In addition to the foundations of professional public management, each program offers unique specializations. These specializations include logistics, acquisition, contract management, program management, financial management, manpower, defense systems, information systems, defense management, and executive management.

1.3B Degree Specification

The Graduate School of Business and Public Policy has graduate programs leading to six different master's degrees All of the programs are closely related and offered by the same faculty unit, using similar course offerings, and resources. All of these programs are delivered predominately by the same full-time resident faculty.

Two of the degrees, the Master of Science in Management (MSM) and the Master of Business Administration (MBA), are awarded from a single, integrated resident program. There are currently 12 separate programs of study within the resident program, each termed a "curriculum", falling within several groups:

- Analysis Curricula:
  - Manpower Systems Analysis MSM
  - Defense Systems Analysis MSM
- Logistics Curricula:
  - Transportation Management MBA
  - Supply Chain Management MBA
  - Material Logistics Support MBA
- Acquisition Curricula:
  - Acquisition and Contract Management MBA
  - Systems Acquisition Management MBA
- Financial Curriculum:
  - Financial Management MBA
- Information Curriculum
  - Information Systems Management MBA
- Defense Management Curricula:
  - Defense Systems Management MBA
  - Resource Planning and Management MBA
  - Defense Business Management MBA

1.3B.1 Brief Overview of the GSBPP Resident Program, Resident Degrees, and NASPAA Accreditation

It is the resident program that was initially accredited by NASPAA in 1980 and most recently reaccredited in 2000. For most of the history of the resident program, the MSM degree was the single degree offered, and completion of any of the resident curricula resulted in the award of an MSM. Starting in 1993, a second degree, the Master of Science in Resource Planning and Management (MSRPM) was established, but only one of the resident curricula (Resource Planning and Management) led to the award of this degree. During the last accreditation process, in 2000, NASPAA awarded accreditation to both of the degrees (MSM, MSRPM) in the resident program.

During 2001-2002, GSBPP conducted a major review of the resident program, resulting in a significant revision of the common core portion of the degree programs. At that time, a new degree, the MBA, was established. At that time also, the individual curricula within the resident program shifted with respect to the degree awarded upon completion of each curriculum. All curricula shifted from awarding an MSM to awarding an MBA, except for the Manpower Systems Analysis curriculum. Students completing the Manpower curriculum continued to earn and be awarded the MSM. (The Resource Planning and Management curriculum, the only curriculum that had led to the MSRPM degree, shifted to awarding the MBA in 2002, and consequently the MSRPM degree was discontinued.)

These degree changes were reported to NASPAA in the 2002 Annual Report and, following review by COPRA, the MBA became a NASPAA-accredited degree. As a result of the changing degrees being awarded in the resident program, we believe there may be some ambiguity concerning the current NASPAA accreditation status of the MSM degree. We had presumed that, with the MSM having been accredited in 2000, that accreditation status had been "extended" to the new MBA degree when it was created in 2002, but that the MSM degree remained NASPAA accredited. Our more recent understanding is that accreditation may have been "transferred" to the MBA degree, resulting in the absence of continuing accreditation of the MSM degree. In any event, GSBPP seeks (re)accreditation of both the MBA and MSM degrees in the resident program.

GSBPP originally had been scheduled for reaccreditation during the 2006-2007 academic year. We completed a self-study of our programs, with 2005-2006 being the self-study year, and with our self-study document submitted August 2006. At that time we submitted a single self-study document, covering the "resident program", and incorporating both the MBA and MSM degrees. Discussions with COPRA following its review of our self-study document led to the conclusion that the reaccreditation process would be better facilitated if we were to provide separate self-study documents for the MBA and MSM degrees. We have re-conducted our self-study for the 2006-2007 academic year and are submitting separate documents for the MBA and MSM degrees,

but with parallel treatment throughout and, often, identical or very similar content. The places of most significant difference between the two self-study documents are:

- Different program mission statements, in Standard 2.1
- Differences in some details of the curriculum, in Standard 4. Particularly in the elements of the Common Curriculum (Stnd 4.21) and the Additional Curriculum Components (Stnd 4.22).
- Where applicable and available, separation of data for the MBA and MSM degree programs in tables throughout the document, with attention focused on the data associated with the program under review.

This self-study document contains the **MSM degree**.

A listing of GSBPP degree programs follows:

DEGREE TITLE:	**Master of Science in Management (MSM)**
LOCATION:	Monterey -- Resident Program
INITIAL OFFERING:	1960
FIRST GRADUATING CLASS:	1961
NASPAA ACCREDITATION:	Initial accreditation 1980 Last reaccreditation 2000 Requesting reaccreditation in 2008

DEGREE TITLE:	**Master of Business Administration (MBA)**
LOCATION:	Monterey -- Resident Program
INITIAL OFFERING:	Winter 2002
FIRST GRADUATING CLASS:	Spring 2003
NASPAA ACCREDITATION:	New degree awarded from the previously accredited program. Accreditation transferred 2002. Requesting reaccreditation in 2008

1.3B.2 GSBPP Programs Not NASPAA-Accredited

GSBPP additionally offers three distance learning degree programs, the Master of Science in Program Management (MSPM), the Master of Science in Contract Management (MSCM), and the Executive Master of Business Administration (EMBA) that are not accredited by NASPAA. Although these programs now satisfy the four-year program length standard, GSBPP does not request a separate review nor initial accreditation of these programs at this time.

Additionally, starting with initial enrollments in July 2006, GSBPP now offers a Master of Executive Management (MEM) degree program. This program does not meet the NASPAA program length standard, and no review of this program is requested.

None of these programs are versions of either the MBA or MSM degrees. None have a similar mission and none serve a similar student population. As such, these

programs are not discussed in this Self-Study document. A description of each, however, is provided in the Appendices (Volume III), which accompanies this Self-Study.

DEGREE:	**Master of Science in Program Management**
LOCATIONS:	Off-campus. Various sites via VTC
INITIAL OFFERING:	April 1999
FIRST GRADUATING CLASS:	June 2001
NASPAA ACCREDITATION:	Not requesting accreditation review

DEGREE:	**Master of Science in Contract Management**
LOCATIONS:	Off-campus. Various sites via VTC
INITIAL OFFERING:	October 1999
FIRST GRADUATING CLASS:	December 2001
NASPAA ACCREDITATION:	Not requesting accreditation review

DEGREE:	**Executive Master of Business Administration**
LOCATIONS:	Off-campus. Various sites via VTC
INITIAL OFFERING:	Summer 2002
FIRST GRADUATING CLASS:	Spring 2004
NASPAA ACCREDITATION:	Not requesting accreditation review

DEGREE:	**Master of Executive Management**
LOCATIONS:	Monterey – Resident Program
INITIAL OFFERING:	Summer 2006
FIRST GRADUATING CLASS:	June 2007
NASPAA ACCREDITATION:	Not requesting accreditation review

Standard 1.4 Program Length
The program must have been in operation at least four years to provide adequate data for evaluating program policies, procedures, and placement of graduates.

1.4 Program Length

Initiation dates and first graduation dates for all GSBPP programs were provided above. The MBA degree was initiated in 2002, but as a continuation of the resident program, extends back decades.

Standard 1.0 Eligibility

STANDARD 2.0 -- PROGRAM MISSION

Standard 2.1 Mission Statement
The program shall state clearly its educational philosophy and mission and have an orderly process for developing appropriate strategies and objectives consistent with its mission resources, and constituencies

2.1A Mission and History of Naval Postgraduate School

The Naval Postgraduate School (NPS) provides unique professional graduate education to US military officers, civilian employees of the US government and defense-oriented individuals from other countries. Owned and operated by the United States Navy, the NPS prides itself on its ability to maintain high academic standards while responding to the dynamic needs of the Navy, other military services, other agencies within the Department of Defense and other countries. NPS is constantly developing new educational programs and delivery methods, and modifying its existing programs, to meet the emerging requirements for programs sponsors and students.

In 1901, the Naval Postgraduate School was originally established as the Postgraduate Division of the U.S. Naval Academy when it was viewed that advanced education for U.S naval officers was intrinsically valuable to the Navy. Throughout its more than one hundred year history, the Naval Postgraduate School has evolved its organization and academic programs to meet the ever-changing needs of the Navy. In 1949, as part of Department of Defense reorganization, Congress moved the Naval Postgraduate School from Annapolis, Maryland, to Monterey, California. In 1951, it officially opened at its current location.

The Naval Postgraduate School specializes in education at the Master's degree level. Some Doctoral degrees are annually conferred by the various departments in NPS. The educational programs are designed to meet the needs of the Navy; however, curricula are developed within a framework of academic degrees with the goal of keeping the highest academic standards.

The majority of the officers attending NPS are practicing military professionals who receive a mid-career education directly relevant to the challenges and concerns of their military careers. The School's curricula are therefore focused on science, engineering, technology, policy, operations, management, and international relations as they are applied to the Navy, other military services, and defense-oriented civilians.

2.1B Institutional Setting

The Naval Postgraduate School is located near downtown Monterey, on a campus of approximately 615 acres. Formerly the grounds of the Del Monte Hotel, the site was leased by the Navy during World War II and purchased in 1946. The capital of old Spanish California, Monterey was best known as a fishing port as recently as the late-1930s. Today, tourism is the area's dominant industry, although the military installations and educational institutions are also major factors in the local economy. In the wider Monterey County area, agriculture is a major industry.

In addition to the Naval Postgraduate School, the Army's Defense Language Institute, the Monterey Institute of International Studies, Monterey Peninsula College, and a branch campus of Golden Gate University are located in Monterey. Fort Ord, once an important Army installation, is now home to California State University, Monterey Bay.

Over 200,000 people live in the greater area known as the Monterey Peninsula. While the entire economic spectrum is represented, the population tends to be relatively affluent. Many have chosen the area for retirement because of the moderate climate. The Monterey Peninsula is a well known tourist area and attracts visitors from all over the world. This gives the area an active international atmosphere and supports diverse cultural events.

2.1C History of Management Education at NPS

Management education at the Naval Postgraduate School began in 1956 with the creation of the Navy Management School. At that time, the management program was five months long and did not lead to a degree. The program was lengthened to 10 months (one academic year) in 1960 and the first Master of Science in Management degrees were awarded in the following year. In 1962, as part of a general reorganization of the NPS, the Management School became a department within the Naval Postgraduate School. The program was lengthened to 12 months in 1964 and the name of the department was changed to Business Administration and Economics. In 1971, this department was merged with the Department of Operations Analysis to form a new Department of Operations Research and Administrative Sciences. In 1972, the program was extended from 12 to 18 months (six academic quarters) and the thesis requirement was instituted.

In 1975, specialty curricula for the various functional areas of management (e.g.; financial, material, manpower, etc.), each drawing on a common core, were formally established. Prior to this, there had been one curriculum with several options in the functional areas. In 1976, the Department of Operations Research and Administrative Sciences split into two separate departments: Operations Research and Administrative Sciences.

In 1992, the Department of Administrative Sciences (AS) initiated a department process to review the department's scope and direction. As a result of this process, the Department clarified its mission, developed a mission statement, and renamed itself the Department of Systems Management (SM). In 1998, Information Technology Management (ITM), which had been housed in the Department of Systems Management since 1991, was renamed, redesigned and transferred to a different division within NPS, the division of Computer and Information Sciences and Operations. Many of the ITM faculty requested and were granted joint appointments with their new division and with the Department of Systems Management. As a result, there was excellent continuity for the students.

During academic year 2000-2001, the Naval Postgraduate School (NPS) underwent a significant reorganization. Previously, NPS contained 11 academic departments, organized into three divisions. The Department of Systems Management, along with three other departments, fell within the Division of Operational and Policy Science. The Chairman of Systems Management reported to the Dean of Operational and Policy Science, who reported to the NPS Provost. NPS reorganized all academic departments into four separate graduate schools. What was formerly the Department of Systems Management became, by itself, the Graduate School of Business and Public Policy (GSBPP). The head of GSBPP is the Dean, who reports directly to the Provost. GSBPP's original organization included three Associate Deans: Associate Dean for Resident Programs, Associate Dean for Distance Learning, and Associate Dean for Research.

The original name considered for the school was the Graduate School of Business, but the faculty rejected that because it did not reflect the strong public policy component needed to meet the sponsors' and the students' broader educational needs. After extensive discussion in a faculty meeting, the faculty adopted the name Graduate School of Business and Public Policy. This was approved by the NPS Provost and Superintendent. For reference, the three other graduate schools are the School of International Graduate Studies (SIGS), the Graduate School of Engineering and Applied Science (GSEAS), and the Graduate School of Operational and Information Science (GSOIS).

The current result of these various organizational changes is that management education and research at NPS is conducted in the separate Graduate School of Business and Public Policy (GSBPP). GSBPP oversees six degree programs and 17 curricula (~30% of NPS); enrolls about 500-600 students (~25% of NPS) and employs about 65-70 full-time faculty (~15% of NPS).

2.1D GSBPP Mission and Strategy Development Process

Mission: In 1992, the Department of Administrative Sciences (an early predecessor to GSBPP), initiated a departmental process to review the scope and direction of the Department's activities, and to develop a meaningful Mission Statement. The process adopted required that faculty approval for the mission statement be

unanimous, rather than by majority vote. After significant faculty discussion, a mission statement was adopted in September 1992 (the process details are contained in the September 1999 NASPAA accreditation documentation). That mission statement has been remarkably robust, and still forms the basis for the current GSBPP mission statement.

In late 1998, the Department of Systems Management (the immediate predecessor to GSBPP), initiated a departmental review of the mission statement, prompted by several changes in the previous six years: the splitting off of the Information Technology group, the establishment of new programs, the growth and changes in the international programs, and the movement of the SM Department into distance learning education. Again, after extensive faculty involvement, a modified Mission Statement was adopted in August 1999. With the exception of a few minor word changes to reflect current circumstances, that mission statement remained in effect into 2007.

Strategy: Starting in 2002 GSBPP began a school strategy process. A faculty offsite was initially held in April 2002, followed by the formation of an ad hoc school strategic planning committee. The strategic planning committee reported to the faculty in December 2002. During 2003 - 2004, the strategy process continued with recurring meetings of the GSBPP leadership team conducting a strategic analysis of the state of the school and the strategic issues it confronts. These processes resulted in two documents speaking to the strategic directions of GSBPP: A Dean's Strategic Report (2002) and a GSBPP Strategic Issues Report (2004). Copies of these documents are in Appendices 2.1I1 and 2.1I2. More recently, in 2006, the GSBPP Dean provided an updated SWOT analysis, based on his perceptions of GSBPP and the evolving external environment, and additionally provided a revised Statement of Dean's Vision and Goals. These documents are contained in Appendices 2.1I3 and 2.1I4.

The School's strategy process has continued in 2007. A GSBPP Ad Hoc Strategic Planning Committee was formed during fall 2006, initially focusing on a review and revision of the School's mission statement. A revised mission statement was adopted in February 2007, which is in effect today. This is presented in the next section, 2.1E. Building from the new mission statement and the 2004 Strategic Issues Report, the Committee developed a Strategic Directions document. This document outlines directions, initiatives and programs deserving of attention by the School and is expected to provide the focus for School efforts in the immediate future. The Strategic Directions document was endorsed by the Faculty in July 2007. A copy is provided in Appendix 2.1I5.

Program Mission: Another important activity during 2007, particularly in the context of this NASPAA reaccreditation review, concerns the development of mission statements at the level of individual degree programs. While GSBPP has long had a mission statement speaking to the School as a whole, GSBPP had not previously thought in terms of separate mission statements for each individual degree program. As noted

earlier in Standard 1.3B.1, GSBPP had submitted a single Self-Study document to NASPAA is 2006 encompassing both the resident MBA and MSM degrees, but is resubmitting self-studies this year, separately for the two degrees. This exercise of separation has beneficially caused us to identify the different purposes of the two NASPAA-accredited degree programs and to clarify their distinct missions. During 2007, the GSBPP Faculty Instruction Committee (FIC) drafted separate program mission statements for the MBA and the MSM degrees. While there is considerable overlap in the two degree programs, each does have a "slant" that is distinct. Somewhat oversimplifying, the MBA degree leans toward the "Managerial" and the MSM degree leans toward the "Analytical". Both GSBPP degrees are unique and do not have perfect correlates with "standard" NASPAA degrees, but the MBA might be characterized as akin to a degree in "Public Management", while the MSM might be characterized as more akin to a degree in "Public Policy Analysis".

The newly created mission statement for the MSM degree program is presented below in section 2.1H.

2.1E GSBPP Mission Statement

Vision

To be recognized as the nation's premier school for defense-focused business management and public policy education and research. To be the institution that national leaders look to for education, research, information, and innovation in the management of the business of defense. To be recognized by our students, alumni, and other stakeholders for our excellence in defense-focused education and research.

Mission:
To serve our Nation by educating US and allied military officers as well as defense civilians in defense-focused business and public policy, by conducting research in defense management and public policy, and by providing intellectual resources for leaders and organizations concerned with defense business management practices and policies.

***Means**: We pursue our vision and perform our mission through graduate education, research, and professional service.*

- *In Education: Through resident and distance learning degree and non-degree programs, we develop students' abilities to analyze, think critically, and take intelligent actions so they can more effectively carry out their future professional responsibilities to manage organizations, resources, people, and programs in complex, sometimes life-threatening environments.*

- *In Research: Conduct research, using the scholarships of discovery, application, integration, or teaching, that supports defense enterprise decision-making, problem solving, and policy setting; improves business management processes and practices; contributes knowledge to academic disciplines via dissemination in high-quality refereed research journals or suitable practitioner-oriented journals; and advances the development of graduate education.*

- *In Professional Service: Provide professional expertise that advances knowledge and business management within GSBPP, NPS, the Department of Navy, the Department of Defense, and other government agencies, as well as in our professional and academic organizations.*

2.1F GSBPP Objectives

Education Objective

Our objective is to provide high quality, relevant, graduate education to career military officers and other government civilians whose contribution to their service or command can most be enhanced by graduate level management education. Our goal is to prepare students for a wide variety of managerial positions in both field activities (e.g., naval stations, shipboards and shipyards, supply centers, etc.) and headquarters where they might be assigned in the future. Typical career specialties for which we prepare our students include financial management, comptrollership, acquisition, logistics, manpower planning and analysis, contracting, human resources, supply center management, and transportation management.

Research Objective

Our research objective is to create opportunities for individual faculty members to engage in original research directed toward advancing the frontiers of knowledge, and thereby to maintain the currency of knowledge which is essential to conducting graduate education and guiding graduate project and thesis work.

We also aspire to enrich our research and instructional programs by encouraging faculty members and students, through personal involvement, to become acquainted with and help solve the scientific and technological challenges facing the Navy and other organizations. We work well with the key personnel responsible for the programs attacking these problems.

We view the master's project or thesis as an important component of our program because it requires students to develop an ability to conduct independent, analytical investigations and present them in a professional way. We believe that the student who

completes a carefully guided master's project or thesis is better prepared both to engage in independent research and to evaluate the research products of others.

2.1G GSBPP Educational Philosophy

All degree programs within GSBPP are designed for mid-career professionals within the military or other DoD organizations. The underlying philosophy of the graduate degrees in GSBPP calls for all students, regardless of specialty, to become familiar with each of the functional disciplines so that they can (1) exercise leadership with an awareness of how their specialty fits in with the interdependent operational characteristics of modern, complex organizations and (2) perform as informed professionals should it be necessary to take on temporary duties within a functional discipline other than their own specialty.

In the resident degree programs (MBA and MSM), this philosophy is implemented via a core of instruction that is common to all students and a specialty in a specific functional management area. It is through the core that the faculty ensures each student's compliance with the common curriculum components detailed in NASPAA's Standard 4.21. The requirements of the student's specialty provide the additional knowledge and skills that build educational relevance into the sponsor's community.

