrade—J. LoPiccolo

4 Larry Smarr visit to campus March 27

5. Western Regional EDUCAUSE conference – C. Cermak

6. Distributed learning tools – Joe LoPiccolo

7. Other?

IT Task Force
Proposed Agenda

March 6, 2008

Meeting location: PCR
Meeting time: 11:00 a.m.

1. Audio-Visual Virtual Manager – Tracy Hammond and Harry Thomas
2. NGEN update – C. Cermak
3. Technology Review – C. Cermak
4. CENIC conference and CENIC president visiting campus – C. Cermak
5. Network Upgrade—J. LoPiccolo

4 Center for Asymmetric Warfare – Joe LoPiccolo and Terri Brutzman

5. Larry Smarr visit to campus March 27
6. Other?

IT Task Force
Proposed Agenda

April 3, 2008

Meeting location: Ingersoll 162
Meeting time: 11:00 a.m.

1. EDUCAUSE conference presentations – C. Cermak & T. Brutzman

2. Recap of the Larry Smarr and Jim Dolgonas Visits --- C. Cermak

3. Microsoft Vista Training – Chris Abila

4 Python Presentation – Mike Anderson

5. Other?

IT Task Force
Proposed Agenda

May 1, 2008

Meeting location: President's Conference Room
Meeting time: 11:00 a.m.

1. Network upgrade status – J. LoPiccolo

2. Recap of the WASC conference – J. LoPiccolo

3. PYTHON update – C. Cermak

4. Expanding Apple presence on campus – W. Yu

5. Navy Higher Education IT Consortium and NGEN – C. Cermak

6. Other?

IT Task Force
Proposed Agenda

May 15, 2008

Meeting location: President's Conference Room
Meeting time: 11:00 a.m.

1. Web project update – F. Horvath
2. Network upgrade status – J. LoPiccolo
3. Minor property tracking – J. Hall
4. Lab recap status – T. Hammond
5. San Diego planning – C. Cermak
6. Navy Higher Education IT Consortium and NGEN – C. Cermak
7. Other?

IT Task Force

Proposed Agenda

May 17, 2005

1. Department of Navy CIO, Director of Knowledge Management Jim Knox visiting NPS today.
2. Power consumption update
3. CENIC funding update
4. IT Strategic Plan update
5. .edu/ERN transition
6. Streaming media – project milestones
7. ITACS and Instructional Technology end-of-year funding requests
8. Email quota committee – status update on implementation
9. President's Digitization Committee
10. other?

Reminder: ITTF meeting summaries are posted on the intranet site.

IT Task Force
Proposed Agenda

June12, 2008

Meeting location: President's Conference Room
Meeting time: 11:00 a.m.

1. Monterey Peninsula DoDNet – Doug Weismann
2. Homeland Security Digital Library update – Tom Mastre
3. Certification and accreditation of systems – T. Brutzman
4. Budget – C. Cermak and Jim Hall
5. Lab recap status – T. Hammond and J. LoPiccolo
6. Sun Microsystems – J. Haferman
7. Management Inventory Control Program – J. Hall
8. Other?

IT Task Force
Proposed Agenda

July 10, 2008

Meeting location: President's Conference Room
Meeting time: 11:00 a.m.

1. Phishing – Jason Cullum
2. Incentive award program – J. Hall
3. Network and annex upgrades – Joe LoPiccolo
4. Navy Higher Education IT Consortium Business Case Analysis – C. Cermak
5. Budget – C. Cermak and Jim Hall
6. Lab recap status – T. Hammond and J. LoPiccolo
7. Sun Microsystems – J. Haferman
8. FastData – T. Brutzman
9. Other?

IT Task Force
Proposed Agenda

August 21, 2008

Meeting location: President's Conference Room
Meeting time: 11:00 a.m.

1. IT Strategic Plan – Cyberinfrastructure chapter – C. Cermak
2. WASC draft report – Capacity and Prepatory Review – C. Cermak
3. UCSC VP Information Technology Mary Doyle visit to NPS August 28.
4. CENIC 2010 Conference Committee visit to Monterey and NPS this week
5. CENIC HPR workshop in San Diego September 15-16
6. Other?

IT Task Force
Proposed Agenda

August 8, 2008

Meeting location: President's Conference Room
Meeting time: 11:00 a.m.

1. Lab recap – recommendation to NPS leadership – T. Hammond
2. Kuali update – C. Cermak and K. Little
3. Sony 4K Installation update – T. Update
4. Navy Higher Education IT Consortium Business Case Analysis – C. Cermak
5. Other?

IT Task Force
Proposed Agenda

September 18, 2008

Meeting location: President's Conference Room
Meeting time: 11:00 a.m.

1. President Oliver remarks
2. IT Strategic Plan Academic Technology section -- All
3. High Performance Research Workshop at UCSD – D. Weismann
4. NGEN news and Navy Higher Education IT Consortium report - C. Cermak
5. Other?

IT Task Force
Proposed Agenda

October 30, 2008

Meeting location: President's Conference Room
Meeting time: **11:30 a.m.**

1. Board of Advisors report – C. Cermak
2. Kuali Student System – T. Hammond
3. Kuali Financial System – T. Halwachs
4. Account closure notices – A. Pires
5. IT Strategic Plan – Administrative Applications and Services -- All
6. NGEN news and Navy Higher Education IT Consortium report - C. Cermak
7. Monterey Institute of International Studies invitation to a presentation by Diana Stuart Sinton (University of Redlands) on Geographic Information Systems, *New Ways to Map a Changing World* – Monday, November 10, 2008 12:30 to 1:45 p.m. Irvine Auditorium – 499 Pierce Street in Monterey
8. Other?

IT Task Force
Proposed Agenda

November 13, 2008

Meeting location: President's Conference Room
Meeting time: **11:00 a.m.**

1. Sun cluster update – J. Haferman
2. Account expiration update – C. Gaucher
3. Learning Management System update – J. Russell
4. Other?

IT Task Force Meeting **President's Conference Room**
13 November 2008 **Naval Postgraduate School**
11a.m.-12:05 p.m.

Attendees:

Christine Cermak	Chris Gaucher
Terri Brutzman	LCDR Warren Yu
Paul Sanchez	Mary Bronzan
Simson Garfinkel	Jon Russell
Rudy Panholzer	Tom Mastre
Jeff Haferman	LCDR Simon McLaren
Jason Cullum	Andrew Ware

Sun Cluster Update by Jon Haferman:

- Sun Cluster: on campus through partnership with Sun, 1100 CPUs plus 110 TB of storage
- Researchers will be using for modeling efforts to include oceanography, physics, mechanical and electrical engineering, operations research, information sciences, computer science. Campus-wide cluster will be open to all across campus for access.
- Cluster arrived 1 month ago and is currently in storage at warehouse
- Room 141 in Ingersoll is receiving upgrades. Asbestos discovered underneath tiles
- Chiller for equipment arrived today, storage space also arrived.
- Friday and Monday: cooling units from APC and power distribution units to arrive
- Next week: Construction of room with one month deadline. Contractors coming in from TN and hope to be finished by Thanksgiving
- Ribbon-cutting presentation to be scheduled
- Process in place for naming machine; nominations being taken. Possibly named after a prominent NPS person (admiral or faculty); Hamming a possibility. Dr. Cermak will send an email to the IT Task Force and ask for ideas. Decision to be made at next meeting.

Account Expiration Update by Chris Gaucher:

- C. Gaucher is the new director of Information Assurance and Privacy and will be taking over as supervisor from Terri Brutzman to develop privacy framework
- Current issue: manually processing expired accounts. Many dormant accounts are still active.
- Possible solutions: for security and accuracy, generate list of users and have them reviewed by academic planning, which is to be done on an annual basis. Also to look at estimated time of departure for non-student users to determine CAC expiration date. Create notification that emphasizes security and accuracy concerns.

- Problems with maintaining accurate list of users: Contractors difficult to manage as individuals change readily and without much notification. Staff has a process for checking out, but faculty is harder to manage.
- Long term goals: Consolidate user data stores.
- Difficult for ITACS staff to disable accounts as access and authorization must be received from the top.
- Check out process must be refined with HRO, academic planning and student services
- Many STBL accounts are dormant, as it is often overlooked in student checkout process

Learning Management System Update by Jon Russell:

- Issues with Blackboard: hosted system, not integrated. Students have multiple accounts, integration is difficult, student data is in two locations, customer response time slow (2-3 weeks for response), poor reliability (4-6 hour outages), not able to support systems until majority of customers make demands, licensing restrictions and cost
- 5-year relationship with MC CCE and NSA ADET ended because of licensing issues with Blackboard
- Open source LMS currently gaining acceptance and increase in market
- Blackboard losing market share (66% to 56% in one year)
- 4-year private universities moving toward Moodle for fiscal reasons
- Public research universities moving toward Sakai for flexibility purposes
- Trends at NPS: strategic goals of continuous improvement, operations, and influx of DL students
- LMS Faculty committee members from various departments currently representing associate deans; providing opinions and input
- Alternative options: keep status quo, host blackboard in-house, Sakai, Moodle
- Evaluation Criteria: replace functionality, reliability, student experiences, added functionality, scalability, integration capabilities, cost
- Timeline: Form committee, stand up pilot of Sakai, list of function requirements, Blackboard to Moodle switch, demo Sakai and Moodle, interview CHDS staff, pilot class in January, make formal recommendations to IT task force, faculty council and NPS executive leadership.
- Ron Fricker will provide pilot class in January
- Contract for Blackboard scheduled for renewal in September, would like to scale down licensing costs
- Demonstration of Sakai: allows users to imbed existing websites into frame, allows access to intranet for DL students
- Prime candidate for needs involving research with other universities; potential for off-campus work
- Envisioning bulk of static information stored inside the system and ability to link out to other locations
- Concern posed by Simson: with a significant investment already made in Blackboard, the cost of faculty transition time may overwhelm licensing costs; many faculty members will not want to make the change.

- Sakai as an open source system won't necessarily be open to everyone; will have password controls and allow for control of copyrighted materials
- Interviews with universities (Delaware and LSU) who have made the switch for feedback

News Items by Christine Cermak:

- Jeff Haferman re-elected to city council
- Tom Mastre is the new NPS Director of OCL, reports to Doug Moses
- Terri Brutzman flying to USNA to meet with CIO and representatives from NETWARCOM, NWC; report is being formally presented to NETWARCOM
- Dr. Cermak will be attending Kuali Conference next week in Southern California (with team of NPS representatives)
- Recommendation for Dr. Cermak to take active role in administrative systems; however, functional areas have to be in charge and can't delegate to IT. But Dr. Cermak will be taking a more active role in partnering with effort.

IT Task Force
Proposed Agenda

December 11, 2008

Meeting location: **Mechanical Engineering Auditorium**
Meeting time: **11:00 a.m.**

1. Sony 4K projector demonstration – J. Russell and Sony Representatives
2. Sun cluster update – J. Haferman
3. Learning Management System (LMS) update – J. Russell
4. UPS (uninterruptible power supply) upgrade – T. Brutzman
5. INFOCON 3/removable media – C. Gaucher
6. Kuali update – C. Cermak
7. Holiday period upgrades/maintenance – T. Brutzman
8. VP Finance and Administration – C. Cermak
9. Other?

Office of Human Resources
Naval Postgraduate School
New Employee Orientation

Welcome!

Grab a cup of coffee and settle in to the easy way to get "oriented" to working at NPS, FNMOC, or any of our other tenant commands.

The Department of the Navy is part of the Executive Branch of the US Government, under the direction of the Chief Executive -- the President of the United States. As an employee of the Navy, and a new member of the faculty, staff, or tenant activity of the Naval Postgraduate School, you are also an employee of the government of the United States.

The purpose of this course is to answer the many questions you may have about your position, your responsibilities, your rights, and the benefits available to you as a federal employee. Your immediate supervisor will acquaint you with the staff, organizational structure, and mission of the department to which you have been assigned and will help you get started in your new job. You may work through the course at your own pace, but you are expected to complete it within 30 days of the date you first report to work.

As a new employee, your questions should first be addressed to your supervisor. If you require additional assistance, please feel free to contact the Human Resources Office (HRO) or information or referral to the appropriate resource. If you have questions which this training session does not answer but which you believe it should, please submit them to the course administrator.

Stay Informed!

You are encouraged to stay informed by regularly checking notices posted on the NPS Intranet home Page, the bulletin boards throughout the installation, and checking the "What's New" page of the HRO web site.

Your loyal, dedicated and enthusiastic support will help the Naval Postgraduate School and its tenant organizations accomplish their missions for the Navy Department and the United States. We are happy that you have chosen to join the proud team of officers, enlisted personnel and civilians working together in Monterey!

Begin New Employee Orientation Course

As you work through the course, click on "Next" at the bottom of each page to advance to the next section. If there isn't a "Next" button, simply click on the "Back" button on your browser menu. Start the course.

New Employee Orientation

Our Mission

The missions of NPS and FNMOC, the two major Naval activities in Monterey, are important to understand, as well as the other Department of Defense activities on the Monterey Peninsula, but pay particular attention to the statement of the organization you will be working for.

FNMOC's mission statement is: "To combine innovative technology with the best available science in order to provide the best weather and oceanographic products, data and services to the operating and support forces of the DoD anywhere, anytime." For further details, check out their web site at: https://www.fnmoc.navy.mil/.

Responsibilities as a Government Employee

You need to know what your responsibilities as a government employee are, including the "Standards of Conduct" that all Department of Navy employees are held to. The basic employee and supervisor responsibilities are common to most offices, whether a government office or a private business; most of it is just plain "common sense."

One of the things that may be new to you if you haven't worked on a military installation before are military customs such as "Colors"! The American flag, located in front of Herrmann Hall, is raised each morning at 0800 and lowered at sunset. You may already know that military members have to salute and stand at attention during "Colors", but do you realize that civilian employees are also required to do certain things during this ceremony? If you are driving on the grounds of the Naval Postgraduate School, FNMOC, or other local military installations during this ceremony, please come to a full stop. Do not resume driving your car until the hoisting or lowering of the flag is complete and the playing of the National Anthem has ended. If you are outdoors during Morning or Evening Colors, you should face the flag (or the music if you cannot see the flag) and stand at attention with your right hand over your heart. Those wearing hats should remove them. Foreign Nationals should stand at attention.

Another military custom you need to be familiar with is what to do when the Admiral (NPS President) enters the room in group setting, such as an auditorium, someone will usually say loudly "ATTENTION ON DECK" as the Admiral enters the room: you are expected to stop speaking and stand as a gesture of respect.

Speaking of active duty personnel, military rank is often confusing for civilians, so here's a chart to help you tell the difference between a Navy CAPTAIN and an Air Force Captain, not to mention all those Navy "Chiefs."

There are many services on the base that are available to civilian employees, including various dining facilities and many fitness and recreational activities.

Every new employees must read the Security Brief (click on "Security Brief" in the top-left frame) for NPS, even if you do not have a security clearance, since this section

addresses physical base security issues. Additionally, parking is a HOT issue at NPS and it's tenant commands, so you need to learn the parking rules while reading through the security brief.

Another big issue is ethics for government workers, including receiving gifts on the job, so be sure to review both the ethics and the gifts sections!

Occupational Safety and Health is an important concern for every employee; be sure you understand your responsibilities.

NPS and its tenant activities are all designated as "Drug Free Workplaces" so learn about the Drug Free Workplace Program; you may be subject to testing!

If you use a computer in your work, you need to learn about Information Systems Security at NPS. One of the most important items for you to remember is that email is not "private" and both email and Internet usage are monitored for compliance with appropriate use policy.

Most importantly, you need to understand the details of the personnel issues , such as leave, performance appraisals, benefits, training, grievances, records, hiring and promotions, and so on, that affect your working life in the government.

NPS Mission

Unique among educational institutions, the Naval Postgraduate School's responsibility for the advanced education of Naval officers is reflected in its stated mission:

"To conduct and direct the advanced education of commissioned officers, and to provide such other technical and professional instruction as may be prescribed to meet the needs of the Naval Service; and in support of the foregoing, to foster and encourage a program of research in order to sustain academic excellence."

History

The idea of a Department of the Navy graduate school was founded in a course of instruction in marine engineering, instituted by the Bureau of Engineering in 1904. The results were so encouraging that in 1909 the Secretary of the navy established a School of Marine Engineering at the Naval Academy at Annapolis, and instruction began with a class of 10 officers. Only three years later the School was designated the Postgraduate Department of the U.S. Naval Academy. By 1948, the scope of the graduate program and the number of officer enrolled had outgrown the east coast facilities, and during the next three years a graduate relocation took place. On 22 December 1951, the Naval Postgraduate School was officially established in Monterey.

Currently, the Naval Postgraduate School occupies a multi-million dollar campus, graduates approximately 800 students per year and offers a range of curricular programs in the scientific, engineering and administrative fields. Its educational and research programs are based on both academic excellence and relevance to Department of Defense requirements. The student body includes officers from all five services, many foreign countries and civilian employees of the Federal government. Fully accredited, the Naval Postgraduate School awards degrees through the doctoral level.

Other DoD Activities Mission's

Activity	Mission
Defense Resources Management Institute (DRMI)	DRMI is a jointly-staffed Department of Defense-sponsored tenant activity of the Naval Postgraduate School. Located in Halligan Hall, it was originally established in 1966 as the Navy Management Systems Center. DRMI conducts both resident and on-site defense resource management courses for domestic and foreign military personnel and senior level Department of Defense civilians. The Center's programs focus on the concepts, techniques, and applications of modern defense management systems, with specific emphasis on analytical decision-making and effective resource management.
Personnel Support Detachment	The Personnel Support Detachment (PSD), Monterey is a tenant activity under the command of the Personnel Support Activity, Pudget Sound. PSD is located at Fort Ord, in the DMDC facility,, with a mission which includes providing travel arrangements and travel claims processing for all Navy sponsored travelers, both military and civilian, in the Monterey area. PSD also provides personnel and finance services for local area Naval active duty members.
Naval Security Group Detachment	The Naval Security Group Detachment provides administrative services to active duty Navy and Marine Corps members studying at the Defense Language Institute.
Navy Medical Administrative Unit	The Navy Medical Administrative Unit provides medical care for Monterey area Navy personnel and their dependents.
Naval Reserve Center & Recruiting Office	Located in downtown Monterey, the Naval Reserve Center & Recruiting Office provide Naval Reserve and Navy Recruiting services to the Monterey area.

Defense Manpower Data Center	The Defense Manpower Data Center (DMDC) is the most comprehensive repository of personnel, manpower, training, and financial data in the Department of Defense. DMDC maintains databases, files, programs, and delivery systems that can provide DOD with the most accurate and timely data about: Major personnel programs that benefit all members of the Department and their family members Military personnel life cycles from enlistment to retirement Reserve component military members Families and dependents of Service members Civilian employees of the Department of Defense
Defense Finance and Accounting Service	The Defense Finance and Accounting Service (DFAS)was established to reduce the cost and improve the overall quality of Department of Defense financial management through consolidation, standardization and integration of finance and accounting operations, procedures and systems.
Defense Personnel Security Research and Education Center	The Defense Personnel Security Research and Education Center, (PERSEREC), is a research and educational organization which performs policy-relevant research and analysis for the Department of Defense to improve personnel security procedures, programs and policies. It also provides DOD components with technical assistance, instruction and advice on personnel security matters.
Defense Printing Service	The Defense Printing Service (DPS) was established 31 May 1992. Printing services formerly operating under Navy, Army and Air Force sponsorship were consolidated under Navy administrative components. In the Monterey area, DPS has print shops located at the former Fort Ord, the Defense Language Institute, and the Naval Postgraduate School. The regional office of DPS is the Defense Printing Service Western Area, San Diego. Area offices are also located in Monterey and Oakland.

Standards of Conduct

To maintain the public's confidence in our institutional and individual integrity, all Department of the Navy (DON) personnel shall:

- Avoid any action, whether or not specifically prohibited by the rules of conduct, which might result in or reasonably be expected to create an appearance of:
  - Using public office for private gain
  - Giving preferential treatment to any person or entity
  - Impeding government efficiency or economy
  - Losing complete independence or impartiality
  - Making a government decision outside official channels
  - Adversely affecting the confidence of the public in the integrity of the government
- Not engage in any activity or acquire or retain any financial or associational interest that conflicts or appears to conflict with the public interests of the United states related to their duties
- Not accept gratuities from Department of Defense contractors unless specifically authorized by law or regulation
- Not use their official positions to improperly influence any person to provide any private benefit
- Not use inside information to further a private gain
- Not wrongfully use rank, title, or position for commercial purposes
- Avoid outside employment or activities incompatible with their duties or which may discredit the Navy
- Never take or use government property or services for other than officially approved purposes
- Not give gifts to your superiors or accept them from your subordinates when it is not appropriate to do so
- Not conduct official business with persons whose participation in the transaction would violate law or regulation
- Seek ways to promote efficiency and economy in government operations
- Preserve the public's confidence in the Navy and its personnel by exercising public office as a public trust
- Put loyalty to the highest moral principles and to country above loyalty to persons, party, or government department

- Uphold the Constitution, laws, and regulations of the United States and never be a party to their evasion
- Give a full day's labor for a full day's pay, providing earnest effort to the performance of duties
- Never discriminate unfairly by the dispensing of special favors or privileges to anyone, whether for remuneration or not, and never accept for himself or herself or for family members, favors or benefits under circumstances which might be construed by reasonable persons as influencing the performance of governmental duties
- Make no private promises of any kind binding upon the duties of office
- Not engage in business with the government, either directly or indirectly, inconsistent with the conscientious performance of governmental duties
- Expose corruption wherever discovered

Basic Employee and Supervisor Responsibilities

Your Supervisor will...	You should..
Explain the chain of command, and identify the first and second line supervisors in your rating chain.	Know the chain of command and be able to identify your first and second line supervisors by name and position title.
Provide you with instruction and answer questions concerning your duties and responsibilities.	Follow directives and instructions issued by your department head, chairperson or supervisor.
Outline the mission requirements, assign work, define job expectations and provide you with performance standards within 30 days of starting your new job.	Understand your role in the organizational mission, complete work assignments and know what is required to successfully meet your job expectations.
Counsel you and provide you with regular feedback on job performance, furnish training, guidance and assistance as needed, and complete your annual performance evaluation.	Work as a courteous and cooperative team member with a focus on getting the job done, continually self-evaluate and seek self improvement opportunities, and provide your supervisor with feedback on your performance.
Review and discuss your problems to arrive at a satisfactory solution and initiate formal performance improvement plans or disciplinary action should it become necessary.	Discuss misunderstandings, unsatisfactory working conditions or other problems with your supervisor and strive for a mutually agreeable resolution or compromise.
Establish the work unit's leave schedule and approve or disapprove leave requests as permitted by work schedules and mission requirements.	Schedule non-emergency requests for leave in advance to ensure completion of work assignments and to avoid disrupting the goals of the work unit.
Ensure that you are provided with appropriate safety equipment, if any is required and take action to verify and resolve unsafe conditions.	Identify and report unsafe conditions you may observe in your daily work and immediately report accidents to your supervisor or other appropriate official.
Provide instruction on how to secure a medical examination if you are injured on the job, and explain how to file an accident report and, if necessary, a claim for an on-the-job injury.	Follow correct procedures for reporting accidents and secure medical examination and treatment of any injury to be eligible for compensation benefits.

Base Services

Post Office

A Monterey branch U.S. Post Office (ZIP 93943) is located in Building 260 on NPS. It is open Monday through Friday from 9:30am until 3:30 p.m. Last mail pickup is 4:00 pm. Closed for lunch 12:30 p.m. to 1:30 p.m.

Bulletin Boards

You should monitor the NPS intranet and read Official Bulk email to keep informed on matters of importance. All official orders and information of general interest are supposed to be posted on the NPS intranet.

Lost and Found

Lost articles may be turned into and retrieved from the Quarterdeck, Herrmann Hall, ext 2441, or you may contact the Base Police Department., Bldg 200, ext 2555.

Dining:

- **Commissioned Officers and Faculty Club**
- **El Prado Room - Herrmann Hall Basement**
  - Breakfast
    0645 - 0900
    Monday - Friday
  - Lunch
    1100 - 1400
    Monday - Friday
- **Trident Room - Herrmann Hall Basement**
  - Lunch
    1045 - 1315
    Monday - Friday
  - Normal business dress or clothing appropriate for special events is expected when using these facilities. Bare feet, no shirt, bathing suits, etc. are not appropriate attire.
- **Commercial Dining Options**
  - Café Del Monte, in the Academic Quadrangle, Mon-Fri, 10:30am-1:30pm
  - The Navy Exchange Food Court, Bldg. 301

Library Privileges

Library cards may be issued to employees once they have received NPS identification cards. Questions regarding library usage should be directed to the Reference Librarian, 656-2485. Library privileges entitle users to check out books and use library services.

Special Services Facilities

All employees are eligible to participate in any of the Recreation Department activities, programs or clubs. Featured activities include basketball, tennis, golf, bowling, swimming, and diving. Clubs and associations include flying, golf, karate, lacrosse, racquetball, rugby, sailing, scuba and tennis. A Child Care Center is available for children six months and older. A Pre-School Activity is also available for children who are at least three years old. Additional information may be obtained by calling 656-2734.

Travel Office

Click here for more info: http://www.nps.navy.mil/travel/.

Navy Exchange Privileges

Civilian employees are not allowed to use the Navy Exchange facilities unless this privilege is based upon prior military service (Retired Military status) or family members currently in the service. The only exceptions to this rule are:

1. Eating facilities operated by the Navy Exchange (open to all civilian staff/faculty);
2. Civilian staff/employees making "Bookstore" purchases for a professor (with supervisory approval);
3. Civilian staff/employees purchasing textbooks for an NPS academic class they are enrolled in.

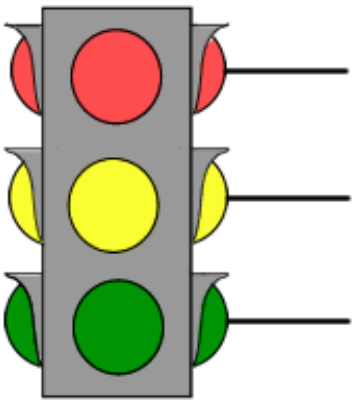
General Rule

"Employees shall protect and conserve Federal property and shall not use it for other than authorized purposes. "
5 CFR 2635.101(b(9))

As Ben Franklin used to say: "A penny saved is applied to the National Debt under miscellaneous receipts."

What is Authorized?



Personal Use: unrelated to mission (no permission)

Personal Use: supportive of mission (with supervisor's permission)

Official Use: directly related to mission accomplishment.

Authorized Personal Use

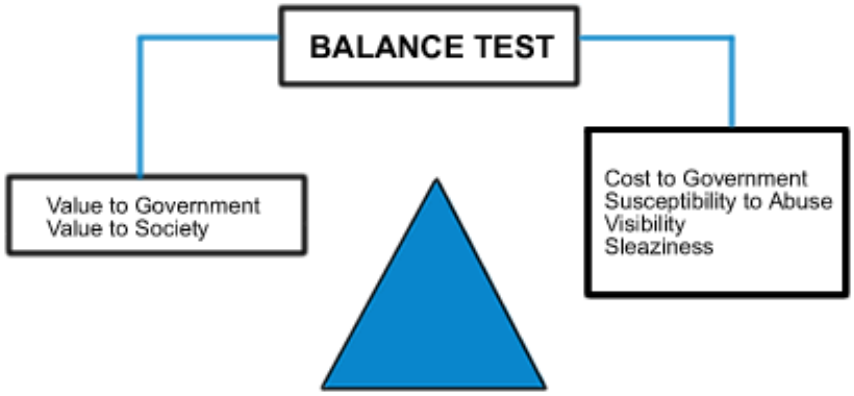
Personal Use: (supportive of mission)

- Does not adversely affect performance of official duties
- Is of reasonable duration and frequency
- Is performed on employee's personal time (of-duty, lunch)
- Serves a legitimate public interest
- Does not reflect adversely on DoD
- Creates no significant additional cost to DoD

Guiding Principles

Rule # 1: Government resources are for the benefit of the Government
Rule # 2: Sometimes, the Government benefits by allowing its employees to use Government resources

- Make employees more efficient
- Improve employee morale
- Increase public's confidence in its officials



The Devil is in the Details

Official Use:
Determined by mission. Must be directly related to and necessary for accomplishing the mission.

Mission:
Will differ from the agency to agency, office to office.

Personal Use:
Supervisor's Approval

1. Formal Regulation
2. Office Policy
3. Case by Case

Equipments/Supplies
(Computers, Copiers, Printers, Paper)

Official Use:

- Accomplish mission

Personal Use:

- Does not adversely affect official duties
- Is of reasonable duration and frequency
- Is performed on employee's personal time
- Serves a legitimate public interest
- Does not reflect adversely on DoD
- Creates no significant additional cost to DoD

Gifts

Gift Acceptance Analysis

This is an easy analysis we can use to determine whether or not we can accept a gift.

When you use the analysis, remember that you will be deemed to have accepted a gift if it is given with your knowledge to a parent, sibling, spouse, child, or dependent relative and given because of that person's relationship with you.

Also, you will be determined to have accepted a gift if you designate a charity to which the gift is given.

There are four general gift rules:

1. Is it:
    1. a form of prohibited source?
    2. offered because of your official position?
2. Is it defined as a "gift"?
3. Is there an exception?
4. Is there a limitation on using the exception?

Equal Employment Opportunity

The Department of the Navy and the Naval Postgraduate School are committed to ensuring in both policy and practice that all persons are afforded equal opportunity for employment, advancement, and treatment regardless of race, color, sex, religion, national origin, age or disability. Equal Employment Opportunity (EEO) is promoted through a continuing Affirmative Employment Program in all situations where under-representation or under-utilization of minorities, women, and individuals with disabilities exist. This includes a work environment free from discrimination which provides equal opportunity for advancement to an individual's maximum potential, and fair and impartial review of complaints of discrimination. It also includes a work force free from sexual harassment by supervisors, colleagues, or subordinates (civilian or military).

The processing of discrimination complaints applies to both appropriated and non-appropriated fund employees of the Naval Postgraduate School and designated tenant activities. Complainants, their representatives or witnesses, EEO Counselors, and EEO program officials shall be free from restraint, interference, coercion, discrimination, or reprisal at any stage during the presentation and processing of a discrimination complaint, or any time thereafter.

Within the framework of the Equal Employment Opportunity Program there are two major divisions, the Discrimination Complaints Process and Affirmative Action which consists of the Special Emphasis Programs. The major goal of these programs is to identify barriers in the employment, advancement, and retention of that particular special emphasis area.

Special Emphasis Programs

- Federal Women's Program
- Hispanic Employment Program
- Black Employment Program
- Asian American/Pacific Islander/Native American Indian Program
- Handicapped/Disabled Veterans Program

The Superintendent of the Naval Postgraduate School is the Equal Employment Opportunity Officer and the Deputy Equal Employment Opportunity Officer is the technical advisor for the EEO Program and may be contacted for additional information in this area.

How Jobs are Classified

All new employees should have received a copy of their position description (PD).

The PD cover sheet includes the title, grade and series of the position as determined by the classification used that best describes work being done. In most cases these standards are based on the 9 Factor Evaluation System (FES) classification factors described below. Each factor is written at various levels that have been assigned points. The points provide the classifier with a means of determining the grade of the position.

Number 7 on the PD cover sheet documents the Fair Labor and Standards Act (FLSA) status of the position, (i.e., Exempt or Non-Exempt). If you are **non-exempt,** and you are required to work overtime, you will receive overtime pay for all hours worked over 40 hours per week, or 8 hours per day. If you are **exempt,** and work overtime you will receive overtime pay computed at the overtime rate of a GS-10 step 01. You may wish to work compensatory time in lieu of overtime.

Your PD will describe the following FES Factors:

Major duties and responsibilities:

- Factor 1 - Knowledge Required - describes the knowledge, skills, and abilities required for the position.
- Factor 2 - Supervisory Controls - Describes how the work is assigned, what the employee's responsibilities are for carry out the work, and how the work is reviewed.
- Factor 3 - Guidelines - Describes the guidelines available to you, and how much judgment is needed to use them.
- Factor 4 - Complexity - Describes the nature of the assignment, what the employee considers when deciding what must be done, and how difficult and original are the employee's actions or responses.
- Factor 5 - Scope and Effect - Describes the purpose of the wo4k, and the impact of the work product.
- Factor 6 - Personal Contacts - Covers the people contacted and the conditions under which the contacts take place.
- Factor 7 - Purpose of Contacts - Explains the purpose of the contacts described in Factor 6. Factor 6 and 7 presume that the same contacts will be evaluated for both factors.
- Factor 8 - Physical Demands - Describes the nature of physical demands placed on the employee.

- Factor 9 - Work Environment - Describes the physical surroundings in which the employee works and any special safety regulations or precautions that the employee must observe to avoid mishaps or discomfort.

Professional and clerical positions are written in FES format. However the classification standards are written in a narrative format, where the responsibilities are described at each grade level. In some cases there are bench-marks to describe the work performed such as positions in the financial series. These benchmarks resemble a written PD that has already been classified and may be used to classify a position that is essentially identical to the PD being classified.

DEPARTMENT OF THE NAVY
OFFICE OF THE SECRETARY
1000 NAVY PENTAGON
WASHINGTON, D.C. 20350-1000

DEC 13 2005

MEMORANDUM FOR DISTRIBUTION

Subj: GENERAL NOTICE OF DRUG TESTING FOR NEW EMPLOYEES UNDER DEPARTMENT OF THE NAVY DRUG-FREE WORKPLACE PROGRAM

On September 15, 1986, President Reagan signed Executive Order 12564 establishing the goal of a Drug-Free Federal Workplace. The Executive Order made it a condition of employment for all Federal employees to refrain from using illegal drugs on or off duty. The Department of the Navy (DON) Drug-Free Workplace Program (DFWP), developed to implement the Order, is designed to accomplish these goals through deterrence, identification, rehabilitation, and personnel action. While the DON will assist employees with drug problems, it must be recognized that employees who use illegal drugs are primarily responsible for changing their own behavior and actions.

Illegal drug use by any civilian employee of the DON is incompatible with the maintenance of high standards of conduct and performance. Moreover, illegal drug use could adversely affect personnel safety, risk damage to government and personal property, and significantly impair day-to-day operations. The DON program is aimed at identifying illegal drug users in order to maintain a safe, secure workplace and efficient DON operation.

The determination that an employee uses illegal drugs may be made on the basis of direct observation, a criminal conviction, the employee's own admission, other appropriate administrative determination or by a confirmed positive drug test. The program subjects all civilian appropriated and non-appropriated fund employees to drug testing under the following conditions:

a. When there is a reasonable suspicion that the employee uses illegal drugs.

b. As part of an authorized examination regarding an accident or unsafe practice.

c. As a part of or as a follow-up to counseling or rehabilitation for illegal drug use.

In addition, certain employees occupying specifically designated sensitive positions within the DON will be subject to random drug testing. These are called Testing Designated Positions (TDPs).

a. Employees in this category will receive individual written notices that their positions have been included in the activity random testing pool at least 30 days prior to actual testing.

b. Employees selected for, or otherwise placed in, a test-designated position will be subject to a drug test prior to final selection/placement and to random testing thereafter.

c. Any employee can volunteer for random testing and will be included in the activity random testing pool.

All employees subject to testing shall be allowed to provide urine specimens in private except when there is reason to believe the specimen will be altered or substituted. The DON has developed strict chain-of-custody procedures to ensure proper identification of the specimen tested.

All specimens will be tested in certified laboratories following mandatory guidelines published by the Department of Health and Human Services as published in the Federal Register. A Medical Review Officer (MRO) will review all positive, non-negative, and negative test results. Employees will be given an opportunity to provide evidence to a MRO for verification of the legitimate use of over-the-counter or prescription drugs authorized by a physician or medical officer.

Drug test results will be handled in a confidential manner. Non-negative test results from the laboratory will only be disclosed to a MRO. Non-negative results, verified by the MRO, may only be disclosed to the employee, the activity Drug Program Coordinator, the appropriate Civilian Employee Assistance Program (CEAP) Administrator and appropriate supervisory/management officials necessary to process an administrative and/or adverse action against the employee, or to a court of law or administrative tribunal in any adverse personnel action.

Medical and rehabilitation records in the CEAP will be deemed confidential "patient" records and may not be disclosed without the prior written consent of the patient, an authorizing court order or otherwise as permitted by federal law.

The DON will not tolerate the use of illegal drugs. Employees of the DON having a substance abuse problem are encouraged to seek assistance through their activity CEAP. Such assistance may be obtained by contacting the activity CEAP administrator. Employees who voluntarily identify themselves to their supervisor or other appropriate management official as a user of illegal drugs, prior to being so identified by other means and who seek counseling and/or rehabilitation assistance, will not be subject to disciplinary action for their prior drug use. This is referred to as safe harbor. It is

important to note that once an employee is officially informed of an impending drug test, the employee is no longer eligible for safe harbor.

All employees are expected to refrain from illegal drug use. Disciplinary action up to and including removal from Federal service will be initiated for the first failure to remain drug-free. Removal action will be initiated for any employee upon a second positive test result, failing to refrain from illegal drug use after counseling and/or rehabilitation, altering or substituting a specimen, failure to report for testing or refusal to submit to a drug test.

This updated General Notice supersedes the DON General Notice of the Navy DWFP initially published on August 6, 1988, and does not affect the ability of activities/commands to continue to conduct drug testing.

William A. Navas Jr.
Assistant Secretary of the Navy
(Manpower and Reserve Affairs)

Distribution:
Echelon I & II

Office of Human Resources
Naval Postgraduate School
New Employee Orientation

Conduct and Discipline

Conduct

As a government employee you are expected to adhere to basic rules of personal conduct, for example:

- Personal work of any kind is not permitted during duty hours.
- Gambling is prohibited on Navy property.
- Telephones are for official use only. Public phone booths are available for employees who need to make personal calls.
- Working or reporting for work while under the influence of drugs or alcohol is not permitted

In general, the rules governing your personal conduct on the job are no different from those of similar jobs in private industry. You are expected to do a fair day's work, carry out the orders of your supervisor, and properly care for government tools and equipment.

The Department of the Navy Bedrock Rules and Standards of Conduct are listed in this Orientation. You are expected to be aware and always comply with these rules.

Discipline

Infractions of rules, regulations and prescribed standards may result in disciplinary action. No disciplinary action will be taken until the circumstances have been thoroughly reviewed and a decision rendered by the responsible official. Employees against whom disciplinary action is taken have various grievance or appeal rights which are explained in detail at the time of the disciplinary action.

Grievances

Most problems involving employee job concerns or dissatisfactions are settled through discussion between the employee and his or her supervisor. For the rare situation in which dissatisfaction persists, procedures have been established whereby employees or groups of employees may carry their case to a higher authority for resolution. The Human Resources Office Human Relations Division will, upon request, provide information concerning these grievance procedures.

Performance Appraisals

Performance Evaluation

Employee development plans which outline your work expectations are formally established and presented to you within 30 days of your appointment to your new position to provide you with an opportunity to succeed and to encourage you to make a meaningful contribution towards the accomplishment of the mission. Depending on the nature of your appointment, your performance will be evaluated under one of the following performance appraisal systems:

Performance Feedback System (PFS).
Naval Postgraduate School and NSAMB employees on General Schedule (GS) and Federal Wage System (FWS) on appointments of 90 days or more.

Alternate Performance Appraisal System (APAS).
Fleet Numerical Meteorology and Oceanography Center (FNMOC) GS and FWS employees on appointments lasting 90 days or longer.

The Faculty Appraisal System (FPAS).
Faculty members appointed to positions lasting 120 days or longer.

Employee Awards

Incentive Awards

The Incentive Awards Program is intended to encourage all Department of the Navy employees to participate in the task of improving the efficiency and economy of its operations. At the Naval Postgraduate School your contributions may be awarded through a variety of recognition devices (e.g. time off, cash, peer recognition, and honorary awards).

Special Act or Service Award

You may be eligible to receive this type of cash award in recognition of a group or individual special act, service, or non-recurring contribution which goes significantly beyond the expected job performance.

On The Spot Award

Cash award ranging from $25 to $250, and an "On The Spot" Cash Award Certificate presented for exceeding job expectations (e.g. taking on an extra project, demonstrating excellence, showing initiative to improve ways of getting the job done, etc.).

Time Off Award

Employees are eligible to receive from 8 to 40 hours of time off in recognition of an act or service which significantly exceeds work expectations. Time Off Awards must be used within one calendar year of its effective date or prior to transfer, retirement, or resignation from the Naval Postgraduate School.

Peer Recognition Awards (aka, Extra MILES Award)

This award is given by one employee to another to personally thank employees and coworkers who demonstrate quality public service, commitment to improvement, and teamwork. Supervisors cannot nominate their own employees, and employees cannot nominate their supervisor. Further, an employee may not be recognized more than four times in a fiscal year. The award and process are available on the Safety Office web site.

Beneficial Suggestion and Invention Program

The Beneficial Suggestion and Invention Program recognizes employee proposals that directly increase economy, efficiency or effectiveness of Government operations.

Beneficial suggestions conserve time, supplies, and equipment, reduce paperwork, improve safety conditions, and otherwise directly contribute to increased productivity, decreased cost, or better service to the public. Adopted suggestions and inventions are ordinarily rewarded through cash awards. To submit a suggestion, use a beneficial suggestion form, available from the Human Resources Office.

Length Of Service Award

All civilian employees are eligible for this award. It is granted to employees to recognize all creditable federal service to include honorable military service. Employees will receive a length of service award after 10, 15, 20, 25, 30, 35, 40, 45 and 50 years of service. The award consists of a lapel pin and a certificate. Employees who complete 40 or more years of service, also receive a certificate signed by the Secretary of the Navy.

Honorary Awards

An Honorary Award may be granted in recognition of continued distinguished service, a single achievement, an act of personal heroism, or any other employee contribution. It may be granted independently of or as a supplement to a cash award.

Navy Distinguished Civilian Service Award (DCSA)

The DCSA is the highest honorary award the Secretary of the Navy can confer on a DON civilian employee. The DCSA is granted only to employees who have given distinguished and/or extraordinary services to the Department of the Navy. The achievements of service must be truly exceptional when measured against position requirements of the individual, and should far exceed the contributions and service of others with comparable responsibilities. The award consists of a citation signed by the Secretary of the Navy, a medal, rosette and lapel bar.

Navy Superior Civilian Service Award (SCSA)

The SCSA is the highest award granted at the major claimant level, and the second highest Navy civilian service award. It is given to recognize superior service or contributions resulting in exceptional value or benefits to the DON; however, contributions while exceptional in value, would be narrower in scope and/or impact than for the DCSA. The award consists of a certificate, citation , medal and lapel bar.

Navy Meritorious Civilian Service Award (MCSA)

The MCSA is the third highest Navy civilian award. It is granted by the local activity head to recognize service or contributions resulting in high value or benefit to DON but, unlike the SCSA or DCSA, the contribution may be limited in scope or impact to the activity level. The award consists of a certificate and citation signed by the activity head, medal and lapel emblem.

Certificate Of Recognition

This certificate may be presented to employees to provide honorary recognition for contributions furthering the achievements and prestige of the Command. It can be awarded for a contribution which does not meet the requirements for the MCSA or SCSA, but has significance meriting more public recognition than a letter of commendation.

New Employee Orientation

Local Labor Unions

The Naval Postgraduate School and NSAMB have granted the following two unions exclusive recognition for representation of civilian employees:

National Federation of Federal Employees, Local 1690. NFFE represents all non-professional General Schedule and Wage Grade employees of the Naval Postgraduate School (NPS), except fire fighters, guards, managers, supervisors, and casual hires -- appointments of not more than 90 days.

International Association of Fire Fighters, Local F-166. IAFF represents all NPS non-supervisory fire fighters.

You have the right to join or refrain from joining a union or other employee groups not subversive in character. Union officials can provide you with more information about these employee organizations:

The NFFE bulletin board is located in the basement of Herrmann Hall on the wall opposite the Navy Federal Credit Union. Current phone numbers, names of officers and stewards, as well as other information is maintained by NFFE.

Information about the Fire Fighters Local F-166 is available at the Fire Department.

Weingarten Rule
Right to Representation

In accordance with Title VII, Section 7114, of the Civil Service Reform Act of 1978, employees represented by the exclusive bargaining unit are informed that:

"An exclusive representative of an appropriate unit in an agency shall be given the opportunity to be represented at any examination of an employee in the unit by a representative of the agency in connection with an investigation if the employee reasonably believes that the examination may result in disciplinary action against the employee; and the employee requests representation."

Wellness Program

This program is designed to encourage a healthy civilian workforce, which is essential to the successful accomplishment of the Naval Postgraduate School mission. NPS wants every employee to have the opportunity to actively seek and sustain good physical and mental health. In recognition of the personal commitment many civilians are making in pursuit of a healthier existence, supervisors and managers are encouraged to support that initiative by matching the employee's personal time investment with limited excused absence. The Wellness Program offers health education training, as well as encourages employees to develop and participate in individual wellness regimens.

Gifts - Prohibited Sources

An employee shall not solicit or accept any gift or other item of monetary value:

- from a prohibited source; or
- given because of the employee's official position.

United states Code 7353 prohibits employees from soliciting or accepting anything of value from a prohibited source.

Even if the donor is not a prohibited source, you are not allowed to accept a gift that is offered because of your official position (e.g., a gift to the DoD liaison to the Retired Officer's Association from the Association).

Prohibited Sources:

Any person:

1. Seeking official action from, doing business with, or conducting activities regulated by, the individual's employing agency; or
2. Whose interest may be substantially affected by the performance or nonperformance of the individual's official duties.

A "prohibited source" is an entity (or an entity with a majority of its member who):

- seeks official action from your agency (e.g., the Boy Scouts, the USO, or the Red Cross)
- does business or seeks to do business with your agency (e.g., defense contractor)
- conducts activities regulated by your agency (e.g., if you work for the Corps of Engineers, then any entity that wants to drain wet lands)
- has interest that may be substantially affected by your performance or nonperformance of official duties (e.g., if you are a procurement officer, then the contractor you deal with; if you are a personnel officer, then outside associations for employees)

Information Covered By Your Supervisor

The following information will be covered by your supervisor:

- Work unit policy on occupational safety and health.
- Awareness of hazards common to the individual's worksite, trade, occupation, or task.
- Specific hazards of chemicals/materials used in the workplace.
- Personal protective equipment requirements for the job.

NOTE: Appropriate training must be provided prior to an employee working with HM/ HW. The NPS HAZCOM instruction will be reviewed with the employee through Safety Stand Down meeting / formal training.

Local OSH Policy Statement :

The policy statement has been issued by the Superintendent of NPS and reflects the commitment to Occupational Safety and Health (OSH) and to programs which prevent or minimize occupational mishaps. The policy statements were distributed to all personnel, and posted on all official bulletin boards.

The policy statements share:

- Maintenance of a staffed OSH Office
- Clear lines of accountability for all personnel concerning their obligations and personal responsibilities to the OSH Program
- Performance evaluations consistent with the duties of the position and with appropriate recognition of superior performance or conversely deficient performance, as appropriate
- Compliance with the occupational mishap reporting procedures
- Inspection of all workplaces at least annually and more frequently based on the level of risk
- Maintenance of the Hazard Abatement Plan (HAP), which include quarterly reviews by the Admiral
- Protection of all personnel from coercion, discrimination, or reprisals for participation in the NAVOSH Program
- Access to exposure and medical records for employees and their representatives
- Equal opportunity to NAVOSH education and training programs

For any questions please contact Michael Berry at extension 2822 or Email.

Individual Responsability for Safety and Health

It is important that you understand your responsibilities in the workplace. They include:

- Participating in on-the-job training programs
- Using required Personal Protective Equipment (PPE), when appropriate
- Practicing good housekeeping
- Informing supervisors of safety and health problems (informal or Employee Report of Unsafe / Unhealthful Working Conditions)
- Being alert for job hazards
- Attend required Safety Briefings

It is the responsibility of all civilian and military personnel to understand and comply with NAVOSH standards and all applicable rules regulations, and orders issued under OPNAVINST 5100.23E.

Violators of NAVOSH regulations or instructions are subject to disciplinary action prescribed in the Civilian Personnel Instruction (CPI) 752, Department of Navy Adverse Actions (NOTAL) or the Uniform Code of Military Justice (Captian's Mast).

Such actions shall also be considered in personnel performance evaluations.

Navy Employee Report of Unsafe and Unhealthy Working Conditions

"The employee has the right to decline a task because of a reasonable belief that there is an imminent risk of death and insufficient time for hazard reporting and abatement actions. " (OPNAVINST 5100.23E, CHAPTER 10)

Identification and reporting of unsafe or unhealthful working conditions is the responsibility of ALL Navy employees, both military and civilian. Since many conditions can be eliminated as soon as they are identified, an effective channel of oral and written communications is imperative in the development of a sound NAVOSH program.

All navy employees are encouraged to orally report unsafe or unhealthful working conditions to their immediate supervisor who shall promptly investigate the situation and take appropriate actions.

The supervisor (or employee) will use the Navy Employee Report of Unsafe and Unhealthful Working Condition form (OPNAV 5100/11) or the on-line form to report said conditions to the Safety Office, Code 223.

The supervisor shall keep the reporting employee informed of all actions taken.

Upon receipt of a hazard report, the Safety Office shall log in the report, contact the originator by telephone or E-mail to acknowledge receipt, and discuss the seriousness of the reported hazard.

The Safety Office shall investigate all reports brought to its attention. Alleged imminent danger situations shall be investigated within 24 hours. Potentially serious situations shall be investigated within 3 working days. If the situation involves a health hazard, the Safety Office shall refer the report to the cognizant medical activity for investigation.

The Safety Office shall provide an interim or complete response in writing to the originator of the written report within 10 working days of the receipt.

For further information please contact Martin Catanese at extension 3317 or on E-mail.

Local Occupational Health Program

How to obtain occupational medical assistance:
In case of an injury or illness that is serious in nature, phone 911 or 2333 for immediate help from the Fire Department.

Required routine medical evaluations:
Prior to or during your processing into employment here at NPS, the Human Resources Office (HRO) informs the Safety Office that new employees will be coming onboard.

Certain job classifications are required to be enrolled into the appropriate medical surveillance program(s) for that job. (Public Works, laboratory staff, etc.)

Your supervisor is responsible to ask the medical surveillance program manager (Michele Jay in the Safety Office; #2475) to ensure that you are enrolled in the program and appointments are made to the NPS medical provider.

Mishap Reporting: Procedures to follow in case of occupational illness or injury.
Mishaps that result in damage to Navy facilities and equipment or occupational deaths, injury, and illnesses to Navy personnel degrade operational readiness and increase operational costs.

Investigation of such mishaps to identify causes and preventive actions, and establishing accurate record keeping, are essential to the success of the Navy Occupational Safety and Health (NAVOSH) Program.

Mishap investigations are aimed at determining how and why an event occurred and prevention of future occurrences of similar events.

Accurate records are necessary to establish trends, conduct analysis, and to assess the effectiveness of the overall NAVOSH Program.

Currently at NPS, we use OPNAVINST 5100.23E (Chapter 14: MISHAP INVESTIGATION, REPORTING, AND RECORDKEEPING) as our guidance document. This chapter applies to shore on-duty Navy personnel and Navy shore operational mishaps.

When an accident occurs, an immediate telephonic notification must be made to the Occupational Safety & Health Office, Ext. 2822. A completed original NPS 5102/2 form must be received in our office within 10 working days of any reportable mishap. The Safety Office will also want copies of the Human Resources Office forms (CA-1, CA-2, CA-16), within 5 working days of the

mishap.

Reproductive Hazards

Navy policy is to provide safe and healthful working conditions for all employees which will not damage or affect their fertility or offspring. A reproductive hazard is defined as any occupational stressor (biological, chemical, or physical) that has the potential to adversely affect the human reproductive process.

The goal is to keep exposures to all reproductive chemical stressors "As Low As Reasonably Achievable" {ALARA}. No one shall be denied employment due to potential exposure to reproductive hazards/stressors. Furthermore, administrative controls implemented to minimize exposure to reproductive hazards, shall not result in reduction of pay or promotion potential. The OSH office shall refer all employee questions regarding pregnancy employment issues to the human resources office.

Control of Reproductive Hazards in the Workplace

Personnel are encouraged to inform supervisors as soon as possible that they are pregnant and to complete a questionnaire (obtainable from their supervisor or the Safety Office), with OSH assistance, if needed, and submit it to the medical clinic. The occupational health professionals provide evaluation and recommendations, and you may use the questionnaire in consultation with your private physician.

Supervisors

Supply Officer shall identify products currently in Navy use at this facility; the Safety Office and the IH shall identify and evaluate physical and biological reproductive hazard stressors and provide guidance to all departments at NPS/TENANT COMMANDS

All Departments shall supply the Safety Office any and all information about potential Hazardous Materials that the departments want to bring to NPS/TENANT COMMANDS before the material is purchased or samples are given.

Responsabilities

Employees are encouraged to:

- Inform supervisors as soon as possible that they are pregnant
- Completely fill out the questionnaire contained in this section and return it to the occupational health professionals for evaluation and recommendation
- Consultation with their private physicians
- Follow the recommendations provided by Navy occupational health professionals.

Federal Personnel Manual, SubChapter 13, Article 13-5, paragraph a.(2)

Agencies should always be aware of working conditions or strenuous requirements in the workplace that could have an adverse effect on an expectant mother. If, after consulting her doctor, an employee asks for a change in duties or assignment, every reasonable effort should be made to accommodate her. Agencies may request medical certification of the nature of the limitations recommended by the employee's doctor. Sick leave may also be used for physical examinations.

Pregnancy Employment Policies and Questions/Answers

- **If, for pregnancy-related reasons, an employee is unable to perform the functions of her job, does the employer have to provide her an alternative job?**
    - An employer is required to treat an employee temporarily unable to perform the functions of her job because of her pregnancy-related condition in the same manner as it treats other temporarily disabled employees, whether by providing modified tasks, alternative assignments, disability leaves, leaves without pay, etc. For example, a woman's primary job function may be the operation of a machine, and, incidental to that function, she may carry materials to and from the machine. If other employees temporarily unable to lift are relieved of these function, pregnant employees also unable to lift must be temporarily relieved of the function.
- **What procedures may an employer use to determine whether to place on leave as unable to work a pregnant employee who claims she is able to work or deny leave to a pregnant employee who claims that she is disabled from work?**
    - An employer may not single out pregnancy-related conditions for special procedures for determining an employee's ability to work. For example, if an employer requires its employees to submit a doctor's statement concerning their inability to work before granting leave or paying sick benefits, the employer may require employees affected by pregnancy-related conditions to submit such statement. Similarly, if an employer allows its employees to obtain doctor's statements from the personal physicians for absences due to other disabilities or return dates from other disabilities, it must accept doctor's statements from personal physicians for absences and return dates connected with pregnancy-related disabilities.
- **Can an employer have a rule which prohibits an employee from returning to work for a predetermined length of time after childbirth?**
    - **No.**
- **If an employee has been absent from work as a result of a pregnancy-related condition and recovers, may her employer require her to remain on leave until after her baby is born?**
    - No. An employee must be permitted to work at all times during pregnancy when she is able to perform her job.
- **Must an employer hold open the job of an employee who is absent on leave because she is temporarily disabled by pregnancy-related conditions?**
    - Unless the employee on leave has informed the employer that she does not intend to return to work, her job must be held open for her return on the same basis as jobs are held open for employees on sick or disability leave for other reasons.

- **Must an employer hire a woman who is medically unable, because of pregnancy-related conditions, to perform a necessary function of a job?**
  - An employer cannot refuse to hire a woman because of her pregnancy-related condition so long as she is able to perform the major functions necessary to the job. Nor can an employer refuse to hire her because of its preferences against pregnant workers or the preferences of co-workers, clients, or customers.

Basic Element of the HAZMAT inst. & Health Hazards Associated with "common use" products

Many personnel routinely use a wide range of HM during daily operations. This instruction provides guidelines to prevent improper handling, storage, or disposal of these materials which could result in personal injury, death, or environmental destruction. NPS is required to comply with the detailed federal and state regulations, and is subject to inspection by local (Monterey County Health Department), state (California Toxic Substance Control Board), and federal EPA. Personnel who willfully violate statutes governing the proper use and disposal of Hazardous Material or Hazardous Waste (HW) may be held liable for their actions; penalties of up to $50,000 and 2 years in prison may be imposed.

The HAZMAT instruction (NAVPGSCOLINST 4110.1A) covers information from the Occupational Safety and Health Administration (OSHA), the Environmental Protection Agency (EPA), Department Of Transportation (DOT), the California Code of Regulations (CCR), and the Navy Occupational Safety and Health Program Manual (NAVOSH).

Purpose: To promulgate policies and procedures for the acquisition, handling, awareness, storage, disposal and life-cycle control of hazardous material (HM) acquired and used by NPS/NSAMB/Tenant Commands.

This instruction applies to is NPS and tenant commands. It defines various terms used in conjunction with HM or HW and how those materials will be handled. It also identifies who is in charge of the program at various responsibility levels and what their duties are. It explains about Departmental Authorized Use Lists (DAUL), Material Safety Data Sheets (MSDS) and the NPS Unique Identifier for materials that are ordered for each department. It also contains information concerning Spill Plans, Record Keeping and Reporting, and Training.

"Right to Know"
Hazardous Material Control & Management (HMC & M) manual (4110.1A) - Ref: (a) OPNAVINST 5100.23D

1. Reference (a), CHAPTER 7, 0702., e., The safe use of Hazardous Material, (6) Identify and establish specific HAZCOM training requirements for routine and non- routine Hazardous Material (HM) uses based upon assessments of HM use, prevailing conditions for use, and availability of HM controls, i.e., authorized HM use. In other words, the end user of a HM has a "Right-To-Know" how to store, use, and dispose of the product properly.
2. Found in the following pages, is an example of items that are found on the Exempt Authorized List (EAL), "LIST OF PRODUCTS EXEMPT FROM HMC & M PROGRAM REQUIREMENTS", then follows,"HAZARDS UNIQUE TO OFFICE PRODUCTS", gives generic hazard awareness about these products.
3. If you have need of Material Safety Data Sheet(s) for these specific products, you should contact the Supply department or your departmental Hazardous Materail Program Manager.

List of Products Exempt from HMC & M Program Requirements	
Toner Cartridges	All types are exempt ONLY if quantities stored do not exceed two backups per printer per department AND if all empties are turned in for recycling. **DO NOT THROW AWAY!** A list of quantity purchased / turned in for recycling will be requested FROM THE DEPARTMENTS ANNUALLY to allow for accurate reporting in respect to the Hazard Minimization Standard requirements. (CHEMICAL ACCOUNTING)
"White Out", correction fluid	Exempt if used / stored in quantities less than 1 gallon total per department.
Furniture polish	Exempt if used / stored in quantities less than 1 gallon total per department
Ink pad inks	Exempt if used / stored in quantities less than 2 pints total per department.
White board cleaner	Exempt if used / stored in quantities less than 2 gallons total per department.
Batteries	(other than Mercury batteries) Exempt ONLY if expended batteries are turned into Code N3E. DO NOT THROW AWAY!, unless battery is "alkaline". Alkaline batteries may be discarded into normal trash. A list of quantity-types of batteries purchased / turned in for recycling will be requested FROM THE DEPARTMENTS ANNUALLY to allow for accurate reporting in respect to the Hazard Minimization Standard requirements. (CHEMICAL ACCOUNTING) **Do not store Lithium or Nickel Cadmium batteries in refrigerator.**
Mercury batteries	No exemption
Fax machine toner	Exempt if used / stored quantities do not exceed 3 backup cartridges per fax machine per department.
Glass cleaner	All types exempt if used / stored in quantities do not exceed 2 gallons total per department.
Film for cameras	All types exempt; Instant, 35mm, 125 mm, etc.

HEALTH HAZARDS UNIQUE TO OFFICE PRODUCTS
Routes of exposure: Inhalation, Ingestion, Skin: contact - absorption, Eye

Toner Cartridges (including fax)	Toner is finely divided solid. Do not breathe the dust. Remove to fresh air if any effects occur. No specific hazard is known concerning eye contact, but, any material contacting the eye may be irritating. Flush eyes with plenty of water (15 min. normally) and seek medical treatment. Wash skin with soap and water. No special controls required for storage or use under normal conditions. Clean up with a vacuum cleaner.
"White Out", correction fluid	White or colored fluid with a pungent solvent odor. The product is non-hazardous when used as directed in an office / room with normal air circulation. There are not any anticipated health effects under foreseeable use conditions. Irritation to the skin may occur if contact is prolonged / repeated. Solvents can be absorbed through the skin during prolonged contact, but not likely to happen in short term contact. Wash with soap and water. Eye contact, flush with plenty of water. If irritation persists obtain medical attention. Ingestion; consult a physician.
Furniture polish	Opaque, viscous liquid or spray pleasantly scented. May cause eye irritation. Flush with water and call physician if irritation persists. May cause skin irritation upon prolonged contact. HARMFUL OR FATAL IF SWALLOWED; ASPIRATION OF LIQUID MAY CAUSE CHEMICAL PNEUMONITIS. Store in a dry cool area. Keep from freezing. KEEP OUT OF REACH OF CHILDREN. Read entire label before using.

Ink pad inks	Water soluble material to be cleaned at once. Will cause staining in very high concentration. Wash with soap and water; Drink several glasses of water if ingested.
White board cleaner	Cloudy aqueous solution with a slight sweet aroma. Soluble in water. Keep product out of sewer, watershed, and water system. Use chemical absorbent for large spills. Can cause moderate to severe irritation to the eyes. Flush eyes with water for at least 15 minutes; get medical attention. Amounts ingested incidental to normal use are not likely to cause injury, however, large amounts ingested may cause injury up to death in extreme cases. Do not induce vomiting. Get medical attention immediately. Inhalation of large amounts of concentrated vapor may irritate the nose and throat. Remove person to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Get medical attention. Wash skin with soap and water while removing contaminated clothing (large spill on to a person).
Batteries *(other than Mercury batteries*)	Normally batteries are non-hazardous to the user, except when they leak. In general, if contact is made with the skin, wash throughly. Eye contact, flush eyes with water for at least 15 minutes and see a physician Clean up of a LITHIUM battery spill should be neutralized with a solution of soda ash (phone HAZMAT or the Fire Department for help). For battery leakers, use neoprene, rubber, latex-nitrile gloves. In the event of an accident or burning batteries, exit the area and notify the Fire Dept.
Glass cleaner	There are many differences between manufactures formulas. Some have ammonia, others use alcohol. Some are clear liquid, others are blue, green, etc. They may have a perfumed smell, or hospital smell. Used under normal conditions, no adverse effects are expected. OVEREXPOSURE: May cause eye irritation. Flush with water. If irritation persists, seek medical attention. May cause drowsiness or dizziness. Remove person to fresh air; If breathing has stopped, administer CPR and seek medical attention. May cause nausea if ingested. Contact the hospital, poison control center, or the Fire Dept. for directions concerning **Emergency and First Aid procedures** about ingestion.
Film for cameras	Used as directed, no adverse effects expected.

Report an occupational exposure of reproductive concern please fill out this form.

MEMORANDUM

From: Deputy Equal Employment Opportunity Officer
To: All supervisors and managers

Subj: NEW GUIDANCE ON RELIGIOUS EXERCISE AND RELIGIOUS EXPRESSION IN THE WORKPLACE

Ref: (a) Office of the Press Secretary, White House, Guidance dtd August 14, 1997

Encl: (1) Policy Guidance #2, Religious Exercise and Religious Expression in the Workplace.

1. On August 14, 1997, President Clinton unveiled new executive guidelines aim at protecting religious expression in the federal workplace, provided that it does not conflict with an employee's work. Enclosure (1) provides policy guidance for all civilian federal employees on Religious Exercise and Expression in the workplace.

2. Should you have any questions pertaining to enclosure (1) please feel free to contact me at extension 2480 or by Email (DBaity).

DEBORAH A. BAITY

Policy Guidance #2: Religious Exercise and Religious Expression in the Workplace

1. Background. On August 14, 1997, President Clinton unveiled new executive guidelines aimed at protecting religious expression in the federal workplace, provided that it does not conflict with an employee's work. The guidelines were issued to clarify and reinforce the right of religious expression in the federal workplace. It will also ensure that federal employees and employers will respect the rights of those who engage in religious speech as well as those who do not.

2. Scope. This guidance applies to civilian federal employees only. Uniformed military

personnel are exempted from the guidelines because they have a "different set of concerns and obligations."

3. Discussion. This guidance specifically addresses an employee's religious exercise and religious expression when the employees are acting in their personal capacity within the federal workplace. These guidelines do not address whether and when the government and its employees may engage in religious speech directed at the public. This policy guidance should provide answers to frequent questions in the workplace. Actual cases will be reviewed on an individual basis based on facts and circumstances.

4. Policy. Departments must permit personal religious expression by its federal employees to the greatest extent possible. They will not discriminate against employees on the basis of religion, require religious participation or non-participation as a condition of employment, or permit religious harassment. Managers and supervisors must treat all employees with the same respect and consideration, regardless of their religion (or lack thereof).

a. Religious Expression.

(1) Agencies will not restrict personal religious expression by employees in the federal workplace except where the employee's interest in the expression is outweighed by the government's interest in promoting the efficiency of public service, or, where the expression intrudes upon the legitimate rights of other employees or creates the appearance, of an official endorsement of the religion.

(2) Agencies may regulate the time, place and manner of all employee speech, provided it does not discriminate on the basis of content or viewpoint. Agencies are not required, however, to permit employees to use work time to pursue religious or ideological agendas.

(3) Expression in Private Work Areas. Employees should be permitted to engage in private religious expression in personal work areas not regularly open to the public. This is to the same extent that they may engage in non-religious private expressions, subject to reasonable content and viewpoint. This religious expression must be permitted as long as it does not interfere with the agency's carrying out of its official responsibilities.

(4) Expression Among Fellow Employees. Employees can be permitted to engage in religious expression with fellow employees subject to reasonable and content-neutral standards and restriction. This expression should not be restricted as long as it does not interfere with the workplace disruption and efficiency. Employees may not display religious messages on items that convey any governmental endorsement of religion or suppression of another group.

(5) Expression Directed at Fellow Employees. Employees are permitted to engage in religious expression directed at fellow employees, and may even attempt to persuade fellow employees of the correctness of their religious views. Some religions encourage adherents to spread the faith at every opportunity, a duty that can encompass the adherent's workplace. They are entitle to do this as long as a reasonable observer would not interpret the expression as government endorsement of the religion and it does not interfere with workplace efficiency. Employees must refrain from such expressions when a fellow employee asks that it stop or otherwise demonstrates that it is unwelcome.

(6) Expression in Areas Accessible to the Public. When the public has access to the federal workplace, all federal employees must be sensitive to the Establishment Clause requirement that states expression not create the reasonable impression that the government is sponsoring, endorsing, or inhibiting religion generally, or favoring or disfavoring a particular religion. Displaying of religious art and literature in personal work areas subject to the public can be displayed, so long as the viewing public would reasonably understand the religious expression to be that of the employee acting in their personal capacity, and not that of the government.

b. Religious Discrimination. Federal agencies may not discriminate against employees on the basis of their religion, religious beliefs, or views concerning religion.

(1) Discrimination in Terms and Conditions. No employee may promote, refuse to promote, hire, refuse to hire, or otherwise favor or disfavor an employee or potential employee because of his or her religion, religious beliefs, or views concerning religion.

(2) Coercion of Employees Participation or Non-participation in Religious Activities. A supervisor may not explicitly or implicitly insist that the employee participate in religious activities as a condition of continued employment, promotion, salary increases, preferred job assignments, or any other incidents of employment nor may a supervisor insist that an employee refrain from participating in religious activities outside the workplace, except where otherwise legal. A supervisor is free to express their views and engage in some kinds of speech about religion as long as it is understood it is his or her personal view. Because a supervisor has the power to hire, fire, or promote, employees may reasonably perceive their supervisor's religious expression as coercive even if not intended by such. Therefore, supervisors need to be careful of their expressions and that it is not perceived as coercion.

(3) Hostile Work Environment and Harassment. The law against workplace discrimination protects employees from being subjected to a hostile environment or religious harassment, in the form of religiously discriminatory intimidation, or pervasive or severe religious ridicule or insult, whether by supervisors or fellow workers. Religious harassment based on hostile work environment will depend on the frequency or repetiveness, as well as its severity. Employees should always be guided by general principles of civility and workplace efficiency. A hostile environment is not created by the bare expression of speech with which some employees might disagree.

c. Accommodation of Religious Exercise. Federal law requires an agency to accommodate employees' exercise of their religion unless such accommodation would impose an undue hardship on the conduct of the agency's operations. The accommodation should be made unless it would cause an actual cost to the agency or to other employees or an actual disruption of work, or unless it is otherwise barred by law. If the agency's work rule imposes a substantial burden on a particular employee's exercise of religion, the agency must go further; an agency should grant the employee an exemption from the rule, unless the agency has a compelling interest in denying the exemption and there is no less restrictive means of furthering that interest.

d. Establishment of Religion. Supervisors and employees must not engage in activities or expression that a reasonable observer would interpret as Government endorsement or denigration of religion or a particular religion.

DO's and DON'Ts

Employees May/Can	Agencies May Not/Cannot
1. Keep a Bible or Koran on their private desk and read it during breaks.	1. Restrict all posters or posters of a certain size, in private work areas, or require that such posters be displayed facing the employee.
2. Engage in private religious expression in personal work areas.	2. Restrict religious expression as long as it does not interfere with workplace efficiency.
3. Discuss their religious views with one another in the cafeteria and hallways.	3. Refuse to hire Buddhist or impose more onerous requirements on applicants for employment.
4. Display religious messages on items of clothing to the same extent as they are permitted to display other comparable	4. Impose, explicitly or implicitly, stricter promotion requirements based on their religion.
5. Wear religious medallions over their clothes, yarmulke, head scarf or hyob, etc.	5. Impose more onerous work requirements on an employee because the supervisor does not share the employee religious beliefs.

6. Urge a colleague to participate in religious activities, or to refrain from other personal endeavors.	
7. Display religious art and literature.	

Examples of Religious Exercise and Religious Expression

Private Work Areas:

- **An employee may keep a Bible or Koran on their private desk and read it during breaks.**
- **An agency may restrict all posters, or posters of a certain size in private work areas, or require the posters be displayed facing the employee, and not on common walls.**

Fellow Employees:

- **In informal settings, such as cafeterias and hallways, employees are entitled to discuss their religious views with one another, subject only to the same rules of order as apply to other employee expression.**
- **Are entitled to display religious messages on items of clothing to the same extent that they are permitted to display other comparable messages.**
- **May wear religious medallions over their clothes or so that they are otherwise visible. Typically, this alone will not affect workplace efficiency, and therefore is protected.**
- **During a coffee break, one employee engages another in a polite discussion of why his faith should be embraced. The other employee disagree with the first employee's religious exhortations, but does not ask that the conversation stop. Under these circumstances, agencies should not restrict or interfere with such speech.**
- **One employee invites another employee to attend worship services at her church, though she knows that the invitee is a devout adherent of another faith. The invitee is shocked, and asks that the invitation not be repeated. The original invitation is protected, but the employee should honor the request that no further invitations be issued.**
- **A supervisor who is an atheist has made it known that he thinks that anyone who attends church regularly should not be trusted with the public weal. Over a period of years, the supervisory regularly awards merit increases to employees who do not attend church routinely, but not to employees of equal merit who do attend church. This course of conduct would reasonably be perceived as coercive and should be prohibited.**
- **At a lunch table discussion about abortion, during which a wide range of views are vigorously expressed, a supervisor shares with those he supervises his belief that God demands full respect for unborn life, and that he believes it is appropriate for all persons to pray for the unborn. Another supervisor expresses the view that abortion should be kept legal because God teaches that women must have control over their own bodies. Without more, neither of these comments coerces employees' religious conformity or conduct. Therefore,**

unless the supervisors take further steps to coerce agreement with their view or act in ways that could reasonably be perceived as coercive, their expressions are protected in the Federal workplace in the same way and to the same extent as other constitutionally valued speech.

Hostile Work Environment and Harassment:

- **An employee repeatedly makes derogatory remarks to other employees with whom she is assigned to work about their faith or lack of faith. This typically will constitute religious harassment**
- **A group of employees subjects a fellow employee to a barrage of comments about his sex life, knowing that the targeted employee would be discomforted and offended by such comments because of his religious beliefs.**
- **A group of employees that share a common faith decides that they want to work exclusively with people who share their views. They engage in a pattern of verbal attacks on other employees who do not share their views, calling them heathens, sinners, and the like. This conduct should not be tolerated.**
- **Two employees have an angry exchange of words. In the heat of the moment, one makes a derogatory comment about the other's religion. When tempers cool, no more is said. Unless the words are sufficiently severe or pervasive to alter the conditions of the insulted employee's employment or create an abusive working environment, this is not statutory religious harassment.**
- **Employees may wear religious jewelry and medallions over their clothes or so that they are otherwise visible. Others wear buttons with a generalized religious or anti-religious message. Typically, these expressions are personal and do not alone constitute religious harassment.**
- **In her private work area, a Federal worker keeps a Bible or Koran on her private desk reads it during breaks. Another employee displays a picture of Jesus and the text of the Lord's Prayer in her private work area. This conduct, without more, is not religious harassment, and does not create an impermissible hostile environment with respect to employees who do not share those religious views, even if they are upset or offended by the conduct.**
- **During lunch, certain employees gather on their own time for prayer and Bible study in an empty conference room that employees are generally free to use on a first-come, first-served basis. Such a gathering does not constitute religious harassment even if other employees with different views on how to pray might feel excluded or ask that the group be disbanded.**

Accommodation of Religious Exercise:

- **An agency must adjust work schedules to accommodate an employee's religious observance. For example, Sabbath or religious holiday observance, if an adequate substitute is available, or if the employee's absence would not otherwise impose an undue burden on the agency.**
- **An employee must be permitted to wear religious garb, such as a crucifix, a yarmulke, or a head scarf or hijab, if wearing such attire during the work day is part of the employee's religious practice or expression, so long as the wearing of such garb does not unduly interfere with the functioning of the workplace.**
- **An employee should be excused from a particular assignment if performance of that assignment would contravene the employee's religious beliefs and the agency would not suffer undue hardship in reassigning the employee to another**

detail.

- **A corrections officer whose religion compels him or her to wear long hair should be granted an exemption from an otherwise generally applicable hair-length policy unless denial of an exemption is the least restrictive means of preservingving safety, security, discipline or other compelling interests.**
- **An applicant for employment in a governmental agency who is a Jehovah's Witness should not be compelled, contrary to her religious beliefs, to take a loyalty oath whose form is religiously objectionable.**

Establishment of Religion:

- **At the conclusion of each weekly staff meeting and before anyone leaves the room, an employee leads a prayer in which nearly all employees participate. All employees are required to attend the weekly meeting. The supervisor neither explicitly recognizes the prayer. This course of conduct is not permitted unless under all the circumstances a reasonable observer would conclude that the prayer was not officially endorsed.**

HUMAN RESOURCES AND
EQUAL EMPLOYMENT OPPORTUNITY OFFICE
NAVAL POSTGRADUATE SCHOOL
MONTEREY, CALIFORNIA

3 February 1998

MEMORANDUM

From: Deputy Equal Employment Opportunity Officer
To: All supervisors and managers

Subj: "SPEAK ENGLISH ONLY" RULE

Ref: (a) 29 CFR 1606

Encl: (1) Policy Guidance #4, "Speaking English Only" Rule.

1. Enclosure (1) contains guidance on requirements for employees to speak English in the workplace.

2. Should you have any questions pertaining to enclosure (1) please feel free to contact me at extension 2480 or by Email.

POLICY GUIDANCE #4: "SPEAK ENGLISH ONLY" RULE

1. **Background: An important part of a person's national origin is often their native language. It is not unexpected that people who have learned English as a second language are extremely fluent in English, will at times revert to their native language. When a department imposes a policy that requires employees to speak English at all times in the workplace, the rule is subject to extreme scrutiny. An employer must always provide a business justification for such a rule.**
2. **Scope: This guidance applies to civilian employees of Naval Postgraduate School, Naval Support Activity Monterey Bay, and tenant commands.**
3. **Discussion: Prohibiting employees at all times, in the workplace, from speaking their primary language or language they speak most comfortably, disadvantages an individual=s employment opportunities on the basis of national origin. The EEO Commission presumes that such a rule violates Title VII. An agency may have a rule requiring that employees speak only in English at certain times where the agency can show that the rule is justified by business necessity. If the agency**

believes it has a business necessity for a Speak-English-only rule at certain times, the supervisor should inform its employees of the general circumstances when speaking English only is required and of the consequences of violating the rule.

Where an employee whose primary or first language is not English establishes that the agency has a Speak-English-Only rule in effect at all times, this will constitute a prima facie case of national origin discrimination. Where the "Speak English Only" rule permits the use of a foreign language during breaks and lunchtime, it will not automatically be found burdensome but will be closely scrutinized under the business necessity justification. The business purpose must be sufficiently compelling to override any racial impact; the challenged practice must effectively carry out the business purpose it is alleged to serve; and there must be available no acceptable alternative policy or practice which better accomplishes the business purpose.

4. **Guidance: The following guidance is provided in accordance with 29 CFR 1606.7:**
    1. **When Speak-English-only rule applies at all times. A rule requiring employees to speak only English at all times in the workplace is a burdensome term and condition of employment. The primary language of an individual is often an essential national origin characteristic. Prohibiting employees at all times, in the workplace, from speaking their primary language or the language they speak most comfortably, disadvantages an individual's employment opportunities on the basis of national origin. It may also creates an atmosphere of inferiority, isolation and intimidation based on national origin which could result in a discriminatory working environment. The EEO Commission will presume that this rule violates Title VII and will closely scrutinize it.**
    2. **When Speak-English-only rule applied at certain times. A department may have a rule requiring that employees speak only in English at certain times where the employer can show that the rule is justified by business necessity.**
    3. **Notice of the Speak-English-only rule. It is common for individuals whose primary language is not English to inadvertently change from English to speaking their primary language. Therefore, if an employer believes it has a business necessity for a speak-English-only rule at certain times, the employer should inform its employees of the general circumstances when speaking only in English is required and of the consequences of violating the rule. If an employer fails to effectively notify its employees of the rule and makes an adverse employment decision against an individual based on a violation of the rule, the EEO Commission will consider the employer's application of the rule as evidence of discrimination on the basis of national origin.**
    4. **In accordance with OPNAVINST 5354.1D Section VIII 1.b. :**
        1. **Commanding Officers are responsible for promoting the morale, discipline, and effectiveness of all assigned personnel. They must ensure that all personnel can safely and effectively carry out all assigned duties. Clear and effective communication among all personnel in the command will not only enhance operational effectiveness, but also foster unit morale and cohesion. Effective communication within a department depends on smooth, orderly, and constant flow of information that is received, understood, and accepted by all.**
        2. **Commanding Officers may issue a written oral order that only English may be spoken in the workplace. It must be clear that the purpose of**

such an order is to foster uniformity of action and operations within the workplace.

3. **Policy. If your department wants to implement a Speak-English-only rule, the following procedure must be applied:**
    1. **The department must document the policy in writing and route the memorandum through the appropriate line manager for approval. This policy can only be based on business necessity and must be specified in the memorandum.**
    2. **This policy will not be officially implemented until the Deputy EEO Officer and the appropriate union officials and Commanding Officers has reviewed and approved the guidance.**
    3. **Upon approval, a copy of the policy will be distributed to all employees within the department.**

Employee Assistance Program

The EAP is a professional counseling and referral service designed to help you with your problems on and off the job. It is free, confidential within the limits of the law, and voluntary. They will:

- Help you assess the problem
- Provide short-term counseling or problem-solving
- Assist you in selecting a community resource
- Follow-up to ensure you receive quality assistance

The EAP assists with emotional, relationship, family, alcohol/drug, job performance, and financial challenges.

To contact, please all 1-800-995-7758 or their TDD is 1-800-882-7610.

Health Benefits

The Federal Employees' Health Benefits Program protects you and your family against the cost of accident or illness. Federal employees may elect to enroll in one of several plans offered to them. Brochures for the plans are available in the Human Resources Office and should be studied carefully. Coverage may include "self only" or "self and family ." In November of each year, there is usually a health benefits Open Season, during which you have the opportunity to change plans or your enrollment status. Office of Personnel Management (OPM) has an excellent web site which contains most of the benefits booklets for the various federal Health Insurance Plans.

Permanent Employees. All permanent employees are eligible to enroll in this voluntary program during the first 31 calendar days from the starting date of your permanent position, or during the annual Open Season. You may cancel your enrollment at any time. Certain changes are permitted between Open Seasons (e. g., if your marittal statues changes, children are born or adopted, etc.) The Federal Government pays a substantial portion of the premium for permanent employees.

Temporary Employees. Under some circumstances, temporary employees also have the option of enrolling in the health benefits program. Temporary employees who have completed one year of current continuous employment, excluding any breaks in service of three days or less, are eligible to enroll. The employee must enroll within 31 calendar days after becoming eligible. Temporary employees who enroll will have the full premium withheld from their pay.

Health benefits coverage may be continued into retirement; or, if you leave federal service, the insurance may be converted to an individual policy within a specified period at a higher premium.

Workers Compensation

The Federal Employees' Compensation Act provides compensation benefits to Federal employees for disabilities due to personal injury or disease sustained in the performance of one's duties. The law also provides for payment of funeral and burial expenses and compensation for the employee's dependents if the injury or disease caused the employees death.

You are expected to give your immediate supervisor written notice of injury within two working days after an injury occurs in the performance of duty.

Compensation may be denied if notice of injury is not submitted within two working days, or if the supervisor does not have actual knowledge of the injury.

An employee is required to file a written claim for compensation within three years after the injury to be eligible for compensation. If an employee dies, a written claim for compensation by or on behalf of the dependents is required before compensation may be paid. Benefits are based on the employee's annual salary and number of dependents at the time of injury. In order to be assured of available compensation benefits, notify your supervisor immediately upon experiencing any on-the-job injury or illness, no matter how slight.

Life Insurance

Most permanent federal employees are eligible to enroll in the Federal Employees' Group Life Insurance Program regardless of health status.

Employees may elect Basic life insurance and, if desired, additional optional insurance in various amounts, as well as coverage for members of their immediate families ("Optional" and Family" options). Basic insurance is equal to the employee's annual salary rounded up to the nearest thousand plus $2,000 (in the case of faculty, 10-month salary). Basic and optional insurance provide additional coverage for additional cost. If you leave the Government, you may convert both basic and optional insurance to an individual policy without medical examination or other evidence of good health.

Additional information may be obtained from the pamphlet entitled "Federal Employees Group Life Insurance" which is available from the Human Resources office.

Retirement

All permanent employees appointed before 1 January 1984 are automatically enrolled in the Civil Service Retirement System (CSRS). Deductions are 7% of an employee's basic salary (7 1/2% for law enforcement officers and fire fighters). If an employee resigns, all money deposited in the retirement fund may be refunded upon request provided the employee is not eligible for a retirement annuity at that time. If the employee returns to civil service after taking a refund, the employee may make a redeposit in order to receive credit. Employees are eligible to retire voluntarily at age 55 with 30 years of service, age 60 with 20 years of service, and age 62 with 5 years of service.

All permanent employees appointed on or after 1 January 1984 are automatically enrolled in the Federal Employees Retirement System (FERS). The Federal Employees Retirement System is a three-part system composed of a Social Security Benefit, Basic Benefit Plan, and the Thrift Savings Plan. Deductions are .80% for the Basic Benefit (.85% for law enforcement offices and fire fighters) and 6.20% for Social Security Benefit. Upon eligibility, an employee will receive a 1% agency automatic contribution of basic pay per pay period in a Thrift Savings Plan account and will have an opportunity to participate in the Thrift Savings Plan. If an employee resigns under this system, a refund of money can also be made. However, if the employee returns to civil service a redeposit cannot be made to receive credit. Employees are eligible to retire voluntarily if they meet the Minimum Retirement Age (MRA) with 30 years of service, age 60 with 20 years of service, and age 62 with 5 years of service. An option available to employees under this system is the MRA plus 10. An employee can retire if they meet the Minimum Retirement Age and has 10 years of service (minimum of five years of civilian service) but the employee may receive a reduced annuity.

The HRO Web Site contains a page of links on federal retirement, including a link to Office of Personnel Management (OPM)'s excellent web site on retirement issues.

Thrift Savings Plan

It you are a FERS or CSRS employee with continuous service, you may be eligible to participate in the Thrift Savings Plan (TSP). The TSP is a defined contribution plan. The retirement income that you receive from your TSP account will depend on how much you (and your agency, if you are a FERS employee) have contributed to your account during your working years and the earnings on these contributions. The contributions that you make to your TSP account are voluntary and are separate from your contributions to your CSRS or FERS annuity.

The Thrift Savings Board has a helpful web site you might useful!

Annual Leave

Annual leave is paid leave time earned on the basis of creditable federal service and is accrued at the rates indicated below. Employees may use annual leave as it is earned; however, up to 30 days of leave may be saved for later use. Annual leave must be approved in advance by the supervisor. Employees whose appointments are for less than 90 days do not earn annual leave unless they work longer than 30 days under a successive appointment.

Years of Service	Accrual Rates
Less than 3 years	4 hours per pay period
3 to 15 years	6 hours per pay period except 10 hours on the last pay period of the leave year
15 years or more	8 hours per pay period

next page

Office of Human Resources
Naval Postgraduate School
New Employee Orientation

Sick Leave

Full-time employees accumulate sick leave without limit at the rate of four hours per bi-weekly pay period --104 hours or 13 days per year. Your supervisor may approve sick leave for a scheduled medical, dental or optical examination; or if you are unable to perform your duties because of physical or mental illness, injury, pregnancy, or childbirth.

You must notify your supervisor at the beginning of your scheduled work hours on the first day you are absent. Sick leave must be requested and approved in writing. Sick leave requests for scheduled medical, dental, or optical appointments should always be submitted to your supervisor in advance.

Under some circumstances if your sick leave exceeds three consecutive days, you may be required to provide a doctor's certification with the following information:

- The reason for your absence
- The beginning and ending date of your incapacitation
- If your condition is on-going, the date you will be expected to return to work.

It is your responsibility to provide the required doctor's medical statement; however, under some circumstances your supervisor may excuse this requirement.

Advance Leave

Advance sick or annual leave may be available after approval by your supervisor and management personnel. Each case will be analyzed individually and recommendations and decisions made after careful consideration. The maximum amount of advance sick leave which may be authorized is 30 days (240 hours). Annual leave may be advanced up to the amount the employee will earn during the current leave year.

Family Medical Leave

The Family Medical Leave Act (FMLA) of 1993 requires employers to provide up to 12 weeks of unpaid, job-protected leave to employees for certain family and medical reasons. If you have worked at least one year, you may be eligible to request unpaid Family Medical Leave for the following reasons:

- To care for your child after birth, or placement for adoption or foster care
- To care for the your spouse, son or daughter, or parent with a serious health condition
- For your own serious health condition that makes you unable to perform your job

You may elect to substitute your paid leave (e.g. annual leave, sick leave, or donated leave as appropriate) during the period you are on approved Family Medical Leave. A physician's certification is required for request to care for family member with a serious health condition or for your own serious health condition. Ordinarily the employee must provide 30 days advance notice when the leave is "foreseeable."

If you meet the criteria for leave and have complied with the requirements and obligations under the Family Medical Leave Act, you may not be denied family medical leave and will, upon return from Family Medical Leave, be restored to your original or equivalent position.

Sick Leave for Family Care or Bereavement

The 1994 Family Friendly Leave Act authorizes federal employees to use sick leave for the purpose of adopting a child; to care for a family member who is physically or mentally ill, injured, pregnant, or experiencing childbirth; or to accompany a family member who requires care during medical, dental, or optical examination or treatment. Sick leave may also be requested to make the necessary arrangements pertaining to a death in the family or to attend a funeral for a family member.

A family member is defined as follows:

- Spouse or parents of spouse;
- Children, including adopted children and children's spouses
- Brothers, sisters and their spouses
- Any individual related by blood or affinity whose close association with the employee is the equivalent of a family relationship

If you are a full time employee, you may request up to 13 work days (104 hours) during the leave year provided you maintain a minimum balance of 80 hours of sick leave. A part-time employee or an employee with an uncommon tour of duty may only request the maximum equal to the amount sick leave accrued in a leave year.

If you maintain a minimum sick leave balance of less than 80 hours but more than 40 hours, you may request up to 5 work days (40 hours) during the leave year. A part-time employee or an employee with an uncommon tour of duty may only request a maximum equal to the average amount of sick leave accrued in a work-week.

Voluntary Leave Transfer Program

Employees who have exhausted all available leave may apply to become a leave recipient under the Voluntary Leave Transfer (VLT) Program. To be eligible to apply for leave donations under the VLT Program, you must have a personal or family medical emergency that place you on a non-pay status for at least 24 hours because of unavailable leave. If you wish to become a leave recipient, you are required to complete an application, submit it through your supervisor for approval and forward the application to the Human Resources Office along with medical documentation which supports the period of time requested and a current leave and earnings statement.