The standards that GSBPP has set for all management programs are stated in the catalog and vary by program. The standard for all degrees is a minimum of 48 quarter credit hours of graduate-level courses, although curricula in the resident program have actual credit hours well in excess of this minimum to satisfy both degree and specialty requirements. All resident MBA and MSM degrees require the successful completion of an MBA project or master's thesis.

2.1H MSM Program Mission Statement

Master of Science in Management Program Mission

The mission Master of Science in Management degree program is to prepare graduates for management and leadership roles in the Defense establishment of the United States or allied nations. The program prepares graduates to manage in complex defense organizations and to conduct rigorous analyses of organizational problems, policies and operations. To accomplish these goals, the program places particular emphasis on developing students' quantitative and analytical skills and their ability to model complex phenomena. The program prepares graduates to

Managerial: *Be well grounded in fundamental areas of management, including accounting, financial management, operations, economics, acquisition, strategy, communications and organizational management.*

Environmental: *Understand the economic, political, governmental, defense and organizational environments that influence their decisions and the organizations in which they work.*

Professional*: Possess the specialized knowledge, skills and abilities to serve in positions of significant responsibility within a specified Defense Management field (Manpower Systems Analysis, Defense Systems Analysis).*

Analytical: *Apply advanced, quantitative, statistical and modeling methodologies to analyze significant defense-related policies and problems in a rigorous manner.*

Critical: *Be capable of thinking in a critical, creative, integrative and strategic manner*

2.1I GSBPP and MSM Program Student Body

The student body in GSBPP resident programs, and in the MSM program, is comprised of military officers and defense department civilians from all services of the United States, officers and civilians of other nations' militaries, and U.S. federal government employees. Students are generally enrolled in NPS only after completing five to eight years of military service or work experience. Students have demonstrated their professional competence and have already served in positions of significant responsibility.

Almost all of our resident students are full-time. While many of our students are graduates of the U.S. military academies, most of the students who enter the curricula offered by the Graduate School of Business and Public Policy obtained their baccalaureate degrees from civilian colleges and universities.

To be qualified for admission, a student must be a proven leader in his/her own service or command. The candidate must also hold a baccalaureate degree with at least a C+ average, and must have completed the prerequisites as required for each degree program. In addition, all international students must demonstrate English fluency. The graduate level curriculum requires dialogue and discussion both in the classroom and team projects; a good understanding of the English language is critical to success.

(The student body for our distance and off-campus education programs includes both military officers and DoD civilians. Military officers are comparable in rank to the students who attend the resident programs. DoD civilians are mid-career professionals who have obtained baccalaureate degrees, at least, from civilian colleges and universities.)

2.1J GSBPP and MSM Program Enrollment Trends

Student enrollment is monitored and, in some cases, limited to maintain reasonable numbers of students in each discipline. Care is exercised to maintain acceptable balances between resources and numbers of students. GSBPP has seen significant growth each year over the period of the past four-five years. Growth in GSBPP has been driven primarily by two factors: 1) Increased enrollment in the resident MBA program, primarily a result of increases in U.S. Air Force students, a group that was previously an insignificant portion of our student body. This growth has enriched classroom discussions. This growth in USAF students is, however, reversing in 2007 and is expected to lead to a noticeable reduction in resident enrollment. 2) Expansion in distance learning programs, primarily a result of the establishment of the DL Executive Master of Business Administration (EMBA) program, which has risen to a steady state enrollment of about 200 students since its beginning in 2002. Within GSBPP, enrollment for the MSM program has been stable during recent years. Enrollment in the MSM program will be affected by additional specialization curricula that may seek an analytically oriented degree. Table 6.3B, in the Standard 6 Student chapter of this report, provides details on the enrollment trends.

We have worked to match the growth in enrollment with a commensurate growth in faculty, support and material resources, though this has been a challenge. We see growth continuing at a moderate pace to meet the increasing demand for officers and civilians with the knowledge and tools to manage scarce human and capital resources in the defense sector. Future growth will likely occur primarily in the collective DL degree programs (not NASPAA-accredited) as opposed to the resident MBA and MSM degree programs (NASPAA-accredited).

2.1K GSBPP Instruction Program Guidance

The GSBPP faculty controls the content of the curricula leading to the degrees granted. Each of the specialty curricula in GSBPP has a sponsor. The civilian-world analogy of a sponsor would be the employer for whom the students will typically work after graduation. As an example, the sponsor for the Financial Management Curriculum is the Office of the Comptroller of the Navy. Sponsors work with GSBPP to help understand the educational needs of the students in their respective curricula. The MSM common core curriculum in the resident program is controlled by the faculty, but obtains required NPS Academic Council approval when required.

The Dean of the School, the Associate Deans, led by the Senior Associate Dean, the Academic Associates for the specific curriculum, and the Program Officer work closely with curriculum sponsors to determine educational skill requirements necessary to prepare students to serve within the sponsored specialty. There is regular and on-going contact with the sponsors, who participate in formal, on-campus biennial curriculum reviews to foster innovation and evolutionary change.

Internally within GSBPP, the Faculty Instruction Committee (FIC) acts as the agent of the Faculty for the oversight of instruction matters and the development of instruction policy and programs. The membership of the FIC consists of faculty representing GSBPP's various faculty areas, various curricula, and various degree programs. The FIC is GSBPP's initial body for consideration of matters involving 1) instruction policy and practices, 2) significant changes to the core curriculum of degree programs or degree program requirements, and 3) the creation of new degree or non-degree instruction programs. Appendix 3.4C contains a copy of the FIC's initial charter.

External to GSBPP, the school also has a GSBPP Advisory Committee, made up of senior military flag officers and government officials at the Assistant Secretary level. The Advisory Committee advises the Dean and faculty on current military issues and future needs, and helps direct us toward research issues and funding. Their personal involvement and support for both teaching and research is helpful for GSBPP to stay in front of the many changes that are occurring in the national security environment around the world. The GSBPP Advisory Committee was established in 2002. Intended to meet at least twice a year, the level of the Committee's involvement and attention to GSBPP has varied since its establishment, often depending on the Chairmanship and make up of the Committee. While continuing communication between the GSBPP Dean and members of the Committee – as individuals – occurs, there has been little activity of the Advisory Committee – as a Committee - during the past couple of years. At present the Advisory Committee represents unrealized potential for the benefit of GSBPP. Appendix 2.1G contains the Advisory Committee's initial charter.

Standard 2.2 Assessment
The program shall assess its students' performance and the accomplishment of its objectives. Assessment procedures and measures may take any form appropriate to the program and its circumstances, but each program shall develop and use procedures for determining how well it carries out its mission.

2.2A Overview of GSBPP Assessment and Review Procedures

Assessment practices flow from the school's mission: The mission of NPS is to provide advanced professional studies at the graduate level for military officers and defense officials from all services and other nations. To accomplish that mission in GSBPP, the educational programs are structured around a core curriculum as well as specialized curricula of study that fulfill the present and future needs of the defense community for officers educated in management. The various curricula are designed to educate the officers in specific Educational Skill Requirements (ESRs). ESRs define a particular set of educational skills that an officer should possess to function effectively as

a manager in a given specialization area. ESRs for a program are developed by curriculum sponsors in conjunction with NPS, especially with the faculty who teach in specialty areas.

The Graduate School of Business and Public Policy has various stakeholders, including students, alumni, faculty, program sponsors, and the broader defense and academic communities. The school relies on a number of procedures, both formal and informal, to obtain feedback from each of these groups to assess the school's performance and the accomplishment of its educational mission.

Formal systems include such items as surveys and questionnaires, which are routinely administered, primarily to current students. A survey for alumni, to be conducted by NPS, is in final draft stages. There are also formally assigned positions within the school that have central responsibility for assessment and management of curricula.

Informal systems include the network of contacts that exist between faculty and former students, military officers, and executives within the larger defense community. The various mechanisms used for assessment and review fall into three related areas – positions, processes, information - as follows:

- Managerial Positions with Assessment Responsibility
  - -Senior Associate Dean / Associate Dean for Instruction
  - -Academic Associate for the MBA/MSM Core
  - -Academic Associates for specialization curricula
  - -Program Officer
  - -Course Coordinators
- NPS and GSBPP Review Processes
  - -Curriculum Review Process
  - -Educational Skill Requirements (ESRs)
  - -Annual Faculty Review Process
  - -Faculty Instruction Committee
  - -Faculty Advisory Board
  - -Ad hoc program review committees
  - -Student Educational Representatives
- Assessment Information: Surveys and Questionnaires:
  - -NPS Student Opinion Forms
  - -GSBPP Core Curriculum Survey
  - -GSBPP Student Exit Curriculum Surveys
  - -Midterm Student Opinion Forms
  - -NPS Alumni Survey

All of these mechanisms play a role in assessment and will be discussed further below. However, unique to NPS, and central to assessment, are the position of Academic

Associate and the formal process of the Curriculum Review, so these mechanisms are described first.

2.2B Academic Associates and Curriculum Reviews

Academic Associates

Assessment practices are structured in terms of curricula. Once a curriculum is established, an Academic Associate is designated for each curriculum. This person has the primary responsibility for managing the curriculum. He/she is responsible for developing, maintaining, and updating curricula to accommodate the needs and academic requirements of the Navy and the Department of Defense. The Program Officer, an active duty naval officer assigned to GSBPP, assists the Academic Associate with administrative liaison with sponsors. The Academic Associate is a faculty member thoroughly familiar with NPS, the Navy and DoD, and is assigned part-time duty to this position. (Appendix 2.2B1, from the NPS Faculty Handbook, further describes the Academic Associate and Program Officer positions.)

The Academic Associate works with specialty sponsors and consultants to define pertinent needs, including professional objectives; to delineate projected utilization of program graduates; and to consult with GSBPP management and faculty to propose useful courses and curricula. These plans and projections consider the impact of developing technology, evolving bodies of knowledge (i.e., other graduate programs related to those under their purview), and the changing mission of the Navy. They are prepared, reviewed, and updated during sponsor reviews of curricula. The Academic Associate maintains a close relationship with the curriculum sponsor to ensure Navy requirements are linked to the academic ESRs.

The Academic Associate for the resident MSM core curriculum is responsible for working with faculty, students and GSBPP management to ensure the quality of the core courses. As will all Academic Associates, he/she has access to all assessment data collected and is responsible for formulating recommendations for suggested changes (such recommendations would go first to the Faculty Instruction Committee and subsequently to the faculty for vote).

<u>Academic Associates for the resident MSM curricula are as follows</u>:

Analysis Curricula

- Manpower Systems Analysis (847) — Steve Mehay
- Defense Systems Analysis (817) — Don Summers

Core Curriculum

- MSM Common Core — Jim Suchan

Academic Associates for the **resident MBA curricula** are as follows:

Logistics Management Curricula:	
• Transportation Management (814)	Keebom Kang
• Supply Chain Management (819)	Keebom Kang
• Material Logistics Support (827)	Keebom Kang
Acquisition Management Curricula	
• Acquisition and Contract Management (815)	Rene Rendon
• Systems Acquisitions Management (816)	Keith Snider
Financial Curriculum	
• Financial Management (837)	Larry Jones
Defense Management Curricula	
• Defense Systems Analysis International (818)	Alice Crawford
• Resource Planning & Mgnt for Intl Defense (820)	Alice Crawford
• Defense Business Management (809)	Jim Suchan
Information Management Curriculum	
• Information Systems Management (870)	Glenn Cook
Core Curriculum	
• MBA Common Core	Jim Suchan

Academic Associates for the **Executive Management** curricula are as follows:

Executive Masters in Business Administration (805)	John Mutty
Master of Executive Management (808)	Bryan Hudgens

Academic Associates for the **Distance Learning MS** curricula are as follows:

Contract Management (835)	Corey Yoder
Program Management (836)	Brad Naegle

In carrying out his or her responsibilities, each Academic Associate maintains ongoing contact with the students, faculty, sponsors and alumni of his/her curriculum. Academic Associates for all curricula have a similar responsibility, but each develops his/her own procedures for managing the curriculum. Routine practices cited by the Academic Associates who manage the resident curricula include:

Input from current students

Meetings with student Section Leaders
Evaluation meetings with current students in the curriculum
Formal exit questionnaires administered to graduating students
End of curricula exit interviews/critiques with graduating students
Academic advising sessions with students
Review of course evaluation (SOF) data

Input from curriculum sponsors
- Biennial Curriculum Review
- Sponsor campus visits
- Informal curriculum reviews with sponsor
- Ongoing ad hoc sponsor contact

Input from graduates/alumni:
- Ad hoc contact with graduates
- NPS Alumni survey planned

Input from Faculty
- Curriculum faculty meetings
- Supervision of Course Coordinators
- Review of course outlines

The Curricular Review Process

The Naval Postgraduate School is unique in that each curriculum exists to serve specified educational needs identified by a sponsor external to the school, but within the defense community. The content of each curriculum is assessed and revised every two years through a structured sequence of events culminating in a formal Curriculum Review with the curriculum sponsor. The purpose of the review is to validate ESRs and propose new ESRs if required; validate any joint stakeholder requirements; review degree requirements that may be independent of the ESRs; conduct an assessment of the design and execution of the curriculum (including a review of faculty and student research). Appendix 2.2B2 provides the formal NPS instruction for curriculum reviews.

Planned events in the review cycle leading up to the formal Review include the following:

Twelve months prior: the Academic Associate begins coordination with sponsors/stakeholders on issues for the next curricular review. They may be assisted in the logistics of this effort by the GSBPP Programs Officer (A Navy Commander who has military line authority over the students and is thoroughly familiar with the curriculum, the sponsors and Navy systems).

Eleven months prior: a review is conducted by program sponsors. This process is mostly external to NPS. The intent is for the program sponsor to review manpower and billets (jobs) and hence review needs for students educated within a given specialty area. The Academic Associate begins collecting required internal data such as exit interviews, survey results, and course content for analysis.

Seven months prior: the School Dean chairs an internal curriculum review. Participants include the NPS Director of Programs, the Academic Associate for the curriculum, the GSBPP Programs Officer, and the Associate Dean for Instruction. The objective is to assess the curriculum's quality and relevancy. The Academic Associate

conducts a curriculum self-study in preparing the Internal Review. One outcome of the Internal Review is a set of curriculum issues to be discussed with the program sponsor and become part of the formal review agenda.

Two months prior: the Academic Associate consults with the sponsors on the status of the review and gathers a set of expected issues. Action plans are drafted for the expected issues.

One-month prior: the Academic Associate pre-briefs the NPS President, Provost, Associate Provost for Academic Affairs, and the Director of Programs. The pre-brief reviews the issues and the proposed presentation to the sponsor. Issues are clearly defined and coordinated with the sponsor.

Formal Curriculum Review: joint review of the curriculum by NPS and the program sponsor. The review focuses on ESRs, curriculum content and resources necessary to support the curriculum. Actions necessary to change and improve the curriculum are identified and agreed upon. While the sponsor is on campus, he/she meets with students to get direct feedback on the curriculum.

2.2C Managerial Positions, Processes and Information

Managerial Positions

- Associate Dean for Instruction Responsible for managing the development and delivery of the Graduate School of Business and Public Policy's educational programs.
- Academic Associates / Program Officer Discussed above.
- Course Coordinators Faculty members assigned to each course. Course coordinators monitor course content and assure that courses are current and relevant.

Review Processes and Review Committees

- Curriculum Review Process and Educational Skill Requirements: discussed above
- Annual Faculty Review Process Annually, the school conducts a "Collegial Review" process for faculty who are not yet at the Full Professor or Senior Lecturer rank. All Full Professors, as a group, review tenured Associate Professors; tenured Professors, as a group, review untenured Professors and Lecturers; and Senior Lecturers review Lecturers. This process reviews and mentors faculty as they progress toward promotion and/or tenure in their career at GSBPP. But, secondarily, the review process assesses the manner in which faculty members contribute to the educational mission of the school.

- Faculty Instruction Committee The Faculty Instruction Committee (FIC) is a standing GSBPP faculty committee serving as the focal point for addressing matters related to instruction policy and practice in GSBPP. The FIC engages major curriculum issues within instructional programs. Specific roles and responsibilities include: studying and evaluating issues and proposed actions and making recommendations to the GSBPP faculty for consideration; making operational policy decisions relevant to instructional programs; providing consultation and advice for the GSBPP administration, particularly the Associate Dean for Instruction. The FIC is discussed further in standard 3.4C, within the GSBPP administrative organization.
- Faculty Advisory Board The Faculty advisory Board (FAB) is the standing faculty committee with the broadest perspective on school-wide issues and leads the processes of faculty governance in GSBPP. The primary role of the Faculty Advisory Board is to consult with and advise the Dean on GSBPP-wide issues of policy, strategy, and organization. FAB membership includes representatives of the various faculty groups in the school. The FAB is discussed further in standard 3.4C, within the GSBPP administrative organization
- Ad Hoc Faculty Program Review Committees It has been common practice in GSBPP that an ad hoc faculty review committee is established to provide an independent review of any newly proposed degree program or curricula. Such ad hoc committees report the findings of their review to the full GSBPP faculty as part of the new program approval process. (Since its recent establishment, the FIC has also played this role.) It is also common practice to establish a faculty program review committee at some period after initiating a new program, to assess the program's effectiveness once underway. Ad hoc faculty committees reviewed the MSCM and MSPM distance learning degree programs in 2003. Twice since its inception in 2002, faculty committees have reviewed the new MBA degree program. (Further comments on the review of the MBA will follow in standard 2.3, Guiding Performance.) GSBPP plans to conduct a faculty review of the EMBA program in the near future.
- Educational Representatives In 2002, GSBPP created the role of student Educational Representatives (Ed Reps) to assist the continuing assessment of the resident MBA/MSM program. The Ed Rep is selected during the first quarter by the other students in his/her entering cohort. The Ed Rep serves as a medium to facilitate communication between students, course instructors and GSBPP program administrators, thus encouraging ongoing dialogue directed toward improving the instructional programs.

Assessment Information

- Student Opinion Forms (SOFs) A questionnaire filled out by all NPS students at the completion of each course. It provides quantitative and qualitative course and instructor evaluation. It is used by instructors to revise and improve courses and

by GSBPP to evaluate faculty instructional performance. Appendix 2.2C contains a copy of the SOF. .

- GSBPP Core Curriculum Survey A student questionnaire conducted after students complete the common core curriculum in the resident MBA/MSM program (usually late in the students' third quarter or fourth quarter). This survey provides students' assessments of the value, defense-relevance and satisfaction associated with the common core curriculum courses. Rating and qualitative assessments are provided. It is used by the Associate Dean for Instruction and Academic Associate for the Core to improve the core curriculum. Appendix 2.2C contains a copy of the Core Survey.
- GSBPP Student Exit Surveys A questionnaire conducted when students complete the specialty part of the resident MBA/MSM program (late in students' final quarter at NPS). It provides students' assessments of the value, defense-relevance and satisfaction associated with the specialty curriculum courses. Rating and qualitative assessments are provided. These surveys are generally accompanied by exit briefs with graduating students to review the survey findings. It is used by Academic Associates to improve the curriculum. Appendix 2.2C contains an example subspecialty curriculum survey.
- Midterm Student Opinion Forms Some faculty members administer a course evaluation at the midterm. This may replicate the formal NPS SOF or it may be designed by the faculty member.
- NPS Alumni Survey An NPS survey has been designed and is ready to conduct. NPS plans call for initial administering of the survey during fall 2007. Appendix 2.2C contains a copy of this planned alumni survey.

Standard 2.3 Guiding Performance
The program shall use information about its performance in directing and revising program objectives, strategies, and operations

2.3A Overview of Program Changes Resulting from Assessment and Review Procedures

Significant curriculum changes have occurred during recent years due to assessment and review processes undertaken within GSBPP, as discussed in the preceding standard 2.2.

The school has reviewed and clarified its mission, principally through on-going work on the school strategy by the GSBPP management team and the Ad Hoc Strategy Committee in addition to many meetings held between sponsors/stakeholders and the Dean who entered in September 2005. This has resulted in new markets being identified, and new programs and curricula being evaluated and created. Program changes have

occurred that 1) significantly altered the resident MSM/MBA program, with emphasis in the core curriculum, 2) added and deleted specialty curricula, 3) modified the specialty curricula to better serve sponsor requirements, and 4) added and deleted degree programs. . The remainder of this section provides summary descriptions, with more detail concerning these program changes.

2.3B The MSM/MBA Resident Program -- Change in Core and Additional Degree

Resident Degree Change Starting in 2001, GSBPP conducted a comprehensive assessment of its main resident degree programs. In part, this review grew out of the previous years' NASPAA and AACSB accreditation visits. In part, it was the result of a long-standing faculty desire to comprehensively review its core curriculum. In part it was motivated by the initiative, encouragement and support from a new NPS Superintendent at the time. The assessment included the following:

- Contact and discussion with high-level Admirals throughout the US Navy to determine their needs and expectations concerning graduate level education
- Assimilation of curriculum sponsor and student evaluations of GSBPP resident curricula
- Survey of current students to determine the value they attached to particular degrees and degree programs
- Review of the existing resident degree programs by GSBPP faculty
- Bench marking of GSBPP degree programs against peer schools

The comprehensive review of GSBPP resident degree programs was lead by a representative committee of GSBPP faculty. The committee's recommendations were reviewed by an independent GSBPP evaluation committee. These results were presented to the full faculty for further discussion and modification. After extensive faculty input and debate, the GSBPP faculty adopted the resulting recommendations, which were then approved by the NPS Academic Council. This process led to several significant decisions and actions:

- Ground-up redesign of the core courses within the resident program
- Changing the name of the predominant degree earned in the resident program from Masters of Science in Management (MSM) to Masters of Business Administration (MBA); at the time of this name change, 11 of GSBPP's resident curricula changed to awarding a "Defense-Focused MBA" degree, while one curriculum continued to award the MSM degree
- Merging the Masters of Science in International Resource Management and Planning into the defense-focused MBA degree program

Detailed results of these changes were reported to NASPAA under standard 4.0 in the 2002 annual report. (Appendix 2.3C contains excerpts from NASPAA Annual Reports 2002-2004 describing curriculum changes.)

2002 Review The GSBPP faculty closely tracked the initial student cohorts that started in January 2002 to monitor all aspects of the program. This tracking involved substantial student input. It became clear early on that the new core design materially exacerbated a problem our students had been experiencing, to a lesser degree, for a number of years: excessive academic workload. In responding to evolving and increasing educational requirements from our specialized curricula sponsors, we had added several required specialty courses, many of them "small" course (less than the 4-credit hour standard). The cumulative effect of added requirements in the specialization curricula and the core redesign was to increase student workload beyond a level conducive to successful learning.

During fall 2002, a faculty committee examined the issue and suggested changes to correct the student workload problem. The process involved the faculty examining the core MBA program, the Academic Associates, in conjunction with faculty groups in each specialty area, examining the specialty portion of the program, and individual instructors examining the workload in their courses. The recommended changes were adopted by the larger faculty and approved by the NPS academic council as appropriate. Objectives were to:

- Reduce the absolute number of courses (particularly 2-credit hour courses)
- Reduce the total credit hours in specialization curricula
- Adjust student work assigned in individual courses to correspond to course credit hour size.

With these changes, the curricula now average somewhere around 16 +/- credit hours per quarter, a "normal" load. Detailed results of these changes were reported to NASPAA under standard 4.0 in the 2003 annual report.

2003-2004 Review When GSBPP adopted the MBA, the faculty pledged to systematically review the program after the first class graduated in June 2003. With the MBA and MSM programs and core having significant overlap, a review of the MBA is also a review of the MSM. This review was initiated during fall 2003 and completed in summer 2004. The review was lead by a GSBPP faculty committee. Their recommendations were adopted by the full GSBPP faculty and approved by the NPS Academic Council, as appropriate. The committee suggested modest adjustments to the core courses. These changes primarily involved repackaging the management and analytical core courses. Detailed results of these changes were reported to NASPAA under standard 4.0 in the 2004 annual report.

As described above, our curricula are periodically fine tuned to meet the changing needs of the students and program sponsors. Care is taken to maintain an integrated curriculum that is linked across each curriculum's educational objectives. This results in an effective student learning environment.

2.3C The MSM Program -- Addition of Specialty Curricula

In response to changing sponsor needs, interest in the MBA program by new sponsors, or changes in student enrollments, new individual specialty curricula may be created and older ones discontinued. During recent years, sponsors of some curricula have sought increased analytical content in rigor in their programs. One result of this has been a shift of the Defense Systems Analysis curriculum from the MBA degree program to the MSM degree program

Defense Systems Analysis: Defense Systems Analysis (DSA) has long been one of the curricula in the resident program. As for most resident curricula, an MSM degree was awarded prior to 2002, and the DSA curriculum then shifted to awarding the MBA degree upon its development in 2002. During 2006-2007, the DSA curriculum underwent a significant curriculum review with the sponsors, leading to a redefinition of the objectives of the curriculum. Sponsors wished to increase the emphasis and focus on developing the analytical skills and capabilities of the graduates. In response to this, quantitative methods and modeling courses were added to the DSA and a master's thesis became a required component. The objectives of this "new" DSA curriculum are better aligned with the MSM degree program rather than the MBA degree program, so the DSA curriculum now satisfies the requirements of the MSM degree and, starting with 2007, students following the DSA curriculum will earn and be awarded the MSM. DMA is no longer and MBA degree curriculum.

2.3D MSM Specialty Curricula Review and Changes

The school has assessed and reviewed the MSM specialization curricula, principally through the ongoing formal process of curriculum reviews of existing programs. This has resulted in continuing modification and adjustment to better satisfy academic and curriculum sponsor needs. Below is a summary of changes in specialty curricula that have occurred during recent (about three) years.

Manpower Systems Analysis Curriculum (847)

- Degree changed from an MBA to a MSM for U.S Navy Officer students, effective with September 2007 graduates
- Eliminated the January curriculum input
- The 2006 Curriculum review resulted in the following curriculum changes:

- Deleted MN 4118 (Modeling Decision Support in Manpower Systems)
- Deleted MN 4116 (Society of Human Resources)
- Deleted MN 4119 (Navy Manpower Requirements Process)
- Deleted MN 4130 (Marine Manpower Management)
- Deleted MA 1010 (Algebra and Trigonometry)
- Added MN 2039 (Basic Quantitative Methods in Management)
- Added OS 3401 (Human Factors in Information Warfare)
- Added MN 2113 (Human Resources II) for USMC students

·Embedded JPME for students required or who desire to complete JPME at NPS
·Deleted the elective requirement for International students

Defense Systems Analysis Curriculum (817)

- Added GB4510 (Strategic Resource Management) to required courses
- Deleted the data base management course from the required courses to allow selection of a more appropriate advanced course
- Replaced MN2221/2222 with MN3331 (Systems Acquisition and Project Management), which is required for all USMC MBAs
- Added required courses GB4550 (Advanced Financial Reporting) and GB4570 (Advanced Finance)
- From 2007 curriculum review, shifted from MBA core curriculum and award of MBA degree to MSM core curriculum and award of MSM degree.
  - Masters thesis required in place of MBA project
  - MN2039 (Basic Quant) and MN3111 (Multivariate Data Analysis) core courses added.
  - Deleted Defense Budget Practice (GB3510), Strategic Resource Management (GB4510), Advanced Finance (GB4570), Advanced Financial Reporting (GB4550) from required specialization courses.
  - Added Decision theory (OA3304), Simulation Modeling (GB4440), Spreadsheet Modeling (OA4801) to required specialization courses.

2.3E New and Deleted GSBPP Degree Programs

In addition to developments within the MSM (and MBA) degree programs, there have been four major additions and deletions to GSBPP degree programs during the past five years.

EMBA In 2002, GSBPP began a new Executive Master of Business Administration (EMBA) program. A continuing issue concerning graduate education for U.S. Naval officers is the difficulty of Unrestricted Line (URL) officers to devote lengthy periods of time away from operational careers to full-time graduate education. As a response to these circumstances, GSBPP created the part-time, distance learning EMBA program, providing management and administrative education without disrupting

officers' career paths. The EMBA program is offered to students by VTC at 13 sites around the country. The program currently has an enrollment of about 200 students. The EMBA is described in detail in the Volume III, Appendices, within Appendix 9.0.

MSRPM: The Master of Science in Resource Planning and Management (MSRPM) degree program had existed since 1993, and was the degree awarded to students (all international) who completed the Resource Planning and Management for International Defense curriculum. In 2002, following the revision of the resident core curriculum and the establishment of the MBA degree, sponsors for the Resource Planning curriculum decided to transition the curriculum to the MBA program. The set of courses in the Resource Planning curriculum were revised to incorporate all MBA core courses and satisfy MBA degree requirements. With this shift to the MBA, the MSRPM degree was discontinued.

MEM In 2006, GSBPP received approval from the NPS Academic Council to offer a new resident degree program, the Master of Executive Management (MEM). The MEM was developed at the request of the U.S. Air Force Acquisition community. Across the service, the USAF designates high-performing, mid-career officers for Intermediate Development Education (IDE) and sends such officers to graduate programs. The USAF Acquisition community requested that GSBPP develop a 1-year resident program to serve its IDE officer needs. Curriculum-wise, the MEM has been modeled on the EMBA program and is very similar with respect to objectives, curriculum content and courses. The MEM enrolled its first students (5) in July 2006. The MEM is described more fully in Appendix 4.1.

LEAD The Master of Science in Leadership and Human Resource Development (LEAD) program was designed and managed for the United States Naval Academy (USNA) by GSBPP for nine years. The program was delivered by NPS faculty, who traveled to USNA, in modularized courses one to two weeks long. During 2006, USNA conducted a review of their needs and decided to put the program up for competitive bids. In June 2006, USNA outsourced this program to the University of Maryland. While 2006 marked that last year for GSBPP delivery of the LEAD program, there is some possibility that the program could return to GSBPP at some point in the future. The LEAD program is discussed fully in Volume III, Appendices, within Appendix 9.0.

STANDARD 3.0 -- PROGRAM JURISDICTION

Standard 3.1 Administrative Organization
Within the framework of the university organization, responsibility for the professional masters degree program should rest with an identifiable component of faculty and an administrative organization capable of conducting the program effectively.

3.1A Administration Arrangement

The Naval Postgraduate School (the university) is organized into university-level administrative offices and the academic operating units. An NPS organization chart is provided below that depicts an overview of the university administration and the academic units. The major academic units are the four individual graduate schools, further divided into departments:

- The Graduate School of Engineering and Applied Sciences: Dean James Kays
  - -Applied Mathematics
  - -Oceanography
  - -Space Systems
  - -Systems Engineering
  - -Physics
  - -Meteorology
  - -Mechanical and Astronomical Engineering
  - -Electrical and Computer Engineering

- The Graduate School of Operational and Information Sciences: Dean Peter Purdue
  - -Operations Research
  - -Computer Science
  - -Information Sciences
  - -Defense Analysis

- The School of International Graduates Studies: Dean Robert Ord
  - -National Security Affairs
  - -Center for Homeland Defense and Security
  - -Center for Civil Military Relations
  - -Defense Resources Management Institute

- The Graduate School of Business and Public Policy: Dean Robert Beck

Besides the four graduate school deans, NPS has a Dean/Associate Provost of Research, providing oversight of NPS research program activities and administrative supervision of three NPS research institutes:

- Dean and Associate Provost of Research: Dan Boger, Acting
  - -Meyer Institute for Systems Engineering
  - -Modeling and Virtual Environments (MOVES) Institute
  - -Cebrowski Institute

Within the NPS academic units, department chairs report to the graduate school deans; the deans report to the Provost and Vice President of NPS. The Provost is responsible for the academic programs and their operations. He delegates responsibilities, as appropriate, to the respective deans and department chairmen. The current NPS Provost position is Dr. Leonard Ferrari. Formerly the NPS Dean of Research, Dr. Ferrari assumed the Provost position in early AY 2007.

The institution is headed by a President. Historically, the President (formerly Superintendent) of NPS has been an Admiral on active duty in the Navy. Historically, the President's term ranged from two to three years duration. The most recent President of NPS was Rear Admiral Richard Wells, Acting President from January-June 2006. During 2006, legislation was passed by the U.S. Congress permitting the President's position to additionally be filled by a civilian. The President's position was vacant until April 1, 2007, when the position was assumed by President Daniel T. Oliver. President Oliver is the first civilian President of NPS, with an initial term of five years. While a civilian, President Oliver is a retired Vice Admiral, having formerly served a full and accomplished career in the U.S. Navy.

3.1B Relationship with Other Academic Units

There are no significant formal relationships or joint agreements between GSBPP and other departments at NPS. There are, however, numerous situations in which GSBPP and other departments collaborate to deliver NPS degree programs or curricula. These arrangements are typically of the service type, providing courses either to or from other departments. The Operations Research, Information Sciences, National Security Affairs, and Systems Engineering Departments all offer courses designed for MBA and MSM students. Our faculty exercise considerable influence on this course content.

Standard 3.2 Recognized Program
There is a public affairs and administrative program with identifiable faculty membership, whose primary responsibility for the program is recognized at the next higher level of university organization.

3.2 Recognized Program

As shown in the GSBPP organizational chart below, Robert Beck was the Dean of the Graduate School of Business and Public Policy during the self-study year. Dean Beck

has overall responsibility for GSBPP's operation and for maintaining links with the school's external sponsors and stakeholders. Dean Beck is advised by the Faculty Advisory Board (FAB). The FAB is composed of elected representatives from all faculty groups and serves as the standing faculty committee with the broadest perspective on School-wide issues.

2A School Administration

Dean Beck is assisted in his administrative duties by one Senior Associate Dean (Professor Doug Moses) and three Associate Deans; one for Instruction (Professor Doug Moses), one for Research (currently vacant); and one Military Associate Dean (Captain Terry Rea, USN). Professor Doug Brinkley serves as the department's Director of Instructional Computer Support, a part-time administrative role

Professor Doug Moses (Senior Associate Dean and Associate Dean-Instruction) assists the Dean with the overall internal operations of the Graduate School of Business and Public Policy, including budgeting oversight, faculty affairs (e.g., recruiting and hiring, collegial review process, etc.), instructional program coordination, and academic issues. As Associate Dean – Instruction, Professor Moses is responsible for assigning faculty to deliver the courses required by the various curricula. He also chairs the Faculty Instruction Committee (FIC) which exercises the oversight necessary to maintain consistent academic quality across the broad spectrum of curricula offered.

The Associate Dean-Research is charged with encouraging and facilitating scholarly activity on the part of our faculty. S/he oversees the processing of proposals for both internal and external research support and represents GSBPP on the NPS Research Board. S/he also chairs the Faculty Research Committee (FRC), which provides advice and guidance on GSBPP-wide issues of research policy and strategy, with the objective of continually improving GSBPP's scholarly productivity, broadly defined.

Captain Terry Rea, USN (Military Associate Dean) is the senior military officer in the school. Captain Riddle oversees military officers in the school and acts as a liaison with external military commands. In GSBPP, the Military Associate Dean also coordinates support functions and activities within the school and supervises staff members who provide those services. Included are secretarial services, supply and equipment purchasing, travel, word processing and graphic arts support, and contract services.

Professor Brinkley is responsible for coordination and operation of the school's classroom computers and computer labs, both research and instructional.

3.2B Faculty Administration

GSBPP includes a number of administrative positions designated as "Academic Associates" (AAs). Each instructional program or curriculum within the school, and each of the major faculty groups within the school, is administered by a faculty member holding an Academic Associate position. Individual AAs may have program responsibility, faculty responsibility, or both. AAs with program responsibility oversee the curriculum content and the integrity of their academic programs and maintain relationships with program sponsors (including conducting curriculum reviews). AAs with faculty responsibility oversee the faculty members within their area, including teaching schedules, recruiting and hiring, and mentoring. The Academic Associates are nominated by the school's Dean and appointed by the NPS Provost.

Since 2006, reflecting an evolution in roles, the Academic Associates who have faculty responsibility have also been referred to as "area chairs". Staring July 2007, distinct administrative appointments as Area Chair have been extended to the five AA positions with responsibility for coordinating area faculty. They are:

Area Chair	Academic Area
• Professor Larry Jones	Financial Management Faculty
• Professor Steve Mehay	Economics and Manpower Faculty
• Professor Frank Barrett	Management Faculty
• Associate Professor Keith Snider	Acquisition Faculty
• Associate Professor Keebom Kang	Operations and Logistics Faculty

3.2C Administration of Research Activities

As noted above, GSBPP has an Associate Dean for Research whose central responsibility is coordination and administration related to the school's research programs and activities. Additionally, as part of the faculty governance structure (discussed more fully in section 3.4), the Faculty Research Committee provides the means for direct faculty participation in the school's research policies and practices.

Research programs within the school vary in size, breadth of faculty involvement, and continuity. With sufficient size, involvement and continuity, research programs may become established as having an individual identity and perhaps formal recognition as entities within the school. At present, six research programs exist as administrative entities in GSBPP:

• Acquisition Research Program	Jim Greene, Chair; Keith Snider, Prog. Mgr
• Center for Defense Mgnt Reform	Douglas Brook, Director
• Center for Innovation	Neil Thornberry, Chair
• Faculty Workload Fund	Associate Dean for Research, Coordinator
• Research Initiation Program	Associate Dean for Research, Coordinator
• MPT&E Research Program	Robert Beck, Dean, Program Manager

Standard 3.3 Program Administration
Responsibility for program administration is assigned to a dean, chairperson, director, or other single administrator who is appointed after appropriate consultation with the program faculty.

3.3A Dean

Overall responsibility for the Graduate School of Business and Public Policy and its programs is assigned to the Dean. The Dean's appointment is limited to a maximum term of three years, with possible renewals. When a Dean is to be appointed or reappointed, the NPS Provost appoints a faculty committee to poll the GSBPP faculty regarding reappointment or the need to conduct a search for a new Dean. A Dean search may include both inside and outside candidates.

An outside search begins with the formation of a committee composed of a cross-section of faculty from the Graduate School of Business and Public Policy and at least one representative from another school. The committee uses advertisements, notices, etc., in the same manner as a Dean search at a civilian university. Top candidates are brought in for interviews.

For inside candidates, individual faculty are interviewed by the Provost, as appropriate, to determine their concerns and preferences with regard to candidates. With the advice of the faculty, the NPS President and Provost confer and offer an individual the job as Dean. This process continues until a suitable person accepts and the new appointment is announced. In such a process the School faculty members have great influence on the Dean selection. In every search or reappointment since this policy was adopted, the successful candidate was supported by a majority of the School faculty.