Employees who wish to donate annual leave to a recipient under this program must complete a leave donor application, submit it through the supervisor for approval, and forward the application to the Human Resources Office. The minimum amount donated is one hour and the maximum is no more than one-half the amount of annual leave the donor would be entitled to accrue during the leave year in which the donation is made.

Leave Bank

In addition to the Leave Transfer Program, the Naval Postgraduate School has established a Leave Bank. To be eligible to receive leave from the leave bank, the employee must be a current member of the bank and must meet the above requirements for the leave transfer program. To become a member of the leave bank, you must donate the minimum amount of leave for your leave category (e. g. four, six or eight hours) during the annual open season. The open season for joining is usually held during August and September.

Employees who wish to donate annual leave to a recipient under the leave bank must complete the leave bank donation application, (which can be obtained at the Human Resources office) submit it through the supervisor for approval, and forward the application to the Human Relations Division.

Employees who are not members of the leave bank may donate leave to a leave bank recipient. The minimum and maximum donation amount restrictions are the same for the Voluntary Leave Transfer Program.

Leave Without Pay

Leave without pay is approved absence from duty granted upon the employee's request and at the discretion of the department head. Leave without pay is only granted when it is held to be in the Government's interest to do so. Leave Without Pay that exceeds more than one pay period will affect you service computation date.

next page

Excused Absence

Excused paid absence without charge to leave is left to the discretion of management. It can be granted for reasons such as blood donations, examinations related to your job, official meetings, or for brief periods of absence or tardiness. The amount of time which may be excused will vary based on the reasons for absence. Tardiness may be excused but absences of 1 hour or more require the employee to be placed in an absent without leave (AWOL) or unexcused absence; or annual leave if requested.

Court Leave

An employee summoned to serve on a jury or to testify as a witness in a judicial proceeding in a nonofficial capacity, on behalf of a state or local government, is entitled to court leave. When an employee is summoned or assigned by his/her agency to testify in their capacity as a Federal employee, he/she is in an official duty status, not a leave status, and is entitled to regular pay. Any compensation (except travel expenses) received from the court must be turned in to the Comptroller's Office to avoid dual compensation.

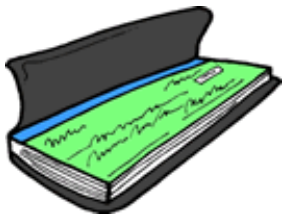
Gifts

What do you do when you may not accept a gift?



1. Decline acceptance
2. Return to donor later if declining on the spot is impractical
3. Pay full market value (not just the amount over $20) and retain

Subsequent reciprocation is not a solution.

Not "Gifts"

- Modest items of food and refreshments
- Greeting cards and times with little intrinsic value, such as plaques, certificates, and trophies
- Loans from financial institutions
- Opportunities and benefits available to the public or a class of employees
- Rewards and prizes to competitors
- Pensions and other benefits from a former employer
- Anything paid for by the Government or by the employee
- Gifts accepted under specific statue

There are 12 Exceptions

As you do your analysis with regard to accepting a gift, remember that even when a gift exception could allow you to accept, it is never inappropriate and frequently prudent to decline a gift offered by a prohibited source or because of your official position.

1. Gifts less than $20, up to $50 per year
2. Discounts and similar benefits
3. You may accept gifts when it is clear that the giving is motivated by a family or personal relationship rather than your official position.
4. Meals, lodging, transportation, other benefits may be accepted under certain circumstances
5. You may accept gifts (other than cash or investment interests) up to $200 as a bona fide award for meritorious public service from an entity that will not be affected by your official performance

6. Travel benefits and free attendance from political organizations
7. Gifts to the President or Vice President
8. Social Invitations from other than prohibited sources
9. Speaking engagements and widely attended gatherings
10. Gifts authorized by supplemental agency regulation
11. Gifts accepted under specific statutory authority
12. Gifts of meals and entertainment in foreign areas

Gift Exception 1

Gifts less thank $20, up to $50 per year

1. You may accept gifts (other thank cash or investment interests) up to $20 per occasion, if the aggregate market value received from one source under this exception does not exceed $50 a year.
2. You may not pay the amount that exceeds the $20 limit, but may decline any distinct item in order to make the aggregate $20 or less.
3. You are responsible for keeping track of your gifts you receive regarding the $50 limit per year. (Procurement integrity limit is $10)

Back

Contact the Orientation Web Site Manager

Gift Exception 2

Discounts and similar benefits

1. You may accept reduced membership or other fees offered to all Government employees or all military personnel by professional organizations if the only restriction on membership is professional qualifications.
2. You may accept opportunities, benefits, favorable rates, and commercial discounts offered:
    1. to a group in which the membership is unrelated to Government employment (e.g., The Association of Retired Persons)
    2. to members of an organization in which membership is related to Government employment if the same is broadly available to large segments of the public through organizations of similar size, (e.g., The Senior Executive Service Association)
    3. by an entity that is not a prohibited source to a group that is not defined by official Government responsibilities nor favors higher grades (e.g., a community reception honoring returning military personnel)

Gift Exception 8

Social Invitations from other than prohibited sources

1. You may accept food, refreshments, and entertainment, not including travel or lodgings, at a social event attended by several people where the invitation is from a person or entity that is not a prohibited source, and there is no fee charged to any person attending the event.

Back

Gift Exception 9

Speaking engagements and widely attended gatherings

1. When you are assigned to participate as a speaker or panel member, or otherwise to present information on behalf of the agency at a conference or other event in your official capacity, you may accept an offer of free attendance at the event on the day of your presentation when provided by the sponsor of the event.
2. When there has been a determination that your attendance in your personal capacity is in the interest of the agency because it will further agency programs or operations, you may accept an unsolicited gift of free attendance to a widely attended gathering of mutual interest to a number of parties when provided by the sponsor of the event.
    1. "Widely attended" usually means an event open to at least 20 individuals interested in a given matter.
    2. "Free attendance" includes waiver of fees or the provision of food, refreshments, entertainment, instruction and materials furnished to all attendees as an integral part of the event. IT does not include travel benefits, entertainment collateral to the event, or meals taken apart from the group.
3. Your agency designee (your supervisor) may authorize to accept a sponsor's invitation to an accompanying spouse to participate.

Back

Gift Exception 10

Gifts authorized by supplemental agency regulation

1. You may accept an unsolicited gift of free attendance from a state, local government, or civic organization for yourself and your accompanying spouse at such an event when there is a community relations interest for your agency (e.g., local special olympics events, high school soccer tournament)
2. You or your dependent may accept an educational scholarship or grant from an entity that does not have interests substantially affected by the performance or nonperformance of your official duties when the DAEO or designee determines the scholarship or grant is:
    1. funded to ensure awards will be given on a regular basis
    2. the selection of recipients is pursuant to written standards

Gift Exception 11

Gifts accepted under specific statutory authority

1. There are several statues that provide for the acceptance of gifts to individual employees (e.g., honoraria, 5 USC App 501; ship launch, 5 USC 7301; training awards, 5 USC 4111; gifts from foreign governments, 5 USC 7342)
    1. Under the Honoraria rules, 5 USC App. 501, even those DoD employees who aren't allowed to accept honoraria may accept the following if they are related to an appearance, speech or writing given in a personal capacity on a subject unrelated to official duties.
        1. travel expenses
        2. other actual expenses (such as copying and typing costs)
        3. meals and free attendance
        4. written, audio, or video recordings
    2. Gifts related to ship launches and similar ceremonies are allowed , only when attendance is official and approved by the organization head, limited to the following:
        1. Attendance at appropriate functions to the ceremony (dinner, entertainment and related benefits that are not extravagant)
        2. Tangible gift or memento to official participant in the ceremony when value is no more than $100 per family.
    3. Training Awards
        1. An employee may accept
            1. Contributions and awards incident to training in an official capacity in non-Government facilities
            2. Travel and other expenses incident to attendance at meetings when 31 USC 1353 does not apply
    4. Gifts from Foreign Governments
        1. Whenever possible, DoD employees shall decline gifts from foreign governments
        2. Gifts from foreign governments may be accepted to avoid embarrassing or giving offenses to the donor
            1. Gifts of minimal value (currently less than $225) may be retained
            2. Gifts of more than minimal value become the property of the U.S. Government.

Gifts

Limitations to Expectations

There are five limitations on the use of the 12 gift acceptance exceptions:

1. accept a gift in return for being influenced in the performance of an official act
2. solicit or coerce the offering as gift
3. accept from the same or different sources on a basis so frequent that a reasonable person would be led to believe you are using your office for private gain
4. accept a gift in violation of any statue (such as the honoraria prohibition or procurement integrity act)
5. accept vendor promotional training contrary to applicable regulations

New Employee Orientation

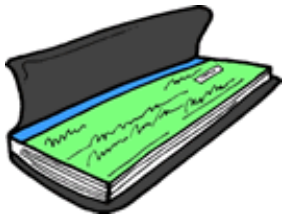
What do you do when you may not accept a gift?



1. Decline acceptance
2. Return to donor later if declining on the spot is impractical
3. Pay full market value (not just the amount over $20) and retain

Subsequent reciprocation is not a solution.

Not "Gifts"

- Modest items of food and refreshments
- Greeting cards and times with little intrinsic value, such as plaques, certificates, and trophies
- Loans from financial institutions
- Opportunities and benefits available to the public or a class of employees
- Rewards and prizes to competitors
- Pensions and other benefits from a former employer
- Anything paid for by the Government or by the employee
- Gifts accepted under specific statue

There are 12 Exceptions

As you do your analysis with regard to accepting a gift, remember that even when a gift exception could allow you to accept, it is never inappropriate and frequently prudent to decline a gift offered by a prohibited source or because of your official position.

1. Gifts less thank $20, up to $50 per year
2. Discounts and similar benefits
3. You may accept gifts when it is clear that the giving is motivated by a family or personal relationship rather than your official position.
4. Meals, lodging, transportation, other benefits may be accepted under certain circumstances
5. You may accept gifts (other than cash or investment interests) up to $200 as a bona fide award for meritorious public service from an entity that will not be affected by your official performance
6. Travel benefits and free attendance from political organizations
7. Gifts to the President or Vice President

8. Social Invitations from other than prohibited sources
9. Speaking engagements and widely attended gatherings
10. Gifts authorized by supplemental agency regulation
11. Gifts accepted under specific statutory authority
12. Gifts of meals and entertainment in foreign areas

Gifts

Gifts Between Employees

- You may not give, or solicit contributions from other employees for a gift to a superior.
- You may not accept gifts from an employee receiving less pay, unless there is no subordinate-superior relationship and there is a personal relationship that justifies a gift.

There are a few exceptions to giving or accepting gifts between employee:

1. Item, other than cash, with a value less then $10 per occasion
2. Food and refreshments to be shared in an office
3. Customary personal hospitality provided by a residence
4. Items customarily given in connection with receipt of personal hospitality
5. Transferred leave under 5 CFR 630, expect to an immediate supervisor
6. Special, infrequent occasions

Limitation on use of expectations:

You can never coerce the offering of a gift from a subordinate.

Ethics

Transportation

"Use of Government vehicle shall always be predicated on need, distance and other conditions to justify their use. When an adequate DoD or commercial bus system is available the use of any individual motor vehicle or commercial rental car is prohibited."
DoD 4500.86-R para. 2-5d

Prohibited Use

- Unofficial, personal use
  - Home to work
  - Private social events
  - After-hours official functions from home
  - Personal errands
  - Unaccompanied dependants/visitors

* Mandatory minimum 30 day suspension for Uniform Code of Military Justice violation.

Temporary Duty

Government owned vehicles may be used with on TDY to go to:

- (and from) lodging
- restaurants, PT, barbershop
- religious services
- but not for entertainment
- rental cars not GOVS

Gifts

Special, Infrequent Ocassions

On special, infrequent occassions you may not accept gifts from a donating group if the market value exceeds and aggregate of $300, if any member of the donating group is a subordinate.

Solicitations of voluntary contributions for group gifts to superiors may not exceed $10.

Special, infrequent occassions include events of personal significance such as birth/ adoption, wedding and major illness.

Also included are occasionas that terminate a subordinate/superior relationship, such as retirement, resignation, or transfer out of change of command.

The cost of food, refeshments and entertainment provided for you and your personal guests is not included in the $300 aggregate limit and a speperate collection of voluntary contributions of up to $10 per person may be solicited for such accomodations.

The value of the gifts from tow or more donating groups shall be aggregated and considered from on donating group if you have reason to know that an indvidual who is your subordinate member of each donating group.

Frequent Flyer Benefits

Anything of value that you receive as a direct result of travel at the Government's expense belongs to the Government, including:

- frequent flyer benefits
- discounts on future hotel accommodations
- other benefits that would not have been possible if not for the official travel

This is a rule made by the General Services Administration, in accordance with many opinions by the Comptroller General.

You may keep careful records of which frequent flyer benefits are from office travel and which are from personal travel. The benefits received due to personal travel are yours to use any way you wish.

You may not use benefits resulting from official travel after you retire. They still belong to the Government.

You may use frequent flyer benefits to upgrade your accommodations to anything other than first class airline seats.

Staff Development Advisory Committee

The Staff Development Advisory Committee's (SDAC) purpose is to provide a framework for career and professional development opportunities for all levels of core and contingent staff. This will be accomplished through individual assessment, learning opportunities and support. The goal is increased value and competencies, operational excellence and continuous improvement for both individuals and NPS.

Naval Postgraduate School

Staff Development Advisory Committee

Spring 2007

Purpose:

The Staff Development Advisory Committee's (SDAC) purpose is to provide a framework for career and professional development opportunities for all levels of core and contingent staff. This will be accomplished through individual assessment, learning opportunities and support. The goal is increased value and competencies, operational excellence and continuous improvement for both individuals and NPS.

Staff Development is defined as the strategic investment in training, education and assimilation into NPS, of the School's core and contingent individual contributor and management staff employees, in support of the NPS mission and goals, and in alignment with employees' specific job requirements and career goals.

The Committee is a consensus-driven forum. The input from staff and the subsequent recommendations generated by this Committee are shared widely on campus with staff to ensure broad-based inclusion and involvement at all levels of NPS.

Charge:

The BPTF established the SDAC as a standing committee. The charge is to raise awareness among the staff about the impact continuous improvement can have on their careers and to provide a framework for staff to achieve their own professional development and career goals.

The objectives of this charge are: (1) improved morale and performance by staff in their current jobs, (2) a workforce better prepared to move into jobs with greater or new responsibilities, and (3) a more productive, versatile and nimble workforce for NPS.

With these 3 objectives in mind, the committee's work may include the following actions:

1. Collect input from employees, managers and senior leadership regarding:

a. current training needs, and
b. expectations about career management and development support.

2. Provide the following tools to the NPS workforce:
    a. A continuously updated menu of learning resources for specific jobs, and
    b. A career development program that meets the needs of a majority of staff.

    Career Development is defined as a combination of the employee's view of upward mobility, the supervisor's view of motivation and retention, Senior Management's view of succession planning and the Navy's view of NSPS.

Membership:

Membership of the Staff Development Advisory Committee is representative of the campus-wide workforce.

Responsibilities:

The Committee meets bi-weekly, and periodically updates the Business Processes Implementation Task Force. The Committee reaches out to the campus-wide workforce through the NPS Intranet, the campus newspaper, the SDAC email box, live forums, focus groups and surveys.

Staff Development Advisory Committee

Staff Development Advisory Committee Reports Findings

The Staff Development Advisory Committee (SDAC) presented the survey findings in detail at an All Hands presentation, March 13, 2008. The presentation was followed by a brief question and answer period.

- **Click here to view the Survey Results presentation (PPT)**

Under the direction of the Provost, the SDAC has collected data from the staff through interviews, focus groups and an online survey to ascertain people's opinions and ideas surrounding staff development. 231 staff members completed the online survey.

The SDAC recently presented the findings to the President, Provost and the Chief of Staff and discussed the possibilities for improving employee engagement through training and education. The SDAC will continue to communicate the results of the findings through an All Hands presentation and meetings with possible stakeholder groups across the University. The SDAC will submit recommendations to the President, for review and approval within the next month or so. The approved recommendations should improve employee engagement as well as enhance the development and education of the NPS staff.

Update NPS

Secondary Report

Taking a Closer Look at Career Development Needs

As a dynamic component of the Provost's vision for NPS, the Business Process Implementation Task Force established the Staff Development Advisory Committee (SDAC) in spring 2007, and charged the group with exploring how it might augment and support staff learning opportunities at NPS. Committee members Toni Dickenson, Mike DiFranco, Jodie Dodge, Megan Heath, Robbie Johnson, Ben Roberts, Liza Rosa, Chair Sue Dooley and Advisor Sheila Dominguez, an HR/OD Consultant, developed a charter and a mission statement:

To raise awareness of career development opportunities and to provide a framework to continuously improve individual and operational excellence at the Naval Postgraduate School.

As its initial project, the SDAC has decided to conduct a Staff Development survey in October. To determine the wants and needs of campus groups, and to understand the challenges that the committee will need to consider when developing its menu of services, Advisor Sheila Dominguez suggested that the SDAC research the formats of various Career and Professional Development programs, and how other private and governmental organizations have collected input from their respective workforces. Fran Horvath, Director of Institutional Research at NPS, also gave the group input on the best methods for collecting data.

Career development services and programs are established based upon a person's position within an organization:

- **Employee**: The acquisition of knowledge, skills and experience as part of a plan or curriculum, in order to grow in a career
- **Supervisor:** Internally or externally provided services or programs that may help to motivate employees and to retain good workers
- **Management:** A tool to help management identify which employees have the right skills to meet the current and future challenges of the organization
- **Human Resources**: A system that is integrated with the organizations' other systems, such as NSPS, job postings, EEO, etc., to enhance the career progress of employees, to retain good performers and/or to help the organization become an "employer of choice"

The services offered through career development programs cover three basic levels:

- **One:** Employee training, to support a person's current job, with no formal ties to either departmental or organizational goals
- **Two:** Training needed for job growth or promotion within a department or organization
- **Three:** Career development program(s) as part of the organization's strategic plan, integrating both the needs of the organization to have skilled employees prepared to assume new responsibilities and the needs of the individual to advance in a career that is personally fulfilling

The SDAC recognizes that there are many aspects to a Career Development program, and their intention is to develop an effective and successful one at NPS. You can help them achieve that by completing the Staff Development survey when it is distributed in October!

To contact the SDAC, email them at: sdac@nps.edu.

Update NPS

For: In Brief
CS Prof. Bret Michael and his colleagues are finishing a technical report that highlights multiple NPS research projects funded by and in support of the Missile Defense Agency.

For: Announcements
Tom Hazard, former Director of the Office of Continuous Learning at NPS, is now the Director of the National Capital Region, headquartered in Washington, DC.

COL Ty Seidule from the the US Military Academy just began a one-year teaching fellowship in the NSA Department

New faculty - NSA: Scott Siegel, Sophal Ear and Clay Moltz

Glen Woodbury has been recently been named Director of the Center for Homeland Defense and Security

Hires – August 2007:
Rebekah K. Dietz, Research Associate

August 29, 2007

Colleagues,

This is your invitation to attend a workshop on Professionalism. The impetus behind this workshop came out of the Provost's *Ad Hoc* Committee on Business Practices. If you have not had a chance to read the report, the report is posted on the Provost's website and sets the stage for a number of initiatives already undertaken or planned for later this year next (http://intranet.nps.edu/Code01/documents/Business_Practices_Report-FINAL.pdf).

Since the report was completed, the Provost established a Task Force to oversee the implementation of the report recommendations. During the course of both the Committee and Task Force's work, we had a great deal of discussion about the need to rededicate ourselves to serving our academic mission – how best to do that, how to demonstrate an institutional commitment to service, and how to support principles of profession management practice. We decided that reaching consensus about these issues within our NPS community was an important first step. To that end, we engaged Ms. Sheila Dominguez, a local human resources consultant (and recent GSBPP Lecturer) to facilitate our campus conversations about professionalism and to provide training based on best practices in other organizations.

We have an important opportunity to rededicate ourselves to standards of professionalism and to think about modeling that behavior for ourselves and the people with whom we work most closely on a day-to-day basis. This workshop is a chance to think about strategies we might use throughout the year to remind ourselves of how to reinforce professionalism within our organization -- modeling professionalism personally, and actively showing others how professionalism can be promoted, rewarded, and sustained throughout NPS.

We look forward to hearing from you about how things go at the workshop and perhaps suggestions about things we might employ going forward. Thank you again for your participation!

Sincerely,

Business Practices Implementation Task Force

Dr. Julie Filizetti, chair
Ms. Terri Brutzman
Dr. Christine Cermak
Dr. Gil Howard
Ms. Danielle Kuska

Ms. Megan Reilly

March 13, 2008

Staff Development Advisory Committee

NAVAL POSTGRADUATE SCHOOL

Employee Survey Description

- In October 2007, a survey was sent out by the Staff Development Advisory Committee (SDAC) to all NPS Administrative staff, Academic support staff, and Contractors.
- Approximately 350 NPS Administrative staff and Academic support staff
- The survey elicited input about one's training and professional development desires, possible obstacles to achieving professional growth, and what one would be willing to participate in if it was available.
- Supervisors were asked about training for their employees and how they would support a Staff Development Program.

Employee Survey Description

- Only data from those who filled out the survey completely was included
- We received input from 231 on training needs, obstacles to growth, and readiness to participate
- We received input from 47 supervisors about supporting a Staff Development Program

Employee Demographics

- 37% have worked at NPS for 2 years or less
- 48% have been in their current position and department for 2 years or less
- Approximately 40% of staff are 42 years old or younger
- 39% are over 50 years old

Employee Demographics

Years of Service at NPS

	2 years or less	3 - 5 years	6 - 10 years	11 - 15 years	16 or more years
Series1	37.0%	18.7%	12.6%	13.9%	17.9%

Employee Demographics

Years of Service in Current Department

	2 years or less	3 - 5 years	6 - 10 years	11 - 15 years	16 or more years
Series1	48.0%	19.6%	12.6%	13.9%	17.9%

Employee Demographics

Educational Level

	High School or GED	Some post High School coursework	Undergraduate Degree	Some postgraduate coursework	Masters Degree or higher
Series1	4.8%	39.2%	17.0%	10.0%	29.0%

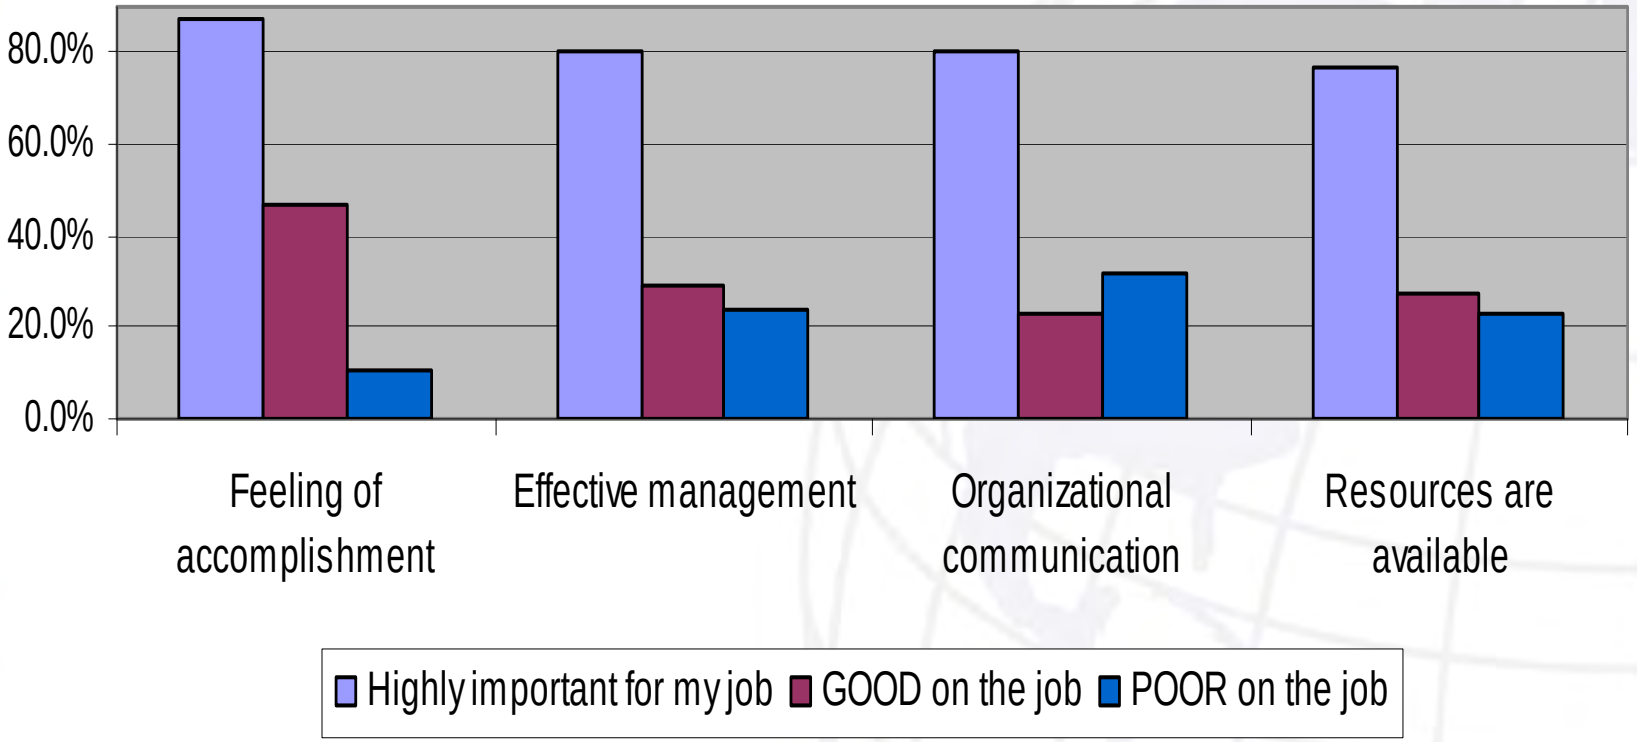
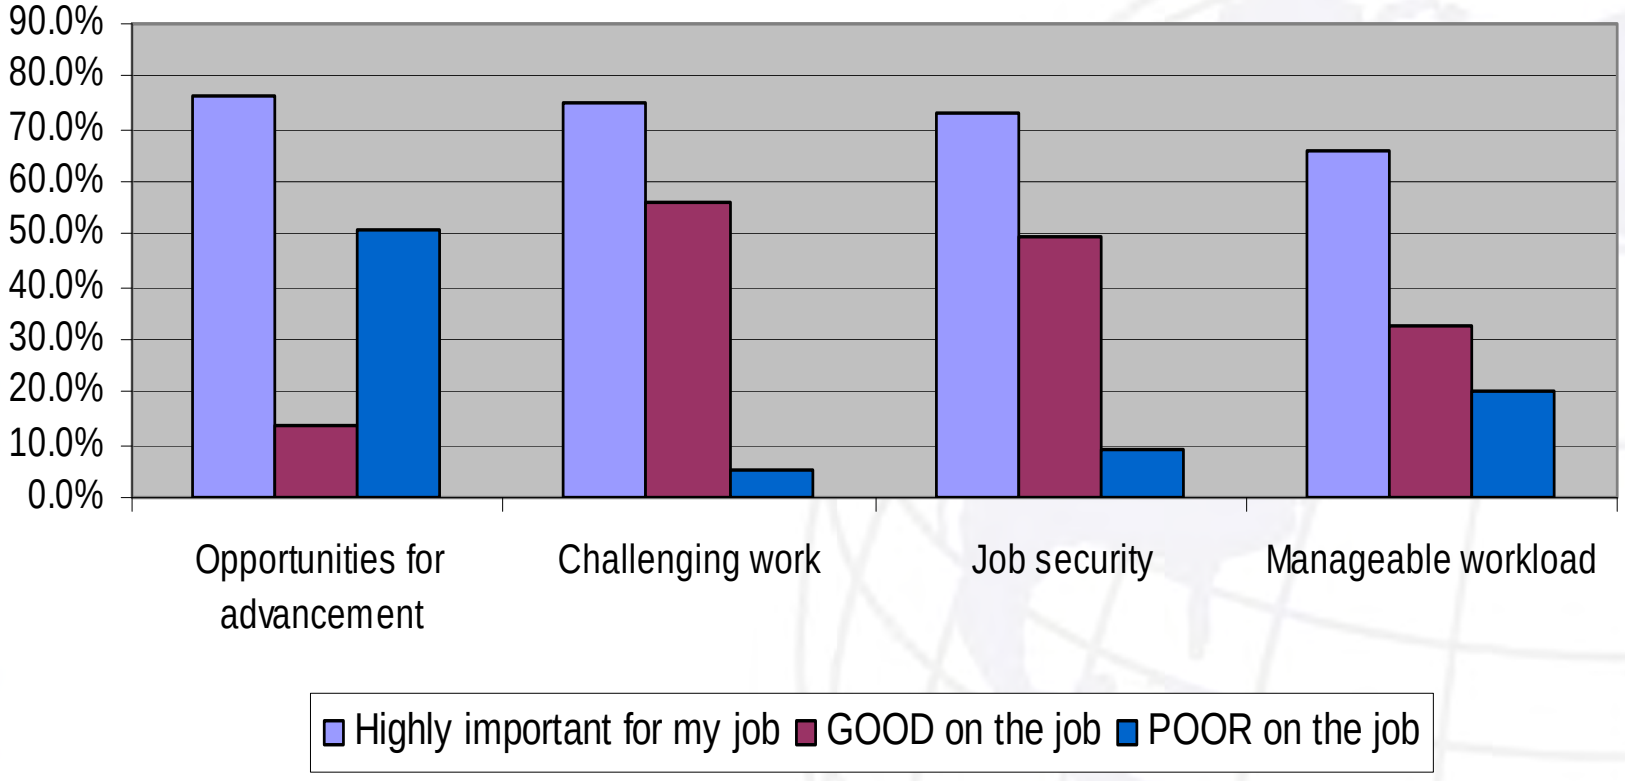
Work Environment

- Work Environment factors important to respondents and the degree to which those factors are fulfilled at work



Work Environment

- Work Environment factors important to respondents and the degree to which those factors are fulfilled at work



Work Environment

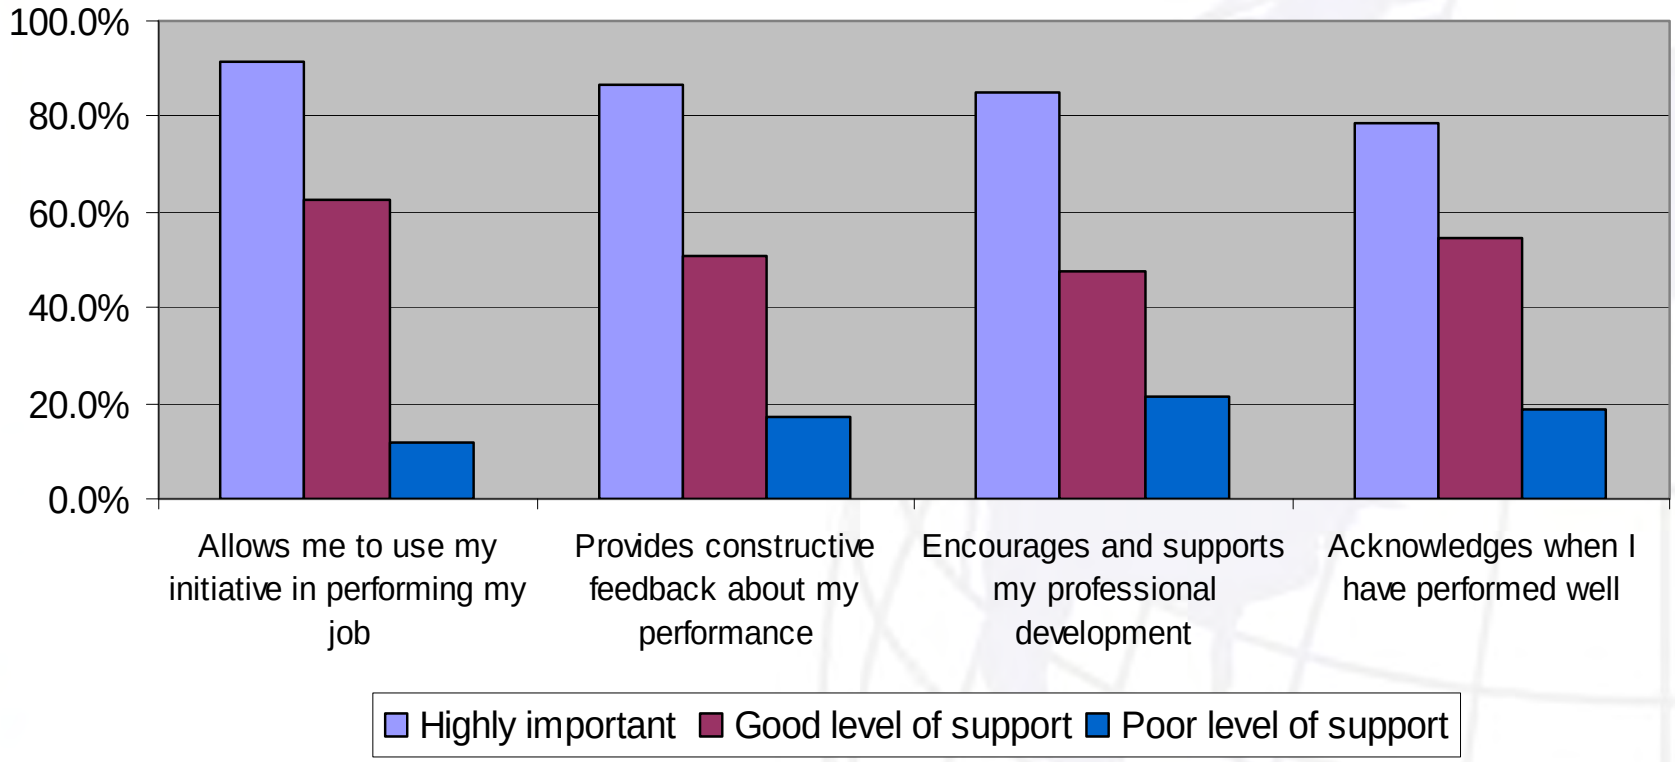
- Importance of management support and the degree to which those factors are fulfilled



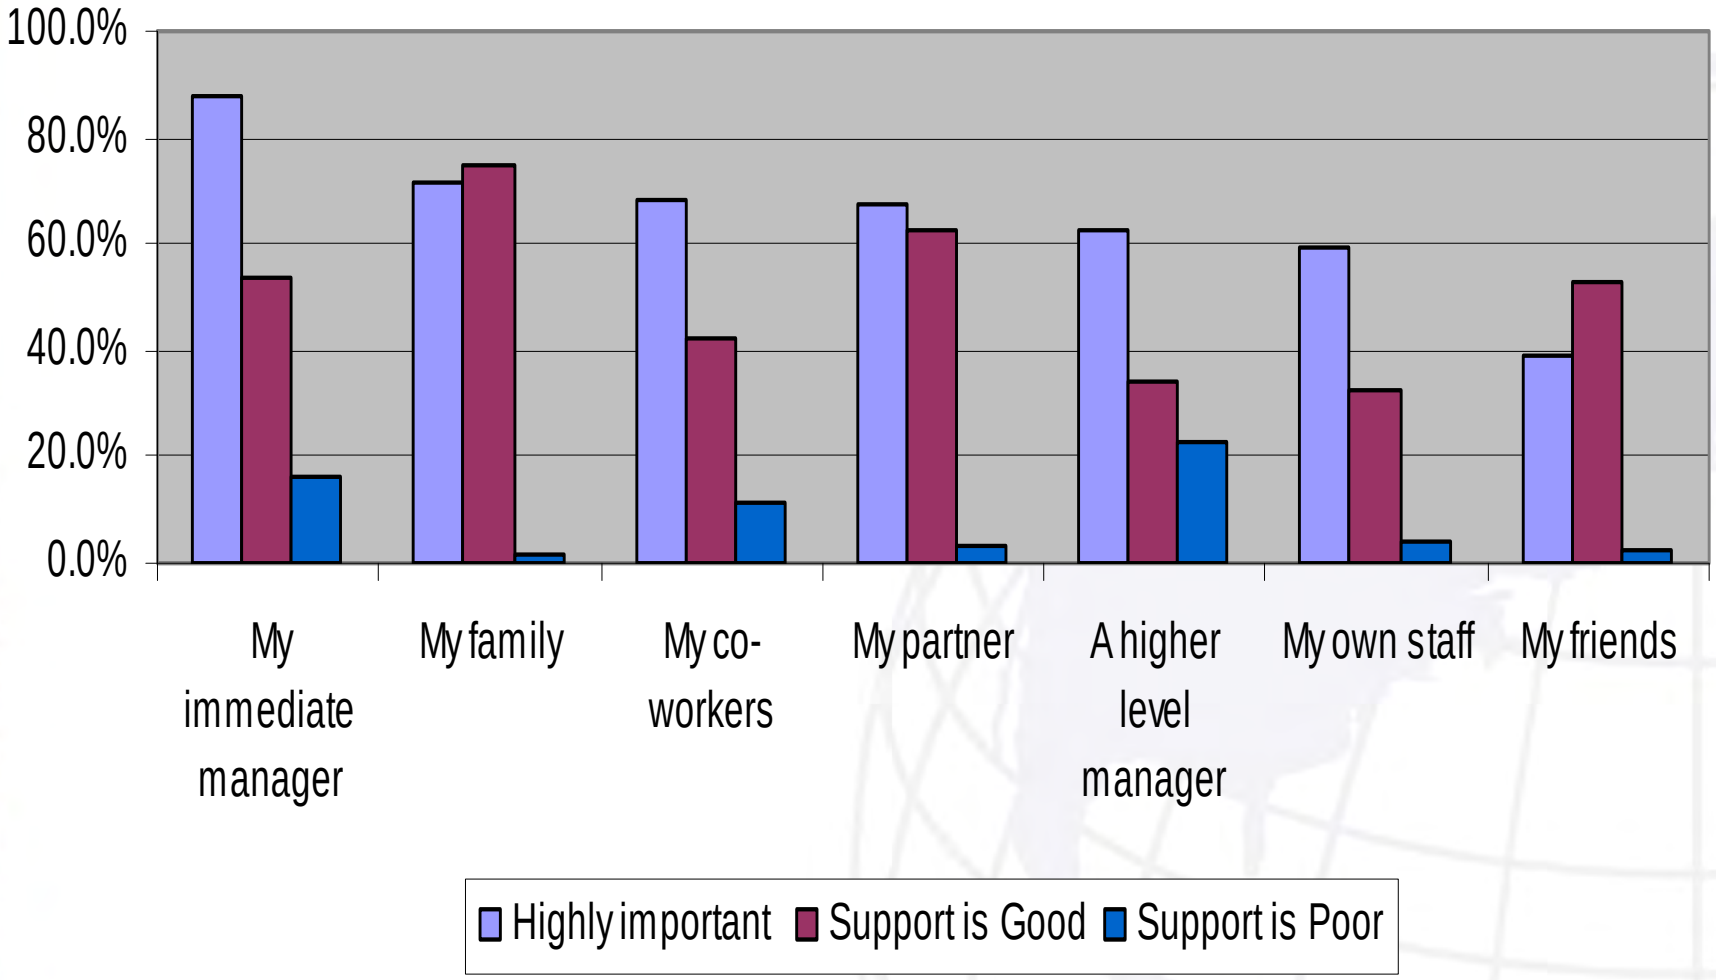
Work Environment

- Other factors that have hindered my career growth

	Workload too great	Poor communication/quality of dept.	Poor leadership from Mezanine	Dept. co-w orkers: negative attitudes, non collaborative	Poor job design w ith no evidence of a career path	No money available for training and development
Series1	11.7%	21.2%	1.3%	4.3%	5.6%	1.3%

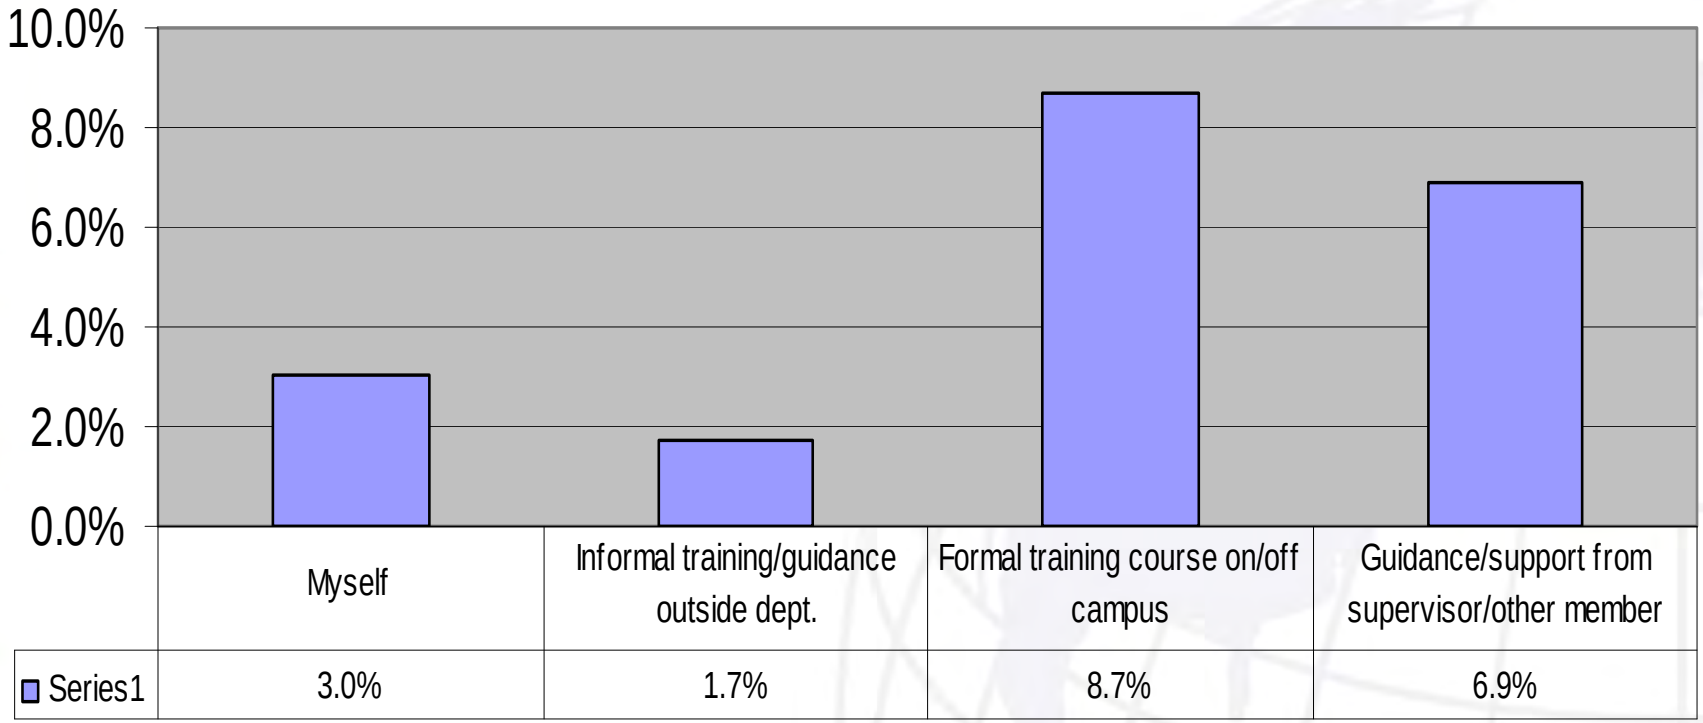
NAVAL POSTGRADUATE SCHOOL

Support for Career Growth



Support for Career Growth

- Other factors that have helped in my career growth



Workforce Mobility

- 49% of respondents are passively or actively looking for another position either internally or externally
- 44% said they will leave NPS if they must in order to further their careers.
- A 2006 SHRM survey indicated that approximately 75% of workforce were passively or actively looking for another position

Reasons for Not Applying

- What stops staff from applying for other positions at NPS

	No Interest	Lack of qualifications/ experience	Uncertain	Lack of support/ opportunities	Unfair selection process	Retiring or leaving the military
Series1	50.22%	30.30%	28.14%	26.40%	21.21%	4.76%

What Staff Are Willing To Do

- 40% would take courses outside of work hours and pay for courses themselves, if their managers could be flexible with scheduling.
- 55% would take courses outside of work hours if their manager paid for them.
- 70% would take courses if paid for by employer and courses were held during work hours.

	Computer training	NPS specific progam training	Other professional level training	People management/ supervisory skill building
For Self	75.2%	48.3%	20.0%	63.4%
For Direct Reports	28.3%	65.2%	17.4%	71.7%

Managers' Support

- Over 94% said they would be willing to allow their employees to attend career workshops on campus during work hours and would help their employees to set and achieve their career goals.
- 70% said they would provide career coaching to their employees (and would take a course in career coaching skills to learn how to do it)

Paying for Training

- 42 or 91% of Managers would pay for the training if it is required to perform the employee's job.
- 37 or 80% of Managers would pay for training if it would enhance the employee's performance.
- 27 or 59% of Managers would pay for training if it would help employees in their career growth.
- 25 or 54% of Managers would pay for training if it would help employees get promoted or another position at NPS.

NAVPGSCOL INSTRUCTION 11010.1 (DRAFT)

Subj: SPACE MANAGEMENT POLICY (SMP)

Ref: (a) NAVFAC P-80 Facility Planning Criteria.
(b) NAVFAC P-73 Real Estate Procedural Manual
(c) COMNAVREGSW Instruction 5910.1
(d) NAVSUPPDETINST 11010.1A – NSDM Space Allocation
(e) Regional Shore Infrastructure Plan (RSIP) for Naval Postgraduate School Monterey, CA (February 2003).
(f) NPS Strategic Plan 2008
(g) NPS Space Management Floor Plans: http://intranet.nps.navy.mil/PublicWorks/FloorPlans.html
(h) Space Allocation Status Tracker: https://intranet.nps.navy.mil/PublicWorks/SpaceManagementTracker.html

Encl: (1) The Road Ahead: October 2006-September 2011.
(2) Space Allocation Request Form

1. Purpose. To define the space usage policy within Naval Postgraduate School (NPS) as directed by Naval Region Southwest (ref a-c). To establish responsibility for campus space allocation with provided graphic representations (ref g). NPS will institute a Space Management and Prioritization Committee (SMPC) to address major changes involving on campus spaces.

2. Applicability. This instruction applies to entities of NPS to include affiliated organizations, contractors, and any other activities occupying space within the environs designated for the NPS by Commander Naval Region Southwest (CNRSW).

3. Background.

a. NPS Space Management policies must continue to keep in alignment with the core mission and Strategic Plan (ref f). NPS' core missions include providing the highest quality in graduate education and research, extending education to the total force and partners, to broaden National Security research, and to seek operational excellence in financial, business, administrative and support areas (ref f). Space allocation and prioritization will stay consistent with the missions.

b. The last official master plan for the Naval Postgraduate School is the April 2003 RSIP listed as reference (e). Enclosure (1) is an NPS planning document which describes changes as currently understood to the RSIP over the next three to five years.

c. Since 2001, NPS reorganized into four graduate schools, four institutes, and a support organization. The desired end state is for these elements to be geographically aligned to achieve academic and support synergy.

d. In 2004, the Navy created the Commander, Naval Installations Command (CNIC), a centralized, programmatic matrix organization which subsumed all shore installation commands through a regionalization process which further resulted in regional commands which manage the requisite installations within their area of governance. The Naval Support Detachment Monterey (NSDM) became the landlord and holder of all class 1 and 2 property (land and buildings), responsible to Commander Naval Region Southwest (CNRSW). The NPS became the primary tenant for the NSDM, CNRSW.

e. This SMP is derived from and in accordance with the references indicated above. The primary measurement criteria for allocation of space and facilities for the Navy is the Basic Facility Requirement (BFR). The BFR allows facilities to be appropriately sized and provides uniformity. They further ensure that the existing and planned facilities are neither too small nor too large to accomplish standard mission objectives.

f. The guiding criteria for the BFR process follow: “The Criteria should be considered guidelines, not regimented formulas. No activity is automatically entitled to a facility size allowance or the facility itself, just because the facility is included in the BFR document. Every facility must be justified on the basis of need. Requirements should neither be based on the size of existing assets simply to justify their retention nor inflated to accommodate existing inefficient or oversized assets. In fact, a smaller facility than the maximum gross allowance may be adequate to meet an activity’s needs. Although a BFR is initially based on facilities sizing guidelines and established planning criteria, the resulting maximum allowances should be reviewed within the context of existing conditions.”

4. Space Usage Policy. NPS has a limited amount of space and exceptional management is essential. All naval spaces will

conform to the definitions and space allowances as stated in ref (a). This space usage policy establishes the guidelines for space allocation and prioritization within NPS. This policy will be used during the review process of space requests.

a. NPS intends to place institutional key leaders and their administrative support staff, to the maximum extent possible, within Herrmann Hall.

b. The academic quad area will be utilized for education and research purposes to the greatest extent possible.

c. Space is allocated to the School Deans for their use as per encl 1. When available, additional space will be allocated at the Dean level for flexibility. Deans that have new space requirements that cannot be accommodated by reallocating their spaces will submit a space allocation request questionnaire (ref g) to the Space Management Audit Group(SMAG)(see paragraph 5).

d. All space not allocated to the NPS executive staff is managed by the Base Director for further allocation. Staff will be doubled up or in multiple workstation arrangements whenever functionality permits.

e. Relocations and expansions of space greater than 3000 square feet must be reported through NSDM to the Regional Space Allocation Committee (RSAC), CNRSW as per ref (c).

f. Overall priority will be given to those organizations, schools and institutes that provide direct mission support, i.e., those that provide direct impact on the education of students. Non-mission related tenant activities will have less priority.

g. Shared Spaces.

1) Space allocation for classrooms, learning resource centers (LRCs), video teleconference classrooms and video tele-conferencing centers (VTCs) is managed by the Associate Provost for Academic Affairs, regardless of who occupies the surrounding space.

2) Scheduling. Classrooms, LRCs, VTCs and Conference rooms are available to all through proper scheduling. Classrooms, VTCs and LRCs are scheduled by the central classroom scheduler. Conference rooms are scheduled through their respective department, school or institute. Auditoriums are

scheduled by the Conference scheduler, with the exception of Glasgow 109 which is scheduled as a classroom. The President's conference room is scheduled through the Executive Assistant to the President.

3) Learning Resource Centers. LRCs are considered shared resources with shared responsibilities. The Associate Provost for Academic Affairs along with the respective School Deans will set the number of required LRCs. Inputs for LRC requirements (i.e. number of computers, software loads, etc.) will be provided by the Departments whose students use the LRC and coordinated with the respective school's Dean. IT Support will provide maintenance and upkeep for computer equipment within the LRCs and classrooms. The Director of Educational Technology is responsible for the classroom, LRC maintenance and recapitalization plans. Upon request, Deans may be authorized to convert classrooms, VTCs, and LRCs into another type of space. These requests will be handled by the SMPC as per Figure 5.1.

h. Office Guidelines. Offices will be allocated as space permits. Table 4-1 can be used as a general guideline for space allocation.

1) There will be no office space used solely as a library other than the Dudley Knox Library. Faculty and staff must store their professional books/resources in their own office space or other storage space approved by the SMPC.

2) No individual will be permitted to have more than one office with the exception of Department Chairs. It is recognized that the Department Chair position is for a specific time period and at the conclusion of their tenure, they will move back to their original faculty office. During the period of their chairmanship, it is recommended that the appointed faculty provide their original faculty offices for other temporary uses such as visiting professors, contract professors, post docs, PhD students, and/or other appropriate uses.

	Office Type	Position
1	Private	President, Tenured/tenure track faculty and executive positions.
2	Private	Associate Deans; Division heads; Heads of directorates
3	Private / Shared	Non-tenure track faculty (to include endowed/designated chair professors,

		administrative faculty and Military faculty), distinguished research professors/associate professors, Reference librarians, supervisory positions and technical/support staff
4	Shared	Post doctorates, research assistants/technical staff, administrative support, contractors who provide direct mission support, and emeritus professors. **
5	Shared	PhD Students
6	Shared / Study Area	Masters students in thesis quarters

*See ref (a) for further details.
**Exceptions can be made for administrative staff members or contractors who routinely work with privacy act information, purchasing agents who need to secure deliveries and others as directed by the respective Dean. Consideration should be given for placing research staff near or within their respective labs without using additional space for offices.

Table 4-1

i. The Information Technology (IT) organization needs critical network infrastructure wiring closets and enterprise server rooms throughout campus; identified inref (g). IT also has staff personnel distributed throughout the academic campus iaw ref (g).

j. The Public Works organization needs mechanical rooms and utility closets to provide building system maintenance. These rooms are identified in ref (g).

k. All unoccupied space within a school is to be held at the Dean level for subsequent prioritization, and allocation, first to support school/institute needs, and/or requirements as deemed necessary by the SMPC.

l. All new research projects/programs must identify the space required prior to approval of the project. A Space Request Questionnaire will need to be submitted to the SMAG. The resulting data audit will be considered during the project approval process. Necessary information considered will include: How much space is needed, which organization will provide the space, special requirements/modification for the space, when the space is needed, and the length of time space is needed. In the case of special requirements or modifications, funding resources must first be identified.

m. Space prioritization guidelines.

Priority	Space Type	Definition
1	Offices	See table 4-1
2	Classrooms	Provides accommodations for classroom lecture instruction, using standard chairs with fixed tablet arms, or a working surfaces in lieu. An instructor station is provided, with space for use of portable training aids. Individual classroom sizes is dictated by the required number of seats as per ref (a).
3	Type I Labs	Spaces used for theoretical or applied research, development and testing operations that provide educational research and generate income.*
4	Type II Labs	Spaces used for theoretical or applied research, development and testing operations that provide educational research.*
5	Type III Labs	Spaces used for theoretical or applied research, development and testing operations that generate income.*
6	LRCs-Non-scheduled	Shared resource areas that provide computer resources to departments for educational purposes. LRC size will be based on number of workstations required.
7	Administrative Spaces	Spaces used for administrative purposes, i.e. mail rooms, copy rooms, prep rooms, etc.
8	Conference Rms	Spaces between 150-500 sf based on size of conference requirements
9	Offices-Professor Emeritus	Offices may be provided to Professor Emeritus who are officially recognized by NPS.
10	Departmental Study Spaces	Study space may be allocated where/when available through the respective Deans. Thesis

		students will have priority for student study space.
11	Storage	Storage for equipment and files.
12	Break Rooms/Lounges	
13	Type IV Labs	Spaces used for personal research and are not generating income, or used for student education.*
14	Dept Libraries	Departmental Libraries are not authorized spaces.

* Laboratories are for teaching and research and belong to the respective departments under the School Deans and, in the case of the Institutes, to the Dean of Research.

Table 4-2

5. Space Management Organization. Space requirements will be managed by one committee and three sub-committees. Requests for additional space or changes will be made as per paragraph 6 and Figure 5.1.

a. Space Management Prioritization Committee (SMPC). The SMPC will address major changes involving space at NPS, including the establishment of space priorities. The SMPC will meet annually or as required. The President will chair and the President's Executive Secretary will schedule the meeting with the required participants. The President's office will also arrange for minutes and required decision documentation.

1) President Of Committee. The President of NPS has overall responsibility for space management, and shall maintain this instruction and oversee its implementation.

2) Membership.

- NPS Executive Vice President and Provost
- Senior Military Assistant and Chief of Staff
- NPS Base Director
- Dean of the Graduate School for Business and Public Policy
- Dean of the Graduate School for Engineering and Applied Sciences
- Dean of the Graduate School for Operational and Informational Sciences
- Dean of the School of International Graduate Studies
- Dean of Students
- Vice President and Dean of Research

- Vice Provost for Academic Affairs
- University Librarian
- NPS Vice President for Information Resources and CIO
- Vice President for Finance and Administration

Additional participants may attend as required.

3) Minutes will be taken at each meeting and posted on the NPS intranet for general dissemination. Decisions made at the proceedings will also be documented and binding.

b. SM Working Group. The SM WG will meet on a quarterly basis to review/validate policies and develop options on space issues for the SMPC. SM WG will create ad hoc working groups of non-biased department representatives in order to process space issues and requests as necessary. They will present their findings and recommendations to the SMPC for final change approval.

1) Membership.

- NPS Base Director
- Deputy Dean of Students
- Military Associate Deans
- Associate University Librarian
- Public Works Officer
- NAVFAC Planner
- NSDM N3
- Registrar
- Executive Director of ITACs
- NPS Deputy Comptroller
- Representatives of campus activities as required

c. Space Management Audit Group (SMAG). The NPS Space Management Audit Group will be charged with the general management of the Space Management Program to include the tracking of space requests, filing SMPC official minutes, maintaining approved changes to the space allocation database, and updating the official space allocation floorplans. The group will review requests, collect background research and present the issues before the SMWG and/or the SMPC.

6. Space Request Process. Deans and executive staff may use allocated space in accordance with guidelines provided. When

formal requests for additional space are submitted, then anything outside of this instruction will be justified.

a. Internal Space Allocations. New space requirements should be resolved internally when possible. When a resolution cannot be established, a formal space request submitted to the SMAG is required.

b. Formal Space Request. A formal request for new space requirements may be submitted to the SMPC through the SMAG and SMWG.

1) Space Request Form. The requester must file a Space Request Form (encl 2) signed by the associated Vice President, Vice Provost or School Dean with the SMAG. The form may be filed submitted to the SMAG at Public Works. Space request status will be tracked on the Public Works website through closure of the case (ref h).

2) SMAG Request Review. The SMAG will review the request, conduct a space audit for the requesting department, and provide an initial internal departmental solution if available. If no viable solution is available, the SMAG will forward the request with potential cross-departmental solutions to the SM Working Group for action.

3) SM Working Group Review. The SM WG will review the request and provide a recommended solution to the SMPC for approval.

4) SMPC Approval. The SMPC will review the request and proposal for final approval.

5) Approved Space Change. If the space change has been approved by the SMPC, the President will sign an official change directive to the Dean or VP. The Dean or VP will reallocate the identified space to the new department. This will be filed by the SMAG until further change of allocation occurs. The SMAG will update the floorplans (ref g) to indicate the new allocations.

THE ROAD AHEAD
The next Five Years, October 2006 - September 2011

1. PURPOSE: the purpose of this document is to generally describe the major base facilities initiatives within the next five years, to include construction, renovation, and major departmental, other moves subject to the approval of the PROVOST's Space Management Prioritization Committee (SMPC). This is intended to be a living document with regular review periods.

2. BACKGROUND:

    a. Original goal of reorganizing the campus was to realign the facilities in order to correlate and better support the academic reorganization of December 2001, which changed the Naval Postgraduate School into four separate graduate schools, each under its own respective Dean, and three institutes aligned under a separate Dean of Research. All movements have been intended and are progressing to an end state, where each graduate school with its respective academic departments and centers, reside in the same general geographic area with the respective buildings under the ownership of the school Dean.
    b. The last official Master Plan is the April 2003 Regional Shore Infrastructure Plan (RSIP). The end state described in the April 2003 RSIP demolishes both Spanagel Hall and Root Hall, and replaces Spanagel Hall with three separate replacement buildings, which the Graduate School for Engineering and Applied Sciences (GSEAS) resides in, along with Watkins Hall, Halligan Hall, and the 2nd floor of Bullard Hall. The Meyer Institute is housed in the 1st floor of Bullard Hall, while the Modeling, Virtual Environments, and Simulation (MOVES) Institute is housed in the Watkins Hall Extension. The Graduate School for Operational and Informational Sciences (GSOIS) resides in Glasgow Hall with it's major extension building. The Graduate School for Business and Public Policy, along with Information Technology resides in Ingersoll Hall with it's major extension building. A new major building has been constructed for the School for International Graduate Studies (SIGS) behind Herrmann Hall, and houses the entire school. Both the Batchelor Enlisted quarters and the Post Office have been demolished to make way for this new building.

c. In accordance with the original plans, and RSIP, the MOVE Institute, the Navy War College, and the Math Department have all moved to their general end-state locations. Significant changes for the NPS since the RSIP include:
    1) increased student growth in GSOIS, and GSBPP
    2) the State Historic Preservation Officer (SHPO) pronouncement that the Skidmore, Owens, and Merrill (SOM) academic complex which consists of Spanagel, Bullard, Root, and Halligan Halls is now eligible for the National Historic Register and replacement/demolition plans will not be favorably considered.
    3) Herrmann Hall Wings renovation project which converted all the existing admin space to billeting, resulting in the moves of the Defense Resource Management Institute (DRMI) to Halligan Hall, the Center for Civil-Military Relations to Glasgow Hall , and the Personnel Services Detachment to the DOD Center Building on the former Fort Ord.

3. NEXT THREE TO FIVE YEARS (November 2006 – October 2011)

a. Computer Science, (CS) and Cebrowski Institute (GSOIS, DOR) move into new Glasgow Extension from Spanagel Hall (5^{th}, 4^{th}, 2^{nd} floors) (Oct – Dec 06)
b. Basic Clean Room (GSEAS) to be built into Watkins Hall (Nov 06 – Apr 07), ($490K)
c. Classroom renovation Program, (Nov 06-Feb 07) ($214K) …with follow on $100K/FY through FY08, 09, 10, & 11.
d. Herrmann Hall Basement room 060 project for MWR/SMART Team, (Nov 06-Feb 07), (Seabees)
e. MWR Golf Course renovation, (Nov 06-Oct 08) ($4M est)
f. ECIP Irrigation project, ph 1, (Nov 06-Jun 07), ($312K)
g. MWR El Prado Renovation project (Dec 06-Jun 07), ($1.2M est)
h. ForceNet Server, HVAC project, B07 Glasgow SCIF/STBL (GSOIS), (Feb 07 – Jul 07), ($250K est)
i. Removal of old Golf Course clubhouse, B-199 (Dec 06-May 07), ($75K est)
j. PSD move from former Ft Ord to NPS, building 300 (Jan 07 – Aug 07) ($500K est)
k. Qtrs B renovation; (GSBPP, CEE), (Dec 06- Jan 07) ($50K est)

l. Temporary Global Center room expansion in HH VQ room (SIGS), (Dec 06-Jan 07), ($25K est, incl 2 yr room lease)
m. Bali Mural project, NPSF, (Jan-Jun 07), ($10K)
n. Bathroom Renovation Program, (Jul 07 – Mar 08), ($400K est)
o. Nano/MEMS lab (GSEAS) to be built into Watkins Hall (May 07 – Oct 08), ($500K est)
p. Electrical and Computer Engineering (ECE) (GSEAS) moves into Spanagel Hall 4th and 5th floors from 2nd floor Bullard Hall and Spanagel Hall 3rd floor (Apr 07 – Dec 07), ($700K est)
q. SSAG machine shop consolidates with MAE machine shop (HA 101), to make room for new Space optics lab in Ha 102 (Oct 07 – Jun 08), ($120K est).
r. Clean room lab for Space Systems Optics MAE (GSEAS) to be built into Halligan Hall (Apr 08 – Mar 09), ($900K est)
s. MAE / Space optics lab (Agrawal) to locate new large scale satellite test facility in basement of HA. This lab will be shared with components of the SSAG small satellite lab test equipment (Jun 07 – May 09), ($150K est)
t. Wind Tunnels Removal (GSEAS), (Jan-Jun 07), ($750K est)
u. AUV / Unmanned Sys Lab Center for MAE (GSEAS) to be moved from Golf Course lab building 230, and built into Halligan Hall old Wind-Tunnel lab (Aug 07 – Jan 09), ($1.2M est)
v. Hydrodynamics lab to be expanded into the MAE machine shop (Oct 07 – Sep 08), ($100K est)
w. Oceanography (Ocean Acoustics) (GSEAS) lab and offices move from Root Hall 1st floor to Spanagel Hall, 3rd floor and basement/loading dock area. PH woodshop required to move to a new location (Jul 07 – Apr 08), ($150K est). Root Hall vacated spaces go to GSOIS to fill Information Sciences (IS), and Defense Analysis (DA) priorities.
x. Electronic Key Lock project, (Dec 06 – Jan 09), ($1.164M)
y. Explosives Materials Magazine project for Golf Course Explosive Materials and Rocketry lab (GSEAS), (Apr 07 – Sep 07), ($500K est)
z. Defense Resource Management Institute (DRMI) (SIGS) 60 person classroom space is built in separate building adjacent to/vicinity of Watkins Hall, and Halligan Hall (Nov 06 – Oct 07), ($1M). Spanagel Hall room 400 is released to central classroom scheduling (Oct 07).
aa. Spanagel Exterior Terra Cotta Painting project (Apr 07 Nov 07), ($500K)

bb. Steam Project laterals for Halligan and Ingersoll Halls, (Apr 07 – Aug 07), ($250K est)

cc. DelMonte Lake dredging project, (Sep 07 – Jan 08), ($500K)

dd. Systems Engineering (GSEAS) moves into Bullard Hall 2nd floor. (Aug 07 – Mar 08), ($100K est)

ee. Space Systems moves from 2nd floor Bu to 1st floor Bu (Mar 07 – Sep 07), ($50K est)

ff. Free Electron Laser (FEL) lab constructed at Golf Course lab building 216; funding TBD; estimated time period (Aug 07 – Nov 08), ($6M est)

gg. Math Dept to occupy Sp 256 and transforms vacated space into offices. This brings math faculty/admin offices to rough parity of faculty and staff across campus (Sep 07 – Mar 08) ($100K est)

hh. SSAG student study space and former large study area in King Hall basement to be assigned as GSEAS spaces.

ii. Dean GSEAS moves his administrative offices to Spanagel Hall 5th floor into old Cebrowski Institute spaces from 1st floor. (Jan 07), ($50K est)

jj. P-205, construction (design-build) contract for new wing to Glasgow Hall was awarded in Sep 06. Construction ongoing with estimated completion in Jul 08, ($8M). Intent at this time is to provide additional space for GSOIS priorities.

kk. Special Project ($8.3M) for renovation of Ingersoll Hall to be awarded by Mar 07, with construction period of 18 -24 months; estimated date of start and completion, Aug 07 – Aug 09. GSBPP and Information Technology Directorate affected.

ll. Herrmann Hall West Wing 4th floor office conversion for Global Center (SIGS); 2007 International Students/IMET funding. Estimated Sep 07 contract award with 12 month construction period; estimated date of completion Oct 08, ($750K est).

mm. P-197, Ingersoll MILCON, presently FYDP 2012; seeking funding approval through Congressional Insert for FY 2008 with tentative Sep 08 contract award, and 18-24 month construction period; tentative estimated completion Apr- Sep 2010, ($10M est).

nn. Special Project ($14.4M) for major systems upgrades, and minor renovation for Spanagel Hall; seeking funding approval through Commander Naval Installations Command (CNIC) FY 08/09 Integrated Priority List (IPL) process. (Sep 08 – Apr 10)

oo. P-208, SIGS MILCON, presently un- programmed, seeking FYDP prioritization through CNIC PR09 MILCON IPL process and

subsequent funding approval through Congressional Insert for FY 2009; tentative Sep 09 contract award with 18-24 month construction period and tentative estimated completion date Apr-Sep 2011, ($10-12M est).

Naval Postgraduate School

EXECUTIVE MEETING STRUCTURE

GOAL: Accomplish the mission of NPS. Allow President and Provost to focus on strategic issues including:

- development and maintenance of relationships with stakeholders
- resource support and advocacy, including development of new streams of revenue
- communication about the relevance and quality of NPS
- achieving the goals of the strategic plan
- communication about the strategic plan with internal and external constituents

In general, we keep meetings to a minimum but make them sufficient in length to accomplish significant objectives. These are the standing meetings. Other meetings on significant issues would be scheduled as required.

1. STRATEGIC PLANNING COUNCIL

- Meets quarterly for half to full day to discuss the progress of the NPS Strategic Plan. Updates initiatives, ensures resources are aligned with plan, prioritizes POM issues, measures success.

Membership

President, Chair
Provost, Co-chair
Chief of Staff
Deans of Schools (4)
Dean of Research
Dean of Students
Associate Provost for Academic Affairs
Associate Provost for Information Resources and CIO
Special Assistant to the Provost
Chair of the Faculty Council
Executive Associate to the Provost

Others will be asked to provide updates on plans and briefs.

Action: Strategic Plan Action Team
Membership: Dean Boger, Julie Filizetti, Christine Cermak (responsibilities to be shared with the Strategic Planning Council on a rotating basis)

2. EXECUTIVE ASSEMBLY

- Meets monthly. Purpose is information sharing primarily by President and Provost.

Membership:
President, Chair
Provost, Co-Chair
Chief of Staff
Deans of Schools (4)
Dean of Research
Associate Provost for Academic Affairs
Dean of Students
Executive Associate to the Provost
Associate Provost for Information Resources and CIO
Special Assistant to the Provost
Institutional Advancement
Sponsored Programs
Programs
Office of Continuous Learning
Associate Deans (or as alternates)
Facilities
Library
Faculty Chair
Institutional Research
Human Resources Officer
Comptroller

Action: Chief of Staff/Executive Associate to the Provost

3. ACADEMIC POLICIES AND PLANNING COMMITTEE (AP&P)
Develops academic plans and policies in support of strategic plan. Deals with operational issues and develops academic resource requirements and budgets.

Meets as required. Weekly to start. (Replaces Provost Council)

Membership
Provost
Deans of Schools (4)
Dean of Research
Associate Provost for Academic Affairs
Special Assistant to the Provost
Executive Associate to the Provost
University Librarian (as required)
Associate Provost for Information Resources and CIO (as required)
Director of Academic Planning (as required)
Chief of Staff (as required)

Others to be invited as required depending on issues.

Action: Associate Provost for Academic Affairs

4. BUSINESS PROCESSES, FACILITIES AND INFRASTRUCTURE COMMITTEE

Ensures that the business processes, facilities, HR plans and policies, space plans, IT and other infrastructure issues support the academic mission.

Meets monthly.

Membership

President (Chair)
Provost
Chief of Staff
Director, Base Operations
Associate Provost for Information Resources and CIO
University Librarian
Comptroller
Human Resources Officer
Chair of Business Processes Implementation Task Force
Director, Sponsored Programs
Special Assistant to the Provost
Executive Associate for the Provost

Action: Chief of Staff/Executive Associate for the Provost

5. RESOURCE ADVISORY COMMITTEE

Monitors NPS resources. Develops recommendations for discussion by Strategic Planning Committee and/or Academic POPR.

Meets with President, Provost, COS monthly or as required.

Membership:

Comptroller
Deputy Comptroller
Special Assistant to the Provost
Academic Planning
Associate Provost for Academic Affairs

Action: Comptroller and Associate Provost for Academic Affairs

6. DEANS AND CHAIRS

Informational meeting. Provost and /or President shares information on academic issues with Deans and Chairs. Meets twice per month. Will be chaired by the Provost or President depending on topics.

Note: This has been a standing Provost meeting for at least a decade. Given the new organization, the Meeting Chair should be shared by the President and Provost.

7. ACADEMIC COUNCIL

Council establishes, monitors, reviews, certifies, and advises on policies and procedures which will ensure high and consistent academic standards of graduate education (for detailed description refer to the Academic Policy Manual).

Meets monthly.

Membership:
Provost
Associate Provost for Academic Affairs
Dean of Students
Director of Programs
Chair of Faculty Scholarship Committee
Officers from Departments and Academic Groups

Action: Chair and Secretary of the Council

8. FACULTY COUNCIL

NPS Faculty Council

The Faculty Council functions as a primary faculty input advisory vehicle to the Provost and Superintendent. The mission of the faculty organization is to promote understanding and communication between members of the faculty and members of the administrative staff, to protect and promote the professional stature of the members, and to assist the administration in accomplishing the goals of the Naval Postgraduate School.

The Faculty Council meets monthly.

Membership: The Faculty is organized with the following elected representative bodies:
- The Faculty Council
- The Faculty Executive Board
- The Standing Committees of the Faculty

Action:
Faculty Executive Board

Applied Science Accreditation Commission
Computing Accreditation Commission
Engineering Accreditation Commission
Technology Accreditation Commission

August 15, 2008

James L. Kays
Dean, Graduate School of Engineering and Applied Sciences
Naval Postgraduate School
Bldg 232, Suite 103
833 Dyer Road
Monterey CA 93943-5117

Dear Dr. Kays :

Engineering Accreditation Commission (EAC) of ABET recently held its 2008 Summer Meeting to act on the program evaluations conducted during 2007-2008. Each evaluation was summarized in a report to the Commission and was considered by the full Commission before a vote was taken on the accreditation action. The results of the evaluation for Naval Postgraduate School are included in the enclosed Summary of Accreditation Actions. The Final Statement to your institution that discusses the findings on which each action was based is also enclosed.

The policy of ABET is to grant accreditation for a limited number of years, not to exceed six, in all cases. The period of accreditation is not an indication of program quality. Any restriction of the period of accreditation is based upon conditions indicating that compliance with the applicable accreditation criteria must be strengthened. Continuation of accreditation beyond the time specified requires a reevaluation of the program at the request of the institution as noted in the accreditation action. ABET policy prohibits public disclosure of the period for which a program is accredited. For further guidance concerning the public release of accreditation information, please refer to Section II.L. of the 2007-2008 Accreditation Policy and Procedure Manual (available at www.abet.org).

A list of accredited programs is published annually by ABET. Information about ABET accredited programs at your institution will be listed in the forthcoming ABET Accreditation Yearbook and on the ABET web site (www.abet.org).

It is the obligation of the officer responsible for ABET accredited programs at your institution to notify ABET of any significant changes in program title, personnel, curriculum, or other factors which could affect the accreditation status of a program during the period of accreditation.

Please note that appeals are allowed only in the case of Not to Accredit actions. Also, such appeals may be based only on the conditions stated in Section II.G. of the 2007-2008 Accreditation Policy and Procedure Manual (available at www.abet.org).

Sincerely,

Mary Leigh Wolfe

Mary Leigh Wolfe, Chair
Engineering Accreditation Commission

Enclosure: Summary of Accreditation Action
Final Statement

ABET, Inc.

Engineering Accreditation Commission

Summary of Accreditation Actions
for the
2007-2008 Accreditation Cycle

Naval Postgraduate School
Monterey, CA

Astronautical Engineering (MS)

Electrical Engineering (MS)

Mechanical Engineering (MS)

Accredit to September 30, 2014. A request to ABET by January 31, 2013 will be required to initiate a reaccreditation evaluation list. In preparation for the visit, a Self-Study Report must be submitted to ABET by July 01, 2013. The reaccreditation evaluation will be a comprehensive general review.

ABET, Inc.
ENGINEERING ACCREDITATION COMMISSION

NAVAL POSTGRADUATE SCHOOL

Monterey, CA

FINAL STATEMENT
Visit Dates: October 21-23, 2007
Accreditation Cycle Criteria: 2007-2008

Introduction and Discussion of Statement Construct

The Engineering Accreditation Commission (EAC) of ABET, Inc. has evaluated the astronautical, electrical, and mechanical engineering programs of the Naval Postgraduate School.

This statement is the final summary of the EAC evaluation, at the institutional and engineering-program levels. This statement consists of two parts: the first deals with the overall institution and its engineering operation, and the second deals with the individual engineering programs. It is constructed in a format that allows the reader to discern both the original visit findings and subsequent progress made during due process.

A program's accreditation action is based upon the findings summarized in this statement. Actions depend on the program's range of compliance or non-compliance with the criteria. This range can be construed from the following terminology:

- Deficiency: A deficiency indicates that a criterion, policy, or procedure is not satisfied. Therefore, the program is not in compliance with the criterion, policy, or procedure.

- Weakness: A weakness indicates that a program lacks the strength of compliance with a criterion, policy, or procedure to ensure that the quality of the program will not be compromised. Therefore, remedial action is required to strengthen compliance with the criterion, policy, or procedure prior to the next evaluation.

- Concern: A concern indicates that a program currently satisfies a criterion, policy, or procedure; however, the potential exists for the situation to change such that the criterion, policy, or procedure may not be satisfied.

- Observation: An observation is a comment or suggestion that does not relate directly to the accreditation action but is offered to assist the institution in its continuing efforts to improve its programs.

The Naval Postgraduate School (NPS) is a defense–oriented, research university, operating as a geographically distributed educational system, providing tailored graduate education in support of national and international security. It is a federal institution, owned and operated by the United States Navy and provides education primarily at the master's degree level. The typical students are mid-career military officers seeking education directly relevant to their military careers. Current enrollment is over 1700 resident and more than 600 non-resident students, an increase of more than 400 resident students over the last six years. About 25 percent of the students are enrolled in accredited engineering or related programs. Approximately 43 percent of the students are from the US Navy, with another 41 percent coming from the other branches of the US Armed Forces. The remaining 16 percent of the student population is comprised of nearly 270 international participants from 48 countries, providing a culturally rich learning environment.

Funding has seen a steady increase over the six years since the last accreditation visit. However, more than half of the budget comes in the form of "reimbursable" funds for research from both Navy and non-Navy clients. Faculty members typically depend on research funds to cover part of their salary. Direct funding is projected to decline somewhat in FY 2008, while reimbursable funding is expected to continue to increase significantly.

A distinctive feature of the educational programs at the Naval Postgraduate School is the grouping of programs of study into military-relevant "curricula" as distinct from degree programs. Curricula are specific educational programs established and monitored by the Navy to meet Navy needs. The curricula are broader than traditional academic disciplines (aeronautical engineering, electrical engineering, etc.) in that they include specific topics relevant to the

military objectives. By properly choosing curricula and degree programs, students can meet their military career goals and also obtain traditional master's degrees. The curricula are reviewed every two years and adjusted to meet Navy needs. The assessment of the academic programs is very well developed and is being considered as a model process for the entire institution.

The following units were reviewed and found to adequately support the engineering programs: library, dean of students, information resources/CIO, institutional research, academic planning, academic affairs, and facilities.

Institutional Strengths

1. Recent efforts to establish NPS as a "Flagship" institution are expected to have significant positive effects relative to governance and funding.

2. The identification of Flag Officer-level curriculum sponsors for the three engineering degree programs has served to provide a direct and authoritative connection between what is needed by the principal constituent and the material taught.

Institutional Concern

1. Policies and Procedures Section II.L. of the ABET Policy and Procedure Manual, Public Release of Accreditation Information, requires institutions to represent the accreditation status of programs accurately and without ambiguity. A review of degrees offered by NPS reveals that there are degrees with "engineering" in their title that are being awarded by schools other than the Graduate School of Engineering and Applied Science (GSEAS). This can lead to confusion for graduates and future employers relative to whether or not those degrees are ABET accredited.

    - Due-process response: The institution did not provide a response to this shortcoming.

    - The concern remains unresolved.

Institutional Observation

1. NPS intends to apply for accreditation of a master's degree program in systems engineering when a sufficient number of students have graduated. A non-ABET accredited MSSE degree has been offered since the early 1990's through the Department of Information Sciences. Responsibility for that degree has recently been transferred to the newly established Department of Systems Engineering within the GSEAS. However, a high percentage of core systems engineering topics continue to be taught by non-engineering faculty members who have no direct reporting relationship to the Department of Systems Engineering. In preparation for ABET accreditation, consideration should be given to establishing a more direct relationship between the Department of Systems Engineering and faculty members responsible for defining and teaching core courses.

Astronautical Engineering
Program

Introduction

The Master of Science in Astronautical Engineering (MSAE) program is part of a new Department of Mechanical and Astronautical Engineering (MAE) that was created in 2003 after the aeronautical engineering program was moved to the Air Force Institute of Technology. The MAE department is responsible for the astronautical engineering program; however, the Space Systems Academic Group (SSAG), an interdisciplinary association of faculty responsible for the space systems engineering curriculum, provides support in meeting some educational objectives. Students in the space systems program have an option of earning a degree in astronautical engineering, electrical engineering, physics, or computer science; however, a large majority of these students pursue the MSAE degree. At the time of the visit, there were 29 students enrolled in the MSAE program. Annually, 8 to 15 students graduate with the MSAE.

The majority of courses in the MSAE program are taught by the five FTE MAE faculty members, but several courses, such as space environment, remote sensing, electric power, microprocessors, and communications engineering, are taught by faculty members from other departments. The SSAG plays an important role in facilitating interaction between the eight academic departments that teach courses for the astronautical engineering program.

Note that in addition to the following program findings, there is an institutional concern as previously presented in the institutional section.

Program Strengths

1. The interdisciplinary nature of the SSAG faculty insures excellent coverage of the broad range of topics required in astronautical engineering.

2. Design plays an important role in the program and projects benefit from extensive input from government and industry. Theses and reports are of a very high quality.

3. The program of each student is of major interest to the agency or command that will employ that individual upon graduation. This insures that the program is relevant to the needs of the Services.

Observations

1. Programmatic support depends to some extent on sources such as reimbursable research funds. Declines in such funding could negatively impact the program.

2. Students indicate that they would like more flexibility in some course requirements and are concerned that some elective courses have not been offered as frequently as they would like.

3. The material on the departmental web site should provide clearer descriptions of the MSAE, MSES (astronautical), and the astronautical engineer options offered by the department.

Electrical Engineering
Program

Introduction

The electrical engineering (MSEE) program is tightly coupled to the electronic systems engineering curriculum and is designed to supply the needs of the constituents. The Navy is the primary stakeholder along with other associated agencies such as the Space & Naval Warfare Systems Command, Naval Sea Systems Command, and Naval Air Systems Command. The program has 30 faculty members and 85 resident students, most of who are from the Navy and the Marine Corps, with a few from the Army and Coast Guard. There are also international students from countries such as Korea, Greece, and Portugal.

Note that in addition to the following program findings, there is an institutional concern as previously presented in the institutional section.

Program Strengths

1. The students are dedicated to their study and highly motivated, with a broad perspective from their work experience before coming to NPS.

2. The faculty is academically strong and shows real concern for students' learning. There is strong interaction between the faculty and the students.

Program Concern

1. Criterion 1. Students This criterion requires that the program have and enforce procedures to assure that all students meet all program requirements. The self-study states that the program is offered to non-resident students through "distance learning." While this did not happen during the accreditation period, it may be done in the near future. The program must assure that all program activities for non-residents are fully equivalent to those provided for resident students.

- Due-process response: The program did not provide a response to this shortcoming.

- The concern remains unresolved.

Mechanical Engineering
Program

Introduction

The mechanical engineering program is offered by the Department of Mechanical and Astronautical Engineering. The program has 16 full-time, tenure-track faculty members and approximately 17 adjunct and other faculty members. For the four quarters of 2007, the average enrollment in the program was 55, with 18 students entering the program and 45 students graduating.

Note that in addition to the following program findings, there is an institutional concern as previously presented in the institutional section.

Program Strengths

1. The student body is universally recognized by the faculty to be a major program strength. Students are confident, capable, personable, mature, professional, disciplined, and determined.

2. Faculty members are competent and concerned teachers and are readily available to students. In research, the faculty is appropriately balanced between fundamental and applied areas and between engineering fundamentals and Navy needs.

3. The program provides a wide range of interesting and useful thesis topics. This is complemented by many laboratory facilities that offer exciting research environments not usually found at other universities.

Observations

1. Precipitously declining enrollments in the program challenge the near- and long-term health of the program. In 2007, the number of graduating students exceeded the number of entering students by a factor of two and one-half. Declining enrollments have both budgetary and

programmatic implications. Although students enjoy the small classes that this situation creates, the viability of courses with small enrollments is threatened. Furthermore, the situation also has the potential for severe dislocations in faculty responsibilities and workloads. The mechanical engineering leadership has been working aggressively to add new sources of students and to maintain traditional sources; however, resolving this issue is likely to require attention at levels above that of the department.

2. The program currently has a very effective assessment process; with further refinements, the assessment process has the potential to be an exemplary model.

Mechanical Engineering

DRAFT

Program Self-Study Report
Mechanical and Astronautical Engineering Department

A. Background Information

1. Degree Title: Master of Science in Mechanical Engineering

2. Program Mode: Residence program

3. Actions to Correct Previous Shortcomings

The last initial ABET visit was performed on fall of 2001 and the Draft Statement on dated March 4, 2002 pointed out three deficiencies and two weaknesses as below:

1. Criterion 1: Students
   Students with BS/BA degrees from non ABET accredited programs do not meet all program requirements (Deficiency)
2. Criterion 3: Program Outcomes and Assessment
   a) No documented assessment process, b) have not provided evidence that demonstrates graduates have met program outcomes, c) the faculty have not established metrics for each of program outcomes, and d) have no documented feedback process in place to improve the program (Deficiency)
3. Criterion 2: Program Educational Objectives
   Objectives need to be published. (Weakness)
4. Criterion 4: Professional Components
   a) Weakness in providing a major design experience for students with BS/BA from a non-ABET accredited program (weakness), b) Students with BS/BA from a non-ABET accredited program may not satisfy one and one-half years of engineering topics and courses (Deficiency)
5. Criterion 8: Program Criteria
   Students from non-ABET accredited engineering programs may not have a sufficient background in statistics (weakness)

Corrective Actions were taken at the request of the Engineering Accreditation Commission, and the report for response the Draft Statements was sent to the Engineering Accreditation Commission. Then, the Engineering Accreditation Commission sent Summary of Accreditation Actions stating accreditation of the Master of Science in Mechanical Engineering Program to September 30, 2004 with a requirement of a reaccredidation evaluation visit during fall of 2003. The Summary of Accreditation Actions dated August 15, 2002 stated that previous deficiencies and weaknesses were reduced to weaknesses and concerns, respectively, as below:

Criterion 1: Students (weakness)

1. Criterion 1: Students (Reduced to Weakness)
2. Criterion 3: Program Outcomes and Assessment (Reduced to Weakness)
3. Criterion 2: Program Educational Objectives (Reduced to Concern)

4. Criterion 4: Professional Components (Reduced to Concern)
5. Criterion 8: Program Criteria (Reduced to Concern)

Furthermore, the evaluation visit during fall of 2003 would be a focused visit to evaluate the corrected actions. As a result, the *Self-Study Report for Focused Visit* was submitted to the Engineering Accreditation Commission on June of 2003, and there was another focused ABET visit on fall of 2003 to address and correct those deficiencies and weaknesses. After the second visit, all weakness and concerns were completed resolved as shown in the Draft Statement dated February 24, 2004. The Draft Statement is provided below.

4. Draft Statement from the Most Recent Accreditation for Mechanical Engineering Program

Introduction

The mechanical engineering program is in the Department of Mechanical and Astronautical Engineering. There are 14 mechanical engineering faculty members and 70 declared MSME majors in Fall 2003. There were about 30 graduates in the last year. The program has a new chair as of the summer of 2003.

Program Strengths

1. The students appear to be well-qualified and highly-motivated, mid-career professionals.
2. Communications with the chair before the visit were efficient and friendly.
3. The current students are very supportive of the mechanical engineering program and the faculty.

Program Weaknesses

1. Criterion 1. Students The *previous review noted that students entering the program with BA/BS from non-ABET accredited programs did not meet all program requirements. This was due to some students from non-ABET accredited programs (about 1/3 of the students were in the non-ABET category) not meeting all BSME equivalency program requirements.*

   The faculty made changes to try to ensure this BSME equivalency. New checklists were created and are being used effectively. Greater flexibility is provided in the MSME program by allowing more courses to be used to meet the EAC BSME equivalency. In addition, a new capstone design course ME 3172 (discussed below) has been created. An examination of transcripts and supporting checklists by the reviewer showed that this issue had been addressed satisfactorily.

   - The weakness is resolved.

2. Criterion 3. Program Outcomes and Assessment In *the previous review it was noted that outcomes had been defined, a set of assessment tools had been defined, and metrics had been identified. An assessment committee had been established and*

performance was to be reviewed quarterly. However a weakness remained pending demonstration that the process and tools work effectively.

A constituency group has been identified. An examination of questionnaire results and minutes of faculty meetings demonstrated that an improvement process is in place and working. Program outcomes have been defined and mapped against the program objectives. A set of tools to evaluate the outcomes has been developed. Assessment data has been gathered and utilized to improve the program.

- This weakness is resolved.

Program Concerns

1. Criterion 2: Program Educational Objectives During *the last visit, there was a concern that the educational objectives were not published in the catalog or in other publicly available media.*
The objectives are now published in the latest catalog shown on the website and on the department's website.

- This concern is resolved.

2. Criterion 4. Professional Component *In the previous review there was a concern about demonstration of the mechanical engineering program criteria. The General Criteria requires that the program must have a major design experience. The mechanical engineering program criteria require that all graduates demonstrate "the ability to work professionally in both thermal and mechanical systems areas including the design and realization of such systems." For students from EAC-accredited mechanical engineering programs, this requirement is satisfied in their BSME programs. A significant number of these students have undergraduate degrees from non-EAC accredited BSME programs. For these students, additional course work is required to bring them up to an EAC equivalency. The ability to work in both stems is usually demonstrated in a capstone design experience. At the last General Review, major design experience was being met by the ME 3711 (Machine Design) and MS 3202 (Failure Analysis) classes.*

A new capstone design class ME3712, Capstone Design Project, was established. It is taken at about the sixth quarter of the eight-quarter program. Examination of the ME 3712 course outline and a number of recent senior design reports did not indicate that students demonstrated the ability to work in the thermal systems courses such as ME3240, Marine Power and Propulsion. The Department is urged to be mindful of this two-stem requirement as the implement curricular improvements.