3.3B Academic Associates

As indicated in section 3.2, the Associate Dean for Instruction is responsible for coordinating of the school's instruction programs, but each instructional program or curriculum within the school is administered by a faculty member holding an Academic Associate position. AAs with program responsibility oversee the curriculum content and the integrity of their academic programs and maintain relationships with program sponsors (including conducting curriculum reviews). The responsibilities of the curricular AAs were discussed in depth in section 2.2. Academic Associates are nominated by the school's Dean and appointed by the NPS Provost. Faculty currently acting as Academic Associates include:

For the <u>MSM program</u> and MSM curricula

- Professor Jim Suchan — MSM core curriculum
- Professor Steve Mehay — Manpower Systems Analysis curriculum
- Lecturer Don Summers — Defense Systems Analysis curriculum

For the MBA program and MBA curricula:

- Professor Jim Suchan — MBA core curriculum
- Professor Larry Jones — Financial Management curriculum
- Associate Professor Keith Snider — Systems Acquisition Management curriculum
- Senior Lecturer Rene Rendon — Acquisition and Contracting curriculum
- Associate Professor Keebom Kang — Logistics curricula
- Senior Lecturer Alice Crawford — International Student curricula
- Lecturer Glen Cook — Information Tech. Mgnt curriculum
- Professor Jim Suchan — Defense Business Management curriculum

For Other GSBPP programs and curricula:

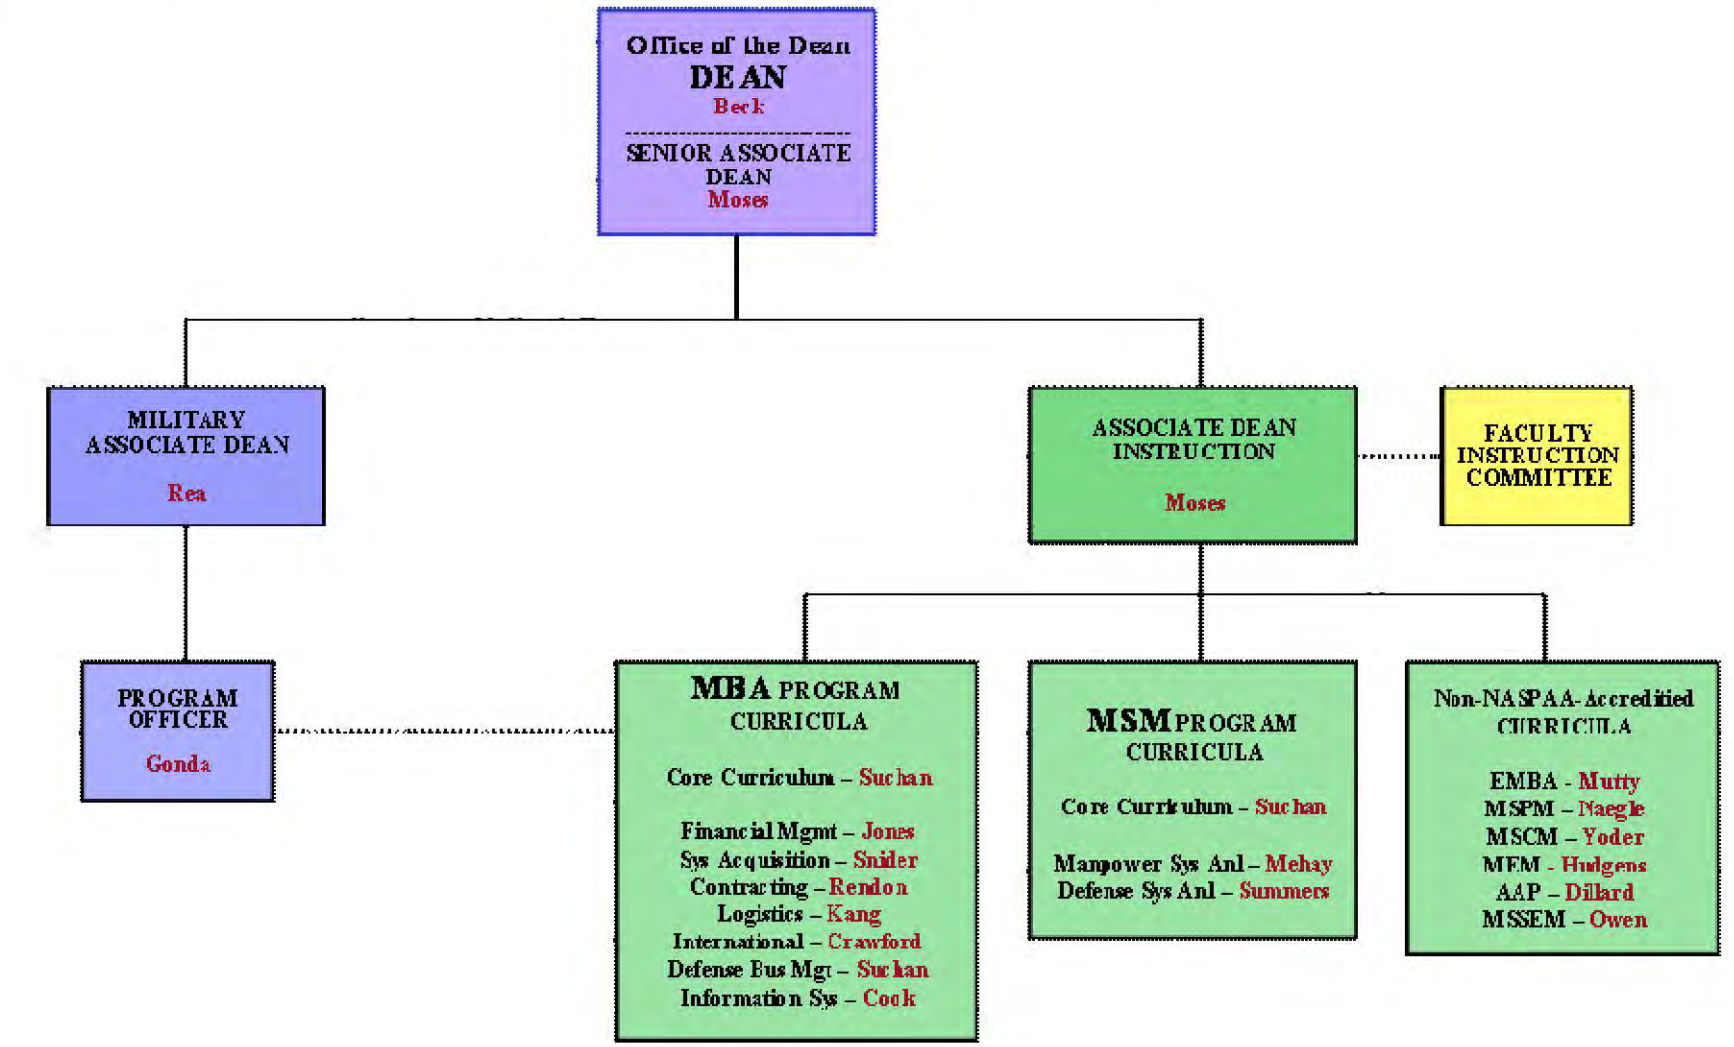
- Senior Lecturer John Mutty — Executive MBA
- Lecturer Bryan Hudgens — Master of Executive Management curriculum
- Senior Lecturer Brad Naegle — MS in Program Management
- Lecturer Cory Yoder — MS in Contract Management
- Senior Lecturer Wally Owen — MS in Systems Engineering Management

3.3C Program Officer

A unique position at the Naval Postgraduate School is the Program Officer. There are several Program Officers across NPS, one assigned to GSBPP. The Program Officer is an active duty military officer (typically at the O5 rank) with administrative responsibilities for a set of curricula. In GSBPP, the Program Officer has responsibility for student administration and administration of the school's formal curriculum review process. The Program Officer acts as a liaison between program sponsors and Academic Associates in overseeing the content of the school's resident curricula. Responsibilities of the Program Officer are noted in section 2.2. Commander Phil Gonda, USN, is the GSBPP Program Officer. Appendix 2.2B1 further describes the Program Officer position.

The following page contains a figure summarizing the GSBPP positions associated with administration of curricula and programs.

Graduate School of Business and Public Policy – Instruction Programs Administration



Standard 3.4 Scope of Influence
Within the framework of organization and process peculiar to the institution, the public affairs and administration faculty and/or administrator exercises initiative, and substantial determining influence with respect to general program policy and planning; degree requirements, new courses and curriculum changes; admissions, certification of degree candidates; course scheduling and teaching assignment; use of financial and other resources; appointment, promotion and tenuring of program faculty.

3.4A General Program Policy and Planning

The GSBPP faculty and administrators determine policy with respect to GSBPP issues. Within NPS's policy and procedures, GSBPP develops policy to facilitate the effective management of the school. Policies that have been developed or refined in the past several years include: The GSBPP Annual Review and Promotion & Tenure Processes (Appendix 3.4J1); The GSBPP Faculty Promotion & Tenure Voting Policy (Appendix 3.4J1); Policy On Lecturer and Senior Lecturer Appointments (Appendix 3.4J2); The GSBPP Policy on Recruiting and Appointment of Tenure Track Faculty (Appendix 3.4I1); and a policy establishing three faculty advisory boards, the Faculty Advisory Board (FAB), the Faculty Instruction Committee (FIC) and the Faculty Research Committee (FRC) (Appendix 3.4C).

3.4B The Senior Faculty Council

Growing out of discussions after the 1997 promotion and tenure deliberations and faculty mentoring sessions, the senior faculty (full professors) in GSBPP (then the Systems Management Department) expressed a collective desire to take more leadership and exert more influence on the governance of the Department. The Chairman at the time had encouraged this increased involvement by the senior faculty. As a result of a series of informal meetings, the Senior Faculty Council was formed in the fall of 1997. After transitioning from the Systems Management Department to the Graduate School of Business and Public Policy, the Senior Faculty Council's Charter became:

Objectives: to function as the advisory body to the School Dean in establishing policies in academic matters, including (1) programs, (2) curricula, (3) faculty evaluation and promotion, (4) collegiality, and (5) professional practice.

Membership: includes all faculty members in the school who hold the rank of full professor.

Structure and Process: The Senior Faculty Council will, after full discussion among its members, including the School Dean, make recommendations to the Dean about actions and policy making guidance. These recommendations will be based on a recorded vote of the members and are advisory to the Dean. The executive agent of the

Council is a four-person Executive Committee, consisting of three full professors selected by the Council and the Dean as an ex officio member. The three elected members will serve a one-year term and are eligible for reelection. A chairperson of the Executive Committee is selected to coordinate and chair all Executive Committee and Council meetings.

The tasks of the Executive Committee include the following:

- Solicit/entertain inputs from the faculty, students, and program sponsors regarding potential policy matters for the Senior Faculty Council to address.
- Decide whether or not a potential issue should be undertaken for further consideration, and the appropriate body (full professors, tenured faculty, full faculty, etc.) for final decision.
- Prepare specific recommendations for discussion and decision by the appropriate faculty body.
- Serve as the advisory body for the Dean on urgent academic-related matters.

When the GSBPP faculty approved the faculty governance initiatives, which included forming the Faculty Advisory Board (FAB), the Senior Faculty Council relinquished its routine advisory role in favor of the FAB, with its broader faculty representation. However, the Senior Faculty Council, now with the name of the Senior Advisors Council (SAC) continues to provide guidance as situations dictate.

3.4C GSBPP Faculty Governance Structure

The Graduate School of Business and Public Policy recently approved a faculty governance structure involving three faculty committees, the Faculty Advisory Board (FAB), the Faculty Instruction Committee (FIC) and the Faculty Research Committee (FRC). These committees serve the school's Dean, Associate Dean for Instruction and Associate Dean for Research, respectively, in both advisory and policy approval roles. The original proposals that outline the committees' membership, roles and responsibilities are provided in Appendix 3.4C.

The Faculty Advisory Board (FAB): The FAB is the standing faculty committee with the broadest perspective on school-wide issues and leads the processes of faculty governance in GSBPP. The primary role of the Faculty Advisory Board is to consult with and advise the Dean on GSBPP-wide issues of policy, strategy, and organization. Both the Dean and the FAB members can initiate and propose matters for discussion. FAB membership includes representatives of the various faculty groups as follows:

- Two members from the tenured faculty
- One member from the untenured, tenure track faculty
- Two members from the Senior Lecturer/Lecturer faculty

Members of the committee are selected for two-year staggered terms and are elected by each faculty group according to processes decided by each group.

The Faculty Instruction Committee (FIC): The FIC is a standing GSBPP faculty committee serving as the focal point for advising the Associate Dean for Instruction (ADI) on instructional matters. The FIC engages major curriculum issues within instructional programs. Specific roles and responsibilities include: studying and evaluating issues and proposed actions and making recommendations to the GSBPP faculty for consideration, as appropriate; making operational policy decisions relevant to instructional programs; providing consultation and advice for the GSBPP administration (particularly the ADI) to discuss instructional program issues and initiatives. Membership includes The ADI (chair), the five faculty area Academic Associates, the Academic Associate for International curricula, an Academic Associate from the DL programs and two at-large faculty members appointed by the Associate Dean for Instruction.

The Faculty Research Committee (FRC): The FRC is a standing GSBPP faculty committee serving as the principle faculty advisory body to the Associate Dean of Research (ADR). The FRC consults with and advises the ADR on GSBPP-wide issues of policy and strategy, with the objective of continually improving GSBPP's scholarly productivity. Both the ADR and the FRC members can initiate and propose matters for discussion. FRC membership includes the ADR (chair) and five faculty members representing the diversity of faculty in GSBPP, including: tenured professors/associate professors, untenured tenure-track faculty members, lecturers/senior lecturers.

3.4D Establishment of Curricula, Degree Requirements and New Courses

The MSM program and curricula that are under consideration in this review are developed in a two-pronged manner. Each program must meet both a) the education needs of the sponsor (the operating department or division for whose requirement the curriculum is maintained), and b) the academic degree requirements.

All degree requirements must be approved by the GSBPP faculty and the NPS Academic Council. The degree requirements are controlled by the faculty, and the curriculum requirements meet both the academic requirements established by the faculty and the educational skill requirements of the program sponsor.

Changes in degree requirements originate through various channels. Degree requirements or changes that may be proposed are reviewed by a committee of the faculty. In the past, ad hoc review committees composed of department faculty would be appointed by the chair. Since the adoption of the new faculty governance structure and the establishment of the Faculty Instruction Committee, the FIC has replaced ad hoc committees as the first level of faculty review. A separate ad hoc committee to review a particularly significant degree program matter may be recommended by the FIC. If, after extensive study of the question, the FIC votes to recommend the proposal, the FIC takes the proposal to a school faculty meeting for consideration, debate and vote by the full faculty. Appendix 4.1 is an example of a report that was recently produced for what became the Master of Executive Management (MEM) program.

If approved by the GSBPP faculty, the Dean then makes a recommendation to the NPS Academic Council through the school's representative. The Academic Council, which consists of representatives of all departments and seven ex-officio members, makes the final decision.

In defining functional management specialties, sponsors and Academic Associates often confer to design courses which have specific goals. Sponsors define these goals by specifying Educational Skill Requirements (ESRs). The faculty responds by designing academically sound courses which simultaneously meet the sponsor's objectives and contain scholarly substance.

The disciplines in the school contribute expertise for developing courses in a broad and relevant mix of subject matter. All new courses and revised courses must obtain approval from NPS's Academic Council. See Appendix 3.4D for the Council's approval guidelines.

3.4E Admission of Students to the Program

Students are admitted to the MSM Program in two basic ways. Officers are first reviewed for academic potential and performance using criteria established by the faculty and supplied through the Program Officer. Then they are screened by their particular service or command for professional performance and potential. The School provides academic ability determination advice in threshold situations, through the Academic Associate.

After an officer is selected to attend a given curriculum, contact is made through the Program Officer and Academic Associate for academic counseling. After a student arrives at the Naval Postgraduate School, the academic record is again reviewed and the Academic Associate who suggests validation of courses, as appropriate (which may be accomplished by examination or review of academic background). Throughout the curriculum, each student is again reviewed for academic performance and potential. Some individuals may be disenrolled, but the vast majority of students are able to continue to graduation.

Civilian employees of the Federal government, particularly the Department of Defense, are eligible to enroll at the Naval Postgraduate School. They are proposed to the School by their agency or activity. If the individuals proposed meet the academic standards, they are admitted.

3.4F Certification of Students for Graduation

The Academic Associate and Program Officer review the records of each individual based on the graduation policy of the Academic Council and the school. The proposed degree recipients are then reviewed by the Dean. If the Dean has any questions, he/she

consults the Academic Associate, the Program Officer, and other faculty as required. The Dean's recommendation is forward to the Academic Council for final review and award of the degree by the NPS President.

3.4G Course Schedules and Faculty Assignments

The Naval Postgraduate School is relatively conventional in its course scheduling and faculty assignment process. The Academic Associate and Program Officer assure a plan for each student's entire program is placed in the NPS student management system (PYTHON) when the student enters the program. This provides a forecast of required courses for students onboard. Future student enrollments are forecast by the Associate Dean for Instruction, in consultation with the Academic Associates. Generally, the school plans for required courses on an annual basis, summarized in the annual teaching plan. The Area Chairs for the major faculty areas coordinate the area faculty to cover the course requirements in the annual plan. The starting notion is that tenure-track faculty will teach for two quarters a year, non-tenure-track for three or four, but divergence from this standard is common as faculty may increase or decrease their teaching load depending on their involvement in research opportunities or administrative positions. Teaching requirements to deliver the school's instruction programs may change as the year proceeds, so the process of forecasting needs and coordination between the Associate Dean for Instruction, the Academic Associates, and area faculty continues iteratively throughout the year. One way in which NPS may differ from other universities is that course requirements are "demand driven". Students are sent to NPS for graduate programs of a specified length, so courses must be provided as the students' programs demand. Hence, the faculty teaching assignment process presumes that all courses demanded by students' programs will be provided. Appendix 3.4G contains the annual GSBPP Workload Planning guidelines.

3.4H Budget Preparation and Spending Authorization

The Graduate School of Business and Public Policy negotiates a budget (that covers faculty and staff salaries, operating support, supplies and travel) each year through the Director of Academic Planning, who sits as a member of NPS's Resources Planning Board. This Board recommends all Naval Postgraduate School resource allocations for the President's approval. The Board is chaired by the Provost. The Dean controls GSBPP operating expenditures.

Additional funding for faculty and staff salaries, travel, equipment and other school activities is generated through sponsored research and instructional activity. Additional funds for activities such as curriculum development, based on demonstrated needs and approved new programs, and are frequently awarded. These funds are allocated from the central NPS administration and then administered by the Dean and Associate Dean for Instruction. In recent years, funds through the International Military Education and Training program (IMET) have been available to specifically develop materials for educating international students.

3.4I Selection, Hiring, and Retention of Faculty

Upon receipt of hiring authority from the Provost, the Dean and the faculty in the relevant discipline(s) begin the recruiting process. EEO rules and procedures are reviewed by all who will participate in the effort. For reference, the GSBPP Policy on Recruiting and Appointment of Tenure Track Faculty is found at Appendix 3.4I1.

Advertising is done at professional meetings, through letters to universities, relevant print media including professional journals, through other more general media such as The Chronicle of Higher Education, and announced through the university's Human Resources website.

As vitae and recommendation letters are received they are passed to relevant faculty members for comment. Meetings are held to screen and select individuals to be invited for visits. The visitation process calls for broad exposure of the prospective new colleague to faculty and administrators. The candidate is also required to present a seminar to demonstrate his/her research abilities to all interested faculty. Upon the completion of visits, the faculty makes recommendations to the Dean about which individuals, if any, should be made offers. When a school decision is reached, the Dean confers with the candidate to ascertain his/her level of interest and salary requirement. He then formulates an offer, which is presented to the Provost for authorization. The offer can then be made by the Dean to the candidate who either accepts or rejects it. This process continues until the required individuals are hired. Operationally, the school's overall process of analyzing faculty needs, recruiting and hiring is coordinated through the Senior Associate Dean.

After an individual has joined the faculty, the Dean is responsible for performing annual performance reviews. Each year all faculty members submit a Faculty Activity Report. In the Graduate School of Business and Public Policy, it is the Dean's practice to form a performance review committee including the Associate Deans and the Dean to review all faculty, tenure-track, non-tenure-track and adjuncts, and to rate each faculty member's performance in terms of teaching, student advising, research, publications, professional and community service, colleague mentoring and administrative duties. The annual Faculty Activity Report Guidelines is in Appendix 3.4I2

These ratings, reached through discussion within the committee, are approved by the Dean and forwarded to the Provost to form the basis for the annual performance salary adjustments.