- This concern is resolved.

3. Criterion 8. Program Criteria *Criterion 8 of the mechanical engineering program criteria requires that each graduate demonstrate a familiarity with linear algebra and statistics. In the last visit, the EAC noted that the program relied on ME 3410*

(Instrumentation and Measurement) to provide this background for the non-EAC accredited students; the EAC team cited this as marginal.

After July 2002, a statistics course became mandatory for those who do not have an EAC-accredited BSME degree. The Reviewer examined the statistics course materials, and found the course to be satisfactory. In addition, the faculty strengthened the linear algebra competence of the students by requiring MA 2043, Introduction to Matrix and Linear Algebra, for those students who had not taken a similar course as an undergraduate.

- This concern is resolved.

B. Accreditation Summary

In this report, the following definitions are used, which are consistent with the standard definitions as used by ABET

Objectives: Statements that describe the expected accomplishments of our graduates during first several years following their graduations.

Outcomes: Knowledge, skills, and abilities that are derived from the objectives and measurable at the time of graduation.

Assessment: Processes that identify, collect, and analyze data for the purpose of determining achievements of objectives and outcomes.

Evaluation: Process of reviewing the results of data collection and analysis, and making determination of the value of findings and action to be taken.

Action: Implementation of new or revised objectives, outcomes, assessment and evaluation procedures, degree requirements, policies, etc. to improve the program.

Constituents: Group of people that affect or are affected by the program, including students, faculty, administrators, program sponsor, alumni, their supervisors, etc.

The complete loop to meet the ABET requirement to improve our degree program is sketched in Figure 1.1. The detailed explanations will be provided in later sections as necessary.

1. Students

Students generally enter the **M**echanical and **A**stronautical **E**ngineering Department through the Navy military channels and are selected based on outstanding professional performance, promotion potential, and academic background. Academic thresholds are based on a three point code called an APC – Academic Profile Code. The ME degree program requires an APC of at least 3-2-3, meaning a Quality Point Rating (QPR) at least 2.2-2.59 in undergraduate work at a recognized institution, the calculus sequence completed with at least an average between C+ and B, and completion of a calculus based Physics sequence with at least an average between C+ and B.

Entering students are initially advised by a Program Officer (currently LCDR James Melvin) and given a matrix of courses that would be required both to fulfill the degree requirements and their military educational skill requirements. During the course of study the students meet with both their program officer and a faculty member designated as a curriculum academic associate. The Academic Associate, currently Professor Josh Gordis, assists the student in the selection of electives, and coursework sequences designed, and sometimes tailored, to meet the requirements of ABET when it is established that the student does not

come from an ABET accredited undergraduate program and significant additional preparation is needed.

Students' progress is closely monitored by the program officer to ensure that the student does not fall behind in class work. Research progress is monitored closely by the supervising professor. In the event that a student fails to maintain a 3.0 QPR after any quarter, he is put on academic probation and given a program plan designed to lead to recovery, monitored closely by the Program Officer.

In the ME degree program, we rarely encounter a need for transfer of credits. In cases where it is needed, we allow the transfer of up to 12 hours of graduate level credit from another institution towards the MSME degree. In special cases permission to transfer a particular course for credit towards a degree requirement may be granted by the Department Chairman.

Validation of required degree courses is allowed where necessary and approved by the Academic Associate and the Department Chairman after a thorough review of the students prior background, prior courses, texts studied, syllabi covered, and sometimes an oral examination.

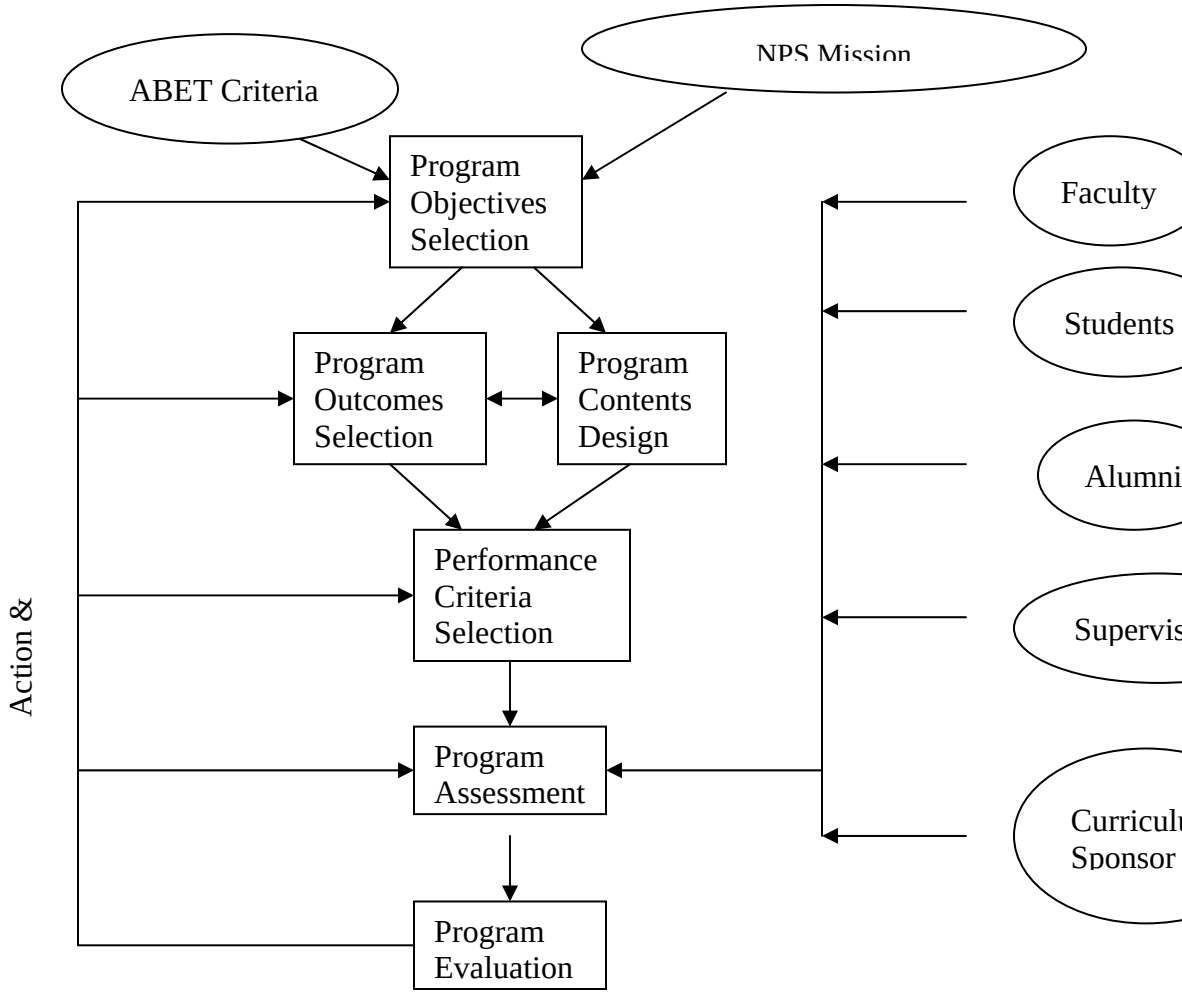

Figure 1.1. Closed-Loop Process for Improvement of MSME Program

2. Program Educational Objectives

2.1 Summary

This section describes the Program Educational Objectives of the MSME degree program at Naval Postgraduate School. Furthermore, it is discussed how the Program Educational Objectives are set, assessed, and evaluated by proper stakeholders of the program. Finally, ongoing process for improvement is also presented.

2.2 Description of Program Educational Objectives

Based on the Naval Postgraduate School (NPS) mission and ABET criteria, the Program Educational Objectives were determined by the ME faculty with input from GSEAS Dean and Provost. The Program Educational Objectives were reviewed by multiple constituents of the program and revised as necessary.

The NPS Mission Statement, as well as the Program Educational Objectives, are provided below:

NPS Mission

Provide relevant and unique advanced education and research programs in order to increase the combat effectiveness of U.S. and Allied armed forces and enhance the security of the United States.

Program Educational Objectives

The overall educational objective of the Mechanical Engineering program is to support the NPS mission by producing graduates who have knowledge and technical competence, at the advanced level in Mechanical Engineering, to support national security.

In order to achieve this goal, the specific objectives are to produce graduates who have:

1. The ability to identify, formulate, and solve technical and engineering problems in Mechanical Engineering and related disciplines using the techniques, skills and tools of modern practice, including modeling and simulation. These problems may include issues of research, design, development, procurement, operation, maintenance or disposal of engineering components and systems for military applications.
2. The ability to provide leadership in the specification of military requirements, in the organization and performance of research, design, testing, procurement and operation of technically advanced militarily effective systems. The graduate must be able to interact with personnel from other services, industry, laboratories and academic institutions, and be able to understand the role that engineering and technology have in military operations, and in the broader national and global environment.

3. The ability to communicate advanced technical information effectively in both oral and written form.

These objectives were published in the school Catalog and the MAE departmental website (http://www.nps.navy.mil/mae/objectives.htm).

2.3 Process for Identifying and Revising Program Educational Objectives

The Program Educational Objectives have been reviewed by the stakeholders to revise them as necessary in order to improve the program. The stakeholders for identifying and revising the Program Educational Objectives are

- Faculty
- Curriculum sponsor
- Supervisors of our alumni
- Alumni
- Students

Surveys and personal interviews have been conducted to assess and evaluate the appropriateness as well as achievement of our Program Educational Objectives. Each survey and interview results were summarized by a responsible faculty member, and the results were presented at a faculty meeting for discussion. If there was any change needed from the discussion, the Educational Program Objectives were revised to reflect the concerns from the data. The revised Objectives were assessed and evaluated in the following cycles as sketched in Figure 1.1.

2.4 Process of Assessing and Evaluating Program Educational Objectives

Surveys were conducted for various constituents including alumni, supervisors of our alumni, Engineering Duty Officer (EDO) school survey, curriculum sponsor, and students. In addition, personal interviews were performed with alumni and supervisors of our alumni.

Most of our students in the program are engineering duty officers in the US Navy. The engineering duty officers should attend the EDO School twice. They attend the school just after graduation from our program for the junior officers program, and several years later for the senior officers program. As a result, we visited the EDO school regularly to survey and interview our alumni there. Sometimes, we had teleconferences with our alumni in cases we could not visit the school or a direct visit was not deemed necessary. On the average, we contacted direct visits or teleconferences at least once a year and very often twice. We also surveyed and interviewed supervisors of our alumni. In many cases, our senior alumni were the supervisors of our junior alumni. In such cases, they were surveyed and interviewed in two different capacities.

For the supervisors of our alumni, we asked a question whether the Program Educational Objectives served their need. The blank survey form is attached for your review in Appendix I-D-1. During the interviews, more elaborate input was provided regarding the appropriateness of the Objectives. For the survey of our alumni, the same question as stated in Appendix I-D-1 was asked, and personal interviews were followed. In general, during these interviews we realized that it is rather difficult to efficiently target a large number of

alumni and alumni supervisors. This is evident by the limited responses that we were able to collect to-date. Specific steps taken to remedy this problem are outlined in Section 2.5.

For the graduating students, we also asked whether the Program Educational Objectives seemed to be appropriate. The primary reason we decided to ask the students these questions is that, typically, they already work in the Navy or Department of Defense communities for some time before they enroll to our degree program. Therefore, they have enough work experience to respond to the question.

Every graduating student indicated that the Program Educational Objectives serve well for their jobs. Out of three specific Objectives, almost everyone stated the Objective #1 was well met from our degree program. In other words, our graduates were well prepared for technical knowledge and skills from our degree program.

As far as Objective #2 is concerned, the surveys and interviews showed overall satisfaction. However, some suggestions proposed by our alumni were to introduce a couple of courses like *Product Lifetime Maintenance*, *Risk/Benefit Cost Analysis*, etc. So far, these requests were rather sporadic and consistent. Therefore, it was decided in the faculty meeting to analyze more input from the future before we took any action for revising our curriculum because our curriculum does not have a room to add a course without sacrificing an existing course with a very tight work schedule of our students. As one possible solution, we decided to add an elective course on Risk and Cost Benefit Analysis, which is discussed later in this report. In addition, we made sure that such concepts are reinforced in our design-related courses.

There were also some concerns regarding Objective #3. Our alumni stated that their thesis experiences were very useful in terms of both written and oral technical communication skills but they would like to have more opportunities to practice them during the degree program. Such opportunities exist but there is some variation with regards to student exposure. Many of our 4000 level courses require that students turn in term projects that are accompanied by oral presentations at the end of the quarter. However, other courses do not require them. Since 4000 level courses are elective, student experience with regards to communication skills would vary depending on their choices of elective courses. Considering this, the faculty passed a resolution to provide a seminar to all students for them to learn how to communicate technical information verbally or in writing.

The initial part of the form asks that students rate the program on a scale of 0 – 5 with respect to each the three stated program objectives. A high numerical rating implies strong agreement that the program meets the objective. The ratings did not appear to vary significantly with time from 2002 – 2006. For this reason, the data are summarized in Figure 2.1 as average student response for each of the objectives.

Overall, the highest numerical response, 4.39, is for Objective 1 (The ability to identify, formulate and solve technical and engineering problems …); the next highest, 4.31, is for Objective 3 (The ability to communicate …). The lowest response, 4.08, is for Objective 2 (The ability to provide leadership in the specification of military requirements …).

The form also solicits written comments regarding the appropriateness of the program objectives; however, few of the students offered any comments and those who did tended to be individuals having non-ME undergraduate backgrounds. Two comments in this respect are given below.

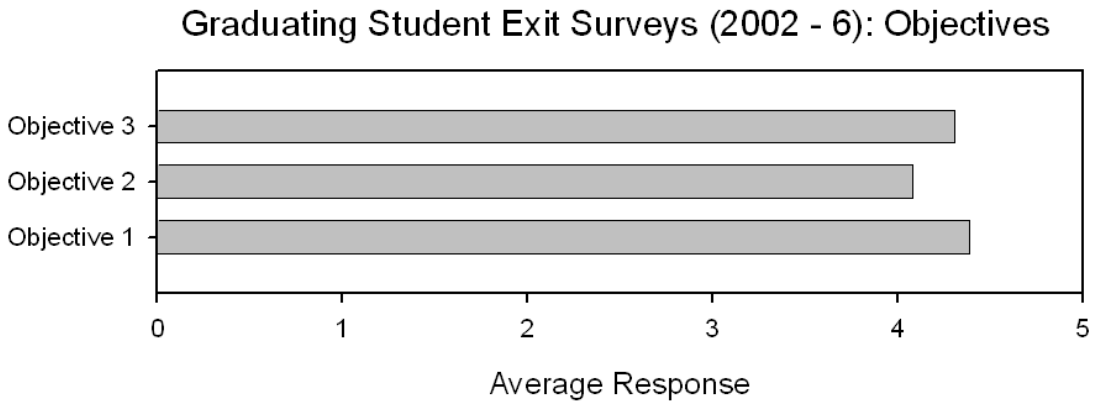

Figure 2.1. Average student responses in respect of the program objectives.

- The challenge to accomplish a BSME undergraduate and complete the MSME, the 2.5 years was a rapid pace and it is hard to say that I reached a proficient level of engineering technical understanding. Although my previous experience of practical application and work in an engineering environment the education at NPS has more than complemented my previous engineering exposure and will be beneficial in my future professional career with the Navy.

- Too many 'check the box' requirements and not enough 4000 level classes to say advanced level for the objectives.

2.5 Ongoing Improvement of the Effectiveness of the Program

Based on the feedback from our alumni and supervisors of our alumni, we identified several issues that called for corrective actions. These are outlined as follows:

- The need for a seminar on technical presentation was identified in our department. This was discussed in several departmental meetings and as a result several courses were either added and/or revised. We also explored the option of inviting outside speakers to give talks to our students on technical presentation skills. More detailed actions are provided in the next section of Program Outcomes because the Outcomes were derived in order to meet the Objectives.
- The difficult which we experienced in efficiently identifying and targeting sufficient numbers of our alumni supervisors was brought up during a teleconference with our curriculum sponsor at NAVSEA (Naval Sea Systems Command) in January 2007. We solicited the sponsor's help in solving this problem. It was decided that the sponsor would grant us access to a scheduled nationwide conference of our alumni

supervisors and we would circulate our questionnaires. The first such occurrence will take place during the summer of 2007.

- An elective Risk and Cost Benefit Analysis course was introduced and was offered first during 2006. The course is also taught this year. So far, student responses have been very positive. In addition, relevant lecture notes from the course have been made available to students during their design projects.

3. Program Outcomes and Assessment

3.1 Summary

This section describes Program Outcomes established to achieve Program Educational Objectives stated in the previous section. The relationship between Program Outcomes and Program Educational Objectives is also discussed. Then, the process to identity as well as to revise Program Outcomes is presented.

Furthermore, the process is also described for assessing and evaluating Program Outcomes in detail. In particular, the developed Assessment Criteria are discussed, and the evaluation of the criteria is presented for each criterion. This section also describes the continuous improvement process for Program Outcomes emphasizing action items for improvement. Finally, a description of relation of Courses to Program Outcomes is presented.

3.2 Description of Program Outcomes and their Relation with Program Educational Objectives

The Program Outcomes are stated below:

1. Graduating students will have knowledge and skills equivalent to an ABET-accredited BSME.
2. Graduating students will have advanced knowledge in Mechanical Engineering and competence in one of the available specialized disciplines of Mechanical Engineering.
3. Graduating students will have high level of communication skills including technical writing and oral presentation.
4. Graduating students will have the ability to independently identify, formulate and solve technical and engineering problems in Mechanical Engineering.
5. Graduating students will have the ability to apply technical knowledge in a leadership role related to national security.

The Program Outcomes are published in the university catalog as well as the current departmental website.

Those Program Outcomes were established from the Program Educational Objectives as shown in Table 3.1. For example, Program Outcomes #1, #2 and #4 were derived from Objective #1 while Outcomes #2 and #5 were established from Objective #2. Finally, Outcome #3 is related to Objective #3.

3.3 Process of Identifying and Revising Program Outcomes

The Program Objectives have been reviewed by the various constituency groups to revise them as necessary in order to improve the program. The stakeholders for identifying and revising the Program Objectives are

- Faculty
- Curriculum sponsor
- Supervisors of our alumni

- Alumni
- Student

Surveys and personal interviews have been conducted to assess and evaluate the appropriateness of the Program Outcomes. For example, the survey form for the supervisor, as attached in Appendix I-D-1, contains the question asking for the appropriateness of the Program Outcomes.

Each survey and interview results were summarized by a responsible faculty member, and the results were presented at a faculty meeting for discussion. If there was any change needed from the discussion, the Educational Program Objectives were revised to reflect the concerns from the data.

Table 3.1. Relationship between Program Objectives and Outcomes

	Outcome #1	Outcome #2	Outcome #3	Outcome #4	Outcome #5
Objective #1	X	X		X	
Objective #2		X			X
Objective #3			X		

X indicates the Outcome is derived from the Objective.

3.4 Process of Assessing and Evaluating Program Outcomes

In order to assess the Program Outcomes, several Assessment Criteria (AC) were established by the faculty, and the relationship between the Assessment Criteria and the Program Outcomes are shown in Table 3.2. There are eight Assessment Criteria as listed below, and each one is to measure the related Program Outcome(s).

Assessment Criteria (AC)

1. Graduating students will meet ABET-accredited BSME equivalence. All students will complete the BSME equivalency checklist form that must be approved.
2. Graduating students will complete one year of study beyond the basic level and follow a specialization track in one of the available disciplines of Mechanical Engineering. All students will complete the MSME degree checklist that must be approved.
3. All MSME degree recipients will complete and present a thesis. Thesis evaluation consists of the thesis signature page, the thesis distribution statement, and the thesis evaluation and rating form.
4. PE exams and success rates.
5. Survey results from the Engineering Duty School.
6. Survey results from the graduating student exit survey.
7. Survey results from recent graduates and their supervisors.
8. Sponsor evaluation.

Table 3.2. Assessment Criteria (AC) to Measure Outcomes

	AC 1. BSME Equivalency	AC 2. MSME Checklist	AC 3. Thesis Evaluation	AC 4. PE Exams	AC 5. ED School Presentation and Report	AC 6. Exit Survey	AC 7. Alumni & Supervisor Survey	AC 8. Program Sponsor Evaluation
Outcome #1: ABET-BSME Equivalency	X					X		
Outcome #2: Advanced Study		X				X	X	X
Outcomes #3: Communication Skill			X		X	X	X	X
Outcomes #4: Identify, Formulate, and Solve Technical & Engineering Problems			X	X		X	X	X
Outcomes #5: Apply technical Knowledge in Leadership & National Security					X	X	X	X

3.4.1. Assessment Criterion # 1 - BSME Equivalency Checklist

Assessment Criterion #1 was established to assess Program Outcome #1 as shown in Table 3.2. In order to assess the Outcome, a form called *BSME Equivalency Checklist* was devised and has been used to guide each student's educational progress. (The blank form is attached in Appendix I-D-2.) The form is prepared by student with a guidance by the student advisor (called Academic Associate) and reviewed and approved by Program Officer (an active Navy officer who oversees students in military affair), Academic Associate (a faculty member, who guides students to meet the degree requirements), and the Department Chair Person.

The form first checked whether a new student has an ABET accredited BSME degree or not from his or her undergraduate study. If the student has the BSME degree from an ABET accredited institution, the person checks the corresponding check box and the form is complete. On the other hand, unless the student received an ABET accredited BSME degree, he or she needs to check the remaining sections of the form.

The *BSME Equivalency* form contains four sections. The first section is to check the Mathematics requirements. This section requires a minimum of 24 quarter credit hours (or 16 semester credit hours) of college level mathematics. In addition to check the total mathematics credit hours, the form also checks individual topic courses like Multivariable Calculus, Differential Equations, Linear Algebra, and Statistics as stated in the ABET Curriculum Description.

The second section of the *BSME Equivalency* form checks the requirements for Basic Sciences like chemistry and calculus-based physics. The minimum 24 quarter credit hours (or 16 semester credit hours) of college-level basic science is required.

The third section checks General Education. A minimum of 24-quarter credit hours (or 16 semester credit hours) is required in subjects other than mathematics, basic science, computer science, and engineering. These general education courses should complement the technical content of the curriculum.

The last section checks Engineering courses including Engineering Design. A minimum of 72 quarter credit hours (or 48 semester credit hours) of engineering science and design are required. Of those 54 quarter credit hours or 36 of the semester hours must be specifically in Mechanical Engineering and include both Thermal and Mechanical Systems. The checklist separates all Mechanical Engineering courses from other engineering courses. In addition, the form includes the check for a major design experience at the advanced undergraduate level.

The approved *BSME Equivalency* forms for the past graduates have been stored in the department.

3.4.2. Assessment Criterion # 2 -MSME Equivalency Checklist

Assessment Criterion #2 was established to assess Program Outcome #2 as shown in Table 3.2. In order to assess the Outcome, a form called *MSME Checklist* was devised and has been used to guide each student's educational progress. (The blank form is attached in Appendix I-D-3.) The form is prepared by student with a guidance by the student Thesis Advisor and Academic Associate, and reviewed and approved by Program Officer, Academic Associate, and the Department Chair.

The form checks the overall credit requirements for the MSME degree which was established at NPS. The requirement is at least 32-quarter hours of graduate level credits. At least 12-quarter hours must be at the 4000 level and at least 24 quarter hours must be in courses offered by the Mechanical Engineering Department. When the credits were counted for the MSME degree, it was made sure that there was no dual count of any 3000 or 4000 level course between the MSME requirement and the BSME equivalency requirement.

In addition, the *MSME Checklist* requires students to check their competency in the advanced level by checking required courses in each specialization track offered by the department. This requirement states two 4000 level courses in the specialty track. Furthermore, the form also records the thesis title and thesis advisor name because the thesis is one of the requirements for the MSME degree.

The complete forms for the past graduates are kept in file.

3.4.3. Assessment Criterion # 3- Thesis Evaluation

Assessment Criterion #3 is also a direct assessment technique and it was established to assess Program Outcomes #3 and #4 as shown in Table 3.2. In order to assess the Outcome, the *Thesis Evaluation and Rating Form* has been used. (The blank form is attached in Appendix I-D-4.) Each student selects his or her thesis topic after discussion with various faculty members. Once the thesis topic is selected, a thesis proposal form is filled out by the student, and the form is approved by Thesis Advisor, Academic Associate, Program Officer, and Department Chair.

After completion of the thesis work, the student writes a written thesis and presents his findings in the department in front of students, faculty, and other guests. The written thesis is approved by Thesis Advisor and Department Chair.

Finally, the Thesis Advisor evaluates the student thesis in terms of (1) Academic level competence, (2) Scientific or technical merit of the thesis, (3) Defense relevance, (4) Written communication, and (5) Oral communication. This evaluation is confidential to students.

At the end of each quarter, this form is collected from all thesis advisors. In order to make sure no one will miss the form, the faculty approved that the department Chair would not sign off each student thesis unless the form is filled out and submitted with the thesis.

The collected assessment forms have been summarized by one responsible faculty member, and presented at the faculty meetings for evaluation and improvement. The summarized results of the collected data are shown in Table 3.3.

The assessment results show that there are variations of the ratings from quarter to quarter. The weighted sum average is shown in the last row of Table 3.3. As the data indicate, communication skills have the lowest rating. In order to improve the communication skills, the faculty decided to invite an expert to present a seminar to our students on better communication skills, on a regular basis so that every student has an opportunity to improve their skills.

3.4.4. Assessment Criterion # 4 - PE Exam Success Rate

Assessment Criterion #4 was established to assess Program Outcome #4 as shown in Table 3.2. Taking the PE Exam is not a requirement of the degree program. However, having the license is beneficial to the students. Therefore, many students took the exams voluntarily. It was thought that the PE passing rate would provide an objective indication for assessing Program Outcome #4 (Identify, Formulate, and Solve Technical & Engineering Problems).

The MAE Department offers a course, ME1000, Preparation for the Professional Engineers Exam as a means to encourage and facilitate our students in obtaining Registration as a

Professional Engineer. ME1000 is offered on a regular basis as student demand has warranted. Prof. Matt Kelleher, a registered PE, conducts seminars on the process and helps students apply and prepare for the exam. The last time it was taught was Summer 2006 to eight students.

Historically the success rate on the ME PE Exam for NPS Students has been on the order of 80% or better. Since Fall 2002, 8 of the 11 students that took the PE Exam passed it, a rate of 81%. This compares to the national passing rate on the ME test of 70%. This is an indication that our students are successful in knowing the disciplines on Mechanical Engineering.

In an effort to accumulate data on our student's PE success rate in the future, a procedure has been initiated whereby the students taking ME1000 who will also be taking the PE Exam have agreed to inform the Curricular Officer or the Instructor of ME1000 as to their success on the PE Exam. Although it is not required, the students have provided their personal email addresses so that they can be queried at the appropriate time after the PE Exam as to the outcome.

The Department also encourages students who have not taken the FE (or EIT) to take the FE Exam so that they can subsequently pursue PE Registration. The detailed results on the component subjects from our student's FEs are evaluated by Department faculty for indications of potential problems. As an example, last year only one (1) student took the FE and he did not do well on statistics. While this was a limited sample, our professor in charge of overseeing the statistics content of our program, Prof. Morris Driels, reviewed the statistics course content and textbook. This course is taught by the Operations Research (OR) Department. Prof. Driels worked collaboratively with the faculty member in OR in charge of this course and has made some recommendations on how they can improve the engineering applicability of that course. We will evaluate the results of this action with the next set of FE results.

3.4.5. Assessment Criterion # 5 – ED (Engineering Duty Officers) School Report and Presentation

The Engineering Duty Officers School ("ED School") is a significant source of information and feedback for the MSME graduates enrolled in the 570 Curriculum. The 570 Curriculum is called Naval/Mechanical Engineering. The 570 Curriculum is related to the MSME degree program but the two are not the same. Any incoming student to NPS is assigned to a Curriculum, and the 570 Curriculum is one of them. Then, the student takes courses toward a degree program which is allowed for the Curriculum. Nearly 100% students in the 570 Curriculum pursue the MSME degree. However, there are students who enrolled in the MSME degree from other Curriculum, even though the number of students from outside of the 570 Curriculum is much less than that from the 570 Curriculum.

Engineering Duty Officers (ED's) constitute about 30% to 50% of the total graduates of the 570 Curriculum. (see Figure 3.1.) Almost all of the ED officers receive the MSME degree. Upon graduation, all ED's have to attend a short course (6 week duration) at the ED School

in order to prepare them for the practical aspects of their job. As part of that preparation they have to prepare and deliver to their peers an oral presentation. In addition, they have to prepare a technical paper related to their job. Successful completion of both is necessary in order to qualify as Engineering Duty Officers. Therefore, visiting the ED School, attending presentations delivered by our graduates and reading their technical reports, would provide us with input on Outcome #3 ("Graduating students will have a high level of communication skills including technical writing and oral presentation") and Outcome #5 ("Graduating students will have the ability to apply technical knowledge in a leadership role related to national security").

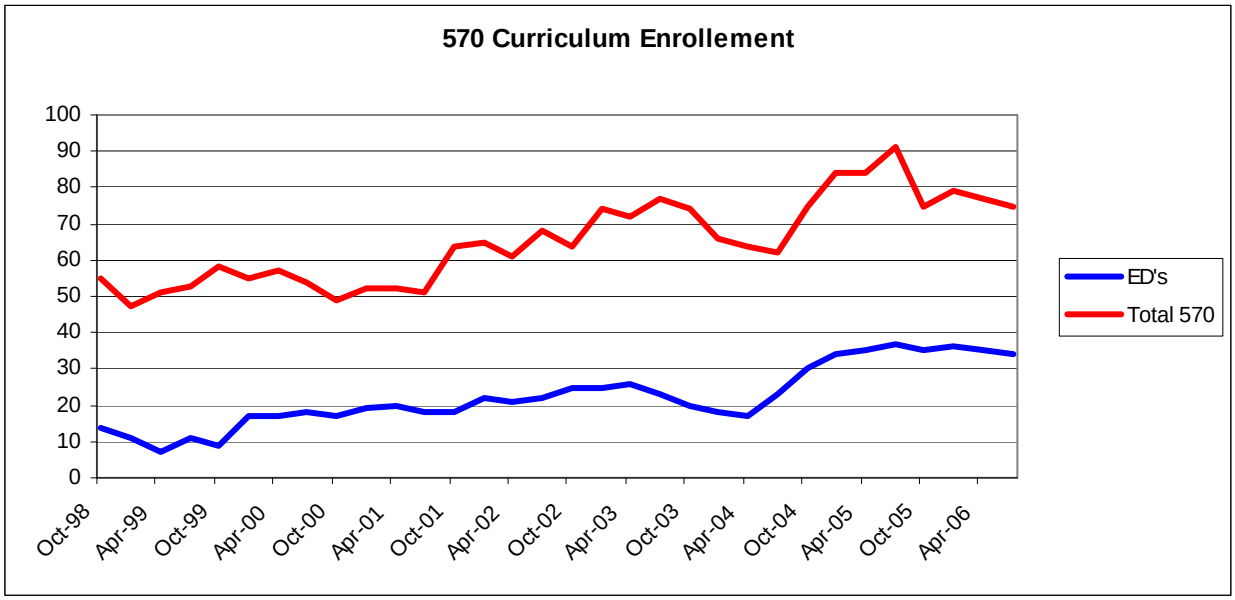

Figure 3.1. No. of Engineering Duty Officers and the total students in 570 Curriculum

In January 2003, an initial familiarization visit to the ED School took place. Profs. Millsaps and Papoulias and Program Officer CDR Cunningham participated and several items were reviewed. We were able to listen to presentations given by recent graduates of the program and also review several technical papers written also by recent graduates. Both the presentations and the technical papers were satisfactory. We did not see the need for major program changes. It was also felt that continuing visits to the ED School are very helpful but they are also difficult to coordinate. The best time to visit is June and it takes an average of two days per visit. Therefore, we asked the ED School if we could get a copy of the graduates' technical reports and review them. Although the ED School leadership was very supportive of this need, they pointed out some potential distribution limitations since the graduates prepare the reports under the assumption that they would be reviewed only by the ED Qualifying Board and not by third parties such as NPS. They promised that they would look into that.

Following this initial visit we have had several phone conversations and interviews with the ED School. Although we did not listen to graduates' presentations, we did talk to their

instructors and received positive feedback. Some technical papers were also transmitted to us. We kept up our inquiries with regards to perpetual access to the graduates' technical reports, and we were assured that the request is under review.

In September 2004, Prof. Millsaps conducted a follow-up visit to the ED School, the trip report is included as Attachment B. The overall feedback was positive; the only potential issue was inadequate preparation with regards to oral presentation skills and writing.

During the Spring of 2006, the ED School was able to post the technical papers of our graduates in a secure web site and provide us access to it. Profs. Papoulias and Millsaps reviewed a sample of the papers and found them satisfactory.

A third visit to the ED School took place during June 2006. Profs. Millsaps, Kwon, Gordis, and Program Officer CDR Plott attended. The nature of the visit and its findings were consistent with the original visit.

From each visit or phone conversations, a trip report has been generated and presented to the faculty. During the discussion it was noted that larger faculty participation was required for adequate review of the technical papers produced by our graduates. The following steps were recommended:

- Collect the technical papers and post them in a secure site under Departmental control. That way, it will be easier for faculty members to access.
- Assign specific papers to be reviewed by faculty members that are in the right area of expertise. Provide a standard form for review and evaluation.
- Keep track of the statistics of the reviews and take corrective actions as necessary.

In addition, there seems to be an issue with regards to oral presentation skills. This is consistent with findings from other Assessment Criteria. Proper actions were taken for improvement. The summary of actions taken to improve the Program is provided in the next section.

3.4.6. Assessment Criterion # 6 – Graduating Student Exit Survey

This Assessment Criterion was established to assess all program Outcomes in terms of graduating students' perspective because students are one of the most important constituencies.

The Department maintained a Graduating Student Exit Survey for many years prior to the merger of the Mechanical and Aero into Mechanical and Astronautical Engineering Departments. As a result of the ABET visit in 2001 the Exit Survey was modified to align it better with the Program Educational Objectives and Outcomes. The Exit Survey was modified again following the merger of the Astronautical Engineering program and faculty to form the Department of Mechanical and Astronautical Engineering in 2004. This second modification did not involve substantive changes. Rather, the Exit Survey form was redesigned so that it could be distributed, completed and returned electronically; furthermore, this Exit Survey is still designed to elicit comments only from students in the program leading to the MSME. The current form is attached as Appendix I-D-5.

The form then states the intended Program Outcomes and asks the students to rate the program on the same 0 – 5 scale with respect to each of the Outcomes. The first three Outcomes are broken down further into more specific questions. Again, the responses did not appear to vary with time and so the response data are summarized in Figures 3.2 through 3.6 as average student response. The data for Outcome #1 (Graduating students will have knowledge and skills equivalent to an ABET-accredited BSME) are given in Figure 3.2.

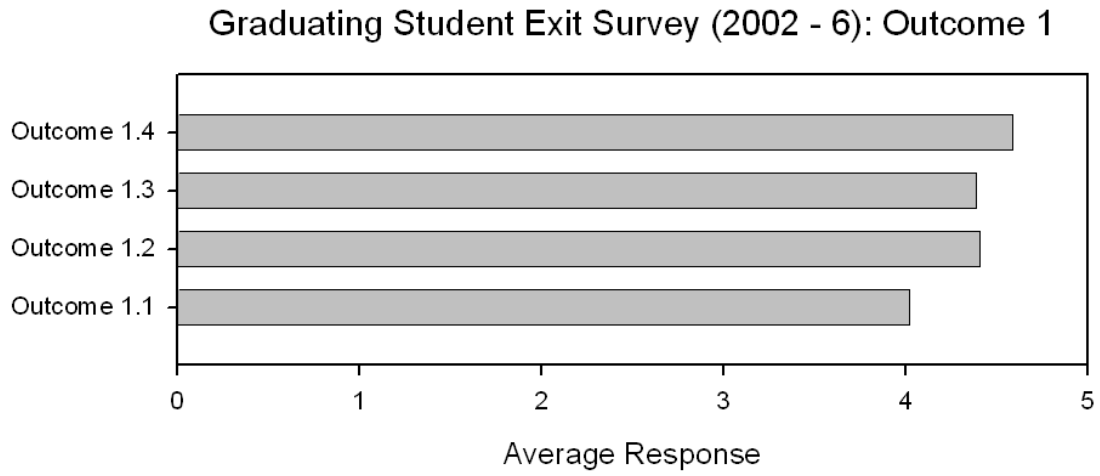

Figure 3.2. Average student responses for Outcome #1.

The lowest numerical response was 4.02 for Outcome #1.1 (Have a solid grasp on statistics) and the highest, 4.59, was for Outcome 1.4 (Apply knowledge of mathematics science and engineering). This latter response was the highest among all of the ratings for the program objectives and outcomes.

The data for Outcome #2 (Graduating students will have advanced knowledge in Mechanical Engineering and competence in one of the available specialized disciplines of Mechanical Engineering) are provided in Fig. 3.3. The numerical values for Outcomes 2.1 (Advanced Competence …) and 2.2 (Advanced knowledge of analytical/numerical tools …) were 4.37 and 4.22, respectively. In contrast, the response value for Outcome 2.3 (Achieve advanced knowledge of modern laboratory techniques) was 3.73, the lowest among all of the responses to this survey. From the written comments (summarize at the end of this section) this low value reflects the poor state of many of the course-specific laboratories, or, in many cases, the absence of laboratories in areas where laboratory work should be included.

The responses for Outcome #3 (Graduating students will have a high level of communication skills including technical writing and oral presentation) are summarized in Figure 3.4. The lowest value, 4.04, was for Outcome 3.1 (Make a contribution to the scientific or technical literature) while the remaining responses were from 4.29 – 4.47. Of particular note is that the students rated the program highly on Outcome 3.3 (Do an effective and clear technical presentation), at 4.47, although numerous faculty comments suggest that this is an area in which improvement in student performance is needed.

Finally, the data for Outcomes #4 (Graduating students will have the ability to independently identify …) and #5 (Graduating students will have the ability to apply technical knowledge in a leadership role related to national security) are given in Figs. 3.5 and 3.6. The Survey called for only a single response for each outcome. Student responses were 4.35 and 4.24, respectively.

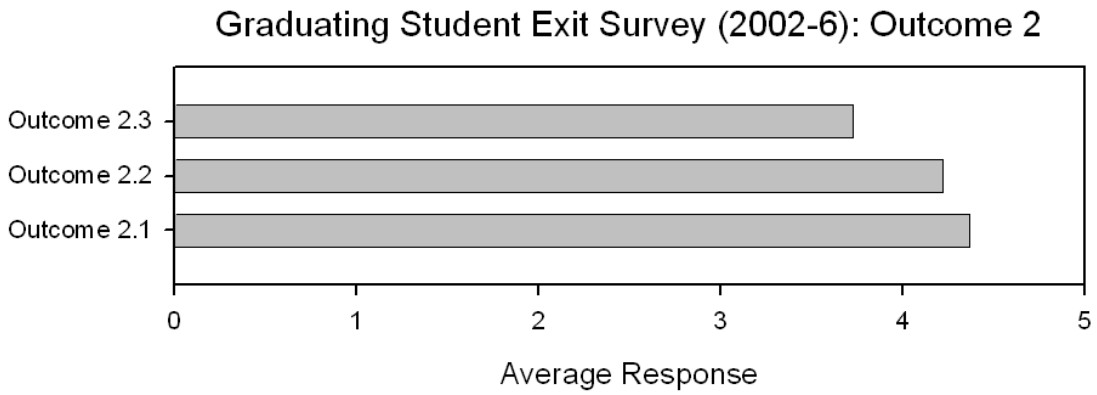

Figure 3.1. Average student responses for Outcome #2

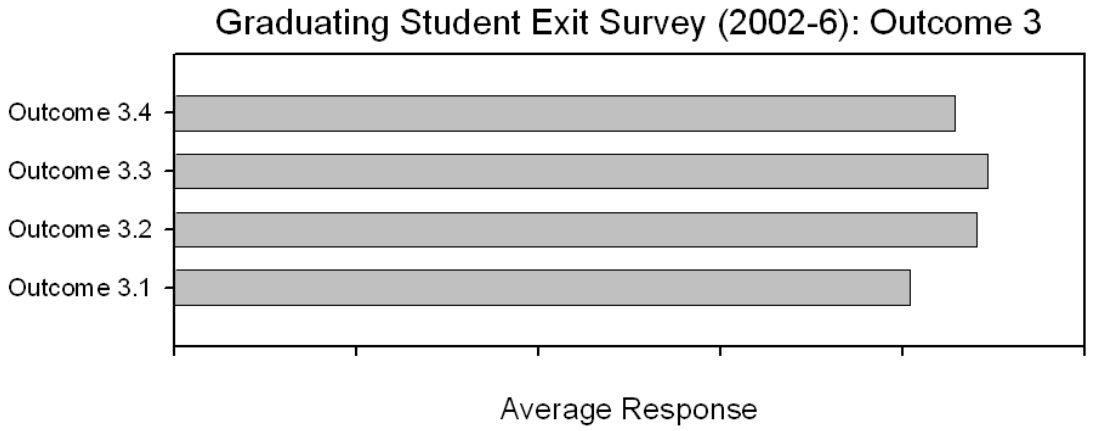

Figure 3.4. Average student responses for Outcome #3

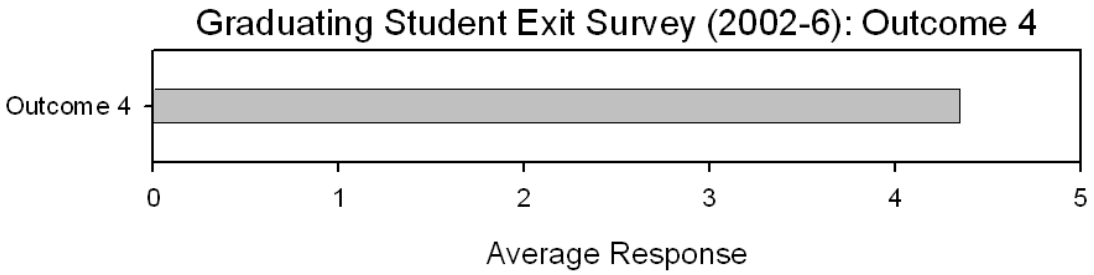

Figure 3.5. Average student responses for Outcome #4

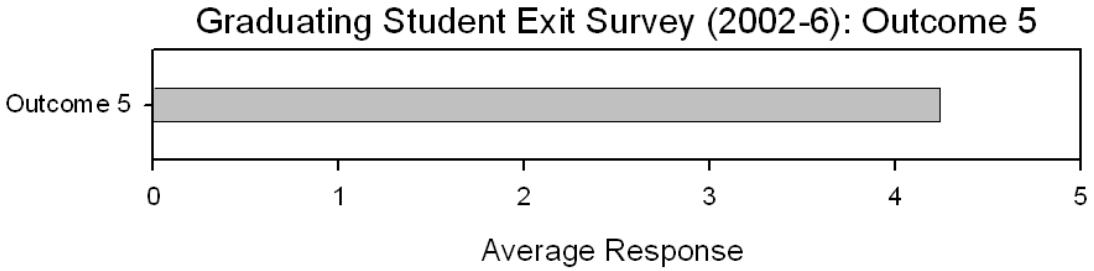

Figure 3.6. Average student responses for Outcome #5

Students generally did not comment on the Outcomes per se; this likely reflects the layout of the form. Instead, pertinent comments were often found in the section on 'Additional questions'. These questions are often related to the Program Outcomes. In addition, a meeting was arranged between graduating students and program Officer and Academic Associates to discuss for any improvement of the educational program. Selected responses are summarized below.

- The controls track needs more classes on intermediate topics to aid in the transition from 3000 to 4000 level.
- More math focused on engineering topics.
- We need more 4000 level courses and specialization.
- Course labs are run down and dirty
- Some of the labs seemed to be lacking in basic supplies and equipment. Maybe due to a lack of funds.
- Computer lab always seems crowded. Systems are outdated.
- Update lab equipment to put the graduate level student on the same level as industry. This is the course-specific labs, not the computer lab.
- Statics and dynamics together is too much for non-ME undergraduates.
- Recommend a MATLAB introduction specialized for engineers
- A better introduction to MATLAB. The six week course that is currently offered is poorly organized and makes use of some advanced examples that student with limited engineering background cannot grasp.
- The laboratories in most classes that you would assume would have labs are pretty much none existent, which really takes away from the learning experience.

- Focus the calculus courses more on the tools that ME students need for the advanced courses.
- Split up Statics and Dynamics courses. The break neck speed of the combined class leaves no time to reflect and absorb. This is a problem in some of the follow on courses like vibrations and controls.
- Improve the bridge between what Math teaches and ME expects.
- The laboratories especially the materials laboratories need work.
- Laboratories were not used in most classes. As a result there is little hands on experience in labs which to me is an important aspect of and engineering education.
- The library and computing facilities were great. The laboratories were not well integrated into the courses. A lot of educational benefit could be gained from incorporating them.
- More laboratory experiences. I think that a course in experimental methods would advance student's understanding of the physics of the phenomena that we study. Computational methods are nice, but I think something is lost when only the computational methods are studied or similarly if only experimental methods are studied.
- Restructure course scheduling to make similar subject areas more grouped and not so disjointed, especially when several quarters pass between opportunities to take related classes. A lot of refreshing is needed to get back into that subject.
- Some of the labs seem dated or in need of repair to equipment, but they generally accomplished their purpose. Computing facilities are more than ample.
- There are very few labs since the classes have been reduced and combined in order to get students through the program faster.

Based on the above, and many more similar responses, we can identify several areas that come up consistently:

- Better labs, both physical and computational.
- Split-up ME2503 (combined Statics and Dynamics course).
- Better introduction to MATLAB.

These concerns were prioritized. Specific actions taken to address the ones that appeared to be more critical to the program and also were under our control are outlined in Section 3.5.

3.4.7. Assessment Criterion # 7 – Alumni & Supervisor Survey

Alumni and supervisor surveys are required in order to assess Program Outcomes #2 ("Graduating students will have advanced knowledge in Mechanical Engineering and competence in one of the available specialized disciplines of Mechanical Engineering"), #3 ("Graduating students will have high level of communication skills including technical writing and oral presentation"), #4 (Graduating students will have the ability to independently identify, formulate and solve technical and engineering problems in Mechanical Engineering), and #5 (Graduating students will have the ability to apply technical knowledge in a leadership role related to national security). A number of past alumni and supervisors attend the Senior ED Course at the ED School. Therefore, interviews

with these will provide us direct measures of the corresponding program outcomes. Such interviews may be combined with planned visits to the ED School for Assessment Criterion 3.

Profs. Millsaps and Papoulias along with Program Officer CDR Plott conducted a phone interview with four supervisors (CDR Gunze - PSNSY, CDR Christensen – SW Regional Maintenance Center, San Diego, CDR Reck – Strategic Systems Program, and LCDR Sexton – EDO Senior Course coordinator) of our graduates on September 2005. All four supervisors were at the ED School at the time of the interview. They communicated to us not only their opinions but also the opinions of their peers who were not present during the interview.

The general feeling was that the program objectives and outcomes serve them well. This was particularly true for Program Outcomes #2, #4, and #5. There were three issues that were identified during the interview as needing further study:

- Program may not prepare its graduates with adequate oral presentation skills.
- Program may not prepare its graduates adequately so they can conduct cost, benefit, and risk analysis of technology decisions that they often face.
- Program should provide knowledge on JCIDS, FORCEnet, and global information grid processes.

A second interview with supervisors was conducted in March 2006. Three supervisors were directly interviewed, CDR's Anderson, Smith, and Maldonado. In addition to the phone interview, they were also asked to provide us with their written evaluation. On a scale from 0 to 5, they rated the Program Objectives as 4.67, and the four program outcomes as 4.33.

There were two possible issues that were identified during the interview as needing further study:

- There is room for improvement with regards to oral presentation skills.
- It is not clear how the program addresses Objective #2 especially with regards to specification of military requirements.

There seems to be an issue with regards to oral presentation skills. Some suggestions for remedy are:

1. One option would be to make the faculty members aware of the issue and see if they can ask the students to give short presentations as part of their course assignments. In a way, this is already happening since all of the non-BSME students are required to take either ME3712 or TSSE and both programs require oral presentations as part of standard course requirements.
2. Another possible solution would be to invite external speakers to give to the students presentations on oral presentation skills. For example, Senior Lecturer George Lober from the Defense Analysis Dept. at NPS has extensive expertise on oral presentation skills.

3.4.8. Assessment Criterion # 8 – Program Sponsor Evaluation

NAVSEA (Naval Sea Systems Command) 08 is the Program Sponsor of our Curriculum called Naval/Mechanical Engineering. (The subtle difference between the Curriculum and the MSME degree program was described in AC #5 previously.) They provide us with their input regarding the education of Engineering Duty Officers. In order words, NAVSEA 08 specifies what technical knowledge and skills are needed for those officers to perform their jobs. Based on the input, the department sets course works for ED officers. Those educational requirements for ED officers are beyond the requirements for the MSME degree. The ED officers need more breadth of knowledge than the degree requirement.

In order to better educate the ED officers, there have been biannual meetings between NAVSEA 08 and the department. At the meetings, the educational requirements for ED officers were reviewed and updated. Then, the department either created or revised course work depending on the new requirement.

Even though the Program Sponsor does not dictate the MSME degree program itself, the degree requirement is a subset of the ED officer educational requirement. Therefore, an input was solicited from the Program Sponsor for the MSME degree Program Educational Objectives and Outcomes whether they are appropriate. The Program Sponsor indicated general satisfaction with the Objectives and Outcomes.

3.5 Continuous Improvement Process for Program Outcomes

Based on the assessment of the program Outcomes as discussed above, some actions have been taken to improve the program. Those actions are summarized below.

Actions Taken To Improve the Degree Program

- Some courses have implemented a written term report even at 2000 or 3000 levels to provide opportunities to students to practice their written communication skills in technical contents. Along similar lines, in many of our courses we require that the students give short presentations.
- Previously, Engineering Statics and Dynamics were combined into a single course to meet the requirement of the reduced residency of the program. However, based on the graduating students exit survey as well as the course instructors' assessment, it was determined that the combined course did not serve the purpose well. Students learning was not satisfactory. As a result, a course committee was formed, which included Profs. Shin, Kwon and Gordis, to review the situation. The committee proposed in the faculty meeting to split the course into two separate courses as Statics and Dynamics. The proposal was approved by the faculty, and the new split courses were introduced to students from the Spring Quarter of 2007.
- Some of alumni expressed that they wanted to be prepared during the educational Program so that they can conduct cost, benefit, and risk analysis of technology decisions that they often face even with not enough data available. In order to meet those requests, an elective course ME4702 – Engineering Systems Risk Benefit Analysis has been offered to the students.
- It was decided that the Thesis Evaluation form must be filed before the Chairman can sign-off on a thesis. This policy has been implemented for about a year. As a result, availability of data has greatly improved.

- A very aggressive lab recapitalization plan is in progress. A department committee solicited input from all faculty members with regards to their priorities and justification. These were further prioritized by the Department Chair and forwarded to the Dean for funding.

There were other concerns and inputs for potential improvement of the educational program as noted previously. However, in order to maintain stability of the educational program, the faculty decided to watch out for a longer period before any further action could be taken.

3.6 Relation of Courses to Program Outcomes

The course contents were reviewed to meet the program Outcomes. In general, 2000 and 3000 level courses offered in the department are used to meet the BSME equivalency. As a result, those courses were reviewed and checked against the ABET BSME requirements (a) to as stated below. Table 3.4 gives the relationship between the courses and the BSME requirements.

(a) Apply knowledge of mathematics, science and engineering.
(b) Design and conduct experiments as well as analyze and interpret data.
(c) Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
(d) Function on multidisciplinary teams.
(e) Identify, formulate, and solve engineering problems.
(f) Understand professional and ethical responsibilities
(g) Communicate effectively
(h) Understand the impact of engineering solutions in a global, economic, environmental, and social context.
(i) Recognize the need for and be able to engage in life long learning.
(j) Understand contemporary issues.
(k) Use the techniques, skills, and modern engineering tools necessary for engineering practice.

For the MSME degree requirements, students take 3000 and 4000 levels courses on top of the BSME equivalency requirement, depending on their selected specialty areas. The course syllabi are provided in Appendix I-B, and the course journals including exemplary student works will be provided when there is the onsite visit.

Table 3.4 Course Matrix to Support ABET Requirement of BSME

		< Courses in the Generic ME curriculum >

Note 1: Achieved through courses in Physics Dept or at MPC, as arranged by Curriculum Officer
Note 2: Achieved via seminars; encouragement to participated in PE exams and post-graduation contacts

4 Professional Component

At the basic level the professional component is satisfied by assuring that the incoming students either have an ABET-accredited undergraduate engineering degree or that they will meet the equivalent of such a degree through a combination of their undergraduate experience and their course matrix at NPS. The advanced-level part of the program includes graduate-level mathematics; additional engineering science and design; and one general course, NS3230, Strategy and Policy: the American Experience.

Our students are unique in respect of the requirements for an adequate design experience. From their Naval experience, they often have had experience in oral and written communication of technical ideas, and in the detailed specifications of equipment that is in need of maintenance, repair or replacement. In addition, our program includes design experience in the several courses. In ME3150 students explore the conceptual design of some form of heat exchanger device. In ME3711, students are asked to design a component such as a helical reduction gear system to a minimum weight criterion for a naval vessel. For those students who have not graduated from an ABET accredited undergraduate program, we especially provide a capstone design experience in the course ME 3712. This course covers system design principles, requirements, concept evaluation, standards and constraints, and though project work, the students are involved in a system design to the conceptual level. The ME3801 control systems course includes a design requirement. Students have been asked to design a compensation system for stabilizing the roll response of a marine vehicle such as a roll stabilizer fin system in which constraints are articulated and evaluated through simulation. The MS3202 course considers failure analysis as the feedback in the iterative process of design. Students are required to identify a failed component and conduct a failure analysis of it. A recommendation regarding how to prevent future failures is part of the required report.

The optional TSSE program covers the organization of a design project as well as the trade-offs necessary in performing the design of a major engineering system such as a warship. The TSSE program includes TS3002, Principles of Ship Design and Case Studies. This course is a systems-oriented course that focuses on needs identification, setting of requirements, feasibility determination, risk reduction, contracts and detail design. The TSSE program concludes with a two-course sequence (TS4002 and 4003) that focuses on the design of a warship as a single engineering system. A major component of this sequence is the integration of the combat system with the hull and propulsion systems.

Mathematical considerations including coverage of probability and statistics are covered through specific focused courses given in the Mathematics and Operations Research Department. Such as MA XXXX MA

Basic Science work, if needed, may be provided by taking selected courses at nearby community colleges such as Monterey Penninsular College.

5 Faculty

The Mechanical Engineering Department prior to September 2003, housed 13 tenure track faculty members. In That month, the Aeronautics program at NPS was closed by a deal between the Air Force and Navy Service Secretaries, and it was decided to combine the Faculty in the Astronautical Engineering part of the AA Engineering Department with the ME Faculty into the new MAE Department. At this time, the Department now houses 16 tenure track faculty and services both the students from the 570 Curriculum (Naval and Mechanical Engineering) and the 591 (Space Systems Engineering) curriculum.

The Mechanical and Astronautical Engineering Department currently is divided into 6 specialization tracks as shown in the Table 5-1 below. Associate Professor Ashok Gopinath is on leave in India working for General Motors, Professors Kaminer and Agrawal have recently completed a Sabbatical year. Recent hires have included Assistant Professor Marcello Romano (Space Craft Dynamics and Control) who is completing his third year and will be recommended for continuation. Additionally the Department houses 17 Non Tenure Track and Visiting Faculty who variously support both the Teaching program as needed and the overall Research program.

The decrease in the number of tenure track faculty from much earlier levels of 17 is consistent with the general decline in student enrollment in the 570 curriculum and the current ratio of resident students (570 and 591) to tenure-track faculty members is about 4.5. With several retirements from both the old Aeronautics and Astronautics Department, and the ME Department, we have both gained and lost Faculty. Table I-4 in the Appendix I lists current Tenure Track faculty covering the 6 major subdivisions of the Department, while the table 5-1 below shows how the faculty align with the specialization areas.

Table 5-1 Faculty and Specialization Areas.

Area	*Faculty Members*
Thermal/Fluid Sciences	Prof. K. T. Millsaps; Assoc. Prof. Gopinath Professor G Hobson, Associate Prof. C. Brophy,
Solid Mechanics, Shock and Vibration	Distinguished Prof. Y. Shin; Prof. Y. Kwon; Assoc. Prof. J. Gordis
Dynamics, Control and Autonomous Systems	Distinguished Prof. A. J. Healey; Prof. I. Kaminer, Prof. M. Driels;
Materials Science and Engineering	Distinguished Prof. T. McNelley; Prof. I. Dutta
Total Ship Systems Engineering	Prof. F. Papoulias
Space Craft Engineering	Distinguished Prof. B. Agrawal, Prof. I M. Ross, Assist. Prof. M. Romano

The backgrounds of the current faculty are well balanced across these discipline areas and the faculty size is sufficient to cover the Mechanical Engineering ESRs as specified for the program. Any future departures will be met with recruitment to stabilize the total number of Tenure track faculty. However, the current enrollment places the Department well below the School's average resident-student to tenure-track faculty ratio (currently about 5.9) and this will be a factor in gaining approval to go forward with a tenure-track recruiting action. Also, the projected reductions in student enrollment will limit our ability to hire. Our strategic plan calls for faculty size to be maintained, but not to grow.

As is noted in Table I-3, Faculty Workload, the Tenure Track Faculty cannot teach the total number of required courses in the program, and we rely on adjunct faculty with specialty area expertise to cover the remainder of classes. For example, we expect to teach 79 total sections in the 2007 year, 45 of which will be taught by Tenure Track faculty and 34 of which will be taught by contract specialists and adjunct faculty. While there is a downside to this from the student perspective, and our own sense of professionalism, the use of contract teaching faculty provides a cushion in the event of reductions in student enrollment which we do not control. We also use this to provide special expertise from outside where it is not with the resident tenure track faculty. This year 43% of our classes will be taught by adjunct, contract, and visiting faculty.

Detailed information pertaining to faculty competency is provided in Table I-4 of Appendix I and the Curriculum Vitae in Part C of Appendix I. All of the faculty have been involved in a wide range of reimbursably funded Navy, DoD, NSF and other research projects. These projects cover a wide range of Navy-relevant topics across the fields of Mechanical, Materials and Naval Engineering.

The annual reimbursable research funding expenditures were $2,899,520 in FY04; $4,681,894 in FY05; $3,309,991 in FY06; and $4,624,251 is planned for expenditure in FY07. There is a difference between planned and expended as some projects carry over across fiscal years. These projects have enabled students to interact directly with research sponsors from the Navy and other agencies in order to see major trends and issues that will emerge in the future. On average, the planned expenditure is $289,015 per faculty member for FY 07.

Altogether, Mechanical Engineering faculty members have published 109 papers in journals and more than 245 papers in conference proceedings over the last five years averaging 1.36 /3.06 faculty member per year.

In addition, three Mechanical Engineering faculty members are authors or co-authors or contributors to textbooks in the field.

M.R. Driels, "Robot Kinematics Tutorial" (and associated software package, MATMAN – A Symbolic Matrix Manipulation Package), Kern International, 1986

M.R. Driels (with Mooring and Roth), "Fundamentals of Robot Calibration", Wiley, 1991

M.R. Driels, “Linear Control Systems Engineering”, McGraw-Hill, 1995

M. R. Driels “Weaponeering”,

Y. W. Kwon (with H. C. Bang), “Finite Element Method Using MATLAB”, CRC Press, 1997; and “Finite Element Method Using MATLAB”, Second Edition, CRC Press, 2000

T. Sarpkaya (with M. Issacson), “Mechanics of Wave Forces on Offshore Structures”, Van Nostrand Reinhold-Wiley, 1981

The following faculty members have received professional society recognition by being named fellows of their professional societies.

M.R. Driels, Fellow of the Inst. Mech. E. (U.K.)
A.J. Healey, Fellow of ASME
Y. W. Kwon, Fellow of ASME
T. R. McNelley, Fellow of ASMI
Y. S. Shin, Fellow of ASME

Recently, three of our faculty have been recognized recently with the award of Distinguished Professor, Distinguished Professors Healey (2003), McNelley (2006) and Shin (2006), in addition to Distinguished Professor Brig Agrawal.

The Department has also been fortunate to have a large number of distinguished visiting and adjunct faculty members from all over the world. These individuals are named below and have participated in both teaching and research activities, and they have contributed a rich diversity to the academic experiences of the students. Several of these individuals have contributed in both a teaching and research capacity as tenure-track faculty members have reduced their teaching load through use of reimbursable funds. A number of National Research Council (NRC) postdoctoral associates have also been affiliated with the Department as well and they have helped maintain a strong, high-level research effort in the program. This has been especially true in the materials area, wherein the NRC postdocs have interacted strongly with the students during the course of their thesis research activities as well as with the faculty.
Current Non Tenure Track faculty members are as follows:

Distinguished Visiting Professor J Lloyd
Dr. J. Sinibaldi, Associate Research Professor
Mr. D. P. Horner, Assistant Research Professor
Dr. K. Jones, Associate Research Professor
Dr. V. Dobrokhodov, Research Assistant Professor
Mr. S. P Kragelund, Research Associate

Dr. Chanrashekhara, Research Professor
Dr. Terry Alfriend, Research Professor
Mr. J. Didoszak, Research Assistant Professor
Dr. O. Yakemenko, Research Associate Professor

Most faculty interactions outside of the institution are with various Navy and Government agencies and laboratories. In many instances, however, faculty members have developed contacts and collaborations with faculty members from other universities as well as with industrial partners through vehicles such as Cooperative Research and Development Agreements (CRADAs). Professor A. J. Healey has developed an international collaboration with IST-Lisbon through a memorandum of understanding between IST and NPS. The Office of Naval Research and NATO has assisted in arrangements; Professor Antonio Pascoal of the Electrical Engineering Department at IST has represented that institution. Sabbatical leave has been another vehicle. For example, Professor A. Gopinath has been on sabbatical leave in Germany and now, India. Professor Kaminer and Agrawal have been on leave at Berkeley and Industry respectively, during FY 2006. Professor Dutta's earlier leave at Motorola has provide renewed insights for his research program in micro soldering materials issues.

6. Facilities

The Department moved into a new building just prior to the last ABET Accreditation visit in 1995. The project budget included $4M to support the acquisition of extensive new laboratory equipment. The Department had been spread out in three different buildings prior to 1995 and the consolidation of facilities largely under one roof has greatly improved interactions and collaborations among the faculty and between faculty and students.

Instructional facilities in the new building included four large, new classrooms, a fully equipped computer laboratory and dedicated laboratories for both instruction and research. The classrooms are due for upgrading and installation of computers and projectors to use existing network connections and bring them fully online. It is anticipated that this will be accomplished with institutional funds rather than Departmental funds.

The original computer laboratory included 24 Silicon Graphics workstations and peripherals. Institutional funds have been used on subsequent occasions to upgrade this laboratory with new servers, Windows NT workstations and selected peripherals have most recently been instituted. This computer laboratory is available at all times to the students and is consistently the most heavily used facility in the building.

Other new facilities acquired with the original building project allowed extensive upgrading of both the instructional and research laboratories in the Department and the Department participates in both a Laboratory Recapitalization Program at NPS as well as special program plus up funds coming from requests to the Navy claimant, NETC through the POM process. For example, we have participated in additional funds through POM 06 for laboratory equipment in "Plus UP" areas defined by the GSEAS Dean for the Unmanned Systems Laboratory and the installation of a "clean room" for the "Nano Mems" activities at NPS in which our Materials faculty will share.

In addition to POM 06 funds, the Center for AUV Research has benefited from the annual DURIP (Defense University Research Instrumentation Program) for the purchase of a REMUS Autonomous Underwater Vehicle ($304K), and two Scan Eagle Unmanned Aerial Vehicles ($350K) as well as a Sea Fox Autonomous RHIB boat from other Navy funds.

In view of diminishing funds for the hiring and use of supporting staff, the degree program as a whole has recently a lessened reliance on formal physical laboratory work. In response to our Navy sponsor, we have included specifically a course in finite element analysis of structures and fluids. Also, computer simulation is widely used in our Dynamics and Control classes with Matlab, and Simulink projects being given. However, especially in the Propulsion and Materials groups, the following courses have associated physical laboratories wherein students conduct experiments and submit reports: ***ME2201, Fluid Mechanics; ME2601, Solids I; MS2201, Introduction to Materials; ME3240, Power and Propulsion; ME3521, Vibrations; MS3202, Failure Analysis***.

Funds for the ongoing maintenance and upgrading of the Department's laboratory facilities have been provided through both laboratory and research recapitalization budgets (Table II-5). Also, substantial support for maintaining and improving these laboratories has come from reimbursable research funding raised by the faculty. The ongoing maintenance and further upgrading of these has been hindered more by lack of support staff and absence of institutional support for faculty labor for these purposes than by lack of funds for the equipment itself.

The Department's laboratory facilities are organized into seventeen major areas for the purpose of oversight by the faculty. These facilities and the responsible faculty members are listed below.

<u>Autonomous Underwater Vehicles (AUV) Laboratory and Unmanned Systems Center</u>
(Distinguished Prof. Healey / Horner / Kaminer)
The centerpiece of this laboratory are the unmanned vehicles, ARIES, and REMUS(2) AUVs, the two Scan Eagle UAVs, several RAVEN UAVs, and a Sea Fox 5 meter RHIB USV. The Unmanned Vehicles program focuses on Command and Control of Autonomous Systems for Mine Hunting and Intelligence gathering and is funded by the Office of Naval Research. The Center has contributed to the evolution of the AUV concept from theory to employment with operational Navy elements in Fleet Battle Exercises (FBXs) and Navy Demonstrations.

<u>CAD/CAE Laboratory</u> ; the laboratory currently houses 35 Dell windows XP workstations and has over 50 major software applications and licenses installed. Included, for example, are Matlab, SolidWorks, Ideas, GeoVRML, STK, Nastran, Dytran, Patran, AutoCad, Ansys, among many others. NPS also has access to mainframe computers and a developing cluster for large-scale processing is available.

Fluid Mechanics and Hydrodynamics Laboratories:
The fluid mechanics laboratory supports instruction in basic courses in fluid mechanics. It is equipped with a small wind tunnel for specific instructional purposes. The hydrodynamics laboratory includes a unique U-shaped oscillating water tunnel for the study of a wide range of phenomena, such as flow about stationary and oscillating bodies, vortex-induced vibrations, stability of submarines and boundary layers, and vortex-free-surface interactions. The hydrodynamics laboratory also houses a re-circulating water tunnel for numerous flow-separation and vibration phenomena and a vortex-breakdown facility for the investigation of the stability of swirling flows. These facilities are supported by a 3-beam Laser-Doppler-Velocimeter, numerous other lasers, high-speed motion analyzers, data-acquisition systems, and dedicated computers for numerical simulations.

Marine Propulsion Laboratory:
This laboratory has gas turbine (Allison C-250) and diesel (Detroit 3-53) engines connected to water brake dynamometers, located in separate, isolated engine test cells. These engines are instrumented to obtain steady-state performance and high-frequency, time-resolved measurements. Aerothermodynamic, acoustic, and vibration phenomena in turbo-machinery and reciprocating engines are being investigated, particularly relating to non-uniform flow and condition-based maintenance (CBM) in naval machinery. These engines are used for both instructional and applied research programs in the area of marine power and propulsion. In addition, this lab has bench-top rotordynamics experiments for demonstrating high-speed machinery balancing and investigating rotordynamic instabilities. The lab has sub-scale flow facilities for developing and testing low observable (stealth) technologies for engine inlets and exhausts.

Rocket Propulsion Laboratory:
This lab conducts research on advanced concepts in solid, liquid, and combined mode propellants. Experimental and computational research is conducted in the areas of propellant mixing, combustion, pulse detonation, thrust control, and plume mixing. A full range of mechanical and optical diagnostic techniques are used on small and subscale experiments.

Turbo-Propulsion Laboratory:
The Turbo Propulsion Laboratory houses a unique collection of experimental facilities for research and development related to compressors, turbines, and advanced air-breathing propulsion engine concepts. In a complex of specially designed concrete structures, one building, powered by a 750 HP compressor, contains 10 by 60 inch rectilinear and 4 to 8-foot diameter radial cascade wind tunnels, and a large 3-stage axial research compressor for low speed studies. A two-component, automated traverse, LDV system is available for CFD code verification experiments. A second building, powered by a 1250 HP compressed air plant, contains fully instrumented transonic turbine and compressor rigs in explosion-proof test cells. A spin-pit for structural testing of rotors to 50,000 RPM and 1,800 degrees Fahrenheit is provided. Model experiments and equipment for instrumentation development are located in a separate laboratory. Data acquisition from 400 channels of steady state and 32 channels of non-steady measurements, at up to 200 kHz, is controlled by the laboratory's Pentium workstations. A third building houses a 600 HP radial and 150 HP boost compressor capable of delivering 2000 scfm of air at 10 and 20 atmospheres respectively. These charge four

tanks for blow-down to a supersonic wind tunnel (4 x 4 inches), a transonic cascade wind tunnel (2 x 3 inches), and two free jets (one 6-inch and one 1-inch in diameter). The large free jet is equipped with an instrumented thrust stand for the testing of small gas turbine engines. The building also houses a 3-inch diameter shock tube. Pressure measurements are made with a 96-channel Scani-valve ZOC system and pressure sensitive paint, and Schlieren and shadowgraph techniques are used routinely.

Thermal Engineering Labs:
These labs are used mainly for instruction in heat transfer to investigate convection phenomena of single and multi-phase flows and include facilities for measurement of temperature change and fluid motion in a range of systems. The lab also includes equipment/instrumentation for measurements in microelectronics and micro-heat exchanger systems.

Machine Shop and Electronics Support; the Department maintains a machining facility and electronics shop for support of both instruction and research.

Materials Characterization Laboratory; (McNelley); major facilities include a Topcon 002B 200KV transmission electron microscope; Topcon S510 scanning electron microscope; Perkin ElmerAuger spectrometer; Philips X-ray diffractometer; and additional optical microscopy and physical characterization equipment. There is a plan in the POM 08 cycle for an $850K purchase of a new SEM to replace the existing machine.

Materials Processing Laboratory; (McNelley); facilities include heat treatment, deformation processing and deposition facilities.

Mechanical Testing Laboratory; (Dutta); this laboratory is equipped with a selection of electro-mechanical and servo-hydraulic testing machines and other equipment for tension, compression, fatigue and creep testing of metals, composites and microelectronic components.

Solid/Structures and Vibrations Laboratory; This laboratory is equipped with an isolation pad, anechoic tank and SGI and HP workstations for data acquisition and analysis.

Ship Shock Simulation Laboratory (Distinguished Professor Shin); this is equipped to conduct shock and vibration analysis, modeling and simulations for hardware and software. We have conducted naval ship shock simulations including DDG53, DDG81, LPD19, and the current work is for LCS-1 & LCS-2. This computational laboratory has been functional to develop and validate modeling and simulation capabilities to improve the survivability of ships subjected to realistic underwater explosions.

TSSE Design and Computer Laboratory (Papoulias); this is a dedicated facility for the Total Ship Systems Engineering program and is set up to facilitate interaction among large groups of students working on various ship design projects.

Space Craft Design and Engineering Center

(Distinguished Prof. Brij Agrawal)

Optical Relay Mirror Laboratory

A new joint NPS and AFRL laboratory, the NPS-AFRL Optical Relay Spacecraft Laboratory, was dedicated on June 5, 2002. This laboratory is used for both instruction and research on acquisition, tracking and pointing of flexible military spacecraft. Three-axis simulator 1 can simulate spacecraft three-axis motion as well as the optical system of a space telescope. The spacecraft simulator has three reaction wheels and thrusters as actuators; rate gyros and sun sensors as sensors; an on-board processor and batteries; and is supported on a spherical air bearing. The optical system consists of a laser source, a fast steering mirror, jitter sensor, and a video camera as a tracking sensor.

Three-Axis Simulator 2
The three-axis simulator 2 can be divided into three modules: spherical air bearing, spacecraft bus module and optical payload module. The spacecraft bus has three variable speed control moment gyros (CMGs), a Northrop Grumman - Litton LN-200 IMU consisting of three fiber optics rate gyroscopes, sun sensors, magnetometers, inclinometer, a fine sensor, batteries, power switching and control electronics, and an automatic balancing system. The optical payload consists of a receive telescope and associated optical equipment on the upper platform and a transmit telescope and associated optical equipment on the lower platform.

Laser Jitter Control Testbed
The purpose of the testbed is to investigate control methods to reduce optical jitter and mitigate disturbances to optical beams and structures. Emphasis is placed on Adaptive Control methods due to the expected changing environment.

Adaptive Optics Test Bed.

The purpose of this test bed is to develop improve control techniques for adaptive optics. The current application is controlling surface of large flexible mirrors in space. The test bed has two adaptive optics systems (two deformable mirrors and two wave front sensors). One system corrects the surface of flexible mirror and the other system correct the aberration in imaging object beam. The test bed also has fast steering mirror for correcting jitter. The test bed has two beams: reference beam and object beam. The reference beam is used by the sensors and actuators to correct flexible mirror surface and beam jitter introduced in the spacecraft.

Smart Structure Laboratory

NPS Space Truss
The overall dimension of the NPS space truss is 3.76 m long, 0.35 m wide and 0.7 m tall. Two piezo-ceramic struts are installed as actuators near the base of the truss. The output force for the actuator is 0-100 N and the displacement range is 0-90m. A linear Proof Mass Actuator, located at the left end of the truss, generates the disturbance.

Precision Pointing Hexapod

The Positioning Hexapod is used for testing control algorithms for both vibration isolation of an imaging payload and fine steering. It is based on an arrangement of six self-supporting electromagnetic voice coil actuators with in-line accelerometers that could enable control of high vibration. Lower frequency steering and vibration isolation is provided by the use of a laser-photo-diode based on a 2-axis position detecting system and eddy current position sensors. The system can deliver over 5.7 mm of axial/position travel, 20 mm of lateral motion, 2.5 deg. of tilt motion and 10 deg. of twist.

Flexible Spacecraft Simulator (FSS)

The FSS, as shown in the figure, simulates attitude motion in the pitch axis of a flexible spacecraft. It consists of a central rigid body representing the spacecraft central body and a flexible appendage representing a reflector with a flexible support structure. This system is floated on air pads over a granite table to simulate a micro-gravity environment. The actuators are thrusters with air supplied by a compressed air bottle and a momentum wheel.

FLTSATCOM Laboratory

This laboratory, as shown in the figure, consists of a qualification model of the Navy FLTSATCOM communications satellite, the associated ground support equipment for testing the satellite, and the FLTSATCOM Attitude Control Simulator, which provides a graphical display of the spacecraft's attitude and rotational motion in response to commands similar to the commands required for flight model FLTSATCOM spacecraft.

Spacecraft Design Laboratory

This laboratory houses computer–aided design tools for spacecraft design and a spacecraft design library. It has GENSAT, a general-purpose software application for satellite design, and Conceptual Design Center (CDC) software from Aerospace. In addition, it has several subsystem design software packages, such as STK, NASTRAN, IDEAS and Matlab/Simulink. Using these unique design tools, students can perform collaborative spacecraft design.

Spacecraft Robotics Laboratory
(Prof. Marcello Romano)

The Autonomous Docking & Spacecraft Servicing (AUDASS) test-bed at the NPS Spacecraft Robotics Lab consists of two spacecraft simulators floating via air-pads on a flat floor in order to recreate in 2D the weightlessness and frictionless conditions of orbital space flight. The test-bed is used to validate Guidance, Navigation and Control Algorithms for spacecraft proximity operations. This test-bed has been developed under AFRL and NPS sponsorship.

Nonlinear Control Systems Laboratory

The laboratory contains two nonlinear control stations. At one station is a flexible robotic link manipulator system that is used for exploring and demonstrating new nonlinear feedback control laws for fast dynamical systems. The second station is a magnetically actuated

spacecraft bus floating on an airbearing assembly that is used to demonstrate nonlinear control laws based on traditional and pseudospectral (PS) techniques. Both stations employ an unscented Kalman filter (UKF) for nonlinear estimation. The PS-UKF framework forms the basis of exploring autonomous operations for generic nonlinear systems.

7. Institutional Support

The Department receives budget allocations from the GSEAS Dean in two main categories: labor and operating target (OPTAR). For a given year, the labor allocation is determined by two factors. These are the numbers of courses taught in the preceding year and the number of thesis students advised. The algorithm for this process resides in the Office of Academic Planning. There is no longer any allocation reflecting the number of faculty in a department, nor are any funds identified directly in the Department allocation as in support of faculty or program development. This situation reflects, as noted earlier, the difficult budget climate in the Department of Defense in general and at the School in particular. It is up to individual Chairs to determine the allocation of labor budget to individual faculty members. In Mechanical and Astronautical Engineering, essentially the entire budget is being consumed in support of faculty labor to teach the program for which it is systematically insufficient. The following tabular summary shows how the current situation has evolved in recent years. The budget is expressed in direct support dollars at the accelerated rate. The H funds are for workload relief and were provided to relieve the burden on faculty raising reimbursable funds which were becoming excessive. The number of course sections taught in each year are also shown for comparison.

Fiscal Year	*TT Faculty*	*Faculty Labor Budget**	*Workload Relief, H funds***	*Course Sections Taught*
'05	17	$1,905,139	$415,144	88
'06	16	$1,959,474	$308,213	83
'07	16	$1,731,065	$213,460	79

* Does not include budget for Distance Learning Programs which are separate
** Additional to Labor Budget

Clearly the institutional budget allocation in support of the program has decreased significantly in recent years. The budget has been balanced each year by use of reimbursable research funds, by use of reimbursable funds for teaching new programs (e.g., the 571 Curriculum a DL program for Naval Reactors), and by other means. These other means include relying on funds held back by the administration to cover short falls in the labor budget.

Funds to support faculty development are not generally available and with the exception of sabbatical funds, the institution relies more and more on the reimbursable research program to support the immediate needs of faculty.

The Department OPTAR account is mainly used to support ongoing operations and routine office and laboratory supply items. The OPTAR account may also be used for limited travel. Mostly, travel is supported by reimbursable funds and the Chair is very limited in available support for faculty travel to conferences where no reimbursable money is available.

The OPTAR for Mechanical Engineering has varied around $40K in recent years and is $46K for Fiscal Year 2007. Additional money is provided as reimbursable indirect funds, which may be used to support both faculty and staff labor (related to research) and faculty

travel for various purposes including fund raising. The amount of these funds has also varied from $36K to $45K each year. It has not been possible to support all faculty requests for travel to see prospective research sponsors and to attend and participate in research conferences, workshops and symposia even in the absence of a funded research program in the area. The research indirect accounts are managed by individual faculty according to their own generation.

In recent years, NPS has allocated funds for recapitalization of both instructional laboratories and for the research infrastructure. The recent funding levels are provided in Table I-5. Since many facilities were new in 1995, these funds have been adequate to maintain the facilities but have not been sufficient to fund significant new initiatives in either the instructional laboratories or research. Faculty members have been able to arrange transfer of equipment from other Navy facilities or been able, in one instance, to secure donations of equipment from industry. In addition, In 2006, the Dean was able to institute Laboratory Support for New Initiatives. There were 5 areas named, Unmanned Systems and the Nano Mems initiative which resulted in the availability of funds to furbish a clean room for the materials group, and reequip the unmanned vehicles center with instrumentation for the Autonomous Underwater vehicle program. The AUV center has been successful in winning awards through the DURIP (Defense University Research Instrumentation Program) for $300K and $350K in the 04 and 06 years.

The division of Institutional recapitalization funds between laboratories supporting the MSME and the MSAstroE degree programs is roughly 178K and 83K respectively for 2007. Items are requested by the faculty annually and are prioritized by the Chair. These requests are justified at an NPS wide committee meeting, following which, cuts are made according to the estimated funds available. Purchase requests are then made and forwarded to the Dean's office, and depending on the availability of funds at the end of the year, some of the requested items are purchased. Unfortunately, this process leads to late purchasing and sometimes items are not even purchased.

The budget allocation from the institution for technical support staff labor has been reduced even more than the faculty labor budget. In 1995, the Department had funding in support of six engineering technicians and three model maker machinists. Several of these individuals have left or retired in the intervening years and most of them have not been replaced. In 2001, there were only two engineering technicians and a recruiting action in place to hire a third, while there were two model maker machinists in support of Mechanical Engineering in a consolidated machine shop. The reductions in faculty labor support and the decline in number of engineering technicians remain the most serious impediments to maintenance and improvement of the instructional laboratories in this Department.

Recently with the help of shared funds with reimbursable funds we have been able to hire more staff in duties that cut across the Department and relate mostly to shared efforts between research programs and teaching support.

Mardo Blanco 50% Time Mechanic
Tom Christian, Electronics Engineer 100% Time

Michael Doherty, 100% Time
John Gibson, Technician 100% Time
George Hegman, Technician 50% Time
Don Meeks Technician, 75% Time
Ben Wring, 20% Time
Aurelio Monarez, 100% Time
Matt Goldman Engineer, 50% Time

8. Program Criteria

Additional program criteria applicable to the program for the 570 Curriculum include the following:

> The graduate must have knowledge of chemistry and calculus-based physics; the ability to apply advanced mathematics through multivariable calculus and differential equations; familiarity with statistics and linear algebra; and the ability to work professionally in both thermal and mechanical systems areas, including design and the realization of such systems.

All of these requirements are factored into the certification procedure that has been established to ensure that individuals accepted into the 570 Curriculum will meet both the basic and advanced level ABET criteria by completion of the program.

Briefly, the Curriculum Officer and the Academic Associate review the transcript of each incoming student to determine whether or not the student has an ABET accredited undergraduate degree. For those who do not have such a degree, the pertinent mathematics, science and humanities courses are entered into a database and coupled with a prospective matrix of courses to be taken at NPS. An iterative process then ensues, involving modification of the matrix of courses, until all of these program requirements are met. In the event that the student has not had chemistry (a rare circumstance), the requirement can be met using local colleges. The program requires students to study mathematics to the level of partial differential equations and numerical analysis. Statistics appears specifically through a course in Operations Research and the design content of the program is met through ME courses.

Table 4 in Appendix I provides a faculty analysis, and current curriculum vitae for the Mechanical Engineering faculty appear in Appendix I, Part C. All faculty members in Mechanical Engineering have earned doctorates. All are from highly regarded doctoral programs. The faculty brings a variety of professional experiences to the program, including purely academic, mixtures of industry and academic, and government or national laboratory experience. All faculty members are active in professional organizations, including ASME, ASNE, TMS and ASMI, and AIAA. Levels of involvement vary, but range from attendance at national meetings to leadership in various society activities. Several faculty members maintain well-funded research programs and a high level of research output in the form of reports, papers and presentations in conference proceedings, and publications in archival journals.

9. General Advanced-Level Program

The certification procedure that has been established to ensure that individuals accepted into the 570 Curriculum will meet the basic level ABET criteria by completion of the program has been long established in this program. Briefly, the Curriculum Officer and the Academic Associate review the transcript of each incoming student to determine whether or not the student has an ABET accredited undergraduate degree. For those who do not have such a degree, the pertinent mathematics, science and humanities courses are entered into a database and coupled with a prospective matrix of courses to be taken at NPS. A matrix of coursework is then established for each such student taking into account qualifying coursework from the Batchelor's Degree program and adding to it such additional classes as may be needed to meet ABET basic level accreditation requirements. The Department chair certifies on a form, prior to the student graduation, that the student's individual program meets the ABET requirements.

The certification procedure is designed to assure that the basic and advanced level program requirements are separately and completely satisfied. The advanced level criteria may be satisfied by completion of the core graduate course sequence, plus a sequence of at least three advanced graduate (4XXX) level courses as approved by the Curricular Officer, Academic Associate and Department Chairman, and a thesis. The thesis must represent an original investigation on a topic that must be approved by the Curricular Officer, Academic Associate and Department Chairman prior to commencement. Finally, the results of the thesis investigation must be presented in written form, presented in oral form to the Department, and finally approved by the thesis advisor and Department Chairman. The Department keeps a record of selected presentation on VHS video tape.

ABET B.S.M.E. Equivalency

All students who enter the ABET-accredited M.S.M.E. degree program must satisfy the requirements of an ABET-accredited B.S.M.E. degree (ABET B.S.M.E. Equivalency). This can be accomplished in one of two ways:

1. Student has earned an B.S. degree from an ABET-accredited Mechanical Engineering undergraduate program; or,
2. Student takes sufficient additional preparatory courses at NPS to meet the ABET B.S.M.E. Equivalency requirements.

This ABET equivalency is documented for every student in the B.S.M.E. equivalency Checklist (See Section D.2.) This checklist is signed by the Program Officer, the Associate Chair for Academics, and the Chair.

AE2440 INTRODUCTION TO DIGITAL COMPUTATION
(3 - 2)

Required or Elective Required (Astronautical Program)

Course (Catalog) Description
Introduction to system operations and program development on the department UNIX workstations and the NPS computer facilities. High-level programming languages, including C, MATLAB, and FORTRAN. Development of computer programs, subroutine organization, input and output. Applications of programming techniques to the solution of selected problems in engineering.

Prerequisites and Co-requisites
MA 1115.

Textbook(s) and/or other Required Material
Text: "Introduction to MATLAB 7 for Engineers," 2nd Edition by William J. Palm III, McGraw-Hill, 2005.

Course Objectives
The course teaches students how to: use the MATLAB and Simulink development environment effectively for writing professional-level scripts, solving applied engineering problems, developing and running models of Naval engineering systems; choose wisely and apply correctly different numerical methods; analyze limitations, advantages, and disadvantages of the chosen numerical method; and use interactive and graphical capabilities of MATLAB and Simulink to make user-developed models universal and easy-to-understand (analyze).

Topics Covered
1. Introduction to MATLAB/Simulink - Technical Computing Language
2. MATLAB's Development Environment and Basic Operations
3. Arrays and Array Operations
4. Data Structures, Types of Files, Managing Input/Output Data
5. Programming with MATLAB and Debugging Tools
6. Two- and Three-Dimensional Plotting and Animation
7. Accuracy of Digital Computations
8. Matrix Algebra and Eigenvalue Problems
9. Root Finding and Optimization
10. Curve Fitting to Measured Data
11. Numerical Differentiation
12. Numerical Integration
13. MATLAB's Symbolic Math Toolbox
14. Initial-Value Problem
15. Simulink Basics
16. Introduction to Mathematical Modeling of System's Dynamics

Class/Laboratory Schedule

This course meets 3 times per week for lectures of 50 minutes with additional 2 times per week for laboratory. The course is also available on-line (students usually use its 'blackboard' version to work on numerous interactive media elements).

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	X
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	X
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.	X
(d) A major design experience	
(e) At least one academic year of advanced level knowledge	

Relationship of Course to Program Outcomes

Mechanical Engineering Program Outcomes	Relationship
1. Graduating students will have knowledge and skills equivalent to an ABET-accredited BSME. (Table 3.4 shows the course matrix to support the ABET requirement of BSME.)	X
2. Graduating students will have advanced knowledge in Mechanical Engineering and competence in one of the available specialized disciplines of Mechanical Engineering.	X
3. Graduating students will have high level of communication skills including technical writing and oral presentation.	X*
4. Graduating students will have the ability to independently identify, formulate and solve technical and engineering problems in Mechanical Engineering.	X*
5. Graduating students will have the ability to apply technical knowledge in a leadership role related to national security.	

* Midterm and final projects are assigned to students to find a real world engineering problem in the military application (spacecraft, satellites, aircraft, UAVs, armored vehicles) related to the course contents, and to present the simplified solution and discussion of the solution in a written report.

Oleg A. Yakimenko

AE3804 Thermal Control of Spacecraft
(3- 0)

Required or Elective: Required (Astronautical Program)

Course (Catalog) Description:

Conduction, radiation, thermal analysis, isothermal space radiator, lumped parameter analytical modeling, Spacecraft passive and active thermal control design, heat pipes, and louvers.

Prerequisites and Co-requisites: None

Textbook(s) and/or other Required Material:

1. Design of Geosynchronous Spacecraft, B.N. Agrawal, Prentice Hall, 1986 (out of print)
2. Instructors Handouts/notes

Course Objectives:

To introduce the students to the fundamental concepts and basic principles of heat transfer relevant to the spacecraft environment and thermal control. To provide "building blocks" for thermal analysis/design of spacecraft.

Topics Covered:

1. Conduction and radiation heat transfer modes.
2. Thermal analysis of spacecraft devices and processes including isothermal space radiators.
3. The use of lumped parameter analytic models.
4. Spacecraft passive and active thermal control.
5. Heat pipes and louvers.
6. Thermal design and testing.

Class/Laboratory Schedule:

This course meets 3 times per week for lectures of 50 minutes.

.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	X
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.	
(d) A major design experience	
(e) At least one academic year of advanced level knowledge	

Relationship of Course to Program Outcomes

Astronautical Engineering Program Outcomes	Relationship
1. Graduating students will have knowledge and skills equivalent to an ABET-accredited BSME. (Table 3.4 shows the course matrix to support the ABET requirement of BSME.)	X
2. Graduating students will have advanced knowledge in Astronautical Engineering and competence in one of the available specialized disciplines of Astronautical Engineering.	X
3. Graduating students will have high level of communication skills including technical writing and oral presentation.	
4. Graduating students will have the ability to independently identify, formulate and solve technical and engineering problems in Astronautical Engineering.	X
5. Graduating students will have the ability to apply technical knowledge in a leadership role related to national security.

ME0952 SPECIAL TOPICS IN MECHANICAL ENGINEERING (1-0)

Required or Elective Required

Course (Catalog) Description
This course provides students with essential computer knowledge and topics of current research interest in mechanical engineering and materials science. PREREQUISITES: None. This is a Pass/Fail course required to all students in the curriculum.

Prerequisites and Co-requisites
None

Textbook(s) and/or other Required Material
None

Course Objectives
This is a seminar course where students are exposed to current topics of interests in both military and mechanical engineering subjects.

Topics Covered
N/A

Class/Laboratory Schedule
This course meets once per week for lectures and seminars, typically of 50 minutes, but some events can be up to 2 hours.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.	X
(d) A major design experience	
(e) At least one academic year of advanced level knowledge	X

Relationship of Course to Program Outcomes

Mechanical Engineering Program Outcomes	Relationship
1. Graduating students will have knowledge and skills equivalent to an ABET-accredited BSME. (Table 3.4 shows the course matrix to support the ABET requirement of BSME.)

Knox Millsaps

ME 1000 Preparation for Professional Engineers Registration (3-0)

Required or Elective Elective

Course (Catalog) Description

The course will cover the topics from the 8-hour Professional Examination given by the State of California for Professional Engineer. Discussion will involve applicable engineering techniques, including design and analysis of mechanical systems and components. Graded on Pass/Fail basis. Course may be taken as an overload only

Prerequisites and Co-requisites

Consent of instructor..

Textbook(s) and/or other Required Material

Required Text: Mechanical Engineering Reference Manual for the PE Exam, Michael R. Lindeburg, 12th Edition, Professional Publications Inc. (PPI), 2006.

Optional Reference Matl.: Practice Problems for the Mechanical Engineering PE Exam, Lindeburg, 10th Edition, PPI, 2000; Quick Reference for the Mechanical Engineering PE Exam, Lindeburg, 3rd Edition, PPI, 2000; Mechanical Engineering Sample Examination, Lindeburg, 3rd Edition, PPI, 1998

Course Objectives

(1) The student will understand the Professional Engineer (PE) licensing process (in particular the application process), the use of a PE license, transferability of the PE from California to other states, and its application to a military career.
(2) Within the guidelines of required experience to pursue a PE license, the student will understand the content of the Engineer In Training / Fundamental Engineering exam and its application process.
(3) The student will become familiar with the types of questions that will appear on the PE exam, the reference materials allowed to take the exam, and the conduct of the PE exam itself. The student will work multiple examples of each category of exam question in preparation to take the PE exam.

Topics Covered

(1) Fundamental mathematics required for answering Mechanical Engineering questions of the caliber found on the PE exam.
(2) Fluid Mechanics
(3) Thermodynamics
(4) Power Cycles
(5) Heat Transfer
(6) HVAC
(7) Machine Design
(8) Dynamics & Vibrations
(9) Control Systems
(10) Plant Engineering
(11) Engineering Economics
(12) Law & Ethics

Class/Laboratory Schedule

This course meets 3 times per week for lectures of 50 minutes. Majority of the classes will be student led, focusing on problem solving.

Contribution of Course to Meeting the Professional Component

ME2101 Engineering Thermodynamics
(4- 2)

Required or Elective Required

Course (Catalog) Description

A comprehensive coverage of the fundamental laws of thermodynamics, with insight toward microscopic phenomena. The laws of thermodynamics. Equations of state. Thermodynamic properties of substances. Entropy, irreversibility and availability. Cycles analysis, gas-vapor mixtures and combustion.

Prerequisites and Co-requisites: M**A1118**

Textbook(s) and/or other Required Material

3. Sonntag, R. E., Borgnakke, C., Van Wylen, G. J., Fundamentals of Thermodynamics, 5th Edition, John Wiley.
4. Engineering Equation Solver (EES) software. F-Chart Software.

Course Objectives

For the student to obtain a fundamental understanding of the concepts, definitions and laws of thermodynamics. To apply this knowledge to be capable of analyzing and designing practical energy conversion devices, such as power plants and refrigeration systems.

Topics Covered

Definitions of terms and introduction to concepts. Temperature, pressure, system, state, interaction, heat, work, energy. First law for a simple system. Properties of a pure substance. Measurable and immeasurable properties. State principle. Property data for ideal gases, incompressible media and steam and refrigerant data. Control mass and control volume formulations of First Law. Second law and entropy. Reversible and irreversible processes and thermodynamic availability. Cycle analysis for vapor and gas power systems. Refrigeration and heat pump cycles. Analysis of ideal gas mixtures both for reacting (combustion) and non-reacting systems.

Class/Laboratory Schedule

This course generally meets 4 times per week for lectures of 50 minutes and once a week for 1 hour and 50 minutes. This longer, double period is typically used for problem working secessions, a power plant tour or a quiz.

.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	X
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.	
(d) A major design experience	
(e) At least one academic year of advanced level knowledge	

Relationship of Course to Program Outcomes

Mechanical Engineering Program Outcomes	Relationship
1. Graduating students will have knowledge and skills equivalent to an ABET-accredited BSME. (Table 3.4 shows the course matrix to support the ABET requirement of BSME.)	X

ME2201 INTRODUCTION TO FLUID MECHANICS
(3 - 2)

Required or Elective Required

Course (Catalog) Description

Properties of fluids, hydrostatics and stability of floating and submerged bodies. Fluid flow concepts and basic equations in steady flows: mass, momentum, and energy considerations. Dimensional analysis and dynamic similitude. Viscous effects and fluid resistance. Drag and separated flow over simple bluff bodies. PREREQUISITE: ME2503.

Prerequisites and Co-requisites
ME2503

Textbook(s) and/or other Required Material
Text: "Fluid Mechanics", Frank M. White,, 5th ed., McGraw Hill, 2003.

Course Objectives
Obtain a deep understanding of fundamental fluid mechanics principles. This will be achieved through a physical and insightful study of fluid properties, fluid flow concepts, and their governing equations and solutions. The course will prepare the students for the follow-on courses such as ME 3201, ME 3150, ME 4220 and such in the Fluid and Thermal Propulsion track. Students completing the course will acquire sufficient basic fluid mechanics knowledge to solve many simple, but practical engineering fluid mechanics problems.

Topics Covered
1. Review of basic concepts and fluid properties.
2. Fluid statics, concept of pressure, hydrostatic pressure distribution, application to manometry and forces on submerged surfaces.
3. Buoyancy and stability of floating bodies.
4. The control volume, system, Reynolds transport theorem, conservation of mass, momentum and energy in integral form.
5. Frictionless flow, Bernoulli theorem and equation.
6. Dimensional analysis, principle of dimensional homogeneity, Buckingham π-theorem, principle of similarity.
7. Reynolds number, regimes of flow, internal and external flows, flow in a circular pipe and the Moody diagram.
8. Pipe flow problems, non-circular ducts, hydraulic diameter, losses in piping systems.
9. The boundary layer, momentum integral solutions.
10. Types of drag, drag of immersed bodies, flow past a specific shapes and drag on ships.

Class/Laboratory Schedule
This course meets 5 times per week for lectures of 50 minutes.

ME2501: STATICS (3 – 0)

Required or Elective Required

Course (Catalog) Description
Forces and moments, particles and rigid bodies in equilibrium. Simple structures, friction, first moments and centroids.

Prerequisites and Co-requisites
MA1116 (may be taken concurrently)

Textbook(s) and/or other Required Material
Text: STATICS by J. L. Meriam, Wiley

Course Objectives
Students are expected building a foundation of analytical capability for the solution of a variety of engineering problems. The primary purpose is to develop capacity to predict the effects of force and motion in the course of carrying out the creative design function of engineering. In the process, certain concepts and definitions should be understood at the outset; space, time, mass, force, particle and rigid body. Students completing this course will have understanding how to apply forces/moment to simple structures in equilibrium.

Topics Covered
1. Introduction to basic concepts, scalars and vectors, Newton's laws, and units (mass, length & time).
2. Force System: 2-D/3-D force system, rectangular components, moment/couple, resultants
3. Equilibrium: equilibrium in 2-D/3-D, and equilibrium conditions
4. Structures: plane trusses, method of joints, method of sections, space trusses, frames and machines
5. Distributed Forces: center of mass, centroids, composite bodies, beams, flexible cables, fluid statics.
6. Frictional Phenomena: types of friction, and dry friction
7. Application of Friction in Machines: wedges, screws, journal bearings, thrust bearings, flexible belts, rolling resistance

Class/Laboratory Schedule
No lab required.

ME2502: DYNAMICS (4 – 1)

Required or Elective Required

Course (Catalog) Description
Kinematics and kinetics of particles and rigid bodies. Rectilinear, plane curvilinear and space curvilinear motion. Newton's laws, work and energy, impulse and momentum and impact. Plane motion of rigid bodies and introduction to gyroscopic motion.

Prerequisites and Co-requisites
ME2501

Textbook(s) and/or other Required Material
Text: DYNAMICS by J. L. Meriam, Wiley

Course Objectives
Students are expected building a foundation of analytical capability for the solution of a variety of engineering problems. The primary purpose is to develop capacity to predict the effects of force and motion in the course of carrying out the creative design function of engineering. In the process, kinematics of particles and kinetics of particles, and kinetics of systems of particles are expected to understand. In addition, students will be fully exposed to plane kinematics and plane kinetics of rigid bodies, and 3-D dynamics of rigid bodies.

Topics Covered
1. Kinematics of Particles: rectilinear motion, plane curvilinear motion, rectangular/cylindrical/polar coordinates, space curvilinear motion, relative motion
2. Kinetics of Particles: Newton's 2nd law, equation of motion, rectilinear/curvilinear motion, work and kinetic energy, potential energy, impulse and momentum, conservation of momentum
3. Kinetics of Systems of Particles: steady mass flow and variable mass flow
4. Plane Kinematics of Rigid Bodies: rotation, absolute motion, relative velocity, relative acceleration, motion relative to rotating axes
5. Plane Kinetics of Rigid Bodies: general equations of motion, translation, fixed-axis rotation, general plane motion, work-energy relation, virtual work, impulse-momentum equation
6. 3-D dynamics of Rigid Bodies: Translation, fixed-axis rotation, parallel-plane motion, rotation about a fixed point, angular momentum, kinetic energy, momentum and energy equations of motion, parallel-plane motion, gyroscopic motion

Class/Laboratory Schedule
One hour per week problem solving session.

ME2601 MECHANICS OF SOLIDS I
(3 - 2)

Required or Elective Required

Course (Catalog) Description
Stress-strain. Plane stress and plane strain, principal stresses, maximum shear stress, thermal stress, Mohr's circle, axial loading, indeterminate members, pressure vessels, elastic torsion, indeterminate torsion, shear moment diagram, elastic bending, beam deflection, combined loading, theory of failure. Supporting laboratory work.

Prerequisites and Co-requisites
MA 1118 and ME2501 or ME2503

Textbook(s) and/or other Required Material
Text: "Mechanics of Materials", Roy R. Craig, Jr., 2nd ed., John Wiley & Sons, 2000.

Course Objectives
Students are expected to understand the basic action-displacement relationships, and the basic stress distribution relationships for linear mechanical elements (bars, shafts, beams) subjected to various actions (forces and moments). Inherent in this understanding is an understanding of basic stress-strain relationships for linear elastic materials. Students completing this course will have the rudiments of how to apply this understanding to the design of those elements.

Topics Covered
1. Introduction to and definition of stress and strain, elasticity and plasticity, and Hooke's law. Allowable stresses and factors of safety are introduced for purposes of design
2. Axially load members. Displacements of axially loaded members. Analysis of statically indeterminate members including temperature effects and pre-strain.
3. Torsion of circular shafts. Displacements of shafts and stress distributions in shafts subjected to torsion. Analysis of statically indeterminate shafts.
4. Stress in beams. Shear force and bending moment diagrams for beams. Relationship between load, shear force, and bending moment. Normal strain and normal stress in beams.

Class/Laboratory Schedule
This course meets 5 times per week for lectures of 50 minutes.

ME3150 Heat Transfer
(4- 1)

Required or Elective: Required (may be waived based on individual circumstances)

Course (Catalog) Description:

Introduction to the various modes of heat transfer and their engineering applications. Steady and unsteady conduction involving the use of thermal circuit analogs, analytical, and numerical techniques. Introduction to conservation of mass, momentum, and energy. External and internal forced convection fundamentals and correlations. External natural convection. Boiling and condensation heat transfer. Heat exchanger analysis. Fundamentals of thermal radiation.

Prerequisites and Co-requisites: ME 2101, ME 2201, MA 3132 (may be taken concurrently).

Textbook(s) and/or other Required Material:
Introduction to Heat Transfer, F.P. Incropera & D.W. DeWitt, John Wiley & Sons (Latest edition)

Course Objectives:
To introduce the fundamental modes of heat transfer: conduction, convection and radiation. To provide analytical and numerical tools to analyze the basic mechanisms of heat transfer. To apply the basic knowledge of the fundamentals to the design of heat transfer equipment and processes.

Topics Covered:
1. Introduction to definitions of fundamental modes of heat transfer
2. Equation of conservation of energy
3. One dimensional steady conduction heat transfer
4. Two dimensional steady conduction heat transfer
5. Transient conduction heat transfer
6. Introduction to convection heat transfer
7. Conservation laws of mass, momentum, and energy
8. External flow convection heat transfer
9. Internal flow convection heat transfer
10. Natural convection heat transfer
11. Boiling and convection heat transfer
12. Fundamentals of thermal radiation heat transfer
13. Thermal radiation heat transfer between surfaces
14. Heat exchanger analysis

Class/Laboratory Schedule:
This course meets 4 times per week for lectures of 50 minutes and once a week for 1 hour for problem working, or a quiz.
.

ME3201 APPLIED FLUID MECHANICS
(4 - 1)

Required or Elective Required (may be waived based on individual circumstances)

Course (Catalog) Description
Steady one-dimensional compressible flow. Fundamentals of ideal-fluid flow, potential function, stream function. Analysis of viscous flows, velocity distribution in laminar and turbulent flows, introduction to the elements of the Navier-Stokes equations, solution of classical viscous laminar flow problems. Applications to Naval Engineering.

Prerequisites and Co-requisites
ME2101, ME2201, MA3132 (may be taken concurrently)

Textbook(s) and/or other Required Material
Text: "Fluid Mechanics", Frank M. White,, 5th ed., McGraw Hill, 2003.

Course Objectives
This is a graduate level fluids course. With its ability to quantitatively describe such diverse engineering applications, the primary goals of this course are 1) to provide the students with a fundamental understanding of the concepts and 2) to enable them to solve practical problems from first principles. It is also a prerequisite for ME 3150, ME 4220 and such in the Fluid and Thermal Propulsion track. Upon successful completion of the course, the students will be able to simplify the basic governing equations to solve specific problems by identifying and applying appropriate boundary conditions to solve the resulting differential equations. separate the viscous and inviscid regions of the flow to apply suitable solution methods, use the boundary layer solutions for a practical problem to derive a reasonable estimate of the viscous drag and solve one-dimensional gas dynamics problems.

Topics Covered
1. Derivation of the differential equations of motion (mass, momentum (Navier-Stokes) and energy), example problems.
2. Ideal fluid (inviscid) flow, singularities, rotational and irrotational flows, Principle of superposition, potential flow past closed bodies, example problems
3. Viscous flow in circular and non-circular ducts, effects of viscosity, Reynolds number.
4. Laminar and turbulent boundary layers, Reynolds averaging, external flows, example problems
5. Speed of sound, one-dimensional compressible fluid flow, isentropic flow relations, shock waves, Prandtl-Meyer flow, Flows with friction-Fanno flow, Frictionless flow with heat transfer-Rayleigh flow, choking, example problems.

Class/Laboratory Schedule
This course meets 5 times per week for lectures of 50 minutes.

ME3410 MISSILE AERODYNAMICS (2-4)

Required or Elective Elective (Not currently offered)

Course (Catalog) Description
Introduction to measurement systems, statistical analysis of data, error analysis, uncertainty analysis, manipulation of data including electrical readout and processing, data acquisition fundamentals and Fourier decomposition and dynamic signals. Measurements of temperature, pressure , velocity, flow rates. Energy balances, surface temperature visualization, flow visualization. Measurement of motion using accelerometers and encoders. Measurement of strain and force. Operational amplifiers, analog computers, filters. PREREQUISITES: ME3601, ME2801, ME3150, ME3521 (ME3150 and ME3521 may be taken concurrently).

Prerequisites and Co-requisites
ME3601, ME2801, ME3150, ME3521

Textbook(s) and/or other Required Material
Text: "Mechanical Measurements", Thomas G. Beckwith, Roy D. Marangoni, John H. Lienhard, 6th Edition, Addison Wesley, 2002.

Course Objectives
Students are expected to gain a fundamental understanding of the principles of measurements, and the process for specifying requirements, designing, and utilizing basic and advanced measurements techniques. Students completing this course are expected to be able to understand how to create and use experimental data, and understand the value and limitations of measurements, and be able to quantify uncertainty, and present data in written laboratory reports.

Topics Covered
1. Review of statistics, including central measures and variability.
2. Use of statistics to determine confidence intervals, and measurement uncertainty.
3. Standards
4. Physical principles of measurements and transducer theory.
5. Amplifiers, filters, and digitizers.
6. Computer data acquisition, A/D converters, and Nyquist criterion.
7. Thermal and fluid measurements.
8. Solids and structure measurement applications.
9. Optical measurements.
10. GPS and navigation theory.

Class/Laboratory Schedule
This course meets 2 times per week for lectures of 50 minutes and once a week for 2 hours for laboratory work.

Knox Millsaps

ME3450 Computational Methods in Mechanical Engineering
(3 - 2)

Required or Elective Required (may be waived based on individual circumstances)

Course (Catalog) Description
The course introduces students to the basic methods of numerical modeling for typical physical problems encountered in solid mechanics and the thermal/fluid sciences. Problems that can be solved analytically will be chosen initially and solutions will be obtained by appropriate discrete methods. Basic concepts in numerical methods, such as convergence, stability and accuracy, will be introduced. Various computational tools will then be applied to more complex problems, with emphasis on finite element and finite difference methods, finite volume techniques, boundary element methods and gridless Lagrangian methods. Methods of modeling convective non-linearities, such as upwind differencing and the Simpler method, will be introduced. Discussion and structural mechanics, internal and external fluid flows, and conduction and convection heat transfer. Steady state, transient and eigenvalue problems will be addressed.

Prerequisites and Co-requisites
ME3150, ME3201, ME3601.

Textbook(s) and/or other Required Material
Versteeg, H. K. and Malalasekera, W., "An Introduction to Computational Fluid Dynamics – The Finite Volume Method" Prentice Hall
Kwon, Y. W. and Bang, H., "The Finite Element Method Using MATLAB," CRC Press 2000.

Course Objectives
The course will progress along roughly two parallel paths. On the one hand, students will first briefly go over the underlying governing equations of structural analysis and fluid flow, followed by a detailed development of the finite element and finite volume methods and their application to these equations. And on the other hand, they will also simultaneously get hands-on experience in the computer lab by working with a typical commercially available FEM and CFD package. One of the goals of the course is to synthesize these two approaches.

Topics Covered
1. Finite Difference/Finite Volume Methods. Boundary Value Problem with MATLAB for Diffusion Problems (BVM). Lab on the BVM.
2. Finite Element/Variational Methods. Lab on the MATLAB Finite Element Toolbox
3 Truss Analysis. Patran and Nastran Laboratory 1
4 FEM of BVM Problems. Patran and Nastran Laboratory 2
5 FEM of Elliptic Partial Differential Equations. **First Quiz**
6 Conservation Laws of Fluid Motion -Viscous Incompressible Flows. Patran and Nastran Laboratory 3
7 Finite Volume Methods for Convection-Diffusion Problems. CFD-ACE Laboratory 1
8 Numerical Diffusion & Higher Order Schemes **Second Quiz**
9 Source Term Linearization. CFD-ACE Laboratory 2

10 Pressure-Velocity Coupling – SIMPLE Algorithm. CFD-ACE Laboratory 3
11 Boundary Condition Implementation. Advanced Topics – Turbulence models

Class/Laboratory Schedule
This course meets 3 times per week for lectures of 50 minutes and once for a 2-hour lab.

ME3521 MECHANICAL VIBRATIONS
(3 - 2)

Required or Elective Required (may be waived based on individual circumstances)

Course (Catalog) Description
Elements of analytical dynamics, free and forced response of single degree and multi-degree of freedom systems. Dynamic response using modal superposition method. Properties of stiffness and inertia matrices, orthogonality of modal vectors, eigenvalue problem, modal truncation, vibration isolation and suppression. Vibration of bars, shafts, and beams. Supporting laboratory work.

Prerequisites and Co-requisites
ME2503, ME3601; MA2121 or equivalent (may be taken concurrently)

Textbook(s) and/or other Required Material
Text: "Theory of Vibration with Applications", Thomson, W. T. and Dahleh, M. D., 5th ed., Prentice Hall.

Course Objectives
(1) Modeling of simple mechanical and structural systems: The class emphasizes the modeling of mechanical and structural systems as simple single and multi-degree of freedom systems. Discussed are real world examples where complex systems exhibiting undesirable vibration characteristics are modeled and analyzed as low dimensional systems. Students are presented with techniques for modeling simple single and multi-degree of freedom systems. Newtonian and analytic (Lagrangian) methods for deriving the governing differential equations of motion are covered. Linear and nonlinear systems and equations are contrasted.
(2) Solution of governing differential equations: General methods for obtaining the solution to the various governing differential equations are presented. The physics of vibration is discussed with respect to these solutions. The relationship of vibration theory to linear system theory and control theory is discussed.
(3) Applications: Various real world applications of the theory are examined, including the critical speed of rotating shafts, vibration isolation, measurement of vibration (transducer theory), frequency response analysis. Various examples from civil, structural, mechanical, naval, and aerospace engineering are discussed.

Topics Covered
1. Undamped free vibration, basic definitions, ..Differential equation description and solution
2. Single degree-of-freedom systems - simple harmonic oscillator/motion
3. Distributed systems - Rayleigh's method for frequency estimation
4. Vector analysis of motion- velocity, acceleration in moving reference frame, linear vs. nonlinear systems/equations, stable vs. unstable systems
5. Damped free vibration - viscous damping, basic definitions, Single degree-of-freedom systems
6. Damped Forced Vibration, General periodic excitation, Solution to differential equation, Rotating shafts, critical speeds, Frequency response
7. Applications, Absolute vs. relative generalized coordinates, vibration isolation, transducer theory, velocimeter, accelerometer, load cells

8. Energy methods, kinetic and potential energies, Lagrange's equation.
9. Multi-degree-of-freedom systems, matrix differential equations - basic linear algebra, eigenvalue problems, mode shapes, Orthogonality, modal decomposition

Class/Laboratory Schedule
This course meets 4 times per week for four lectures of 50 minutes, with several two-hour labs.

ME3611 MECHANICS OF SOLIDS II
(4-0)

Required or Elective Required (may be waived based on individual circumstances)

Course (Catalog) Description
Differential equations of bars, shafts and beams with Macauley functions. Unsymmetric bending. Curved beams. Shear flow in thin walled sections. Shear center. Torsion of thin walled open sections. Thick walled cylinders. Energy including Castigliano and unit dummy load methods for displacements. Statically indeterminate systems including beams, frames, trusses, arches and combined structures.

Prerequisites and Co-requisites
ME2601

Textbook(s) and/or other Required Material
Text: Advanced Strength and Applied Elasticity, (A. C. Ugural and S. K. Fenster), 4th edition, Prentice Hall 2003.

Course Objectives
It is the objective of this course to complete the introduction (with Mechanics of Solids I) to solid mechanics for all elementary structural elements. It is also the goal of the course to introduce students to advanced theories and methods of analysis in solid mechanics.

Topics Covered
1. Topics in beams: beam deflection, curved beam behavior, composite beam, non-symmetric beam, shear stress and shear center, statically indeterminate beam, energy method
2. Torsion of thin-walled members: open section, closed section, multiple sections
3. Axially load members: thick walled cylinders with internal and external pressure, compound cylinders
4. Beams on elastic foundation, infinite beams, semi-infinite beams, beams supported by equally spaced elastic elements, and application problems
5. Energy method: Catigliano's theorem, statically indeterminate systems
   Elastic stability: critical load, Euler buckling, effects of boundary condition, eigenvalue problem

Class/Laboratory Schedule
This course meets 4 times per week for lectures of 50 minutes.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	X
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.	
(d) A major design experience	
(e) At least one academic year of advanced level knowledge	

Relationship of Course to Program Outcomes

Mechanical Engineering Program Outcomes	Relationship
1. Graduating students will have knowledge and skills equivalent to an ABET-accredited BSME. (Table 3.4 shows the course matrix to support the ABET requirement of BSME.)	X

ME3711: DESIGN OF MACHINE ELEMENTS (4-1)

Required or Elective Required (may be waived based on individual circumstances)

Course (Catalog) Description

Design of representative machine elements with consideration given to materials selection, tolerances, stress concentrations, fatigue, factor of safety, reliability, and maintainability. Typical elements to be designed include fasteners, columns, shafts, journal bearings, spur and helical gears, and clutches and brakes. In addition to traditional design using factor of safety against failure, particular emphasis is placed on design for specified reliability using probabilistic design methods.

Prerequisites and Co-requisites

ME2601

Textbook(s) and/or other Required Material

Shigley's Mechanical Engineering Design by R. G. Budynas and J. K. Nisbett, 8th Ed. McGraw-Hill

Course Objectives

The course objective Is to Introduce the students to the design process by sizing various ma components to meet specified design criteria. Students apply previously learned analysis techniques to the design of machine elements.

Topics Covered

(1) Screws, fasteners and connections
(2) Design for static strength-steady loading
(3) Design for fatigue strength-variable loading
(4) Design of shafts, axles, and spindles
(5) Spur and helical gear design
(6) Design of rolling-contact bearing
(7) Design of journal bearing
(8) Design of clutches and brakes
(9) Welded joint design
(10) Column design
(11) Probabilistic concept of design and its applications
(12) Factor of safety vs. probabilistic design

Class and Laboratory Schedule

Four one hour (50 minutes) lecture periods each week. One hour (50 minutes) problem session each week. Term project is also assigned to design naval reduction gear system which includes double helical pinion gear, shaft and journal bearing.

Contribution of Course to Meeting Professional Component

Required Professional Components	Components Satisfied by ME 3711
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	X
(c) A general education component that complements the technical content of the curriculum and is consistent with the program and institution objectives.	
(d) A major design experience incorporating engineering standards and realistic constraints including most of the following: economic, environmental, sustainability, manufacturability, ethical, health and safety, social, and political.	X

Relationship of Course to Program Outcomes:

Mechanical Engineering Program Objectives	Program Objectives Satisfied by ME 3711
1. Ability to identify, formulate and solve technical and engineering problems in areas related to mechanical engineering	X
2. Ability to apply the tools of modern mechanical engineering practice	X
3. Ability to apply knowledge acquired in academic study	X
4. Ability to communicate effectively in oral and written form	X
5. Ability to understand the broader societal impacts	X

Prepared by

Young S. Shin

ME 3712: Capstone Design (1-6)

Required or Elective Required (may be waived based on individual circumstances)

Course (Catalog) Description

Design teams apply integrated and systematic design processes to real multifunctional and multidisciplinary problems in mechanical systems. Students develop process concepts, planning, design methodology, material selection, manufacturing and engineering analysis. Capstone design projects include projects provided by industry partners as well as DoD sponsors. The scope of design problems ranges across both engineering and non-engineering issues in the integrated design process.

Prerequisites and Co-requisites

ME2801, ME3150, ME3201, ME3450, ME3521, ME3711, MS3202, OS3104.

Reference Materials

Mark N. Horenstein, "Design Concepts for Engineers," 2nd Ed., Prentice Hall
Barry Hyman, "Fundamentals of Engineering Design," 2nd Ed., Prentice Hall
Gerard Voland, "Engineering by Design," Addison Wesley
K. Otto & K. Wood, "Product Design," Prentice Hall
Mark's Mechanical Engineering Handbook
Rothbart, H., Mechanical Design and Systems Handbook, McGraw Hill
Dieter, G. E., Engineering Design: A Materials Processing Approach

Course Objectives

1. To enable students to synthesize the knowledge and skills acquired in the context of a realistic design project.
2. To develop in students the ability to address a broad range of requirements, including most of the following: performance, economic, marketing, environmental, manufacturing, ethical, safety, social, and political issues.
3. To prepare for the professional design environment by learning how to learn, by working in teams, and by enhancing communications skills.

Topics Covered in Lecture

1. ENGINEERING DESIGN: What is "Engineering Design"? ; The Difference Between Design, Analysis, and Reproduction; Good Design vs. Bad Design
2. The Design Cycle: Define the Overall Objective; Gather Information; Choose a Design Strategy; Make a First Cut at the Design; Build, Document, and Test; Revise and Revise Again; Thoroughly Test the Finished Product

3. WORKING IN TEAMS: Teamwork Skills; Brainstorming; Documentation; Project Management
4. ENGINEERING DESIGN TOOLS; MATLAB, SOLID WORKS, ABAQUS, NASTRAN, ETC.
5. THE HUMAN-MACHINE INTERFACE: Ergonomics: Science of how the human interacts with machines (i.e. key board); Cognition: The way a user learns abut the device and masters its features fast; Case Studies
6. ENGINEERS AND REAL WORLD; Society's View of Engineering; How Engineers Learn from Mistakes; The Role of Failure in Engineering Design: Case Studies
7. LEARNING TO SPEAK, WRITE, AND MAKE PRESENTATION

Evaluation

1. Final Report and Presentation/Show.
2. Weekly/Regular Presentations/Deliverables.
3. Prototypes, where possible.

Course Outcomes

1. Students will be able to identify relevant topics from earlier courses, then apply them to their design project.
2. Students will be able to critically evaluate designs using engineering criteria and predictive usage.
3. Students will demonstrate an ability to identify and specify design requirements from general problem descriptions.
4. Students will be able to systematically develop a design from concept to prototype.
5. Students will be able to clearly communicate design ideas and information.
6. Students will be able to work collaboratively and responsibly as members of a team.
7. Students will demonstrate the ability to facilitate their learning by identifying design issues and questions that require additional investigation, and then formulating appropriate courses of action.

Example Design Project on Autonomous Underwater Vehicle (AUV)

1. Produce a concept level design for the next generation mine-hunting robot submarine.

   Background: The navy needs small smart submarines to perform autonomous mine-hunting missions in shallow water. These vehicles carry a side-scan sonar to produce images of the ocean bottom from which mines can be identified. Their sweep rates need to be fast enough to permit in stride mine hunting, and identification and classification. At the same time, the vehicles need to travel slow enough to produce high-resolution imagery.

2. Requirements: An autonomous submarine vehicle (with respect to power and control) that will have a range of 50 nmiles at a cruising speed of 3 knots , able to cruise at 3(+/-0.5) meters above the ocean bottom and record side scan sonar images out to a swath of 150m each side. The vehicle should be structurally capable of operating in up to 150m

of water depth. The vehicle should be self navigating using inertial means with GPS correction when surfaced. Navigational accuracy should be within 0.1% of distance traveled.

The computer system should be capable of reading data from all onboard sensors and computing all required functions for the automatic control of speed heading, depth and or altitude above bottom. Failure detection means should be built in to protect against propeller failure, leaks, and low battery conditions.

Consideration shall be given to

1. Design of the propulsion system
2. Design of the energy storage system (high energy density batteries are preferred, but consideration to charging and replenishment is critical. Fuel cells may be an option)
3. Design of the hull form for minimal drag
4. Design of the control surfaces and their drive motors.
5. Modular mechanical design is preferred to accommodate a wide range of sensor payloads (Optical Back Scatter, CTD, Forward Look Sonar, Video Camera, Acoustic Camera), (Details of sensors can be provided)
6. Thermal Control inside the hull.
7. Design of the Electrical Power Distribution System
8 Transportation , Costs, and Lifetime Maintenance
9. Acoustic Modem Communications Link.

The following items would be nice to consider if time permits:

10. GPS , Radio Communications Antennas
11. Navigational Performance with an Acoustic Doppler Aided Inertial Navigation System
12. Computer Hardware and Software Architecture integration.
13. Data Display.

ME3750 PLATFORM SURVIVABILITY (4-0)

Required or Elective Elective

Course (Catalog) Description
This course introduces the concepts and analytical tools used in designing and testing survivable combat platforms and weapon systems. The applications are to a broad range of platforms and weapons, including submarines, surface ships, fixed and rotary wing aircraft, cruise missiles, and satellites in a hostile (non-nuclear) environment. The technology for increasing survivability and the methodology for assessing the probability of surviving hostile environments are presented. Topics covered include: current and future threat descriptions; the mission/threat analysis; combat analysis of SEA, vulnerability reduction technology for the major systems and subsystems; susceptibility reduction concepts, including stealth; vulnerability, susceptibility, and survivability assessment; and trade-off methodology. PREREQUISITES: None.

Prerequisites and Co-requisites
None

Textbook(s) and/or other Required Material
Text: "Fundamentals of Aircraft Survivability Analysis and Design" Robert. E. Ball, 2nd Edition, AIAA Education Series, 2002.

Course Objectives
Students are expected to gain a fundamental understanding of the principles of platform survivability and be able to use this knowledge in improving system survivability and improve operations to limit losses due to hostile actions.

Topics Covered
1. Introduction to statistical analysis and methods.
2. Definitions of terminology of the kill chain.
3. Platform layout and systems interconnections.
4. Physical principles of detection, tracking and engagement.
5. Mechanics of damage and kill mechanisms.
6. Design of survivability.

Class/Laboratory Schedule
This course meets 4 times per week for lectures of 50 minutes and a separate computer laboratory period is used to perform calculations and have design discussions.

ME3801 Autonomous Systems and Vehicle Control I

Required or Elective Required (may be waived based on individual circumstances)

Course (Catalog) Description
The course will focus on the part of the classical control theory, which implies the frequency-domain analysis. This approach is still widely used and has many practical applications; analysis tools learned here will be used in your follow-on controls and dynamics courses. Modern control theory - state-space analysis working in the time domain - will also be introduced to provide a smooth transition between the two methods.

Prerequisites and Co-requisites
ME 2801

Textbook(s) and/or other Required Material
Text:

1. "Linear Control Systems Engineering", by Morris Driels ISBN: 0-07-249361-5, McGraw-Hill, Inc., 2000.
2. "Modern Control Engineering, 4th edition", by Katsuhiko Ogata, ISBN: 0-13-060907-2, Prentice-Hall, Inc., 2002

Course Objectives
Students are expected to understand and practice how to:

1. Develop a mathematical model and represent it using different frequency response methods;
2. Analyze stability and performance of any Naval engineering system in the frequency domain;
3. Design a feedback controller/compensator to meet the stability and performance requirements.

Students completing this course will have the fundamentals of how to apply these techniques to the analysis and design of control systems. Upon successful completion of this course, they will be able to:

1. Describe the behavior of a linear system by its time history response to various inputs or by a frequency-domain analysis (response to steady sinusoidal input);
2. Recognize the problems a naval engineering system might have in terms of accuracy, relative stability, speed of response;
3. Model simple systems by differential equations, block diagrams, and transfer functions;
4. Understand the basic principles of feedback stabilization via a frequency-domain analysis;
5. Produce a root-locus plot of a system in the complex plane, and examine its stability;
6. Analyze the frequency response of a system and construct a Bode diagram for a stability analysis;
7. Employ Nyquist stability theory and the concepts of gain and phase margin for a stability analysis;
8. Apply the concepts of lead, lag, and lag-lead compensation for stabilizing or improving the dynamics of a system and estimate the increase of system's performance;

Topics Covered

7. BODE DIAGRAM
   - Bode Diagrams of Simple Transfer Functions

- Bode Diagrams of Compound Transfer Functions
- Elemental Bode Diagrams

8. BODE ANALYSIS, STABILITY, AND GAIN AND PHASE MARGINS
   - Conditional Stability
   - Gain and Phase Margins in the Bode Diagram
   - System Type and Steady-State Error from Bode Diagrams
   - Further Discussion of Gain and Phase Margins
9. FREQUENCY RESPONSE AND NYQUIST DIAGRAMS
   - Frequency Response
   - Nyquist Diagrams from Transfer Functions
10. NYQUIST STABILITY CRITERION
    - Conformal Mapping: Cauchy's Theorem
    - Application to Stability
    - Some Comments on Nyquist Stability
    - Alternative Approach to Nyquist Stability Criterion
11. NYQUIST ANALYSIS AND RELATIVE STABILITY
    - Conditional Stability
    - Gain and Phase Margins
12. FREQUENCY-DOMAIN SPECIFICATIONS AND CLOSED-LOOP FREQUENCY RESPONSE
    - Frequency-Domain Specifications
    - Closed-Loop Frequency Response from Nyquist Diagram
    - Closed-Loop Frequency Response from Bode Diagram
    - Gain for a Desired Mp from the Nyquist Diagram
    - Gain For a Desired Mp from the Nichols Chart
    - Non-Unity-Feedback Gain Systems
13. PHASE LEAD COMPENSATION
    - Multiple-Design Constraints
    - Transfer Function of Phase Lead Element
    - Phase Lead Compensation Process
    - Comments on the Applicability and Results of Phase Lead Compensation
14. PHASE LAG AND LAG-LEAD COMPENSATION
    - Transfer Function of Phase Lag Element
    - Phase Lag Compensation Process
    - Comments on Phase Lag Compensation
    - Lag-lead Compensation
    - Transfer Function of a Lag-lead Element
    - Lag-lead Compensation Process
15. LOOP SHAPING
    - Disturbance attenuation
    - Reference following
    - Noise reduction
    - Sensitivity to plant uncertainty
    - Actuator limits
    - Loop shaping design examples
    - Intrinsic limitations on achievable performance

10. INTRODUCTION TO STATE-SPACE DESIGN
- Advantages of state space
- Analysis of the state equations
- Block diagrams and canonical forms

Class/Laboratory Schedule
This course requires 3 Lecture hours and 2 Lab hours per week.

ME4101 ADVANCED THERMODYNAMICS (4-0)

Required or Elective Elective

Course (Catalog) Description
This course reviews elementary definitions, concepts and laws of thermodynamics and then extends these to cover general thermodynamics and advanced topics. The concepts of availability, exergy, irreversibility, and general equilibrium conditions in single and multi-component systems are presented. Ideal and non-ideal solutions and chemical potential are treated along with an introduction to statistical thermodynamics and non-equilibrium concepts such as Osager's reciprocal relations. PREREQUISITE: ME2101.

Prerequisites and Co-requisites
ME2101

Textbook(s) and/or other Required Material
Text: J. W. Tester and M. Modell, "Thermodynamics and its Applications," 3rd Edition, Prentice-Hall, 1996.

References:

1. J.M. Prausnitz et al., "Molecular Thermodynamics of Fluid-Phase Equilibria", 2d ed., Prentice-Hall, 1986.
2. D. Chandler, "Introduction to Modern Statistical Mechanics" Oxford University Press, 1987.
3. H.B. Callen, "Thermodynamics and an Introduction to Thermostatistics," 2d ed., Wiley, 1985.

Course Objectives
Students are expected to gain a deeper understanding of thermodynamics and extend a students grasp on multi-component and reacting systems and general equilibrium, and well as the statistical foundations of macroscopic thermodynamic quantities. Students completing this course are expected to be able to calculate thermodynamics properties of complex mixtures, and be able to use general thermodynamic relationships to relate changes in properties. Students should also be able to analyze and design complex thermodynamics systems for engineering applications.

Topics Covered

1. Review of first and second laws of thermodynamics along with combined formulations – Gibbs Equations.
2. General thermodynamic relationships – Maxwell's relationships.
3. Thermodynamic properties of mixtures of non-reacting systems.
4. Thermodynamics of chemically reacting systems.
5. General equilibrium conditions for systems – Gibbs and Helmholtz free energies.
6. Introduction to statistical thermodynamics.
7. Introduction to non-equilibrium thermodynamics – Onsager's relations.

Class/Laboratory Schedule
This course meets 4 times per week for lectures of 50 minutes.

ME4161 CONDUCTION HEAT TRANSFER (4-0)

Required or Elective Elective

Course (Catalog) Description
Steady-state heat conduction in multi-dimensions with and without heat sources. Transient conduction. Numerical methods for heat conduction. Mechanical Engineering applications. PREREQUISITE: ME3150.

Prerequisites and Co-requisites
ME3150

Textbook(s) and/or other Required Material
Texts:

1. Jiji, L. M., Heat Conduction, Begell House, 2nd Edition, 2003.
2. Millsaps, K. T., Conduction Heat Transfer", ME4161 Courses Notes, 2005.

Additional References:

1. Carslaw, H. S., Jaeger, J. C., Conduction of Heat in Solids, Oxford University Press, Second Edition.
2. Arpaci, V. S., Conduction Heat Transfer, Addison Wesley, 1966.
3. Ozisik, M. N., Boundary Value Problems of Heat Conduction, Dover.
4. Farlow, S. J., Partial Differential Equations for Scientist and Engineers, Dover. (A good introduction to PDEs at the undergraduate level.)
5. Generally, two or three Journal articles are provided as required reading.

Course Objectives
Students are expected to have a fundamental understanding of the physics and mathematics of steady and transient conduction problems. Students should be able to use standard analytical and computational methods to calculate temperature fields and heat fluxes in solids and stationary fluids. Students should also be able to analyze and design complex thermal systems typical of engineering applications involving both thermal and thermal induced stress considerations.

Topics Covered

1. Physics of conduction process in solids and gases.
2. Formulation of fundamental equations and boundary conditions for conduction problems.
3. Mathematical solutions to steady conduction in one, two and three dimensions in finite and unbounded regions in a variety of coordinate systems.
4. Mathematical solutions to transient conduction in one, two and three dimensions in finite and unbounded regions in a variety of coordinate systems.
5. Problems with short time or distance scales. Non –Fourier conductions.
6. Approximate and asymptotic solutions to linear and non-linear problems.
7. Engineering design applications: contact resistance, coupled thermal-stress problems, etc.

Class/Laboratory Schedule
This course meets 4 times per week for lectures of 50 minutes.

ME4162 CONVECTION HEAT TRANSFER
(4 - 0)

Required or Elective Elective

Course (Catalog) Description
Fundamental principles of forced and free convection. Laminar and turbulent duct flows and external flows. Dimensionless correlations. Heat transfer during phase changes. Heat exchanger analysis with Mechanical Engineering applications.

Prerequisites and Co-requisites
Prerequisites: ME 3150, ME 3201, ME4220, or consent of instructor.

Textbook(s) and/or other Required Material
Text: "Convective Heat and Mass Transfer", W.M. Kays, M.E. Crawford and B. Weigand, 4th Ed., McGraw Hill, 2005 and Instructor's Class Notes.

Course Objectives
This is a graduate level heat transfer course. The major objective of the course is to enable the students a deep physical understanding of the subject of Convective Heat Transfer through a physical and insightful study. It also prepares the students to solve practical convective heat transfer problems that involve a variety of boundary conditions and apply the knowledge to heat exchanger design. Various closed form and approximate solutions are taught so that the students can apply these to solve the multitude of open ended engineering problems in their work related situations. It is offered as a VTC course in the Distance Learning environment to the Navy Nuclear Reactors students from Washington, D.C. to participate and earn their graduate degrees.

Topics Covered
1. Review of basic concepts.
2. Derivation of governing equations.
3. Solutions of the governing equations for specific cases:
    a. Laminar internal flows: Momentum and heat transfer.
    b. Laminar external flows: Momentum and heat transfer.
4. Turbulent internal and external flows.
5. Natural convection.
6. Two phase flows: boiling, condensing flows.

Class/Laboratory Schedule
This course meets 2 times per week for lectures of 100 minutes.

Contribution of Course to Meeting the Professional Component

ME4163 Radiation Heat Transfer
(4- 0)

Required or Elective: Elective

Course (Catalog) Description:
Basic laws and definitions. Radiation properties of surfaces. Radiant interchange among diffusely emitting and reflecting surfaces. Applications and solutions of the equations of radiant interchange. Radiant interchange through participating media. Combined conduction and radiation.

Prerequisites and Co-requisites: ME 3150

Textbook(s) and/or other Required Material:
Radiative Heat Transfer, M.F. Modest, McGraw-Hill, 2nd edition

Course Objectives:
The student will learn about:

- Basic concepts of electromagnetic radiation, the Planck distribution, definition of black body, concept of radiation intensity
- Directional and Spectral radiative properties of real surfaces and their predictions from electromagnetic theory
- View factors and grey, diffuse body heat transfer
- Radiative heat transfer between gray, diffuse surfaces under both diffuse & specular conditions
- Applications to solar collectors, radiation shields, and selective surfaces
- Radiative transfer in participating media including absorption, emission, and scattering
- Spectral radiative properties of molecular gases and the use of various band models in calculating heat transfer
- Radiative heat transfer in particulate media, with emphasis on small and large particle limits, as well as soot properties
- Radiative Transport Equation and it application in gray media
- Approximate methods for optically thick and thin gases
- Combined mode problems where conduction and/or convection are coupled to radiation
- Applications such as furnace gas heat transfer, IR thermometry, and IR signature reduction issues.

Topics Covered:

1. Fundamentals of thermal radiation
2. Radiative properties of real surfaces and their prediction from electromagnetic wave theory
3. View factors for diffuse surface exchange
4. Radiative exchange in enclosures of grey diffuse surfaces as well as specular surfaces
5. Radiation transport equation
6. Molecular gas radiation properties and processes
7. Radiative transport in particulate media
8. Exact solutions of the Radiative Transport Equation in 1-D media and comparison with total gas property approach
9. Combined mode heat transfer: Conduction and/or convection with radiation

Class/Laboratory Schedule:

This course meets 4 times per week for lectures of 50 minutes.
.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	X
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	X
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.	X
(d) A major design experience	
(e) At least one academic year of advanced level knowledge	X

Relationship of Course to Program Outcomes

Mechanical Engineering Program Outcomes	Relationship
1. Graduating students will have knowledge and skills equivalent to an ABET-accredited BSME. (Table 3.4 shows the course matrix to support the ABET requirement of BSME.)	X
2. Graduating students will have advanced knowledge in Mechanical Engineering and competence in one of the available specialized disciplines of Mechanical Engineering.	X
3. Graduating students will have high level of communication skills including technical writing and oral presentation.	
4. Graduating students will have the ability to independently identify, formulate and solve technical and engineering problems in Mechanical Engineering.	X
5. Graduating students will have the ability to apply technical knowledge in a leadership role related to national security.

ME4211 APPLIED HYDRODYNAMICS (4-0)

Required or Elective Elective

Course (Catalog) Description
Fundamental principles of hydrodynamics. Brief review of the equations of motion and types of fluid motion. Standard potential flows: source, sink, doublet, and vortex motion. Flow about two-dimensional bodies. Flow about axisymmetric bodies. Added mass of various bodies and the added-mass moment of inertia. Complex variables approach to flow about two-dimensional bodies. Conformal transformations. Flow about hydro and aerofoils. Special topics such as dynamic response of submerged bodies, hydroelastic oscillations, etc. Course emphasizes the use of various numerical techniques and the relationship between the predictions of hydrodynamics and viscous flow methods. PREREQUISITE: ME3201.

Prerequisites and Co-requisites
ME3201

Textbook(s) and/or other Required Material
Text: "An Introduction to Fluid Dynamics", George K. Batchelor, Cambridge University Press, 1967.

References:
1. "Hydrodynamics" Horace Lamb, 1st Edition, Cambridge University Press, 2000.
2. "Fluid Mechanics", Landau and Lifshitz, Addison-Wsley, 1959.

Course Objectives
Students are expected to gain a fundamental understanding of the classical solutions and phenomena of potential flow and vortex methods. Various exact and approximate methods are provided as well as experimental data. Students completing this course are expected to be able to calculate the hydrodynamic coefficients and free surface flows associated with typical naval systems.

Topics Covered
1. Review of the fundamentals equations of fluid mechanics.
2. Potential flow calculations and pressure distributions for incompressible flow.
3. Classical solution methods of potential equations, including sources, sinks, distributed vortex, and image methods. Aerodynamics and hydrodynamics of bodies of revolution.
4. Free surface and stratified flow.
5. Vortex and panel methods.
6. Numerical methods and solutions.

Class/Laboratory Schedule
This course meets 4 times per week for lectures of 50 minutes.

ME4220 ME4220 VISCOUS FLOW
(4 - 0)

Required or Elective Elective

Course (Catalog) Description
Development of continuity and Navier-Stokes equations. Exact solutions of steady and unsteady viscous flow problems. Development of the boundary-layer equations. Similarity variables, numerical and integral techniques. Separation, boundary-layer control. Time-dependent boundary layers. Origin and nature of turbulence, phenomenological theories, calculation of turbulent flows with emphasis on naval engineering applications, and numerical models and CFD.

Prerequisites and Co-requisites
ME3201 and instructor's permission.

Textbook(s) and/or other Required Material
Text: "Boundary Layer Theory", H. Schlichting, 7th Ed., McGraw Hill, 1979 and Instructor's Class Notes.

Course Objectives
This is a graduate level fluids course. The major objective of the course is to give the students a deep physical understanding of viscous flows through a physical and insightful study of viscous fluid flows, and solutions of their governing equations. It also prepares the students for the follow-on course on convective heat transfer. Upon completion of the course, the students will be able to see the order in and develop a "quantitative feel" for the chaos known as turbulence. Significant viscous fluid flow knowledge is imparted to enable the students to solve a multitude of open ended engineering fluid mechanics problems. It is offered as a VTC course in the Distance Learning environment to the Navy Nuclear Reactors students from Washington, D.C. to participate and earn their graduate degrees.

Topics Covered
1. Review of basic concepts.
2. Derivation of governing (continuity and Navier-Stokes) equations.
3. Solutions of Navier-Stokes equations for specific cases.
4. Laminar boundary layers: Derivations of Prandtl boundary layer equations, properties, Blasius solution, Falkner-Skan solution, approximate methods, flow separation and its control.
5. Instability, origins of turbulence, Orr-Sommerfeld equation.
6. Turbulent flows, Reynolds averaging, Closure problem, gradient transport, law of the wall and related topics on turbulent boundary layers, turbulent kinetic energy, energy spectrum.
7. Turbulent pipe and flat plate flows.
8. Turbulence modeling.
9. Separation and its control

Class/Laboratory Schedule
This course meets 2 times per week for lectures of 100 minutes.

ME4225 Computational Fluid Dynamics and Heat transfer
(3 - 2)

Required or Elective Elective

Course (Catalog) Description
This course presents numerical solution of sets, of partial differential equations, that describe fluid flow and heat transfer. The governing equations for fluid dynamics are reviewed and turbulence modeling is introduced. Discretization techniques are applied to selected model equations and numerical methods are developed for inviscid and viscous, compressible and incompressible flows. Individual term projects include application of CFD to thesis research and to current military problems.

Prerequisites and Co-requisites
ME3201, ME3450, MA4243

Textbook(s) and/or other Required Material
Instructors Notes

Course Objectives
The emphasis will be on the numerical solution of sets, of partial differential equations, that describe fluid flow. The philosophy used throughout the course, is the construction and use of computer programs, leading to an understanding of the various algorithms

Topics Covered
INTRODUCTION
- Computational trends and historical perspective

GOVERNING EQUATIONS OF FLUID DYNAMICS (Inviscid)
SOLUTION OF THE STEADY ONE-DIMENSIONAL EULER EQUATIONS
- Implicit and Explicit schemes for the one-dimensional Euler equations
- Flux splitting and upwind differencing
- Implementation of boundary conditions

STEADY STATE SOLUTIONS OF THE TWO-DIMENSIONAL EULER EQUATIONS
- Explicit algorithms for the two-dimensional Euler equations
- Implicit methods for the solution of the Euler equations

NUMERICAL METHODS FOR THE NAVIER-STOKES EQUATIONS
- Tensors
- Reynolds equations for turbulent flow
- Introduction to turbulence modeling
- Turbulent flows, two-equation turbulence models
- Unsteady two-dimensional N-S calculations
- Selected topics (dependant on the selection of term projects)
. Advanced Topics – Turbulence models

Class/Laboratory Schedule
This course meets 3 times per week for lectures of 50 minutes and once for a 2-hour lab.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	X

ME4240 ADVANCED TOPICS IN FLUID DYNAMICS (4-0)

Required or Elective Elective

Course (Catalog) Description
Topics selected in accordance with the current interests of the students and faculty. Examples include fluid-structure interactions, cable strumming, wave forces on structures, free-streamline analysis of jets, wakes, and cavities with emphasis on computational fluid dynamics. PREREQUISITES: ME4220 and ME4211.

Prerequisites and Co-requisites
ME4220 and ME4211

Textbook(s) and/or other Required Material
Text: Various.

Course Objectives
This is a second level graduate course that treats topics of mutual interest of the faculty and students.

Topics Covered
No fixed set of topics.

Class/Laboratory Schedule
This course meets 4 times per week for lectures of 50 minutes.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	X

ME4420 ADVANCED POWER AND PROPULSION (4-0)

Required or Elective Elective

Course (Catalog) Description
This course presents an advanced treatment of power and propulsion topics, primarily for naval applications. Thermodynamic analysis of simple, advanced and complex cycles, such as combined and augmented cycles (e.g., RACER and STIG) are presented along with new and direct energy conversion concepts. Design integration of single and multi-type (CODAG, CODOG, etc.) power and propulsion systems with vehicles. Engine installation considerations, including the design of auxiliary equipment and inlet/exhaust systems, are presented. Design and current research topics in fluid mechanics and rotordynamics of turbomachinery are presented. Repair, condition-based maintenance and machinery operation, including balancing techniques, are discussed. PREREQUISITE: ME3240.

Prerequisites and Co-requisites
ME3240

Textbook(s) and/or other Required Material
Texts:
1. "Handbook of Gas Turbines", Meherwan P. Boyce, 2nd Edition, Gulf Publishing, 2000.
2. "Instillations Design Manual for the General Electric LM2500", GE, 2001.
3. "Manual for Allison 501-K34", Rolls Royce, 1992.

Course Objectives
This course presents both advanced special topics in gas turbines and Diesel engines, along with design related topics, useful for understanding modern naval power and propulsion platforms and weapons. Students are expected to gain an advanced level understanding of the aerothermodynamics gas turbine components, such as inlets, compressors, combustors, turbines and exhausts. Design and integration of engines into naval platforms and weapon systems for power and propulsion is covered. Students are expected to demonstrate competence in preliminary design of warship power and propulsion, through a comprehensive design project.

Topics Covered
1. Review of the fundamentals of thermodynamic cycles.
2. Advanced gas turbine cycles, including intercooling, reheat, and regeneration.
3. Steam injected cycles.
4. Mission and platform requirements.
5. Analysis and design of inlets and exhausts.
6. Auxiliary systems.
7. Gears and shafting.
8. Propeller and propulsor systems
9. Analysis of mechanical and electrical drive.

Class/Laboratory Schedule
This course meets 4 times per week for lectures of 50 minutes.

Contribution of Course to Meeting the Professional Component

Knox Millsaps

ME4522 FINITE ELEMENT METHODS IN STRUCTURAL DYNAMICS
(4 - 0)

Required or Elective Elective

Course (Catalog) Description
This course provides an introduction to the principles and methods of computational structural dynamics and vibration analysis. Modern computational methods make use of the matrix structural models provided by finite element analysis. Therefore, this course provides an introduction to dynamic analysis using the finite element method, and introduces concepts and methods in the calculation of modal parameters, dynamic response via mode superposition, frequency response, model reduction, and structural synthesis techniques. Experimental modal identification techniques will be introduced.

Prerequisites and Co-requisites
ME3521

Textbook(s) and/or other Required Material
"Structural Dynamics: An Introduction to Computer Methods", Craig, Roy R., John Wiley & Sons.

Course Objectives
(1) Finite Element Modeling for Structural Dynamics: Provide students with an introduction to computer-based modeling of structural dynamic systems. Such computer modeling is the way real world complex vibration problems are modeled, analyzed, and solved. Students learn the basic theory of the finite element method for structural dynamics, and each student writes his/her own simple finite element program for analyzing structural dynamics problems.
(2) Advanced Theory of Dynamics and Vibration: Provide students with an understanding of the mathematical theory of multi-degree of freedom systems. The underlying theory of linear systems, and the associated mathematical concepts in ordinary differential equations and linear algebra are presented in a manner that facilitates the use of these concepts to solve problems in structural dynamics. Several homeworks reinforce mathematical ideas discussed in class.
(3) Computational Techniques: Each student uses his/her finite element program written as part of the course requirements to solve simple but representative problems in structural dynamics, including the calculation of dynamic response, frequency response, and reduced order models.

Topics Covered
Review: Lagrange's Equations, Derivation of Equations of Motion
Coordinate Coupling.
Finite Element Formulation for Beam Dynamic Bending, System matrices
Modal Decomposition Solution to NDOF Equation of Motion, Orthogonality
Transient Vibration - Non-periodic excitation, Impulse Response, Convolution
Calculation of Dynamic Response - Mode Superposition
Frequency Response (Transfer Functions).

Model reduction, Structural Synthesis Techniques: An Introduction

Class/Laboratory Schedule
This course meets 2 times per week for lectures of 1 hour 50 minutes.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship

ME4525: NAVAL SHIP SHOCK DESIGN AND ANALYSIS (4-0)

Required or Elective Elective

Course (Catalog) Description

Characteristics of underwater phenomena, including shock wave, bubble behavior and bubble pulse loading, and bulk cavitation. Surface ship/submarine bodily response to shock loading. Application of shock spectra to component design. Dynamic Design Analysis Method (DDAM) and applications to shipboard equipment design. Fluid-structure interaction (FSI) analysis, including Doubly Asymptotic Approximation and surface ship FSI. Current design requirements for shipboard equipment.

Prerequisites and Co-requisites

ME3521 or equivalent.

Textbook(s) and/or other Required Material

Text: Response of Marine Structure to Underwater Explosions by Y. S. Shin (Instructor's N
References: (1) R. H. Cole, "Underwater Explosions', Princeton University, 1948.
(2) A. H. Keil, "Introduction to Underwater Explosion Research", UERD Report 19-56 (Confidential)

Course Objectives

The course objective is to provide full understanding of fundamentals of underwater explos and their effects to the responses of surface ships and submarines.

Topics Covered

(1) Sequence of underwater explosion events and hydrodynamic relations
(2) Plane and spherical shock wave: air-water interface problem
(3) Shock wave parameters, bubble loading, scaling laws
(4) Taylor plate theory and its applications, bodily responses, shock spectra
(5) Fluid-structure interaction: doubly asymptotic approximation, hull cavitation
(6) Dynamic design analysis method and its application to shipboard equipment design
(7) Current design requirement for shipboard equipment design
(8) Ship/submarine vulnerability and sruvivability

Class and Laboratory Schedule

Two 2-hour (100 minutes) lecture periods each week.

Contribution of Course to Meeting Professional Component

Required Professional Components	Components Satisfied by ME 4525
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline

ME4550: RANDOM VIBRATION AND SPECTRAL ANALYSIS (3-2)

Required or Elective Elective

Course (Catalog) Description

Engineering application of spectral analysis techniques to characterize system responses under a random vibration environment. The topics include: characteristics of physical random data and physical system responses, applications of probability concepts to random data and response analysis, correlations and spectral density functions, transmission of random vibration, and failure due to random vibration. The supporting labs are included. PREREQUISITE: ME3521 or equivalent.

Prerequisites and Co-requisites

ME3521 or equivalent

Text and References

Text Book: Julius S. Bendat and Allan G. Piersol, "Engineering Applications of Correlation and Spectral Analysis," 2nd Edition, John Wiley & Sons, 1993; ISBN: 0471570559

Course Objectives

The course objective is to provide full understanding of random vibration and spectral anal and their applications to engineering analysis and design.

Topics Covered

1. Introduction: Characteristics of Random Data
2. Physical System Response
3. Probability Functions
4. Correlations
5. Spectral Density Function
6. Excitation-response Relations for Linear System: Single Input / Single Output Relations
7. Frequency Response Function Measurements and Error Analysis
8. Single Input/Multiple Output Relationships
9. System Identification and Response Prediction
10. Identification of Propagation Paths and Velocities5
11. Source Location and System Estimation
12. Multiple Input/Multiple Output Relationships
13. Procedures for Solving Multiple Input/Output Problems
14. Multiple Input/Output Applications
15. Identification of Energy Sources
16. Applications to Condition Monitoring

Class and Laboratory Schedule

Three one hour (50 minutes) lecture periods each week. Two hour (100 minutes)

laboratory session each week. 3~4 laboratory random vibration and spectral analysis experiments

ME4611 ADVANCED MECHANICS OF SOLIDS
(4-0)

Required or Elective Elective

Course (Catalog) Description
Selected topics from advanced mechanics of materials and elasticity. Stress and strain tensors. Governing equations such as equations of equilibrium, constitutive equations, kinematic equations and compatibility equations. Two-dimensional elasticity problems in rectangular and polar coordinate systems. Airy stress function and semi-inverse technique. Energy methods with approximate solution techniques including Rayleigh-Ritz method. Buckling of imperfect columns. Introduction to plate and shell bending theory.

Prerequisites and Co-requisites
ME3611

Textbook(s) and/or other Required Material
Text: Advanced Strength and Applied Elasticity, (A. C. Ugural and S. K. Fenster), 4th edition, Prentice Hall 2003.

Course Objectives
Students are expected to understand theory of elasticity, structural instability, energy methods, and plate bending as well as proper solution techniques. Students are also expected to understand the engineering modeling (or mathematical modeling) of real world solid/structure problems as well as various important factors to be considered in designing structures. Skill for literature review in the related subject is expected for students.

Topics Covered
1. Stress tensor, transformation of stresses and Mohr's circle in three-dimension, Stress invariant, deviatoric stresses, equations of equilibrium, principal stresses in three-dimension, octahedral plane, and traction boundary condition.
2. Strain tensor, kinematic equations for finite and infinitesimal strains, equations of compatibility, strain transformation, deviatoric strain, constitutive equations, strain energy, and Saint-Venant's principle.
3. Two-dimensional elasticity problems in Cartesian and polar coordinate systems, Airy stress function, semi-inverse technique to determine the solutions, stress concentration factors, and elasticity solutions for beam bending
4. Energy methods including principle of virtual work and principle of minimum potential energy, trigonometric series solution technique, Rayleigh-Ritz method
5. Buckling of Imperfect columns including initial curvature and eccentricity, and energy method for buckling analyses.
6. Introduction of plate bending theory, biharmonic governing equations, various boundary conditions, and Navier solution technique.

Class/Laboratory Schedule
This course meets 2 times per week for lectures of 100 minutes.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	X
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.	
(d) A major design experience	
(e) At least one academic year of advanced level knowledge	X

Relationship of Course to Program Outcomes

Mechanical Engineering Program Outcomes	Relationship
1. Graduating students will have knowledge and skills equivalent to an ABET-accredited BSME. (Table 3.4 shows the course matrix to support the ABET requirement of BSME.)	
2. Graduating students will have advanced knowledge in Mechanical Engineering and competence in one of the available specialized disciplines of Mechanical Engineering.	X
3. Graduating students will have high level of communication skills including technical writing and oral presentation.	X*
4. Graduating students will have the ability to independently identify, formulate and solve technical and engineering problems in Mechanical Engineering.	X*
5. Graduating students will have the ability to apply technical knowledge in a leadership role related to national security.	

* Projects are assigned throughout the class so that students have to analyze the given problems and submit written reports.

Young W. Kwon

ME4613 FINITE ELEMENT METHODS
(4-0)

Required or Elective Elective

Course (Catalog) Description
Introduction to the fundamental concepts of the finite element method. Weighted residual methods and weak formulation. Element discretization concept and shape functions. Generation of element matrices and vectors, and their assembly into the matrix equation. Application of boundary and initial conditions. Isoparametric elements and numerical integration techniques. Computer programming and application to engineering problems such as boundary value, initial value and eigenvalue problems.

Prerequisites and Co-requisites
ME3611, ME3450, or Consent of Instructor

Textbook(s) and/or other Required Material
Text: Finite Element Method Using MATLAB, (Y. W. Kwon and H.-C. Bang), 2nd edition, CRC Press, 2000.

Course Objectives
The student is expected to understand the basic formulation and programming structure of the finite element method. The fundamental concepts will be understood including weighted residual methods; piecewise continuous functions; shape functions; construction of element matrices and vectors for ordinary and partial differential equations; assembly into the system of equations; application of boundary conditions; and solution techniques. The student is also expected to understand both static (or steady-state) or transient problems along with the computer programming techniques. Understanding design process will be expected of students by undertaking design projects.

Topics Covered
1. Introduction of weighted residual methods including collocation method, least squares method and Galerkin's method as well as concepts of residual, trial functions and test functions. Weak formulation. Direct approach for finite element methods using one-dimensional spring, bar, torsion, heat conduction, laminar pipe flow and electric circuit.
2. Introduction of piecewise continuous functions and shape functions for one-dimensional, two-dimensional and three-dimensional elements for various shape of elements. Emphasis is placed on the basic characteristics of the shape functions. Continuity requirement of shape functions.
3. Element discretization concept, computation of element matrices and vectors as well as their assembly into a system of equations. Evaluation of boundary integrals and application of boundary conditions to the system of equations.
4. Mathematical mapping, isoparametric elements and numerical integration techniques.
5. Introduction of common program structures for the finite element analyses and programming techniques. Application of the finite element method for design process.
6. Both static (or steady-state) and dynamic (or transient) problems are selected for application problems including beam bending, elasticity, eigenvalue problems, transient dynamics, and Laplace equation.

Class/Laboratory Schedule
This course meets 2 times per week for lectures of 100 minutes.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	X
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.	
(d) A major design experience	
(e) At least one academic year of advanced level knowledge	X

Relationship of Course to Program Outcomes

Mechanical Engineering Program Outcomes	Relationship
1. Graduating students will have knowledge and skills equivalent to an ABET-accredited BSME. (Table 3.4 shows the course matrix to support the ABET requirement of BSME.)	
2. Graduating students will have advanced knowledge in Mechanical Engineering and competence in one of the available specialized disciplines of Mechanical Engineering.	X
3. Graduating students will have high level of communication skills including technical writing and oral presentation.	X*
4. Graduating students will have the ability to independently identify, formulate and solve technical and engineering problems in Mechanical Engineering.	X*
5. Graduating students will have the ability to apply technical knowledge in a leadership role related to national security.	

* A term design project is assigned. Students present their report orally in class as well as submit written reports.

Young W. Kwon

ME4731 ENGINEERING DESIGN OPTIMIZATION
(4 - 0)

Required or Elective Elective

Course (Catalog) Description
Application of automated numerical optimization techniques to design of engineering systems. Algorithms for solution of nonlinear constrained design problems. Familiarization with available design optimization programs. State-of-the-art applications. Solution of a variety of design problems in mechanical engineering, using numerical optimization techniques.

Prerequisites and Co-requisites
ME3450, ME3150, ME3201, ME3611

Textbook(s) and/or other Required Material
Text: "Optimization Concepts and Applications in Engineering", Belegundu and Chandrupatla, Prentice-Hall.

Course Objectives
(1) Formulation of Engineering Problems as Optimization Problems: Students are expected to be able to translate an engineering problem into the standard form of a general linear or nonlinear, constrained or unconstrained, optimization problem. Not only is this required in order to actually solve a problem as an optimization problem, but it forces students to identify the dependent and independent variables in a problem, and to identify what quantity is to be minimized/maximized, and what constraints are important.
(2) Understanding and Implementing Algorithms for Numerical Optimization: Provide students with an understanding of the mathematical theory of unconstrained and constrained linear and nonlinear optimization. The underlying theory and the associated mathematical concepts are presented in a manner that facilitates the use of these concepts to develop optimization strategies. Several programming projects reinforce mathematical ideas discussed in class, and familiarize students with the structure of optimization programs.
(3) Engineering Design and Analysis: The students consider a variety of problems in engineering design, and economics in studying and applying the optimization techniques covered. In addition to the concepts in optimization, general consideration of fundamental issues in design are discussed. Most importantly among them is the prediction and subsequent modeling of failure modes.

Topics Covered

(1) Introduction, Sample engineering problems, Basic notation, Problem formulation Optimum design concepts, case studies
(2) Unconstrained problems, Single variable functions - Properties and optimality, Region elimination methods, Line searching, Functions of several variables, Properties and optimality
(3) Gradient based methods - Cauchy's, Newton's, Conjugate gradient, Quasi-Newton

(4) Constrained problems: Linear programming,Problem definition, canonical form, Graphical solution, Simplex method, Sample problems
(5) Constrained problems: Nonlinear Constrained optimality conditions, Lagrange multipliers, Karush-Kuhn-Tucker conditions, Successive linear programming, Generalized reduced gradient method, Multi-objective problems, Sensitivity analysis, Mechanism optimization 10. beams.

Class/Laboratory Schedule
This course meets 2 times per week for lectures of 1 hour m50 minutes.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline

ME4751 COMBAT SURVIVABILITY, RELIABILTY, AND SYSTEMS SAFTEY ENGINEERING (4-1)

Required or Elective Elective

Course (Catalog) Description
Description:
This course provides the student with an understanding of the essential elements in the study of survivability, reliability and systems safety engineering for military platforms including submarines, surface ships, fixed-wing and rotary wing aircraft, as well as missiles, unmanned vehicles and satellites. Technologies for increasing survivability and methodologies for assessing the probability of survival in a hostile (non-nuclear) environment from conventional and directed energy weapons will be presented. Several in-depth studies of the survivability various vehicles will give the student practical knowledge in the design of battle-ready platforms and weapons. An introduction to reliability and system safety engineering examines system and subsystem failure in a non-hostile environment. Safety analyses (hazard analysis, fault-tree analysis, and component redundancy design), safety criteria and life cycle considerations are presented with applications to aircraft maintenance, repair and retirement strategies, along with the mathematical foundations of statistical sampling, set theory, probability modeling and probability distribution functions. PREREQUISITES: Consent of Instructor.

Prerequisites and Co-requisites
Consent of Instructor.

Textbook(s) and/or other Required Material
Text: "Fundamentals of Aircraft Survivability Analysis and Design" Robert. E. Ball, 2nd Edition, AIAA Education Series, 2002.

Course Objectives
Students are expected to gain a fundamental understanding of the principles of platform survivability and be able to use this knowledge in improving system survivability and improve operations to limit losses due to hostile actions.

Topics Covered
1. Introduction to statistical analysis and methods.
2. Definitions of terminology of the kill chain.
3. Platform layout and systems interconnections.
4. Physical principles of detection, tracking and engagement.
5. Mechanics of damage and kill mechanisms.
6. Design of survivability.

Class/Laboratory Schedule
This course meets 4 times per week for lectures of 50 minutes and a separate computer laboratory period is used to perform calculations and have design discussions.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	X
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.	
(d) A major design experience	X*
(e) At least one academic year of advanced level knowledge	X

Relationship of Course to Program Outcomes

Mechanical Engineering Program Outcomes	Relationship
1. Graduating students will have knowledge and skills equivalent to an ABET-accredited BSME. (Table 3.4 shows the course matrix to support the ABET requirement of BSME.)

Knox Millsaps

ME4811 MULTIVARIABLE CONTROL OF SHIP SYSTEMS
(3 - 2)

Required or Elective Elective

Course (Catalog) Description
Multivariable analysis and control concepts for MIMO systems. State Observers. Disturbances and tracking systems. Linear Optimal Control. The linear Quadratic Gaussian compensator. Introduction to non-linear system analysis. Limit cycle behavior.

Prerequisites and Co-requisites
Me3801

Textbook(s) and/or other Required Material
Web-based notes by F. Papoulias

Course Objectives
Students are expect to know how to design a compensator (controller and observer) for a linear system and verify its response using simulations, design a disturbance estimation and compensation control law, perform an integral control design in state space, set up the LQR/LQG optimization problems and solve using MATLAB/SIMULINK, utilize Lyapunov functions to analyze simple nonlinear control systems and limit cycle behavior

Topics Covered

1. State Feedback Control Law Design.
2. Observer Design.
3. Tracking Systems.
4. Disturbance Estimation.
5. Optimal/Sliding Mode Control.
6. Discrete Time Control.
7. Effects of Noise.
8. Robust Control.
9. Nonlinear Systems

Class/Laboratory Schedule
This course meets 4 times per week for 3 lectures of 50 minutes and 2 hours of lab

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline

Isaac Kaminer

ME4821 MARINE NAVIGATION
(3 - 2)

Required or Elective Elective

Course (Catalog) Description
This course presents the fundamentals of inertial navigation, principles of inertial accelerometers, and gyroscopes. Derivation of gimbaled and strapdown navigation equations and corresponding error analysis. Navigation using external navigation aids (navaids): LORAN, TACAN, and GPS. Introduction to Kalman filtering as a means of integrating data from navaids and inertial sensors...

Prerequisites and Co-requisites
ME3801

Textbook(s) and/or other Required Material
Lecture Notes Provided by instructor

Course Objectives
Students are expected to be able to:
1. Explain principles of operation of inertial sensors such a fiber optic gyros and accelerometers
2. Define typical coordinate systems and derive transformations between them
3. Derive inertial navigation equations
4. Derive inertial navigation error equations
6. Derive navigation aids models including bearings, GPS and vision.
7. Design complementary and Kalman filters that integrate inertial sensors with navaids

Topics Covered
Coordinate Systems and Transformations, Earth Models, Terrestrial Navigation, Navigation Sensor Models, Navigation Aids, Complementary and Kalman Filtering, navigation systems modeling using nonlinear simulation environment

Class/Laboratory Schedule
This course meets 4 times per week for 3 lectures of 50 minutes and 2 hours of lab

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline

Isaac Kaminer

MS2201 INTRODUCTION TO MATERIALS SCIENCE & ENGINEERING (3 - 2)

Required or Elective Required

Course (Catalog) Description

This is a first course in Materials Science and Engineering and emphasizes the basic principles of microstructure-property relationships in materials of engineering and Naval relevance. Topics include crystalline structure and bonding, defects, thermodynamics and kinetics of reactions in solids, deformation, strengthening mechanisms and heat treatment. Students will acquire a working vocabulary and conceptual understanding necessary for advance study and for communication with materials experts.

Prerequisites and Co-requisites

Undergraduate courses in calculus, physics and chemistry.

Textbook(s) and/or other Required Material

Text: "Materials Science & Engineering: An Introduction", W. D. Callister., 6th ed., John Wiley & Sons, 2005.

Course Objectives

To understand the correlation between microstructure, property and processing of materials, based on the following areas.

1 Structure of materials - including atomic structure, bonding in the solid state and crystal structure;
2 Defects in structure - including point, line, interfacial and bulk defects, and how these affect material properties such as strength, ductility and toughness;
3 Mechanical behavior - the role of microstructure in determining mechanical response;
4 Phase transformations - the principal means for controlling alloy microstructure and thus mechanical and other material properties.

The overall objective of the course is that the students learn to understand the observed characteristics of engineering materials in terms of structure-property-processing correlations. The specific goals of the course are to: (1) enable students to appreciate how the service properties of materials depend on both fabrication history and service environment, and (2) provide a foundation for subsequent Materials Science courses.

Topics Covered

1. Introduction
2. Atomic Structure/Bonding
3. Crystalline Solids
4. Imperfections in Solids
5. Diffusion
6. Mechanical Behavior
7. Phase Diagrams
8. Dislocations and Strengthening Mechanisms
9. Phase Transformations in Metals
10. Thermal Processing of Metals

Class/Laboratory Schedule

This course meets 3 times per week for lectures of 50 minutes, plus once a week for a 2 hour laboratory.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	X
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.	
(d) A major design experience	
(e) At least one academic year of advanced level knowledge	

Relationship of Course to Program Outcomes

Mechanical Engineering Program Outcomes	Relationship
1. Graduating students will have knowledge and skills equivalent to an ABET-accredited BSME. (Table 3.4 shows the course matrix to support the ABET requirement of BSME.)	X
2. Graduating students will have advanced knowledge in Mechanical Engineering and competence in one of the available specialized disciplines of Mechanical Engineering.	
3. Graduating students will have high level of communication skills including technical writing and oral presentation.	
4. Graduating students will have the ability to independently identify, formulate and solve technical and engineering problems in Mechanical Engineering.	
5. Graduating students will have the ability to apply technical knowledge in a leadership role related to national security.

MS3202 Properties, Performance and Failure of Engineering Materials (3-2)

Required or Elective Required (may be waived based on individual circumstances)

Course (Catalog) Description
The purpose of this course is to advance the students' understanding of the fundamentals of materials science, while putting that understanding in the context of the behavior of materials in engineering applications. Contemporary developments in engineering materials such as composites, ceramics and polymers are considered, as well as traditional engineering alloys such as steels and aluminum alloys. Performance and failure histories of materials in service will be studied, as well as conventional textbook subjects. Examples pertinent to Naval, Aero and Combat Systems Science are emphasized. Topics include mechanical properties, fracture, fatigue, failure analysis and corrosion.

Prerequisites and Co-requisites
MS2201 or equivalent or consent of instructor.

Textbook(s) and/or other Required Material
Text: "Materials Science and Engineering: An Introduction", 7th Ed., William D. Callister, J. Wiley & Sons, 2007; "Failure Analysis and Prevention", Metals Handbook Vol. 11, 10th Ed., ASMI (Amer. Soc. Mater. International), Metals Park, OH, 2000.

Course Objectives
Upon completion of MS3202, students are expected to understand the mechanisms governing strength, ductility, fracture toughness, fatigue and creep, as well as the mechanisms controlling the environmental degradation of materials, and to understand the procedures for analyzing service failures related to materials issues. Students will complete a failure analysis project on a failed component from an engineering system and report the results of the analysis orally and in written form.

Topics Covered
8. Review of selected topics in basic materials science
9. Mechanical behavior and mechanical failure modes.
10. Corrosion and corrosion failure modes.
11. Combined failure modes: stress corrosion cracking and hydrogen embrittlement.
12. Fractography.
13. Failure analysis.
14. Applications of failure analysis to components of naval systems.

Class/Laboratory Schedule
This course meets 3 times per week for lectures of 50 minutes and once per week for laboratory sessions of 110 minutes.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	X*
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.	
(d) A major design experience	
(e) At least one academic year of advanced level knowledge	

Relationship of Course to Program Outcomes

Mechanical Engineering Program Outcomes	Relationship
1. Graduating students will have knowledge and skills equivalent to an ABET-accredited BSME. (Table 1 shows the course matrix to support the ABET requirement of BSME.)	
2. Graduating students will have advanced knowledge in Mechanical Engineering and competence in one of the available specialized disciplines of Mechanical Engineering.	X
3. Graduating students will have high level of communication skills including technical writing and oral presentation.	X*
4. Graduating students will have the ability to independently identify, formulate and solve technical and engineering problems in Mechanical Engineering.	X
5. Graduating students will have the ability to apply technical knowledge in a leadership role related to national security.	

* Students must identify a failed component from an engineering systems of military relevance and conduct a laboratory failure analysis on it; the results of the analysis will be reported in both oral and written form.

Terry R McNelley

MS3304: CORROSION AND MARINE ENVIRONMENTAL DETERIORATION (3 - 2)

Required or Elective Required (may be waived based on individual circumstances)

Course (Catalog) Description
The fundamentals of corrosion science and the practice of corrosion engineering are discussed. The objectives include an appreciation of the varied causes, mechanisms and effects of corrosion. Fundamental topics such as basic electrochemistry, polarization and passivity are covered. A primary goal of the course is the development of skill in the recognition and prevention of a wide variety of types of corrosion. Standard methods of corrosion control are discussed, including cathodic protection, coatings, alloy selection and inhibitors.

Prerequisites and Co-requisites
MS2201 or equivalent or consent of instructor

Textbook(s) and/or other Required Material

Text: Denny A. Jones, "Principles and Prevention of Corrosion", Prentice Hall, 2nd Edition, 1996.
Ref.: Mars G. Fontana, "Corrosion Engineering", McGraw-Hill, 3rd Edition, 1986.

Course Objectives
The fundamentals of corrosion science and the practice of corrosion engineering are discussed. The objectives include an appreciation of the varied causes, mechanisms and effects of corrosion. Fundamental topics such as basic electrochemistry, polarization and passivity are covered. A primary goal of the course is the development of skill in the recognition and prevention of a wide variety of types of corrosion. Standard methods of corrosion control are discussed, including cathodic protection, coatings, alloy selection and inhibitors.

Topics Covered
1. Modes of Corrosion
2. Corrosion Rates
3. Electrochemical Thermodynamics
4. Pourbaix Diagram
5. Electrochemical Potentials
6. Electrochemical Kinetics
7. Experimental Polarization Measurement
8. Passivity
9. Galvanic & Conc. Cell Corrosion
10. Pitting & Crevice Corrosion
11. Environmentally Assited Cracking
12. Intergranular Attack & De-alloying
13. Cathodic Protection
14. Coatings
15. Inhibitors
17. Materials Selection

Class/Laboratory Schedule
This course meets 2 times per week for lectures of 50 minutes, plus one 2-hour laboratory session.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline

Indranath Dutta

MS3606 Introduction to Welding and Joining Metallurgy (3-2)

Required or Elective Required (may be waived based on individual circumstances)

Course (Catalog) Description
Welding and joining are presented from the point of view of metallurgy. Topics include the nature and applications of welding and joining processes; the welding thermal cycle; metallurgical effects of the welding thermal cycle; welding and joining of steels, aluminum alloys, stainless steels and heat-resistant alloys. Also, weldment inspection and quality assurance are introduced.

Prerequisites and Co-requisites
MS2201 and MS3202 or consent of instructor.

Textbook(s) and/or other Required Material
Text: "Welding Metallurgy", 2nd Edition, S. Kou, J. Wiley & Sons, 2003

Course Objectives
Upon completion of MS3606, students are expected to know the basic vocabulary of welding and welding metallurgy, especially for fusion welding processes; to be able to explain the advantages and limitations of the more common welding processes; to understand heat flow in fusion welding and the effect of the welding thermal cycle in welded materials; to understand gas-metal interactions and their implications in fusion welding; to understand the effect of solidification processes on microstructures in various regions of a weldment; to recognize the origin of various welding defects and how to prevent their occurrence; to be able to apply the physical metallurgy principles which were presented in MS2201 and further developed in MS3202; and, finally, to recognize the limitations on structural performance due to welding

Topics Covered
1. Introduction to welding and joining processes.
2. Allied processes
3. The molten zone in fusion welding processes.
4. The heat affected zone.
5. Recent developments in welding and joining processes.

Class/Laboratory Schedule
This course meets 3 times per week for lectures of 50 minutes and once per week for laboratory sessions of 110 minutes.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline

MS4215: PHASE TRANSFORMATIONS (3-2)

Required or Elective Elective

Course (Catalog) Description
The mechanisms and kinetics of structural changes in solid materials are considered in detail. A wide variety of transformation mechanisms are studied, including solidification, recrystallization, precipitation and martensitic transformation. The basic principles which govern these reactions are developed, including principles of nucleation and growth, diffusion and lattice distortion. The relevance of various transformations to practical heat treatment, thermomechanical processing, and technological advances is discussed. Microstructural recognition and methods of monitoring phase transformations are included. Changes in properties which result from phase transformations are given limited attention. Prerequisites: MS3214 or equivalent or consent of instructor.

Prerequisites and Co-requisites
MS3202, and MS3214 or consent of the instructor

Textbook(s) and/or other Required Material
Required:

"Phase Transformations in Metals and Alloys", D.A. Porter and K.E. Easterling, 2nd Ed., CRC – Taylor and Francis, 2004

"Transformations in Metals", P.G. Shewmon, J. Williams & Co, 1981.

References:

"An Introduction to Solid State Diffusion", R.J. Borg and C.J. Dienes , Academic Press, 1988

"Phase Transformations in Materials", G. Kostorz, Ed., Wiley – VCH, 2001

Course Objectives
This course is concerned with the thermodynamics and kinetics of phase transformations in metallic materials of naval interest for structural and functional applications. Upon completion of MS4215, students will be able to describe the temperature, pressure and composition dependence of the Gibbs free energy in single and two-component systems and calculate unary and binary phase diagrams from free energy data; to understand diffusion mechanisms and to apply solutions to diffusion equations for steady-state and non-steady-state problems in phase transformations; to state the roles of interfacial energies in transformation processes; and to apply concepts of diffusional and diffusionless transformations to problems of materials processing

Topics Covered

1. Thermodyndamics and phase diagrams
2. Diffusion
3. Microstructure and interfaces
4. Solidification
5. Diffusional transformations in solids: nucleation and growth processes
6. Diffusionless transformations: martensitic transformations

Class/Laboratory Schedule
This course meets 4 times per week for lectures of 50 minutes.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study

Terry R. McNelley

MS4312: CHARACTERIZATION OF ADVANCED MATERIALS (3-2)

Required or Elective Elective

Course (Catalog) Description
This course is structured to provide an insight into the various tools available for advanced physical examination of engineering materials. Topics covered include X-ray diffraction and optical, scanning, transmission and scanning transmission electron microscopy methods.

Prerequisites and Co-requisites
MS3202 or consent of the instructor

Textbook(s) and/or other Required Material
Required:

"Modern Physical Techniques in Materials Technology", T. Mulvey and R.K. Webster, Eds., Oxford University Press, 1974
"Modern Physical Metallurgy and Materials Engineering" R.E. Smallman and R.J. Bishop, Butterworth-Heinemann, 1999
"Elements of X-ray Diffraction", B.D. Cullity and S.R. Stock, Prentice Hall, 2001

"Optical Microscopy of Metals", R.C. Gifkins, Pitman House, 1970
"Practical Scanning Electron Microscopy", J.I. Goldstein and H. Yakowitz, 3rd Ed., Plenum Press, 1994

Course Objectives
This course is concerned with the theories of modern methods of materials characterization and the experimental evaluation of material microstructure by optical microscopy, x-ray diffraction and electron diffraction methods. At the conclusion of MS4312, students will be able to explain the applications and resolution limits of light microscopy, x-ray diffraction and electron diffraction methods. Also, students will be able to prepare samples for these techniques and obtain and interpret data, including structural, imaging and composition data, from typical naval materials of structural and functional interest.

Topics Covered

1. Atom structure, crystallography and diffraction
2. Defects in crystals
3. X-ray diffraction
4. Neutron diffraction
5. Electron diffraction
6. Optical microscopy and interferometry
7. Transmission electron microscopy
8. Scanning electron microscopy
9. Microanalysis

Class/Laboratory Schedule
This course meets 3 times per week for lectures of 50 minutes and once per week for a 110 minute laboratory.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.	
(d) A major design experience	
(e) At least one academic year of advanced level knowledge	X

Relationship of Course to Program Outcomes

Mechanical Engineering Program Outcomes	Relationship
1. Graduating students will have knowledge and skills equivalent to an ABET-accredited BSME. (Table 3.4 shows the course matrix to support the ABET requirement of BSME.)	
2. Graduating students will have advanced knowledge in Mechanical Engineering and competence in one of the available specialized disciplines of Mechanical Engineering.	X
3. Graduating students will have high level of communication skills including technical writing and oral presentation.	X*
4. Graduating students will have the ability to independently identify, formulate and solve technical and engineering problems in Mechanical Engineering.	
5. Graduating students will have the ability to apply technical knowledge in a leadership role related to national security.	

* Students are required to write a critical review of a published archival journal paper, including a summary of the principal findings and a review of associated literature.

Terry R. McNelley

MS4811: MECHANICAL BEHAVIOR OF ENGINEERING MATERIALS (4 - 0)

Required or Elective Elective

Course (Catalog) Description

The response of structural materials to stress is discussed, including elastic and plastic deformation and fracture. Topics include elastic response and the modules of elasticity; plasticity; deformation mechanisms and dislocation theory; strengthening mechanisms; and fatigue and fracture. Application to materials development is also considered.