3.4J Faculty Mentoring and Annual Review Process

Each year all untenured tenure-track faculty members, tenured associate professors considering promotion to full professor or lecturers considering promotion to senior lecturer are eligible to participate in a collegial review process. This process involves submitting a

written summary and vitae that highlights the faculty member's teaching, research, and service accomplishments. Each faculty member has his or her case presented at a faculty meeting by a higher ranking colleague; all higher ranking faculty members are eligible to participate in this meeting. Discussions regarding expectations and "trajectory" toward a successful promotion and/or tenure decision ensue. After the final rounds of discussions, the reviewing faculty members complete an evaluation form. Summaries of these evaluations and discussions are provided to each reviewed faculty member by their faculty mentor. Specific recommendations for improvement are provided when an individual is not "on track". This process has provided a forum for open discussion regarding the criteria for tenure and promotion in GSBPP. Appendix 3.4J1 contains various guidelines and policies related to the annual review process.

For untenured tenure-track faculty following the normal "clock" for a tenure decision in their sixth year, collegial reviews would typically occur about three times prior to the formal tenure decision year. The initial tenure track appointment is typically for three years, so the third year review is a more rigorous evaluation leading to a faculty recommendation regarding continued employment. This recommendation provides input for the Dean's reappointment recommendations to the Provost. Faculty members considering promotion to Full Professor or Senior Lecturer are required to participate in at least two collegial reviews in the three years prior to initiating the promotion process. Non-tenure-track faculty are also reviewed as part of the annual collegial review process. In 2003 GSBPP adopted a policy on expectations related to retention and promotion of non-tenure-track faculty, contained in Appendix 3.4J2.

3.4K Promotion and Tenure of Faculty

Promotion policies at NPS are university-wide, encompassing all schools and departments. Policies differ according to the rank of faculty. Promotion from assistant to associate professor requires that one meet threshold performance criteria and exhibit scholarly accomplishments and future potential. At the time of a promotion or tenure decision, the school forms a Department Evaluation committee (DEC) that works with the candidate in preparing the promotion case. All faculty with the rank of associate professor and above then review the individual's case and make a recommendation to the Dean and Provost and to a school-wide committee composed of all Deans, Chairmen, and the Provost. Promotion to full professor is similar except that the review and recommendation is provided by only those faculty members holding the rank of Professor.

Tenure is regarded as the most important career decision point for all faculty members and the Naval Postgraduate School handles this in accordance with AAUP guidelines. A three-person committee reviews the individual's application and prepares complete documentation (which includes outside references). The school's tenured faculty then votes as a group. That vote and the GSBPP Dean's recommendation are presented to the university-wide committee described above. After this, the Deans and the Provost confer and the Provost makes a formal recommendation to the NPS President.

Further information about the mentoring, annual performance review and promotion and tenure processes are provided in Standard 5.3 Faculty Quality.

Standard 3.0 Program Jurisdiction

STANDARD 4.0 -- CURRICULUM

Standard 4.1 Purpose of the Curriculum
The purpose of the curriculum shall be to prepare students for professional leadership in public service.

4.1 Purpose

The basic objective of all of the GSBPP programs and curricula is to prepare military officers, government civilians, and international officers from allied nations for positions of middle and upper management in the defense establishment. Thus, the focus of the programs and curricula is on managing financial, human, material and information resources in the Federal government and, particularly, in the Department of Defense.

GSBPP has multiple degree programs and numerous specialized curricula, but in general each program consists of three main parts: a common core of courses relevant broadly to the practice of management, a specialization emphasizing a particular functional area, and a thesis or capstone project.

The major elements of the core in all GSBPP curricula are those functional and analytical subjects that underlie effective management in all public organizations. These subjects include communication skills, information technology, economics, budgeting and financial management, human resources and organizational behavior, management policy, public policy processes and analytical methods.

In addition to the core, with very few exceptions, all students are enrolled in special programs ("subspecialties" or "specializations") designed to prepare them for management responsibilities in specific functional areas. Their programs include required and/or elective courses in their areas of specialization. Finally, all students are required to prepare masters theses or applications projects designed to demonstrate their abilities to integrate appropriate core and special curricular material in the analyses of issues and problems pertinent to their academic programs and their professional careers.

Outline of Programs: Degrees and Curricula

GSBPP awards six different master's degrees and has 16 different fields of study (curricula). The dominant program, in terms of student enrollment, is the long-standing, resident program leading to either a Master of Business Administration (MBA) degree or a Master of Science in Management (MSM) degree. The other four degree programs have been created within recent years to serve particular student communities, typically non-resident. Each of these degree programs has only one curriculum associated with it. An outline of the GSBPP programs (degrees and curricula) is as follows:

Master of Science in Management (MSM) Program (2 curricula)

Analysis Curricula

- Manpower Systems Analysis (847)
- Defense Systems Analysis (817)

Master of Business Administration (MBA) Program (10 curricula)

Logistics Management

- Transportation Management (814)
- Supply Chain Management (819)
- Material Logistics Support Management (827)

Acquisition Management

- Acquisition and Contract Management (815)
- Systems Acquisitions Management (816)

Financial Management

- Financial Management (837)

Defense Management

- Defense Systems Management - International (818)
- Resource Planning and Mgmt for Intl Defense (820)
- Defense Business Management (809)

Information Management

- Information Systems Management (870)

Executive Degree Programs

- Executive Master of Business Administration (805)
- Master of Executive Management (808)

Master of Science Degree Programs

- Masters of Science in Program Management (836)
- Master of Science in Contract Management (835)

Coverage of Degree Programs in this Report:

This chapter will cover Standards 4.2 - 4.4 for the Master of Science in Management (MSM) degree program, including the (currently) two curricula within that program and which lead to the MSM degree.

A separate Self-Study document (Volume I) has been prepared for the Master of Business Administration (MBA) degree program, including the (currently) ten curricula within that program and which lead to the MBA degree.

An Appendix document (Volume III) provides an overview and description of the EMBA, MEM, MSPM, and MSCM degree programs, for reference. NASPAA accreditation of these program is not being sought, but collectively they represent about 30% of the instructional activity of GSBPP, and so are described in the Appendix for background purposes.

Standard 4.2 Curriculum Components for MSM Program
The curriculum components are designed to produce professionals capable of intelligent, creative analysis and communication, and action in public service. Courses taken to fulfill the common curriculum components shall be primarily for graduate students. Both the common and additional curriculum components need to be assessed as to their quality and consistency with the stated mission of the program.

4.2 Curriculum Components for MSM Degree Program

The central objective of the MSM degree program is to prepare military officers and defense civilians for positions of middle and upper management in the United States' military and defense establishment, and the military and defense establishments of allied nations. The educational objectives of the MSM program are reflected in the program mission statement (reproduced again here from Standard 2.1):

Master of Science in Management Program Mission

The mission Master of Science in Management degree program is to prepare graduates for management and leadership roles in the Defense establishment of the United States or allied nations. The program prepares graduates to manage in complex defense organizations and to conduct rigorous analyses of organizational problems, policies and operations. To accomplish these goals, the program places particular emphasis on developing students' quantitative and analytical skills and their ability to model complex phenomena. The program prepares graduates to

Managerial: *Be well grounded in fundamental areas of management, including accounting, financial management, operations, economics, acquisition, strategy, communications and organizational management.*

Environmental: *Understand the economic, political, governmental, defense and organizational environments that influence their decisions and the organizations in which they work.*

Professional*: Possess the specialized knowledge, skills and abilities to serve in positions of significant responsibility within a specified Defense Management field (Manpower Systems Analysis, Defense Systems Analysis).*

Analytical: *Apply advanced, quantitative, statistical and modeling methodologies to analyze significant defense-related policies and problems in a rigorous manner.*

Critical: *Be capable of thinking in a critical, creative, integrative and strategic manner*

4.2A Background Information

Credit System:	Quarter
Length of term:	12 weeks
Full time status:	16 credits per quarter
Credit Limits:	8 credit minimum, 20 credit maximum
Time limitations:	18-21 months, depending on curriculum
Class contact hours:	1 credit = 11 contact hours
Numbering system:	0000s = no credit 1000s = Lower division college 2000s = Upper division college 3000s = Upper division or graduate 4000s = Graduate

4.2B Course Credits Distribution

Table 4.2B
COURSE CREDITS DISTRIBUTION IN MSM PROGRAM

Course Level	Required Prerequisites	Required Graduate	Additional Components	Total
Lower Div.	0	0	0-7*	0-7
Upper Div.	0	4	0-3***	4-7
Up Div & Grad	0	31	9-17***	40-48
Graduate only	0	20	11-23***	31-43
Project / Thesis	0	12**	0	12
Total	0	67	28-44***	95-111

Two curricula are currently offered within the MSM. All MSM curricula share a common 15 course (55 credit) core. The variances in the table above are due to:

*Two orientation courses (Language & Communication; US Institutions) may be required for international students.
** The Master's thesis is nominally 12 credits.
***The variance in the Additional Components column is due to each curriculum having different requirements for specialization courses.

4.2C Capable Professionals

The MSM degree program is designed to create capable professionals by providing educational curricula (described below) designed to satisfy specific "Educational Skills Requirements." Degree programs and curricula are created at the

Naval Postgraduate School in response to educational needs identified by curriculum sponsors, the military commands that send students to attend the programs. The educational needs are formalized as a set of Educational Skills Requirements, which specify the educational objectives of each curriculum

4.2D Assessment and Guiding Performance

The curricula are monitored, assessed, reviewed and modified through several processes and mechanisms. Though there is overlap, some mechanisms are focused more on the common core of the MSM degree program, some more on the specially curricula within the degree program.

Core-Related Mechanisms:

- The managerial position of Academic Associate for the Core Curriculum: the Academic Associate is responsible for coordinating oversight of the objectives, content, assessment and quality of the core curriculum; this position is a recent addition and replaces previous faculty committees that provided core oversight
- The Student Feedback system: systematic interaction with students provides ongoing feedback concerning their assessment of the core curriculum; feedback occurs periodically throughout their program in the form of curriculum surveys and meetings with cohorts of students

Curricula-Related:

- The managerial position of Academic Associate, for each curriculum: a faculty member, acting as Academic Associate for a specific curriculum, is responsible for managing the curriculum; the Academic Associate is responsible for ongoing curriculum assessment and maintaining contact with Curriculum Sponsors to determine curriculum effectiveness in satisfying the sponsor's educational requirements
- The Curriculum Review Process: the ongoing review and assessment of each curriculum culminates in an official Curriculum Review by the Curriculum Sponsor every two years
- The Educational Skills Requirements (ESRs) system: ESRs are a statement of the objectives each curriculum is to satisfy; ESRs provide the focal point for determining if curricula meet sponsors' needs

The position of Academic Associate and the Curriculum Review Process were discussed further in this report in Standard 2.2 (Assessment). The ESRs for each curriculum are presented later in this section.

4.2E Graduate Classes

All courses in all programs are "primarily for graduate students" since NPS is exclusively a graduate school and GSBPP degree programs only enroll graduate students.

NPS academic policy requires a minimum of 12 credit hours in 4000-level ("exclusively graduate") courses for a master's degree. Actual 4000-level classes in the MSM, vary across the curricula, ranging from 31-43 credits.

4.2F Required Prerequisites

Two semesters of college algebra or trigonometry with a B or better is the only stated prerequisite for admission to the program. Literacy in common computer applications programs is also expected.

Standard 4.21 Common Curriculum Components for MSM Program
The common curriculum components shall enhance the student's values, knowledge and skills to act ethically and effectively:

-In the management of Public Service Organizations, the components of which include: Human Resources; Budgeting and financial processes; Information management, technology applications, and policy.

-In the application of Quantitative and Qualitative Techniques of Analysis, the components of which include: Policy and program formulation, implementation and evaluation; Decision-making and problem-solving.

-With an understanding of the Public Policy and Organizational Environment, the components of which include: Political and legal institutions and processes; Economic and social institutions and processes; Organization and management concepts and behavior.

4.21 Common Curriculum Components for MSM Program

The MSM degree program design is based on the premise that a quality management education must include both a solid broad-based foundation of knowledge and skill in several basic management disciplines and a focused, comprehensive exposure to knowledge and practical skills in one particular management specialty area.

The broad, multi-disciplinary exposure provides the graduate with the perspective and foundation knowledge needed throughout one's managerial career as problems and challenges requiring broader consideration are encountered, especially those typically faced at senior management and executive levels. The more focused and specialty education is intended to prepare the graduate for the more immediate and anticipatable assignments as functional managers and senior staff experts in a particular discipline. The MSM common core curriculum is designed to provide the broad-based, multi-disciplinary foundation needed for future management and policy analysis positions, while the specialty curriculum is designed to provide the necessary knowledge and skills to excel in one's chosen functional discipline.

Through completion of the MSM degree program, students will earn:

- Master's Degree: Accredited by NASPAA, AACSB, WASC
- Military Specializations:
  - US Navy Subspecialty Code
  - USMC Military Occupational Specialty
  - US ARMY Military Occupational Specialty
- Professional Certifications (optional):
  - Defense Acquisition University
  - Certified Management Accountant
  - Certified Defense Financial Manager
  - Certified Professional Contract Manager
- Military Certifications:
  - Joint Professional Military Education

4.21A Common Curriculum Courses

The following courses are required of students in the MSM degree program:

Table 4.21A
MSM CORE COURSES

Course Number	Course Title	Credits
GB3010	Managing for Organizational Effectiveness	(4-0)
GB3012	Communication for Managers	(3-0)
GB3013	Problem Analysis and Ethical Dilemmas	(0-2)
GB3020	Fundamentals of Information Technology	(4-0)
GB3040	Managerial Statistics	(4-0)
GB3042	Operations Management	(4-0)
GB3050	Financial Reporting and Analysis	(4-0)
GB3051	Cost Management	(3-0)
GB3070	Economics of the Global Defense Environment	(4-0)
GB4014	Strategic Management	(4-0)
GB4043	Business Modeling and Analysis	(3-0)
GB4053	Defense Budget and Financial Management Policy	(4-0)
GB4071	Economic Analysis and Defense Resource Allocation	(4-0)
MN2039	Basic Quantitative Methods in Economic Analysis	(4-0)
MN4110	Multivariate Data Analysis	(4-1)
NW3230	Strategy and Policy: The American Experience*	(4-2)

*Not required for International students. Non-DoN US officers may substitute service equivalent. Is an NPS requirement for all DoN officers.

The numbers in the credit column after a course title indicate both the class hours and the quarter credit hours for the course. The first digit indicates lecture hours per week and the second digit, lab hours. One credit hour is granted for each lecture hour, and one half of a credit hour for each lab hour.

The chart below shows the pre-requisite relationship among the required core courses, and additionally shows the placement of the core courses in a typical program.

Chart 4.21A1 MSM CORE CURRICULUM MATRIX

Core Curriculum Design

The courses within the common MSM core were listed above. However, it might be appropriate to briefly summarize the design underlying the common curriculum. There are two ways to do this: first, in terms of broad areas the core course address; second, in terms of how the core courses topics prepare managers.

Broad Areas: Basically, the common curriculum addresses six broad areas that we feel are critical to effective management practice: organizations and organizational behavior, economics and policy analysis, financial management, quantitative methods and analysis, operations and information technology, and institutional processes and strategic management. How each of these elements is addressed is briefly described in the following few paragraphs. As compared to the sister MBA degree, the MSM is stronger on courses relating to quantitative and analytical methods.

Organization and organizational behavior considerations are the basic content of Managing for Organizational Effectiveness (GB3010) and are also important elements in Problem Analysis and Ethical Dilemmas (GB3013), Communication for Managers (GB3012) and Strategic Management (GB4014).

Economic analysis is emphasized in Economic of the Global Defense Environment (GB3070) while policy analysis using economic frameworks and tools is the central focus of Economic Analysis and Defense Resource Allocation (GB4071).

Concepts and techniques of financial management, including budgeting, accounting, resource management, financial analysis are addressed most explicitly in Financial Reporting and Analysis (GB3050), Cost Management (GB3051), and Defense Budget and Financial Management Policy (GB4053) which examines the federal budget process.

Quantitative and statistical methods are the principal focus of Quantitative Methods for Economic Analysis (MN2039), Managerial Statistics (GB3040), Business Modeling Analysis (GB4043), and Multivariate Data Analysis I (MN4110).

Operations Management (GB3042) and Fundamentals of Information Technology (GB3020) both address the management of organizations in today's technological world.

In the common core, political and legal institutional processes are addressed most directly in Defense Budget and Financial Management Policy (GB4053). The focus of this course is on the processes by which government policy is established and, in particular, on the federal budget process. Economic institutions and processes are studied in Economics of the Global Defense Environment (GB3070). Strategic management considerations are the primary emphasis of Strategic Management (GB4014), although strategic planning and implementation are also addressed in Economic Analysis and Defense Resource Allocation (GB4071) and Cost Management (GB3051).

Preparation of Managers: The design of the core assumes that managers need preparation in three areas: knowledge of the functional activities that occur in organizations, development of personal capabilities, and knowledge of the wider context in which organization exist and operate. Courses and topics within the core curriculum address these three aspects of preparing managers.

Chart 4.21A2 MSM CORE DESIGN	
MANAGERIAL FUNCTIONS (What gets done) Accounting Financial Management Production/Operations Planning and Budgeting Strategic Management Organizations	MANAGERIAL CAPABILITIES (What helps to do it) Quantitative Analysis Modeling & Economic Analysis Communications Information Technology Ethical Reasoning Decision Making Advanced Analytical Techniques

4.21B Ethical Action: Analysis of the Common Core Courses

The above sections described our purposes and organizing framework in the design of the MSM common core. This section describes the treatment of Ethics within the common core. Ethics is taught in two distinct ways: first, as the central topic of GB3013, the Problem Analysis and Ethical Dilemmas course; second, as a theme that relates to all aspect of management and is revisited in individual courses in connection to the subjects of those courses.

The Problem Analysis and Ethical Dilemmas (PAED) course is distinct from all others in the MSM curriculum. During the first two days of the first quarter in attendance for all new MSM students, regular classes are suspended and the PAED seminar is held for the full period. The course is designed to be a "welcome to what graduate school is like" experience and to immediately present new students with complex, ill-defined, no-right-answer problems and the ethical dimensions inherent in such problems. Students learn frameworks for ethical reasoning that are intended to be of value throughout their curriculum and beyond. The remaining courses in the curriculum continue to raise ethical questions and themes in settings related to the courses' topics.

Table 4.21B offers an overview of Ethics in the common core courses. It lists brief examples of the manner or context in which Ethics is covered in core courses and provides rough estimates of the proportion of each course related to Ethics.

Table 4.21B ETHICS CONTENT WITHIN THE MSM CORE CURRICULUM		
"Enhances students' values, knowledge, and skills to act ethically"		
GB3013	**Problem Analysis and Ethical Dilemmas** As military officers advance to higher levels of responsibility, the organizational environments in which they operate become more complex and the decisions that they must make become more clouded by uncertainty. Senior government and business leaders face similar challenges. Under these conditions, ethical problems and issues often emerge in complex and uncertain ways leading to questions that go beyond simply "following the rules." The purpose of this seminar is to gain familiarity with problem analysis and the moral and ethical issues arising in the normal pursuit of public and private sector management practices. We accomplish this through the presentation, analysis, and discussion of representative case studies treating the ethical issues in society and within organizations. These cases illustrate the interdisciplinary character of moral dilemmas, and show how such dilemmas draw on insights from organizational and management theory, law, political science and social psychology, as well as from philosophical ethics. Thus, the seminar seeks to educate BPP students in theories and models of ethics, and to explore the application of this understanding of ethics to real problems of military leadership and Defense management.	100%
GB3010	**Managing for Organizational Effectiveness** Ethics in relation to leadership, change management, conflict management, negotiation, and power/influence	25%
GB3012	**Communication for Managers** Ethics in the context of persuasion. Ethics in writing and speaking assignments.	5%
GB3020	**Fundamentals of Information Technology** Information security and the protection of personal and organizational information	10%
GB3040	**Managerial Statistics** Ethical obligations of researchers and analysts toward human subjects. Ethical obligations for objective and unbiased analysis and findings.	5%
GB3042	**Operations Management** Ethical questions in the conduct of organizational operations. Environmentally responsible and socially beneficial operations.	5%
GB3050	**Financial Reporting and Analysis** Ethical issues in accounting and financial reporting. Ethical implications of corporate accounting scandals and financial manipulations and misrepresentation.	15%
GB3051	**Cost Management**	5%

	Professional standards for ethical conduct of management accountants.