Prerequisites and Co-requisites

MS3202, and MS3214 or consent of the instructor

Textbook(s) and/or other Required Material

Required: R.W. Hertzberg, "Deformation and Fracture Mechanics of Engineering Materials", 4th Edition, John Wiley & Sons, 1996.

References :

- G. E. Dieter, "Mechanical Metallurgy", McGraw-Hill, 1976
- F. Garofalo, "Fundamentals of Creep and Creep Rupture in Metals", MacMillan, 1966
- T. H. Courtney, "Mechanical Behavior of Materials", McGraw-Hill, 1989

Course Objectives

This course is concerned with strength, deformation and fracture of crystalline solids, and can be divided broadly into three parts. The first part deals with elastic and plastic deformation of crystalline materials, with particular emphasis on low temperature plastic deformation, including dislocation theory and strengthening mechanisms. The second part deals with high temperature deformation (creep), and develops a mechanistic approach based on available analytical formulations. The third part addresses failure in materials, where a fracture-mechanics based approach is adopted to supplement the fracture mode / mechanism based approach of MS 3202. The failure of materials via fatigue is also addressed.

Topics Covered

1. Tensile Response
2. Dislocations
3. Strengthening Mechanisms
4. Elevated Temperature Deformation (Creep, Stress relaxation)
5. Fracture
6. Fatigue

Class/Laboratory Schedule

This course meets 4 times per week for lectures of 50 minutes.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study

MS4822 THE ENGINEERING AND SCIENCE OF COMPOSITE MATERIALS (4 - 0)

Required or Elective Elective

Course (Catalog) Description

This course focuses on the structure-property correlation in composites utilizing a multi-disciplinary approach, covering the areas of materials science and engineering and solid mechanics. Emphasis is given to the theoretical constitutive behavior at the micro- and macro-levels, as well as on how such behavior can be altered by processing and service variables. The course is divided into three broad parts: (1) Theoretical predictions of composite properties; (2) Materials issues (including processing) complicating accurate performance prediction; and (3) Thermo-mechanical behavior in actual service conditions.

Prerequisites and Co-requisites

ME3611, MS3202 or equivalent

Textbook(s) and/or other Required Material

Required :

1. KC: K. K. Chawla, "Composite Materials - Science and Engineering", Springer-Verlag, New York 2nd Edition (1999).
2. TA: M. Taya and R. J. Arsenault, "Metal-Matrix Composites-Thermo-Mechanical Behavior", Pergamon Press, New York (1989).

References :

1. Handouts based on selected journal papers.
2. P. K. Mallick, "Fiber-Reinforced Composites - Materials, Manufacturing and Design", Marcel Dekker, New York (1988).

Course Objectives

To yield an understanding of the design, performance and fabrication of composites, based on :

(1) Theoretical predictions of composite properties
(2) Materials issues complicating accurate performance prediction
(3) Suitability of different types of composites to different applications
(4) Methods of fabrication of different types of composites
(5) Performance under service conditions as different from predicted performance, with creep and fatigue as specific examples

Topics Covered

1. Introduction and Definitions
2. Elasticity, Plasticity and Visco-Plasticity - Constitutive Relations
3. Constitutive Thermo-Mechanical Behavior of Composites - Micro-level
4. Constitutive Thermo-Mechanical Behavior of Composites - Macro-level
5 Materials and Fabrication : Polymer, Metal and Ceramic Matrix Composites
6. Design of Reinforcement-Matrix Interfaces - Chemical and Mechanical
7. Behavior under Service Conditions - Effect of Material and Design Parameters on Creep and Fatigue

Class/Laboratory Schedule

This course meets 4 times per week for lectures of 50 minutes.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	X
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.	
(d) A major design experience	
(e) At least one academic year of advanced level knowledge	X

TS3001 FUNDAMENTAL PRINCIPLES OF NAVAL ARCHITECTURE
(3 - 2)

Required or Elective Required (may be waived based on individual circumstances)

Course (Catalog) Description
The geometry, hydrostatics and hydrodynamics of monohull and other floating and submerged bodies; Froude similarity; wave and skin friction resistance; powering determination. Longitudinal and transverse stability of floating bodies. Hull girder strength. Introduction to seakeeping and passive survivability principles.

Prerequisites and Co-requisites
ME2201, ME2601

Textbook(s) and/or other Required Material
Text: "Applied Naval Architecture", Robert B. Zubaly, Cornell Press, 1996. Other notes by the instructor.

Course Objectives
Students are expected to understand the fundamental principles of ship hydrostatics, damage stability, structures, and powering principles. Students completing this course will have the rudiments of how to apply this understanding to the analysis of ships.

Topics Covered
1. Ships and ship types.
2. Hull form, geometry, and definitions.
3. Static equilibrium and stability. Stability at large angles.
4. Trim and longitudinal stability.
5. Flooding and subdivision.
6. Ship strength. Calculation of bending moments and primary hull girder stresses.
7. Ship powering.

Class/Laboratory Schedule
This course meets 3 times per week for lectures of 50 minutes. A lab meeting of 90 minutes per week is primarily used for projects and recitation sessions.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	X
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	X
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.	X

TS3003 NAVAL COMBAT SYSTEM ELEMENTS
(3 - 2)

Required or Elective Required (may be waived based on individual circumstances)

Course (Catalog) Description
This course will cover combat system detection and engagement elements. This includes radar, ESM, active and passive sonar, infrared, warheads, guns, missiles, torpedoes, fire control and countermeasures. The emphasis will be on what the elements contribute to a combat system, their basic principles of operation, their performance limitations, and their interfaces with the rest of the combat system. Details on specific elements and systems will be limited to those needed to illustrate basic principles of operation and interactions affecting systems engineering.

Prerequisites and Co-requisites
ME2503 or equivalent or consent of instructor.

Textbook(s) and/or other Required Material
Text: "Combat Systems. Vols. I, II, and III", Robert C. Harney, not yet published.

Course Objectives
Students are expected to understand the basic organization and implementation, principles of operation, and limitations of the principal detection and engagement elements of naval combat systems. Students completing this course will have the rudiments of how to apply this understanding to the design of those elements.

Topics Covered
1. Properties electromagnetic radiation. Propagation of electromagnetic radiation. Effects of weather-related attenuation. Ducting and multipath phenomena.
2. Properties of acoustic radiation. Propagation of acoustic radiation.
3. Radiometry and radiometric analysis of sensor systems.
4. Detection theory. Noise and false alarms. Receiver operating characteristics. Clutter.
5. Parameter estimation theory. Sensor resolution. Pattern recognition.
6. Imaging systems and image-based perception.
7. Tracking systems and tracking filters.
8. Microwave and laser radar systems. Synthetic aperture radar, bistatic radar, and over-the-horizon radar.
9. Infrared and electro-optical imaging systems.
10. Passive microwave detection systems.
11. Active and passive sonar systems.
12. Warheads and fuzing. Explosives and shock waves. Armor penetration.
13. Projectile weapons. Propulsion technologies and launching systems. Ballistics and aerodynamics. Guidance and control.
14. Electromagnetic weapons. Information warfare and electronic warfare. Directed energy weapons.

Class/Laboratory Schedule
This course meets 5 times per week for lectures of 50 minutes. A laboratory component is being developed but inauguration of that component cannot begin before Winter Quarter 2007.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.	
(d) A major design experience	
(e) At least one academic year of advanced level knowledge	X

Relationship of Course to Program Outcomes

Mechanical Engineering Program Outcomes	Relationship

TS4000 NAVAL COMBAT SYSTEM ENGINEERING
(3 - 2)

Required or Elective Elective

Course (Catalog) Description
Covers the definition and integration of naval combat systems. The emphasis will be on how the various detection, engagement, and control elements interact with each other and on how to combine them into an efficient and survivable combat system. Also addressed will be topside arrangements, signature reduction, readiness assessment, embedded training, and support system interfaces.

Prerequisites and Co-requisites
TS3000 and TS3003.

Textbook(s) and/or other Required Material
Text: Lecture notes prepared by instructor.

Course Objectives
Students are expected to understand the basic process of systems engineering as specifically applied to combat systems. Students completing this course will have the rudiments of how to apply this understanding to the design and integration of complete combat systems.

Topics Covered
1. Command and control elements. Computers and communication systems and networks. Navigation systems.
2. Combat systems engineering process.
3. Combat systems element selection.
4. Topside design and internal combat systems arrangements. Sensor selection priorities.
5. Combat system performance evaluation. Coverage and blockage analysis models. Engagement models and operations analysis.
6. Principles of survivability and survivability enhancement.
7. Signature (observables) prediction, reduction, and control.
8. Electromagnetic interference analysis, prevention, and elimination.
9. CBRN survivability. Agent detection. Collective protection. Decontamination.
10. The system environment. Environmental effects in design.
11. System safety considerations and design.
12. Embedded training.
13. Supportability considerations.
14. Readiness assessment.

Class/Laboratory Schedule
This course meets 5 times per week for lectures of 50 minutes. A laboratory component is being developed but inauguration of that component cannot begin before Spring Quarter 2007.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline

TS4001 INTEGRATION OF NAVAL ENGINEERING SYSTEMS
(3 - 2)

Required or Elective Elective

Course (Catalog) Description
A system-oriented approach to integrating the principles of Naval Architecture and Marine Engineering in the design of ship subsystems. Lectures and projects exploring engineering design tools and analysis methods to meet specified systems requirements are used. Projects on hull, mechanical and electrical ship systems design are emphasized. The impact of systems design on other systems and subsystems and on the ship, including affordability, military effectiveness and survivability at the whole ship level are considered.

Prerequisites and Co-requisites
TS3000, TS3001

Textbook(s) and/or other Required Material
Text: Lecture notes and other material prepared and assembled by the instructor.

Course Objectives
Students are expected to understand the process of systems engineering and integration as applied to naval ships with particular emphasis on hull, mechanical, and electrical systems. Students completing this course will have the rudiments of how to apply this understanding to the design and integration of complete naval ship systems.

Topics Covered
1. Introduction to Systems Engineering. The Systems Engineering process.
2. Cost considerations, optimization, and parametric methods.
3. The US Navy ship design environment. Naval ship design considerations and design impacts.
4. Resistance, powering, and propeller selection. Prime movers and propeller, hull, engine matching.
5. Introduction to electric drive and integrated power systems.
6. Maneuvering and seakeeping considerations in design.
7. Risk analysis and decision making methodologies.
8. Naval tactics and ship design implications.
9. Ship survivability principles.
10. Ship production, CAD, and topside design.
11. Systems Engineering management.

Class/Laboratory Schedule
This course meets 3 times per week for lectures of 50 minutes and once per week for lab exercises for 90 minutes.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	X
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.	
(d) A major design experience	X
(e) At least one academic year of advanced level knowledge	X

Relationship of Course to Program Outcomes

Mechanical Engineering Program Outcomes	Relationship
1. Graduating students will have knowledge and skills equivalent to an ABET-accredited BSME. (Table 3.4 shows the course matrix to support the ABET requirement of BSME.)	
2. Graduating students will have advanced knowledge in Mechanical Engineering and competence in one of the available specialized disciplines of Mechanical Engineering.	X
3. Graduating students will have high level of communication skills including technical writing and oral presentation.	
4. Graduating students will have the ability to independently identify, formulate and solve technical and engineering problems in Mechanical Engineering.	X
5. Graduating students will have the ability to apply technical knowledge in a leadership role related to national security.	X

* A project was assigned to students to find a real world engineering problem in the military application related to the course contents, and to present the simplified solution and discussion of the solution in a written report.

Fotis A. Papoulias

TS4002 SHIP DESIGN INTEGRATION
(2 - 4)

Required or Elective Elective

Course (Catalog) Description
The ship-impact of requirements/cost/performance tradeoffs within technical and acquisition constraints. Conversion of broad military requirements to mission-based ship requirements and specific tasks resulting from those requirements. Exploration of alternative methods of satisfying requirements, leading to combat systems (payload) definition. Conduct of feasibility studies to investigate whole-ship alternatives which meet requirements. Selection of a best design approach. Design considerations for unusual ship types and an assessment of future Navy ship and combat systems needs and trends.

Prerequisites and Co-requisites
TS4001/TS4000

Textbook(s) and/or other Required Material
Instructor notes and other material.

Course Objectives
Students are expected to understand the basic principles and process of converting broad customer requirements into ship design requirements. Students completing this course will have the rudiments of how to apply this understanding to the design of naval ship systems.

Topics Covered
1. Requirement traceability and functional decomposition.
2. Feasibility studies.
3. Design selection.

Class/Laboratory Schedule
This course nominally meets 2 times per week for lectures of 50 minutes and two times per week for lab exercises of 90 minutes. It is primarily done in a group (design oriented) environment.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study

TS4003 TOTAL SHIP SYSTEMS ENGINEERING
(2 - 4)

Required or Elective Elective

Course (Catalog) Description
The design of a Naval vessel as a single engineering system satisfying mission requirements, with emphasis on affordability and survivability. The interaction and interfacing of various subsystems such as hull, propulsion, and combat systems will be explored through a joint ship "preliminary design" project to produce a balanced ship design based on the alternative chosen from feasibility studies conducted in TS4002. Concepts of design optimization within constraints.

Prerequisites and Co-requisites
TS4002

Textbook(s) and/or other Required Material
Instructor notes and other material.

Course Objectives
Students are expected to understand the process of converting ship design requirements into a balanced ship design. Students completing this course will have the rudiments of how to apply this understanding to the design of naval ships.

Topics Covered
1. Naval ship design spiral.
2. Ship hydrostatics, structures, powering, survivability, and arrangement trade-off studies.
3. Design selection.

Class/Laboratory Schedule
This course nominally meets 2 times per week for lectures of 50 minutes and two times per week for lab exercises of 90 minutes. It is primarily done in a group (design oriented) environment.

Contribution of Course to Meeting the Professional Component

Required Professional Components	Relationship
(a) One year of a combination of college level math and basic sciences (some with experimental experience) appropriate to the discipline	
(b) One and one-half years of engineering topics, consisting of engineering sciences and engineering design appropriate to the student's field of study	
(c) A general education component that complements the technical contents of the curriculum and is consistent with the program and institution objectives.

M.E.	Mechanical Engineering	IIT, Roorkee	1966
M.S.	Mechanical Engineering	McMaster University	1968
Ph.D.	Mechanical Engineering	Syracuse University	1970

NPS Experience

Employment details:
Distinguished Professor, 1989--Present,
Director, Spacecraft Research and Design Center. *www.aa.nps.navy.mil/~agrawal/srdc/*

Areas of research:
Acquisition, tracking, and pointing of Bifocal Relay Mirror Spacecraft. Vibration isolation, optical beam jitter control, and active structural control. Structural, control, and optics interaction for large flexible space mirrors. Adaptive optics and adaptive control. Space system design.

Areas of teaching:
Dynamics and Control of Flexible Spacecraft, Spacecraft Design, Acquisition, Tracking, and Pointing of Military systems, and Spacecraft Testing.

Other Related Work Experience

1969-1989, conducted research in spacecraft attitude dynamics and control, spacecraft structures, spacecraft system design, and spacecraft testing and participated in the development of communications satellites at Communications Satellite Corporation (COMSAT) and International Telecommunications Satellite Corporation (INTELSAT). Consulting Professor, Stanford University, Adjunct Professor at George Washington University and University of Maryland.

Consulting and Patents

Consulted INTELSAT and Space Systems Loral. Consulted DoD on several classified space programs.

Patent:
Attitude Pointing Error Correction System and Methods for Geosynchronous Satellites, US patent No. 4,911,385, March 27, 1990

Book:
Design of Geosynchronous

Professional Registration
P.E., State of Maryland

Scientific and Professional Society Memberships
Member of the American Society of Mechanical Engineers, 1997-present.
Senior Member of the American Institute of Aeronautics and Astronautics, 1993-present.

Honors and Awards
None.

Institutional and Professional Service in Last Five Years
JANNAF Pulse Detonation Working Group Co-Chair, 2005-present
AIAA Propellants and Combustion Technical Committee Member, 2005-present
Reviewer for AIAA Journal of Propulsion and Power
Academic Advisor, NPS, 2006-present

Professional Development Activities in Last Five Years
None.

Muguru S. Chandrasekhara
Research Professor of Mechanical and Astronautical Engineering
Naval Postgraduate School

Education

B.E.	Mechanical Engineering	Bangalore University	1974
M.E.	Mechanical Engineering	Indian Institute. of Science	1976
Ph.D.	Mechanical Engineering	University of Iowa	1983

NPS Experience

Employment details:

Research Professor, 6/2003 – Present, MAE Department; Research Professor & *Acting Director*, *Navy-NASA Joint Institute of Aerospace Sciences;* 7/95 – 6/2003, Aeronautics and Astronautics department, Research Associate Professor, 1991-1995, Research Adjunct Professor, 1987-1991.

Areas of research:

Unsteady aerodynamics, fluid mechanics of compressible dynamic stall and control

Areas of teaching:

Fluid Dynamics and Convective Heat Transfer

Other Related Work Experience

Associate Director, Navy-NASA Joint Institute of Aerospace Sciences, 1989-2003.

Consulting and Patents

None

Professional Registration

None

Doctoral Study in Mechanical Engineering

Vladimir N. Dobrokhodov
Assistant Professor of Mechanical and Astronautical Engineering
Naval Postgraduate School

Education

B.S.	Computer Science	Moscow State Aviation Institute	1989
M.S.	Aerospace Engineering	Moscow State Aviation Institute	1991
M.S.	Operations Research	Air Force Engineering Academy	1993
Ph.D.	Aerospace Engineering	Air Force Engineering Academy	1999

NPS Experience

Employment details:

Research Assistant Professor, 2004-Present, full-time appointment.

Areas of research:

Flight Mechanics and Trajectory Optimization
Guidance, Navigation and Control of Unmanned Aerial Systems
Cooperative Control of Multi-Vehicle Formations and their Effectiveness
Integration of Vision into Guidance and Control
Multidimensional Vector Optimization and Systems Identification
Real-Time Avionics and Flight Control
Modeling and Simulation of Mechanical Systems

Areas of teaching:

Flight Mechanics
Flight Dynamics and Control
Classical and Modern Control, Optimal Control
Modeling and Simulation
Numerical Methods and Digital Computations
Operations Research and Applied Optimization
Real Time Embedded Control Systems

Other Related Work Experience

Post-Doctoral Researcher, Dept. of Electrical & Computer Eng of University of California at Santa-Barbara, CA, USA. August 2004 - December 2004

National Research Council (NRC) Research Associate, Department of Aeronautics and Astronautics, Naval Postgraduate School, Monterey, CA, USA, February 2001 - August 2004

Senior Research Associate, Zhukovskiy Air Force Engineering Academy, Moscow, Russia,1997-1999

Research Associate, Zhukovskiy Air Force Engineering Academy, Moscow, Russia, 1995-1997.

Senior Engineer, Zhukovskiy Air Force Engineering Academy, Moscow, Russia, 1991-1995.

Scientific and Professional Society Memberships

Senior Member, American Institute of Aeronautics and Astronautics (AIAA), 2001-present.

Honors and Awards

- National Research Council Postdoctoral Fellowships for Scientific and Technological Exchange, Awarded in 2001, 2002, 2003, and 2004.
- Mikojan Design Bureau Certificate of Recognition, 1999.

Professional Development Activities in Last Five Years

Every year I serve as a reviewer for the multiple conferences and technical (peer review) journals including:

- Journal of Guidance, Control, and Dynamics
- International Committee on Electronic letters, The Institution of Engineering and Technology (IEE)
- International Program Committee of the annual American Control Conference (ACC)
- International Committee of the annual AIAA 2006-07 GNC and MST conferences
-

Every year I attend number of training courses and seminars in my areas of interest including:

- Robust and Adaptive Control Theory, 2006

- Computing and Control in RTLinux environment, 2006.

Morris R. Driels
Professor of Mechanical and Astronautical Engineering
Naval Postgraduate School

Education

B.S.	Mechanical Engineering	University of Surrey	1969
Ph.D.	Mechanical Engineering	City University, London	1973

NPS Experience

Employment details:
Professor, 1989-Present, full-time appointment.
Areas of research:
Conventional Weapons Effects (Weaponeering)
Areas of teaching:
Weaponeering, Controls

Other Related Work Experience

1. Professor, Mechanical Engineering Department,Texas A&M University 1985-1989
2. Associate Professor, Mechanical Engineering Department, University of Rhode Island 1982-1985
3. Lecturer, Edinburgh University, Scotland, 1973-1982

Consulting and Patents

1. Miniature Lightweight Digital Camera for Robotic Vision System Applications. US patent 4,727,471 (with E. Collins), Feb 23 1988
2. Computer Controlled Adaptive Compliance Assembly Workstation. US patent 4,842,475, June 27 1989

Professional Registration

Chartered Engineer, UK

Principal Publications of Last Five Years

1. "Weaponeering: Conventional Weapon System Effectiveness", AIAA Education Series, 2004.
2. Several classified manuals and computer programs in conventional weapons effects.

Scientific and Professional Society Memberships

- Fellow, Institution of Mechanical Engineers. Chartered Engineer (I Mech E).
- Member, American Society of Mechanical Engineers (ASME).
- Member, Institute of Electrical & Electronic Engineers (IEEE).

Honors and Awards

- Halliburton Professor of Mechanical Engineering, Texas A&M University, 1987.
- Senior Research Fellow, ONR/ASEE Summer Faculty Research Program, 1989.
- Outstanding Instructional Contribution Award, Naval Postgraduate School, 1991.

Institutional and Professional Service in Last Five Years

Provided Weaponeering short course to military and civilian audiences about twice/year since 2000, in the US and overseas

Professional Development Activities in Last Five Years

Developed the subject of Weaponeering into an academic discipline.

INDRANATH DUTTA

Professor, Department of Mechanical Engineering
Center for Materials Science and Engineering
Naval Postgraduate School, Monterey, CA 93943
Ph : 831-656-2851 ; Fax : 831-656-2238 ; E-mail : idutta@nps.edu
Web: web.nps.navy.mil/~me/dutta.html

EDUCATION

- Ph.D., Materials Science and Engineering, University of Texas at Austin, December 1988
- M.S., Metallurgy and Materials Science, Case Western Reserve University, August 1985
- B. Tech., Metallurgical Engineering, Indian Institute of Technology, Kharagpur, July 1983

NPS EXPERIENCE

- Professor of Mechanical Engineering, Naval Postgraduate School, April 2001-present
- Associate Professor, Naval Postgraduate School, 1993-2001
- Assistant Professor, Naval Postgraduate School, 1988-1993

  Areas of research: *Materials Science and Micro-mechanics of Thermo-Mechanical Effects in Multi-Component Materials Systems (supported by NSF, ARO, ONR, SRC, industry)*
  Areas of teaching: *Materials Science*

OTHER PROFESSIONAL EXPERIENCE

- Visiting Faculty, Assembly Tech. Dev., Intel Corporation, Chandler, AZ, Apr'01-June-'01
- Visiting Consultant, Interconnect Systems Lab, Motorola, Tempe, Aug'00-Mar'01
- Visiting Fellow, Corpus Christi College / Dept. of Materials, Oxford University (U.K.), 1996
- AFOSR Summer Faculty Fellow, Wright Patterson Air Force Base, May-July 1995

AWARDS & HONORS

- Exemplary Service Award, Electronic, Magnetic and Photonic Materials Division, TMS, 2005
- Fellow, ASM International, 2004
- Who's Who in America (Marquis Who's Who), 2003-present
- Who's Who in the World (Marquis Who's Who), 2002-present
- Who's Who in Science and Engineering (Marquis Who's Who), 2003-present
- Carl E. and Jessie W. Menneken Award for Excellence in Scientific Research, NPS, 1998
- Outstanding Research Achievement Award, Naval Postgraduate School, 1997

Member of the American Association of Physics Teachers, 1971-present.
Member of the Optical Society of America, 1972-present.
Vice President, Florida Section, 1984-1985
President, Florida Section, 1985-1986
Technical Member of the Astronomical Society of the Pacific, 1975-present.
Life Member of Sigma Xi, 1980-present.
Member of the Society of Photo-Optical Instrumentation Engineers, 1980-present
Life Member of the Association of Old Crows, 1985-present.
Member of the American Society of Naval Engineers, 1999-present.
Member of the Military Operations Research Society, 2004-present.

Honors and Awards

President's [of the United States] Executive Intern, 1969.
Fannie and John Hertz Foundation Fellow, 1972.
Meritorious Technical Achievement Award, Martin Marietta Corporation, 1985 and 1989.
Outstanding Engineer, IEEE Orlando Section and Florida Council, 1990.
Northrop Grumman Award for Excellence in Systems Engineering and Integration, NPS, 2000 and 2001.
Wayne E. Meyer Award for Excellence in Systems Engineering, NPS, 2006.

Institutional and Professional Service in Last Five Years

Research Board, NPS, 2003-present.
Faculty Council, NPS, 2003-2004.
Academic Council, NPS, 2004-present.
Systems Engineering & Analysis Curriculum Committee, NPS, 2001-2003, 2007-present.

Professional Development Activities in Last Five Years

Video Tele-Education (VTE) Faculty Training, Office of Continuous Learning, NPS, September 2006.

Anthony J. Healey
Distinguished Professor of Mechanical and Astronautical Engineering
Naval Postgraduate School

Education

B.S.	Mechanical Engineering	University of London, UK	1961
Ph.D.	Mechanical Engineering	University of Sheffield, UK	1966

NPS Experience

Professor, 1986-2003, full-time appointment. Distinguished Professor 2003-present
Chairman, ME Department, 1986-1992, Chairman, MAE Department 2003-present

Other Related Work Experience

Penn State University, Assistant Professor Mechanical Engineering, 1967-71
M.I.T., Visiting Assistant Professor, Mechanical Engineering, 1970
The University of Texas at Austin, Associate Professor Mechanical Engineering, 1971-74
The University of Texas at Austin, Professor Mechanical Engineering, 1974-81
Cambridge University, Visiting Professor, 1978
Director, Center for Autonomous Underwater Vehicle Research, NPS 1995-present

Teaching : Dynamics, Analysis, Vibration, Automatic Control, Non-Linear Systems and Control Theory,, Random Data and Stochastic Processes, Digital Systems, Similitude and Simulation in Engineering, Fluid Power Control, Dynamic System Modeling, Marine Vehicle Dynamics and Underwater Vehicle Control

Consulting and Patents

Scientific and Professional Society Memberships

Dynamic Systems and Control Division, Member, 1967-Present
Associate Editor, ASME Transactions Journal of System Dynamics, Measurement and Control, 1971-74,
Secretary, Dynamic Systems and Control Division, 1973-76
Executive Committee, Dynamic Systems and Control Division,, 1976-81
Chairman, Dynamic Systems and Control Division, 1979-80
Past Chairman, Dynamic Systems and Control Division,, 1980-81
Technical Chairman, IEEE AUV'94 Symposium on Autonomous Underwater Vehicle Technology, 1994
Executive Chairman, IEEE AUV'96 Symposium on Autonomous Underwater Vehicle Technology, 1996
IEEE Robotics and Automation Society, Underwater Robotics Committee, 1995-present
Editorial Board: International Journal of Autonomous Systems (IJAVS)

Honors and Awards

American Society of Mechanical Engineers, Distinguished Service Award 1994
American Society of Mechanical Engineers, Fellow
Faculty Teaching Award, University of Texas at Austin, 1975
Pi Tau Sigma, Honorary Member
Elected to IEEE Oceanic Engineering Society Administrative Committee, 1995-present
Research Achievement Award, Naval Postgraduate School, 1995

Sheshagiri K. Hebbar
Senior Lecturer of Mechanical and Astronautical Engineering
Naval Postgraduate School

Education

B.E.	Mechanical Engineering	University of Mysore	1963
M.E	Aeronautical Engineering	Indian Institute of Science	1965
Ph.D.	Aerospace Engineering	University of Maryland	1976

NPS Experience

Employment details:

Senior Lecturer, 1997-present, full-time appointment. Adjunct Professor, 1988-1995, full-time appointment.

Areas of research:

Basic and applied research and developmental work in experimental fluid mechanics and aerodynamics, Wind tunnel and water tunnel testing, Vortical flows at high angles of attack, and Fluid flow instrumentation.

Areas of teaching:

Fluid mechanics, Thermodynamics, Heat transfer, Missile aerodynamics, Statics and dynamics, Solid mechanics, Machine design, Spacecraft structures, Spacecraft thermal control, and Spacecraft propulsion.

Other Related Work Experience

Associate Professor, Department of Aerospace Engineering Science, Tuskegee University, Tuskegee, AL, 1985-1987.
Senior NRC-NASA Research Associate, Experimental Fluid Dynamics Branch, NASA Ames Research Center, Moffett Field, CA, 1983-1985.
Scientist/Assistant Director, Aerodynamics and Propulsion Divisions, National Aerospace Laboratories (NAL), Bangalore, India, 1965-1983.
Research Assistant/Research Associate, Department of Aerospace Engineering, University of Maryland, College Park, MD, 1971-1976.
German Academic Exchange Service Scholar, Technical University, Braunschweig, Germany, 1966-1967.

Garth V. Hobson
Professor of Mechanical and Astronautical Engineering
Naval Postgraduate School

Education

B.Sc.M.E., Aeronautical Option; University of the Witwatersrand, Johannesburg (1979)
M.Sc.M.E. University of the Witwatersrand, Johannesburg, South Africa (1983)
Ph.D. in Aerospace Engineering; Penn State University (1990)

NPS Experience

Employment details:
2003 – Date, Professor, Department of Mechanical and Astronautical Engineering, Director – Turbopropulsion Laboratory
2001 – 2003, Professor, Deptartment of Aeronautics and Astronautics,
Associate Director – Turbopropulsion Laboratory
1990 – 2001, Associate Professor, Deptartment of Aeronautics and Astronautics,
Areas of research:

Propulsion and Energy Conversion, Aerospace Propulsion and Power,
Propulsion Computational Fluid Dynamics

Areas of teaching:

Gas Dynamics, Propulsion and Power, Computational Methods,
Computational Fluid Dynamics, Fluid Mechanics Measurements

Other Related Work Experience

1980 - 1990, Council for Scientific and Industrial Research (CSIR), Pretoria,

Engineer, Section Head, Facility Head (Aero-Thermodynamic Facility)

Consulting and Patents

Consulting; NAVAIR, ADENA (Duke Energy)

Scientific and Professional Society Memberships

Member of the American Institute of Aeronautics and Astronautics, 1992-present.

Honors and Awards

1.NASA Certificate of Recognition for the Creative Development of a Technical Innovation, October 1991.
2. 1994 NATO Fellowship for Scientific and Technological Exchange.
3. 1994 Excellence in Research Award, Naval Postgraduate School.
4. 1995 ASEE/NASA Summer Faculty Fellowship.
5. 1995 NATO Fellowship for Scientific and Technological Exchange.
6. 1999 AIAA Outstanding Service Award.
7. 1999 NPS Menneken Annual Faculty Award for Excellence in Scientific Research.

Institutional and Professional Service in Last Five Years

1. Member, Editorial Board, Journal of Autonomous Systems
2. Reviewer for the following American and international scientific journals

IEEE Transactions on Automatic Control
IEEE Transactions on Control Technology
IFAC Automatica
AIAA Journal of Guidance, Control and Dynamics
International Journal of Nonlinear and Robust Control
Mathematics of Control, Signals and Systems

2. Reviewer for the following American and international conferences

American Control Conference
European Control Conference
AIAA Conference on Guidance, Navigation and Control
IEEE Conference on Decision and Control

3. Organizer and Chairman of the Invited Session *Motion Control of Autonomous Vehicles* at 1995 American Control Conference, June 1995, Seattle, WA
4. Co-Chair of *Guidance, Navigation, and Control II* Session at 1997 AIAA GNC conference, New Orleans, August 1997.
5. Organizer with Prof. H. McClamroch of University of Michigan an invited session on UAVs at 1998 American Control Conference
6. Topic Chair, 1999 *AIAA Navigation, and Control Conference*
7. Member NSF CAREER Award panel, October 20-21, 2005.

J.R. Lloyd, M.O. Hayes-Michel, C.J. Radcliffe, 2007, "Internal Organizational Measurement for Control of Magnetorheological Fluid Properties", ASME Trans, Jour Fluids Eng, April 2007

Scientific and Professional Society Memberships

Member of the American Society of Mechanical Engineers, 1971-present.

Honors and Awards

1978 ASME Melville Medal for best paper in the field of Mechanical Engineering.
1986 Ralph R. Teetor Educational Award, Society of Automotive Engineers.
1986 Election to Fellow of ASME.
1990 University Distinguished Professor, Michigan State University
1995 ASME Heat Transfer Memorial Award
2000 Doctor of Technical Science Honorus Causa, Russian Academy of Sciences
2002 Elected to Member, European Academy of Sciences
2004 ASME Curriculum Innovation Award, Honorable Mention

Institutional and Professional Service in Last Five Years

Advisory Editor, Journal of Heat Transfer Research, 1997-present
International Advisory Board, Thermophysics and Aeromechanics, International Academic Publishing Company, 1999 – present.
Senior Vice-President of Engineering, ASME International, November 1998- 2002.
Governor, ASME International, June 2002-June 2005.
Member, Executive Committee of Int. Center Heat and Mass Transfer, Turkey, 2002- 2006.
Member, planning committee, Minority Serving Institutions Research Partnerships Conf. 2006
Member,Planning group 14th Intl Heat Transfer Conference, Aug 2010, Washington DC
Member, ASME Board on Research and Technology Development, Nov. 2006 – present.
Member, Board of Directors, ASME Nanotechnology Institute, November 2006-present

Professional Development Activities in Last Five Years

None

Fernand D.S. Marquis
Visiting Professor of Mechanical and Astronautical Engineering
Naval Postgraduate School

Education

B. S. Chem. Eng., Univ. of Coimbra, 1967
Dipl. Eng. Chem-Industrial Eng., Instituto Superior Tecnico, Univ. of Lisbon, 1970
DIC Metallurgical Eng., Imperial College of Science and Technology, University of London, 1973
Ph.D. Metallurgical Eng., Imperial College of Science and Technology, University of London, 1977
Ph.D. Metallurgy and Materials Science, Univ. of Lisbon, 1977

NPS Experience

January 2006–Present: Visiting/Adjunt Professor, Dept. of Mechanical and Astronautical Engineering, Naval Postgraduate School.

Areas of research:

Nanomaterials; Nanotechnology; Nanotribology; Shock Synthesis and Densification and Combustion Synthesis and Densification of Ceramics, Composites and Intermetallics; Ceramic and Ceramic/Metal Armor; High Strain, High-Strain Rate Deformation Behavior; Airplane and Aerospace Materials and Structures; Failure Analysis and Mechanisms in Structural Components.

Areas of teaching:

Materials Engineering and Science Courses: Advanced Materials Characterization, Composite Materials (PMCs, MMCs and CMCs), Fundamentals of Materials Systems, Fundamentals of Materials Science and Engineering.

Other Related Work Experience

1988-2005 Professor of Materials and Metallurgical Engineering, South Dakota School of Mines and Technology (SDSMT)
1993-1994 Visiting Professor, Dept. of Applied Mechanics and Engineering Science, University of California, San Diego (UCSD)

Consulting and Patents

1. "Carbon Nanoparticle-Containing Lubricant and Grease" Hong, H., Waynick, J.A and Marquis, F.D.S., US 11/332,679.
2. "Carbon Nanoparticle-Containing Hydrophilic Nanofluid" Hong, H. and Marquis, F.D.S., US 11/332,682.

Professional Registration

Registered Metallurgical Engineer (1979); Registered Chemical Engineer (1979); Charted Engineer, Council of Engineering Institutions, United Kingdom (1979).

Principal Publications of Last Five Years

Books

1. "Nanocomposites-Their Science, Technology and Applications", Schneider, J., Marquis, F.D.S., Schadler, L.S., and Simmons, K, TMS, 2006.
2. "The Science and Technology of Powder Materials: Synthesis, Consolidation and Properties", L.L. Shaw, F.D.S. Marquis, E.A. Olevsky, I.E. Anderson, M.G. McKimpson, J.P. Singh and J.H. Adair, ISBN 978-0-87339-601-1, TMS, 2005.
3. "Powder Materials: Current Research and Industrial Practices III", F.D.S. Marquis, ISBN 0-87339-563-8, TMS, 2003.

4. "Rapid Prototyping of Materials", Marquis, F.D.S. and Bourell, D. L., ISBN 0-87339-530-1, TMS, 2002
5. "Powder Materials: Current Research and Industrial Practices II", Marquis, F.D.S., Thadhani, N.N., and Barrera, E. V, ISBN 0-87339-507-7, TMS, 2001.

Papers

1. Marquis, F.D.S. and L.P.F. Chibante "Improving the Heat Transfer of Nanofluids and Nanolubricants with Carbon Nanotubes" *Journal of Materials, 12 (2005) 32-44*.
2. Marquis, F.D.S., Mahajan, A. And Mamalis, A.G."Shock Synthesis and Densification of Tungsten Based heavy Alloys", *J. Mater. Proc. Tech.,* Vol. 161, 1-2(2005), 113-130.
3. Mamalis, A.G., Vottea, I.N., Manolakos, D.E., Szalay, and Marquis, F.D.S., "Explosive Compaction/Cladding of YBCO Discs: a Numerical Approach" *J. Mater. Proc. Tech.* Vol. 161, 1-2(2005) 36-41.
4. Marquis, F.D.S., Chikhradze, N.M., Abasshidze, G.S., Dalakishvili, N.Z. and Peikrishvili, A.B., "Investigation of Sorption Properties of Boron Containing Composite Materials", Powder Materials World Congress, Vienna, 2004, 8 pages.
5. Barrera, E.V., Chibante, L.P.F., Marquis, F.D.S. et al "Nanocomposites: from Space Suits to Spaceships", *Acta Astronautical*, (2003), 14 pages.

Scientific and Professional Society Memberships (Past and Present)

American Society for Metals (ASM); American Institute of Mining, Metallurgical and Petroleum Engineers (AIMME); Sigma Xi; Materials Research Society (MRS); American Society for Testing of Materials (ASTM); Past member Societe Francaise de Metallurgie.

Honors and Awards

Fellow of the Royal Microscopical Society, United Kingdom, 1977; Editorial Advisory Board, Portugaliae Physica, 1978-1986; Chartered Engineer, Council of Engineering Institutions, 1979, UK; Professional Chemical Engineer, Portugal, 1979; Professional Metallurgical Engineer, Portugal, 1979; Member of the Board of Governors of the International Congress on Mechanical Behavior of Materials, 1979-1981; Who's Who in Engineering; Biography International; Outstanding Award for Service, as Organizer of the International Symposium on "In Situ Reactions for Synthesis of Composites, Ceramics and Intermetallics", TMS, 1995; Special Recognition from Entrepeneurs of America, 1998.

Institutional and Professional Service in Last Five Years

1. ABET Program Evaluator for the programs in: (1) Materials Engineering and Science and (2) Metallurgical Engineering. Performed four ABET visits in the last five years.
2. Board of Trustees of Alpha Sigma Mu.
3. Program Representative Materials Processing and Manufacturing Division of TMS 2005-2007.
4. Executive Council of the Materials Processing and Manufacturing Division of TMS
5. Treasurer of the Materials Processing and Manufacturing Division of TMS
6. Mechanical Behavior Committee (ASM/TMS)

Professional Development Activities in Last Five Years

1. ABET Program Evaluator for the programs in: (1) Materials Engineering and Science and (2) Metallurgical Engineering. Performed four ABET visits in the last five years.
2. Board of Trustees of Alpha Sigma Mu
3. Research Director "United Nanotechnologies", 2005-2006.

TERRY R. MCNELLEY

Distinguished Professor of Materials Science
Department of Mechanical and Astronautical Engineering
Naval Postgraduate School
700 Dyer Road
Monterey, CA 93943-5146

EDUCATION

Purdue University, West Lafayette, Indiana; B.S. in Metallurgical Engineering, June 1967

Stanford University, Stanford, CA; Ph.D. in Materials Science and Engineering; dissertation: "The Mechanical Behavior of Powder Metallurgy Zinc-Alumina Particulate Composite Materials" (advised by Professor Emeritus Oleg D. Sherby), January 1973

ACADEMIC EXPERIENCE

1972-1976: Department of Mechanical Engineering, University of Wyoming, Laramie, WY. Appointed as Assistant Professor; Advancement to Tenure: June, 1976

1976-present: Department of Mechanical Engineering, Naval Postgraduate School, Monterey, CA. Original appointment : Assistant Professor, Sept., 1976; Advancement: Associate Professor (with Tenure), June, 1979; Professor, June, 1987; Associate Chairman of Mechanical Engineering, 1992-1995; Chairman of Mechanical Engineering, 1996 – 2002

PROFESSIONAL ACTIVITIES

Scientific and Professional Societies

American Society for Materials International
The Minerals, Metals and Materials Society
Materials Research Society

Distinctions and Awards

Tau Beta Pi; Sigma Xi; American Society for Testing and Materials Achievement Award, 1972
Fellow, American Society for Materials - International (ASMI), elected 2001
Distinction as 'Plank Owner', Reactors/Mechanical Engineering Program, by Naval Reactors (NAVSEA 08), Awarded January, 2002
Distinguished Professor, Awarded September, 2004

Other Appointments

Visiting Professor, Royal Military College of Cranfield Institute, Shrivenham, UK, 1980-81
ONR-London Scientific Liaison (intermittent, 1980-81)
Visiting Professor, Naval Research Laboratory, 1987

Visiting Distinguished Lecturer, Japan National Defense Academy, Yokuska, Japan, October - November 1993

Visiting Professor, Centro Nacional de Investigaciones Metalurgicas (CENIM), Madrid, Spain, August – December, 1999

Consulting (2000 - present)

Failure analysis report "Fuel Oil Fill and Transfer Piping on DDG90, USS Chaffee", T. R. McNelley and C. Park, October 2004

Testimony before the Armed Services Board of Contract Appeals on 11 February 2005, in respect of docket ASBCA No. 54544, Appeal of Bath Iron Works to Denial of Claim. Testimony was on behalf of the Navy Litigation Office, Office of General Council, Washington Navy Yard, in respect of the failure analysis report "Fuel Oil Fill and Transfer Piping on DDG90, USS Chaffee".

ACADEMIC ADMINISTRATION

Departmental

Associate Chairman of Mechanical Engineering, 1992 -95; duties included scheduling and internal administration.

Chairman of Mechanical Engineering, initial appointment1995 - 1999; reappointed 1999 - 2002

University

Member, NPS Academic Council, 1978-80; 89-92
Chair, ad hoc committee on Distance Learning, NPS Academic Council, 1991-2
Search Committee for Chairman of Mechanical Engineering, 1986
Member, NPS Research Council, 1986-89
Member, Total Ship Systems Engineering Program Development Committee, 1989-90
Search Committee for Dean of Engineering, 1993
Search Committee for GSEAS Dean, 2001

Publications (2000 – 2005)

1. T.R. McNelley, "Application of EBSD Methods to Evaluate Grain Boundary Character of Fine-Grained Pure Aluminum", in Ultrafine Grained Materials (R.S. Mishra, S.L. Semiatin, C. Suryanarayana, N.N. Thadhani and T.C. Lowe, eds.), TMS, Warrendale, PA, 2000, pp. 185-194
2. T.R. McNelley, "Processing, Recrystallization and Superplasticity in Aluminum Alloys", in Deformation, Procesing, and Properties of Structural Materials (E.M Taleff, C.K. Syn and D.R. Lesuer, eds.), TMS Warrendale, PA, 2000, pp. 339-352
3. M.T. Pérez-Prado, T.R. McNelley, G. González-Doncel and O.A. Ruano, "Texture, Grain Boundaries and Deformation of Superplastic Aluminum Alloys", in Proceedings of ICSAM 2000 (N. Chandra, ed.), Materials Science Forum, Trans Tech, Zurich, 2001, pp. 255-260
4. T.R. McNelley, "Chapter 22: Continuous Recrystallization and Grain Boundaries in a Superplastic Aluminum Alloy", in Electron Backscatter Diffraction, (A.J. Schwartz, et al., eds), Kluwer Academic/Plenum, New York, 2000, pp.277-290
5. M.T. Pérez-Prado, D.L. Swisher and T.R. McNelley, "Deformation Banding, Grain Boundaries and Continuous Recrystallization in a Superplastic Aluminum Alloy", in Proceedings of THERMEC 2000 (T. Chandra, K. Higashi, C. Suryanarayana and C. Tomé, eds.), Elsevier, London, 2001, Section G2

Knox T. Millsaps
Professor of Mechanical and Astronautical Engineering
Naval Postgraduate School

Education

B.S.	Engineering Science/Physics	University of Florida	1983
S.M.	Aeronautics and Astronautics	MIT	1986
Ph.D./Sc.D.	Aeronautics and Astronautics	MIT	1991

NPS Experience

Employment details:

- Professor, 2005-Present, full-time appointment.
- Associate Professor, 1998-2005, full-time appointment.
- Assistant Professor, 1992-1998, full-time appointment.
- Associate Provost for Academic Affairs, 2005
- Associate Provost for Institutional Development, 2006
- Associate Department Chairman, 2002-Present

Areas of research:

Power and propulsion for aircraft, ships, submarines, missiles and spacecraft. Gas turbines and Diesels. Turbomachinery aerodynamics and heat transfer. Rotordynamics. Thermodynamics and energy conversion. Signal processing for condition based maintenance. Platform and weapon system low observable technology.

Areas of teaching:

Thermodynamics, Fluid Dynamics, Heat Transfer, Power and Propulsion. Gas Turbines.

Other Related Work Experience

- ASME Congressional Fellow: Office of Rep. John M. Spratt, Jr. (5th-SC). Chairman, House Budget Committee, and senior member House Armed Services Committee. 2001.
- Brookings Legislative Fellow: Office of Rep. John M. Spratt, Jr. (5th-SC). 2000.
- Visiting Professor: Institute fur Thermische Stromungsmachinen. University of Karlsruhe, Germany. Worked with o.Prof. Sigmar Wittig, currently, Executive Director DLR (equivalent to NASA Administrator) 1997. Also, Post-doctoral Fellow. 1991.
- Senior Staff Engineer: Pratt and Whitney. East Hartford, CT. Turbine Group. 1988
- Staff Engineer: Pratt and Whitney. East Hartford, CT. Aero-Acoustics of Inlets Group. 1986.
- Junior Engineer: Pratt and Whitney. West Palm Beach, FL. Compressor, Turbine, and Structures Groups. 1984.

Consulting and Patents

- United Technologies Research Center, East Hartford, CT
- Electric Power Research Institute, Palo Alto, CA
- Integrated Devices, San Jose, CA
- Kurz Instruments, Monterey, CA
- Northrop-Grumman, Aircraft Division, El Segundo, CA
- Cidra Inc., Hamilton, CT
- Consultants in Engineering Acoustics
- Millsaps, K. T., “Integrated Electric Gas Turbine”, U.S. Patent Application Number 11/086,734; filed on 03/18/2005.

Professional Registration
None

Principal Publications of Last Five Years

April 1992-June 1998
Assistant Professor of Aeronautics and Astronautics
The Naval Postgraduate School, Monterey, CA

Areas of research:
Pseudospectral methods for optimal control and optimal control theory
Areas of teaching:
Guidance, Control and Optimization

Other Related Work Experience

October 1999-June 2001
Visiting Associate Professor of Aeronautics and Astronautics
The Charles Stark Draper Laboratory, Cambridge, MA

Scientific and Professional Society Memberships

Book Review Editor, Journal of Guidance, Control and Dynamics, 1996-2003
NASA Peer Review Evaluator, 1998, 2001
Member, AAS Space Flight Mechanics Committee, 1995-2000
Member, AIAA Astrodynamics Technical Committee, 1991-1993, 1995-1998
Member, AIAA Mechanics and Control of Flight Award Committee, 1998
AIAA Technical Chair, AAS/AIAA Astrodynamics Specialist Conference, 1995
Founding Chair, AAS Breakwell Travel Award Committee, 1995-96
Member, AIAA Mechanics and Control of Flight Award Committee, 1992-1994
Chair, AIAA Mechanics and Control of Flight Award Committee, 1992
Member, AIAA Astrodynamics Awards Subcommittee, 1991-1994

Honors and Awards

Carl E. and Jessie W. Menneken Award for Excellence in Research, 2002
Associate Fellow, American Institute of Aeronautics and Astronautics
AIAA Outstanding Leadership Award, 1998
Outstanding Research Award, Space Systems Engineering, NPS, 1998
Provost's Award for Excellence in Course Design, NPS, 1996
Outstanding Research Award, Astronautical Engineering, NPS, 1995
Meritorious Teaching Award, Astronautical Engineering, NPS, 1994
Meritorious Teaching Award, Space Systems Engineering, NPS, 1992

Institutional and Professional Service in Last Five Years

Academic Associate for Space Systems Engineering Curriculum, 2003-2004
Member, Astronautics Curriculum Committee, 1992-present
Member, NPS Academic Council, 1992-1998, 2001-2003
Team Leader, NPS Team for Nonlinear Dynamics and Control, 2002-03
Member, Dissertation Committee (various)

Professional Development Activities in Last Five Years

Classified

Young S. Shin

Distinguished Professor of Mechanical and Astronautical Engineering
Naval Postgraduate School

Education:

Ph.D.	Case Western Reserve University, Cleveland, Ohio; Mechanical Engineering
M.S.	University of Minnesota, Minneapolis, MN; Civil (Structural) Engineering
B.S.	Seoul National University, Seoul, Korea; Civil Engineering

Experiences:

1981 - Present **Naval Postgraduate School**

Distinguished Professor of Mechanical Engineering

Department of Mechanical and Astronautical Engineering

General responsibilities include teaching and research in Navy relevant research projects: (i) underwater explosions / acoustics, shock qualification of shipboard electronic weapon systems, (ii) ship silencing, acoustic/material damping, wave-guide absorbers and tuned damper, (iii) shock and vibration isolation and suppression, (iv) shipboard machinery condition monitoring and diagnostics, (v) finite element techniques, modeling and simulation.

Teaching: I have taught the following courses: Dynamics, Mechanical Vibration, Mechanics of Solid, Design of Machine Elements, Shipboard Vibration and Noise, Naval Ship Shock Design and Analysis, Random Vibration and Spectral Analysis, and Marine Engineering Design.

Developed the graduate courses, ME4525: Naval Ship Shock Analysis and Design, and ME4550: Random Vibration and Spectral Analysis.

Research: Fundamental and applied research in Shock and Vibration: underwater shock response analysis and testing, shock modeling and simulation, shock and vibration isolation and suppression, shipboard machinery condition monitoring and diagnostics, modal testing and acoustic damping measurement, acoustic-structure interaction, noise cancellation, fatigue reliability, joint damping characteristics, and passive vibration control by constrained viscoelastic layers and wave guide absorber.

1981 – Present **Engineering Consultant**

Provides series of lectures and consultancy in “ship shock response to underwater explosions” to Electric Boats Co. of General Dynamics, Newport News Shipbuildings, Bath Iron Works, NWSC-White Oaks, TNO Research Center in Delft, Netherlands, Mishubishi Shipbuilding Research Center in Nagasaki, Japan, National University of Singapore, Seoul National University in Seoul, Korea, IZAR in Spain, EAC in Norway.

1979 - 1981 **General Electric Company, Nuclear Power Systems Engineering,**
San Jose, California

Performed research on fluid-structure interaction effect in Boiling Water Reactor (BWR) for loss of coolant accident (LOCA) situation. New transient loading in LOCA was identified and I was in charge of the research project to assess if this additional dynamic loading is within design boundary.

1974 - 1979 **Argonne National Laboratories**, Components Technology Division, Argonne, Illinois

Performed research on flow-induced vibrations in Fast Breeder Reactor and also steam generator. The design configuration is the bundle of parallel tubes. Both parallel and cross flow-induced vibration problems in tube bundle have to be resolved. The work involved in analysis, design and testing.

Major Honors, Awards & Professional Societies

- Fellow in American Society of Mechanical Engineers since January 1992
- NPS Certificate of Recognition for Outstanding Research Achievement in 1993
- ASME PVP Service Award for Chairman of Fluid-Structure Interaction Technical Committee in 1992
- Director's Award on Developing a Special Session on Ship Shock Modeling and Simulation at the 74th Shock & Vibration Symposium (2003)

Current Research Programs and Sponsors

M&S Education & Training for Life Long Learning,,DoD Washington, DC (2007 - Present)

Title of person completing form: _____

I. Objectives

The overall educational objective of the Mechanical Engineering program is to support the NPS mission by producing graduates who have knowledge and technical competence, at the advanced level in Mechanical Engineering, in support of national security.

In order to achieve this goal, the specific objectives are to produce graduates who have:

1. The ability to identify, formulate, and solve technical and engineering problems in Mechanical Engineering and related disciplines using the techniques, skills and tools of modern practice, including modeling and simulation. These problems may include issues of research, design, development, procurement, operation, maintenance or disposal of engineering components and systems for military applications.
2. The ability to provide leadership in the specification of military requirements, in the organization and performance of research, design, testing, procurement and operation of technically advanced, militarily effective systems. The graduate must be able to interact with personnel from other services, industry, laboratories and academic institutions, and be able to understand the role that engineering and technology have in military operations, and in the broader national and global environment.
3. The ability to communicate advanced technical information effectively in both oral and written form.

Please help us evaluate the appropriateness of these Program Objectives:

These objectives serve my needs:

Strongly Agree O O O O O Strongly Disagree

Please provide any comments on the appropriateness of these Program Objectives and any changes that would better align our goals with your needs:

II. Program Outcomes

Based on your overall experience with MSME graduates from NPS, please provide your opinion of their preparedness and ability to support your programs. Specifically, rate them in the following four categories:

1. NPS/MSME graduates demonstrate advanced knowledge in Mechanical Engineering and have technical competence over the expected breadth of technical subjects.
   Strongly Agree O O O O O Strongly Disagree

2. NPS/MSME graduates demonstrate the ability to communicate effectively technical information both orally and in written form.
   Strongly Agree O O O O O Strongly Disagree

3. NPS/MSME graduates have the ability to independently identify, formulate, and solve technical and engineering problems in Mechanical Engineering.
   Strongly Agree O O O O O Strongly Disagree

4. NPS/MSME graduates have the ability to apply technical knowledge in a leadership role related to national security.
   Strongly Agree O O O O O Strongly Disagree

5. Please provide any comments about your perceptions of NPS/MSME graduates, particularly with respect to their academic preparation. Comments on the appropriateness of our Program Outcomes and suggestions for improvement are particularly welcomed.

Appendix I-D-2

Checklist for BSME Degree Equivalency

The Department of Mechanical Engineering at the Naval Postgraduate School is accredited at the Master of Science degree level through the Accreditation Board of Engineering and Technology. Students earning a Master of Science in Mechanical Engineering or a Degree of Mechanical Engineer at NPS, must either have attained an ABET accredited undergraduate Mechanical Engineering degree, or earned the equivalency of a Bachelor of Science Degree in Mechanical Engineering. Some courses from the student's undergraduate institution may count toward that equivalency, even though his final undergraduate may not have been in Mechanical Engineering. Some courses taken at NPS may also be applied to meeting this undergraduate equivalency. This checklist is provided to document the completion of that equivalency.

Undergraduate Institutions Attended:

INSTITUTION	DATE		DEGREE EARNED
	From	To	
	From	To	
	From	To	

Do you already have an ABET accredited BSME degree? Check one response only.

☐ **YES - Skip the rest of this form. Go directly to the MSME Checklist form.**
☐ **NO - Complete the rest of this form. Then proceed to the MSME Chacklist.**

We certify that this student has met the minimum requirements for the equivalency of the BSME degree.

_____ _____
ME Program Officer, Date **ME Academic Associate, Date**

_____
ME Department Chair, Date

I. Mathematics

A. A minimum of 24 quarter credit hours or 16 semester credit hours of college-level mathematics is required. List all college-level mathematics courses passed with a grade of C or better. For each course, indicate the college or university where the course was taken, the course number, the course title, and the number of credit hours.

University	Course Number	Title	Quarter Credit Hours	Semester Credit Hours
		Quarter Credit Hours Sub Total		
		Semester Credit Hours Sub Total		

Total Math Credits (Qtr Credits + (1.5 × Sem Credits)):
(24 required)

B. For each of the following mathematics subjects that has been studied, indicate the college or university where the subject was studied, the course number, and the course title. All courses must have been passed with a grade of C or better.

Subject	University	Course Number	Course Title
Multivariable Calculus			
Differential Equations			
Linear Algebra			
Statistics			

II. Sciences

A. Basic Science

A minimum of 24 quarter credit hours or 16 semester credit hours of college-level basic science is required. Studies must inlcude both general chemistry and calculus based physics. List all college-level basic science courses passed with a grade of C or better. For each course, indicate the college or university where the course was taken, the course number, the course title, and the number of credit hours.

University	Course Number	Title	Quarter Credit Hours	Semester Credit Hours
		Quarter Credit Hours Sub Total		
		Semester Credit Hours Sub Total		

Total Basic Science Credits (Qtr Credits + (1.5 × Sem Credits)): **(24 required)**

III. General Education

A. A minimum of 24-quarter credit hours or 16 semester credit hours is required in subjects other than mathematics, basic science, computer science, and engineering. These general education courses should complement the technical content of the curriculum. Examples of traditional subjects in these areas are philosophy, religions, history, literature, fine arts, sociology, psychology, political science, anthropology, economics, and foreign language. Examples of non-acceptable courses include accounting, industrial management, finance, personnel administration, engineering economy, physical education and military science and training.

University	Course Number	Title	Quarter Credit Hours	Semester Credit Hours
		Quarter Credit Hours Sub Total		
		Semester Credit Hours Sub Total		

Total General Education Credits (Qtr Credits + (1.5 × Sem Credits)):
(24 required)

IV. Engineering Science and Engineering Design

A minimum of 72 quarter credit hours or 48 semester credit hours of engineering science and design are required. Of those 54 quarter credit hours or 36 of the semester hours must be specifically in Mechanical Engineering and include both Thermal and Mechanical Systems.

A. List all **Mechanical Engineering** courses passed with a grade of C or better. A minimum of 54 quarter hours or 36 semester hours are required. For each course, indicate the college or university where the course was taken, the course number, the course title, and the number of credit hours (weekly lecture hours plus one half of lab hours). Courses must include Thermal Systems and Mechanical Systems.

University	Course Number	Title	Quarter Credit Hours	Semester Credit Hours
		Quarter Credit Hours Sub Total		
			Semester Credit Hours Sub Total	

Total Mechanical Engr Credits (Qtr Credits + (1.5 × Sem Credits)): **(54 required)**

B. List all engineering courses **not** in Mechanical Engineering passed with a grade of C or better. For each course, indicate the college or university where the course was taken, the course number, the course title, and the number of credit hours. Combined with the above Mechanical Engineering Courses, a minimum of 72 quarter hours or 48 semester hours is required.

University	Course Number	Title	Quarter Credit Hours	Semester Credit Hours
		Quarter Credit Hours Sub Total		
		Semester Credit Hours Sub Total		

Total Non-Mech Engineering Credits (Qtr Credits + (1.5 × Sem Credits)):

C. Also, DoD officers are entitled to certain college credit based on service schools attended (Nuclear Power School, DCA School, MPA School, etc.) If you have attended any technical DoD schools, including in a prior enlisted status, list those service schools by Title. See your Program Officer for evaluation of those courses based on publications by the American Council on Education. If applicaple, the Engineering Science Hours may be added to the total as identified below.

Service School Title	Course Number	Mech Engr Semester Credit Hours	Eng Science Semester Credit Hours
Total Service Related Mechanical Engr Science Credit Hours			
Convert Semester Hours to Quarter Hours (1.5 x Sem Hours): Mech Engr Science Service Qtr Credit Hours			
Total Service Related Engr Science Credit Hours			
Convert Semester Hours to Quarter Hours (1.5 x Sem Hours): Engr Science Service Qtr Credit Hours			

D. Total Engineering Science Credit Hours:

Total Mechanical Engineering Science Credits (Sect IV. A. Previous Pages + Service Related Mechanical Engineering Science Hours Above):

(54 required)

Total Non-Mech Engineering Credits (Sect IV. B. Previous Pages + Service Related Non-Mechanical Engineering Science Hours Above):

Total Engineering Science Credits (sum above):

(72 required)

V. A major design experience at the advanced undergraduate level is required. It shall be based on the knowledge and skills acquired in earlier course work and incorporating engineering standards and realistic constraints. Briefly describe your major design experience. This requirement can be satisfied by completing a course with a major design experience that has been previously approved by the NPS ME department curriculum committee.

Appendix I-D-3

Checklist for MSME Degree

The Department of Mechanical Engineering at the Naval Postgraduate School is accredited at the Master of Science degree level through the Accreditation Board of Engineering and Technology and the Western Association of Schools and Colleges. Those accreditations are based on degree requirements set forth by the Mechanical Engineering Department at NPS and approved by the NPS Academic Council. This checklist is provided to document the completion of those degree requirements.

Student Name:

E-mail Address:

Month/year Enrolled:

I certify that the information on this form is correct.

Student Signature: _____

We certify that this student has met the minimum requirements for the MSME degree.

_____ _____

ME Program Officer, Date **ME Academic Associate, Date**

_____

ME Department Chair, Date

1. BSME Degree / Equivalence Requirement satisfied by (fill in one):

BSME degree from: Month/Year

BSME Equivalence from NPS. Date (from completed checklist)

2. **Thesis Requirement:**

Number of Thesis Credits (16 minimum)

Thesis Advisor:

Thesis Title:

3. **Competancy / Track Requirement:**

In completion of the requirements for a Master of Science Degree in Mechanical Engineering, a specific Specialization Track within the discipline of Mechanical Engineering must be delcared. Identify the specialization track completed below:

☐ **Thermal Fluid Sciences** Must Complete Minimum of Two Courses Listed Below		
Course Number	**Course Title**	**Taken**
ME4160	Applications of Heat Transfer	☐
ME4161	Conduction of Heat Transfer	☐
ME4162	Convection of Heat Transfer	☐
ME4163	Radiation Heat Transfer	☐
ME4202	Compressible Flow	☐

4. Course Credit Requirements:

The Master of Science degree in Mechanical Engineering requires at least 32-quarter hours of graduate level credits. At least 12-quarter hours must be at the 4000 level and at least 24 quarter hours must be in courses offered by the Mechanical Engineering Department. Identify courses to be counted toward the MSME degree:

NOTE: NO COURSES COUNTED TOWARD A BSME EQUIVALENCY MAY BE COUNTED TOWARD MSME GRADUATION REQUIREMENTS

A. List 4000 Level Courses applied toward MSME degree.

Course Number	**Course Title**	**Quarter Hours**
Total 4000 Level Hours		**(12 required)**

B. List All 3000 and 4000 Mechanical Courses applied toward MSME. Include duplicates of Mechanical Engineering Courses listed above.

Course Number	**Course Title**	**Quarter Hours**

Total Mechanical Engineering 3000 and 4000 level courses		**(24 required)**

C. List all 3000 and 4000 level courses applied toward MSME degree (Mechanical Engineering non-Mechanical Engineering graduate level courses):

Course Number	**Course Title**	**Quarter Hours**
Total ALL MSME degree 3000 and 4000 level courses		**(32 required)**

0 = NO COMMENT

Program Objectives

The overall educational objective of the Mechanical Engineering program is to support the NPS mission by producing graduates who have knowledge and technical competence, at the advanced level in Mechanical Engineering, in support of national security.

In order to achieve this goal, the specific objectives are to produce graduates who have:

1. The ability to identify, formulate, and solve technical and engineering problems in Mechanical Engineering and related disciplines using the techniques, skills and tools of modern practice, including modeling and simulation. These problems may include issues of research, design, development, procurement, operation, maintenance or disposal of engineering components and systems for military applications.

2. The ability to provide leadership in the specification of military requirements, in the organization and performance of research, design, testing, procurement and operation of technically advanced, militarily effective systems. The graduate must be able to interact with personnel from other services, industry, laboratories and academic institutions, and be able to understand the role that engineering and technology have in military operations, and in the broader national and global environment.

3. The ability to communicate advanced technical information effectively in both oral and written form.

5 = Strongly Agree, 4 = Agree, 3 = No Strong Opinion, 2 = Disagree, 1 = Strongly Disagree, 0 = No Comment

Rate the program relative to the stated objectives:

3. The program enabled me to meet objective #3	☐	☐	☐	☐	☐	☐

Please provide any comments on the appropriateness of these objectives below:

Program Outcomes:

1. Graduating students will have knowledge and skills equivalent to an ABET-accredited BSME.

2. Graduating students will have advanced knowledge in Mechanical Engineering and competence in one of the available specialized disciplines of Mechanical Engineering.

3. Graduating students will have a high level of communication skills including technical writing and oral presentation.

4. Graduating students will have the ability to independently identify, formulate and solve technical and engineering problems in Mechanical Engineering.

5. Graduating students will have the ability to apply technical knowledge in a leadership role related to national security.

5 = Strongly Agree, 4 = Agree, 3 = No Strong Opinion, 2 = Disagree, 1 = Strongly Disagree, 0 = No Comment

IN REPLY REFER TO:

29 June, 2007

Richard A. Cosier
Chair of The Maintenance of Accreditation Committee (MAC)
AACSB International
777 South Harbour Island Boulevard, Suite 750
Tampa, Florida 33602
USA

Dear Chair Cosier:

By means of this letter, **The Graduate School of Business & Public Policy at the Naval Postgraduate School** is applying for maintenance of AACSB International business accreditation for our master's degree programs.

Attached are:
1. The Maintenance Review Application including the list of the degree programs that we offer.
2. The list of our Comparison Groups, including Comparable Peers, Competitive Group, and Aspirant Group.

We request a review in **Winter** of **2010.**

Sincerely,

L A Ferrari FOR:

Daniel T. Oliver, President, Naval Postgraduate School

L A Ferrari

Leonard Ferrari, Provost/Vice-President, Naval Postgraduate School

FOR:

Robert N. Beck, Dean, Graduate School of Business & Public Policy, Naval Postgraduate School

Business Maintenance Review Application

Please send the requested information to the Maintenance of Accreditation Committee (MAC). The MAC will forward the information to the Accreditation Coordinating Committee (ACC) to rule on Eligibility Requirements for AACSB International Accreditation.

(Please see *Eligibility Procedures and Standards for Business Accreditation, January 2007* at http://www.aacsb.edu/accreditation/business/STANDARDS.pdf)

Please request the Accounting Maintenance Review Application when filing for accounting accreditation.

APPLICATION SUBMISSION INFORMATION

Please submit this application and the accompanying cover letter as follows:

1. **Electronically:** Submit via email one set of all materials to the Maintenance of Accreditation Committee Chair at MAC@aacsb.edu. If applicable, this should include a link to course catalogs available online.

2. **Hard copy:** Submit one (1) hard copy set of all materials, including course catalogs, to:

GSBPP - DIVERSITY AND ETHICS IN CONTEXT

The Graduate School of Business and Public Policy (GSBPP), at the Naval Postgraduate School (NPS), is a part of the U.S. Navy, the U.S. Department of Defense, and of the U.S. federal government. Our core mission is to serve the graduate education needs of these agencies. Students are predominantly active duty military officers or federal government civilians. Faculty are federal government employees. Matters of Diversity and Ethics within GSBPP are influenced significantly by GSBPP's mission, and its organizational (cultural) context as a graduate school operating within a larger university and defense and governmental setting.

1. DIVERSITY: Consistent with your mission and within your cultural context, describe how diversity in your business programs is demonstrated.

GSBPP Faculty Diversity

GSBPP Diversity Philosophy: While GSBPP does not follow an articulated plan for achieving diversity in the faculty composition, we nonetheless have a serious commitment to achieving and maintaining a high level of faculty diversity. We do not set targets or numerical goals, but we actively strive to provide a supportive and positive atmosphere where diversity among the faculty and staff can thrive and grow. We have a shared philosophy among the School's leadership that guides our efforts in the area of diversity management. This philosophy requires and involves equitable recognition and reward for one's contributions, openness to individual difficulties (with students, programs, etc.) and sensitivity to challenges that might affect one's feeling of effectiveness in their jobs and professional lives. We believe this is a continuing accomplishment in the School. We have no "second class citizens". Faculty members are recognized, treated and valued as faculty; not as "Adjunct" or "Military" or "Tenure Track"; not as "junior" or "senior"; and, certainly, not as "minorities", "women" or "handicapped".

Mission and Faculty: In terms of faculty recruitment and our efforts to support faculty diversity, we often find that the uniqueness of our academic mission, the specializations represented in our academic fields, and our focus on defense-relevance, all work against us. In many instances, the types of experience and military-relevant perspective we seek in a faculty member dramatically restrict the total pool of applicants, and the possibility of finding a well-qualified diversity hire. For example, we have an almost a constant recruiting effort in the Acquisition area. The necessity of a relevant experiential background in the area often means that plausible candidates will come principally from retired military officers or senior defense civilian employees. There are few minorities, women, and almost no handicapped candidates in these fields. While there has been an increasing number of women and minorities among the officer corps of the military, their percentages do not mirror the general public. There are somewhat analogous limitations when seeking faculty candidates in the Transportation and Logistics area, the Manpower area and the Defense Financial Management area. Nonetheless, we encourage all 'diversity candidates' in these specialized fields, using our current faculty

members' contacts and taking advantage of the fact that the communities from which qualified candidates derive are small and usually well known to our senior faculty in these fields.

Faculty Recruiting and Hiring: Because of the curricular and discipline diversity in the School, major responsibility for the development, implementation and monitoring of our diversity efforts remains vested in the Dean, with the assistance of the Associate Deans and the five faculty members acting as Area Chairs. Faculty recruitment efforts are largely carried out by the faculty group involved, with the designated Area Chair as the lead person. The Senior Associate Dean assists the School's leadership team in determining hiring needs, monitoring the recruiting process and candidate hiring recommendations.

The Naval Postgraduate School's administration is actively supportive of the EEO/Affirmative Action efforts of all schools and departments. When GSBPP begins faculty recruitment, the Area Chairs who will lead each search coordinate with the Senior Associate Dean to plan search activities. EEO factors are discussed so that all advertisements and notices bear the proper invitation for attracting a diverse pool of applicants. When applications are received we ensure that women, minorities, or identifiable handicapped individuals are objectively considered. A report is compiled for each search that outlines the pool of applicants in terms of diversity characteristics and that report is included with the hiring requests forwarded to the Dean and Provost for action.

While we have had some difficulties in those fields with small or constrained candidate pools, we have been successful in hiring and retaining diversity faculty in areas where the related candidate pool is large and mature enough to provide many competitive applicants. A table below displays our record of faculty hiring during the past five years, noting three diversity dimensions: Gender, Race/Ethnicity, and Country of Origin.

As indicated in the table, GSBPP has been growing significantly during recent years, with a total of 31 new participating faculty members hired since 2002. About 75% of the new faculty members have been hired as tenure-track faculty. Concerning diversity, 5 (16%) of the new faculty members are from racial/ethnic minorities, 17 (55% are women, and 7 (23%) originate from countries outside of the U.S. Considering all three dimensions, a full 68% of the recently hired participating faculty are diversity faculty.

GSBPP Participating Faculty Hires 2002-2006				
Year of Hire	**Academic Appointment**	**Race / Ethnicity**	**Gender**	**Origin**

Student Diversity

Mission and Student Admissions: The mission of GSBPP is derived from the mission of NPS, as stated by Congress. The mission of GSBPP/NPS is to serve the Nation by educating military officers and DoD civilians in defense-focused business and public policy, by conducting scholarly research in defense management and public policy and by providing intellectual resources for leaders and organizations concerned with national defense management practice and policies.

With a focus on preparing military officers and government civilians for professional positions, NPS and GSBPP, in conjunction with sponsoring agencies, determine admission standards and processes. Admissions standards and processes reflect two dimensions: Academic and Professional. GSBPP/NPS set academic standards for admissions. The Navy, and other sponsoring agencies, select students -- who have met the academic standards -- for admission based on professional and career considerations. Thus admission to GSBPP/NPS is accomplished through the joint efforts of the School and students' sponsors.

During the earlier years of their career, all Navy officers have are initially screened for graduate study, based on their undergraduate academic performance (officer transcripts may be reviewed by the NPS Admissions Office). In addition to the academic admissions standards, U.S. Navy officers are reviewed for selection to graduate school based on their professional performance and promotion potential. Selection boards and Senior Officer Reviews occur annually to select eligible officers. The selection board evaluates both the officer's professional performance in the Navy and his/her prior academic record. Officers selected for graduate study are then offered the opportunity to attend a specific graduate curriculum. No one is ordered to graduate school against his/her will. Similar selection procedures are employed by the other U.S. services and by federal agencies wishing to nominate civilian employees for graduate study.

Diversity in the U.S. Navy: Given the mission and admissions process for GSBPP, diversity among GSBPP students will be significantly influenced by diversity policies within the larger Navy, and the population of officers from which students will come. Diversity is recognized as a strategic goal of the Navy and expressed as Navy policy:

Diversity is a strategic imperative for the United States Navy:

We defend the greatest nation in the world. It is a nation that welcomes, indeed encourages, the active participation of every citizen regardless of race, gender, creed or color - - a democracy founded on the promise of opportunity for all. It is also a nation whose demographic makeup continually changes, reflecting the influx of new immigrants and the growth of minority populations. The Navy must change with it. To the degree we truly represent our democracy, we are a stronger, more relevant armed force.

Diversity is critical to mission accomplishment:

Everyone in our Navy contributes to mission success, and everyone brings to that collective effort unique capabilities and individual talent. How we harness those capabilities and foster that talent bears considerable effect on our ability to successfully accomplish the mission. Like an organization in time of change, we thrive on the infusion of new ideas and the

diversity of thought. This is particularly true today, when understanding the mores, customs, and ideals of diverse cultures, as well as the perspectives of other people, remains critical to winning the long war.

Diversity is a leadership issue, and everyone is a leader:

We will promote and engender a culture that embraces our diversity. Through our communications, education, policies, programs, and conduct, each of us will actively foster work environments where people are valued, respected, and provided the opportunity to reach their full personal and professional potential. We will recruit, develop, educate, and retain leaders from and for all parts of our Navy and nation.

We defend the greatest nation in the world. The strength of our diversity directly and irrefutably helps us do so. The Navy will stay committed to improving that strength.
(US Navy Diversity Policy, Chief of Naval Operations)

Student Demographics: As indicated above, selection of individual students for admission originates with the sponsoring military service or agency, not with NPS. Hence GSBPP/NPS does not have direct influence on the diversity characteristics of students. Student diversity will depend significantly on the diversity characteristics of the wider Navy and Defense community.

Presented here are data on the diversity demographics of GSBPP's resident student population, as compared with the university (NPS) and the wider Navy officer Corp. Broadly speaking, GSBPP student characteristics with respect to Race/Ethnicity and to Gender are reflective of the university and defense community which it serves.

Race/Ethnicity **Comparison of GSBPP / NPS / Navy Officer Corps**			
	GSBPP	**NPS**	**Navy**
Caucasian	73%	78%	81%
African American	12%	7%	8%
Hispanic	7%	6%	6%
Asian	8%	7%	4%
Other	<1%	<1%	1%

Gender **Comparison of GSBPP / NPS / Navy Officer Corps**			
	GSBPP	**NPS**	**Navy**
Male	88%	89%	85%
Female	12%	11%	15%

One way in which the student population in GSBPP will, by design, differ from the officer population in the wider U.S. defense community is through the recruitment and enrollment of international students. Through an admissions and selection process roughly analogous to that used for U.S. students, allied nations may select and send officer students to NPS. Through

various programs, NPS actively seeks enrollment of international officers, and values the range of backgrounds and experiences they bring to the academic experience. Student representation for specific countries varies over time, as does the proportion of GSBPP students from other countries. Currently GSBPP enrolls students from 13 different nations, with international students comprising about 15% of the student population.

Citizenship **Comparison of GSBPP / NPS / Navy Officer Corps**			
	GSBPP	**NPS**	**Navy**
U.S.	85%	84%	~100%
International	15%	16%	

2. ETHICAL BEHAVIOR: Describe the established expectations of the institution or the business programs of the institution for ethical behavior by administrators, faculty, and students.

As a part of NPS, and the Department of the Navy, expectations for ethical behavior for all individuals within GSBPP are influenced and substantially governed by codes of conduct, policies and instructions, laws and regulations, and administrative and disciplinary systems from those institutions. Additionally, as a part of the "military community", GSBPP exists in a context in which codes of behavior are part of the culture. Collectively, the institutions and culture result in an environment deeply conscious of the importance of ethical behavior, and rich with guidance. There is no attempt here to fully describe that environment. Instead, three items are presented here to provide an overview and a sense of ethical conduct expected within GSBPP:

1. The Core Values Charter from the Department of the Navy: This provides the expectations for ethical behavior for all individuals who are part of the U.S Navy organization.
2. A statement of Ethics and Standards for Faculty: This is an excerpt from the NPS Faculty Handbook, a document that encompasses a wide range of guidance and expectations for faculty behavior at the university.
3. A list of Instructions and Policies: This is a partial, but illustrative, list of documents that specify appropriate behavior, and institutional processes, relating to a wide range of activities within GSBPP/NPS.

These items, together, are intended to convey that GSBPP is an organization that holds ethical behavior as a principal value, and that GSBPP operates in an institutional environment that actively encourages ethical behavior.

1. Core Values Charter

As in our past, we are dedicated to the Core Values of Honor, Courage and Commitment to build the foundation of trust and leadership upon which our strength is based and victory is achieved. These principles on which the U.S. Navy and the U.S. Marine Corps were founded continue to guide us today. Every member of the Naval Service - active, reserve, and civilian, must understand and live by our Core Values. For more than two hundred years, members of the Naval Service have stood ready to protect our nation and our freedom. We are ready today to carry out any mission; deter conflict around the globe and, if called upon to fight, be victorious. We will be faithful to our Core Values of Honor, Courage and Commitment as our abiding duty and privilege.

HONOR: I am accountable for my professional and personal behavior. I will be mindful of the privilege I have to serve my fellow Americans. I will:

- *Abide by an uncompromising code of integrity, taking full responsibility for my actions and keeping my word.*
- *Conduct myself in the highest ethical manner in relationships with seniors, peers and subordinates.*
- *Be honest and truthful in my dealings within and outside the Department of the Navy.*
- *Make honest recommendations to my seniors and peers and seek honest recommendations from junior personnel.*
- *Encourage new ideas and deliver bad news forthrightly.*
- *Fulfill my legal and ethical responsibilities in my public and personal life.*

COURAGE: Courage is the value that gives me the moral and mental strength to do what is right, with confidence and resolution, even in the face of temptation or adversity. I will:

- *Have the courage to meet the demands of my profession and the mission entrusted to me.*
- *Make decisions and act in the best interest of the Department of the Navy and the nation, without regard to personal consequences.*
- *Overcome all challenges while adhering to the highest standards of personal conduct and decency.*
- *Be loyal to my nation by ensuring the resources entrusted to me are used in an honest, careful and efficient way.*

COMMITMENT: The day-to-day duty of every man and woman in the Department of the Navy is to join together as a team to improve the quality of our work, our people and ourselves. I will:

- *Foster respect up and down the chain of command.*
- *Care for the professional, personal and spiritual well being of my people.*
- *Show respect toward all people without regard to race, religion or gender.*
- *Always strive for positive change and personal improvement.*
- *Exhibit the highest degree of moral character, professional excellence, quality and competence in all that I do.*

(Office of the Secretary of the Navy)

2. Ethics and Standards of Conduct (NPS Faculty Handbook)

In addition to the expected ethical standards of all faculty in academia, NPS faculty members, as government employees, are held to high federal standards of ethics and conduct. The goal is to avoid even the appearance of impropriety.

The faculty member must, for his/her own legal protection, review the provisions of the Secretary of the Navy Instruction 5370.2 (series) on "Standards of Conduct and Government Ethics" and NAVPGSCOLINST 5370.3E**.** Some of the basic principles set forth in the "Standards of Conduct" instruction include:

- Government facilities, property, and employee labor may not be used for other than officially approved purposes or for private gain (i.e., they cannot be used for consulting activities).
- A government employee may not engage in any activity, with or without compensation, which might result in a conflict of interest or the appearance of conflict of interest.
- With the exception of military reserve pay, government employees may not receive basic pay from more than one position in the government for more than an aggregate of 40 hours of work in one calendar week (Sunday through Saturday). (This is considered "dual compensation" and is forbidden by law.)
- Government employees may not receive any salary or supplementation of salary from a private source as compensation for their government service.
- A government employee may not use, directly or indirectly, "inside information" to further a private gain for his- or herself or for others.
- A government employee is prohibited from using his/her grade, rank, title or position in connection with any commercial enterprise or in endorsing any commercial product. This does not preclude author identification for materials published in accordance with DoD procedures.
- A government employee may not engage in outside employment or other outside activity, with or without compensation, that may reasonably be expected to bring discredit on the government or the Department of the Navy.

Carelessness in the formulation of agreements or thoughtless actions by either the faculty member or his/her employer can lead to the embarrassment of the School and the possible assessment of civil penalties against or criminal prosecution of the individual faculty member. The conflict of interest statutes have been interpreted as applying not only to the individual government employee but also to members of the individual's immediate family. Officers on active duty and retired officers who are members of the faculty, are additionally constrained by laws and regulations related to their military service.

GSBPP COMPARISON SCHOOLS

As background, and for our own benefit, we briefly describe the thinking behind our choice of comparison schools.

Comparable Peers: AACSB describes Comparable Peer Schools as:

Schools considered similar in mission and assumed appropriate for performance comparison. The schools should be chosen carefully to match key characteristics of the applicant. In addition to mission, some features that might be salient when choosing comparison schools include student populations served, size, degree levels and primary funding source.

In addressing the question of Peer schools, we assumed it more relevant to think in terms of "type", rather than "quality". We asked: What is the mission of GSBPP? What distinguishes GSBPP? How can we characterize GSBPP, and can we find potential Peer schools that are similar in those respects? Listed below are a set of characteristics identified as descriptive of GSBPP.

Mission Orientation:

1. Single Industry Orientation: We have a focus, specializations and expertise oriented toward one sphere or industry (Defense). Are there other "niche" schools?
2. Corporate University: We are a "corporate" university in one respect. We have a clear and bounded population of customers (students and sponsors) who we serve, and we do focused tailoring of our programs to serve their needs.
3. Graduate Only: We have no undergraduate programs; we have no PhD. Our core mission and focus is graduate education at the master's level.

Academic Orientation:

4. Teaching / Research mix: We sometimes describe GSBPP as being equally committed to teaching and research missions. Not all schools try to strike this same balance.
5. Scholarship Emphasis: AACSB often describes scholarship activities as falling in three areas: a) Discipline-based Scholarship, b) Contributions to Practice, c) Learning and Pedagogical Research. We describe ourselves as equally committed to Discipline and Practice scholarship, with Pedagogical stressed less.
6. Faculty Mix: With respect to participating faculty, GSBPP is roughly 65/35 in the mix of Academically-Qualified faculty (having a doctoral degree) and Professionally-Qualified faculty (having a masters and significant professional experience).

Program Orientation:

7. Public / Private Sector mix: Our curriculum content, accreditations (AACSB & NASPAA), and faculty backgrounds, all speak to how GSBPP is a merging of both private and public sector orientations.
8. Curriculum: Most GSBPP curricula are constructed with a distinct combination of a) a broad management core and b) a deep specialization. Specializations typically diverge from traditional business school fields (Acquisition, Logistics, Financial Management, Analysis). Most GSBPP curricula have a capstone Thesis/Project requirement.
9. Distance Learning: Three GSBPP programs, and about 25-30% of teaching, are in off-campus, distance learning degree programs. This is likely to be a direction of growth fro GSBPP.

Size and Resources:

10. Faculty Size: GSBPP's full-time faculty size ranges from 60 – 70.

11. Masters Enrollment: Full-time resident masters students enrolled range from 300 – 400. Total masters students enrolled range from 500 – 600.
12. Resources: GSBPP's annual operating budget is approximately ~$15M.
13. Funding Source: GSBPP / NPS is a public institution, predominantly centrally-funded.

Because of the truly unique mission of GSBPP, we expected to find no other school that is truly similar, but sought to identify schools that might have a selection of important characteristics in common with GSBPP. Through various processes of search, research, analysis and judgment, we have identified 15 schools, each of which has a number of characteristics in common with GSBPP. But none of which is truly similar. The table below provides our list of Comparable Peer schools, and also indicates the areas where we see strong commonality (X), or weaker, but still significant, commonality (l) with these Peer schools.

Competitive Group: AACSB describes Competitive Group Schools as:

Schools so directly competitive that conflict of interest considerations exclude their personnel from the review process. Only those schools should be included where the direct competition for students, faculty, or resources is so compelling that the appearance of a conflict of interest is present.

GSBPP does not see direct competitor schools and hence lists none here.

Aspirant Group: AACSB describes Aspirant Schools as:

Schools that provides a developmental goal for the applicant, represents management education programs or features that the applicant hopes to emulate, and places the vision and strategy of the applicant in context.

In identifying Aspirant Schools, we have focused on two dimensions of importance:

- Graduate Education Mission: The core mission of GSBPP is to provide graduate-level management education (for the military/defense community). As such, we limited the candidate aspirant schools to those who have a similar focus on graduate-level education.
- Scholarship Excellence: Although GSBPP's strategy calls for efforts in multiple directions, a particular strategic direction is of importance and reflects the consensus aspirations of the faculty: Scholarship Excellence. GSBPP aspires towards increased excellence in scholarship activities – which would be reflected in increased scholarship output and productivity, improved scholarship culture, and an enhanced academic reputation and wider recognition for GSBPP. As such, we look to emulate schools that we see as having achieved significant success in scholarship activities.

Listed here as our Aspirant Group Schools are five schools that, sharing the graduate education focus of GSBPP, have reputations for scholarship excellence.

EXECUTIVE SUMMARY

Naval Postgraduate School

The Naval Postgraduate School (NPS) provides unique professional graduate education to mid-career military officers and civilian employees of the US Department of Defense. Owned and operated by the United States Navy, the School prides itself on its ability to maintain the highest academic standards while responding to the dynamic needs of the Navy and other military services agencies within the Department of Defense. NPS is constantly developing new educational programs and delivery methods, and modifying its existing programs, to meet the emerging requirements for the military services and other agencies within the Department of Defense.

Graduate School of Business and Public Policy

The Graduate School of Business and Public Policy was formally established in 2001, renamed and reorganized from the earlier Department of Systems Management. The degree of Master of Science in Management (MSM) was first awarded at the Naval Postgraduate School in 1960, and was the predominate management/administration degree awarded until 2002, when the resident program evolved to additionally award a Master of Business Administration (MBA) degree.

The MSM degree program was initially accredited by NASPAA in 1980 and reaccredited most recently in 2000. With the transition to the MBA degree in 2002, NASPAA accreditation was extended to the MBA. The Naval Postgraduate School's regional accreditation is from the Western Association of Schools and Colleges (WASC). The most recent WASC reaccreditation was conducted in 1998, resulting in full accreditation granted through 2009. The Graduate School of Business and Public Policy is also accredited by The Association to Advance Collegiate Schools of Business – International (AACSB), receiving accreditation in 2000, with a reaccreditation review anticipated in 2009.

Mission

The Graduate School of Business and Public Policy (GSBPP) has a clear mission and direction. The school's mission statement, originally developed in 1992, was the result of the entire faculty's participation. The mission statement was reaffirmed by the GSBPP faculty in 1998, and newly updated by the faculty in 2007. The most recent version of our mission statement follows:

Vision

To be recognized as the nation's premier school for defense-focused business management and public policy education and research. To be the institution that national leaders look to for education, research, information, and innovation in the management

of the business of defense. To be recognized by our students, alumni, and other stakeholders for our excellence in defense-focused education and research.

Mission:
To serve our Nation by educating US and allied military officers as well as defense civilians in defense-focused business and public policy, by conducting research in defense management and public policy, and by providing intellectual resources for leaders and organizations concerned with defense business management practices and policies.

***Means**: We pursue our vision and perform our mission through graduate education, research, and professional service.*

- *In Education: Through resident and distance learning degree and non-degree programs, we develop students' abilities to analyze, think critically, and take intelligent actions so they can more effectively carry out their future professional responsibilities to manage organizations, resources, people, and programs in complex, sometimes life-threatening environments.*

- *In Research: Conduct research, using the scholarships of discovery, application, integration, or teaching, that supports defense enterprise decision-making, problem solving, and policy setting; improves business management processes and practices; contributes knowledge to academic disciplines via dissemination in high-quality refereed research journals or suitable practitioner-oriented journals; and advances the development of graduate education.*

- *In Professional Service: Provide professional expertise that advances knowledge and business management within GSBPP, NPS, the Department of Navy, the Department of Defense, and other government agencies, as well as in our professional and academic organizations.*

Degree Programs and Curriculum

The Graduate School of Business and Public Policy (GSBPP) has graduate programs leading to six different master's degrees All of the programs are related and offered by the same faculty unit, using similar course offerings. These programs are predominately delivered by the same full-time resident faculty.