MN4110	**Multivariate Data Analysis I** Ethical principles related to conducting valid data analysis	5%

4.21C Curriculum Coverage: Analysis of Common Core Courses

The above sections described our purposes and organizing framework in the design of the MSM common core. This section relates the core courses to the areas listed in standard 4.21. The primary intent here is to indicate, by listing, which courses contribute to each of the NASPAA topic areas. Secondarily, rough estimates of the proportion of each course that contributes to an area are provided.

Standard 4.22 Additional Curriculum Components for MSM Program
Each program shall clearly define its objectives for additional work and the rationale for the objectives, and shall explain how the curriculum is designed to achieve those objectives. The statement of objectives shall include any program specializations or concentrations and the main category of students to be served (e.g., pre-service, in-service, full-time, part-time). If a program advertises its ability to provide preparation for a specialization or concentration in its catalog, bulletin, brochures, and/or posters, evidence shall be given that key courses in the specialization or concentration are offered on a regular basis by qualified faculty. Specialization or concentration courses may be offered by units other than the public affairs or administration program. The specialization or concentration courses shall not be substitutes for the common curriculum components.

4.22A Elective Design

In general within the MSM degree program, advanced coursework beyond the common core is intended to prepare students for management or analysis responsibilities in some particular functional area of management, a specialization. Virtually all students are sent to the Naval Postgraduate School by military sponsors who specify the functional specialties each student is to take. (The only exceptions are some, but not all, foreign military officers and U.S. government civilian employees, who are allowed to select their advanced courses, with the advice and approval of their faculty advisors. Even so, many of these students actually choose courses in one of the established specialty curricula.)

Some of the curricula have requirements such that all advanced courses beyond the common core are specified and required for students in that specialization. Some curricula may require a number of specific courses but permit the student to elect, perhaps one or two, other courses from a list of approved specialty courses. Finally, some curricula may permit the student to choose a free elective that could fall outside the specialty area. Regardless of these small differences in design, the intent of all the

advanced coursework beyond the core is to achieve a specialization rather than broad, advanced training.

Program length for one of the two current MSM curricula is 18 months (Defense Systems Analysis); program length for the other is 21 months (Manpower Systems Analysis). Since each curriculum shares the common MSM core (and MSM thesis requirement), their differences are in their specialization requirements. (Even within a given curriculum, the specialization requirement may differ slightly depending on the student and/or sponsor.) Required quarter credit hours, beyond the common core curriculum, to satisfy the specialization requirements are approximately as follows:

Analysis Curricula

- Manpower Systems Analysis (847) 44 credits
- Defense Systems Analysis (817) 27 credits

The nature of the advanced courses varies considerably, depending on both the specialization area and the particular course objectives. Some emphasize the application of analytical techniques to issues and problems in the specialization area. Others focus more on management processes in that area.

With the exception of a few seminars, used primarily for guest speakers and/or training and administrative matters, none of the advanced courses offered, either in the specialty curricula or as free electives, is listed at the undergraduate level. There are no undergraduate students in GSBPP programs, so undergraduate courses are largely absent from the programs.

4.22B Additional Curriculum Components: Specializations

Objectives, Educational Requirements & Courses for MSM Curricula

As was noted earlier, each specialty curriculum is designed to prepare students for functional management responsibilities in that specialization area. Each curriculum has its own objective. Most curricula have their own set of Educational Skill Requirements (ESRs), prepared by the faculty in consultation with the program sponsor. These skill requirements constitute the specific curriculum requirements. Each curriculum has its own required specialization courses and, perhaps, an optional course.

Descriptions of both of the current curricula in the MSM program are presented on the following pages. The descriptions include: curriculum objective, Educational Skills Requirements (ESRs), required curriculum specialization courses (along with the names of faculty who regularly teach each course), and a "course matrix." It may be noted that certain courses appear in more than one curriculum.

Additional curriculum specializations exist within GSBPP, beyond the two currently associated with the MSM Program. These include specializations related to

Financial Management, Acquisition, Contracting, Logistics, Information Technology and Management. It is possible to "build" any of these specialization curricula on top of the MSM Core Curriculum, should sponsors or students desire, in which case they also would become "MSM curricula" and relevant to this Additional Curriculum Components section of the Self-Study. In fact, prior to 2002, each of the other specialization curricula was an MSM curriculum. However, currently all of these other specialization curricula are "MBA curricula" and hence further description is not provided here.

Manpower Systems Analysis - Curriculum 847

Objective and Description

The Manpower Systems Analysis Curriculum (MSA), leading to the MSM degree, is designed for U.S. and international officers. Officers enrolled in the Manpower Systems Analysis curriculum at the Naval Postgraduate School undertake an academic program to fill leadership and analytical roles in military manpower personnel, training and education management. MSA specialists are responsible for developing and analyzing policies to ensure that the Navy and DoD are recruiting, training, utilizing and retaining personnel in the most efficient and effective ways possible. MSA is an analytical curriculum intended to develop the skills to perform and evaluate manpower analyses and manage the Navy's Human Resource community of interest. As such, the curriculum emphasizes mathematical, statistical and other quantitative and qualitative analysis methods. Successful completion of the curriculum yields an officer skilled in conducting manpower personnel, training and education policy analysis. The areas covered in the MSA curriculum include an understanding of manpower, personnel, training, education policy development, managing diversity, compensation systems, enlistment supply and retention models, manpower training models, manpower requirements determination processes, career mix, enlistment and reenlistment incentives, training effectiveness measures and hardware/manpower trade-offs. Students gain familiarity with current models and methods of manpower analysis and economics as well as military manpower organizations, information systems and issues.

Completion of this curriculum qualifies an officer as a Manpower Systems Analysis Subspecialist, subspecialty code 3130P. U.S. Marine Corps officers qualify for MOS 9640. Curriculum Sponsors are OPNAV, N-1, Chief of Naval Personnel and Subject Matter Expert, OPNAV, N14; Director of Strategic Planning and Analysis, Military Personnel Plans and Policy and Headquarters - United States Marine Corps (Manpower & Reserve Affairs)

Educational Skills Requirements (ESR): Curriculum 847

1. Management Fundamentals - Organization and Management The graduate will have the ability to apply contemporary management principles, organizational theory and social science methodology to the development, implementation and management of effective MPT&E polices and programs throughout DoN/DoD. The graduate will have the ability to use and understand computer systems in problem solving and will have a basic understanding of management information systems and E-Business.

2. Budgeting and Financial Controls The graduate will have an understanding of basic financial management practices of DoN/DoD and will be able to conduct cost benefit analyses and participate in the budgetary planning of commands and/or DoN programs. The graduate will have an understanding of the Planning, Programming, Budgeting and Execution System (PPBES) and the ability to

analyze the impact of budgetary changes on DoN/DoD manpower and personnel programs and polices.

3. Automated Data Analysis The graduate will possess the skills in data manipulation, statistics and exploratory data analysis to be able to formulate and execute analyses of a wide variety of manpower, personnel and training issues. The graduate will have proficiency in computing and interactively apply a variety of methods to large-scale DoN and DoD databases. The graduate will have a working understanding of the manpower information systems.

4. Management Fundamentals - Analytical Techniques The graduate will be able to apply mathematical, statistical, accounting, economic and other analytical techniques and concepts to day-to-day military management issues. The graduate will be able to gather and analyze qualitative data. The graduate will also be able to use these techniques and concepts as a participant in the long-range strategic planning efforts of the Navy and DoD.

5. Advanced Quantitative and Qualitative Analysis The graduate will have the ability to apply a wide range of advanced organizational, economics, statistical and mathematical techniques and concepts to manpower and personnel polices and issues. These include the use of econometric techniques in the quantitative analysis of large-scale DoN/DoD manpower and personnel databases, of qualitative techniques in the analysis of survey and personnel data, of manpower decision support systems and of Markov models in the analysis of force structure and manpower planning, forecasting and flow models.

6. Manpower Systems Analysis Fundamental Concepts The graduate will have an understanding of the fundamental concepts and basic functional areas of manpower, personnel, training and education (MPT&E) within DoN/DoD as listed below, as well as an understanding of the MPT&E systems and their interrelationships.

7. Manpower Requirements determination; billet authorizations; billet costs; end strength planning; and total force planning and programming.

8. Personnel Recruiting; accession plans and policies; officer and enlisted community management; attrition; retention; compensation; and readiness.

9. Training Applications of theories of learning; instructional technologies; the systems approach to training; evaluation of training effectiveness and cost; and the relationship between training and fleet readiness.

10. Manpower Systems Policy Analysis The graduate will have the ability to analyze critically the strengths and weaknesses of proposed manpower, personnel and

training polices and to suggest alternatives that recognize the potential impact on DoN/DoD program planning, resources, and objectives.

11. Joint Military Strategic Planning The graduate will have an understanding of the development and execution of military strategy, the effects of technical developments on warfare and the processes for formulating U.S. policy, the roles of military forces, joint planning and current issues in the defense organization. This understanding will include expertise on the combined use of active and reserve forces in joint warfare.

12. Evaluation, Innovation, and Creativity The graduate will demonstrate individual initiative and creativity in the application of the skills and knowledge gained from the Manpower Systems Analysis program. The graduate will select a manpower, personnel, training or education policy or management issue of importance to DoN/DoD, develop a plan to investigate the issue, analyze all of its aspects, suggest a solution as appropriate and report the significant findings and recommendations in writing by means of a thesis.

- * Not required for international students. Non-Navy students may validate by comparable Service course(s)
- ** International Students take IT1600, Communications Skills for International Officer (if needed) in the first quarter, and IT1500, American Life and Institutions in the second or third quarter.
- *** Replaced by MN4115, Training Foundations, during 2007.

Defense Systems Analysis - Curriculum 817

Objective and Description

This curriculum provides officers with the fundamental interdisciplinary techniques of quantitative problem-solving methods, behavioral and management science, economic analysis, and financial management. The curriculum educates students to evaluate others' research and analysis and to develop in them sound management and leadership skills. This curriculum is an interdisciplinary program that integrates mathematics, accounting, economics, behavioral science, management theory, operations/systems analysis, and a subspecialty into an understanding of the process by which the defense mission is accomplished.

This curriculum is also structured to give students the opportunity to design their own program of study. Concentration areas and courses are determined after consultation with the Academic Associate. U.S. Marine Corps officers completing this curriculum fulfill the requirements for MOS 9652. The curriculum sponsor is Marine Corp Systems Command, Program Analysis and Evaluation Directorate.

Educational Skills Requirements (ESR): Curriculum 817

Note: During 2007, the Defense Systems Analysis curriculum underwent a significant curriculum review, resulting in changed courses, requirement for a thesis, and a shift to the MSM degree. These ESRs have not been updated to reflect those changes.

1. Management Fundamentals The graduate will have the ability to apply quantitative techniques, accounting, economics, finance, organization theory, information technology and other state-of-the-art management techniques and concepts to military management problems. Also, the graduate will know basic management theory and practice, embracing leadership, ethics, written and oral communication, organization design, team building, human resource management, conflict resolution, quality assurance, cost-benefit analysis, risk analysis, stakeholder analysis and planning within military organizations, as well as military sub-units and activities. This ensures internal and external constituencies are considered in resource management.

2. Strategic Vision and Defense Budgeting The graduate will understand the roles of the executive and legislative branches in strategic planning, setting federal fiscal policy, allocating resources to national defense, budget formulation, budget negotiation, budget justification and budget execution strategies, including the principles of Federal Appropriations Law. In addition, the graduate will have knowledge of all aspects of the federal, defense, and navy budget cycles including the Planning, Programming, Budgeting, and Execution System with emphasis on budget formulation and execution.

3. Funds Management In support of approved programs, the graduate will be able to manage appropriated, revolving and non-appropriated funds in compliance with regulations of the Comptroller of the Navy and the federal government. Also, the graduate will be able to develop and review financial reports, analyze budget execution against operating and financial plans, develop alternate plans based on analyses of an activity's financial performance and prepare recommendations or make decisions regarding the reallocation or reprogramming of funds. The guidelines of the Defense Finance and Accounting System and the Federal Accounting Standards Advisory Board are relevant.

4. Accountability, Control, and Auditing The graduate will be able to acquire and analyze financial data and communicate the results to a diverse audience, including maintaining an integrated financial information system and appropriate internal controls to ensure timely, accurate and consistent financial information. In accordance with the auditing standards of the U.S. Government Accountability Office, the defense and navy audit organizations, and the professional standards of the American Institute of Certified Public Accountants, the graduate will learn to apply audit techniques that enforce sound internal accounting and administrative controls, safeguard defense assets and assure the completeness and integrity of financial reports.

5. Acquisition and Program Management The graduate will understand the purpose and concepts, fundamentals and philosophies of the defense systems acquisition process, and the practical application of program management methods within this process. This includes systems acquisition management; the systems acquisition life cycle; user-producer acquisition management disciplines and activities; and program planning, organizing, staffing, directing and controlling. This satisfies the Defense Acquisition University education equivalency requirements for defense acquisition professionals as specified in Congress' Defense Acquisition Workforce Improvement Act (DAWIA).

6. Economy, Efficiency, and Effectiveness The graduate will have the skills for solving complex and unstructured management problems in which alternatives must be identified, evaluated and selected in accordance with economical procurement of resources, efficient utilization of resources and effective accomplishment of overall defense and navy goals and objectives. This includes cost/benefit analysis, systems analysis, cost estimation, value engineering, business process reengineering and application of relevant OMB and defense regulations.

7. Cost Management and Analysis The graduate will be able to design, implement, and evaluate different costing systems encountered within defense and navy organizations and activities, as well as those found in private sector organizations conducting business with the federal government. In addition to private sector cost management policies and practices, the graduate will understand the

application of defense unit costing guidelines to functional business areas and the Office of Management and Budget's Cost Accounting Standards for major suppliers of goods and services to the federal government.

8. Strategic Resource Management The graduate will have knowledge of strategic vision and strategic core competency concepts for setting long-range goals and objectives; designing programs to achieve objectives; assigning individual responsibility for resource management, actions and decision making; measuring performance; reporting results; and evaluating and rewarding performance. This includes assessing customer needs and customer satisfaction, making recommendations and implementing improvements in the effective delivery of goods and services to customers or users.

9. Innovation and Creativity The graduate will demonstrate innovation and creativity in developing solutions to complex financial, budget and program management issues that increase program effectiveness and customer satisfaction, while controlling the efficient utilization of financial, physical and human resources. This involves the ability to identify problems and potential concerns, providing leadership and teaming with others in the decision-making process, and obtaining support for recommended decisions or courses of action.

10. Strategy and Policy Officers develop a graduate-level ability to think strategically, critically analyze past military campaigns and apply historical lessons to future joint and combined operations, in order to discern the relationship between a nation's policies and goals and the ways military power may be used to achieve them. Fulfilled by completing the first of the Naval War College series leading to Service Intermediate-level Professional Military Education (PME) and Phase I Joint PME credit.

5 W/Sm	Thesis	OA 4702 (4-0) Cost Estimation	GB4440 (3-0) Simulation Modeling for Mgmt Decision Making	OA3304 (4-0) Decision Theory		
6 Sp/F	Thesis	NW3230 * (4-2) Strategy & Policy	OA4801 (3-2) Spreadsheet Modeling for Military OR	Curriculum Elective# (3/4-0)		

- NW3230 is required for USMC officers but is waived by completing USMC Command & Staff.
- # Recommended Elective course for those assigned to Programs and Review: GB4530, Management Control systems; GB4510, Strategic Resource Management; GB3510, Defense Financial Management Practice; GB4560 Defense Financial Management

Standard 4.23 General Competencies for the MSM Program
The common and additional components shall develop in students general competencies that are consistent with the program mission.

4.23 MSM Program Competencies

The MSM program, and the curricula within, consist of three broad phases (core, specialization, thesis) and develop distinct competencies in each phase:

Common Core: Develops broad management competencies in six areas:

Quantitative Methods and Analysis
Organizations and Organizational Behavior
Economic and Policy Analysis
Financial Management
Operations and Information Technology
Institutional Processes and Strategic Management

Specializations: Develop specific functional competencies in one area:

Defense System Analysis	(817)
Manpower Systems Analysis	(847)

Master's Thesis: The thesis serves an integrating mechanism and develops competencies for analysis, integration and application. As examples, a list of the thesis topics that were completed for the last graduating class is provided in Appendix 4.23B.

Standard 4.3 Minimum Degree Requirements for the MSM degree:
Students with little or no educational background or professional experience in the common and additional curriculum components are expected to devote the equivalent of two academic years of full-time study to complete the professional masters degree program. Where students have had strong undergraduate preparation in the common curriculum requirements or have been engaged in significant managerial activities, some of the subject matter requirements might be appropriately waived or reduced. Even in such cases, students ordinarily must spend the equivalent of a calendar year in full-time study in formal academic work exclusive of an internship, to obtain the professional masters degree. A calendar year is defined as two semesters and a summer session at least eight weeks in duration or four quarters (exclusive of internship) of full-time academic work.

4.3 MSM Degree Requirements

Stated minimum requirements for MSM degree are contained in the Naval Postgraduate School catalog, and summarized here.

Table 4.3 MSM STATED DEGREE REQUIREMENTS	
Core	Completion or validation of the Management Fundamentals program, which consists of a total of 32-quarter hours of 2000 and 3000 level courses, including a minimum of the following hours by discipline: Accounting and Financial Management (6), Economics (6), Organization and Management (6), Quantitative Methods (8).
Credits	In addition to the Management Fundamentals, completion of a minimum of 48 hours of graduate-level courses, at least 12 of which are at the 4000 level.
Concentration	Completion of an approved sequence of courses in the student's area of concentration.
Capstone	Completion of an acceptable thesis.

4.3A Degree Minimum Credit Hours

Combining the core and concentration credit requirements, and assigning effective credits to the thesis (12) component of the degree, the theoretical minimum credits for the MSM degree (assuming complete validation of the 32-credit Fundamentals) is:

- MSM Degree: 48 graduate-level credits; 12 at 4000 level

In practice, practical limits on course validations and individual course requirements specified by each of the different curriculum concentrations result in all students completing programs well in excess of these stated minimums.

4.3B Degree Length

Potential program length, for students with:

- Little/no education background & exp. 6 quarters 18 months
- Significant background & exp 5 quarters 15 months

Most students require the full six or seven quarters allowed by their curriculum to complete their programs because of the time elapsed from their undergraduate work to their graduate work. Shorter programs are extremely rare and even students with significant

background will take the full quarters allowed. Rather than reduce program length, students with strong backgrounds will identify additional requirements they might accomplish (e.g., complete a second subspecialty or professional certifications).

4.3C Concluding Requirements – Master's Thesis

No comprehensive examination is required. All MSM students complete a master's thesis. Normally the students spend about 6-9 months working on their thesis. Two to four equivalent course blocks are identified in each student's curriculum, depending on the length of the curriculum. No academic course credit is given for the thesis, although the scope of the thesis effort should roughly translate to about 12 course credits. Students may not earn the MSM degree without satisfactorily completing a thesis.

4.3D Course Format

All courses at the Naval Postgraduate School follow an (X –Y) format, where X is the number of "lecture" credit hours and Y the number of "lab" credit hours. Contact hours (class meeting hours per week) are the sum of the lecture and lab hours. Courses offered by GSBPP, and courses contained in the GSBPP curricula, range from 2 – 6 contact hours, however the most common formats are (3-0) and (4-0) courses.

Courses of (4-0) size are predominant in the MSM program, although (3-0) courses are common also. Most (4-0) course are scheduled to meet for two 2-hour sessions per week and (3-0) courses to meet for two 1 ½-hour sessions, although instructors have the discretion to request an alternative scheduling pattern. All courses in the MSM program meet on a weekly basis throughout the normal NPS quarters, with the exception of the Problem Analysis and Ethical Dilemmas course (GB3013), which meets for a dedicated two-day period at the start of the first quarter of the MSM program.

All classes meet during the daytime. We do not offer evening or weekend courses. The resident MSM program parallels NPS's school year, which consists of four quarters with two two-week breaks at the end of June and December. All students in these programs complete four quarters of classes within a one-year period.

4.3E Student Transcript Analysis

Student transcript analyses were completed for the MSM degree program. At the time of the analysis, only students in the Manpower curriculum (847) were recent graduates of the MSM, so all students in the sample followed that specialization. Grades for the common curriculum components and additional curriculum components are provided. Table 4.3E1 provides a list of the students in the sample. Table 4.3E2 displays their grades in program courses. The principal factor that may result in the programs of individual students differing from the stated core and specialty curriculum set of courses is validation.

Validation of Courses: As with many graduate programs of administration and management, our students possess varied undergraduate education, including majors (or minors) in public or business administration or economics. In order to ensure that all of our graduates are well and broadly grounded in a range of management foundation disciplines, our degree requirements include foundation courses in financial management, economics, quantitative methods and organizational behavior. Many of our entering students with strong undergraduate preparation in these disciplines already possess such foundation knowledge in these disciplines. In those cases, students may attempt to 'validate' the requirements through examination and/or interview (and transcript review) conducted by a faculty member assigned as "course coordinator" for the course.

Naval Postgraduate School policy concerning validation is: "A student with the appropriate background may validate a course that is required for his/her curriculum. Validation will allow the student to omit that course from the program of study. However, no credit will be granted for a course that has been validated. The basic purpose of the course validation is to make optimal use of the student's time at the Naval Postgraduate School. Every validation must be justified by documented evidence of prior work in the area of the course to be validated."

Standard 4.4 Internships
A carefully planned internship experience shall be made available by the program and students who lack a significant professional work background shall be strongly encouraged to take advantage of it. The program shall provide on-going academic supervision. Internship programs shall generally reflect NASPAA's internship guidelines.

4.4 Internships

There is no requirement for an internship nor is there any provision for a student to elect one. All students, however, have significant professional experience in complex governmental organization.

Table 4.3.E1

LIST OF STUDENTS IN MSM TRANSCRIPT ANALYSIS

Student Number	Curric #	Curriculum	Degree	Grad. Date

STANDARD 5.0 -- THE FACULTY

Standard 5.1 Faculty Nucleus
There must be a faculty nucleus that accepts primary responsibility for the professional graduate program. This regular faculty should consist of a sufficient number of full-time faculty significantly involved with the program to support the set of teaching, research and service responsibilities appropriate to the size and structure of the program. In no case should this faculty nucleus be fewer than five full-time persons. The institution should specify how each regular member is involved in the teaching and related research and service aspects of the program. At least 50 percent of the courses covering the common curriculum components shall be taught by full-time faculty of the institution.

5.1 Defining the Faculty Nucleus

At the outset of discussing faculty, we see a question of definition and bounding that needs to be directly addressed: Who are the "Program Faculty?" Which individual faculty in GSBPP should be associated with a specific program (e.g., the MSM)? As the earlier chapters have described, GSBPP has six degree programs, with 16 curricula embedded within the degree programs. Two degree programs (MBA, MSM), with 12 curricula, are being reviewed for NASPAA reaccreditation, and one degree program (MSM), with 2 curricula, is the subject of this self-study volume. Should all faculty in the School be seen as "MSM Program faculty", or should there be an attempt to identify a smaller subset of the School's faculty, those whose recent assignments and experience have been most closely aligned with the MSM program, and define that subset as the "MSM Program faculty"?

Given this choice of an "all faculty" or "subset faculty" approach, we have elected the former as being more representative of the set of faculty that exists to support a program. Two examples may help to explain why:

1. Non-resident Teaching Assignments: GSBPP has a number of faculty, full-time regular faculty members within the School, whose instructional assignments have been almost exclusively in one of the School's distance learning programs, programs that are not seeking NASPAA accreditation. In terms of recent assignments, these faculty members have not been teaching in the MSM. But all of the School's non-MSM programs and curricula rely on courses that are similar to those taught in the MSM and the programs are built on a faculty base of expertise that is the same base that forms the foundation for the MSM program. Hence all of these faculty members are potential resources for the MSM program, even if their recent assignments have been elsewhere. Their association (or not) with the MSM program is more a matter of the teaching assignment process than any inherent non-connection with the MSM program and its mission.

2. Shifting Specialty Curriculum Alignment: GSBPP has groups of faculty who are associated with some of the individual specialty curricula. As described earlier, two specialty curricula are currently associated with the MSM degree, and students completing those curricula earn the MSM. Similarly, ten specialty curricula are currently associated with the MBA degree, and students completing those curricula earn the MBA. This might suggest that faculty who teach only within one specialty curriculum should be readily associated with either the MSM program or the MBA program, but not both. We think not. The group of "Manpower" faculty, who teach courses in the Manpower curriculum, provide an example. Currently students following the Manpower specialty curriculum earn an MSM degree, so faculty teaching Manpower courses only teach students in the MSM program (and thus these faculty members might be considered as "MSM Program faculty"). But the alignment of the Manpower curriculum (or any specialty curriculum) with the MSM degree (or any degree) is somewhat tentative and subject to change. Prior to 2002, the Manpower specialty curriculum fell under the MSM degree and all Manpower students earned an MSM. From 2002 to 2006, the alignment shifted so that some Manpower students earned the MBA degree (and the actual program of study for these students was altered so as to satisfy the degree requirements of the MBA). Starting 2006, the Manpower curriculum shifted back to being a solely MSM curriculum. Similarly, the Defense Systems Analysis curriculum was an MSM curriculum until 2002, an MBA curriculum from 2002 until 2007, and has now shifted back to being an MSM curriculum. In fact all resident curricula that have been in existence since 2001 have, at one time or another, been aligned with both the MSM and the MBA degrees.

This shifting is to be expected and is even desirable. It is the result of curriculum sponsors choosing to build their specialization on top of either the MSM core curriculum or the MBA core curriculum, whichever provides the focus the sponsors (of the moment) may deem most relevant to the education of the students they sponsor. What this means from the GSBPP standpoint is that all specialization curricula are available within either the MSM or MBA program, and hence all GSBPP faculty exist to support, and are relevant to, both the MSM and MBA degree programs

We have followed this "all faculty" approach in describing the Program Faculty in this chapter. But, if of value, additional data in various tables provides information about whether GSBPP faculty assignments during the self-study period, or particular courses taught, were associated with particular programs.

5.1A Critical Mass

GSBPP views its faculty size and background as a key strength. During the self-study year, 71 different full-time, nucleus faculty made significant contributions to GSBPP programs. Departures of 10 faculty members but the addition of 10 during the year leave 61 nucleus faculty members as of the time of this document (July 2007). This 61 includes

the addition of two new nucleus faculty members recently onboard for the start of the 2008 academic year.

GSBPP faculty are drawn from a wide variety of academic disciplines—including management, business and public administration, political science, economics, education, accounting, law, information systems, psychology, operations research, engineering and other fields—to meet the demands of the School's diverse programs and curricula. In addition, faculty members represent a number of sub-disciplines within academic areas. For example, in 2007, faculty with doctorates in economics specialized in labor economics, econometrics, microeconomics, political economy, strategy and public finance; faculty with graduate degrees in accounting included those with specializations in financial reporting, cost management, comptrollership, enterprise systems and management control systems.

Students are given maximum opportunity to interact with faculty in the numerous disciplines. Curricula are designed so that students have maximum exposure to different viewpoints both in their courses and in thesis or project work.

Faculty members within the School interact regularly as project/thesis advisors, on course/curriculum design, on research projects, and on issues of faculty governance.

5.1B Faculty Nucleus

Table 5.1B provides a list of the nucleus faculty within the Graduate School of Business and Public Policy. These faculty members are the nucleus available to support all of the School's degree programs. The faculty members in the table are identified as belonging to various groups, as follows:

- ACQ Acquisition
- ECON Economics
- MGT Organizations and Management
- FM Financial Management
- OLM Operations and Logistics Management
- MSA Manpower Systems Analysis
- IT Information Technology

5.1C Teaching Assignments

Table 5.1C lists courses taught by the nucleus faculty during the self-study year and the preceding year (AY2007 & AY2006). All of the nucleus faculty members are available and capable of teaching in the MSM program under review, but in any given year their actual teaching assignments may be in the MSM program, the MBA program, in one of the other degree programs in GSBPP (EMBA, MSCM, MSPM, MEM). The table indicates which courses, by virtue of current curriculum alignment, support MSM program, the MBA program, or both.

5.1D Course Load

The normal course load per year for full-time tenure-track faculty is 8 course credit-hours per teaching quarter or 16 course credit-hours per year. Most faculty members teach two quarters per calendar year, with two quarters of research release per year. Tenure-track faculty (beyond their third year) are generally expected to secure funding for their two research quarters either from external sources or from internal programs available to support research activity. Tenure-track faculty without such funding may request to do additional teaching. Student thesis or project advising is considered to be part of a faculty member's normal instructional activities. While actual experience will vary widely, on average faculty would be involved with advising 2-4 students on projects/theses for each quarter they are teaching. Some faculty will serve in academic administrative positions (e.g., Academic Associate, Associate Dean). These administrative duties, or above or below average advising activity, may cause variation in a faculty member's teaching load.

Table 5.1D provides a list of the faculty members who had research, administrative or other assignments in lieu of teaching during AY2007.

5.1E Other Full-Time Faculty

Table 5.1E provides a list of faculty who are full-time at the Naval Postgraduate School but do not have primary responsibility for teaching in the program under review. GSBPP does rely on some faculty outside of GSBPP for teaching in some areas. The most common examples are the use of faculty from the Department of Information Technology (IT) to teach in information systems courses; faculty from the Operations Research Department (OR) to teach in statistics and quantitative methods courses; and faculty from the Defense Resource Management Institute (DRMI) to teach in economics courses.

Table 5.1E

ADDITIONAL FULL-TIME FACULTY

Last Name	First Name	Rank	Tenure Status	NPS Academic Unit	Degree	University	Degree Field	Program

Standard 5.2 Professional Qualifications

At least 75% of the professional graduate program's full-time faculty should hold an earned doctorate or other equivalent terminal professional degree in their field. Any full-time faculty member lacking a terminal degree must have a record of outstanding professional or academic experience directly relevant to the faculty member's assigned responsibilities. Full-time faculty actively pursuing appropriate terminal degrees are to be included in the 25 percent not holding a terminal degree.

5.2 Professional Qualifications

Seventy percent (43/61 = 70%) of the nucleus full-time faculty hold terminal academic degrees. Those full-time faculty members who lack a terminal degree have a record of outstanding professional experience as evidenced in the faculty data sheets - Volume II. All GSBPP faculty members teach in areas that are relevant to their professional education.

Seven percent (4/61 = 7%) of the nucleus full-time faculty are military instructors, accomplished practitioners in their fields. Military officers bring expertise to GSBPP programs in such areas as defense contracting, program management and financial management. All military faculty members hold masters degrees in their professional field. Military faculty members are sent to the School for 2 - 3 years. GSBPP reviews officers who may be sent to the school as military faculty, but GSBPP does not hire the military faculty in the traditional sense. If military faculty members are excluded from the nucleus faculty, then seventy-five percent (43/57 = 75%) of the nucleus faculty hold terminal academic degrees.

We examined all courses taught to students in the MBA program during the past two academic years (2006-2007) with respect to the degree held by instructors. Table 5.2A shows the breakdown. For the required Common Curriculum (Core) courses in the MSM program, 86% of all courses were taught by instructors with a terminal degree. When courses from the Additional Curriculum Components (Specialization) are additionally considered, the percentage of doctorally qualified instructors across the complete set of MSM courses falls to 78%. The table suggests the ready explanation for this. Only a slight majority (52%) of courses in the Additional Curriculum Components (the Specialization) were taught by doctorally qualified faculty during the 2006-2007 self-study period. This pattern – doctorally-qualified faculty more heavily in the Common Core of the degree program and master-qualified faculty more heavily in the Specialization Component of the program – is to be expected, given the mission of GSBPP, the mission of the MSM degree program, and the structure of the specialized programs of study within the degree program.

One element from the MSM Program mission statement is repeated here:

- ***Professional****: The program prepares graduates to possess the specialized knowledge, skills and abilities to serve in positions of significant responsibility within a specified Defense Management field (Manpower Systems Analysis, Defense Systems Analysis).*

This element of the program mission directly influences both the structure of the curriculum and the qualifications and composition of the faculty. As reported in Standard 4, the Common Core Curriculum component of the MSM program is a minimum of 55

credit hours. Specializations are constructed on the common core foundation, ranging from 28 to 44 additional credit hours, depending on the curriculum. Because of the mission of the program, these specializations will be oriented toward a distinct set of Defense Management professional fields. And, of importance with respect to the composition of the School's faculty, masters-qualified faculty, who additionally possess significant professional experience, may be the most appropriate faculty for some of the professionally-focused courses within the Specialization component.

Table 5.2A
COURSES TAUGHT IN MSM & MBA PROGRAMS:
BY INSTRUCTOR DEGREE LEVEL

	Doctoral Qualified	Masters Qualified
MSM Program		
All MSM Program Courses	78%	22%
MSM Common Curriculum (Core) Courses	86%	14%
Additional Component (Specialization) Courses	52%	48%
MBA Program		
All MBA Program Courses	66%	34%
MBA Common Curriculum (Core) Courses	86%	14%
Additional Component (Specialization) Courses	36%	64%

Other full-time faculty members are defined as those who teach at least one-graduate course and are employed full-time by the NPS. These are generally faculty whose home is in another School or Department at NPS. As mentioned above, GSBPP utilizes some NPS faculty from outside GSBPP to teach individual courses in the MSM and/or MBA programs. All have at least a Masters degree in a related field. Sixty-seven percent (8/12) of the other full-time NPS faculty who taught in GSBPP courses hold terminal degrees. Table 5.2B below indicates the proportion of GSBPP courses taught by the GSBPP nucleus faculty and other faculty types. For the courses in the MSM Program, about 8% of courses were taught by NPS faculty from outside GSBPP. About another 9% were taught by adjunct faculty, generally hired from among faculty at other universities.

Table 5.2B PERCENT OF COURSES TAUGHT BY DIFFERENT FACULTY TYPE			
	% of MSM Program Courses	**% of MBA Program Courses**	**% of All GSBPP Courses**
Faculty Type			
GSBPP Nucleus Faculty	**83%**	89%	83%
Other NPS Full-time Faculty	**8%**	5%	8%
Part-time Adjuncts	**9%**	6%	9%

Standard 5.3 Practitioner Involvement
The involvement of practitioners is integral to the activities of a professional master's degree program. The institution shall specify how it involves practitioners in its program. Where practitioners teach courses, there shall be satisfactory evidence of the quality of their academic qualifications, professional experience, and teaching ability.

5.3 Practitioner Involvement

Practitioners are an integral part of the programs in GSBPP. In fact, GSBPP and NPS consciously employ practitioners on a full-time basis to enhance the relevancy of the academic programs. The full-time practitioners include military instructors and retired senior military officers who serve in various capacities. All full-time practitioners have master's degrees in their respective areas and have been recognized as accomplished professionals in their fields.

The military officers generally are assigned to NPS for a three-year tour. Their assignments while in GSBPP include teaching courses, advising student projects or theses, and working with civilian faculty on various projects. Military faculty members are scheduled to teach courses for which they are academically and professionally qualified to teach. Military faculty members are evaluated on teaching performance just as are civilian faculty.

Former senior military personnel also play an important role in the delivery of our programs. At this time, sixteen of the non-tenure-track faculty members among the

nucleus faculty are retired military. Retired Flag and General-level officers are present in the School, both as members of the nucleus faculty and as visiting faculty or associates.

Practitioners participate in numerous phases of the programs in GSBPP including program development, teaching, student advising and assessment.

In addition to the functions mentioned above, all curricula rely on practitioners as guest speakers to bring relevance to the content areas. Guest speakers range from analyst-type personnel to high ranking senior officers and civilians.

GSBPP uses few part-time faculty because of the requirement for high-quality, relevant content. Our experience has been that few part-timers are able to possess the required level of disciplinary expertise, DoD expertise and an ability to teach to mid-level career officers. Part-time faculty members who taught in the program under review during the past two years are provided in Table 5.3. All faculty members are evaluated at the end of each course. Those faculty members who receive below average evaluations are not asked to return.

Table 5.3

ADJUNCT PART-TIME FACULTY TEACHING IN MBA/MSM 2006-2007

Last Name	First Name	Job Title / Agency	Deg.	Field	Year	Course	Course Title	Program

Standard 5.4 Faculty Quality
In addition to the above, the qualitative adequacy of faculty members shall be demonstrated by their previous and current instruction, research, experience and service.

5.4A Faculty Data Sheets

Faculty Data sheets are contained in Volume II of this self-study report.

5.4B Promotion and Tenure

NPS Promotion and Tenure Process

Before a faculty member is recommended for promotion in rank or award of tenure on the Naval Postgraduate School faculty, there is a review of professional qualifications by a Department Evaluation Committee (DEC), appointed by the Dean for this purpose. (For NPS's formal promotion and tenure process, GSBPP is seen as a Department.)

The DEC consists of at least three faculty members who are senior to the candidate's current position; one member must be from outside the candidate's Department. The DEC submits its report to the Department Faculty Promotion Council (DFPC).

The specific procedure for this colleague-review is at the discretion of the individual Department, within policy guidelines provided annually by the Provost to ensure equitable treatment of all faculty members. (Guidelines on the P&T Process and Documentation for 2007 (32 pages) are available on request.)

The Department Faculty Promotion Council (DFPC) convenes to consider the case of each candidate within their purview and makes a recommendation on each case by secret ballot. The results of the secret ballot are advisory to the Dean and must be included (along with any comments from the DFPC discussion) in the Dean's recommendation on each individual case.

The Dean makes a recommendation to the Provost. This recommendation is supported by appropriate documentation specified by the Provost and will include the written report of the candidate's DEC.

Annually during the winter quarter, there is a series of meetings of the Faculty Promotion Council (FPC) to consider all recommendations. The FPC is made up of all Department and Academic Group Chairs, all School Deans, and the Provost. The Chairman of the Professional Practices Committee of the NPS Faculty Council is an ex-officio member. The participants in the meetings shall have received copies of the Department/Group DEC and Chairman's recommendations, as well as the documentation for all candidates. At these meetings, the Department Chairman, or substitute, answers any questions about the candidate's qualifications. After full discussion, the participants in the meetings (with the exception of the Chairman of the Professional Practices Committee) individually make their recommendations regarding all candidates to the Provost.

The Provost considers the recommendations and then meets with the Deans Promotion Council (DPC) for further considerations. The NPS President is invited to be present at these meetings. Finally, the recommendations of the Provost are presented to the President in the presence of the Deans Promotion Council (DPC).

There may be cases where a faculty member is denied promotion or tenure after being positively recommended by the Department faculty, by the Chairman/Dean, or by the FPC. In that case, the Provost meets with the appropriate faculty of that Department to discuss the reasons for denial and to determine if further deliberations are appropriate. The faculty member, colleagues and/or Chairman may request the assistance of the Professional Practices Committee in appealing this adverse decision, if they feel that the decision process was flawed. The Committee shall determine whether such an appeal is justified and, if so, shall make recommendations to the Provost as to how it should be pursued.