Two of the degrees, the Master of Business Administration (MBA) and the Master of Science in Management (MSM), are awarded from an integrated resident program. GSBPP seeks review and reaccreditation of both the MBA and MSM degree programs in 2008. This Self-Study Volume I covers the MBA program. A separate Self-Study Volume I has been prepared for the MSM program.

GSBPP additionally offers three part-time, distance learning degree programs, the Master of Science in Program Management (MSPM), the Master of Science in Contract

Management (MSCM) and the Executive Master of Business Administration (EMBA). Starting in 2006, GSBPP also offers a new one-year resident degree, the Master of Executive Management (MEM). GSBPP does not seek accreditation for these programs.

In general each degree program consists of three main parts: a common core of courses relevant broadly to the practice of public management, a specialization emphasizing a particular functional area, and a capstone project or thesis.

The major elements of the core of all Graduate School of Business and Public Policy curricula are those functional and analytical subjects that underlie effective management in all public organizations. These subjects include communication skills, information technology, economics, financial management, human and organizational behavior, management policy, public policy processes, and quantitative and qualitative analytical methods.

In addition to the core, with few exceptions students are enrolled in specialty programs designed to prepare them for management responsibilities in specific functional areas. Their programs include required courses in their areas of specialization. The project/thesis requirement allows students to demonstrate their abilities to integrate appropriate core and special curricular material through the analyses of issues and problems pertinent to their academic programs and their professional careers

All programs have a Navy (or other service) senior leader sponsor who participates in a needs assessment and biennial curriculum reviews. Academic Associates serve as program managers for each curriculum and assure that programs and courses are assessed on an ongoing basis and continuously improved. These assessments, in conjunction with NPS and the school's evaluation systems, allow us to operate high quality, unique, and military-relevant programs, and evolve these programs as changing academic and sponsor needs may require.

Research

Faculty research is an important component of the Graduate School of Business and Public Policy's mission, and is integrated to the greatest possible extent with the educational process. Students are encouraged to participate in faculty projects and faculty research results are incorporated in classroom instruction. The school's diverse, multidisciplinary character is reflected in the breadth and depth of issues addressed by faculty research, which have historically been concentrated in areas of interest to the Navy and the Departments of Defense (DoD). The school's research programs can be grouped into five functional areas, based on the school's specialty focuses: Acquisition and Contracting; Logistics and Transportation; Manpower Systems Analysis; Economics and Financial Management; and Organization, Management, and Policy Analysis.

The primary goal of the school's research program is to provide the Navy and DoD with the capability of managing defense systems efficiently and effectively. Some of this research applies an existing base of knowledge while other research requires the

development of new concepts and theory. Thus, the school recognizes the importance of both basic research and research applied to the Navy and DoD; it seeks to create a balance of both types of research in its research program.

Students

The Naval Postgraduate School operates year round. With a few exceptions, all resident students attend school full-time, 12 months a year, carrying 16 credit-hours of coursework per quarter. The resident program length for students in the Graduate School of Business and Public Policy is 18-21 months, depending on the student's curriculum. While Naval officers comprise the single largest group (45%), GSBPP enrolls students from all the U.S. military services, as well as international students (15%). All students have significant work experience and can be described as highly motivated and mature students. They are carefully selected for these programs and nearly all students complete their instructional programs within the time allotted. After completion of the program, students return to their military careers. Overall, GSBPP programs continue to enroll more than 20% of the students campus-wide.

Faculty

The school has 61 full-time nucleus faculty members who are drawn from a wide variety of academic disciplines. In addition to the academics, practitioners are an integral part of our faculty. In keeping with our mission, we employ highly qualified practitioners on a full-time basis to enhance the relevance and quality of our programs. All full-time practitioners have at least a master’s degree and have been recognized as accomplished professionals in their fields.

All GSBPP faculty members are expected to excel in teaching as well as conduct scholarly or practitioner research that is relevant to the Department of Defense. Almost all faculty members work year round; most typically teach two quarters and conduct research and/or engage in administrative work for the other two quarters.

As a group, our faculty members make significant contributions to the Navy and to other agencies in the Department of Defense through service on advisory boards, consulting to senior leaders, and teaching in management development programs. They are also active in their professional and academic communities, making significant contributions through published research, conference presentations and leadership with in their professional societies.

The Graduate School of Business and Public Policy is highly committed to providing high quality, unique, military-relevant, and cost effective programs for military officers and government civilian professionals. This goal directs our operations and provides direction for our future.

STANDARD 1.0 -- ELIGIBILITY FOR PEER REVIEW AND ACCREDITATION

Standard 1.1 Eligibility
These standards assume a commitment to the use of peer review procedures to assess educational quality. Formal peer review and accreditation processes of NASPAA are open to programs which meet criteria related to institutional accreditation, professional education, and program length as described in standards 1.2-1.4.

1.1 Eligibility

The programs in the Graduate School of Business and Public Policy (GSBPP) at the Naval Postgraduate School are eligible for peer review and accreditation.

Standard 1.2 Institutional Accreditation
The parent institution is accredited by its regional association.

1.2 Institutional Accreditation

The Naval Postgraduate School is accredited by the Western Association of Schools and Colleges. The most recent reaccreditation was conducted in 1998, resulting in full accreditation granted through 2009.

The Graduate School of Business and Public Policy is also accredited by The Association to Advance Collegiate Schools of Business – International (AACSB), receiving accreditation in 2000, with a reaccreditation review anticipated in 2009-10.

Standard 1.3 Professional Education
The primary objective is professional education preparing persons for leadership and management roles in public affairs/policy/administration.

1.3A Leadership and Management Objective

All programs offered by GSBPP are designed for students who are commissioned officers on active duty in the U.S. military services or in the military services of allied nations, as well as for civilian employees of the U.S. government.

Our programs prepare students for increasing levels of leadership and management responsibility in policy-making and professional management roles. Each of the programs

within GSBPP is designed to acquaint students with a broad overview of the functional disciplines of management. The design of each program also takes into account the environment in which the activities will be situated and the knowledge and skill base that will be required to function effectively in a specialization.

Each of our programs draws upon courses designed to provide professional public management education. These courses include management, budgeting and financial processes, information technology, quantitative and qualitative analysis, decision making, problem solving, and public policy processes.

In addition to the foundations of professional public management, each program offers unique specializations. These specializations include logistics, acquisition, contract management, program management, financial management, manpower, defense systems, information systems, defense management, and executive management.

1.3B Degree Specification

The Graduate School of Business and Public Policy has graduate programs leading to six different master's degrees All of the programs are closely related and offered by the same faculty unit, using similar course offerings, and resources. All of these programs are delivered predominately by the same full-time resident faculty.

Two of the degrees, the Master of Business Administration (MBA) and the Master of Science in Management (MSM), are awarded from a single, integrated resident program. There are currently 12 separate programs of study within the resident program, each termed a "curriculum", falling within several groups:

- Logistics Curricula:
  - Transportation Management MBA
  - Supply Chain Management MBA
  - Material Logistics Support MBA
- Acquisition Curricula:
  - Acquisition and Contract Management MBA
  - Systems Acquisition Management MBA
- Financial Curriculum:
  - Financial Management MBA
- Information Curriculum
  - Information Systems Management MBA
- Defense Management Curricula:
  - Defense Systems Management MBA
  - Resource Planning and Management MBA
  - Defense Business Management MBA
- Analysis Curricula:
  - Manpower Systems Analysis MSM
  - Defense Systems Analysis MSM

1.3B.1 Brief Overview of the GSBPP Resident Program, Resident Degrees, and NASPAA Accreditation

It is the resident program that was initially accredited by NASPAA in 1980 and most recently reaccredited in 2000. For most of the history of the resident program, the MSM degree was the single degree offered, and completion of any of the resident curricula resulted in the award of an MSM. Starting in 1993, a second degree, the Master of Science in Resource Planning and Management (MSRPM) was established, but only one of the resident curricula (Resource Planning and Management) led to the award of this degree. During the last accreditation process, in 2000, NASPAA awarded accreditation to both of the degrees (MSM, MSRPM) in the resident program.

During 2001-2002, GSBPP conducted a major review of the resident program, resulting in a significant revision of the common core portion of the degree programs. At that time, a new degree, the MBA, was established. At that time also, the individual curricula within the resident program shifted with respect to the degree awarded upon completion of each curriculum. All curricula shifted from awarding an MSM to awarding an MBA, except for the Manpower Systems Analysis curriculum. Students completing the Manpower curriculum continued to earn and be awarded the MSM. (The Resource Planning and Management curriculum, the only curriculum that had led to the MSRPM degree, shifted to awarding the MBA in 2002, and consequently the MSRPM degree was discontinued.)

These degree changes were reported to NASPAA in the 2002 Annual Report and, following review by COPRA, the MBA became a NASPAA-accredited degree. As a result of the changing degrees being awarded in the resident program, we believe there may be some ambiguity concerning the current NASPAA accreditation status of the MSM degree. We had presumed that, with the MSM having been accredited in 2000, that accreditation status had been "extended" to the new MBA degree when it was created in 2002, but that the MSM degree remained NASPAA accredited. Our more recent understanding is that accreditation may have been "transferred" to the MBA degree, resulting in the absence of continuing accreditation of the MSM degree. In any event, GSBPP seeks (re)accreditation of both the MBA and MSM degrees in the resident program.

GSBPP originally had been scheduled for reaccreditation during the 2006-2007 academic year. We completed a self-study of our programs, with 2005-2006 being the self-study year, and with our self-study document submitted August 2006. At that time we submitted a single self-study document, covering the "resident program", and incorporating both the MBA and MSM degrees. Discussions with COPRA following its review of our self-study document led to the conclusion that the reaccreditation process would be better facilitated if we were to provide separate self-study documents for the MBA and MSM degrees. We have re-conducted our self-study for the 2006-2007 academic year and are submitting separate documents for the MBA and MSM degrees,

but with parallel treatment throughout and, often, identical or very similar content. The places of most significant difference between the two self-study documents are:

- Different program mission statements, in Standard 2.1
- Differences in some details of the curriculum, in Standard 4. Particularly in the elements of the Common Curriculum (Stnd 4.21) and the Additional Curriculum Components (Stnd 4.22).
- Where applicable and available, separation of data for the MBA and MSM degree programs in tables throughout the document, with attention focused on the data associated with the program under review.

This self-study document contains the **MBA degree**.

A listing of GSBPP degree programs follows:

DEGREE TITLE:	**Master of Business Administration (MBA)**
LOCATION:	Monterey -- Resident Program
INITIAL OFFERING:	Winter 2002
FIRST GRADUATING CLASS:	Spring 2003
NASPAA ACCREDITATION:	New degree awarded from the previously accredited program. Accreditation transferred 2002. Requesting reaccreditation in 2008

DEGREE TITLE:	**Master of Science in Management (MSM)**
LOCATION:	Monterey -- Resident Program
INITIAL OFFERING:	1960
FIRST GRADUATING CLASS:	1961
NASPAA ACCREDITATION:	Initial accreditation 1980 Last reaccreditation 2000 Requesting reaccreditation in 2008

1.3B.2 GSBPP Programs Not NASPAA-Accredited

GSBPP additionally offers three distance learning degree programs, the Master of Science in Program Management (MSPM), the Master of Science in Contract Management (MSCM), and the Executive Master of Business Administration (EMBA) that are not accredited by NASPAA. Although these programs now satisfy the four-year program length standard, GSBPP does not request a separate review nor initial accreditation of these programs at this time.

Additionally, starting with initial enrollments in July 2006, GSBPP now offers a Master of Executive Management (MEM) degree program. This program does not meet the NASPAA program length standard, and no review of this program is requested.

None of these programs are versions of either the MBA or MSM degrees. None have a similar mission and none serve a similar student population. As such, these

programs are not discussed in this Self-Study document. A description of each, however, is provided in the Appendices (Volume III), which accompanies this Self-Study.

DEGREE:	**Master of Science in Program Management**
LOCATIONS:	Off-campus. Various sites via VTC
INITIAL OFFERING:	April 1999
FIRST GRADUATING CLASS:	June 2001
NASPAA ACCREDITATION:	Not requesting accreditation review

DEGREE:	**Master of Science in Contract Management**
LOCATIONS:	Off-campus. Various sites via VTC
INITIAL OFFERING:	October 1999
FIRST GRADUATING CLASS:	December 2001
NASPAA ACCREDITATION:	Not requesting accreditation review

DEGREE:	**Executive Master of Business Administration**
LOCATIONS:	Off-campus. Various sites via VTC
INITIAL OFFERING:	Summer 2002
FIRST GRADUATING CLASS:	Spring 2004
NASPAA ACCREDITATION:	Not requesting accreditation review

DEGREE:	**Master of Executive Management**
LOCATIONS:	Monterey – Resident Program
INITIAL OFFERING:	Summer 2006
FIRST GRADUATING CLASS:	June 2007
NASPAA ACCREDITATION:	Not requesting accreditation review

Standard 1.4 Program Length
The program must have been in operation at least four years to provide adequate data for evaluating program policies, procedures, and placement of graduates.

1.4 Program Length

Initiation dates and first graduation dates for all GSBPP programs were provided above. The MBA degree was initiated in 2002, but as a continuation of the resident program, extends back decades.

Standard 1.0 Eligibility

STANDARD 2.0 -- PROGRAM MISSION

Standard 2.1 Mission Statement
The program shall state clearly its educational philosophy and mission and have an orderly process for developing appropriate strategies and objectives consistent with its mission resources, and constituencies

2.1A Mission and History of Naval Postgraduate School

The Naval Postgraduate School (NPS) provides unique professional graduate education to US military officers, civilian employees of the US government and defense-oriented individuals from other countries. Owned and operated by the United States Navy, the NPS prides itself on its ability to maintain high academic standards while responding to the dynamic needs of the Navy, other military services, other agencies within the Department of Defense and other countries. NPS is constantly developing new educational programs and delivery methods, and modifying its existing programs, to meet the emerging requirements for programs sponsors and students.

In 1901, the Naval Postgraduate School was originally established as the Postgraduate Division of the U.S. Naval Academy when it was viewed that advanced education for U.S naval officers was intrinsically valuable to the Navy. Throughout its more than one hundred year history, the Naval Postgraduate School has evolved its organization and academic programs to meet the ever-changing needs of the Navy. In 1949, as part of Department of Defense reorganization, Congress moved the Naval Postgraduate School from Annapolis, Maryland, to Monterey, California. In 1951, it officially opened at its current location.

The Naval Postgraduate School specializes in education at the Master's degree level. Some Doctoral degrees are annually conferred by the various departments in NPS. The educational programs are designed to meet the needs of the Navy; however, curricula are developed within a framework of academic degrees with the goal of keeping the highest academic standards.

The majority of the officers attending NPS are practicing military professionals who receive a mid-career education directly relevant to the challenges and concerns of their military careers. The School's curricula are therefore focused on science, engineering, technology, policy, operations, management, and international relations as they are applied to the Navy, other military services, and defense-oriented civilians.

2.1B Institutional Setting

The Naval Postgraduate School is located near downtown Monterey, on a campus of approximately 615 acres. Formerly the grounds of the Del Monte Hotel, the site was leased by the Navy during World War II and purchased in 1946. The capital of old Spanish California, Monterey was best known as a fishing port as recently as the late-1930s. Today, tourism is the area's dominant industry, although the military installations and educational institutions are also major factors in the local economy. In the wider Monterey County area, agriculture is a major industry.

In addition to the Naval Postgraduate School, the Army's Defense Language Institute, the Monterey Institute of International Studies, Monterey Peninsula College, and a branch campus of Golden Gate University are located in Monterey. Fort Ord, once an important Army installation, is now home to California State University, Monterey Bay.

Over 200,000 people live in the greater area known as the Monterey Peninsula. While the entire economic spectrum is represented, the population tends to be relatively affluent. Many have chosen the area for retirement because of the moderate climate. The Monterey Peninsula is a well known tourist area and attracts visitors from all over the world. This gives the area an active international atmosphere and supports diverse cultural events.

2.1C History of Management Education at NPS

Management education at the Naval Postgraduate School began in 1956 with the creation of the Navy Management School. At that time, the management program was five months long and did not lead to a degree. The program was lengthened to 10 months (one academic year) in 1960 and the first Master of Science in Management degrees were awarded in the following year. In 1962, as part of a general reorganization of the NPS, the Management School became a department within the Naval Postgraduate School. The program was lengthened to 12 months in 1964 and the name of the department was changed to Business Administration and Economics. In 1971, this department was merged with the Department of Operations Analysis to form a new Department of Operations Research and Administrative Sciences. In 1972, the program was extended from 12 to 18 months (six academic quarters) and the thesis requirement was instituted.

In 1975, specialty curricula for the various functional areas of management (e.g.; financial, material, manpower, etc.), each drawing on a common core, were formally established. Prior to this, there had been one curriculum with several options in the functional areas. In 1976, the Department of Operations Research and Administrative Sciences split into two separate departments: Operations Research and Administrative Sciences.

In 1992, the Department of Administrative Sciences (AS) initiated a department process to review the department's scope and direction. As a result of this process, the Department clarified its mission, developed a mission statement, and renamed itself the Department of Systems Management (SM). In 1998, Information Technology Management (ITM), which had been housed in the Department of Systems Management since 1991, was renamed, redesigned and transferred to a different division within NPS, the division of Computer and Information Sciences and Operations. Many of the ITM faculty requested and were granted joint appointments with their new division and with the Department of Systems Management. As a result, there was excellent continuity for the students.

During academic year 2000-2001, the Naval Postgraduate School (NPS) underwent a significant reorganization. Previously, NPS contained 11 academic departments, organized into three divisions. The Department of Systems Management, along with three other departments, fell within the Division of Operational and Policy Science. The Chairman of Systems Management reported to the Dean of Operational and Policy Science, who reported to the NPS Provost. NPS reorganized all academic departments into four separate graduate schools. What was formerly the Department of Systems Management became, by itself, the Graduate School of Business and Public Policy (GSBPP). The head of GSBPP is the Dean, who reports directly to the Provost. GSBPP's original organization included three Associate Deans: Associate Dean for Resident Programs, Associate Dean for Distance Learning, and Associate Dean for Research.

The original name considered for the school was the Graduate School of Business, but the faculty rejected that because it did not reflect the strong public policy component needed to meet the sponsors' and the students' broader educational needs. After extensive discussion in a faculty meeting, the faculty adopted the name Graduate School of Business and Public Policy. This was approved by the NPS Provost and Superintendent. For reference, the three other graduate schools are the School of International Graduate Studies (SIGS), the Graduate School of Engineering and Applied Science (GSEAS), and the Graduate School of Operational and Information Science (GSOIS).

The current result of these various organizational changes is that management education and research at NPS is conducted in the separate Graduate School of Business and Public Policy (GSBPP). GSBPP oversees six degree programs and 17 curricula (~30% of NPS); enrolls about 500-600 students (~25% of NPS) and employs about 65-70 full-time faculty (~15% of NPS).

2.1D GSBPP Mission and Strategy Development Process

Mission: In 1992, the Department of Administrative Sciences (an early predecessor to GSBPP), initiated a departmental process to review the scope and direction of the Department's activities, and to develop a meaningful Mission Statement. The process adopted required that faculty approval for the mission statement be unanimous, rather than by majority vote. After significant faculty discussion, a mission statement was adopted in September 1992 (the process details are contained in the September 1999 NASPAA accreditation documentation). That mission statement has been remarkably robust, and still forms the basis for the current GSBPP mission statement.

In late 1998, the Department of Systems Management (the immediate predecessor to GSBPP), initiated a departmental review of the mission statement, prompted by several changes in the previous six years: the splitting off of the Information Technology group, the establishment of new programs, the growth and changes in the international programs, and the movement of the SM Department into distance learning education. Again, after extensive faculty involvement, a modified Mission Statement was adopted in August 1999. With the exception of a few minor word changes to reflect current circumstances, that mission statement remained in effect into 2007.

Strategy: Starting in 2002 GSBPP began a school strategy process. A faculty offsite was initially held in April 2002, followed by the formation of an ad hoc school strategic planning committee. The strategic planning committee reported to the faculty in December 2002. During 2003 - 2004, the strategy process continued with recurring meetings of the GSBPP leadership team conducting a strategic analysis of the state of the school and the strategic issues it confronts. These processes resulted in two documents speaking to the strategic directions of GSBPP: A Dean's Strategic Report (2002) and a GSBPP Strategic Issues Report (2004). Copies of these documents are in Appendices 2.1I1 and 2.1I2. More recently, in 2006, the GSBPP Dean provided an updated SWOT analysis, based on his perceptions of GSBPP and the evolving external environment, and additionally provided a revised Statement of Dean's Vision and Goals. These documents are contained in Appendices 2.1I3 and 2.1I4.

The School's strategy process has continued in 2007. A GSBPP Ad Hoc Strategic Planning Committee was formed during fall 2006, initially focusing on a review and revision of the School's mission statement. A revised mission statement was adopted in February 2007, which is in effect today. This is presented in the next section, 2.1E. Building from the new mission statement and the 2004 Strategic Issues Report, the Committee developed a Strategic Directions document. This document outlines directions, initiatives and programs deserving of attention by the School and is expected to provide the focus for School efforts in the immediate future. The Strategic Directions document was endorsed by the Faculty in July 2007. A copy is provided in Appendix 2.1I5.

Program Mission: Another important activity during 2007, particularly in the context of this NASPAA reaccreditation review, concerns the development of mission statements at the level of individual degree programs. While GSBPP has long had a mission statement speaking to the School as a whole, GSBPP had not previously thought in terms of separate mission statements for each individual degree program. As noted earlier in Standard 1.3B.1, GSBPP had submitted a single Self-Study document to NASPAA is 2006 encompassing both the resident MBA and MSM degrees, but is resubmitting self-studies this year, separately for the two degrees. This exercise of separation has beneficially caused us to identify the different purposes of the two NASPAA-accredited degree programs and to clarify their distinct missions. During 2007, the GSBPP Faculty Instruction Committee (FIC) drafted separate program mission statements for the MBA and the MSM degrees. While there is considerable overlap in the two degree programs, each does have a "slant" that is distinct. Somewhat oversimplifying, the MBA degree leans toward the "Managerial" and the MSM degree leans toward the "Analytical". Both GSBPP degrees are unique and do not have perfect correlates with "standard" NASPAA degrees, but the MBA might be characterized as akin to a degree in "Public Management", while the MSM might be characterized as more akin to a degree in "Public Policy Analysis".

The newly created mission statement for the MBA degree program is presented below in section 2.1H.

2.1E GSBPP Mission Statement

Vision

To be recognized as the nation's premier school for defense-focused business management and public policy education and research. To be the institution that national leaders look to for education, research, information, and innovation in the management of the business of defense. To be recognized by our students, alumni, and other stakeholders for our excellence in defense-focused education and research.

Mission:
To serve our Nation by educating US and allied military officers as well as defense civilians in defense-focused business and public policy, by conducting research in defense management and public policy, and by providing intellectual resources for leaders and organizations concerned with defense business management practices and policies.

***Means**: We pursue our vision and perform our mission through graduate education, research, and professional service.*

- *In Education: Through resident and distance learning degree and non-degree programs, we develop students' abilities to analyze, think critically, and take intelligent actions so they can more effectively carry out their future professional responsibilities to manage organizations, resources, people, and programs in complex, sometimes life-threatening environments.*

- *In Research: Conduct research, using the scholarships of discovery, application, integration, or teaching, that supports defense enterprise decision-making, problem solving, and policy setting; improves business management processes and practices; contributes knowledge to academic disciplines via dissemination in high-quality refereed research journals or suitable practitioner-oriented journals; and advances the development of graduate education.*

- *In Professional Service: Provide professional expertise that advances knowledge and business management within GSBPP, NPS, the Department of Navy, the Department of Defense, and other government agencies, as well as in our professional and academic organizations.*

2.1F GSBPP Objectives

Education Objective

Our objective is to provide high quality, relevant, graduate education to career military officers and other government civilians whose contribution to their service or command can most be enhanced by graduate level management education. Our goal is to prepare students for a wide variety of managerial positions in both field activities (e.g., naval stations, shipboards and shipyards, supply centers, etc.) and headquarters where they might be assigned in the future. Typical career specialties for which we prepare our students include financial management, comptrollership, acquisition, logistics, manpower planning and analysis, contracting, human resources, supply center management, and transportation management.

Research Objective

Our research objective is to create opportunities for individual faculty members to engage in original research directed toward advancing the frontiers of knowledge, and thereby to maintain the currency of knowledge which is essential to conducting graduate education and guiding graduate project and thesis work.

We also aspire to enrich our research and instructional programs by encouraging faculty members and students, through personal involvement, to become acquainted with and help solve the scientific and technological challenges facing the Navy and other

organizations. We work well with the key personnel responsible for the programs attacking these problems.

We view the master's project or thesis as an important component of our program because it requires students to develop an ability to conduct independent, analytical investigations and present them in a professional way. We believe that the student who completes a carefully guided master's project or thesis is better prepared both to engage in independent research and to evaluate the research products of others.

2.1G GSBPP Educational Philosophy

All degree programs within GSBPP are designed for mid-career professionals within the military or other DoD organizations. The underlying philosophy of the graduate degrees in GSBPP calls for all students, regardless of specialty, to become familiar with each of the functional disciplines so that they can (1) exercise leadership with an awareness of how their specialty fits in with the interdependent operational characteristics of modern, complex organizations and (2) perform as informed professionals should it be necessary to take on temporary duties within a functional discipline other than their own specialty.

In the resident degree programs (MBA and MSM), this philosophy is implemented via a core of instruction that is common to all students and a specialty in a specific functional management area. It is through the core that the faculty ensures each student's compliance with the common curriculum components detailed in NASPAA's Standard 4.21. The requirements of the student's specialty provide the additional knowledge and skills that build educational relevance into the sponsor's community.

The standards that GSBPP has set for all management programs are stated in the catalog and vary by program. The standard for all degrees is a minimum of 48 quarter credit hours of graduate-level courses, although curricula in the resident program have actual credit hours well in excess of this minimum to satisfy both degree and specialty requirements. All resident MBA and MSM degrees require the successful completion of an MBA project or master's thesis.

2.1H MBA Program Mission Statement

Defense-Focused MBA Program Mission

The mission of the Defense-Focused MBA degree program is to prepare graduates for management and leadership roles in the Defense establishment of the United States or allied nations. The program prepares graduates to manage organizations, resources, people, and programs in complex environments. The program prepares graduates to

***Managerial**: Be well grounded in fundamental areas of management, including accounting, financial management, operations, economics, acquisition, strategy, communications and organizational management.*

***Environmental:** Understand the economic, political, governmental, defense and organizational environments that influence their decisions and the organizations in which they work.*

***Professional**: Possess the specialized knowledge, skills and abilities to serve in positions of significant responsibility within a specified Defense Management field (Financial Management, Logistics, Acquisition, Contracting, Defense Management, and Information Management).*

***Analytical:** Apply analytical and problem-solving techniques to enhance decision making in policy and management*

***Critical**: Be capable of thinking in a critical, creative, integrative and strategic manner*

2.1I GSBPP and MBA Program Student Body

The student body in GSBPP resident programs, and in the MBA program, is comprised of military officers and defense department civilians from all services of the United States, officers and civilians of other nations' militaries, and U.S. federal government employees. Students are generally enrolled in NPS only after completing five to eight years of military service or work experience. Students have demonstrated their professional competence and have already served in positions of significant responsibility.

Almost all of our resident students are full-time. While many of our students are graduates of the U.S. military academies, most of the students who enter the curricula offered by the Graduate School of Business and Public Policy obtained their baccalaureate degrees from civilian colleges and universities.

To be qualified for admission, a student must be a proven leader in his/her own service or command. The candidate must also hold a baccalaureate degree with at least a C+ average, and must have completed the prerequisites as required for each degree program. In addition, all international students must demonstrate English fluency. The graduate level curriculum requires dialogue and discussion both in the classroom and team projects; a good understanding of the English language is critical to success.

(The student body for our distance and off-campus education programs includes both military officers and DoD civilians. Military officers are comparable in rank to the

students who attend the resident programs. DoD civilians are mid-career professionals who have obtained baccalaureate degrees, at least, from civilian colleges and universities.)

2.1J GSBPP and MBA Program Enrollment Trends

Student enrollment is monitored and, in some cases, limited to maintain reasonable numbers of students in each discipline. Care is exercised to maintain acceptable balances between resources and numbers of students. GSBPP has seen significant growth each year over the period of the past four-five years. Growth in GSBPP has been driven primarily by two factors: 1) Increased enrollment in the resident MBA program, primarily a result of increases in U.S. Air Force students, a group that was previously an insignificant portion of our student body. This growth has enriched classroom discussions. This growth in USAF students is, however, reversing in 2007 and is expected to lead to a noticeable reduction in resident enrollment. 2) Expansion in distance learning programs, primarily a result of the establishment of the DL Executive Master of Business Administration (EMBA) program, which has risen to a steady state enrollment of about 200 students since its beginning in 2002. Table 6.3B, in the Standard 6 Student chapter of this report, provides details on the enrollment trends.

We have worked to match the growth in enrollment with a commensurate growth in faculty, support and material resources, though this has been a challenge. We see growth continuing at a moderate pace to meet the increasing demand for officers and civilians with the knowledge and tools to manage scarce human and capital resources in the defense sector. Future growth will likely occur primarily in the collective DL degree programs (not NASPAA-accredited) as opposed to the resident MBA and MSM degree programs (NASPAA-accredited).

2.1K GSBPP Instruction Program Guidance

The GSBPP faculty controls the content of the curricula leading to the degrees granted. Each of the specialty curricula in GSBPP has a sponsor. The civilian-world analogy of a sponsor would be the employer for whom the students will typically work after graduation. As an example, the sponsor for the Financial Management Curriculum is the Office of the Comptroller of the Navy. Sponsors work with GSBPP to help understand the educational needs of the students in their respective curricula. The MBA common core curriculum in the resident program is controlled by the faculty, but obtains required NPS Academic Council approval when required.

The Dean of the School, the Associate Deans, led by the Senior Associate Dean, the Academic Associates for the specific curriculum, and the Program Officer work closely with curriculum sponsors to determine educational skill requirements necessary to prepare students to serve within the sponsored specialty. There is regular and on-going contact with

the sponsors, who participate in formal, on-campus biennial curriculum reviews to foster innovation and evolutionary change.

Internally within GSBPP, the Faculty Instruction Committee (FIC) acts as the agent of the Faculty for the oversight of instruction matters and the development of instruction policy and programs. The membership of the FIC consists of faculty representing GSBPP's various faculty areas, various curricula, and various degree programs. The FIC is GSBPP's initial body for consideration of matters involving 1) instruction policy and practices, 2) significant changes to the core curriculum of degree programs or degree program requirements, and 3) the creation of new degree or non-degree instruction programs. Appendix 3.4C contains a copy of the FIC's initial charter.

External to GSBPP, the school also has a GSBPP Advisory Committee, made up of senior military flag officers and government officials at the Assistant Secretary level. The Advisory Committee advises the Dean and faculty on current military issues and future needs, and helps direct us toward research issues and funding. Their personal involvement and support for both teaching and research is helpful for GSBPP to stay in front of the many changes that are occurring in the national security environment around the world. The GSBPP Advisory Committee was established in 2002. Intended to meet at least twice a year, the level of the Committee's involvement and attention to GSBPP has varied since its establishment, often depending on the Chairmanship and make up of the Committee. While continuing communication between the GSBPP Dean and members of the Committee – as individuals – occurs, there has been little activity of the Advisory Committee – as a Committee - during the past couple of years. At present the Advisory Committee represents unrealized potential for the benefit of GSBPP. Appendix 2.1G contains the Advisory Committee's initial charter.

Standard 2.2 Assessment
The program shall assess its students' performance and the accomplishment of its objectives. Assessment procedures and measures may take any form appropriate to the program and its circumstances, but each program shall develop and use procedures for determining how well it carries out its mission.

2.2A Overview of GSBPP Assessment and Review Procedures

Assessment practices flow from the school's mission: The mission of NPS is to provide advanced professional studies at the graduate level for military officers and defense officials from all services and other nations. To accomplish that mission in GSBPP, the educational programs are structured around a core curriculum as well as specialized curricula of study that fulfill the present and future needs of the defense community for officers educated in management. The various curricula are designed to

educate the officers in specific Educational Skill Requirements (ESRs). ESRs define a particular set of educational skills that an officer should possess to function effectively as a manager in a given specialization area. ESRs for a program are developed by curriculum sponsors in conjunction with NPS, especially with the faculty who teach in specialty areas.

The Graduate School of Business and Public Policy has various stakeholders, including students, alumni, faculty, program sponsors, and the broader defense and academic communities. The school relies on a number of procedures, both formal and informal, to obtain feedback from each of these groups to assess the school's performance and the accomplishment of its educational mission.

Formal systems include such items as surveys and questionnaires, which are routinely administered, primarily to current students. A survey for alumni, to be conducted by NPS, is in final draft stages. There are also formally assigned positions within the school that have central responsibility for assessment and management of curricula.

Informal systems include the network of contacts that exist between faculty and former students, military officers, and executives within the larger defense community. The various mechanisms used for assessment and review fall into three related areas – positions, processes, information - as follows:

- Managerial Positions with Assessment Responsibility
  - -Senior Associate Dean / Associate Dean for Instruction
  - -Academic Associate for the MBA/MSM Core
  - -Academic Associates for specialization curricula
  - -Program Officer
  - -Course Coordinators
- NPS and GSBPP Review Processes
  - -Curriculum Review Process
  - -Educational Skill Requirements (ESRs)
  - -Annual Faculty Review Process
  - -Faculty Instruction Committee
  - -Faculty Advisory Board
  - -Ad hoc program review committees
  - -Student Educational Representatives
- Assessment Information: Surveys and Questionnaires:
  - -NPS Student Opinion Forms
  - -GSBPP Core Curriculum Survey
  - -GSBPP Student Exit Curriculum Surveys
  - -Midterm Student Opinion Forms
  - -NPS Alumni Survey

All of these mechanisms play a role in assessment and will be discussed further below. However, unique to NPS, and central to assessment, are the position of Academic Associate and the formal process of the Curriculum Review, so these mechanisms are described first.

2.2B Academic Associates and Curriculum Reviews

Academic Associates

Assessment practices are structured in terms of curricula. Once a curriculum is established, an Academic Associate is designated for each curriculum. This person has the primary responsibility for managing the curriculum. He/she is responsible for developing, maintaining, and updating curricula to accommodate the needs and academic requirements of the Navy and the Department of Defense. The Program Officer, an active duty naval officer assigned to GSBPP, assists the Academic Associate with administrative liaison with sponsors. The Academic Associate is a faculty member thoroughly familiar with NPS, the Navy and DoD, and is assigned part-time duty to this position. (Appendix 2.2B1, from the NPS Faculty Handbook, further describes the Academic Associate and Program Officer positions.)

The Academic Associate works with specialty sponsors and consultants to define pertinent needs, including professional objectives; to delineate projected utilization of program graduates; and to consult with GSBPP management and faculty to propose useful courses and curricula. These plans and projections consider the impact of developing technology, evolving bodies of knowledge (i.e., other graduate programs related to those under their purview), and the changing mission of the Navy. They are prepared, reviewed, and updated during sponsor reviews of curricula. The Academic Associate maintains a close relationship with the curriculum sponsor to ensure Navy requirements are linked to the academic ESRs.

The Academic Associate for the resident MBA core curriculum is responsible for working with faculty, students and GSBPP management to ensure the quality of the core courses. As will all Academic Associates, he/she has access to all assessment data collected and is responsible for formulating recommendations for suggested changes (such recommendations would go first to the Faculty Instruction Committee and subsequently to the faculty for vote).

Academic Associates for the **resident MBA curricula** are as follows:

Logistics Management Curricula:

- Transportation Management (814) — Keebom Kang
- Supply Chain Management (819) — Keebom Kang
- Material Logistics Support (827) — Keebom Kang

Acquisition Management Curricula

- Acquisition and Contract Management (815) — Rene Rendon
- Systems Acquisitions Management (816) — Keith Snider

Financial Curriculum

- Financial Management (837) — Larry Jones

Defense Management Curricula

- Defense Systems Analysis International (818) — Alice Crawford
- Resource Planning & Mgnt for Intl Defense (820) — Alice Crawford
- Defense Business Management (809) — Jim Suchan

Information Management Curriculum

- Information Systems Management (870) — Glenn Cook

Core Curriculum

- MBA Common Core — Jim Suchan

Academic Associates for the **resident MSM curricula** are as follows:

Analysis Curricula

- Manpower Systems Analysis (847) — Steve Mehay
- Defense Systems Analysis (817) — Don Summers

Core Curriculum

- MSM Common Core — Jim Suchan

Academic Associates for the **Executive Management** curricula are as follows:

Executive Masters in Business Administration (805) — John Mutty
Master of Executive Management (808) — Bryan Hudgens

Academic Associates for the **Distance Learning MS** curricula are as follows:

Contract Management (835) — Corey Yoder
Program Management (836) — Brad Naegle

In carrying out his or her responsibilities, each Academic Associate maintains ongoing contact with the students, faculty, sponsors and alumni of his/her curriculum. Academic Associates for all curricula have a similar responsibility, but each develops his/her own procedures for managing the curriculum. Routine practices cited by the Academic Associates who manage the resident curricula include:

Input from current students

Meetings with student Section Leaders
Evaluation meetings with current students in the curriculum
Formal exit questionnaires administered to graduating students
End of curricula exit interviews/critiques with graduating students

Academic advising sessions with students
Review of course evaluation (SOF) data
Input from curriculum sponsors
Biennial Curriculum Review
Sponsor campus visits
Informal curriculum reviews with sponsor
Ongoing ad hoc sponsor contact
Input from graduates/alumni:
Ad hoc contact with graduates
NPS Alumni survey planned
Input from Faculty
Curriculum faculty meetings
Supervision of Course Coordinators
Review of course outlines

The Curricular Review Process

The Naval Postgraduate School is unique in that each curriculum exists to serve specified educational needs identified by a sponsor external to the school, but within the defense community. The content of each curriculum is assessed and revised every two years through a structured sequence of events culminating in a formal Curriculum Review with the curriculum sponsor. The purpose of the review is to validate ESRs and propose new ESRs if required; validate any joint stakeholder requirements; review degree requirements that may be independent of the ESRs; conduct an assessment of the design and execution of the curriculum (including a review of faculty and student research). Appendix 2.2B2 provides the formal NPS instruction for curriculum reviews.

Planned events in the review cycle leading up to the formal Review include the following:

Twelve months prior: the Academic Associate begins coordination with sponsors/stakeholders on issues for the next curricular review. They may be assisted in the logistics of this effort by the GSBPP Programs Officer (A Navy Commander who has military line authority over the students and is thoroughly familiar with the curriculum, the sponsors and Navy systems).

Eleven months prior: a review is conducted by program sponsors. This process is mostly external to NPS. The intent is for the program sponsor to review manpower and billets (jobs) and hence review needs for students educated within a given specialty area. The Academic Associate begins collecting required internal data such as exit interviews, survey results, and course content for analysis.

Seven months prior: the School Dean chairs an internal curriculum review. Participants include the NPS Director of Programs, the Academic Associate for the

curriculum, the GSBPP Programs Officer, and the Associate Dean for Instruction. The objective is to assess the curriculum's quality and relevancy. The Academic Associate conducts a curriculum self-study in preparing the Internal Review. One outcome of the Internal Review is a set of curriculum issues to be discussed with the program sponsor and become part of the formal review agenda.

Two months prior: the Academic Associate consults with the sponsors on the status of the review and gathers a set of expected issues. Action plans are drafted for the expected issues.

One-month prior: the Academic Associate pre-briefs the NPS President, Provost, Associate Provost for Academic Affairs, and the Director of Programs. The pre-brief reviews the issues and the proposed presentation to the sponsor. Issues are clearly defined and coordinated with the sponsor.

Formal Curriculum Review: joint review of the curriculum by NPS and the program sponsor. The review focuses on ESRs, curriculum content and resources necessary to support the curriculum. Actions necessary to change and improve the curriculum are identified and agreed upon. While the sponsor is on campus, he/she meets with students to get direct feedback on the curriculum.

2.2C Managerial Positions, Processes and Information

Managerial Positions

- Associate Dean for Instruction Responsible for managing the development and delivery of the Graduate School of Business and Public Policy's educational programs.
- Academic Associates / Program Officer Discussed above.
- Course Coordinators Faculty members assigned to each course. Course coordinators monitor course content and assure that courses are current and relevant.

Review Processes and Review Committees

- Curriculum Review Process and Educational Skill Requirements: discussed above
- Annual Faculty Review Process Annually, the school conducts a "Collegial Review" process for faculty who are not yet at the Full Professor or Senior Lecturer rank. All Full Professors, as a group, review tenured Associate Professors; tenured Professors, as a group, review untenured Professors and Lecturers; and Senior Lecturers review Lecturers. This process reviews and mentors faculty as they progress toward promotion and/or tenure in their career at

GSBPP. But, secondarily, the review process assesses the manner in which faculty members contribute to the educational mission of the school.

- Faculty Instruction Committee The Faculty Instruction Committee (FIC) is a standing GSBPP faculty committee serving as the focal point for addressing matters related to instruction policy and practice in GSBPP. The FIC engages major curriculum issues within instructional programs. Specific roles and responsibilities include: studying and evaluating issues and proposed actions and making recommendations to the GSBPP faculty for consideration; making operational policy decisions relevant to instructional programs; providing consultation and advice for the GSBPP administration, particularly the Associate Dean for Instruction. The FIC is discussed further in standard 3.4C, within the GSBPP administrative organization.
- Faculty Advisory Board The Faculty advisory Board (FAB) is the standing faculty committee with the broadest perspective on school-wide issues and leads the processes of faculty governance in GSBPP. The primary role of the Faculty Advisory Board is to consult with and advise the Dean on GSBPP-wide issues of policy, strategy, and organization. FAB membership includes representatives of the various faculty groups in the school. The FAB is discussed further in standard 3.4C, within the GSBPP administrative organization
- Ad Hoc Faculty Program Review Committees It has been common practice in GSBPP that an ad hoc faculty review committee is established to provide an independent review of any newly proposed degree program or curricula. Such ad hoc committees report the findings of their review to the full GSBPP faculty as part of the new program approval process. (Since its recent establishment, the FIC has also played this role.) It is also common practice to establish a faculty program review committee at some period after initiating a new program, to assess the program's effectiveness once underway. Ad hoc faculty committees reviewed the MSCM and MSPM distance learning degree programs in 2003. Twice since its inception in 2002, faculty committees have reviewed the new MBA degree program. (Further comments on the review of the MBA will follow in standard 2.3, Guiding Performance.) GSBPP plans to conduct a faculty review of the EMBA program in the near future.
- Educational Representatives In 2002, GSBPP created the role of student Educational Representatives (Ed Reps) to assist the continuing assessment of the resident MBA/MSM program. The Ed Rep is selected during the first quarter by the other students in his/her entering cohort. The Ed Rep serves as a medium to facilitate communication between students, course instructors and GSBPP program administrators, thus encouraging ongoing dialogue directed toward improving the instructional programs.

Assessment Information

- Student Opinion Forms (SOFs) A questionnaire filled out by all NPS students at the completion of each course. It provides quantitative and qualitative course and

instructor evaluation. It is used by instructors to revise and improve courses and by GSBPP to evaluate faculty instructional performance. Appendix 2.2C contains a copy of the SOF. .

- GSBPP Core Curriculum Survey A student questionnaire conducted after students complete the common core curriculum in the resident MBA/MSM program (usually late in the students' third quarter or fourth quarter). This survey provides students' assessments of the value, defense-relevance and satisfaction associated with the common core curriculum courses. Rating and qualitative assessments are provided. It is used by the Associate Dean for Instruction and Academic Associate for the Core to improve the core curriculum. Appendix 2.2C contains a copy of the Core Survey.
- GSBPP Student Exit Surveys A questionnaire conducted when students complete the specialty part of the resident MBA/MSM program (late in students' final quarter at NPS). It provides students' assessments of the value, defense-relevance and satisfaction associated with the specialty curriculum courses. Rating and qualitative assessments are provided. These surveys are generally accompanied by exit briefs with graduating students to review the survey findings. It is used by Academic Associates to improve the curriculum. Appendix 2.2C contains an example subspecialty curriculum survey.
- Midterm Student Opinion Forms Some faculty members administer a course evaluation at the midterm. This may replicate the formal NPS SOF or it may be designed by the faculty member.
- NPS Alumni Survey An NPS survey has been designed and is ready to conduct. NPS plans call for initial administering of the survey during fall 2007. Appendix 2.2C contains a copy of this planned alumni survey.

Standard 2.3 Guiding Performance
The program shall use information about its performance in directing and revising program objectives, strategies, and operations

2.3A Overview of Program Changes Resulting from Assessment and Review Procedures

Significant curriculum changes have occurred during recent years due to assessment and review processes undertaken within GSBPP, as discussed in the preceding standard 2.2.

The school has reviewed and clarified its mission, principally through on-going work on the school strategy by the GSBPP management team and the Ad Hoc Strategy Committee in addition to many meetings held between sponsors/stakeholders and the Dean who entered in September 2005. This has resulted in new markets being identified,

and new programs and curricula being evaluated and created. Program changes have occurred that 1) significantly altered the resident MBA/MSM program, with emphasis in the core curriculum, 2) added and deleted specialty curricula, 3) modified the specialty curricula to better serve sponsor requirements, and 4) added and deleted degree programs. . The remainder of this section provides summary descriptions, with more detail concerning these program changes.

2.3B The MBA/MSM Resident Program -- Change in Core and Degree

Resident Degree Change Starting in 2001, GSBPP conducted a comprehensive assessment of its main resident degree programs. In part, this review grew out of the previous years' NASPAA and AACSB accreditation visits. In part, it was the result of a long-standing faculty desire to comprehensively review its core curriculum. In part it was motivated by the initiative, encouragement and support from a new NPS Superintendent at the time. The assessment included the following:

- Contact and discussion with high-level Admirals throughout the US Navy to determine their needs and expectations concerning graduate level education
- Assimilation of curriculum sponsor and student evaluations of GSBPP resident curricula
- Survey of current students to determine the value they attached to particular degrees and degree programs
- Review of the existing resident degree programs by GSBPP faculty
- Bench marking of GSBPP degree programs against peer schools

The comprehensive review of GSBPP resident degree programs was lead by a representative committee of GSBPP faculty. The committee's recommendations were reviewed by an independent GSBPP evaluation committee. These results were presented to the full faculty for further discussion and modification. After extensive faculty input and debate, the GSBPP faculty adopted the resulting recommendations, which were then approved by the NPS Academic Council. This process led to several significant decisions and actions:

- Ground-up redesign of the core courses within the resident program
- Changing the name of the predominant degree earned in the resident program from Masters of Science in Management (MSM) to Masters of Business Administration (MBA); at the time of this name change, 11 of GSBPP's resident curricula changed to awarding a "Defense-Focused MBA" degree, while one curriculum continued to award the MSM degree
- Merging the Masters of Science in International Resource Management and Planning into the defense-focused MBA degree program

Detailed results of these changes were reported to NASPAA under standard 4.0 in the 2002 annual report. (Appendix 2.3C contains excerpts from NASPAA Annual Reports 2002-2004 describing curriculum changes.)

2002 Review The GSBPP faculty closely tracked the initial student cohorts that started in January 2002 to monitor all aspects of the program. This tracking involved substantial student input. It became clear early on that the new core design materially exacerbated a problem our students had been experiencing, to a lesser degree, for a number of years: excessive academic workload. In responding to evolving and increasing educational requirements from our specialized curricula sponsors, we had added several required specialty courses, many of them "small" course (less than the 4-credit hour standard). The cumulative effect of added requirements in the specialization curricula and the core redesign was to increase student workload beyond a level conducive to successful learning.

During fall 2002, a faculty committee examined the issue and suggested changes to correct the student workload problem. The process involved the faculty examining the core MBA program, the Academic Associates, in conjunction with faculty groups in each specialty area, examining the specialty portion of the program, and individual instructors examining the workload in their courses. The recommended changes were adopted by the larger faculty and approved by the NPS academic council as appropriate. Objectives were to:

- Reduce the absolute number of courses (particularly 2-credit hour courses)
- Reduce the total credit hours in specialization curricula
- Adjust student work assigned in individual courses to correspond to course credit hour size.

With these changes, the curricula now average somewhere around 16 +/- credit hours per quarter, a "normal" load. Detailed results of these changes were reported to NASPAA under standard 4.0 in the 2003 annual report.

2003-2004 Review When GSBPP adopted the MBA, the faculty pledged to systematically review the program after the first class graduated in June 2003. This review was initiated during fall 2003 and completed in summer 2004. The review was lead by a GSBPP faculty committee. Their recommendations were adopted by the full GSBPP faculty and approved by the NPS Academic Council, as appropriate. The committee suggested modest adjustments to the core courses. These changes primarily involved repackaging the management and analytical core courses. Detailed results of these changes were reported to NASPAA under standard 4.0 in the 2004 annual report.

2005 Changes The only significant change to the core in 2005 was introducing a "core elective" block. Students had almost no flexibility or room in their defined curricula for elective courses. As a part of the MBA core, all students are now required

to select one course from a short list of offerings. This core elective block provides a space both for students to select an elective course and for the program to experiment and innovate by offering new courses. An acceptable core elective must add value to the core knowledge in business and public policy and be relevant to students in any concentration curricula. Detailed results of these changes were reported to NASPAA under standard 4.0 in the 2005 annual report.

As described above, our curricula are periodically fine tuned to meet the changing needs of the students and program sponsors. Care is taken to maintain an integrated curriculum that is linked across each curriculum's educational objectives. This results in an effective student learning environment.

2.3C The MBA Program -- Additions and Deletions of Specialty Curricula

In response to changing sponsor needs, interest in the MBA program by new sponsors, or changes in student enrollments, new individual specialty curricula may be created and older ones discontinued. During recent years, two new curricula have been added under the MBA program umbrella, two have dropped out.

Shore Installation Management: At the time GSBPP was last reaccreditation by NASPAA, the Shore Installation Management (SIM) Curriculum was one of the many curricula offered within the resident degree program. Though valued by the Navy, the Navy was unable to maintain student enrollments in the SIM curriculum at the level anticipated when the curriculum was created. Small student numbers made the curriculum unsustainable and the final students graduated in 2002.

Information Systems Management: A new specialty curriculum created since the last NASPAA reaccreditation is the Information Systems Management (ISM) curriculum. ISM was developed in response to a requirement from the Naval Supply Systems Command (NAVSUP). NAVSUP sponsors a number of curricula at NPS, both in GSBPP and in other NPS graduate schools. NAVSUP identified a need for graduates with a blended education, including broad managerial and administrative expertise with significant information system technology depth. The ISM curriculum combines the common core curriculum courses from GSBPP's MBA program with specialization courses from NPS's Department of Information Sciences. This curriculum is described fully in standard 4.0.

Defense Business Management: A new curriculum created just this past year (2007) is the Defense Business Management (DBM) curriculum. DBM was created for students who may pursue the MBA degree but have no need to satisfy the specialization requirements of any of the other recognized specialty curricula. The DBM permits students to design their own specialization, in conjunction with their Academic Associate.

Defense Systems Analysis: Defense Systems Analysis (DSA) has long been one of the curricula in the resident program. As for most resident curricula, an MSM degree was awarded prior to 2002, and the DSA curriculum then shifted to awarding the MBA degree upon its development in 2002. During 2006-2007, the DSA curriculum underwent a significant curriculum review with the sponsors, leading to a redefinition of the objectives of the curriculum. Sponsors wished to increase the emphasis and focus on developing the analytical skills and capabilities of the graduates. In response to this, quantitative methods and modeling courses were added to the DSA and a master's thesis became a required component. The objectives of this "new" DSA curriculum are better aligned with the MSM degree program rather than the MBA degree program, so the DSA curriculum now satisfies the requirements of the MSM degree and, starting with 2007, students following the DSA curriculum will earn and be awarded the MSM. DMA is no longer and MBA degree curriculum.

2.3D MBA Specialty Curricula Review and Changes

The school has assessed and reviewed the MBA specialization curricula, principally through the ongoing formal process of curriculum reviews of existing programs. This has resulted in continuing modification and adjustment to better satisfy academic and curriculum sponsor needs. Below is a summary of changes in specialty curricula that have occurred during recent (about five) years.

Logistics Curricula:

- The following sentence was added to the ESRs: "The graduate will also have a detailed understanding of the plans and processes of the DoD for providing support of strategic sealift and mobilization."
- Transportation Logistics Management Curriculum (813) and Systems Inventory Management Curriculum (819) were merged under the Supply Chain Management Curriculum (819)
- With the change from the MS to MBA degree, three curricula (Transportation Management (814), Supply Chain Management (819), and Material Logistics Support Management (827)) adopted a common course matrix
- Added a new course: GB3420 Supply Chain Management
- Added a new course: GB4420 Logistics Information Systems
- Revised requirements for Acquisition courses: GB3031 (2-0) may be substituted by MN3301 (4-0) or MN3331 (5-1) as part of DAWIA certification requirements; Curriculum 819 officers (3100 Officers) take MN3331 (5-1); Curriculum 814 and 827 officers (1110 & 1520 Officers) choose between MN3301 (4-0) and MN3331 (5-1)

Acquisition Curricula:

For the Acquisition and Contract Management Curriculum (815)

- Created, in response to USAF needs, a three-course track in Strategic Purchasing. Developed Educational Skill Requirements (ESRs) for this track
- Created two new courses, one on Contingency Contracting and one on Contracting for Services
- Revised three courses (MN3303, MN3315, and MN4371) to align those more closely with Defense Acquisition University (DAU) learning objectives
- 5th quarter; Contingency Contracting course (MN3318) moved to 6th quarter
- Dropped MN2302 (0-2) seminar in quarters 4, 5, and 6. Retain capability for guest speakers.
- MN3304 and MN3312 DAU equivalencies updated

For the Systems Acquisition Management Curriculum (816):

- In response to Army and Air Force sponsor needs, reduced curriculum length from seven to six quarters
- Revised MN4602 (Test & Evaluation Management) from 2-0 to 2-2 to reflect additional content and sponsor emphasis
- Revised Educational Skill Requirements (ESRs) to reflect sponsor emphasis on "systems of systems" management and strategic thinking
- Removed MN2303 (Seminar for Program Management Students) to reduce the students' quarterly workload
- Obtained DAU equivalency for MN4602 (Test & Evaluation Management, 2-2)
- Updated MN3303 and MN3304 to reflect new DAU equivalencies

Financial Curriculum

For the Financial Management Curriculum (837):

- As a result of the 2004 Curriculum Review, the ESRs were revised to conform to the Joint Financial Management Improvement Program's Competencies for Federal Financial Managers; JFMIP is jointly sponsored by OMB, OPM and Treasury
- Added two options for Certified Management Accountant (CMA), Certified Financial Manager (CFM), and Certified Defense Financial Manager (CDFM) Professional Certifications: MN4157 Seminar in Management Accounting and GB4560 Seminar in Financial Management
- Added required courses GB4550 (Advanced Financial Reporting) and GB4570 (Advanced Finance)

- Added OA4702 (Cost Estimation) to replace required MN4163 (Decision, Cost and Policy Analysis)
- Developed new required course, MN3301 (Systems Acquisition Management) for U.S. Navy and Air Force students in place of MN3331 (Systems Acquisition and Project Management), which continues as the requirement for USMC students
- Reinstituted GB4520, Internal Control and Auditing, as a required curriculum course.

2.3E New and Deleted GSBPP Degree Programs

Beyond the development of the MBA degree, there have been four major additions and deletions to GSBPP degree programs during the past five years.

EMBA In 2002, GSBPP began a new Executive Master of Business Administration (EMBA) program. A continuing issue concerning graduate education for U.S. Naval officers is the difficulty of Unrestricted Line (URL) officers to devote lengthy periods of time away from operational careers to full-time graduate education. As a response to these circumstances, GSBPP created the part-time, distance learning EMBA program, providing management and administrative education without disrupting officers' career paths. The EMBA program is offered to students by VTC at 13 sites around the country. The program currently has an enrollment of about 200 students. The EMBA is described in detail in the Volume III, Appendices, within Appendix 9.0.

MSRPM: The Master of Science in Resource Planning and Management (MSRPM) degree program had existed since 1993, and was the degree awarded to students (all international) who completed the Resource Planning and Management for International Defense curriculum. In 2002, following the revision of the resident core curriculum and the establishment of the MBA degree, sponsors for the Resource Planning curriculum decided to transition the curriculum to the MBA program. The set of courses in the Resource Planning curriculum were revised to incorporate all MBA core courses and satisfy MBA degree requirements. With this shift to the MBA, the MSRPM degree was discontinued.

MEM In 2006, GSBPP received approval from the NPS Academic Council to offer a new resident degree program, the Master of Executive Management (MEM). The MEM was developed at the request of the U.S. Air Force Acquisition community. Across the service, the USAF designates high-performing, mid-career officers for Intermediate Development Education (IDE) and sends such officers to graduate programs. The USAF Acquisition community requested that GSBPP develop a 1-year resident program to serve its IDE officer needs. Curriculum-wise, the MEM has been modeled on the EMBA program and is very similar with respect to objectives, curriculum content and courses. The MEM enrolled its first students (5) in July 2006. The MEM is described more fully in Appendix 4.1.

LEAD The Master of Science in Leadership and Human Resource Development (LEAD) program was designed and managed for the United States Naval Academy (USNA) by GSBPP for nine years. The program was delivered by NPS faculty, who traveled to USNA, in modularized courses one to two weeks long. During 2006, USNA conducted a review of their needs and decided to put the program up for competitive bids. In June 2006, USNA outsourced this program to the University of Maryland. While 2006 marked that last year for GSBPP delivery of the LEAD program, there is some possibility that the program could return to GSBPP at some point in the future. The LEAD program is discussed fully in Volume III, Appendices, within Appendix 9.0.

STANDARD 3.0 -- PROGRAM JURISDICTION

Standard 3.1 Administrative Organization
Within the framework of the university organization, responsibility for the professional masters degree program should rest with an identifiable component of faculty and an administrative organization capable of conducting the program effectively.

3.1A Administration Arrangement

The Naval Postgraduate School (the university) is organized into university-level administrative offices and the academic operating units. An NPS organization chart is provided below that depicts an overview of the university administration and the academic units. The major academic units are the four individual graduate schools, further divided into departments:

- The Graduate School of Engineering and Applied Sciences: Dean James Kays
  - -Applied Mathematics
  - -Oceanography
  - -Space Systems
  - -Systems Engineering
  - -Physics
  - -Meteorology
  - -Mechanical and Astronomical Engineering
  - -Electrical and Computer Engineering

- The Graduate School of Operational and Information Sciences: Dean Peter Purdue
  - -Operations Research
  - -Computer Science
  - -Information Sciences
  - -Defense Analysis

- The School of International Graduates Studies: Dean Robert Ord
  - -National Security Affairs
  - -Center for Homeland Defense and Security
  - -Center for Civil Military Relations
  - -Defense Resources Management Institute

- The Graduate School of Business and Public Policy: Dean Robert Beck

Besides the four graduate school deans, NPS has a Dean/Associate Provost of Research, providing oversight of NPS research program activities and administrative supervision of three NPS research institutes:

Within the NPS academic units, department chairs report to the graduate school deans; the deans report to the Provost and Vice President of NPS. The Provost is responsible for the academic programs and their operations. He delegates responsibilities, as appropriate, to the respective deans and department chairmen. The current NPS Provost position is Dr. Leonard Ferrari. Formerly the NPS Dean of Research, Dr. Ferrari assumed the Provost position in early AY 2007.

The institution is headed by a President. Historically, the President (formerly Superintendent) of NPS has been an Admiral on active duty in the Navy. Historically, the President's term ranged from two to three years duration. The most recent President of NPS was Rear Admiral Richard Wells, Acting President from January-June 2006. During 2006, legislation was passed by the U.S. Congress permitting the President's position to additionally be filled by a civilian. The President's position was vacant until April 1, 2007, when the position was assumed by President Daniel T. Oliver. President Oliver is the first civilian President of NPS, with an initial term of five years. While a civilian, President Oliver is a retired Vice Admiral, having formerly served a full and accomplished career in the U.S. Navy.

3.1B Relationship with Other Academic Units

There are no significant formal relationships or joint agreements between GSBPP and other departments at NPS. There are, however, numerous situations in which GSBPP and other departments collaborate to deliver NPS degree programs or curricula. These arrangements are typically of the service type, providing courses either to or from other departments. The Operations Research, Information Sciences, National Security Affairs, and Systems Engineering Departments all offer courses designed for MBA and MSM students. Our faculty exercise considerable influence on this course content.

Standard 3.2 Recognized Program
There is a public affairs and administrative program with identifiable faculty membership, whose primary responsibility for the program is recognized at the next higher level of university organization.

3.2 Recognized Program

As shown in the GSBPP organizational chart below, Robert Beck was the Dean of the Graduate School of Business and Public Policy during the self-study year. Dean Beck

has overall responsibility for GSBPP's operation and for maintaining links with the school's external sponsors and stakeholders. Dean Beck is advised by the Faculty Advisory Board (FAB). The FAB is composed of elected representatives from all faculty groups and serves as the standing faculty committee with the broadest perspective on School-wide issues.

2A School Administration

Dean Beck is assisted in his administrative duties by one Senior Associate Dean (Professor Doug Moses) and three Associate Deans; one for Instruction (Professor Doug Moses), one for Research (currently vacant); and one Military Associate Dean (Captain Terry Rea, USN). Professor Doug Brinkley serves as the department's Director of Instructional Computer Support, a part-time administrative role

Professor Doug Moses (Senior Associate Dean and Associate Dean-Instruction) assists the Dean with the overall internal operations of the Graduate School of Business and Public Policy, including budgeting oversight, faculty affairs (e.g., recruiting and hiring, collegial review process, etc.), instructional program coordination, and academic issues. As Associate Dean – Instruction, Professor Moses is responsible for assigning faculty to deliver the courses required by the various curricula. He also chairs the Faculty Instruction Committee (FIC) which exercises the oversight necessary to maintain consistent academic quality across the broad spectrum of curricula offered.

The Associate Dean-Research is charged with encouraging and facilitating scholarly activity on the part of our faculty. S/he oversees the processing of proposals for both internal and external research support and represents GSBPP on the NPS Research Board. S/he also chairs the Faculty Research Committee (FRC), which provides advice and guidance on GSBPP-wide issues of research policy and strategy, with the objective of continually improving GSBPP's scholarly productivity, broadly defined.

Captain Terry Rea, USN (Military Associate Dean) is the senior military officer in the school. Captain Riddle oversees military officers in the school and acts as a liaison with external military commands. In GSBPP, the Military Associate Dean also coordinates support functions and activities within the school and supervises staff members who provide those services. Included are secretarial services, supply and equipment purchasing, travel, word processing and graphic arts support, and contract services.

Professor Brinkley is responsible for coordination and operation of the school's classroom computers and computer labs, both research and instructional.

3.2B Faculty Administration

GSBPP includes a number of administrative positions designated as "Academic Associates" (AAs). Each instructional program or curriculum within the school, and each of the major faculty groups within the school, is administered by a faculty member holding an Academic Associate position. Individual AAs may have program responsibility, faculty responsibility, or both. AAs with program responsibility oversee the curriculum content and the integrity of their academic programs and maintain relationships with program sponsors (including conducting curriculum reviews). AAs with faculty responsibility oversee the faculty members within their area, including teaching schedules, recruiting and hiring, and mentoring. The Academic Associates are nominated by the school's Dean and appointed by the NPS Provost.

Since 2006, reflecting an evolution in roles, the Academic Associates who have faculty responsibility have also been referred to as "area chairs". Staring July 2007, distinct administrative appointments as Area Chair have been extended to the five AA positions with responsibility for coordinating area faculty. They are:

Area Chair	Academic Area
• Professor Larry Jones	Financial Management Faculty
• Professor Steve Mehay	Economics and Manpower Faculty
• Professor Frank Barrett	Management Faculty
• Associate Professor Keith Snider	Acquisition Faculty
• Associate Professor Keebom Kang	Operations and Logistics Faculty

3.2C Administration of Research Activities

As noted above, GSBPP has an Associate Dean for Research whose central responsibility is coordination and administration related to the school's research programs and activities. Additionally, as part of the faculty governance structure (discussed more fully in section 3.4), the Faculty Research Committee provides the means for direct faculty participation in the school's research policies and practices.

Research programs within the school vary in size, breadth of faculty involvement, and continuity. With sufficient size, involvement and continuity, research programs may become established as having an individual identity and perhaps formal recognition as entities within the school. At present, six research programs exist as administrative entities in GSBPP:

• Acquisition Research Program	Jim Greene, Chair; Keith Snider, Prog. Mgr
• Center for Defense Mgnt Reform	Douglas Brook, Director
• Center for Innovation	Neil Thornberry, Chair
• Faculty Workload Fund	Associate Dean for Research, Coordinator
• Research Initiation Program	Associate Dean for Research, Coordinator
• MPT&E Research Program	Robert Beck, Dean, Program Manager

Standard 3.3 Program Administration
Responsibility for program administration is assigned to a dean, chairperson, director, or other single administrator who is appointed after appropriate consultation with the program faculty.

3.3A Dean

Overall responsibility for the Graduate School of Business and Public Policy and its programs is assigned to the Dean. The Dean's appointment is limited to a maximum term of three years, with possible renewals. When a Dean is to be appointed or reappointed, the NPS Provost appoints a faculty committee to poll the GSBPP faculty regarding reappointment or the need to conduct a search for a new Dean. A Dean search may include both inside and outside candidates.

An outside search begins with the formation of a committee composed of a cross-section of faculty from the Graduate School of Business and Public Policy and at least one representative from another school. The committee uses advertisements, notices, etc., in the same manner as a Dean search at a civilian university. Top candidates are brought in for interviews.

For inside candidates, individual faculty are interviewed by the Provost, as appropriate, to determine their concerns and preferences with regard to candidates. With the advice of the faculty, the NPS President and Provost confer and offer an individual the job as Dean. This process continues until a suitable person accepts and the new appointment is announced. In such a process the School faculty members have great influence on the Dean selection. In every search or reappointment since this policy was adopted, the successful candidate was supported by a majority of the School faculty.

3.3B Academic Associates

As indicated in section 3.2, the Associate Dean for Instruction is responsible for coordinating of the school's instruction programs, but each instructional program or curriculum within the school is administered by a faculty member holding an Academic Associate position. AAs with program responsibility oversee the curriculum content and the integrity of their academic programs and maintain relationships with program sponsors (including conducting curriculum reviews). The responsibilities of the curricular AAs were discussed in depth in section 2.2. Academic Associates are nominated by the school's Dean and appointed by the NPS Provost. Faculty currently acting as Academic Associates include:

For the <u>MBA program</u> and MBA curricula:

- Professor Jim Suchan — MBA core curriculum
- Professor Larry Jones — Financial Management curriculum

- Associate Professor Keith Snider — Systems Acquisition Management curriculum
- Senior Lecturer Rene Rendon — Acquisition and Contracting curriculum
- Associate Professor Keebom Kang — Logistics curricula
- Senior Lecturer Alice Crawford — International Student curricula
- Lecturer Glen Cook — Information Tech. Mgnt curriculum
- Professor Jim Suchan — Defense Business Management curriculum

For the MSM program and MSM curricula

- Professor Jim Suchan — MSM core curriculum
- Professor Steve Mehay — Manpower Systems Analysis curriculum
- Lecturer Don Summers — Defense Systems Analysis curriculum

For Other GSBPP programs and curricula:

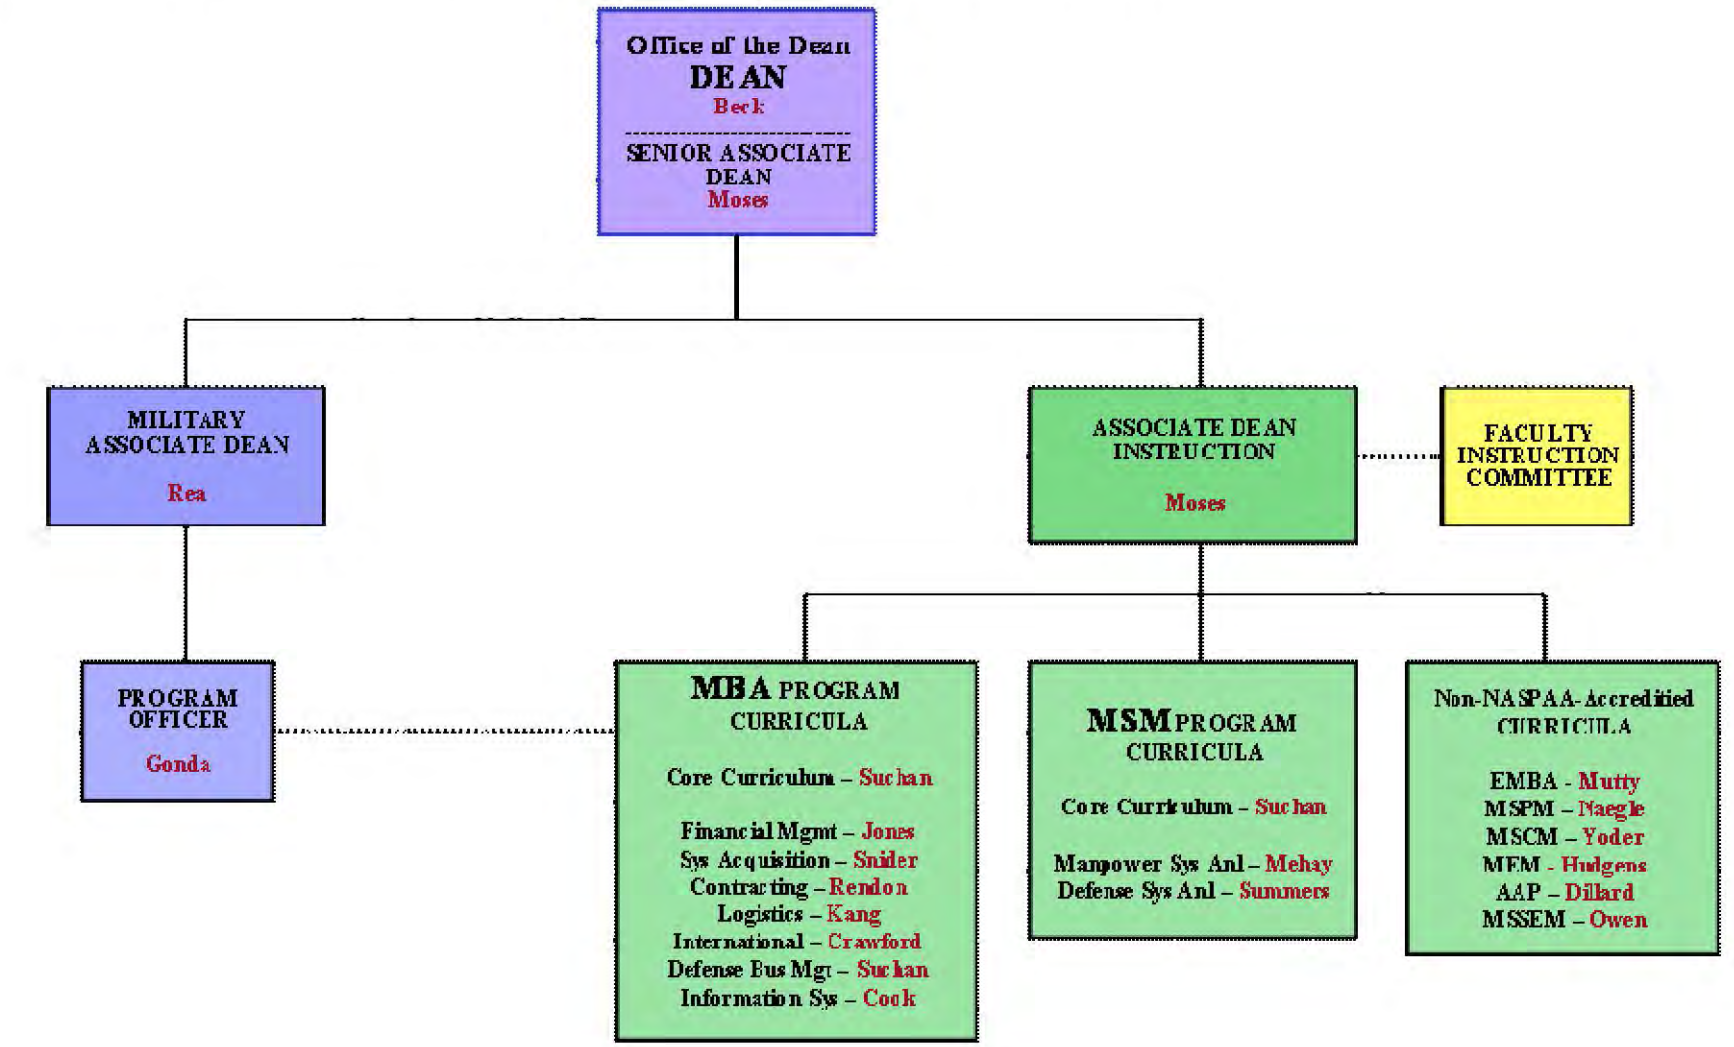
- Senior Lecturer John Mutty — Executive MBA
- Lecturer Bryan Hudgens — Master of Executive Management curriculum
- Senior Lecturer Brad Naegle — MS in Program Management
- Lecturer Cory Yoder — MS in Contract Management
- Senior Lecturer Wally Owen — MS in Systems Engineering Management

3.3C Program Officer

A unique position at the Naval Postgraduate School is the Program Officer. There are several Program Officers across NPS, one assigned to GSBPP. The Program Officer is an active duty military officer (typically at the O5 rank) with administrative responsibilities for a set of curricula. In GSBPP, the Program Officer has responsibility for student administration and administration of the school's formal curriculum review process. The Program Officer acts as a liaison between program sponsors and Academic Associates in overseeing the content of the school's resident curricula. Responsibilities of the Program Officer are noted in section 2.2. Commander Phil Gonda, USN, is the GSBPP Program Officer. Appendix 2.2B1 further describes the Program Officer position.

The following page contains a figure summarizing the GSBPP positions associated with administration of curricula and programs.

Graduate School of Business and Public Policy – Instruction Programs Administration



Standard 3.4 Scope of Influence
Within the framework of organization and process peculiar to the institution, the public affairs and administration faculty and/or administrator exercises initiative, and substantial determining influence with respect to general program policy and planning; degree requirements, new courses and curriculum changes; admissions, certification of degree candidates; course scheduling and teaching assignment; use of financial and other resources; appointment, promotion and tenuring of program faculty.

3.4A General Program Policy and Planning

The GSBPP faculty and administrators determine policy with respect to GSBPP issues. Within NPS's policy and procedures, GSBPP develops policy to facilitate the effective management of the school. Policies that have been developed or refined in the past several years include: The GSBPP Annual Review and Promotion & Tenure Processes (Appendix 3.4J1); The GSBPP Faculty Promotion & Tenure Voting Policy (Appendix 3.4J1); Policy On Lecturer and Senior Lecturer Appointments (Appendix 3.4J2); The GSBPP Policy on Recruiting and Appointment of Tenure Track Faculty (Appendix 3.4I1); and a policy establishing three faculty advisory boards, the Faculty Advisory Board (FAB), the Faculty Instruction Committee (FIC) and the Faculty Research Committee (FRC) (Appendix 3.4C).

3.4B The Senior Faculty Council

Growing out of discussions after the 1997 promotion and tenure deliberations and faculty mentoring sessions, the senior faculty (full professors) in GSBPP (then the Systems Management Department) expressed a collective desire to take more leadership and exert more influence on the governance of the Department. The Chairman at the time had encouraged this increased involvement by the senior faculty. As a result of a series of informal meetings, the Senior Faculty Council was formed in the fall of 1997. After transitioning from the Systems Management Department to the Graduate School of Business and Public Policy, the Senior Faculty Council's Charter became:

Objectives: to function as the advisory body to the School Dean in establishing policies in academic matters, including (1) programs, (2) curricula, (3) faculty evaluation and promotion, (4) collegiality, and (5) professional practice.

Membership: includes all faculty members in the school who hold the rank of full professor.

Structure and Process: The Senior Faculty Council will, after full discussion among its members, including the School Dean, make recommendations to the Dean about actions and policy making guidance. These recommendations will be based on a recorded vote of the members and are advisory to the Dean. The executive agent of the

Council is a four-person Executive Committee, consisting of three full professors selected by the Council and the Dean as an ex officio member. The three elected members will serve a one-year term and are eligible for reelection. A chairperson of the Executive Committee is selected to coordinate and chair all Executive Committee and Council meetings.

The tasks of the Executive Committee include the following:

- Solicit/entertain inputs from the faculty, students, and program sponsors regarding potential policy matters for the Senior Faculty Council to address.
- Decide whether or not a potential issue should be undertaken for further consideration, and the appropriate body (full professors, tenured faculty, full faculty, etc.) for final decision.
- Prepare specific recommendations for discussion and decision by the appropriate faculty body.
- Serve as the advisory body for the Dean on urgent academic-related matters.

When the GSBPP faculty approved the faculty governance initiatives, which included forming the Faculty Advisory Board (FAB), the Senior Faculty Council relinquished its routine advisory role in favor of the FAB, with its broader faculty representation. However, the Senior Faculty Council, now with the name of the Senior Advisors Council (SAC) continues to provide guidance as situations dictate.

3.4C GSBPP Faculty Governance Structure

The Graduate School of Business and Public Policy recently approved a faculty governance structure involving three faculty committees, the Faculty Advisory Board (FAB), the Faculty Instruction Committee (FIC) and the Faculty Research Committee (FRC). These committees serve the school's Dean, Associate Dean for Instruction and Associate Dean for Research, respectively, in both advisory and policy approval roles. The original proposals that outline the committees' membership, roles and responsibilities are provided in Appendix 3.4C.

The Faculty Advisory Board (FAB): The FAB is the standing faculty committee with the broadest perspective on school-wide issues and leads the processes of faculty governance in GSBPP. The primary role of the Faculty Advisory Board is to consult with and advise the Dean on GSBPP-wide issues of policy, strategy, and organization. Both the Dean and the FAB members can initiate and propose matters for discussion. FAB membership includes representatives of the various faculty groups as follows:

- Two members from the tenured faculty
- One member from the untenured, tenure track faculty
- Two members from the Senior Lecturer/Lecturer faculty

Members of the committee are selected for two-year staggered terms and are elected by each faculty group according to processes decided by each group.

The Faculty Instruction Committee (FIC): The FIC is a standing GSBPP faculty committee serving as the focal point for advising the Associate Dean for Instruction (ADI) on instructional matters. The FIC engages major curriculum issues within instructional programs. Specific roles and responsibilities include: studying and evaluating issues and proposed actions and making recommendations to the GSBPP faculty for consideration, as appropriate; making operational policy decisions relevant to instructional programs; providing consultation and advice for the GSBPP administration (particularly the ADI) to discuss instructional program issues and initiatives. Membership includes The ADI (chair), the five faculty area Academic Associates, the Academic Associate for International curricula, an Academic Associate from the DL programs and two at-large faculty members appointed by the Associate Dean for Instruction.

The Faculty Research Committee (FRC): The FRC is a standing GSBPP faculty committee serving as the principle faculty advisory body to the Associate Dean of Research (ADR). The FRC consults with and advises the ADR on GSBPP-wide issues of policy and strategy, with the objective of continually improving GSBPP's scholarly productivity. Both the ADR and the FRC members can initiate and propose matters for discussion. FRC membership includes the ADR (chair) and five faculty members representing the diversity of faculty in GSBPP, including: tenured professors/associate professors, untenured tenure-track faculty members, lecturers/senior lecturers.

3.4D Establishment of Curricula, Degree Requirements and New Courses

The MBA program and curricula that are under consideration in this review are developed in a two-pronged manner. Each program must meet both a) the education needs of the sponsor (the operating department or division for whose requirement the curriculum is maintained), and b) the academic degree requirements.

All degree requirements must be approved by the GSBPP faculty and the NPS Academic Council. The degree requirements are controlled by the faculty, and the curriculum requirements meet both the academic requirements established by the faculty and the educational skill requirements of the program sponsor.

Changes in degree requirements originate through various channels. Degree requirements or changes that may be proposed are reviewed by a committee of the faculty. In the past, ad hoc review committees composed of department faculty would be appointed by the chair. Since the adoption of the new faculty governance structure and the establishment of the Faculty Instruction Committee, the FIC has replaced ad hoc committees as the first level of faculty review. A separate ad hoc committee to review a particularly significant degree program matter may be recommended by the FIC. If, after extensive study of the question, the FIC votes to recommend the proposal, the FIC takes the proposal to a school faculty meeting for consideration, debate and vote by the full faculty. Appendix 4.1 is an example of a report that was recently produced for what became the Master of Executive Management (MEM) program.

If approved by the GSBPP faculty, the Dean then makes a recommendation to the NPS Academic Council through the school's representative. The Academic Council, which consists of representatives of all departments and seven ex-officio members, makes the final decision.

In defining functional management specialties, sponsors and Academic Associates often confer to design courses which have specific goals. Sponsors define these goals by specifying Educational Skill Requirements (ESRs). The faculty responds by designing academically sound courses which simultaneously meet the sponsor's objectives and contain scholarly substance.

The disciplines in the school contribute expertise for developing courses in a broad and relevant mix of subject matter. All new courses and revised courses must obtain approval from NPS's Academic Council. See Appendix 3.4D for the Council's approval guidelines.

3.4E Admission of Students to the Program

Students are admitted to the MBA Program in two basic ways. Officers are first reviewed for academic potential and performance using criteria established by the faculty and supplied through the Program Officer. Then they are screened by their particular service or command for professional performance and potential. The School provides academic ability determination advice in threshold situations, through the Academic Associate.

After an officer is selected to attend a given curriculum, contact is made through the Program Officer and Academic Associate for academic counseling. After a student arrives at the Naval Postgraduate School, the academic record is again reviewed and the Academic Associate who suggests validation of courses, as appropriate (which may be accomplished by examination or review of academic background). Throughout the curriculum, each student is again reviewed for academic performance and potential. Some individuals may be disenrolled, but the vast majority of students are able to continue to graduation.

Civilian employees of the Federal government, particularly the Department of Defense, are eligible to enroll at the Naval Postgraduate School. They are proposed to the School by their agency or activity. If the individuals proposed meet the academic standards, they are admitted.

3.4F Certification of Students for Graduation

The Academic Associate and Program Officer review the records of each individual based on the graduation policy of the Academic Council and the school. The proposed degree recipients are then reviewed by the Dean. If the Dean has any questions, he/she

consults the Academic Associate, the Program Officer, and other faculty as required. The Dean's recommendation is forward to the Academic Council for final review and award of the degree by the NPS President.

3.4G Course Schedules and Faculty Assignments

The Naval Postgraduate School is relatively conventional in its course scheduling and faculty assignment process. The Academic Associate and Program Officer assure a plan for each student's entire program is placed in the NPS student management system (PYTHON) when the student enters the program. This provides a forecast of required courses for students onboard. Future student enrollments are forecast by the Associate Dean for Instruction, in consultation with the Academic Associates. Generally, the school plans for required courses on an annual basis, summarized in the annual teaching plan. The Area Chairs for the major faculty areas coordinate the area faculty to cover the course requirements in the annual plan. The starting notion is that tenure-track faculty will teach for two quarters a year, non-tenure-track for three or four, but divergence from this standard is common as faculty may increase or decrease their teaching load depending on their involvement in research opportunities or administrative positions. Teaching requirements to deliver the school's instruction programs may change as the year proceeds, so the process of forecasting needs and coordination between the Associate Dean for Instruction, the Academic Associates, and area faculty continues iteratively throughout the year. One way in which NPS may differ from other universities is that course requirements are "demand driven". Students are sent to NPS for graduate programs of a specified length, so courses must be provided as the students' programs demand. Hence, the faculty teaching assignment process presumes that all courses demanded by students' programs will be provided. Appendix 3.4G contains the annual GSBPP Workload Planning guidelines.

3.4H Budget Preparation and Spending Authorization

The Graduate School of Business and Public Policy negotiates a budget (that covers faculty and staff salaries, operating support, supplies and travel) each year through the Director of Academic Planning, who sits as a member of NPS's Resources Planning Board. This Board recommends all Naval Postgraduate School resource allocations for the President's approval. The Board is chaired by the Provost. The Dean controls GSBPP operating expenditures.

Additional funding for faculty and staff salaries, travel, equipment and other school activities is generated through sponsored research and instructional activity. Additional funds for activities such as curriculum development, based on demonstrated needs and approved new programs, and are frequently awarded. These funds are allocated from the central NPS administration and then administered by the Dean and Associate Dean for Instruction. In recent years, funds through the International Military Education and Training program (IMET) have been available to specifically develop materials for educating international students.

3.4I Selection, Hiring, and Retention of Faculty

Upon receipt of hiring authority from the Provost, the Dean and the faculty in the relevant discipline(s) begin the recruiting process. EEO rules and procedures are reviewed by all who will participate in the effort. For reference, the GSBPP Policy on Recruiting and Appointment of Tenure Track Faculty is found at Appendix 3.4I1.

Advertising is done at professional meetings, through letters to universities, relevant print media including professional journals, through other more general media such as The Chronicle of Higher Education, and announced through the university's Human Resources website.

As vitae and recommendation letters are received they are passed to relevant faculty members for comment. Meetings are held to screen and select individuals to be invited for visits. The visitation process calls for broad exposure of the prospective new colleague to faculty and administrators. The candidate is also required to present a seminar to demonstrate his/her research abilities to all interested faculty. Upon the completion of visits, the faculty makes recommendations to the Dean about which individuals, if any, should be made offers. When a school decision is reached, the Dean confers with the candidate to ascertain his/her level of interest and salary requirement. He then formulates an offer, which is presented to the Provost for authorization. The offer can then be made by the Dean to the candidate who either accepts or rejects it. This process continues until the required individuals are hired. Operationally, the school's overall process of analyzing faculty needs, recruiting and hiring is coordinated through the Senior Associate Dean.

After an individual has joined the faculty, the Dean is responsible for performing annual performance reviews. Each year all faculty members submit a Faculty Activity Report. In the Graduate School of Business and Public Policy, it is the Dean's practice to form a performance review committee including the Associate Deans and the Dean to review all faculty, tenure-track, non-tenure-track and adjuncts, and to rate each faculty member's performance in terms of teaching, student advising, research, publications, professional and community service, colleague mentoring and administrative duties. The annual Faculty Activity Report Guidelines is in Appendix 3.4I2

These ratings, reached through discussion within the committee, are approved by the Dean and forwarded to the Provost to form the basis for the annual performance salary adjustments.

3.4J Faculty Mentoring and Annual Review Process

Each year all untenured tenure-track faculty members, tenured associate professors considering promotion to full professor or lecturers considering promotion to senior lecturer are eligible to participate in a collegial review process. This process involves submitting a

written summary and vitae that highlights the faculty member's teaching, research, and service accomplishments. Each faculty member has his or her case presented at a faculty meeting by a higher ranking colleague; all higher ranking faculty members are eligible to participate in this meeting. Discussions regarding expectations and "trajectory" toward a successful promotion and/or tenure decision ensue. After the final rounds of discussions, the reviewing faculty members complete an evaluation form. Summaries of these evaluations and discussions are provided to each reviewed faculty member by their faculty mentor. Specific recommendations for improvement are provided when an individual is not "on track". This process has provided a forum for open discussion regarding the criteria for tenure and promotion in GSBPP. Appendix 3.4J1 contains various guidelines and policies related to the annual review process.

For untenured tenure-track faculty following the normal "clock" for a tenure decision in their sixth year, collegial reviews would typically occur about three times prior to the formal tenure decision year. The initial tenure track appointment is typically for three years, so the third year review is a more rigorous evaluation leading to a faculty recommendation regarding continued employment. This recommendation provides input for the Dean's reappointment recommendations to the Provost. Faculty members considering promotion to Full Professor or Senior Lecturer are required to participate in at least two collegial reviews in the three years prior to initiating the promotion process. Non-tenure-track faculty are also reviewed as part of the annual collegial review process. In 2003 GSBPP adopted a policy on expectations related to retention and promotion of non-tenure-track faculty, contained in Appendix 3.4J2.

3.4K Promotion and Tenure of Faculty

Promotion policies at NPS are university-wide, encompassing all schools and departments. Policies differ according to the rank of faculty. Promotion from assistant to associate professor requires that one meet threshold performance criteria and exhibit scholarly accomplishments and future potential. At the time of a promotion or tenure decision, the school forms a Department Evaluation committee (DEC) that works with the candidate in preparing the promotion case. All faculty with the rank of associate professor and above then review the individual's case and make a recommendation to the Dean and Provost and to a school-wide committee composed of all Deans, Chairmen, and the Provost. Promotion to full professor is similar except that the review and recommendation is provided by only those faculty members holding the rank of Professor.

Tenure is regarded as the most important career decision point for all faculty members and the Naval Postgraduate School handles this in accordance with AAUP guidelines. A three-person committee reviews the individual's application and prepares complete documentation (which includes outside references). The school's tenured faculty then votes as a group. That vote and the GSBPP Dean's recommendation are presented to the university-wide committee described above. After this, the Deans and the Provost confer and the Provost makes a formal recommendation to the NPS President.

Further information about the mentoring, annual performance review and promotion and tenure processes are provided in Standard 5.3 Faculty Quality.

Standard 3.0 Program Jurisdiction

STANDARD 4.0 -- CURRICULUM

Standard 4.1 Purpose of the Curriculum
The purpose of the curriculum shall be to prepare students for professional leadership in public service.

4.1 Purpose

The basic objective of all of the GSBPP programs and curricula is to prepare military officers, government civilians, and international officers from allied nations for positions of middle and upper management in the defense establishment. Thus, the focus of the programs and curricula is on managing financial, human, material and information resources in the Federal government and, particularly, in the Department of Defense.

GSBPP has multiple degree programs and numerous specialized curricula, but in general each program consists of three main parts: a common core of courses relevant broadly to the practice of management, a specialization emphasizing a particular functional area, and a thesis or capstone project.

The major elements of the core in all GSBPP curricula are those functional and analytical subjects that underlie effective management in all public organizations. These subjects include communication skills, information technology, economics, budgeting and financial management, human resources and organizational behavior, management policy, public policy processes and analytical methods.

In addition to the core, with very few exceptions, all students are enrolled in special programs ("subspecialties" or "specializations") designed to prepare them for management responsibilities in specific functional areas. Their programs include required and/or elective courses in their areas of specialization. Finally, all students are required to prepare masters theses or applications projects designed to demonstrate their abilities to integrate appropriate core and special curricular material in the analyses of issues and problems pertinent to their academic programs and their professional careers.

Outline of Programs: Degrees and Curricula

GSBPP awards six different master's degrees and has 16 different fields of study (curricula). The dominant program, in terms of student enrollment, is the long-standing, resident program leading to either a Master of Business Administration (MBA) degree or a Master of Science in Management (MSM) degree. The other four degree programs have been created within recent years to serve particular student communities, typically non-resident. Each of these degree programs has only one curriculum associated with it. An outline of the GSBPP programs (degrees and curricula) is as follows:

Master of Business Administration (MBA) Program (10 curricula)

Logistics Management
- Transportation Management (814)
- Supply Chain Management (819)
- Material Logistics Support Management (827)

Acquisition Management
- Acquisition and Contract Management (815)
- Systems Acquisitions Management (816)

Financial Management
- Financial Management (837)

Defense Management
- Defense Systems Management - International (818)
- Resource Planning and Mgmt for Intl Defense (820)
- Defense Business Management (809)

Information Management
- Information Systems Management (870)

Master of Science in Management (MSM) Program (2 curricula)

Analysis Curricula
- Manpower Systems Analysis (847)
- Defense Systems Analysis (817)

Executive Degree Programs
- Executive Master of Business Administration (805)
- Master of Executive Management (808)

Master of Science Degree Programs
- Masters of Science in Program Management (836)
- Master of Science in Contract Management (835)

Coverage of Degree Programs in this Report:

This chapter will cover Standards 4.2 - 4.4 for the Master of Business Administration (MBA) degree program, including the ten curricula within that program and which lead to the MBA degree.

A separate Self-Study document (Volume I) has been prepared for the Master of Science in Management (MSM) degree program, including the (currently) two curricula within that program and which lead to the MSM degree.

An Appendix document (Volume III) provides an overview and description of the EMBA, MEM, MSPM, and MSCM degree programs, for reference. NASPAA accreditation of these program is not being sought, but collectively they represent about

30% of the instructional activity of GSBPP, and so are described in the Appendix for background purposes.

Standard 4.2 Curriculum Components for MBA Program
The curriculum components are designed to produce professionals capable of intelligent, creative analysis and communication, and action in public service. Courses taken to fulfill the common curriculum components shall be primarily for graduate students. Both the common and additional curriculum components need to be assessed as to their quality and consistency with the stated mission of the program.

4.2 Curriculum Components for MBA Degree Program

The central objective of the MBA degree program is to prepare military officers and defense civilians for positions of middle and upper management in the United States' military and defense establishment, and the military and defense establishments of allied nations. The educational objectives of the MBA program are reflected in the program mission statement (reproduced again here from Standard 2.1):

Defense-Focused MBA Program Mission

The mission of the Defense-Focused MBA degree program is to prepare graduates for management and leadership roles in the Defense establishment of the United States or allied nations. The program prepares graduates to manage organizations, resources, people, and programs in complex environments. The program prepares graduates to

- ***Managerial**: Be well grounded in fundamental areas of management, including accounting, financial management, operations, economics, acquisition, strategy, communications and organizational management.*

- ***Environmental:** Understand the economic, political, governmental, defense and organizational environments that influence their decisions and the organizations in which they work.*

- ***Professional**: Possess the specialized knowledge, skills and abilities to serve in positions of significant responsibility within a specified Defense Management field (Financial Management, Logistics, Acquisition, Contracting, Defense Management, and Information Management).*

- ***Analytical:** Apply analytical and problem-solving techniques to enhance decision making in policy and management*

- ***Critical**: Be capable of thinking in a critical, creative, integrative and strategic manner*

4.2A Background Information

Credit System:	Quarter
Length of term:	12 weeks
Full time status:	16 credits per quarter
Credit Limits:	8 credit minimum, 20 credit maximum
Time limitations:	18-21 months, depending on curriculum
Class contact hours:	1 credit = 11 contact hours
Numbering system:	0000s = no credit 1000s = Lower division college 2000s = Upper division college 3000s = Upper division or graduate 4000s = Graduate

4.2B Course Credits Distribution

Table 4.2B
COURSE CREDITS DISTRIBUTION IN MBA PROGRAM

Course Level	Required Prerequisites	Required Graduate	Additional Components	Total
Lower Div.	0-2*	0	0-7**	0-9
Upper Div.	0	0	0	0
Up Div & Grad	0	36	7-31****	43-67
Graduate only	0	18	8-26****	26-44
Project / Thesis	0	6-12***	0	6-12
Total	0-2	60-66***	24-43****	84-103

Ten curricula are offered within the MBA. All curricula share a common 16 course (54 credit) core. The variances in the table above are due to:

*A math prerequisite course (MA1010) may be required for students not suitably prepared..
**Two orientation courses (Language & Communication; US Institutions) may be required for international students.
*** The variance in the Required Graduate column is due to a choice allowed between an MBA project or a Master's thesis. The project is nominally 6 credits; the thesis is nominally 12 credits.
****The variance in the Additional Components column is due to each curriculum having different requirements for specialization courses. Two curricula (809, 818) require a minimum of 24 credit hours of additional graduate courses, but all are elective, resulting in the number of credit hours at the Upper Division/Grad or Graduate Only levels being unspecified in advance.

4.2C Capable Professionals

The MBA degree program is designed to create capable professionals by providing educational curricula (described below) designed to satisfy specific

"Educational Skills Requirements." Degree programs and curricula are created at the Naval Postgraduate School in response to educational needs identified by curriculum sponsors, the military commands that send students to attend the programs. The educational needs are formalized as a set of Educational Skills Requirements, which specify the educational objectives of each curriculum

4.2D Assessment and Guiding Performance

The curricula are monitored, assessed, reviewed and modified through several processes and mechanisms. Though there is overlap, some mechanisms are focused more on the common core of the MBA degree program, some more on the specially curricula within the degree program.

Core-Related Mechanisms:

- The managerial position of Academic Associate for the Core Curriculum: the Academic Associate is responsible for coordinating oversight of the objectives, content, assessment and quality of the core curriculum; this position is a recent addition and replaces previous faculty committees that provided core oversight
- The Student Feedback system: systematic interaction with students provides ongoing feedback concerning their assessment of the core curriculum; feedback occurs periodically throughout their program in the form of curriculum surveys and meetings with cohorts of students

Curricula-Related:

- The managerial position of Academic Associate, for each curriculum: a faculty member, acting as Academic Associate for a specific curriculum, is responsible for managing the curriculum; the Academic Associate is responsible for ongoing curriculum assessment and maintaining contact with Curriculum Sponsors to determine curriculum effectiveness in satisfying the sponsor's educational requirements
- The Curriculum Review Process: the ongoing review and assessment of each curriculum culminates in an official Curriculum Review by the Curriculum Sponsor every two years
- The Educational Skills Requirements (ESRs) system: ESRs are a statement of the objectives each curriculum is to satisfy; ESRs provide the focal point for determining if curricula meet sponsors' needs

The position of Academic Associate and the Curriculum Review Process were discussed further in this report in Standard 2.2 (Assessment). The ESRs for each curriculum are presented later in this section.

4.2E Graduate Classes

All courses in all programs are "primarily for graduate students" since NPS is exclusively a graduate school and GSBPP degree programs only enroll graduate students. NPS academic policy requires a minimum of 12 credit hours in 4000-level ("exclusively graduate") courses for a master's degree. Actual 4000-level classes in the MBA, vary across the curricula, ranging from 26-44 credits.

4.2F Required Prerequisites

Two semesters of college algebra or trigonometry with a B or better is the only stated prerequisite for admission to the program. Literacy in common computer applications programs is also expected.

Standard 4.21 Common Curriculum Components for MBA Program
The common curriculum components shall enhance the student's values, knowledge and skills to act ethically and effectively:

-In the management of Public Service Organizations, the components of which include: Human Resources; Budgeting and financial processes; Information management, technology applications, and policy.

-In the application of Quantitative and Qualitative Techniques of Analysis, the components of which include: Policy and program formulation, implementation and evaluation; Decision-making and problem-solving.

-With an understanding of the Public Policy and Organizational Environment, the components of which include: Political and legal institutions and processes; Economic and social institutions and processes; Organization and management concepts and behavior.

4.21 Common Curriculum Components for MBA Program

The MBA degree program design is based on the premise that a quality management education must include both a solid broad-based foundation of knowledge and skill in several basic management disciplines and a focused, comprehensive exposure to knowledge and practical skills in one particular management specialty area.

The broad, multi-disciplinary exposure provides the graduate with the perspective and foundation knowledge needed throughout one's managerial career as problems and challenges requiring broader consideration are encountered, especially those typically faced at senior management and executive levels. The more focused and specialty education is intended to prepare the graduate for the more immediate and anticipatable assignments as functional managers and senior staff experts in a particular discipline. The MBA common core curriculum is designed to provide the broad-based, multi-disciplinary foundation needed for future general management positions, while the

specialty curriculum is designed to provide the necessary knowledge and skills to excel in one's chosen functional discipline.

Through completion of the MBA degree program, students will earn:

- Master's Degree: Accredited by NASPAA, AACSB, WASC
- Military Specializations:
  - US Navy Subspecialty Code
  - USMC Military Occupational Specialty
  - US ARMY Military Occupational Specialty
- Professional Certifications:
  - Defense Acquisition University
  - Certified Management Accountant
  - Certified Defense Financial Manager
  - Certified Professional Contract Manager
- Military Certifications:
  - Joint Professional Military Education

Table 4.21

Economics for Defense Managers	Acquisition Management
CURRICULAR SPECIALIZATION	
Acquisition Management	Resource Planning & Management
Contracting	Financial Management
Logistics Management	Information Systems Management
Defense Management	
APPLICATION PROJECT / THESIS	
PROFESSIONAL CERTIFICATIONS	

MBA Project vs. Thesis: The MBA degree requires completion of an MBA Project or a Master's Thesis. Generally, the choice is left to the student and the overwhelming majority of students choose a Project. An exception is the "Conrad Scholars" program. The Conrad Scholars program is an honors program, open to perhaps eight students per year, that is associated with the Financial Management curriculum. Conrad scholars are required to complete a Thesis. Both the Thesis and the MBA Project provide a capstone experience for diagnosis, analysis and application of the knowledge and skills acquired during the program. Both Theses and Projects are designed to be culminating, integrative experiences, but they do differ in some respects. The principal differences are in terms of:

Participation Theses are conducted by individual students. MBA Projects are conducted by teams of students (up to three). Exception are permitted, but the norm is individual vs. teams.

Orientation Theses tend to be more analytical and research-focused. Projects may be more applied or focused on problem solving or consulting.

Scope of the effort Theses nominally equate to 12 credits of student activity. Projects nominally equate to 6 credits of student activity. While the overall scope of a Project with multiple students on a team may exceed a Thesis, the individual effort on a Thesis is intended to be greater.

4.21A Common Curriculum Courses

The following courses are required of students in the MBA degree program:

Table 4.21A
MBA CORE COURSES

Course Number	Course Title	Credits
GB3010	Managing for Organizational Effectiveness	(4-0)
GB3012	Communication for Managers	(3-0)
GB3013	Problem Analysis and Ethical Dilemmas	(0-2)
GB3020	Fundamentals of Information Technology	(4-0)
GB3040	Managerial Statistics	(4-0)
GB3042	Operations Management	(4-0)
GB3050	Financial Reporting and Analysis	(4-0)
GB3051	Cost Management	(3-0)

GB4053	Defense Budget and Financial Management Policy	(4-0)
GB4071	Economic Analysis and Defense Resource Allocation	(4-0)
GB3031	Acquisition and Program Management*	(2-0)
GBxxxx	Core Elective**	(3-0)
NW3230	Strategy and Policy: The American Experience***	(4-2)

*A minimum (2-0) Acquisition course is a core requirement, but most curricula include a larger, superior course that satisfies this requirement (usually, MN3301 or MN3331).
**Choices typically include GB3030 Marketing Management (3-0), GB4021 Strategic Management of Information Technology (3-0) or GB4044 Managerial Inquiry (3-0).
***Not required for International students. Non-DoN US officers may substitute service equivalent.

The numbers in the credit column after a course title indicate both the class hours and the quarter credit hours for the course. The first digit indicates lecture hours per week and the second digit, lab hours. One credit hour is granted for each lecture hour, and one half of a credit hour for each lab hour.

The chart below shows the pre-requisite relationship among the required core courses, and additionally shows the placement of the core courses in a typical program.

Core Curriculum Design

The courses within the common MBA core were listed above. However, it might be appropriate to briefly summarize the design underlying the common curriculum. There are two ways to do this: first, in terms of broad areas the core course address; second, in terms of how the core courses topics prepare managers.

Broad Areas: Basically, the common curriculum addresses six broad areas that we feel are critical to effective management practice: organizations and organizational behavior, economics and policy analysis, financial management, quantitative methods and analysis, operations and information technology, and institutional processes and strategic management. How each of these elements is addressed is briefly described in the following few paragraphs

Organization and organizational behavior considerations are the basic content of Managing for Organizational Effectiveness (GB3010) and are also important elements in Problem Analysis and Ethical Dilemmas (GB3013), Communication for Managers (GB3012) and Strategic Management (GB4014).

Economic analysis is emphasized in Economic of the Global Defense Environment (GB3070) while policy analysis using economic frameworks and tools is the central focus of Economic Analysis and Defense Resource Allocation (GB4071).

Concepts and techniques of financial management, including budgeting, accounting, resource management, financial analysis are addressed most explicitly in Financial Reporting and Analysis (GB3050), Cost Management (GB3051), Managerial Finance (GB4052), and Defense Budget and Financial Management Policy (GB4053) which examines the federal budget process.

Quantitative and statistical methods are the principal focus of Managerial Statistics (GB3040) and Business Modeling Analysis (GB4043).

Operations Management (GB3042) and Fundamentals of Information Technology (GB3020) both address the management of organizations in today's technological world.

In the common core, political and legal institutional processes are addressed most directly in Defense Budget and Financial Management Policy (GB4053). The focus of this course is on the processes by which government policy is established and, in particular, on the federal budget process. Economic institutions and processes are studied in Economics of the Global Defense Environment (GB3070). Strategic management considerations are the primary emphasis of Strategic Management (GB4014), although strategic planning and implementation are also addressed in Economic Analysis and Defense Resource Allocation (GB4071) and Cost Management (GB3051).

Preparation of Managers: The design of the core assumes that managers need preparation in three areas: knowledge of the functional activities that occur in

organizations, development of personal capabilities, and knowledge of the wider context in which organization exist and operate. Courses and topics within the core curriculum address these three aspects of preparing managers.

4.21B Ethical Action: Analysis of the Common Core Courses

The above sections described our purposes and organizing framework in the design of the MBA common core. This section describes the treatment of Ethics within the common core. Ethics is taught in two distinct ways: first, as the central topic of GB3013, the Problem Analysis and Ethical Dilemmas course; second, as a theme that relates to all aspect of management and is revisited in individual courses in connection to the subjects of those courses.

The Problem Analysis and Ethical Dilemmas (PAED) course is distinct from all others in the MBA curriculum. During the first two days of the first quarter in attendance for all new MBA students, regular classes are suspended and the PAED seminar is held for the full period. The course is designed to be a "welcome to what graduate school is like" experience and to immediately present new students with complex, ill-defined, no-right-answer problems and the ethical dimensions inherent in such problems. Students learn frameworks for ethical reasoning that are intended to be of value throughout their

curriculum and beyond. The remaining courses in the curriculum continue to raise ethical questions and themes in settings related to the courses' topics.

Table 4.21B offers an overview of Ethics in the common core courses. It lists brief examples of the manner or context in which Ethics is covered in core courses and provides rough estimates of the proportion of each course related to Ethics.

Table 4.21B

ETHICS CONTENT WITHIN THE MBA CORE CURRICULUM

"Enhances students' values, knowledge, and skills to act ethically"		
GB3013	**Problem Analysis and Ethical Dilemmas** As military officers advance to higher levels of responsibility, the organizational environments in which they operate become more complex and the decisions that they must make become more clouded by uncertainty. Senior government and business leaders face similar challenges. Under these conditions, ethical problems and issues often emerge in complex and uncertain ways leading to questions that go beyond simply "following the rules." The purpose of this seminar is to gain familiarity with problem analysis and the moral and ethical issues arising in the normal pursuit of public and private sector management practices. We accomplish this through the presentation, analysis, and discussion of representative case studies treating the ethical issues in society and within organizations. These cases illustrate the interdisciplinary character of moral dilemmas, and show how such dilemmas draw on insights from organizational and management theory, law, political science and social psychology, as well as from philosophical ethics. Thus, the seminar seeks to educate BPP students in theories and models of ethics, and to explore the application of this understanding of ethics to real problems of military leadership and Defense management.	100%
GB3010	**Managing for Organizational Effectiveness** Ethics in relation to leadership, change management, conflict management, negotiation, and power/influence	25%
GB3012	**Communication for Managers** Ethics in the context of persuasion. Ethics in writing and speaking assignments.	5%
GB3020	**Fundamentals of Information Technology** Information security and the protection of personal and organizational information	10%
GB3040	**Managerial Statistics** Ethical obligations of researchers and analysts toward human subjects. Ethical obligations for objective and unbiased analysis and findings.	5%
GB3042	**Operations Management**	5%

	Ethical questions in the conduct of organizational operations. Environmentally responsible and socially beneficial operations.	
GB3050	**Financial Reporting and Analysis** Ethical issues in accounting and financial reporting. Ethical implications of corporate accounting scandals and financial manipulations and misrepresentation.	15%

4.21C Curriculum Coverage: Analysis of Common Core Courses

The above sections described our purposes and organizing framework in the design of the MBA common core. This section relates the core courses to the areas listed in standard 4.21. The primary intent here is to indicate, by listing, which courses contribute to each of the NASPAA topic areas. Secondarily, rough estimates of the proportion of each course that contributes to an area are provided.

Standard 4.22 Additional Curriculum Components for MBA Program
Each program shall clearly define its objectives for additional work and the rationale for the objectives, and shall explain how the curriculum is designed to achieve those objectives. The statement of objectives shall include any program specializations or concentrations and the main category of students to be served (e.g., pre-service, in-service, full-time, part-time). If a program advertises its ability to provide preparation for a specialization or concentration in its catalog, bulletin, brochures, and/or posters, evidence shall be given that key courses in the specialization or concentration are offered on a regular basis by qualified faculty. Specialization or concentration courses may be offered by units other than the public affairs or administration program. The specialization or concentration courses shall not be substitutes for the common curriculum components.

4.22A Elective Design

In general within the MBA degree program, advanced coursework beyond the common core is intended to prepare students for management responsibilities in some particular functional area of management, a specialization. Virtually all students are sent to the Naval Postgraduate School by military sponsors who specify the functional specialties each student is to take. (The only exceptions are some, but not all, foreign military officers and U.S. government civilian employees, who are allowed to select their advanced courses, with the advice and approval of their faculty advisors. Even so, many of these students actually choose courses in one of the established specialty curricula.)

Some of the curricula have requirements such that all advanced courses beyond the common core are specified and required for students in that specialization. Some curricula may require a number of specific courses but permit the student to elect, perhaps one or two, other courses from a list of approved specialty courses. Finally, some curricula may permit the student to choose a free elective that could fall outside the specialty area. Regardless of these small differences in design, the intent of all the advanced coursework beyond the core is to achieve a specialization rather than broad, advanced training. (The exceptions are the Defense Systems Management (#818) and the Defense Business Management (#809) Curricula, where all courses beyond the core are electives and students can, if they wish, design a broad rather than specialized program.)

Current program length for nine of the ten MBA curricula is 18 months; program length for one (Information Systems Management) is 21 months. Since all share a common core (and either a thesis or project requirement), their differences are in their specialization requirements. (Even within a given curriculum, the specialization requirement may differ slightly depending on the student and/or sponsor.) Required quarter credit hours, beyond the common core curriculum, to satisfy the specialization requirements are approximately as follows:

Logistics Management
- Transportation Management (814) 26 credits
- Supply Chain Management (819) 26 credits

- Material Logistics Support Management (827) 26 credits

Acquisition Management
- Acquisition and Contract Management (815) 39 credits
- Systems Acquisitions Management (816) 37 credits

Financial Management
- Financial Management (837) 33 credits

Defense Management
- Defense Systems Management - International (818) 24 credits
- Resource Planning and Mgmt for Intl Defense (820) 24 credits
- Defense Business Management 24 credits

Information Management
- Information Systems Management (870) 43 credits

The nature of the advanced courses varies considerably, depending on both the specialization area and the particular course objectives. Some emphasize the application of analytical techniques to issues and problems in the specialization area. Others focus more on management processes in that area.

With the exception of a few seminars, used primarily for guest speakers and/or training and administrative matters, none of the advanced courses offered, either in the specialty curricula or as free electives, is listed at the undergraduate level. There are no undergraduate students in GSBPP programs, so undergraduate courses are largely absent from the programs.

4.22B Additional Curriculum Components: Specializations

Objectives, Educational Requirements & Courses for MBA Curricula

As was noted earlier, each specialty curriculum is designed to prepare students for functional management responsibilities in that specialization area. Each curriculum has its own objective. Most curricula have their own set of Educational Skill Requirements (ESRs), prepared by the faculty in consultation with the program sponsor. These skill requirements constitute the specific curriculum requirements. Each curriculum has its own required specialization courses and, perhaps, an optional course.

Descriptions of each of the ten curricula in the MBA program are presented on the following pages. The descriptions include: curriculum objective, Educational Skills Requirements (ESRs), required curriculum specialization courses (along with the names of faculty who regularly teach each course), and a "course matrix." It may be noted that certain courses appear in more than one curriculum.

LOGISTICS MANAGEMENT AREA

Transportation Management - Curriculum 814
Supply Chain Management - Curriculum 819
Material Logistics Support - Curriculum 827

Objective and Description:

The Logistics Management curricula provide education in all aspects of the logistics function. The curricula are comprised of management core and logistics concentration subjects. The management core of the Logistics Management curricula provides study in mathematics, accounting, economics, communications, marketing management, risk analysis, DoD mission, structure and resource determination, strategy making, and the global defense marketplace. The logistics curricula subjects are significant components of the military supply chain and each provides unique and relevant education that meets the critical needs of the armed services. The specialized logistics courses concentrate on studies in production and project management, inventory management, integrated logistics support, procurement and contract administration, systems acquisition, and logistics strategic planning. The logistics curricula are rounded out by including education in national, international, and defense transportation systems. The educational skills in these curricula prepare those responsible for managing the various elements of total life cycle support from requirements determination through sustainment.

The Logistics Management curricula are interdisciplinary, integrating mathematics, accounting, economics, management theory, operations analysis, and the specialty concentration to understand the process by which the defense mission is accomplished. The curricula provide the officer with fundamental interdisciplinary techniques of quantitative problem-solving methods, behavioral and management science, economic analysis, and financial management; furthermore, they provide the officer with a Navy/Defense systems-oriented graduate management education and to provide the officer with the specific functional skills to effectively manage in these specialty areas. These curricula prepare officers for naval logistics system positions. The Logistics Management curricula emphasize all of the aspects for providing integrated logistics support of military systems. Skills from the curricula prepare those responsible for managing the various segments of a military system's life cycle from initial planning for support to fielding the system, through sustaining operations to phase out. These curricula additionally emphasize the management of military owned inventories at the three levels of wholesale, intermediate and retail customer support, and worldwide transportation and distribution systems.

Completing these curricula provides a naval officer with a specialization in Supply Chain Management (subspecialty code 1304P), Material Logistics Support Management (subspecialty code 3121P), or Transportation Management (subspecialty code 3122P). U.S. Marine officers receive MOS 9662. Curriculum Sponsors are Naval

Supply Systems Command Headquarters (819), Naval Air Systems Command Headquarters (827), and Navy Military Sealift Command Headquarters (814).

Educational Skills Requirements: Curricula 814, 819, 827

1. Management Fundamentals - Quantitative Analysis The graduate will have the skills to apply mathematical, statistical, accounting, economic and other state-of-the-art quantitative techniques and concepts to the solving of day-to-day military management problems as well as the capability to use these skills as a participant in the long-range strategic planning efforts of the Navy and DoD.

2. Management Fundamentals - Organization and Management The graduate will have a thorough knowledge of basic management theory and practices, embracing leadership, communication, organizational design, staffing, directing, planning and controlling of military organizations.

3. Integrated Logistics Support Management The graduate will have a detailed understanding of the processes associated with designing an integrated logistics support system for a new weapon system. The graduate will also have detailed knowledge about the DoD processes for contracting for and acquiring a new weapon system. The graduate will be able to serve as an assistant program manager for logistics (APML) for a major weapon system.

4. Budgeting and Financial Controls The graduate will have an understanding of the financial management practices of DoD, will be able to conduct cost/benefit analyses and participate in the budgetary planning by a hardware systems command for the support of both old and new weapon systems.

5. Production/Operations Management The graduate will be able to apply the techniques of production/operations management at Naval Aviation Intermediate Activities and Depots, Navy Fleet Industrial and Support Activities and other DoD maintenance and maintenance support activities.

6. Materials and Physical Distribution Management The graduate will be able to apply the techniques of materials management and physical distribution management in designing and operating of fleet and troop support systems, both during peacetime and during rapidly developing wartime contingencies. This will include acquiring material and transportation assets to ensure that the distribution of material is both cost-effective and efficient. The graduate will also have an in-depth understanding of domestic, international and defense transportation systems including the various modes, types of carriers within each mode and the regulations affecting material movement by each type of carrier.

7. Joint and Maritime Strategic Planning The graduate will have knowledge of the development and execution of military strategy and the effects of technical effects

on warfare, an understanding of the means of formulation of U.S. policy, the roles of military forces and joint planning and current issues in the defense organization. The graduate will also have a detailed understanding of the plans and processes of the DoD for providing support of strategic sealift and mobilization.

8. Thesis/Project The graduate will demonstrate the ability to conduct independent research and analysis, and proficiency in presenting the results in writing by means of a thesis appropriate to this curriculum.

- *Not required for international students. Non-Navy students may validate comparable Service course(s)
- ** Is replaced by MN3301 (4-0) or MN3331 (5-1) for higher levels of DAU equivalency. International students take GB3031 in the 4th quarter.
- *** International Students take IT1600, Communications Skills for International Officer (if needed) in the first quarter, and IT1500, American Life and Institutions in the second or third quarter.

ACQUISITION MANAGEMENT AREA

The Acquisition Management Curricula develop the knowledge, skills and competencies necessary to effectively lead the acquisition workforce and efficiently manage the resources allocated to the acquisition process. The curricula focus on problem solving and decision-making in a variety of acquisition situations demanding critical thinking and a balanced approach in applying theory and practical solutions. Graduates of the curricula are expected to assume leadership positions in the acquisition workforce.

Acquisition and Contract Management - Curriculum 815

Objective and Description

The Acquisition and Contract Management Curriculum develops the knowledge, skills and competencies necessary to effectively lead the acquisition workforce and efficiently manage the resources allocated to the acquisition process. The curriculum focuses on problem solving and decision making in various acquisition situations demanding critical thinking and a balanced approach in applying theory and practical solutions. Graduates of the curriculum are expected to assume leadership positions in the acquisition workforce.

Completion of this curriculum qualifies naval officers as Acquisition and Contract Management specialists with a subspecialty code of 1306P, Army officers as Functional Area 51C, USAF officers as 64P, and Marine Corps officers with a 9656 MOS. The curriculum satisfies mandatory Defense Acquisition University (DAU) contracting courses required by the Defense Acquisition Workforce Improvement Act (DAWIA). The curriculum sponsor is the Deputy Assistant Secretary of the Navy (Acquisition)

Educational Skills Requirements (ESR): Curriculum 815

1. Management Fundamentals The graduate will understand the theory of and have an ability to apply accounting, economic, mathematical, statistical, managerial and other state-of-the-art management techniques and concepts to problem solving and decision-making responsibilities as military managers.

2. Advanced Management Concepts The graduate will have the ability to apply advanced management and operations research techniques to defense problems. This includes policy formulation and execution, strategic planning, defense resource allocation, cost benefit and cost effectiveness analysis, federal fiscal policy, computer-based information and decision support systems, and complex managerial situations requiring comprehensive integrated decision making.

3. Acquisition and Contracting Principles The graduate will have an understanding of and will be able to apply the principles and fundamentals of acquisition and contracting within the federal government, including knowledge of the acquisition

laws and regulations, particularly the Federal Acquisition Regulation (FAR) and the DoD FAR Supplement (DFARS); the unique legal principles applied in government contract law and the Uniform Commercial Code; and the application of sound business principles and practices to defense contracting problems. Further, the graduate will be able to apply innovative and creative approaches not only to resolve difficult acquisition and contracting issues but to significantly influence the legal and regulatory structure within which acquisition decision making occurs. Finally, the graduate will have the ability to conceptualize, develop and execute strategic business alliances and relationships necessary to the successful acquisition of goods and services.

4. Acquisition and Contracting Policy The graduate will have an ability to formulate and execute acquisition policies, strategies, plans and procedures; a knowledge of the legislative process and an ability to research and analyze acquisition legislation; and a knowledge of the government organization for acquisition, including Congress, the General Accounting Office, the Office of Federal Procurement Policy, the federal and military contracting offices, the Boards of Contract Appeals, and the court system.

5. Contracting Process The graduate will understand the theory of and have the ability to manage the field contracting, system acquisition and contract administration processes. This involves a knowledge of the defense system life cycle processes, including requirements determination, funding, contracting, ownership and disposal; an ability to evaluate military requirements, specifications and bids and proposals; an ability to utilize the sealed bid, competitive proposals and simplified acquisition methodologies; a comprehensive knowledge of all contract types and their application in defense acquisition; an ability to conduct cost and price analyses; and an ability to negotiate various contracting actions, including new procurement, contract changes and modifications, claims, equitable adjustment settlements and noncompliance issues.

6. Business Theory and Practices The graduate will have an understanding of the business philosophy, concepts, practices and methodologies of the global commercial industrial base, and the ability to apply these to the federal government acquisition environment.

7. Federal and Defense Budgeting The graduate will have an ability to apply economic and accounting principles, including monetary and fiscal theories, to defense acquisition and contracting issues.

8. Program Management The graduate will have an understanding of the basic principles and fundamentals of Program Management, with particular emphasis on the Procuring Contractor Officer's and Administrative Contracting Officer's roles and relationships with the Program Manager.

9. Acquisition Workforce The graduate will satisfy all requirements of the Defense Acquisition Workforce Improvement Act (DAWIA) and mandatory contracting courses required by the Defense Acquisition University (DAU) at Levels I, II, III.

10. Ethics and Standards of Conduct The graduate will have an ability to manage and provide leadership in the ethical considerations of military acquisition, including the provisions of procurement integrity, and to appropriately apply defense acquisition standards of conduct.

11. Strategy and Policy Officers develop a graduate-level ability to think strategically, critically analyze past military campaigns and apply historical lessons to future joint and combined operations, in order to discern the relationship between a nation's policies and goals and the ways military power may be used to achieve them. This is fulfilled by completing the first of the Naval War College course series leading to Service Intermediate-level Professional Military Education (PME) and Phase I Joint PME credit.

12. Analysis, Problem Solving, and Critical Thinking: The graduate will demonstrate the ability to conduct research and analysis, and proficiency in presenting the results in writing and orally by means of an applied project and a command-oriented briefing appropriate to this curriculum.

Required Specialization Courses

Within the 815 curriculum, students may substitute specialty courses in strategic purchasing with the approval of their service and the academic associate.

Acquisition and Contract Management - Curriculum 815			
Course	**Credits**	**Course Title**	**Faculty**
MN3331	(5 - 1)	Principles of Systems Acquisition and Program Management	Rendon, Snider, Matthews, Nalwasky, Petross

- *Not required for international students. Non-Navy students may validate comparable Service course(s)
- ** Required for USMC, US Army. Strategic Purchasing students complete MN3306.
- *** International Students take IT1600, Communications Skills for International Officer (if needed) in the first quarter, and IT1500, American Life and Institutions in the second or third quarter.
- **** Navy students substitute MN3306.
- USAF Strategic Purchasing Track substitutes MN3306 Strategic Purchasing, MN3307 Entrepreneurship, and MN4374 Contracting and Strategic Purchasing Capstone, for MNMN3312, MN3304.

Systems Acquisition Management - Curriculum 816

Objective and Description:

The Systems Acquisition Management curriculum is an interdisciplinary program that integrates business principles, program leadership and management theory, operations analysis, and systems engineering applications. It is uniquely tailored to federal government acquisition management and intensive exposure to the fundamental principles of the acquisition environment. The courses in this curriculum apply business analysis and problem solving techniques essential to effective major system program management within the structure of DoD acquisition management. It further focuses on the decisions and problems facing the acquisition manager, the various forces at work within industry and government, and the impact of acquisition policies and strategies. Student input includes officers and civilians from all DoD Services, other federal agencies and allied nations.

Completing this curriculum qualifies an Army officer for Functional Area 51, an Air Force officer as 63A and a Marine Corps officer for MOS 9657. Department of Defense civilians are typically members of the acquisition workforce as specified by the Defense Acquisition Workforce Improvement Act (DAWIA). This curriculum satisfies the mandatory Defense Acquisition University (DAU) program management education required by the DAWIA for Program Management through Level III and provides up to 14 additional DAU equivalencies in other functional areas. The curriculum Sponsor is Director, Acquisition Career Management, Office of the Assistant Secretary of the Army (Acquisition, Logistics and Technology): ASA/ALT (DACM).

Educational Skills Requirements (ESR): Curriculum 816

1. Management Fundamentals The graduate will understand the theory of and have an ability to apply accounting, economic, mathematical, statistical, managerial and other state-of-the-art management techniques and concepts to problem solving and decision-making responsibilities as Department of Defense managers. The graduate will have the ability to think creatively, addressing issues and problems in a dynamic, challenging environment.

2. Advanced Leadership and Management Concepts The graduate will have the ability to apply advanced leadership, management and operations research techniques to defense problems. This includes policy formulation and execution, strategic planning, defense resource allocation, project leadership, cost benefit and cost effectiveness analysis, federal fiscal policy, computer-based information and decision support systems, and complex managerial situations requiring comprehensive integrated leadership abilities.

3. Program Leadership and Management Principles The graduate will have an understanding of and will be able to apply the principles, concepts and techniques of program leadership and program management to the acquisition of major

defense weapon systems. This includes the principles of risk management and tradeoff decision analysis using Total Ownership Cost, schedule and performance dynamics from a total life cycle management perspective.

4. Program Management Policies The graduate will have an ability to formulate and execute defense acquisition policies, strategies, plans and procedures; an understanding of the policy-making roles of various federal agencies of the executive, legislative and judicial branches of the U.S. government, particularly the Department of Defense (DoD), the General Accounting Office (GAO), congressional committees, the Office of Management and Budget (OMB); and an understanding of the strategies necessary to influence policy development and implementation.

5. Systems and Acquisition Process The graduate will understand the theory of and have an ability to lead program teams and manage the systems acquisition process. This involves the system life cycle process for requirements determination, research and development, funding and budgeting, procurement, systems engineering, including systems of systems, test and evaluation, manufacturing and quality control, integrated logistics support, ownership and disposal; the interrelationship between reliability, maintainability and logistics support as an element of system effectiveness in defense system/equipment design; and embedded weapon system software, particularly related to current policies and standards, software metrics, risk management, inspections, testing, integration and post-deployment software support.

6. Contract Management The graduate will understand the role of the contracting process within the acquisition environment, including financial, legal, statutory, technical and managerial constraints in the process.

7. Business Theory and Practices The graduate will have an understanding of the business and operating philosophies, concepts, practices and methodologies of defense industry with regard to major weapon systems acquisition, particularly the application of sound business practices.

8. Government and Industry Budgeting and Financial Management The graduate will have an understanding of and an ability to apply the principles of government and private organizational financing, including corporate financial structures, cost and financial accounting, capital budgeting techniques, financial analysis and defense financial management and budgeting processes, to include the Government Planning, Programming and Budgeting System (PPBS).

9. Acquisition Workforce The graduate will satisfy all requirements of the Defense Acquisition Workforce Improvement Act (DAWIA) and mandatory program management courses required by the Defense Acquisition University (DAU) at Levels I, II, and III.

10. Ethics and Standards of Conduct The graduate will have an ability to manage and provide leadership in the ethical considerations of defense acquisition, including the provisions of procurement integrity, and to appropriately apply defense acquisition standards of conduct.

11. Analysis, Problem Solving, and Critical Thinking The graduate will demonstrate the ability to conduct research and analysis, and proficiency in presenting the results in writing and orally by means of an applied project and a command-oriented briefing appropriate to this curriculum.

* If necessary

International Students pursue a 7-quarter program, taking IT1600, Communications Skills for International Officer (if needed) in the first quarter, and IT1500, American Life and Institutions in the second or third quarter.

FINANCIAL MANAGEMENT AREA

Financial Management - Curriculum 837

Objective and Description

The Financial Management Curricula prepares officers for business, financial and analysis positions within the DoN and DoD. Financial managers assist the DoN's decision-making processes at all levels by providing accurate, timely and relevant information and analysis. They are concerned with the optimal allocation of human, physical and financial resources to achieve the DoN's goals and objectives while assuring efficient and effective expenditure of public funds. Graduates of the Financial Management Curricula will be prepared for assignment to positions in strategic planning, business analysis, financial analysis, budgeting, accounting, business and financial management, and internal control systems and auditing.

Graduate courses cover topics such as financial reporting standards, cost standards, cost analysis, budgeting, internal control, auditing, management planning and control systems, strategic resource management, quantitative techniques used in planning and control, system acquisition and program management, and the Planning Programming, Budgeting and Execution System (PPBES) used within the Department of Defense.

Completing this curriculum qualifies a U.S. Navy officer as a Financial Management specialist, subspecialty code 3110P. Completion qualifies a U.S. Marine Corps officer for MOS 9644. The curriculum sponsor is N-82, Director, Office of Budget and Fiscal Management Division.

Educational Skills Requirements (ESR): Curriculum 837

1. Management Fundamentals The graduate will have the ability to apply quantitative techniques, accounting, economics, finance, organization theory, information technology and other state-of-the-art management techniques and concepts to military management problems. Also, the graduate will know basic management theory and practice, embracing leadership, ethics, written and oral communication, organization design, team building, human resource management, conflict resolution, quality assurance, cost-benefit analysis, risk analysis, stakeholder analysis and planning within military organizations, as well as military sub-units and activities. This ensures internal and external constituencies are considered in resource management.

2. Strategic Vision and Defense Budgeting The graduate will understand the roles of the executive and legislative branches in strategic planning, setting federal fiscal policy, allocating resources to national defense, budget formulation, budget negotiation, budget justification and budget execution strategies, including the principles of Federal Appropriations Law. In addition, the graduate will have knowledge of all aspects of the federal, defense and navy budget cycles including

the Planning, Programming, Budgeting, and Execution System with emphasis on budget formulation and execution.

3. Funds Management In support of approved programs, the graduate will be able to manage appropriated, revolving and non-appropriated funds in compliance with regulations of the Comptroller of the Navy and the federal government. Also, the graduate will be able to develop and review financial reports, analyze budget execution against operating and financial plans, develop alternate plans based on analyses of an activity's financial performance and prepare recommendations or make decisions regarding the reallocation or reprogramming of funds. The guidelines of the Defense Finance and Accounting System and the Federal Accounting Standards Advisory Board are relevant.

4. Accountability, Control, and Auditing The graduate will be able to acquire and analyze financial data and communicate the results to a diverse audience, including maintaining an integrated financial information system and appropriate internal controls to ensure timely, accurate, and consistent financial information. In accordance with the auditing standards of the U.S. Government Accountability Office, the defense and navy audit organizations and the professional standards of the American Institute of Certified Public Accountants, the graduate will learn to apply audit techniques that enforce sound internal accounting and administrative controls, safeguard defense assets, and assure the completeness and integrity of financial reports.

5. Acquisition and Program Management The graduate will understand the purpose and concepts, fundamentals and philosophies of the defense systems acquisition process and the practical application of program management methods within this process. This includes systems acquisition management; the systems acquisition life cycle; user-producer acquisition management disciplines and activities; and program planning, organizing, staffing, directing and controlling. This satisfies the Defense Acquisition University education equivalency requirements for defense acquisition professionals as specified in Congress' Defense Acquisition Workforce Improvement Act (DAWIA).

6. Economy, Efficiency, and Effectiveness The graduate will have the skills for solving complex and unstructured management problems in which alternatives must be identified, evaluated and selected in accordance with economical procurement of resources, efficient utilization of resources and effective accomplishment of overall defense and navy goals and objectives. This includes cost/benefit analysis, systems analysis, cost estimation, value engineering, business process reengineering and application of relevant OMB and Defense regulations.

7. Cost Management and Analysis The graduate will be able to design, implement, and evaluate different costing systems encountered within defense and navy

organizations and activities, as well as those found in private sector organizations conducting business with the federal government. In addition to private sector cost management policies and practices, the graduate will understand the application of defense unit costing guidelines to functional business areas, and the Office of Management and Budget's Cost Accounting Standards for major suppliers of goods and services to the federal government.

8. Strategic Resource Management The graduate will have knowledge of strategic vision and strategic core competency concepts for setting long-range goals and objectives; designing programs to achieve objectives; assigning individual responsibility for resource management, actions and decision making; measuring performance; reporting results; and evaluating and rewarding performance. This includes assessing customer needs and customer satisfaction, making recommendations and implementing improvements in the effective delivery of goods and services to customers or users.

9. Innovation and Creativity The graduate will demonstrate innovation and creativity in developing solutions to complex financial, budget, and program management issues that increase program effectiveness and customer satisfaction, while controlling the efficient utilization of financial, physical and human resources. This involves the ability to identify problems and potential concerns, providing leadership and teaming with others in the decision making process, and obtaining support for recommended decisions or courses of action.

10. Strategy and Policy Officers develop a graduate-level ability to think strategically, critically analyze past military campaigns and apply historical lessons to future joint and combined operations, in order to discern the relationship between a nation's policies and goals and the ways military power may be used to achieve them. Fulfilled by completing the first of the Naval War College series leading to Service Intermediate-level Professional Military Education (PME) and Phase I Joint PME credit.

- # Either MN4157 or GB4560 or both may be selected. Optional for International officers & Optional for USN completing JPME in six quarters.

INFORMATION MANAGEMENT AREA

Information Systems Management - Curriculum 870

Objective and Description

The Information Age has generated a revolution in the means by which we conduct business and warfare. New technologies have changed the traditional views of the marketplace, supply chain management, and logistics. As the range and complexity of computer applications have grown, the need to manage and exploit those resources has increased. This curriculum provides both the technical skills and business acumen to deal with a constantly evolving digital world.

The Information Systems Management graduate has the knowledge, skills and competencies to: 1) manage the acquisition of Information Systems for public sector applications; 2) manage Information Systems and infrastructure support afloat and ashore; 3) solve Information Systems engineering and management problems individually and in teams; 4) apply technological solutions at the organizational and enterprise level focusing on public sector applications; 5) develop and implement effective strategies and policies to take advantage of technological opportunities and mitigate risk; 6) assimilate new technologies and transform organizations, processes, and strategies to compete in the marketplace or on the battlefield. These general education skill requirements are supported by the topical educational skill requirements provided below.

Completing this curriculum qualifies a U.S. Navy Supply Corps Officer as a Logistics - Information Technology specialist (subspecialty code 1309P). The curriculum sponsor is the Naval Supply Systems Command.

Educational Skills Requirements (ESR): Curriculum 870

1. Management Fundamentals The graduate will have the ability to apply quantitative accounting, economics, information technology and other management techniques and concepts to military management problems. Also, the graduate will know management theory and practices, including leadership, communications, organizational design, staffing, quality and planning within large public and private sector organizations with a focus on military sub-units and activities.

2. Information Systems Technology The officer will have a thorough knowledge of information systems management to include: 1) computer system components 2) computer networks: network architectures, protocols and standards; 3) database management systems: database technologies, object-oriented databases, data warehouses, OLAP, technical and administrative issues involved in the design, implementation and maintenance of database management systems.

3. Decision Support and Knowledge Management Systems The student will have a thorough knowledge of problem identification, formulation and application of systems to support decision making. The student will understand the purpose of executive information systems, group decision support systems and contingency management systems and their potential impacts on public organizations and missions. The student will also be familiar with knowledge collection technologies designed to capture, categorize, store, retrieve and present knowledge.

4. Computer Security The student will gain fundamental knowledge of the methods for ensuring integrity, confidentiality, authentication and availability of computer resources, distributed databases and networks.

5. Information Systems Analysis and Management The officer will have a thorough knowledge of the following concepts to effectively manage the application of information systems to organizational goals, including: 1) Managerial Concepts: decision-making theory, microeconomics, marketing, operations analysis, statistics, financial management, organizational development and research methodologies; 2) Evaluation of Information Systems: cost-performance (effectiveness) analysis; selection, evaluation, acquisition, installation and effective utilization of information systems hardware and software risk assessment; 3) Systems Analysis and Design: information systems feasibility, life cycle management, system requirements determination, system performance evaluation, conversion and maintenance of legacy systems, and post-implementation evaluation,; 4) Management of Information Systems: metrics evaluation, monitoring, capacity planning, human resource management, budgeting and financial control of computer centers, design of effective organization structure, understanding architectural constraints, control and security (INFOSEC) policies and training requirements for both the user and support staff; 5) Adapting to Technological, Organizational, and Economic Changes: evaluation of potential impacts of new technology on information systems and organizational strategy.

6. Military Applications: The officer must be able to combine analytical methods and technical expertise with operational experience for effective military applications to include: 1) DoD Decision-Making Process on Information Systems: DoD, DoN, OMB and congressional decision making on information systems matters; 2) Information Technology Acquisition Management: acquisition policies and procedures of the DoD, including: statutory framework, acquisition planning, contracting, and the planning, programming, and budgeting system; 3) Joint Professional Military Education (JPME) Level 1.

7. Independent Research: The graduate will demonstrate the ability to conduct independent research analysis and proficiency in communicating the results in

writing and orally by means of a field application study. The research in information technology and its management will include problem formulation, decision criteria specification, decision modeling, data collection and experimentation, analysis and evaluation.

DEFENSE MANAGEMENT AREA

The Defense Management Curricula serve US and international officers. The overriding objective of the curricula is to provide students with the analytical skills and critical thinking ability to solve problems they confront in both operational and staff jobs. Students may design their own concentrations to meet their organizations' unique staffing and operational needs. International officers in the REPMID curriculum blend courses from the Graduate School of Business and Public Policy and the National Security Affairs Department into an integrated Defense Resource program of study.

Defense Business Management—Curriculum 809

Objective and Description

This interdisciplinary curriculum integrates within the defense context coursework in accounting, economics, mathematics, communications, management theory, and operations/systems analysis. As a result, students develop the analytical, critical thinking, and problem-solving skills not only to understand and critically assess the processes by which management in a defense organization is accomplished but also to manage and allocate wisely defense resources, evaluate written research, and analyze products of others throughout their careers.

In addition, this curriculum permits students to design their own concentration. Students work with their Academic Associate to determine the concentration areas and courses that meet their sponsoring agency needs. Students are free to choose among any of the specific management areas available. For example, a student may elect to specialize in the relevant portion of a functional area, such as financial management, logistics, human resources and organization management, acquisition, or manpower and personnel analysis. Or, the student may choose to follow a general management program, which would include an overall balance of courses from many functional areas.

Educational Skill Requirements (ESR): Curriculum 809

1. Management Fundamentals - Quantitative Analysis: The graduate will have the skills to apply mathematical, statistical, accounting, economic, and other state-of-the-art quantitative techniques and concepts to the solving of day-to-day military management problems as well as the capability to use these skills as a participant in the long-range strategic planning efforts of the Navy and DoD

2. Management Fundamentals - Organization and Management: The graduate will have a thorough knowledge of basic management theory and practices, embracing leadership, communication, organizational design, staffing, directing, planning, and controlling of military organizations.

3. Defense Economics: The graduate will be able to apply the fundamental tools of micro- and macroeconomic theory to Defense management and resource allocation decisions. Additionally, the student will understand markets and their interactions with

Defense acquisition and contracting processes, the national security implications of globalization, and efficiency in Defense decision making.

4. Acquisition and Program Management: The graduate will understand the purpose and concepts, fundamentals and philosophies of the defense systems acquisition process, and the practical application of program management methods within this process. This includes systems acquisition management; the systems acquisition life cycle; user-producer acquisition management disciplines and activities; and program planning, organizing, staffing, directing and controlling.

5. Financial Management: The graduate will understand the roles of the executive and legislative branches in strategic planning, setting federal fiscal policy, allocating resources to national defense, budget formulation, budget negotiation, budget justification, and budget execution strategies, including the principles of Federal Appropriations Law. In addition, the graduate will have knowledge of all aspects of the federal, Defense, and Navy budget cycles including the Planning, Programming, Budgeting, and Execution System with emphasis on budget formulation and execution.

6. Complex Systems Thinking: The graduate will be able to diagnose complex Navy and DoD problems from a systems perspective and offer solutions that maintain system alignments.

7. Strategic Thinking: The graduate will have knowledge of senior-level decision-making processes under conditions of significant uncertainty within the unique context of DoD organizations. In addition, students will learn how to implement these decisions, evaluate their effectiveness, and determine steps to take if desired outcomes aren't reached.

8. Analysis for Efficiency and Effectiveness: The graduate will be able to use various statistical methods to solve complex and unstructured problems in which alternatives will be evaluated and selected based on cost and systems analysis factors. This includes the use of probability theory, decision models and decision analysis, decision trees, forecasting, and simulation to make decisions under conditions of uncertainty with competing objectives.

9. Innovation and Creativity: The graduate will demonstrate innovation and creativity in developing solutions to complex management issues that increase program effectiveness and customer satisfaction, while controlling the efficient utilization of financial, physical, and human resources. This involves the ability to identify problems and potential concerns, providing leadership, and teaming with others in the decision-making process, and obtaining support for recommended decisions or courses of action.

10. Thesis/Project: The graduate will demonstrate the ability to conduct independent research and analysis, and proficiency in presenting the results in writing by means of an MBA project or thesis.

Required Specialization Courses

No specific specialized courses are required. However, the student in consultation with his/her Academic Associate must develop a coherent plan of specialized coursework that meets the student's career and the sponsoring agency's workforce needs. At least 24 credits of these types of courses are required beyond the MBA set of courses. Also, the student must complete a project or a thesis.

Defense Systems Management - Curriculum 818

Objective and Description

This curriculum is designed for international students. It provides international officers with the core MBA interdisciplinary techniques of quantitative problem-solving methods, management theory, management science, economic analysis and financial management. These skills enable the officers to manage and allocate defense resources, evaluate written research and analyze products of others throughout their careers. The curriculum further provides the officers with the specific functional skills required for effective leadership and defense resources management.

This curriculum permits students the opportunity to design their own concentration. Concentration areas and courses are determined after consultation with the Academic Associate. The 818 program allows students to design a program of course work specific to management effectiveness in the host country's military system. The student may elect to specialize in the relevant portion of a functional area, such as financial management, logistics, human resources and organization management, or manpower and personnel analysis. Or, the student may choose to follow a general management program, which would include an overall balance of courses from many functional areas. International students are free to choose any of the specific management curricula available.

Educational Skills Requirements (ESR): Curriculum 818

None are specified for this curriculum

Required Specialization Courses

A minimum of 24 credit hours determined in consultation with the Academic Associate is required.

Resource Planning and Management for International Defense - Curriculum 820

Objective and Description

The Resource Planning and Management for International Defense curriculum is an interdisciplinary program designed exclusively for officers and civilian employees in defense agencies of other countries. The program focuses on economic analysis, the management of financial, material and human resources, domestic and international political institutions, civil-military relations and the role of international law. The curriculum includes a combination of existing courses within the Graduate School of Business and Public Policy and the Department of National Security Affairs. In the majority of courses, international students will study and learn with U.S. students from several other management and national security affairs curricula.

Educational Skills Requirements (ESR): Curriculum 820

None are specified for this curriculum.

Standard 4.23 General Competencies for the MBA Program
The common and additional components shall develop in students general competencies that are consistent with the program mission.

4.23 MBA Program Competencies

The MBA program, and the curricula within, consist of three broad phases (core, specialization, project or thesis) and develop distinct competencies in each phase:

Common Core: Develops broad management competencies in six areas:

Organizations and Organizational Behavior
Economic and Policy Analysis
Financial Management
Quantitative Methods and Analysis
Operations and Information Technology
Institutional Processes and Strategic Management

Specializations: Develop specific functional competencies in one area:

Defense Business Management	(809)
Transportation Management	(814)
Acquisition and Contract Management	(815)
Systems Acquisitions Management	(816)
Defense Systems Management	(818)
Supply Chain Management	(819)
Resource Planning and Management	(820)
Material Logistics Support Management	(827)
Financial Management	(837)
Information Systems Management	(870)

MBA Project or Master's Thesis: The project/thesis serves an integrating mechanism and develops competencies for analysis, integration and application. As examples, a list of the project/thesis topics that were completed for the last graduating class (June 2007) is provided in Appendix 4.23A.

Standard 4.3 Minimum Degree Requirements for the MBA degree:
Students with little or no educational background or professional experience in the common and additional curriculum components are expected to devote the equivalent of two academic years of full-time study to complete the professional masters degree program. Where students have had strong undergraduate preparation in the common curriculum requirements or have been engaged in significant managerial activities, some of the subject matter requirements might be appropriately waived or reduced. Even in such cases, students ordinarily must spend the equivalent of a calendar year in full-time study in formal academic work exclusive of an internship, to obtain the professional masters degree. A calendar year is defined as two semesters and a summer session at least eight weeks in duration or four quarters (exclusive of internship) of full-time academic work.

4.3 MBA Degree Requirements

Stated minimum requirements for MBA degree are contained in the Naval Postgraduate School catalog, and summarized here.

Table 4.3
MBA STATED DEGREE REQUIREMENTS

Core	Completion or validation of all required courses in the Business Core. Completion or validation of all required courses in the Mission Core.
Credits	Completion (excluding by validation) of a minimum of 58 credits of graduate-level courses, at least 22 of which are at the 4000 level.
Concentration	Completion of an approved sequence of courses in a concentration area with a minimum of 24 graduate-level credit hours.
Capstone	Completion of an acceptable project or thesis

4.3A Degree Minimum Credit Hours

Combining the core and concentration credit requirements, and assigning effective credits to the project (6) component of the degree, the theoretical minimum credits for the MBA degree is:

- MBA Degree: 64 graduate-level credits; 22 at 4000 level

In practice, practical limits on course validations and individual course requirements specified by each of the 10 different curriculum concentrations result in all students completing programs well in excess of these stated minimums.

4.3B Degree Length

Potential program length, for students with:

• Little/no education background & exp.	6 quarters*	18 months
• Strong undergrad preparation, but no exp	5 quarters	15 months
• Significant background & exp.	4 quarters	12 months

Most students require the full six quarters or 18 months to complete their programs because of the time elapsed from their undergraduate work to their graduate work. Shorter programs are extremely rare and even students with significant background will take the full six quarters allowed. Rather than reduce program length, students with strong backgrounds will identify additional requirements they might accomplish (e.g., complete a second subspecialty or professional certifications).

*One MBA curriculum (870) requires, and one curriculum (816) permits, programs seven-quarters in length.

4.3C Concluding Requirements – MBA Project or Master's Thesis

No comprehensive examination is required. All resident students complete either a an MBA project or master's thesis. Normally the students spend about 6-9 months working on their project or thesis. Two to four equivalent course blocks are identified in each student's curriculum, depending on the length of the curriculum. No academic course credit is given for the project or thesis. Students may not earn a degree without satisfactorily completing a project or thesis.

4.3D Course Format

All courses at the Naval Postgraduate School follow an (X –Y) format, where X is the number of "lecture" credit hours and Y the number of "lab" credit hours. Contact hours (class meeting hours per week) are the sum of the lecture and lab hours. Courses offered by GSBPP, and courses contained in the GSBPP curricula, range from 2 – 6 contact hours, however the most common formats are (3-0) and (4-0) courses.

Courses of (4-0) size are predominant in the MBA resident program, although (3-0) courses are common also. Most (4-0) course are scheduled to meet for two 2-hour sessions per week and (3-0) courses to meet for two 1 ½-hour sessions, although instructors have the discretion to request an alternative scheduling pattern. All courses in the MBA program meet on a weekly basis throughout the normal NPS quarters, with the exception of the Problem Analysis and Ethical Dilemmas course (GB3013), which meets for a dedicated two-day period at the start of the first quarter of the MBA program.

All classes meet during the daytime. We do not offer evening or weekend courses. The resident MBA program parallels NPS's school year, which consists of four quarters with two two-week breaks at the end of June and December. All students in these programs complete four quarters of classes within a one-year period.

4.3E Student Transcript Analysis

Student transcript analyses were completed for the MBA degree program, with students from all curricula. Grades for the common curriculum components and additional curriculum components are provided. Table 4.3E1 provides a list of the students in the sample. Table 4.3E2 displays their grades in program courses. Two factors may result in the programs of individual students differing from the stated core and specialty curriculum set of courses. A comment on each:

Validation of Courses As with many graduate programs of administration and management, our students possess varied undergraduate education, including majors (or minors) in public or business administration or economics. In order to ensure that all of our graduates are well and broadly grounded in a range of management foundation disciplines, our degree requirements include foundation courses in financial management, economics, quantitative methods and organizational behavior. Many of our entering students with strong undergraduate preparation in these disciplines already possess such foundation knowledge in these disciplines. In those cases, students may attempt to 'validate' the requirements through examination and/or interview (and transcript review) conducted by a faculty member assigned as "course coordinator" for the course.

Naval Postgraduate School policy concerning validation is: "A student with the appropriate background may validate a course that is required for his/her curriculum. Validation will allow the student to omit that course from the program of study. However, no credit will be granted for a course that has been validated. The basic purpose of the course validation is to make optimal use of the student's time at the Naval Postgraduate School. Every validation must be justified by documented evidence of prior work in the area of the course to be validated."

Substitutability of Common Core Courses GSBPP policy allows for the substitution of a core course with a more comprehensive or more advanced "Superior Substitute" course. These substitutions may occur on a curriculum-by-curriculum basis. The principal example of a superior substitute concerns the core acquisition course (GB3031). The MBA core requires a 2-credit acquisition course as one element of the degree requirement, which GB3031 was designed to serve. However, most of the resident subspecialty curricula place an even greater requirement for acquisition knowledge than that provide by GB3031. Students in these curricula complete more advanced work in acquisition and take courses that are superior to GB3031. Most students will instead complete MN3331 (5-1) or MN3301 (4-0) as substitutes for GB3031 (2-0).

Standard 4.4 Internships
A carefully planned internship experience shall be made available by the program and students who lack a significant professional work background shall be strongly encouraged to take advantage of it. The program shall provide on-going academic supervision. Internship programs shall generally reflect NASPAA's internship guidelines.

4.4 Internships

There is no requirement for an internship nor is there any provision for a student to elect one. All students, however, have significant professional experience in complex governmental organization.

STANDARD 5.0 -- THE FACULTY

Standard 5.1 Faculty Nucleus
There must be a faculty nucleus that accepts primary responsibility for the professional graduate program. This regular faculty should consist of a sufficient number of full-time faculty significantly involved with the program to support the set of teaching, research and service responsibilities appropriate to the size and structure of the program. In no case should this faculty nucleus be fewer than five full-time persons. The institution should specify how each regular member is involved in the teaching and related research and service aspects of the program. At least 50 percent of the courses covering the common curriculum components shall be taught by full-time faculty of the institution.

5.1 Defining the Faculty Nucleus

At the outset of discussing faculty, we see a question of definition and bounding that needs to be directly addressed: Who are the "Program Faculty?" Which individual faculty in GSBPP should be associated with a specific program (e.g., the MBA)? As the earlier chapters have described, GSBPP has six degree programs, with 16 curricula embedded within the degree programs. Two degree programs (MBA, MSM), with 12 curricula, are being reviewed for NASPAA reaccreditation, and one degree program (MBA), with 10 curricula, is the subject of this self-study volume. Should all faculty in the School be seen as "MBA Program faculty", or should there be an attempt to identify a smaller subset of the School's faculty, those whose recent assignments and experience have been most closely aligned with the MBA program, and define that subset as the "MBA Program faculty"?

Given this choice of an "all faculty" or "subset faculty" approach, we have elected the former as being more representative of the set of faculty that exists to support a program. Two examples may help to explain why:

1. Non-resident Teaching Assignments: GSBPP has a number of faculty, full-time regular faculty members within the School, whose instructional assignments have been almost exclusively in one of the School's distance learning programs, programs that are not seeking NASPAA accreditation. In terms of recent assignments, these faculty members have not been teaching in the MBA. But all of the School's non-MBA programs and curricula rely on courses that are similar to those taught in the MBA and the programs are built on a faculty base of expertise that is the same base that forms the foundation for the MBA program. Hence all of these faculty members are potential resources for the MBA program, even if their recent assignments have been elsewhere. Their association (or not) with the MBA program is more a matter of the teaching assignment process than any inherent non-connection with the MBA program and its mission.

2. Shifting Specialty Curriculum Alignment: GSBPP has groups of faculty who are associated with some of the individual specialty curricula. As described earlier, ten specialty curricula are currently associated with the MBA degree, and students completing those curricula earn the MBA. Similarly, two specialty curricula are currently associated with the MSM degree, and students completing those curricula earn the MSM. This might suggest that faculty who teach only within one specialty curriculum should be readily associated with either the MBA program or the MSM program, but not both. We think not. The group of "Manpower" faculty, who teach courses in the Manpower curriculum, provide an example. Currently students following the Manpower specialty curriculum earn an MSM degree, so faculty teaching Manpower courses only teach students in the MSM program (and thus these faculty members might be considered as "MSM Program faculty"). But the alignment of the Manpower curriculum (or any specialty curriculum) with the MSM degree (or any degree) is somewhat tentative and subject to change. Prior to 2002, the Manpower specialty curriculum fell under the MSM degree and all Manpower students earned an MSM. From 2002 to 2006, the alignment shifted so that some Manpower students earned the MBA degree (and the actual program of study for these students was altered so as to satisfy the degree requirements of the MBA). Starting 2006, the Manpower curriculum shifted back to being a solely MSM curriculum. Similarly, the Defense Systems Analysis curriculum was an MSM curriculum until 2002, an MBA curriculum from 2002 until 2007, and has now shifted back to being an MSM curriculum. In fact all resident curricula that have been in existence since 2001 have, at one time or another, been aligned with both the MSM and the MBA degrees.

This shifting is to be expected and is even desirable. It is the result of curriculum sponsors choosing to build their specialization on top of either the MBA core curriculum or the MSM core curriculum, whichever provides the focus the sponsors (of the moment) may deem most relevant to the education of the students they sponsor. What this means from the GSBPP standpoint is that all specialization curricula are available within either the MBA or MSM program, and hence all GSBPP faculty exist to support, and are relevant to, both the MBA and MSM degree programs

We have followed this "all faculty" approach in describing the Program Faculty in this chapter. But, if of value, additional data in various tables provides information about whether GSBPP faculty assignments during the self-study period, or particular courses taught, were associated with particular programs.

5.1A Critical Mass

GSBPP views its faculty size and background as a key strength. During the self-study year, 71 different full-time, nucleus faculty made significant contributions to GSBPP programs. Departures of 10 faculty members but the addition of 10 during the year leave 61 nucleus faculty members as of the time of this document (July 2007). This 61 includes

the addition of two new nucleus faculty members recently onboard for the start of the 2008 academic year.

GSBPP faculty are drawn from a wide variety of academic disciplines—including management, business and public administration, political science, economics, education, accounting, law, information systems, psychology, operations research, engineering and other fields—to meet the demands of the School's diverse programs and curricula. In addition, faculty members represent a number of sub-disciplines within academic areas. For example, in 2007, faculty with doctorates in economics specialized in labor economics, econometrics, microeconomics, political economy, strategy and public finance; faculty with graduate degrees in accounting included those with specializations in financial reporting, cost management, comptrollership, enterprise systems and management control systems.

Students are given maximum opportunity to interact with faculty in the numerous disciplines. Curricula are designed so that students have maximum exposure to different viewpoints both in their courses and in thesis or project work.

Faculty members within the School interact regularly as project/thesis advisors, on course/curriculum design, on research projects, and on issues of faculty governance.

5.1B Faculty Nucleus

Table 5.1B provides a list of the nucleus faculty within the Graduate School of Business and Public Policy. These faculty members are the nucleus available to support all of the School's degree programs. The faculty members in the table are identified as belonging to various groups, as follows:

- ACQ Acquisition
- ECON Economics
- MGT Organizations and Management
- FM Financial Management
- OLM Operations and Logistics Management
- MSA Manpower Systems Analysis
- IT Information Technology

5.1C Teaching Assignments

Table 5.1C lists courses taught by the nucleus faculty during the self-study year and the preceding year (AY2007 & AY2006). All of the nucleus faculty members are available and capable of teaching in the MBA program under review, but in any given year their actual teaching assignments may be in the MBA program, the MSM program, in one of the other degree programs in GSBPP (EMBA, MSCM, MSPM, MEM). The table indicated which courses, by virtue of current curriculum alignment, support MBA program, the MSM program, or both.

5.1D Course Load

The normal course load per year for full-time tenure-track faculty is 8 course credit-hours per teaching quarter or 16 course credit-hours per year. Most faculty members teach two quarters per calendar year, with two quarters of research release per year. Tenure-track faculty (beyond their third year) are generally expected to secure funding for their two research quarters either from external sources or from internal programs available to support research activity. Tenure-track faculty without such funding may request to do additional teaching. Student thesis or project advising is considered to be part of a faculty member's normal instructional activities. While actual experience will vary widely, on average faculty would be involved with advising 2-4 students on projects/theses for each quarter they are teaching. Some faculty will serve in academic administrative positions (e.g., Academic Associate, Associate Dean). These administrative duties, or above or below average advising activity, may cause variation in a faculty member's teaching load.

Table 5.1D provides a list of the faculty members who had research, administrative or other assignments in lieu of teaching during AY2007.

5.1E Other Full-Time Faculty

Table 5.1E provides a list of faculty who are full-time at the Naval Postgraduate School but do not have primary responsibility for teaching in the program under review. GSBPP does rely on some faculty outside of GSBPP for teaching in some areas. The most common examples are the use of faculty from the Department of Information Technology (IT) to teach in information systems courses; faculty from the Operations Research Department (OR) to teach in statistics and quantitative methods courses; and faculty from the Defense Resource Management Institute (DRMI) to teach in economics courses.

Table 5.1E

ADDITIONAL FULL-TIME FACULTY

Last Name	First Name	Rank	Tenure Status	NPS Academic Unit	Degree	University	Degree Field	Program

Standard 5.2 Professional Qualifications

At least 75% of the professional graduate program's full-time faculty should hold an earned doctorate or other equivalent terminal professional degree in their field. Any full-time faculty member lacking a terminal degree must have a record of outstanding professional or academic experience directly relevant to the faculty member's assigned responsibilities. Full-time faculty actively pursuing appropriate terminal degrees are to be included in the 25 percent not holding a terminal degree.

5.2 Professional Qualifications

Seventy percent (43/61 = 70%) of the nucleus full-time faculty hold terminal academic degrees. Those full-time faculty members who lack a terminal degree have a record of outstanding professional experience as evidenced in the faculty data sheets - Volume II. All GSBPP faculty members teach in areas that are relevant to their professional education.

Seven percent (4/61 = 7%) of the nucleus full-time faculty are military instructors, accomplished practitioners in their fields. Military officers bring expertise to GSBPP programs in such areas as defense contracting, program management and financial management. All military faculty members hold masters degrees in their professional field. Military faculty members are sent to the School for 2 - 3 years. GSBPP reviews officers who may be sent to the school as military faculty, but GSBPP does not hire the military faculty in the traditional sense. If military faculty members are excluded from the nucleus faculty, then seventy-five percent (43/57 = 75%) of the nucleus faculty hold terminal academic degrees.

We examined all courses taught to students in the MBA program during the past two academic years (2006-2007) with respect to the degree held by instructors. Table 5.2A shows the breakdown. For the required Common Curriculum (Core) courses in the MBA program, 86% of all courses were taught by instructors with a terminal degree. When courses from the Additional Curriculum Components (Specialization) are additionally considered, the percentage of doctorally qualified instructors across the complete set of MBA courses falls to 66%. The table suggests the ready explanation for this. Only a minority (36%) of courses in the Additional Curriculum Components (the Specialization) were taught by doctorally qualified faculty during the 2006-2007 self-study period. This pattern – doctorally-qualified faculty more heavily in the Common Core of the degree program and master-qualified faculty more heavily in the Specialization Component of the program – is to be expected, given the mission of GSBPP, the mission of the MBA degree program, and the structure of the specialized programs of study within the degree program.

One element from the MBA Program mission statement is repeated here:

- ***Professional****: The program prepares graduates to possess the specialized knowledge, skills and abilities to serve in positions of significant responsibility within a specified Defense Management field (Financial Management, Logistics, Acquisition, Contracting, Defense Management, and Information Management).*

This element of the program mission directly influences both the structure of the curriculum and the qualifications and composition of the faculty. As reported in Standard 4, the Common Core Curriculum component of the MBA program is a minimum of 60 credit hours. Specializations are constructed on the common core foundation, ranging from 24 to 43 additional credit hours, depending on the curriculum. Because of the

mission of the program, these specializations will be oriented toward a distinct set of Defense Management professional fields. And, of importance with respect to the composition of the School's faculty, masters-qualified faculty, who additionally possess significant professional experience, may be the most appropriate faculty for some of the professionally-focused courses within the Specialization component.

Table 5.2A
COURSES TAUGHT IN MBA & MSM PROGRAMS:
BY INSTRUCTOR DEGREE LEVEL

	Doctoral Qualified	Masters Qualified
MBA Program		
All MBA Program Courses	66%	34%
MBA Common Curriculum (Core) Courses	86%	14%
Additional Component (Specialization) Courses	36%	64%
MSM Program		
All MSM Program Courses	78%	22%
MSM Common Curriculum (Core) Courses	86%	14%
Additional Component (Specialization) Courses	52%	48%

Other full-time faculty members are defined as those who teach at least one-graduate course and are employed full-time by the NPS. These are generally faculty whose home is in another School or Department at NPS. As mentioned above, GSBPP utilizes some NPS faculty from outside GSBPP to teach individual courses in the MBA and/or MSM programs. All have at least a Masters degree in a related field. Sixty-seven percent (8/12) of the other full-time NPS faculty who taught in GSBPP courses hold terminal degrees. Table 5.2B below indicates the proportion of GSBPP courses taught by the GSBPP nucleus faculty and other faculty types. For the courses in the MBA Program, about 5% of courses are taught by NPS faculty from outside GSBPP. About another 6% are taught by adjunct faculty, generally hired from among faculty at other universities.

Table 5.2B PERCENT OF COURSES TAUGHT BY DIFFERENT FACULTY TYPE			
	% of MBA Program Courses	**% of MSM Program Courses**	**% of All GSBPP Courses**
Faculty Type			
GSBPP Nucleus Faculty	**89%**	83%	83%
Other NPS Full-time Faculty	**5%**	8%	8%
Part-time Adjuncts	**6%**	9%	9%

Standard 5.3 Practitioner Involvement
The involvement of practitioners is integral to the activities of a professional master's degree program. The institution shall specify how it involves practitioners in its program. Where practitioners teach courses, there shall be satisfactory evidence of the quality of their academic qualifications, professional experience, and teaching ability.

5.3 Practitioner Involvement

Practitioners are an integral part of the programs in GSBPP. In fact, GSBPP and NPS consciously employ practitioners on a full-time basis to enhance the relevancy of the academic programs. The full-time practitioners include military instructors and retired senior military officers who serve in various capacities. All full-time practitioners have master's degrees in their respective areas and have been recognized as accomplished professionals in their fields.

The military officers generally are assigned to NPS for a three-year tour. Their assignments while in GSBPP include teaching courses, advising student projects or theses, and working with civilian faculty on various projects. Military faculty members are scheduled to teach courses for which they are academically and professionally qualified to teach. Military faculty members are evaluated on teaching performance just as are civilian faculty.

Former senior military personnel also play an important role in the delivery of our programs. At this time, sixteen of the non-tenure-track faculty members among the nucleus faculty are retired military. Retired Flag and General-level officers are present in the School, both as members of the nucleus faculty and as visiting faculty or associates.

Practitioners participate in numerous phases of the programs in GSBPP including program development, teaching, student advising and assessment.

In addition to the functions mentioned above, all curricula rely on practitioners as guest speakers to bring relevance to the content areas. Guest speakers range from analyst-type personnel to high ranking senior officers and civilians.

GSBPP uses few part-time faculty because of the requirement for high-quality, relevant content. Our experience has been that few part-timers are able to possess the required level of disciplinary expertise, DoD expertise and an ability to teach to mid-level career officers. Part-time faculty members who taught in the program under review during the past two years are provided in Table 5.3. All faculty members are evaluated at the end of each course. Those faculty members who receive below average evaluations are not asked to return.

Standard 5.4 Faculty Quality
In addition to the above, the qualitative adequacy of faculty members shall be demonstrated by their previous and current instruction, research, experience and service.

5.4A Faculty Data Sheets

Faculty Data sheets are contained in Volume II of this self-study report.

5.4B Promotion and Tenure

NPS Promotion and Tenure Process

Before a faculty member is recommended for promotion in rank or award of tenure on the Naval Postgraduate School faculty, there is a review of professional qualifications by a Department Evaluation Committee (DEC), appointed by the Dean for this purpose. (For NPS's formal promotion and tenure process, GSBPP is seen as a Department.)

The DEC consists of at least three faculty members who are senior to the candidate's current position; one member must be from outside the candidate's Department. The DEC submits its report to the Department Faculty Promotion Council (DFPC).

The specific procedure for this colleague-review is at the discretion of the individual Department, within policy guidelines provided annually by the Provost to ensure equitable treatment of all faculty members. (Guidelines on the P&T Process and Documentation for 2007 (32 pages) are available on request.)

The Department Faculty Promotion Council (DFPC) convenes to consider the case of each candidate within their purview and makes a recommendation on each case by secret ballot. The results of the secret ballot are advisory to the Dean and must be included (along with any comments from the DFPC discussion) in the Dean's recommendation on each individual case.

The Dean makes a recommendation to the Provost. This recommendation is supported by appropriate documentation specified by the Provost and will include the written report of the candidate's DEC.

Annually during the winter quarter, there is a series of meetings of the Faculty Promotion Council (FPC) to consider all recommendations. The FPC is made up of all Department and Academic Group Chairs, all School Deans, and the Provost. The Chairman of the Professional Practices Committee of the NPS Faculty Council is an ex-officio member. The participants in the meetings shall have received copies of the Department/Group DEC and Chairman's recommendations, as well as the documentation for all candidates. At these meetings, the Department Chairman, or substitute, answers any questions about the candidate's qualifications. After full discussion, the participants in the meetings (with the exception of the Chairman of the Professional Practices Committee) individually make their recommendations regarding all candidates to the Provost.

The Provost considers the recommendations and then meets with the Deans Promotion Council (DPC) for further considerations. The NPS President is invited to be present at these meetings. Finally, the recommendations of the Provost are presented to the President in the presence of the Deans Promotion Council (DPC).

There may be cases where a faculty member is denied promotion or tenure after being positively recommended by the Department faculty, by the Chairman/Dean, or by the FPC. In that case, the Provost meets with the appropriate faculty of that Department to discuss the reasons for denial and to determine if further deliberations are appropriate. The faculty member, colleagues and/or Chairman may request the assistance of the Professional Practices Committee in appealing this adverse decision, if they feel that the decision process was flawed. The Committee shall determine whether such an appeal is justified and, if so, shall make recommendations to the Provost as to how it should be pursued.

Promotion and Tenure Evaluation Criteria

Faculty members at NPS are judged in two general categories for pay, promotion and tenure: 1) internal service to NPS and 2) external visibility which demonstrably enhances NPS's reputation in either the academic community or DoD (or both).

Tenure-track faculty members at NPS are expected to be strong contributors to high quality, relevant instruction and to be active in their profession and service to DoD. Adequate performance in these areas does not automatically qualify an individual for promotion or tenure. For example, doing an adequate, even exemplary, job of teaching courses and making only a minimal impact on the world outside NPS should not qualify a faculty member for advancement. Impact on the outside world can be achieved in any area of faculty performance, including instruction. The quality and quantity of performance above acceptable will determine the rate at which an individual progresses through the academic ranks. Promotion to Professor additionally requires that the person demonstrates consistent leadership in at least one area of faculty activity and has meritorious performance in both internal and external service. Further guidance on the evaluation of the scholarly products of faculty is found in the "Marto" Report and the Report of the Committee on Nontraditional Productivity. (Lengthy report available by request.)

Judging an individual's qualifications for advancement should be on the basis of his/her meritorious performance. This means performance in both internal and external service that are worthy of note. Listed below are some typical examples of internal and external activities that indicate such meritorious performance. The implication is not that a person should pick "one from column A and two from column B" and get promoted, but that the successful faculty member should be engaged in a significant amount of meritorious work.

Internal Activities

- Demonstration of quality and flexibility in instructing graduate-level and applications-oriented courses
- Introduction of new material in curricula and development of new courses, particularly special topics courses with DoD relevance
- Development or implementation of creative teaching methods (such as computer-aided instructional materials) to improve upon student learning efficiency
- Development of extensive instructional material
- Leadership in developing and/or refining curricula
- Development of instructional laboratories, including specifying equipment and designing experiments
- Service as academic associate, associate chairman, chairman of a school-wide committee, etc.
- Contributions to interdisciplinary research projects
- Direction of high-quality research efforts by thesis students

- Direction of DoN-relevant theses
- Tutoring students who need remedial work
- Teaching capstone courses in applied areas
- Teaching in operations oriented curricula

External Activities

- Creation of products of direct use to Navy operations, both shore and sea-based
- Publication of research results in refereed archival journals and conference proceedings at a regular rate
- Service in a professional society through elected offices, committee work, conference planning, editorial work, peer/proposal review, etc.
- Participation in fleet exercises
- Participation in a Navy, multi-laboratory research project
- Publication of a textbook that receives acceptance external to NPS
- Offering on-campus and off-campus short courses to DoD personnel
- Creation of instructional material that receives significant use outside NPS, (e.g., textbooks, course notes, teaching methodologies, etc.)
- Acting as a consultant for operational commands and other DoD organizations
- Service in high-level position in DoD
- Publication of technical reports, either unclassified or classified, from a DoD or non- DoD research program (For this work to be a significant factor in promotion and tenure actions, timely external peer review is essential.)
- Contributing chapters in research monographs
- Presentation of research results to operational commands and other DoN organizations
- Participation in research with operational units, laboratories, systems commands, and headquarters of the Navy and Marine Corps
- Service to DoD by participation in workshops, on panels, advisory boards, and liaison with laboratories

The initial appointment of all Federal Civil Service employees encompasses a one-year probationary period. This is applicable to the civilian members of the faculty at the Naval Postgraduate School. The Naval Postgraduate School accepts a maximum of three years of prior experience as a full-time teaching faculty member in an accredited collegiate institution in consideration of individual faculty members for promotion and tenure. The Postgraduate School may consider other significant professional experience in lieu of teaching experience in making promotions and in granting tenure.

Recent Experience in Tenure and Promotion

During the most recent five year period from 2003 to 2007, GSBPP received actions on eight promotion and/or tenure cases. Specifically, there have been two cases of

review for promotion to the rank of Professor, three cases of review for the award of tenure, and three cases for review for promotion from Lecturer to Senior Lecturer. In all eight cases, the candidates were successful and received the desired awards.

Standard 5.41 Instruction
Efforts to improve the instructional program, including student advisement, teaching methods, course content, and innovative curricula development.

5.41A Quality of Instruction

As mentioned in Standard 2.2-Assessment, all programs in GSBPP rely on a number of procedures, both formal and informal, to obtain feedback from numerous sources to assess the School's performance.

Formal systems include such items as surveys and questionnaires which are routinely administered, primarily to current students. There are also formally assigned positions within the School which have central responsibility for assessment and management of curricula. These include the Associate Dean for Instruction, Academic Associates, Program Officer, and the Course Coordinators. A new position, Academic Associate for the Core, was just created (July 2006) to provide a focus for oversight and coordination of both the MBA and MSM common curriculum core courses. The School also has a school committee, the Faculty Instruction Committee, responsible for instructional policy.

Informal systems include the network of contacts that exist between faculty and former students, military officers and executives within the larger defense community. The various mechanisms used for assessment and review fall into three broad areas, as follows:

Managerial Positions with Assessment Responsibility:
- Associate Dean for Instruction
- Academic Associates / Curricular Officer
- Course Coordinators

Program Review Processes:
- Curriculum Review Process
- MBA/MSM Core ad hoc curriculum review committees

Surveys and Questionnaires:
- Student Opinion Forms (at completion of each course)
- Student Core Survey (at completion of the core curriculum)
- Student Exit Surveys (at completion of program)

All of these processes are explained in Standard 2.2. These processes allow all curricula to undergo constant, continuous improvement. Evidence-based data often result in changes to a particular curriculum. Changes to curricula over the past few years are also explained in detail in Section 2.3.

Individual course quality is maintained via similar processes. Student evaluation forms are monitored quarterly by the Associate Dean for Instruction and the Dean. Faculty members who fall above or below a specified threshold are noted. Those faculty members who are evaluated in the upper range are recognized by announcement for their achievement. Those who fall in the lower range may be asked to discuss their performance with the Dean. Plans are made to improve performance.

Feedback about the quality of students' learning is also obtained from GSBPP faculty. For example, follow-on course instructors may report that students do not have the prerequisite skill level for their class. If so, the Dean and/or Associate Dean for Instruction confirm the report and take corrective action as required.

Faculty, student, and sponsor feedback is taken seriously. Formal and informal processes allow the School to monitor quality and take corrective action in a timely manner.

5.41B Workload Policy

All full-time faculty members are expected to carry equitable teaching workloads. During teaching quarters, full-time faculty members are expected to complete 11 credits-hours of instructional work. For most faculty, this typically means teaching two 4-credit-hour graduate courses (with 20-30 students each) and serving as a thesis or project advisor for 2-4 graduating students.

The number of course preparations per year varies across the faculty depending on a faculty member’s teaching expertise and student demand for particular courses. Some faculty who teach the core courses may only have one preparation. Faculty who teach specialized courses often prepare two courses per year. Occasionally a faculty member may have more than two preps. This would be most common for non-tenure-track faculty who carry a heavier teaching load.

Over a year's time, a full-time faculty member must earn 44 credit-hours. In addition to teaching and thesis work, faculty members meet their workload requirements through research or internal administrative assignments. (See Appendix 3.4G.)

All full-time faculty have a written annual workload plan and agreement that specifies on a quarter-by-quarter basis what the faculty member's workload (teaching,

research, administration, projects) will be over the entire academic year. Before the start of an academic year, the workload agreement is signed by each faculty member acknowledging that the School and the faculty member agree to the stated workload plan.

5.41C Class Sizes

Table 5.41C provides information about class size. Part I of the table shows the distribution of class size across all the GSBPP programs for the 2002-2006 period. Most classes fall in the 10-29 class size range, with class size in the 20s clearly being the mode. This is an expected consequence of the planning and scheduling of classes in accordance with GSBPP guidelines. For planning purposes, the maximum class size in GSBPP is nominally 30, with an attempt always made to break a course into multiple sections when enrollment exceeds the 30 level. In the MBA program, class size may depend on whether a course is part of the Common Core Curriculum or a Specialization. Students are grouped into distinct cohorts, which are maintained through the Common Core Curriculum. The input of students during 2007 translated to six sections of core courses during the year, with class size typically from 20-30. Beyond the core, each of the 10 MBA curricula has curriculum-specific courses. Depending on the number of students enrolled in a particular specialized curriculum, class size in concentration courses may often be less than 30.

Part II of Table 5.41C, provides class size data for only 2007, but disaggregated by degree program. (Similar disaggregated data is not readily available for the years prior to the 2007 self-study year, but may be constructed retro-actively should such be deemed important.). Part II shows great similarity of the class size distribution between MBA Program courses, MSM program courses, and GSBPP courses in the aggregate. As in previous years, classes with size in the 20s dominate the distribution. This similarity across programs and similarity with earlier years is to be expected given that the same policy and scheduling practices are followed.

Table 5.41C – Part I

CLASS SIZES – GSBPP 2003-2006

	Number of Course Sections			
Class Size	**AY2003**	**AY2004**	**AY2005**	**AY2006**
1-9	21	14	14	30

Standard 5.42 Research
Research, writing and publication

5.42A Purpose

One element in the mission statement for the Graduate School of Business and Public Policy is:

> *Conduct research, using the scholarships of discovery, application, integration, or teaching, that supports defense enterprise decision-making, problem solving, and policy setting; improves business management processes and practices; contributes knowledge to academic disciplines via dissemination in high-quality refereed research journals or suitable practitioner-oriented journals; and advances the development of graduate education.*

As indicated by this statement, faculty research is an important faculty activity in the Graduate School of Business and Public Policy. This research program is integrated to the greatest possible extent with the educational process. Students are encouraged to participate in faculty projects and faculty research results are typically incorporated in classroom instruction.

5.42B Areas of Research

Because of the close link between our research and educational programs, research in the Graduate School of Business and Public Policy is largely driven by the school's curricula and the academic areas from which we draw faculty to support those educational programs.

Briefly, the Graduate School of Business and Public Policy has primary responsibility for seven graduate degrees. The largest program is the resident MBA program, with curricular concentration areas in acquisition management, logistics management, financial management, information management and defense management. The resident MS in Management degree program currently offers a concentration in Manpower Systems Analysis. A third resident degree, the Master of Executive Management (MEM) started July 2006.

The Graduate School of Business and Public Policy also offers three Distance learning graduate degree programs. The largest program is an Executive Masters of Business Administration (targeting senior Navy Lieutenants through Commanders, particularly from the Unrestricted Line communities who have middle-management level experience). The other two programs offer a Master of Science in Contract Management and a Master of Science in Program Management. These programs are primarily offered to

Department of Defense civilians at designated off-site locations. Through 2006 GSBPP also offered an MS in Leadership degree, which has now been discontinued.

Finally, the Graduate School of Business and Public Policy offers two certificate programs: the Practical Comptrollership Course, sponsored by the Assistant Secretary of the Navy (Financial Management and Comptroller), which targets individuals (civilian and military) occupying financial management positions; and the Advanced Acquisition Program, which provides Level III education certificate in Program Management for the Department of Defense acquisition workforce.

The faculty of the Graduate School of Business and Public Policy are drawn from a wide variety of academic disciplines in business and public sector management. The school's diverse, multidisciplinary character is reflected in the breadth and depth of issues addressed by faculty research, which has historically been concentrated in applied areas of interest to the Departments of Defense and Navy. The school's research program touches a wide range of distinct topics within the course of a year. These topics and issues can be grouped into five functional areas, related to the school's curricula. The school's five functional areas included the following:

- Acquisition and Contracting
- Economics and Manpower Systems Analysis
- Financial Management
- Logistics and Transportation
- Organization, Management, and Policy Analysis

5.42C Planning For the Future: General Guiding Principles

As noted, research in the Graduate School of Business and Public Policy is multidisciplinary and often widely diverse; but, this research is directed toward a common set of goals. As stated in the school's mission statement, the faculty conducts a variety of research to:

- Contribute knowledge to academic disciplines
- Support military decision-making, problem-solving, and policy-setting
- Improve administrative processes and organizational effectiveness
- Advance the mission of graduate education

The primary goal of the school's research program is to provide the Navy and DoD with the capability of managing defense systems efficiently and effectively. This includes the efficient and effective utilization of resources, which derive from an existing base of knowledge or may require the development of new concepts and theory. Thus, the school recognizes the importance of both basic and applied research to the Navy and DoD, and it seeks to balance both types of research.

The school's research program goals are further specified as follows on the Graduate School of Business and Public Policy "web" page: (http://www.nps.navy.mil/gsbpp/research.htm):

- Increase the quality and quantity of relevant defense-oriented research
- Catalyze a broad and robust research program
- Involve top researchers, practitioners and graduate students in defense-oriented research useful to DoD policy/decision making processes
- Augment and complement cooperative, interdisciplinary research activities
- Disseminate relevant, important results to researchers, sponsors, policy makers and practitioners
- Integrate defense-oriented research with education, DoD workforce training and standardize policy practices
- Establish and maintain a community of academic and professional scholars engaged in exploratory and applied research to address complicated defense issues from a number of perspectives, while integrating defense applications into familiar business disciplines

Concepts, theory, and existing knowledge can generally be identified with a particular functional area or discipline. Actual defense policy and management decisions or policies often require information or perspectives drawn from a variety of functional areas and professional expertise. Consequently, in addition to pursuing functional area research with a critical mass of faculty, the school actively seeks to engage in cooperative, interdisciplinary research. Such research places the school in a strong position to assist defense policy makers, since it allows for a coordinated, broad-based program under "one roof" — where researchers from diverse fields and professional experience can share information and findings in a unified and truly systematic fashion.

5.42D Planning for the Future: Research Opportunities by Functional Area

As the Graduate School of Business and Public Policy prepares for the challenges of the future, it is appropriate to consider research fields that would help the school achieve its program goals and simultaneously assist defense decision-makers. Fields of inquiry and research opportunities are discussed below by each of the school's five functional areas.

Acquisition and Contract Management. Defense acquisition and contract management represents a process of critical importance to the military, not only to reduce taxpayer costs, but to ensure the quality and performance of today's increasingly sophisticated weapon systems. Nevertheless, negligible academic research has been applied to systematically investigate, understand, and model the acquisition process; and current innovations in this domain—such as spiral development, open architecture, contract termination, process reengineering and acquisition reform—are uncoordinated, ad-

hoc, and performed largely on a trial-and-error basis. This is the case because many acquisition policy makers and executives have little or no benefit of theory or practice.

Beginning in 2002, the Graduate School of Business and Public Policy initiated an Acquisition Research Program to provide leadership in innovation, creative problem solving and an on-going dialogue to support the evolution of Department of Defense acquisition strategies. The program goals include:

- Establishing NPS acquisition research as an integral part of policy-making for Departments of Defense and Navy officials
- Creating a stream of relevant information concerning the performance of DoD acquisition policies with viable recommendations for continuous process improvement
- Preparing the workforce to participate in the continued evolution of the defense acquisition process
- Collaborating with other universities, think tanks, industry and Government in acquisition research

Supported primarily by the Graduate School of Business and Public Policy Acquisition Chair, currently held by Rear Admiral Jim Greene, USN, (Ret.), this research program initiated fifteen research projects in 2003, with the number increasing to well over 20 in 2004, and over 35 in 2005. These projects include several collaborative efforts with Dr. Jacques Gansler (former Under Secretary of Defense for Acquisition, Technology and Logistics) and other faculty members at the University of Maryland, as well as faculty members from universities across the United States. Primary research sponsors include: Assistant Secretary of the Navy (Research, Development and Acquisition), Naval Sea Systems Command, Program Executive Office (Ships), Program Executive Office (Integrated Warfare Systems) and the Defense Contract Management Agency (International). In 2006, this program grew further, adding significant support from the Under Secretary of Defense (Acquisition, Technology and Logistics) in a separate proposal process, funding an additional 10 proposals.

A significant portion of this research funding is open-ended, restricted only to research topics involving acquisition issues broadly defined. The Graduate School of Business and Public Policy has established a competitive internal proposal process to allocate these funds; the call for proposals is distributed to faculty from across the Naval Postgraduate School. Priority is given to proposals that involve collaboration between tenure-track and non-tenure-track faculty members and to proposals involving thesis students and MBA project teams. The objective is to encourage collaboration that exploits the school's academic as well as professional expertise, a collaboration that provides the Graduate School of Business and Public Policy a strong comparative advantage for defense acquisition policy research. This program has been growing rapidly, with four of five proposals funded in AY2004, nine of 11 proposals funded in AY2005, 10 of 27 proposals funded in AY2007 and 11 of 30 proposals funded in AY2008.

The Acquisition Research Program also hosts an annual research symposium in Monterey. The fourth symposium, in May 2007, involved well over 100 people, including researchers and acquisition policy and decision makers from across the United States. Mr. Shay D. Assad – Director, Defense Procurement and Acquisition Policy, Office of the Under Secretary of Defense (Acquisition, Technology and Logistics) delivered the keynote address. Details for the Acquisition Research Program and symposium are on the Acquisition Research Program website (http://acquisitionresearch.org/index.php).

Logistics and Transportation. The primary mission of the Logistics and Transportation group is to educate military officers and DoD civilians in state-of-the-art concepts of logistics, transportation and supply chain management. Emphasis is placed on understanding both military and non-military applications, so that students will be prepared to perform effectively in a military environment and interact efficiently with civilian contractors and suppliers. The general research perspective of the group is focused on improving DoD logistics and transportation performance as well as management effectiveness. Major research areas include:

- DoD inventory policy
- Weapon system total ownership cost and life-cycle support
- Defense transportation and distribution systems
- Total Asset Visibility (TAV) and real-time logistics
- Metrics and Performance Based Logistics
- Spiral Development
- Modeling and simulation for logistics decision support
- Supply chain management and lean manufacturing
- Weapon system readiness and risk management
- Business case analysis for transportation and logistics technologies

Much of this work has been supported through the Acquisition Research Program and its associated sponsors. Additional sponsors have included the Office of Naval Research, NAVAIR, the Military Sealift Command, the US Transportation Command and the Naval Surface Warfare Center.

Financial Management and Budgeting. Research in the area of financial management has become increasingly important since the end of the Cold War and the events of 9-11. The Financial Management (FM) group has identified three major functional areas as targets of opportunity for future research. These are:

- Financial resource policy formulation, analysis and management
- Financial management and budgeting
- Organizational efficiency, managerial control and performance metrics

The first of these functional areas — financial resource policy formulation, analysis and management — covers a range of sub-areas: national defense and national security resource policy and management; resource planning, programming, budgeting and policy under the Planning, Programming, Budgeting and Execution System; and relationships between financial management, contracting, acquisition and other policy fields. Financial management and budgeting includes the following: federal, DoD and Navy budget formulation and execution; impacts of budget allocation, reallocation and reduction; implementation of Defense Resource Management Systems; and the Chief Financial Officer Act and federal financial management reforms. The research area of organizational efficiency, managerial control and performance metrics, in turn, covers the following: mapping, goals, and objectives to a defense organization's strategic themes using a balanced scorecard and performance metrics, examining the efficiency of defense sector consolidation and the cost –effectiveness of public-private partnerships.

In addition to the Acquisition Research Program, sponsors for this research have included: Assistant Secretary of the Navy (Research, Development and Acquisition), Program Executive Office (Ships); Program Executive Office (Integrated Warfare Systems); the Office of the Comptroller, COMNAVAIRPAC (CNAP); U.S. Department of Justice; and the Personnel Security Research Center (Department of Defense).

Manpower Systems Analysis. As noted above, the primary goal of the department's research programs is to provide defense policy makers with the capability of utilizing resources with maximum efficiency and effectiveness. This includes *human* resources, the focus of research in the Manpower Systems Analysis (MSA) group. Defense manpower policy makers have been faced with many challenges since the end of the Cold War and the events of 9-11. Key among these challenges include an over 30 percent reduction of the active-duty force, budget reductions in recruiting and advertising, a steady, high operational tempo and deployment schedule with fewer people, new missions, increasing pressure to change the "culture" of military service, renewed efforts toward population representation of women and racial/ethnic minorities throughout the force, a high rate of first-term attrition among new recruits, declining levels of personnel retention in certain critical areas, a number of high-profile "scandals" and others. As the active-duty force was reduced and missions changed, it soon became clear that a smaller military had to be even more skilled and adaptable than the one that witnessed the end of compulsory service and performed so successfully throughout the early 1980s and early 1990s. These challenges confronting defense manpower policy makers are recognized by the MSA group as opportunities for research that will have a lasting impact on the future of the force. MSA research areas can be summarized as follows:

- Manpower supply and force requirements
- Improvements in selection and classification of enlisted personnel
- Innovations in recruiting and the application of new technologies
- Improvements in selection of officers and pre-commissioning programs
- Effectiveness of equal opportunity and diversity management programs

- Training effectiveness and efficiency
- Innovations in instructional technologies
- Innovations in enlisted assignments and auctions for assignment incentive pay
- Personnel retention in critical fields and communities, including auction based approaches
- Reduction of first-term attrition rates among enlisted personnel
- Force management programs and planning
- Force structure and cost analysis
- Auction-based approaches to force shaping
- Career-force modeling
- Officer promotion and performance
- Civil-military relations and the All-Volunteer Force
- Manpower management in Reserve components

Sponsors for this research include: Office of the Chief of Naval Personnel (N-1, N-1H, N-1Z, N-12, N-13, and N-14), Navy Personnel Research, Studies and Technology and the Office of the Assistant Secretary of Defense.

Economics and Finance. GSBPP also maintains an expertise in general defense economics and finance. Rather than focusing on specific areas within the defense department, this capability represents a set of skills that has been applied to a wide range of applications over time. Past areas of interest have involved burden-sharing and the economics of defense alliances, game theory approaches to terrorists' decisions and defense strategy, defense requirements (e.g., aerial refueling and operational support aircraft), and incentives in defense decision-making. Current interest focuses on several areas:

- Transaction cost economics in defense acquisition
- Technology innovation and diffusion in the Department of Defense
- Business case analysis for new defense technologies
- Consolidation in the defense industrial base
- Discount rates and personal decision making in the defense sector
- Healthcare Economics, incentives, ownership and patient outcomes

Sponsors for this research have included the Acquisition Research Program, the Under Secretary of Defense (Advanced Systems and Concepts), internal NPS research funding and other external non-defense sponsors.

Organization, Management, and Policy Analysis. Faculty members in this functional area pursue basic and applied research on key management issues at a variety of organizational levels. Faculty members bring a strategic perspective to this work, seeking to identify courses of action that will best achieve organizational goals in a given setting. Individual faculty members are acknowledged experts who publish leading-edge research

on a variety of issues. Top management issues include strategy and entrepreneurship, appreciative inquiry and positive change, organizational design (including the use of self-managing groups), social network analysis, ethics, collaboration in teams, managerial communications and the development of culture.

There is a developing interest in management innovation in the defense sector, embodied in the recently formed Center for Defense Management Reform. This multi-disciplinary research center initially focused on personnel management initiatives, such as those enacted in the Homeland Security Act of 2002 and the National Security Personnel System. Interest is extending to other areas including budgeting and financial management, organizational resilience, and market-based approaches to workforce and acquisition-related issues.

In addition to their subject area and methodological expertise, faculty members have developed considerable knowledge of current military organizations through their research. Most of this work has been with Navy organizations, such as the NAVSUP, NAVAIR, CNET, NETWARCOM, Naval Reserves and CINCLANTFLEET. However, faculty members have also worked with organizations in other service branches, including extensive work with the U.S. Army Reserve Command and Coast Guard Headquarters. Recent DoD-wide research includes work for the Office of Force Transformation. Individual faculty have also conducted research for other US government agencies, including the Office of Personnel Management, the Department of Homeland Security and the Center for Disease Control, and consulted with state government agencies, the United Nations, and private-sector organizations. Supervising student theses has broadened this knowledge even more. This organizational expertise increases the value of faculty as applied researchers for DoN and DoD organizations.

5.42E Research Labs and Centers

In 2007, the Graduate School of Business and Public Policy was the "home" of two research centers: the Center for Defense Management Reform (Director – Professor Douglas Brook; Sponsors – Defense Logistics Agency, Office of Personnel Management); the center for Positive Change (Director – Professor Frank Barrett; Sponsors – NETWARCOM, NAVSUP IT, Office of Force Transformation and NETC).

5.42F Scholarly Productivity

Over the past four years (AY2003 – 2006) faculty productivity in the graduate School of Business and Public Policy has increased dramatically. This increase reflects two factors: new hires and a new Policy on Lecturer and Senior Lecturer Appointments. After several years with very limited new tenure-track faculty hires, the school has been involved in an aggressive hiring process. Supported by institutionally provided research

support during their first three years of employment, the new tenure-track hires have contributed significantly to the school's scholarly output. Much of this output is focused on mainstream academic journals, as required for a successful tenure decision. This complements the more applied defense policy research typically conducted by the tenured faculty.

In addition, the Graduate School of Business and Public Policy recently adopted a new Policy on Lecturer and Senior Lecturer Appointments. This policy specifies a scholarship expectation for non-tenure track faculty members, which emphasizes more applied research. Coupled with the concurrent increase in applied research funding through the Acquisition Research Program described above, the lecturers and senior lecturers have contributed significantly to scholarly output in the Graduate School of Business and Public Policy.

Over the four year evaluation period (2003-2006), faculty members in GSBPP have appeared as authors or co-authors for: 146 refereed journal publications (up from 74 in the last evaluation cycle); 74 conference papers (up from 32); 9 books (up from 3); 58 book chapters (up from 53), 146 technical reports (up from 25); and 105 non-refereed papers, case studies, notes, editorials, letters, etc. Conference presentations over this period numbered 298 (up from 169).

Table 5.42F shows that our faculty members are active and their work has increased over this period. This data indicates the two trends described above. The increase in journal publications largely reflects the recent increase in tenure-track hires; the increase in technical report and other publications, including non-refereed papers, largely reflects the contribution of the non-tenure track faculty in response to their new appointment policy and Acquisition Research Program funding. In this table, "participating faculty" refers to all nucleus faculty members who are expected to participate in scholarship. Essentially, this includes all civilian faculty members -- tenure-track and lecturers/senior lecturers. Excluded are faculty members who fill positions where there is, by the nature of the position, no scholarship expectation. This includes all active duty military faculty members, as well as a couple of retired military officers holding administrative faculty positions.

TABLE 5.42F

GRADUATE SCHOOL OF BUSINESS AND PUBLIC POLICY
SCHOLARLY CONTRIBUTIONS
AY 2003-2006

	AY2003	AY2004	AY2005	AY2006

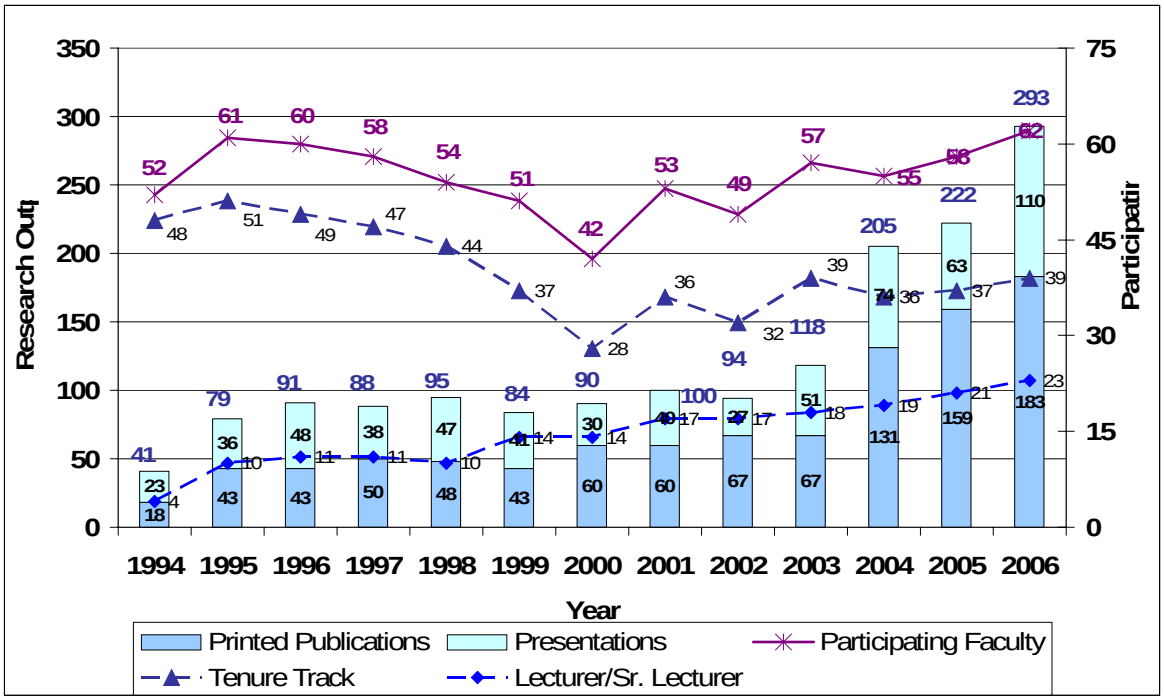
Output/Participating Faculty	**2.07**	**3.73**	**3.83**	**4.73**

Figure 5.42F below shows the number of full-time, faculty members expected to participate in scholarship in the Graduate School of Business and Public Policy superimposed over scholarly output over the period 1994 through 2006. As the graph illustrates, full-time faculty numbers have increased since the low in 2000. However, the significant increase in scholarly output over the study period is not the result of an increase in full time faculty; the number of full time faculty members averaged 58 over the current study period, essentially equivalent to the 58.25 average over the previous study period.

Figure 5.42F
GRADUATE SCHOOL OF BUSINESS AND PUBLIC POLICY
SCHOLARLY CONTRIBUTIONS AND NUCLEUS FACULTY
AY 1994-2006



In fiscal 2006, Graduate School of Business and Public Policy faculty members received a total of $4.16 million in funding for research and other sponsored projects (including projects carried over from previous years). This funding supported over 40 projects. Of these projects, 7 were umbrella contracts secured by the Acquisition Chair for the Acquisition Research Program. Each of these umbrella contracts supported several additional faculty and student projects; a list of these projects can be found at the Acquisition Research Program's website: http://www.acquisitionresearch.org/.

In addition to this external funding, the Graduate School of Business and Public Policy distributed approximately $640 thousand in internal research funding to tenure-track faculty through the Workload Relief Funding Program. This program earmarks a particular funding line to support tenure-track faculty research. It is distributed to the four schools within NPS according to the number of tenure-track faculty in each school. The Graduate School of Business and Public Policy allocates its share of these funds as follows: all untenured tenure-track faculty are entitled to two months (44 days) of workload relief funding, if needed; all tenured tenure-track faculty equally share the remaining funds, as needed, after receiving approval for their proposed research program from the school's Faculty Research Committee. In AY2006, 18 tenured faculty members received 33 days in research funding through this process. This research funding primarily helps underwrite research projects supported by other sponsors, making NPS faculty proposals more competitive and cost-effective.

Finally, 10 newly hired tenure-track faculty were eligible for NPS Research Initiation Program (RIP) funding in AY2006. RIP funds six months of research labor for all tenure-track hires in their first two years at NPS. In addition, RIP candidates can submit proposals for non labor support, including travel, equipment, research assistance, etc., as required by their research. On average, the 10 RIP faculty members received $13,800 in non-labor funding for FY2006. The total value of the RIP funding exceeded $1.1M in FY2006 for the Graduate School of Business and Public Policy, and this funding was credited with supporting, at least in part, 21 different research projects. This funding varies by year depending on the number of eligible faculty members. RIP funding supported 7 faculty members in FY2004 and 10 faculty members in FY2005.

Detailed information for individual faculty's publications, conference presentations and research projects is presented in the Faculty Data Sheets - Volume II of this Self-Study report.

Standard 5.43 Experience and Service
Professional experience and public service with government, industry, non-profit agencies, or consulting assignments.

5.43 Experience and Service

Faculty from GSBPP have a broad range of professional experience as detailed in the Faculty Data Sheets - Volume II. From the self-reports in the Faculty Data sheets, more than 70% of the nucleus faculty members have significant practitioner experience that directly relates to their field of study. As would be expected, given their role in supporting the school's mission and programs, all (100%) of the non-tenure-track faculty have significant practitioner experience.

About 42% of the nucleus faculty report they are currently, or have recently been, engaged in public service activities. Scanning the kinds of public service activities reported by the faculty, in general, most of the reported activities outside of their regular professional or academic positions, often of a voluntary nature. An alternative way to think of public service is in terms of the jobs or careers the faculty members have pursued. Given that all faculty members at the Naval Postgraduate School are federal government employees, in a sense, all are engaged in public, governmental service by their current employment. Additionally, as noted before, a significant portion (41%) of the faculty have had prior service, or full careers, in the military, with military service representing a distinct form of public service.

About 37% of our faculty members report specific consulting activities in which they are currently, or have recently been, engaged. Participation is spread across all ranks of the nucleus faculty. Several faculty members serve as consultants to senior leaders within the Department of Defense. Most of this type of consulting is done is conjunction with research projects or as members of advisory boards, etc.

Standard 5.5 Faculty Diversity
There should be evidence that specific plans are being implemented to assure diversity of the composition of the faculty with respect to the representation of minorities, women, and persons with disabilities. Programs and plans to insure faculty diversity shall generally reflect NASPAA's Diversity Guidelines.

5.5A Diversity Plans

While GSBPP has no explicitly articulated program targeted to assure diversity in the faculty composition, we nonetheless have a serious commitment to achieving and maintaining a high level of faculty diversity. Although we have set no quotas or numerical goals, we actively strive to provide a supportive and positive atmosphere where diversity among the faculty and staff can thrive and grow. We have a shared philosophy among the School's leadership that guides our efforts in the area of diversity management. This philosophy requires and involves equitable recognition and reward for one's contributions, openness to individual difficulties (with students, programs, etc.) and sensitivity to

challenges that might affect one's feeling of effectiveness in their jobs and professional lives. We believe this is a continuing accomplishment in the School. We have no "second class citizens". Faculty members are recognized, treated and valued as faculty; not as "Adjunct" or "Military" or "Tenure Track"; not as "junior" or "senior"; and, certainly, not as "minorities", "women" or "handicapped".

In terms of how our faculty recruitment plans and efforts support faculty diversity, we often find that the uniqueness of our academic mission and our focus on defense-relevance works against us. In many instances, the types of experience and military-relevant perspective we seek in a faculty member dramatically restrict the total pool of applicants, and most certainly the possibility of finding a well-qualified diversity hire. For example, we have a frequent recruiting need in the Acquisition area. The necessity of a relevant experiential background in the area often means that plausible candidates will come principally from retired military officers or senior defense civilian employees. There are few minorities, women, and almost no handicapped candidates in these fields. While there has been an increasing number of women and minorities among the officer corps of the military, their percentages do not mirror the general public, and most of those that have reached retirement age are quickly recruited into industry at salaries well above our salary scales. There are somewhat analogous limitations when seeking faculty candidates in the Transportation and Logistics area, the Manpower area and the Defense Financial Management area. Nonetheless, we encourage all 'diversity candidates' in these specialized fields, using our current faculty members' contacts and taking advantage of the fact that the communities from which qualified candidates derive are small and usually well known to our senior faculty in these fields. The result is that despite the difficulties outlined, we have had only modest success at hiring women and minority faculty in these fields.

While we have difficulties in those fields with small candidate pools, we can and have been successful in hiring and retaining women in particular, and minorities to a lesser extent, in areas where the related candidate pool is large and mature enough to provide many competitive applicants. For example, we have had no serious difficulty in attracting 'diversity candidates' in areas such as Organization and Management, Managerial Communications and Accounting, where we've hired well qualified women and minority faculty colleagues.

In terms of recent changes in faculty diversity, Table 5.5A is a list of all new nucleus faculty hires during the past six years (2002-2007), indicating their diversity status.

Table 5.5A

GSBPP NUCLEUS FACULTY HIRES 2002 - 2007

Year of Hire	Academic Appointment	Status	NPS Start Date	Race/Ethnicity	Gender
2002	Assistant Professor	Resigned	10/7/2002	White	Female

2003	Assistant Professor	Resigned	6/16/2003	Black	Female
2003	Assistant Professor	Resigned	1/13/2003	White	Female
2003	Professor	Deceased	6/2/2003	White	Male
2004	Assistant Professor	Untenured	6/28/2004	Asian/Pacific Islander	Female
2004	Associate Professor	Untenured	6/28/2004	White	Male
2004	Associate Professor	Untenured	10/18/2004	White	Male
2004	Assistant Professor	Untenured	6/1/2004	White	Female
2004	Assistant Professor	Untenured	9/7/2004	White	Female
2004	Assistant Professor	Untenured	10/4/2004	White	Female
2004	Assistant Professor	Untenured	9/20/2004	Asian	Female
2004	Professor	Tenured	6/28/2004	Asian/Pacific Islander	Male
2004	Assistant Professor	Resigned	11/1/2004	White	Male
2004	Lecturer	Non-TT	10/12/2004	White	Male
2004	Lecturer	Non-TT	7/12/2004	Hispanic	Male
2004	Lecturer	Non-TT	5/3/2004	White	Male
2005	Assistant Professor	Untenured	6/27/2005	White	Female
2005	Senior Lecturer	Resigned	10/3/2005	White	Male
2006	Associate Professor	Untenured	9/20/2006	White	Male
2006	Assistant Professor	Untenured	9/20/2006	White	Male
2006	Assistant Professor	Untenured	9/20/2006	White	Female
2007	Lecturer	Non-TT	9/16/2006	White	Female
2007	Senior Lecturer	Non-TT	6/25/2007	White	Male
2007	Assistant Professor	Untenured	To start 9/07	Asian/Pacific Islander	Male
2007	Associate Professor	Untenured	To start 9/07	White	Male

As indicated in the table, GSBPP has been growing significantly during recent years, with a total of 34 nucleus faculty members hired since 2002. About 74% of the new faculty members have been hired as tenure-track faculty. As a result of this, the tenure-track proportion of the nucleus faculty has increased in recent years. Concerning diversity,

only 6 of the new faculty members (18%) are from racial/ethnic minorities, but 17, half, are women. Considering both race/ethnicity and gender, 59 percent (20/34) of the newly hired nucleus faculty members are diversity faculty.

The School is aware of the need to retain women and minority faculty members once recruited. The table also shows that eight of the 34 faculty members hired in the last six years have resigned to accept other job opportunities; five of the eight accepted university positions; three accepted industry positions. Six of the eight lost were diversity faculty members. We are personally and organizationally conscious of the importance and sensitivities of each faculty member and encourage behavior which respects that. Efforts directed toward retention of faculty apply to all faculty members and are based on faculty members' individual contributions.

5.5B Faculty Diversity Data

Table 5.5B provides data on the current diversity of the nucleus faculty. Nineteen faculty members are listed, representing 31% of the 61 total current nucleus faculty members.

Table 5.5B

NUCLEUS FACULTY DIVERSITY 2007

Faculty	Gender	Race/Ethnicity	Rank	Tenure Status
A	Male	Asian/Pacific Islander	Professor	Tenured
B	Male	Hispanic	Professor	Tenured
C	Female	White	Associate Professor	Tenured
D	Male	Asian/Pacific Islander	Associate Professor	Tenured

v	Male	Hispanic	Lecturer	Non-TTrack

5.5C Faculty Searches

Because of the curricular and discipline diversity in the School, major responsibility for the development, implementation and monitoring of our affirmative action effort remains vested in the Dean, with the assistance of the Associate Deans and the five faculty members acting as Area Chairs. Faculty recruitment efforts are largely carried out by the faculty group involved, with the designated Area Chair as the lead person. The Senior Associate Dean assists the School's leadership team in determining hiring needs, monitoring the recruiting process and candidate hiring recommendations.

The Naval Postgraduate School's administration is actively supportive of the EEO/Affirmative Action efforts of all schools and departments. When GSBPP begins faculty recruitment, the Area Chairs who will lead each search coordinate with the Dean and Senior Associate Dean to plan search activities. EEO factors are discussed so that all advertisements and notices bear the proper invitation for attracting a diverse pool of applicants. When applications are received we ensure that women, minorities, or identifiable handicapped individuals are objectively considered and we make a special effort to invite a diverse range of candidates for on-campus interviews.

For any particular faculty position, the number of candidates invited for on-campus interviews will vary, depending on the size and strength of the candidate pool. After on-campus interviews of the set of candidates deemed most qualified, they are compared with one another so that we may judge the best qualified for the appropriate position. Since we recognize that "best" is a relative word, and since criteria are multiple, we examine all candidates to be sure we are not overlooking opportunities to add diversity to our faculty. If in our opinion other factors are approximately equal, we enhance diversity. Additionally, a report is compiled for each search that outlines the pool of applicants in terms of diversity characteristics and that report is included with the hiring requests forwarded to the Dean and Provost for action. (Admittedly, when screening possible candidates based on resumes, it may be difficult to identify all candidates who are members of a minority group, or handicapped.) Table 5.5C summarizes applicant data for faculty searches during the past five years.

Table 5.5.C

SEARCH HISTORY 2002 - 2007

Year of Search	Position Type	Position Area	Ethnicity of Hired	Gender of Hired	Total Apps/Intv	Women Apps/Intv	Minority Apps/Intv

STANDARD 6.0 -- ADMISSION OF STUDENTS

Standard 6.1 Admission Goals and Standards
Admission goals, policy and standards, including academic prerequisites, should be clearly and publicly stated, specifying any differences for pre-service or other categories of students.

6.1A Mission

The mandate for NPS is clearly stated by Congress. The purpose of the Naval Postgraduate School is to serve the Nation by educating military officers and DoD civilians in defense-focused business and public policy, by conducting scholarly research in defense management and public policy and by providing intellectual resources for leaders and organizations concerned with national defense management practice and policies.

With a focus on preparing military officers and government civilians for professional positions, NPS and the Graduate School of Business and Public Policy in conjunction with sponsoring agencies determine admission standards and processes.

6.1B Admission Processes

Admissions standards and processes reflect two dimensions: Academic and Professional. GSBPP/NPS set academic standards for admissions. The Navy, and other sponsoring agencies, select students -- who have met the academic standards -- for admission based on professional and career considerations. Thus admission to GSBPP/NPS is accomplished through the joint efforts of the School and students' sponsors.

During the earlier years of their career, all Navy officers have are initially screened for graduate study, based on their undergraduate academic performance (officer transcripts may be reviewed by the NPS Admissions Office). In addition to the academic admissions standards, U.S. Navy officers are reviewed for selection to graduate school based on their professional performance and promotion potential. Selection boards and Senior Officer Reviews occur annually to select eligible officers. The selection board evaluates both the officer's professional performance in the Navy and his/her prior academic record. Officers selected for graduate study are then offered the opportunity to attend a specific graduate curriculum. No one is ordered to graduate school against his/her will. Similar selection procedures are employed by the other U.S. services and by federal agencies wishing to nominate civilian employees for graduate study.

The Graduate School of Business and Public Policy does not select individual Navy students. However, in the case of prospective students from other services, including U.S. and allied nations, the appropriate Academic Associate reviews all individual transcripts and offers recommendations to the director of admissions about acceptance or rejection. The Academic Associate's recommendation is normally the determining factor in the admission decision.

6.1C Representation

As indicated above, selection of students originates with the sponsoring military service or agency, not with NPS. Given the mission and admissions process for GSBPP, diversity among GSBPP students, and within the MBA program, will be significantly influenced by diversity policies within the larger Navy, and the population of officers from which students will come.

US Navy Diversity Policy: Diversity is recognized as a strategic goal of the Navy and expressed as Navy policy:

Diversity is a strategic imperative for the United States Navy:

We defend the greatest nation in the world. It is a nation that welcomes, indeed encourages, the active participation of every citizen regardless of race, gender, creed or color - - a democracy founded on the promise of opportunity for all. It is also a nation whose demographic makeup continually changes, reflecting the influx of new immigrants and the growth of minority populations. The Navy must change with it. To the degree we truly represent our democracy, we are a stronger, more relevant armed force.

Diversity is critical to mission accomplishment:

Everyone in our Navy contributes to mission success, and everyone brings to that collective effort unique capabilities and individual talent. How we harness those capabilities and foster that talent bears considerable effect on our ability to successfully accomplish the mission. Like an organization in time of change, we thrive on the infusion of new ideas and the diversity of thought. This is particularly true today, when understanding the mores, customs, and ideals of diverse cultures, as well as the perspectives of other people, remains critical to winning the long war.

Diversity is a leadership issue, and everyone is a leader:

We will promote and engender a culture that embraces our diversity. Through our communications, education, policies, programs, and conduct, each of us will actively foster work environments where people are valued, respected, and provided the opportunity to reach their full personal and professional potential. We will recruit, develop, educate, and retain leaders from and for all parts of our Navy and nation.

We defend the greatest nation in the world. The strength of our diversity directly and irrefutably helps us do so. The Navy will stay committed to improving that strength. (US Navy Diversity Policy, Chief of Naval Operations)

Student Demographics: As indicated above, selection of individual students for admission originates with the sponsoring military service or agency, not with NPS. Hence GSBPP does not have direct influence on the diversity characteristics of students. Student diversity will depend significantly on the diversity characteristics of the wider Navy and Defense community.

Presented here are data on the diversity demographics of GSBPP's resident student population, as compared with the university (NPS) and the wider Navy officer Corp. Broadly speaking, GSBPP student characteristics with respect to Race/Ethnicity and to Gender are reflective of the university and defense community which it serves.

Table 6.1C1
RACE / ETHNICITY
Comparison of GSBPP / NPS / Navy Officer Corps

	GSBPP	NPS	Navy
Caucasian	73%	78%	81%
African American	12%	7%	8%
Hispanic	7%	6%	6%
Asian	8%	7%	4%
Other	<1%	<1%	1%

Table 6.1C2
GENDER
Comparison of GSBPP / NPS / Navy Officer Corps

	GSBPP	NPS	Navy
Male	88%	89%	85%
Female	12%	11%	15%

One way in which the student population in GSBPP will, by design, differ from the officer population in the wider U.S. defense community is through the recruitment and enrollment of international students. Through an admissions and selection process roughly analogous to that used for U.S. students, allied nations may select and send officer students to NPS. Through various programs, NPS actively seeks enrollment of international officers, and values the range of backgrounds and experiences they bring to the academic experience. Student representation for specific countries varies over time, as does the proportion of GSBPP students from other countries. Currently GSBPP enrolls students from 13 different nations, with international students comprising about 15% of the student population. The MBA Program is approximately 12% international students.

Table 6.1C3 CITIZENSHIP Comparison of MBA / GSBPP / NPS / Navy Officer Corps				
	MBA	**GSBPP**	**NPS**	**Navy**
U.S.	88%	85%	84%	~100%
International	12%	15%	16%	

No military students with significant physical handicaps have been admitted; the physically or mentally handicapped are not considered fully qualified to serve on active duty in the military services and therefore are not assessed into the force. Nothing precludes an academically qualified handicapped DoD civilian employee from attending.

Officers from foreign military services who enter the Graduate School of Business and Public Policy are expected to meet the same admission requirements as U.S. students. They must also demonstrate proficiency in English before enrolling

6.1D Admission Process for Beginning Part-time Graduate Students

A very small number of the officers and civilians assigned to the Naval Postgraduate School staff have taken courses on a part-time basis in a program leading to a master's degree. These persons must meet the same admission qualifications as full-time students. In addition, their enrollment must be approved by their immediate supervisor.

Standard 6.2 Baccalaureate Requirements
Admission shall normally be limited to applicants with a baccalaureate degree from a regionally accredited institution and appropriately evaluated applicants from non-US universities.

6.2 Baccalaureate Requirements

Admission to the Naval Postgraduate School is normally limited to military officers and other DoD employees with baccalaureate degrees.

Special Conditions: The Academic Council may approve the admission of students who do not hold baccalaureate degrees. Such applicants must have a minimum of 120 quarter hours of acceptable college credit. At least 100 hours must have been completed in accredited institutions and the applicant must have a B average for this work. No more than 20 semester hours of credit may be allowed for study in non-degree granting service schools. In addition, the applicant must have a score on the Graduate Record Examination high enough to indicate probable success in graduate study.

Standard 6.3 Admission Factors
Admission shall be limited to applicants that show good potential for success in professional graduate study and public service. Admission standards shall include several of the following factors about each applicant (a) performance on the aptitude part of the GRE or the GMAT, or equivalent tests; (b) undergraduate grade point average and trend of grades; (c) rank in graduating class; and (d) biographical and career interest data and essays; (e) evaluation of the quality of professional experience.

6.3A Admission Factors

Admission standards are determined by the Graduate School of Business and Public Policy based on discussions and agreement with school faculty, Deans and the Provost. In particular, the Dean, Senior Associate Dean, and the Academic Associates are responsible for the academic standards and programs offered within the school. Academic standards for all programs must be approved by NPS's Academic Council.

All military officers who are enrolled at NPS have been assigned an Academic Profile Code (APC) by the registrar's office. This code is a three-digit code that summarizes an officer's prior college performance. Each curriculum has a specified APC. The code is 345 for all curricula in the MBA program, which means a minimum of a baccalaureate degree with a 2.20 grade-point average, two or more pre-calculus courses with a B or better and no requirement for science courses. College algebra or trigonometry is considered to be the minimum mathematical preparation. In addition to meeting the established academic standards, students are screened by their sponsoring agencies. Selection by sponsoring agencies is based on outstanding professional performance and promotion potential

A summary of the NPS registrar's records which are presented in Table 6.3A show that 83% of the students enrolled the MBA program in AY2007 had GPAs of 2.60 or better.

Table 6.3A
UNDERGRADUATE GPAs FOR MBA STUDENTS
Enrolled 2007

NPS Academic Code 1st Digit	GPA	Number of Enrolled Students	Percent of Enrolled Students
0	3.60-4.00	36	14%
1	3.20-3.59	72	27%
2	2.60-3.19	109	41%
3	2.20-2.59	39	15%
4	1.90-2.19	6	2%
		263	

6.3B Admissions Record

As explained above, officers are screened for NPS each year. Many are considered to be unqualified and are quickly rejected. Hence, the total number of students screened is not a meaningful surrogate for the number of applications.

Officers selected for graduate study are given military orders to the School (in effect, admitted). Consequently, the numbers admitted and matriculated are equal. No data are available on the number of officers who decline the opportunity of graduate study. During AY 2007, a total of 337 officers entered degree programs in GSBPP; 124 of them into the MBA program. See Table 6.3B for the number of students entering the various programs in the Graduate School of Business and Public Policy AY2003-2007. The students in the MBA program are at the top of the table.

6.3C Probationary Students Assessments

Generally, no students are admitted to GSBPP on a "probationary" status. All admitted students are required to satisfy minimum admissions standards described above.

6.3D Enrollment/Size of Programs

For the most part, the number of students selected for the GSBPP resident curricula, and thus the MBA program, is determined by the military services. Each year a board convenes to establish a quota for students who will be sent for fully-funded education at the Naval Postgraduate School. Navy quotas are based on a complex system designed to determine the number of professionals requiring advanced education in the various subspecialties.

Table 6.3D1 displays the trends in student enrollment in the various GSBPP programs, and in the specific curricula in the resident MBA program. Due to the increased emphases on graduate education by the leadership of the U.S. military services over the past several years, overall enrollment in GSBPP programs has grown from 340 to 612, an 80% increase, during the past five years. The resident enrollment at NPS has increased by about 55% during that same period. Enrollment in the MBA Program shows growth up through 2006, but a decline in 2007, reflecting a pullback in the numbers of U.S. Air Force students. GSBPP continues to enroll more than 20% of the resident students at NPS.

Table 6.3D2 provides a breakdown of students in the combined resident MBA and MSM programs by their military service, and points to the source of the growth in the resident program. Overall, the number of students from most branches of the U.S. military services has remained relatively unchanged, with the notable exception of the U.S. Air Force. Air Force students have grown from a nominal amount to now represent, after the Navy, the second largest service in GSBPP. In 2002, the graduate institutions of the Navy and the Air Force, the Naval Postgraduate School and the Air Force Institute of Technology, formed a partnership to better serve the graduate education needs of their officer corps. As a result, NPS and GSBPP have seen a significant increase in Air Force officer enrollments. In GSBPP, the majority of this enrollment increase has been in the Acquisition Management and the Financial Management curricular areas. Starting in 2007, however, The Air Force has reduced its student input, with the resulting effect on total enrollment experienced in GSBPP.

STANDARD 7.0 -- STUDENT SERVICES

Standard 7.1 Advisement and Appraisal
Strong and continuous program advisement, career guidance, and progress appraisal shall be available for all students from the point of admission through graduation.

7.1A Advising System

Academic counseling is the responsibility of the Academic Associates, Program Officers, and the individual faculty members. The counseling program is designed to encourage students to seek assistance when advice is desired or the first indications of academic difficulties develop.

The Academic Associate (AA) is a Graduate School of Business and Public Policy faculty member who is assigned to a particular specialization curriculum, within the MBA Program. The AA is responsible for maintaining academic standards for the program. The Program Officer and staff support the school's mission and objectives by providing administrative support to accomplish Navy needs and academic requirements.

The Academic Associate reviews the records of all students assigned to the curricula under their purview and, in consultation with each student and based on academic background, develops a program of study within the framework of the established standard curricula. Student academic progress is monitored via the AA/Program Office Team and program changes or inter-curricular transfer made, when deemed necessary.

Both members of this team are responsible for the overall quality of a student's program. It is incumbent upon both members of the team to provide counseling for all students in the curricula under their purview. The Academic Associate will hold primary responsibility for the academic counseling of the student.

The Program Officer performs requisite administrative duties pertaining to the officer students, evaluates their military-related performance and counsels them on pertinent military matters.

Career guidance is not a need of the student at NPS since all students already have well-established careers.

7.1B Financial Assistance

None is needed since all students are on full salary.

7.1C Attrition

Data for AY 2006 was examined to determine the percentage of students who completed their degrees and those who did not. Of the 142 students eligible to graduate in AY 2006, all but one has graduated. The who did not graduate is female. Minority status data were not available. This student completed her coursework but did not complete her MBA project.

In general attrition in the MBA program is low, with efforts made to assist struggling students. When non-graduation does occur, the most common reason is non-completion of the project/ thesis requirement. According to NPS policy, students have up to three years to complete their project/thesis after leaving the school. If a student does not complete their project/thesis, no degree is awarded.

Standard 7.2 Placement Service
The program and/or the institution shall provide an adequate placement service oriented to public affairs and administration.

7.2A Number of Graduates

Table 7.2A provides data regarding the number of graduates per year in all GSBPP degree programs. Data for the MBA Program curricula are at the top. As mentioned earlier, the resident MBA program is six or seven quarters in length or 18-21 months long.

7.2B Follow-up of Graduates

All Graduate School of Business and Public Policy graduates are employed by the U.S. government or by foreign governments and return to government service upon graduation. U.S. Navy officers make a commitment to remain on active duty after graduation for three years for their first year of graduate study and for one additional year for each subsequent year of graduate work. As a practical matter, most military officer graduates will remain on active duty until retirement (20 years after their date of first entry into the service). Frequent informal contacts are maintained between individual graduates and faculty members.

STANDARD 8.0 -- SUPPORT SERVICES AND FACILITIES

Standard 8.1 Budget
The program shall have the financial resources sufficient to support its stated objectives.

8.1A GSBPP Resources and Budget

The budget for the Graduate School of Business and Public Policy is composed of two main types of funds: "Mission" or "Direct" funds and "Reimbursable" funds. Mission/Direct funds are funds allocated directly from the Naval Postgraduate School from the annual budget it receives from the Navy. Reimbursable funds are received from organizations or agencies outside of NPS, by agreement, and in exchange for specified services (e.g., research or education programs) provided to those external organizations. In general, GSBPP activities will fall in one of four broad categories:

- Mission-Funded Education
- Mission-Funded Research
- Reimbursable Education
- Reimbursable Research

Mission Funded Budget: The mission funded budget is the main budget for day-to-day school operations. This includes instruction, thesis or project advising, faculty and staff development, travel and departmental management and administrative support of the School. As currently structured, the faculty workload plan, which includes consideration for instruction and project/thesis advising, is developed by the Senior Associate Dean, using input from the faculty. This forms the basis for the most significant portion of the GSBPP budget. It is reviewed by the School Dean prior to the start of the new fiscal year of October 1. Once approved by the Dean, it is submitted to the Office of Academic Planning for input into the overall GSBPP budget. The remainder of the mission funded budget is allocated to the School for the fiscal year that is reflective of GSBPP's 'fair share' of the Navy's overall allocation to the entire university, based on number of students served, faculty size and infrastructure support requirements. In essence, the total Naval Postgraduate School's mission allocation is divided among the four academic schools and the supporting structure, based on submitted needs, the constraint of the allocation received from the Navy, and the Deans' and Provost's determined priorities. In addition to faculty and staff salaries, categories included in the mission funded budget are:

- Supplies and materials, including computer peripherals and software, furniture
- Travel and honoraria
- Training and staff development programs
- Instructional laboratory equipment maintenance
- Faculty instructional & organizational development
- Service contracts

Mission funded budget dollars are made available to the School from two main sources: direct funds from the Naval Postgraduate School's overall mission funded account and indirect funds, collected by NPS on all reimbursable activities and allocated to the university's operating units through the NPS Sponsored Programs Office. Direct funds are related to the size of the nucleus faculty and the volume of instructional activities in the resident degree programs. Indirect funds are related to the size and nature of the School's reimbursable research programs or reimbursable education programs.

Mission-Funded Research Budget: NPS provides two categories of mission-funded research funds for use by each school annually. One category of funds supports research projects of new tenure-track faculty research and is known as the Research Initiation Program (RIP). The other category supports research work by tenure track and tenured faculty not on RIP and is known as Workload Relief (WR).

RIP research money is provided for new professors with less than two years of service. These professors must prepare formal research proposals and in turn receive two quarters of salary support annually as well as additional funds to purchase equipment, software, supplies and project-related travel. Proposals for RIP are submitted to the Dean of Research with the GSBPP Dean's endorsement 30 days prior to the quarter starting research.

Workload Relief funding is pro-rated across the campus based on numbers of tenured and tenure-track (non-RIP eligible) faculty in each school. Internal to the Business School, the untenured tenure-track faculty members are given priority and they receive two months of WR funding. Tenured faculty may then request up to two months of WR funding, as needed. All faculty members requesting such funding must submit a brief proposal describing their research and the research products expected from their work. The Faculty Research Committee reviews the research summaries and proposals for the tenured faculty and allocates the available WR funds based on both past research productivity and future promise.

Reimbursable Budget: The Reimbursable Budget is determined by the efforts that the School and faculty make to obtain funding from either Navy or non-Navy sponsors. Reimbursable funds may be for research activities (reimbursable research) or instruction programs (reimbursable education). Proposals for this type of funds may be submitted at any time during the fiscal year. The funds received from these sources may be used from a one-year period up to an indefinite period of time, depending on the nature of the agreement and financial arrangement with the sponsor, but funds with an expiration date within the current fiscal year comprise the vast majority of reimbursable funds.

For **reimbursable research**, the sponsor sets the dollar amount based upon the scope of the work and funding constraints. Reimbursable money may be used to fund any expenses necessary to complete the research project. These expenses may include support for students while conducting their theses/projects in the form of travel, equipment or software. Reimbursable research, while variable each year depending on research projects that may be

arranged, provides a substantial portion of the Business School's total support (see Table 8.1A).

For **reimbursable education**, GSBPP establishes a price necessary to recover the costs of program delivery, and announces the availability of programs and the opportunity for sponsorship and student enrollment. Different arrangements are possible whereby potential sponsors may "purchase" full degree programs, or individual courses, or "seats" within courses within degree programs (tuition). The distance education programs in GSBPP are generally reimbursably funded. These include the Master of Science in Program Management (MSPM), Master of Science in Contract Management (MSCM) and Advanced Acquisition Program (AAP). The distance learning Executive Master of Business administration program (EMBA) is something of a hybrid between a mission-funded program and a reimbursable program. Technically, the EMBA funds are mission/direct funds in that they are received as part of NPS's annual budget and then allocated down to GSBPP. But the annual funds are specifically set aside for the EMBA program, and provided by a sponsor for the intended delivery of a specified level of the program, and thus are operationally more like reimbursable funds.

Overall Budget for GSBPP: The following table summarizes the School's operating budget for the past four years.

Table 8.1A
GSBPP BUDGET
(in $1000)

	FY 04	FY 05	FY 06	FY 07*

*For FY 07, Reimbursable Education and Research amounts are the current Authorized amounts. Mission Operations, EMBA and Direct Research amounts are year-to-date obligations plus projected expenses for the remainder of the fiscal year.

MBA Program Budget: GSBPP does not plan, budget, or account for funds separately for the "MBA Program". GSBPP does, however, plan, budget and account separately for the "resident" instruction program. The resident instruction program consists of 1) MBA program courses and 2) MSM program courses (and a few service courses provided to other NPS degree programs outside of GSBPP). The delivery of the resident program is highly integrated in that the large majority of courses are attended by both MBA and MSM students and thus exist to support both programs. The budget number most directly applicable to the resident program is the Mission Operations budget, provided in the top panel of Table 8.1A ($7,534K in 2007). This is the funding allocated to GSBPP annually by NPS to provide for delivery of resident instruction -- and the student advising, administrative and support activities associated with that resident instruction. This then represents one measure of the budget available for the MBA Program. **MBA Program Budget 1 = $7,534K.**

If support for the research activities of the faculty is considered to be support for the instruction program, then Mission-Funded Research ($1,322K in 2007) should additionally be considered as part of the budget for the resident instruction programs. There is some sense to this perspective since the resources available for mission-funded research are, in some respects, amounts that remain available after having fully provided for the successful delivery of the resident instruction program. From this perspective, a second measure of the budget available for the MBA Program would include Mission Research. **MBA Program Budget 2 =** $7,534K + $ 1,322K **= $8,856K.**

It is possible to divide the Mission Operation total into a smaller amount associated "only" with the MBA Program, but this can be done only through use of a somewhat arbitrary proration. During 2007, approximately 88% of the courses delivered within the resident instruction program were attended by students who were enrolled in the MBA Program. Applying this percentage to the Mission Operations budget results in

a third measure of the budget available for the MBA Program. **MBA Program Budget 3 =** $7,534K x 88% **= $6,630K.**

8.1B Budget Sufficiency

Mission Budget: Overall the funding levels have been adequate to support the School's mission and objectives. As can be seen in Table 8.1A, both mission operations and direct research funding for faculty and staff have grown slightly over time. This follows the growth in full time equivalent faculty since FY04 and also parallels the increased volume of instruction (# of courses) that has occurred due to increased enrollments over the same period. Faculty salaries are always the largest component of the mission budget, and one where control can be exercised at most on the margins. Faculty salaries in GSBPP/NPS are Congressionally capped at their current rate, but the high cost of living in the local economy stresses these salaries, especially in the housing market.

Reimbursable Budget: Our reimbursable education numbers were down in FY06/07 primarily due to the requirement that reimbursable education programs increase their price in order to collect indirect costs. Both reimbursable education sponsors and our own DL operations have transitioned to this new price structure and the School's DL activity is expected to recover in 2008 to earlier levels. Our reimbursable research, however, has increased significantly in FY07 as the faculty continues to pursue opportunities for research in their respective academic areas and as our ties to our customer base strengthen and grow.

Non-Labor Costs: Allocations for travel and supplies have been a challenge, especially in keeping up with our increasing needs to establish and build partnership relations with other academic and sponsoring organizations. Additionally, we are experiencing sharply increased costs of instructional technology that our faculty and students have come to need and expect to enhance the quality of our classroom and distance learning educational experiences. It is our expectation that future revenue streams that support instructional technology (equipment, software, databases and staff support) will have to be developed. Developing such revenue streams is a priority for the Dean and the NPS leadership.

8.1C Salary Information

Table 8.1C presents the average and median 10-month salary for faculty in the Graduate School of Business and Public Policy. While the table presents 10-month salaries, almost all GSBPP faculty members work and are paid for a full 12 months each year. The management of GSBPP operations, and of faculty labor, assumes the objective of 12-month salaries for all faculty members who desire. The reimbursable activities of the School generally supplement the mission-funded activities, providing sufficient work

activities for 12-month compensation for faculty. Appendix 8.1 shows NPS's Faculty Salary Schedule, which was effective 7 January 2007.

Table 8.1C

2007 GSBPP AVERAGE 10-MONTH FACULTY SALARY

2007	# Faculty	Average	Median
Professor (Tenure Track)	11	$118,528	$118,528

Adjunct (Non-tenure Track)	26	$99,065	$102,776

Standard 8.2 Library Services
All students and faculty shall have reasonable access to library facilities and services that are recognized as adequate for master's level study in public affairs and administration. This would normally include texts, monographs, periodicals, serials, pamphlets, and research reports. The program faculty should have a major role in selecting library acquisitions for its program.

8.2A Overview of Dudley Knox Library's Resources and Services

The Dudley Knox Library (DKL), 2004 Federal Library of the Year, provides the Naval Postgraduate School (NPS) and the broader defense and security communities with an information rich environment supporting academic and research pursuits. DKL's annual budget of $3.5 million is used to provide a rich combination of collections, staff, and associated services that support and facilitate graduate education and research in all subject areas taught at NPS. DKL anticipates and responds to current and emerging requirements, and seeks innovative and creative ways to provide scholarly information to patrons by investing in leading edge technology and services. Level funding for the past 6 years in conjunction with spiraling inflationary increases for personnel and content

(databases, journals, and monographs), has impacted Library collections and services. In the current global economy, no library can stand alone. DKL actively partners with federal, special, and academic libraries—particularly the Consortium of Naval Libraries (CNL) and the National Research Library Alliance (NRLA)--to leverage limited budget dollars and invest jointly in collaborative acquisitions, joint-licensing agreements, and resource sharing that extend content offerings to NPS patrons beyond what we could afford alone.

DKL's staff of highly qualified librarians and support personnel is committed to providing excellent service to all faculty, staff and students and to developing and maintaining strong collections and services to support all areas of research at NPS. DKL has 9 full-time professional librarians who hold Masters in Library Science degrees and approximately 20 additional staff.

Five reference librarians serve as Subject Specialists providing collection development, research guidance, outreach and instructional support to all NPS Schools and curricula. One librarian serves this role for the Graduate School of Business & Public Policy (GSBPP). In addition, all reference librarians provide service at the reference desk and through DKL's Ask a Librarian Live virtual reference service, which has been in place since September 2004. In 2006, nearly 45% of reference questions were received and answered through DKL's *Ask a Librarian Live* chat reference service and e-mail.

The GSBPP Subject Specialist works closely with faculty and students to evaluate and select print and electronic materials, provide classroom and individual instruction on library resources and research skills and assist with research and teaching information needs. Because Public Administration is interdisciplinary and therefore can include political science and political theory, it is important to recognize that support to this area is covered not only through the Subject Specialist's relationship with the GSBPP but also by the Subject Specialist for National Security Affairs (NSA), who also works closely with GSBPP students and faculty depending on their research needs. In addition, DKL's acquisitions to support NSA are often relevant to GSBPP.

DKL's holdings include more than 600,000 print volumes, including bound journals and all books. DKL's usable space totals approximately 100,000 sq. ft. DKL provides photocopying, scanning and printing facilities, 135 individual study carrels and 19 group study rooms (collaboratories), and provides a telephone paging service. DKL is open for service 7 days a week, 343 days a year and is accessible to students an average of 81 hours a week with building hours being extended for study purposes the week prior to and during finals. DKL is closed on official federal holidays and reduces hours during school breaks.

Whenever possible, DKL is replacing traditional paper journals and indices with subscriptions to electronic journals and databases accessible from the user's desktop. Many of these databases provide information in full-text and/or image format. DKL's online catalog, web pages and database access is available to faculty, staff and students in

DKL, campus labs, classrooms, offices as well as from off campus. DKL continuously updates and adds links to individual journal titles through the online catalog as well as from a web page entitled "Find Journal Online". In late 2006 DKL implemented electronic resource management tools (ERM) including “link resolver” software (called SFX) that makes it easy for library patrons to determine whether DKL provides electronic access to journals and with a few keystrokes provides access at the full-text article level. Detailed information about DKL’s print and electronic journal subscriptions and electronic databases is provided below in the section on Library Support.

DKL has been a Federal Depository since 1964. Through the depository program, DKL selects and receives free materials from various government agencies, including Congress, the Congressional Budget Office, the Department of Commerce, the Department of Defense, the Government Accountability Office, the International Trade Administration and others. The Library staff includes a professional Documents Librarian who regularly reviews the materials available to DKL and assists students and faculty with specialized research questions that require an in-depth understanding of government documents.

To support classroom teaching, research and other NPS mission-related tasks, DKL provides Interlibrary Loan and Document Delivery (ILL) service to the school’s faculty, staff and students, including distance learning students. DKL loans more resources to libraries worldwide than must be borrowed for needs of our local patrons. Faculty, students and staff are regularly encouraged to make use of this service, which is provided at no cost to the end-user. GSBPP students and faculty currently account for approximately 15% of ILL requests. Table 8.2A below provides detailed information on GSBPP use of ILL.

In June 2005, DKL implemented ILLiad Interlibrary Loan management software to automate routine functions, increase staff productivity and reduce paperwork. This suite of software tools enables patron-initiated borrowing, is fully integrated with the Library’s online catalog and ERM systems and provides tools that allow patrons to: check against local resource holdings; place requests for items not owned by DKL; monitor the status of each request from copyright compliance to delivery; and retrieve e-documents as they are delivered. This service is available to authorized patrons 24/7, extending the Library’s ability to manage requests and deliver resources to patrons, including distance learners, regardless of their time zone/location.

Materials not owned by DKL are obtained as quickly as possible through a variety of resources including the Online Computer Library Center (OCLC), regional library consortia -- the Monterey Bay Area Cooperative Library System (MOBAC) and the Military Education Research Library Network (MERLN) -- as well as electronic and Web resources and document delivery vendors. The Subject Specialist is able to review the titles of items that have been requested so they can be considered for purchase for the Library collection. Most articles are posted to the Web or delivered by PDF attachment to the user's email. Turn-around times are fast – 45% of article requests are filled within 3 days, with 6% being filled within 1.6 hours. DKL responds quickly to "rush" requests

where faculty or students have an immediate need for books or papers and cannot wait for the normal purchase or Interlibrary Loan processes.

DKL has 52 computers and 14 circulating laptops available for public use. All provide access to the Internet and to a variety of programs including the Microsoft Office and Adobe suites. The Library Systems Department worked with our international students in 2006 to add additional languages to standard Library computer configurations to provide additional support for non-native English speakers. Many of DKL's study rooms and carrels provide wired network access. DKL provides nearly 100% wireless coverage as well, so that an increasing number of students and faculty connect via laptop while in the building.

DKL provides 19 group study rooms (collaboratories) as well as a large group study area. These spaces are heavily utilized by GSBPP students as their program of study involves many collaborative projects. Two of the public rooms and one in our Restricted Resources and Services Library are equipped with advanced technology including plasma screens, speakers, and dual laptop switchers to enhance patron experience and promote teamwork for assignments, study, and group projects.

DKL provides a secure, service-oriented environment for cataloging, preservation and access to classified and limited distribution resources through its Restricted Resources and Services (RRS) unit. RRS is accessible to approved members of the NPS community and provides retrieval and research support. RRS catalogs all received materials and is the repository of NPS generated restricted reports and theses. Many limited distribution reports held by RRS are relevant to the faculty and students in the GSBPP, including those published by agencies such as CNA (Center for Naval Analysis), Rand Corporation and LMI (Logistics Management Institute). DKL also provides access to the classified internet (SIPRNET) for those NPS personnel with the appropriate security clearance.

The online catalog (BOSUN) is available to anyone via the Internet. In addition to listing the materials DKL owns or provides electronic access to, it also includes a digital archive of NPS-produced documents as well as relevant full-text documents from other sources. The archive contains NPS theses and MBA Professional Reports, most of which are available as full-text PDF files if they were published after 1995. Other archived collections relevant to GSBPP include Congressional Research Service and Defense Science Board reports. As they become available, DKL adds and regularly updates web links to both journals and books that are concurrently, or in some cases, only available in electronic form.

BOSUN allows those with Library accounts to place holds and renew materials electronically, as well as link to ILL forms or make book purchasing suggestions to the appropriate Subject Specialist.

DKL's web pages can be used to access most Library resources and services, including: placing Interlibrary Loan/Document Delivery requests; accessing electronic

databases and electronic journals; contacting the reference desk with questions or contacting the appropriate Subject Specialist; and making book purchase suggestions. DKL's web site includes many pages developed by the subject specialist librarians to support specific areas of interest at NPS. Some of those that are relevant to GSBPP include: Acquisition and Contracting, Congressional Information Resources, Defense Budget Information, Military Manpower, Military Information, Military Publications, Finding Company and Industry Information, Marketing, and Military Transportation and Logistics.

As part of an ongoing effort to ensure that Library services, facilities and resources meet the needs and expectations of NPS students, faculty, and staff, DKL conducted a standardized survey assessing service quality (LibQual) in 2003 and 2005. Additionally, in early 2006 DKL developed and conducted a survey to assess whether reference service hours meet the needs of the NPS community. Input from these surveys has informed DKL's planning. In spring 2007, the GSBPP Subject Specialist provided reference and research consultations from an office in the department's building for four hours each week. DKL is currently reviewing the results of a recently conducted survey about this pilot outreach project.

8.2B Library Support: Relevant Library Collections and Expenditures

The Library's collection is one of the primary assets supporting both educational and research efforts across the campus. The main collection is comprised of monographs (books and reports), journals, theses, and maps/nautical charts, in print and digital formats. Resources are catalogued and access to metadata and full-text is provided via the BOSUN online catalog. DKL shares its bibliographic records with the international OCLC database so DKL materials are available for searching by anyone in the world. Digital copies of NPS theses, for example, are catalogued and accessible throughout the world within weeks of graduation. DKL has been a selective federal depository since 1963. DKL also houses a secure collection of classified and limited distribution resources in our Restricted Resources and Services department. Content, including journals, electronic databases and monograph expenditures averaging $1.6 million/year over the past four years comprise approximately 46% of DKL's annual budget. Journal expenditures average 36% of the total content budget; databases average 34%; and monograph expenditures average 30%.

Books/Monographs

Librarians are Subject Specialists who work with faculty to continuously review and evaluate requirements and select/acquire monographs to meet evolving curricular and research needs. Overall, DKL allocates fewer budget dollars to monographs than to databases and journals.

DKL's book budget is allocated by fund code to the Subject Specialists, who expend these funds based on regular review of publisher catalogs, use of the reviews

published in CHOICE magazine, book reviews in curriculum related journals and other appropriate professional sources. Specialists also solicit and consider input and suggestions from faculty, staff and students. GSBPP faculty provide significant input which ensures that DKL's collection continues to meet the needs of GSBPP students and faculty.

DKL holds more than 231,090 unique print monographic titles. This total does not include items in our Government Documents, theses or journals collections. Approximately 41% of the monograph budget supports GSBPP and other NASPAA-related areas (such as political science, national security affairs, and military).

Table 8.2B1 presents the number of GSBPP- and NASPAA-relevant books added to the DKL collection by Library of Congress (LC) classification areas -- of HA-HJ (Business and Economics) and J-JZ (political science). The figures listed in the ALL SUBJECTS column include all items within the LC classification areas plus all the materials added into DKL's Federal Document collection.

Table 8.2B1
NUMBER OF BOOKS ADDED 2000-2006

Year	HA-HJ	J-JZ	All Subjects
2000	953	236	14202
2001	1224	317	14470
2002	1367	271	24793
2003	1325	288	24336
2004	1394	474	26150
2005	1448	428	31527
2006	1186	1572	24492

Table 8.2B2 presents the figures for the funds allocated for the purchase of single title or monographic materials only and does not include additional publications DKL purchases that are considered to be publisher renewals or standing orders due to a regular publication cycle. There is often overlap in materials across related disciplines and the subject specialists can use their discretion about which fund code is appropriate for a particular purchase. To more accurately reflect DKL's ability to adequately cover the larger elements of public policy and political science, the expenditures of the three relevant fund codes are all listed in Table 8.2B2. The areas represented are: BIZ/BPP (Graduate School of Business & Public Policy), NSA (National Security Affairs) and MIL (Military Science). The MIL code is not curriculum specific but rather more of a "catch-all" area to ensure DKL is able to purchase items that might not fit well into any one curriculum or which, conversely, could be charged to several different curricula.

Table 8.2B2
FUNDS EXPENDED FOR PURCHASE OF MONOGRAPHIC MATERIALS
(Does not include standing orders or publishers' renewals*)

Fiscal Year	A BPP/BIZ Fund	B NSA fund	C MIL Fund	D BPP+BIZ+ NSA+MIL	All Funds	D as % of All Funds
2002	$9,129,25	$10,160.15	$5,841.46	$25,130.86	$69,249.88	36%
2003	$8,165.91	$12,297.32	$4,058.45	$24,521.68	$59,651.28	41%
2004	$9,571.51	$10,965.33	$3,731.72	$24,268.56	$78,156.05	31%
2005	$8,961.45	$9,641.12	$3,612.54	$22,215.11	$63,588.82	35%
2006	$5,392.38	$4,724.52	$1,790.93	$11,907.83	$29,027.55	41%

*does not include funds spent on Brookings Publications which the Library collects extensively and which are particularly relevant to NASPAA-related research.

Table 8.2 B3 below shows DKL circulation statistics for selected GSBPP areas.

Periodicals

DKL has historically purchased print journals that support NPS curricular and research needs. The advent of online journals, coupled with steep price increases per title and changing publisher access models, have impacted libraries' ability to procure content, particularly in the fields of science and technology. The Association of Research Libraries reports journal unit price increases of 188% in the period 1986-2004 and a 2007 report demonstrates a 33% increase in the average price for business and economics journals and a 53% increase for political science journals in the last 4 years alone (Van Orsdel and Born, *Library Journal*, 4/15/2007). DKL is aggressively moving away from print in favor of licensing online access to current volumes and backfiles. Such access, which we procure locally as well as through library consortial licenses, extends access to critical journals 24/7. Table 8.2B4 gives a snapshot of DKL-licensed e-journals supporting GSBPP subject areas.

Table 8.2B4
NASPAA-Relevant E-Journals Accessible Through DKL (2007)

Subject	# Titles
Accounting & Auditing	113

DKL expended nearly $670,000 to fund periodicals for 2007 (excludes database subscriptions which are discussed below). Of this total, approximately $94,000 (14%) was for periodicals directly related to GSBPP. Many additional titles of a military, political science, or general nature also support GSBPP teaching and research needs.

Databases

Information discovery is facilitated by general and subject-specific databases, such as *ProQuest's ABI INFORM, EBSCO'S Business Source Complete, and the Web of Knowledge.* DKL provides access to a wide array of licensed and open access databases that support business and public policy and administration topics. Most of the databases contain or link out to full-text content via enhanced ERM services supported and maintained by DKL staff. DKL has expended approximately $605,000 on electronic databases for FY 2007. Of this, approximately $124,000 was spent on databases that directly support GSBPP (20%). These databases provide full-text access to articles from

more than 9,000 journals. A partial listing of databases most relevant to GSBPP students, faculty and staff is listed in Table 8.2B6.

In the past, GSBPP has collaborated with DKL to fund subscriptions to databases and other online resources such as *EBSCO's Business Source Complete*, *Inside Defense* and *CQ Budget Tracker*. These resources (and GSBPP funding of them in tight budget circumstances) have been critical to meeting the needs of NPS business, public policy and administration researchers.

8.2C Program Role: Library Instruction and Outreach

Five Subject Specialist librarians share responsibility for providing reference and research assistance services, which are actively promoted to NPS students, faculty and staff in tours, classes, Blackboard, the NPS intranet, DKL web site and other means. Students and faculty are also encouraged to make appointments with their Subject Specialist for in-depth assistance.

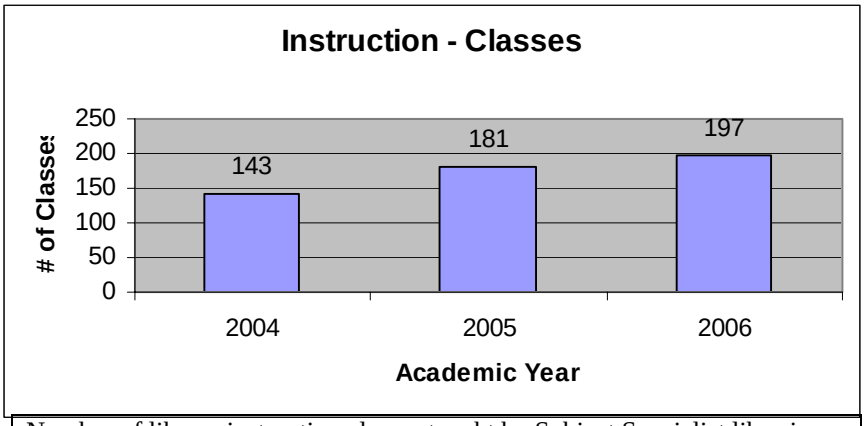
DKL provides instruction to resident GSBPP students in a variety of ways. All incoming resident GSBPP students participate in a mandatory tour of DKL's facilities and services. This is soon followed by a two hour "hands on" Library session which is regularly included in one of the required first quarter classes (Introduction to Information Technology). Many GSBPP students also later take an elective course (Managerial Inquiry) which includes an additional two hour segment on research skills. In addition, GSBPP faculty members occasionally include a specialized presentation from the subject specialist librarian in their courses.

To supplement these GSBPP-specific courses, many students take advantage of the numerous 50-90 minute drop-in classes offered by DKL on various research tools and techniques. These classes include both database-specific instruction (*BOSUN*, *ProQuest*, *LexisNexis*, *CSA*, Defense Technical Information Center *STINET*) and skills-specific classes (Using RefWorks to Manage Citations, Searching the Web, Searching the Deep Web, Finding Military Information, and Staying Current With RSS News Feeds).

GSBPP distance students also routinely receive Library instruction. Depending on the program, this may be in the form of face-to-face instruction while on campus, or via Video Teleconferencing or other technologies if they are at a remote location. Interested GSBPP faculty members receive instruction and support from DKL to ensure that their Blackboard course sites include information about appropriate Library resources and services.

Table 8.2C below provides information on the number of instruction sessions DKL has provided to NPS resident and distance students over the past few years.

Table 8.2C
Library Instruction (2004-2006)



Number of library instruction classes taught by Subject Specialist librarians. In 2006 more than 3,200 students and faculty (onsite and distributed attendees) participated in these classes.

DKL posts instructional materials on DKL's web site in a variety of formats (PDF handouts, *PowerPoint* presentations, *Flash* tutorials, web pages, links to vendor-created tutorials) so that NPS students will be able to better learn how to use Library resources at their point of need.

The GSBPP Subject Specialist interacts with the faculty in a variety of ways including regularly participating in faculty meetings, selectively e-mailing faculty members about new documents, services and resources of interest, and consulting with faculty on their research topics. The Subject Specialist works closely with interested faculty to ensure that Library resources and services are integrated into their Blackboard course sites.

The Subject Specialist encourages faculty members to provide book and journal purchase suggestions and if desired, they are notified as soon as recommended titles are available. The Subject Specialist also works closely with the faculty to identify and evaluate possible additions to DKL's online databases. DKL also regularly considers faculty input as part of the periodic review of print and online journal subscriptions.

The Subject Specialist provides guidance and support to faculty members involved in the Promotion, Tenure and Review process, using appropriate tools such as the *Social Science Citation Index* and other online sources providing the capability to do cited reference searches and journal "impact" analysis. DKL recently added significant back files and *Social Science Citation Index* coverage now goes back to 1965.

Standard 8.3 Support Personnel
Adequate secretarial and clerical personnel should be available to enable the program to meet its educational objectives.

8.3 Support Personnel

The Graduate School of Business and Public Policy currently employs 19 full-time staff personnel and 4 part time research assistants. Job functions are as follows:

Administrative Officer (1)
Sponsored Programs Financial Specialist (1)
Admin Support Service Specialist (1)
Information Technology Specialists (1)
Dean's Secretary (1)
Office Automation Assistants/Clerk (1)
Educational Technician (1)
Administrative Support Assistant (2)
Purchasing Agent (1)
Contractors Admin (6)
Contractors Financial (2)
Contractor Information Technology (1)
Research Assistants* (4)

*These research assistants support various faculty members.

In addition, the department maintains research and department support positions for students. These students work full-time during the summer and school breaks and part-time during the school year.

Standard 8.4 Instructional Equipment
Program faculty and students should have access to appropriate equipment for coursework and research including computer facilities, visual aid devices, audio and video tapes and films.

8.4A Computer Support

GSBPP Computer Lab 1 (I-224)

Current Configuration: This lab holds 18 student computers, one instructor station and two print servers, for a total of 21 systems. The standard computer configuration is a Pentium IV 2.8Ghz with 1GB RAM and 19" LCD monitor. The

instructor's station is also tied to a ceiling mounted projector.

Functional Requirements: The lab is heavily used by many MBA courses that employ statistical programs, spreadsheet programs, simulation programs and other specialized decision support programs. The lab is also used to teach various information technology courses such as Web design and networking.

GSBPP Computer Lab 2 (I-250)

Current Configuration: This lab holds 24 student computers, one instructor station and one print server, for a total of 26 systems. The standard computer configuration is a Pentium IV 2.8Ghz with 1GB RAM and 19" LCD monitor. The instructor's station is also tied to a ceiling mounted projector.

Functional Requirements: The lab is heavily used by many MBA courses that employ statistical programs, spreadsheet programs, simulation programs and other specialized decision support programs.

Applied Network Technology Lab (I-380)

Current Configuration: This lab holds 9 student computers, one multi-media workstation and one Windows Server. The standard student computer configuration is a Pentium IV 2.8Ghz with 1GB RAM and 19" LCD monitor.

Functional Requirements: This lab is used for hands-on computer hardware orientation and network design/installation. Students routinely install and remove various network-related hardware and software to experiment with multiple system configuration options. When not being used for instruction, this lab is also used to support student thesis and faculty research projects.

Smart Classroom (I-260)

Current Configuration: This classroom includes a dual projection system capable of displaying the same or different images on each screen. In addition to the standard instructor podium suite of equipment, each student seat includes a permanently mounted laptop computer tied to the school's network backbone. The classroom holds 45 students and serves as a substitute computer lab for those MBA courses too large for the traditional computer labs. The classroom is also equipped with VTC capability to facilitate guest lecturers from remote sites.

Functional Requirements: This classroom is used for multimedia-based instruction, including audio material, video material, computer-based analysis, Internet-based instruction, and VTC capability.

Smart Classroom (I-271)

Current Configuration: This classroom includes a dual projection system capable of displaying the same or different images on each screen. In addition to the standard instructor podium suite of equipment, each student seat includes a thin-client computer tied to the school's network backbone. The classroom holds 36 students and serves as a substitute computer lab for those MBA courses too large for the traditional computer labs.

Functional Requirements: This classroom is used for multimedia-based instruction, including audio material, video material, computer-based analysis, and Internet-based instruction.

8.4B Audio-Visual Support

GSBPP has set a priority on upgrading classrooms with instructional technology. The standard suite of equipment installed in each GSBPP classroom includes the following:

- Ceiling mounted multi-media projector
- Instructor podium with projector controls
- Internet ready instructor computer
- Document camera
- Combination DVD/VCR player

NPS has state of the art distance learning facilities to accommodate courses that are taught by VTC. These facilities include three studios that are equipped with PictureTel 4000 Video conferencing Systems using Integrated Services Digital Network, Basic Rate Interface (ISDN BRI) lines. This setup allows two-way, interactive audio and video between the distant sites and NPS classroom. The NPS-owned video bridge makes multi-point classes possible.

At the NPS end, three 26-student classrooms are equipped with VCRs, electronic whiteboards, document cameras, facsimile machines, and PCs for computer generated presentation. Student sites have a standards-based (H.320-compatible system) connection to a dial-up network (FTS2000).

Standard 8.5 Faculty Offices
The offices for faculty should provide adequate space and privacy for student counseling, course preparation, and other faculty responsibilities.

8.5 Faculty Offices

Each permanent faculty member in the Graduate School of Business and Public Policy has an individual office with reasonable space for a desk, computer, table, books and student or colleague meeting area.

Depending on availability, part-time faculty are housed in offices comparable in size to those occupied by permanent faculty or in a multi-office space that provides a desk, computer, table, and some book or storage space. For individuals in the latter office space, there are two conference rooms available for reservation should the faculty member desire complete privacy in meeting with students or colleagues.

Standard 8.6 Classrooms
Appropriate classrooms should be available for the courses being offered. This would normally include rooms suitable for seminars, case discussions, and simulation exercises, and lectures.

8.6 Classrooms

Overall, classrooms are the size and the type needed for graduate classes in management. The classrooms are various sizes, holding from 20-40 students, and are assigned by the NPS scheduler based upon class size and other requirements. While maintenance and upgrades to these rooms are not directly funded from GSBPP allocated resources, we have undertaken a classroom lifecycle management effort to reflect more clearly the needs within these rooms. This plan, which is a work in progress, will allow our business school leadership to provide ready documentation and cost estimates as opportunities arise for additional funding.

Standard 8.7 Meeting Area
An appropriate area should be available for students and faculty to meet informally and discuss class projects, internship experiences, and other program matters.

8.7 Meeting Area

Informal meetings between students and faculty to discuss course projects or other program matters usually occur in the faculty member's office or after class in the classroom. GSBPP has two conference rooms available for faculty and faculty/student meetings. Other conference rooms around campus are available upon request. Students have easy access to private study rooms in the library located next to Ingersoll Hall.

STANDARD 9.0 -- OFF-CAMPUS AND DISTANCE EDUCATION

Standard 9.1 Definition and Scope
Off-campus and distance education programs are offerings and arrangements in which (a) students are located in facilities or at sites other than the main [parent] campus of the program and/or (b) the students do not engage regularly in face-to-face interaction with an instructor who is in physical proximity. Off-campus and distance education programs can satisfy legitimate educational needs. When off-campus and distance education versions of the program serve different missions, student populations, or utilize education technology or learning methods that differ from the parent program, the burden is on the program to provide adequate information that demonstrates:

-the extent to which educational offerings are consistent with and contribute to the mission;

-the extent to which assessment and guidance processes ensure the comparability of the education offered;

-the effects of these differences on students, faculty, administrators, systems, processes, and the allocation of program resources and, therefore;

-the effects of these differences on the education received by all students in the program seeking accreditation regardless of where they are located.

9.1 Definition and Scope

The Graduate School of Business and Public Policy (GSBPP) has three active off-campus or distance learning (DL) degree programs:

- The Executive Master of Business Administration (EMBA)
- The Master of Science in Program Management (MSPM)
- The Master of Science in Contract Management (MSCM).

Until June 2006, GSBPP also offered a fourth DL program, which has since been contracted to another university.

- The Master of Science in Leadership and Human Resource Development (LEAD)

The NPS Academic Council has approved all of these programs. All of these programs are accredited by WASC and by AACSB.

Each of these programs is a distinct degree program by itself, and none is an off-campus or distance version of either the resident MBA Program or the resident MSM Program. **GSBPP does not seek NASPAA accreditation for any of the School's off-campus/distance programs**. As such, these programs are not presented here. For background, a full description of these programs, following the Standard 9 format, is provided in Appendix 9 of the Volume III Appendices document that accompanies this Self-Study report.

78. Is an internship available? Is it required? (4.4-B)	No internship available or required

EXECUTIVE SUMMARY

Naval Postgraduate School

The Naval Postgraduate School (NPS) provides unique professional graduate education to mid-career military officers and civilian employees of the US Department of Defense. Owned and operated by the United States Navy, the School prides itself on its ability to maintain the highest academic standards while responding to the dynamic needs of the Navy and other military services agencies within the Department of Defense. NPS is constantly developing new educational programs and delivery methods, and modifying its existing programs, to meet the emerging requirements for the military services and other agencies within the Department of Defense.

Graduate School of Business and Public Policy

The Graduate School of Business and Public Policy was formally established in 2001, renamed and reorganized from the earlier Department of Systems Management. The degree of Master of Science in Management (MSM) was first awarded at the Naval Postgraduate School in 1960, and was the predominate management/administration degree awarded until 2002, when the resident program evolved to additionally award a Master of Business Administration (MBA) degree.

The MSM degree program was initially accredited by NASPAA in 1980 and reaccredited most recently in 2000. With the transition to the MBA degree in 2002, NASPAA accreditation was extended to the MBA. The Naval Postgraduate School's regional accreditation is from the Western Association of Schools and Colleges (WASC). The most recent WASC reaccreditation was conducted in 1998, resulting in full accreditation granted through 2009. The Graduate School of Business and Public Policy is also accredited by The Association to Advance Collegiate Schools of Business – International (AACSB), receiving accreditation in 2000, with a reaccreditation review anticipated in 2009.

Mission

The Graduate School of Business and Public Policy (GSBPP) has a clear mission and direction. The school's mission statement, originally developed in 1992, was the result of the entire faculty's participation. The mission statement was reaffirmed by the GSBPP faculty in 1998, and newly updated by the faculty in 2007. The most recent version of our mission statement follows:

Vision

To be recognized as the nation's premier school for defense-focused business management and public policy education and research. To be the institution that national leaders look to for education, research, information, and innovation in the management

of the business of defense. To be recognized by our students, alumni, and other stakeholders for our excellence in defense-focused education and research.

Mission:
To serve our Nation by educating US and allied military officers as well as defense civilians in defense-focused business and public policy, by conducting research in defense management and public policy, and by providing intellectual resources for leaders and organizations concerned with defense business management practices and policies.

***Means**: We pursue our vision and perform our mission through graduate education, research, and professional service.*

- *In Education: Through resident and distance learning degree and non-degree programs, we develop students' abilities to analyze, think critically, and take intelligent actions so they can more effectively carry out their future professional responsibilities to manage organizations, resources, people, and programs in complex, sometimes life-threatening environments.*

- *In Research: Conduct research, using the scholarships of discovery, application, integration, or teaching, that supports defense enterprise decision-making, problem solving, and policy setting; improves business management processes and practices; contributes knowledge to academic disciplines via dissemination in high-quality refereed research journals or suitable practitioner-oriented journals; and advances the development of graduate education.*

- *In Professional Service: Provide professional expertise that advances knowledge and business management within GSBPP, NPS, the Department of Navy, the Department of Defense, and other government agencies, as well as in our professional and academic organizations.*

Degree Programs and Curriculum

The Graduate School of Business and Public Policy (GSBPP) has graduate programs leading to six different master's degrees All of the programs are related and offered by the same faculty unit, using similar course offerings. These programs are predominately delivered by the same full-time resident faculty.

Two of the degrees, the Master of Science in Management (MSM) and the Master of Business Administration (MBA), are awarded from an integrated resident program. GSBPP seeks review and reaccreditation of both the MSM and MBA degree programs in 2008. This Self-Study Volume I covers the MSM program. A separate Self-Study Volume I has been prepared for the MBA program.

GSBPP additionally offers three part-time, distance learning degree programs, the Master of Science in Program Management (MSPM), the Master of Science in Contract

Management (MSCM) and the Executive Master of Business Administration (EMBA). Starting in 2006, GSBPP also offers a new one-year resident degree, the Master of Executive Management (MEM). GSBPP does not seek accreditation for these programs.

In general each degree program consists of three main parts: a common core of courses relevant broadly to the practice of public management, a specialization emphasizing a particular functional area, and a capstone project or thesis.

The major elements of the core of all Graduate School of Business and Public Policy curricula are those functional and analytical subjects that underlie effective management in all public organizations. These subjects include communication skills, information technology, economics, financial management, human and organizational behavior, management policy, public policy processes, and quantitative and qualitative analytical methods.

In addition to the core, with few exceptions students are enrolled in specialty programs designed to prepare them for management responsibilities in specific functional areas. Their programs include required courses in their areas of specialization. The project/thesis requirement allows students to demonstrate their abilities to integrate appropriate core and special curricular material through the analyses of issues and problems pertinent to their academic programs and their professional careers

All programs have a Navy (or other service) senior leader sponsor who participates in a needs assessment and biennial curriculum reviews. Academic Associates serve as program managers for each curriculum and assure that programs and courses are assessed on an ongoing basis and continuously improved. These assessments, in conjunction with NPS and the school's evaluation systems, allow us to operate high quality, unique, and military-relevant programs, and evolve these programs as changing academic and sponsor needs may require.

Research

Faculty research is an important component of the Graduate School of Business and Public Policy's mission, and is integrated to the greatest possible extent with the educational process. Students are encouraged to participate in faculty projects and faculty research results are incorporated in classroom instruction. The school's diverse, multidisciplinary character is reflected in the breadth and depth of issues addressed by faculty research, which have historically been concentrated in areas of interest to the Navy and the Departments of Defense (DoD). The school's research programs can be grouped into five functional areas, based on the school's specialty focuses: Acquisition and Contracting; Logistics and Transportation; Manpower Systems Analysis; Economics and Financial Management; and Organization, Management, and Policy Analysis.

The primary goal of the school's research program is to provide the Navy and DoD with the capability of managing defense systems efficiently and effectively. Some of this research applies an existing base of knowledge while other research requires the

development of new concepts and theory. Thus, the school recognizes the importance of both basic research and research applied to the Navy and DoD; it seeks to create a balance of both types of research in its research program.

Students

The Naval Postgraduate School operates year round. With a few exceptions, all resident students attend school full-time, 12 months a year, carrying 16 credit-hours of coursework per quarter. The resident program length for students in the Graduate School of Business and Public Policy is 18-21 months, depending on the student's curriculum. While Naval officers comprise the single largest group (45%), GSBPP enrolls students from all the U.S. military services, as well as international students (15%). All students have significant work experience and can be described as highly motivated and mature students. They are carefully selected for these programs and nearly all students complete their instructional programs within the time allotted. After completion of the program, students return to their military careers. Overall, GSBPP programs continue to enroll more than 20% of the students campus-wide.

Faculty

The school has 61 full-time nucleus faculty members who are drawn from a wide variety of academic disciplines. In addition to the academics, practitioners are an integral part of our faculty. In keeping with our mission, we employ highly qualified practitioners on a full-time basis to enhance the relevance and quality of our programs. All full-time practitioners have at least a master’s degree and have been recognized as accomplished professionals in their fields.

All GSBPP faculty members are expected to excel in teaching as well as conduct scholarly or practitioner research that is relevant to the Department of Defense. Almost all faculty members work year round; most typically teach two quarters and conduct research and/or engage in administrative work for the other two quarters.

As a group, our faculty members make significant contributions to the Navy and to other agencies in the Department of Defense through service on advisory boards, consulting to senior leaders, and teaching in management development programs. They are also active in their professional and academic communities, making significant contributions through published research, conference presentations and leadership with in their professional societies.

The Graduate School of Business and Public Policy is highly committed to providing high quality, unique, military-relevant, and cost effective programs for military officers and government civilian professionals. This goal directs our operations and provides direction for our future.

STANDARD 1.0 -- ELIGIBILITY FOR PEER REVIEW AND ACCREDITATION

Standard 1.1 Eligibility
These standards assume a commitment to the use of peer review procedures to assess educational quality. Formal peer review and accreditation processes of NASPAA are open to programs which meet criteria related to institutional accreditation, professional education, and program length as described in standards 1.2-1.4.

1.1 Eligibility

The programs in the Graduate School of Business and Public Policy (GSBPP) at the Naval Postgraduate School are eligible for peer review and accreditation.

Standard 1.2 Institutional Accreditation
The parent institution is accredited by its regional association.

1.2 Institutional Accreditation

The Naval Postgraduate School is accredited by the Western Association of Schools and Colleges. The most recent reaccreditation was conducted in 1998, resulting in full accreditation granted through 2009.

The Graduate School of Business and Public Policy is also accredited by The Association to Advance Collegiate Schools of Business – International (AACSB), receiving accreditation in 2000, with a reaccreditation review anticipated in 2009-10.

Standard 1.3 Professional Education
The primary objective is professional education preparing persons for leadership and management roles in public affairs/policy/administration.

1.3A Leadership and Management Objective

All programs offered by GSBPP are designed for students who are commissioned officers on active duty in the U.S. military services or in the military services of allied nations, as well as for civilian employees of the U.S. government.

Our programs prepare students for increasing levels of leadership and management responsibility in policy-making and professional management roles. Each of the programs

within GSBPP is designed to acquaint students with a broad overview of the functional disciplines of management. The design of each program also takes into account the environment in which the activities will be situated and the knowledge and skill base that will be required to function effectively in a specialization.

Each of our programs draws upon courses designed to provide professional public management education. These courses include management, budgeting and financial processes, information technology, quantitative and qualitative analysis, decision making, problem solving, and public policy processes.