Promotion and Tenure Evaluation Criteria

Faculty members at NPS are judged in two general categories for pay, promotion and tenure: 1) internal service to NPS and 2) external visibility which demonstrably enhances NPS's reputation in either the academic community or DoD (or both).

Tenure-track faculty members at NPS are expected to be strong contributors to high quality, relevant instruction and to be active in their profession and service to DoD. Adequate performance in these areas does not automatically qualify an individual for promotion or tenure. For example, doing an adequate, even exemplary, job of teaching courses and making only a minimal impact on the world outside NPS should not qualify a faculty member for advancement. Impact on the outside world can be achieved in any area of faculty performance, including instruction. The quality and quantity of performance above acceptable will determine the rate at which an individual progresses through the academic ranks. Promotion to Professor additionally requires that the person demonstrates consistent leadership in at least one area of faculty activity and has meritorious performance in both internal and external service. Further guidance on the evaluation of the scholarly products of faculty is found in the "Marto" Report and the Report of the Committee on Nontraditional Productivity. (Lengthy report available by request.)

Judging an individual's qualifications for advancement should be on the basis of his/her meritorious performance. This means performance in both internal and external service that are worthy of note. Listed below are some typical examples of internal and external activities that indicate such meritorious performance. The implication is not that a person should pick "one from column A and two from column B" and get promoted, but that the successful faculty member should be engaged in a significant amount of meritorious work.

Internal Activities

- Demonstration of quality and flexibility in instructing graduate-level and applications-oriented courses
- Introduction of new material in curricula and development of new courses, particularly special topics courses with DoD relevance
- Development or implementation of creative teaching methods (such as computer-aided instructional materials) to improve upon student learning efficiency
- Development of extensive instructional material
- Leadership in developing and/or refining curricula
- Development of instructional laboratories, including specifying equipment and designing experiments
- Service as academic associate, associate chairman, chairman of a school-wide committee, etc.
- Contributions to interdisciplinary research projects

- Direction of high-quality research efforts by thesis students
- Tutoring students who need remedial work
- Teaching capstone courses in applied areas
- Teaching in operations oriented curricula

External Activities

- Creation of products of direct use to Navy operations, both shore and sea-based
- Publication of research results in refereed archival journals and conference proceedings at a regular rate
- Service in a professional society through elected offices, committee work, conference planning, editorial work, peer/proposal review, etc.
- Participation in fleet exercises
- Participation in a Navy, multi-laboratory research project
- Publication of a textbook that receives acceptance external to NPS
- Offering on-campus and off-campus short courses to DoD personnel
- Creation of instructional material that receives significant use outside NPS, (e.g., textbooks, course notes, teaching methodologies, etc.)
- Acting as a consultant for operational commands and other DoD organizations
- Service in high-level position in DoD
- Publication of technical reports, either unclassified or classified, from a DoD or non- DoD research program (For this work to be a significant factor in promotion and tenure actions, timely external peer review is essential.)
- Contributing chapters in research monographs
- Presentation of research results to operational commands and other DoN organizations
- Participation in research with operational units, laboratories, systems commands, and headquarters of the Navy and Marine Corps
- Service to DoD by participation in workshops, on panels, advisory boards, and liaison with laboratories

The initial appointment of all Federal Civil Service employees encompasses a one-year probationary period. This is applicable to the civilian members of the faculty at the Naval Postgraduate School. The Naval Postgraduate School accepts a maximum of three years of prior experience as a full-time teaching faculty member in an accredited collegiate institution in consideration of individual faculty members for promotion and tenure. The Postgraduate School may consider other significant professional experience in lieu of teaching experience in making promotions and in granting tenure.

Recent Experience in Tenure and Promotion

During the most recent five year period from 2003 to 2007, GSBPP received actions on eight promotion and/or tenure cases. Specifically, there have been two cases of

review for promotion to the rank of Professor, three cases of review for the award of tenure, and three cases for review for promotion from Lecturer to Senior Lecturer. In all eight cases, the candidates were successful and received the desired awards.

Standard 5.41 Instruction
Efforts to improve the instructional program, including student advisement, teaching methods, course content, and innovative curricula development.

5.41A Quality of Instruction

As mentioned in Standard 2.2-Assessment, all programs in GSBPP rely on a number of procedures, both formal and informal, to obtain feedback from numerous sources to assess the School's performance.

Formal systems include such items as surveys and questionnaires which are routinely administered, primarily to current students. There are also formally assigned positions within the School which have central responsibility for assessment and management of curricula. These include the Associate Dean for Instruction, Academic Associates, Program Officer, and the Course Coordinators. A new position, Academic Associate for the Core, was just created (July 2006) to provide a focus for oversight and coordination of both the MSM and MBA common curriculum core courses. The School also has a school committee, the Faculty Instruction Committee, responsible for instructional policy.

Informal systems include the network of contacts that exist between faculty and former students, military officers and executives within the larger defense community. The various mechanisms used for assessment and review fall into three broad areas, as follows:

Managerial Positions with Assessment Responsibility:
- Associate Dean for Instruction
- Academic Associates / Curricular Officer
- Course Coordinators

Program Review Processes:
- Curriculum Review Process
- MSM/MBA Core ad hoc curriculum review committees

Surveys and Questionnaires:
- Student Opinion Forms (at completion of each course)
- Student Core Survey (at completion of the core curriculum)
- Student Exit Surveys (at completion of program)

All of these processes are explained in Standard 2.2. These processes allow all curricula to undergo constant, continuous improvement. Evidence-based data often result in changes to a particular curriculum. Changes to curricula over the past few years are also explained in detail in Section 2.3.

Individual course quality is maintained via similar processes. Student evaluation forms are monitored quarterly by the Associate Dean for Instruction and the Dean. Faculty members who fall above or below a specified threshold are noted. Those faculty members who are evaluated in the upper range are recognized by announcement for their achievement. Those who fall in the lower range may be asked to discuss their performance with the Dean. Plans are made to improve performance.

Feedback about the quality of students' learning is also obtained from GSBPP faculty. For example, follow-on course instructors may report that students do not have the prerequisite skill level for their class. If so, the Dean and/or Associate Dean for Instruction confirm the report and take corrective action as required.

Faculty, student, and sponsor feedback is taken seriously. Formal and informal processes allow the School to monitor quality and take corrective action in a timely manner.

5.41B Workload Policy

All full-time faculty members are expected to carry equitable teaching workloads. During teaching quarters, full-time faculty members are expected to complete 11 credits-hours of instructional work. For most faculty, this typically means teaching two 4-credit-hour graduate courses (with 20-30 students each) and serving as a thesis or project advisor for 2-4 graduating students.

The number of course preparations per year varies across the faculty depending on a faculty member’s teaching expertise and student demand for particular courses. Some faculty who teach the core courses may only have one preparation. Faculty who teach specialized courses often prepare two courses per year. Occasionally a faculty member may have more than two preps. This would be most common for non-tenure-track faculty who carry a heavier teaching load.

Over a year's time, a full-time faculty member must earn 44 credit-hours. In addition to teaching and thesis work, faculty members meet their workload requirements through research or internal administrative assignments. (See Appendix 3.4G.)

All full-time faculty have a written annual workload plan and agreement that specifies on a quarter-by-quarter basis what the faculty member's workload (teaching,

research, administration, projects) will be over the entire academic year. Before the start of an academic year, the workload agreement is signed by each faculty member acknowledging that the School and the faculty member agree to the stated workload plan.

5.41C Class Sizes

Table 5.41C provides information about class size. Part I of the table shows the distribution of class size across all the GSBPP programs for the 2002-2006 period. Most classes fall in the 10-29 class size range, with class size in the 20s clearly being the mode. This is an expected consequence of the planning and scheduling of classes in accordance with GSBPP guidelines. For planning purposes, the maximum class size in GSBPP is nominally 30, with an attempt always made to break a course into multiple sections when enrollment exceeds the 30 level. In the MSM program, class size may depend on whether a course is part of the Common Core Curriculum or a Specialization. Students are grouped into distinct cohorts, which are maintained through the Common Core Curriculum. The input of students during 2007 translated to six sections of core courses during the year, with class size typically from 20-30. Beyond the core, both the, currently, two MSM curricula has curriculum-specific courses. Depending on the number of students enrolled in a particular specialized curriculum, class size in concentration courses may often be less than 30.

Part II of Table 5.41C, provides class size data for only 2007, but disaggregated by degree program. (Similar disaggregated data is not readily available for the years prior to the 2007 self-study year, but may be constructed retro-actively should such be deemed important.). Part II shows great similarity of the class size distribution between MSM Program courses, MBA program courses, and GSBPP courses in the aggregate. As in previous years, classes with size in the 20s dominate the distribution. This similarity across programs and similarity with earlier years is to be expected given that the same policy and scheduling practices are followed.

Table 5.41C – Part I

CLASS SIZES – GSBPP 2003-2006

	Number of Course Sections			
Class Size	**AY2003**	**AY2004**	**AY2005**	**AY2006**
1-9	21	14	14	30

Standard 5.42 Research
Research, writing and publication

5.42A Purpose

One element in the mission statement for the Graduate School of Business and Public Policy is:

> *Conduct research, using the scholarships of discovery, application, integration, or teaching, that supports defense enterprise decision-making, problem solving, and policy setting; improves business management processes and practices; contributes knowledge to academic disciplines via dissemination in high-quality refereed research journals or suitable practitioner-oriented journals; and advances the development of graduate education.*

As indicated by this statement, faculty research is an important faculty activity in the Graduate School of Business and Public Policy. This research program is integrated to the greatest possible extent with the educational process. Students are encouraged to participate in faculty projects and faculty research results are typically incorporated in classroom instruction.

5.42B Areas of Research

Because of the close link between our research and educational programs, research in the Graduate School of Business and Public Policy is largely driven by the school's curricula and the academic areas from which we draw faculty to support those educational programs.

Briefly, the Graduate School of Business and Public Policy has primary responsibility for seven graduate degrees. The largest program is the resident MBA program, with curricular concentration areas in acquisition management, logistics management, financial management, information management and defense management. The resident MS in Management degree program currently offers a concentration in Manpower Systems Analysis. A third resident degree, the Master of Executive Management (MEM) started July 2006.

The Graduate School of Business and Public Policy also offers three Distance learning graduate degree programs. The largest program is an Executive Masters of Business Administration (targeting senior Navy Lieutenants through Commanders, particularly from the Unrestricted Line communities who have middle-management level experience). The other two programs offer a Master of Science in Contract Management and a Master of Science in Program Management. These programs are primarily offered to

Department of Defense civilians at designated off-site locations. Through 2006 GSBPP also offered an MS in Leadership degree, which has now been discontinued.

Finally, the Graduate School of Business and Public Policy offers two certificate programs: the Practical Comptrollership Course, sponsored by the Assistant Secretary of the Navy (Financial Management and Comptroller), which targets individuals (civilian and military) occupying financial management positions; and the Advanced Acquisition Program, which provides Level III education certificate in Program Management for the Department of Defense acquisition workforce.

The faculty of the Graduate School of Business and Public Policy are drawn from a wide variety of academic disciplines in business and public sector management. The school's diverse, multidisciplinary character is reflected in the breadth and depth of issues addressed by faculty research, which has historically been concentrated in applied areas of interest to the Departments of Defense and Navy. The school's research program touches a wide range of distinct topics within the course of a year. These topics and issues can be grouped into five functional areas, related to the school's curricula. The school's five functional areas included the following:

- Acquisition and Contracting
- Economics and Manpower Systems Analysis
- Financial Management
- Logistics and Transportation
- Organization, Management, and Policy Analysis

5.42C Planning For the Future: General Guiding Principles

As noted, research in the Graduate School of Business and Public Policy is multidisciplinary and often widely diverse; but, this research is directed toward a common set of goals. As stated in the school's mission statement, the faculty conducts a variety of research to:

- Contribute knowledge to academic disciplines
- Support military decision-making, problem-solving, and policy-setting
- Improve administrative processes and organizational effectiveness
- Advance the mission of graduate education

The primary goal of the school's research program is to provide the Navy and DoD with the capability of managing defense systems efficiently and effectively. This includes the efficient and effective utilization of resources, which derive from an existing base of knowledge or may require the development of new concepts and theory. Thus, the school recognizes the importance of both basic and applied research to the Navy and DoD, and it seeks to balance both types of research.

The school's research program goals are further specified as follows on the Graduate School of Business and Public Policy "web" page: (http://www.nps.navy.mil/gsbpp/research.htm):

- Increase the quality and quantity of relevant defense-oriented research
- Catalyze a broad and robust research program
- Involve top researchers, practitioners and graduate students in defense-oriented research useful to DoD policy/decision making processes
- Augment and complement cooperative, interdisciplinary research activities
- Disseminate relevant, important results to researchers, sponsors, policy makers and practitioners
- Integrate defense-oriented research with education, DoD workforce training and standardize policy practices
- Establish and maintain a community of academic and professional scholars engaged in exploratory and applied research to address complicated defense issues from a number of perspectives, while integrating defense applications into familiar business disciplines

Concepts, theory, and existing knowledge can generally be identified with a particular functional area or discipline. Actual defense policy and management decisions or policies often require information or perspectives drawn from a variety of functional areas and professional expertise. Consequently, in addition to pursuing functional area research with a critical mass of faculty, the school actively seeks to engage in cooperative, interdisciplinary research. Such research places the school in a strong position to assist defense policy makers, since it allows for a coordinated, broad-based program under "one roof" — where researchers from diverse fields and professional experience can share information and findings in a unified and truly systematic fashion.

5.42D Planning for the Future: Research Opportunities by Functional Area

As the Graduate School of Business and Public Policy prepares for the challenges of the future, it is appropriate to consider research fields that would help the school achieve its program goals and simultaneously assist defense decision-makers. Fields of inquiry and research opportunities are discussed below by each of the school's five functional areas.

Acquisition and Contract Management. Defense acquisition and contract management represents a process of critical importance to the military, not only to reduce taxpayer costs, but to ensure the quality and performance of today's increasingly sophisticated weapon systems. Nevertheless, negligible academic research has been applied to systematically investigate, understand, and model the acquisition process; and current innovations in this domain—such as spiral development, open architecture, contract termination, process reengineering and acquisition reform—are uncoordinated, ad-

hoc, and performed largely on a trial-and-error basis. This is the case because many acquisition policy makers and executives have little or no benefit of theory or practice.

Beginning in 2002, the Graduate School of Business and Public Policy initiated an Acquisition Research Program to provide leadership in innovation, creative problem solving and an on-going dialogue to support the evolution of Department of Defense acquisition strategies. The program goals include:

- Establishing NPS acquisition research as an integral part of policy-making for Departments of Defense and Navy officials
- Creating a stream of relevant information concerning the performance of DoD acquisition policies with viable recommendations for continuous process improvement
- Preparing the workforce to participate in the continued evolution of the defense acquisition process
- Collaborating with other universities, think tanks, industry and Government in acquisition research

Supported primarily by the Graduate School of Business and Public Policy Acquisition Chair, currently held by Rear Admiral Jim Greene, USN, (Ret.), this research program initiated fifteen research projects in 2003, with the number increasing to well over 20 in 2004, and over 35 in 2005. These projects include several collaborative efforts with Dr. Jacques Gansler (former Under Secretary of Defense for Acquisition, Technology and Logistics) and other faculty members at the University of Maryland, as well as faculty members from universities across the United States. Primary research sponsors include: Assistant Secretary of the Navy (Research, Development and Acquisition), Naval Sea Systems Command, Program Executive Office (Ships), Program Executive Office (Integrated Warfare Systems) and the Defense Contract Management Agency (International). In 2006, this program grew further, adding significant support from the Under Secretary of Defense (Acquisition, Technology and Logistics) in a separate proposal process, funding an additional 10 proposals.

A significant portion of this research funding is open-ended, restricted only to research topics involving acquisition issues broadly defined. The Graduate School of Business and Public Policy has established a competitive internal proposal process to allocate these funds; the call for proposals is distributed to faculty from across the Naval Postgraduate School. Priority is given to proposals that involve collaboration between tenure-track and non-tenure-track faculty members and to proposals involving thesis students and MBA project teams. The objective is to encourage collaboration that exploits the school's academic as well as professional expertise, a collaboration that provides the Graduate School of Business and Public Policy a strong comparative advantage for defense acquisition policy research. This program has been growing rapidly, with four of five proposals funded in AY2004, nine of 11 proposals funded in AY2005, 10 of 27 proposals funded in AY2007 and 11 of 30 proposals funded in AY2008.

The Acquisition Research Program also hosts an annual research symposium in Monterey. The fourth symposium, in May 2007, involved well over 100 people, including researchers and acquisition policy and decision makers from across the United States. Mr. Shay D. Assad – Director, Defense Procurement and Acquisition Policy, Office of the Under Secretary of Defense (Acquisition, Technology and Logistics) delivered the keynote address. Details for the Acquisition Research Program and symposium are on the Acquisition Research Program website (http://acquisitionresearch.org/index.php).

Logistics and Transportation. The primary mission of the Logistics and Transportation group is to educate military officers and DoD civilians in state-of-the-art concepts of logistics, transportation and supply chain management. Emphasis is placed on understanding both military and non-military applications, so that students will be prepared to perform effectively in a military environment and interact efficiently with civilian contractors and suppliers. The general research perspective of the group is focused on improving DoD logistics and transportation performance as well as management effectiveness. Major research areas include:

- DoD inventory policy
- Weapon system total ownership cost and life-cycle support
- Defense transportation and distribution systems
- Total Asset Visibility (TAV) and real-time logistics
- Metrics and Performance Based Logistics
- Spiral Development
- Modeling and simulation for logistics decision support
- Supply chain management and lean manufacturing
- Weapon system readiness and risk management
- Business case analysis for transportation and logistics technologies

Much of this work has been supported through the Acquisition Research Program and its associated sponsors. Additional sponsors have included the Office of Naval Research, NAVAIR, the Military Sealift Command, the US Transportation Command and the Naval Surface Warfare Center.

Financial Management and Budgeting. Research in the area of financial management has become increasingly important since the end of the Cold War and the events of 9-11. The Financial Management (FM) group has identified three major functional areas as targets of opportunity for future research. These are:

- Financial resource policy formulation, analysis and management
- Financial management and budgeting
- Organizational efficiency, managerial control and performance metrics

The first of these functional areas — financial resource policy formulation, analysis and management — covers a range of sub-areas: national defense and national security resource policy and management; resource planning, programming, budgeting and policy under the Planning, Programming, Budgeting and Execution System; and relationships between financial management, contracting, acquisition and other policy fields. Financial management and budgeting includes the following: federal, DoD and Navy budget formulation and execution; impacts of budget allocation, reallocation and reduction; implementation of Defense Resource Management Systems; and the Chief Financial Officer Act and federal financial management reforms. The research area of organizational efficiency, managerial control and performance metrics, in turn, covers the following: mapping, goals, and objectives to a defense organization's strategic themes using a balanced scorecard and performance metrics, examining the efficiency of defense sector consolidation and the cost –effectiveness of public-private partnerships.

In addition to the Acquisition Research Program, sponsors for this research have included: Assistant Secretary of the Navy (Research, Development and Acquisition), Program Executive Office (Ships); Program Executive Office (Integrated Warfare Systems); the Office of the Comptroller, COMNAVAIRPAC (CNAP); U.S. Department of Justice; and the Personnel Security Research Center (Department of Defense).

Manpower Systems Analysis. As noted above, the primary goal of the department's research programs is to provide defense policy makers with the capability of utilizing resources with maximum efficiency and effectiveness. This includes *human* resources, the focus of research in the Manpower Systems Analysis (MSA) group. Defense manpower policy makers have been faced with many challenges since the end of the Cold War and the events of 9-11. Key among these challenges include an over 30 percent reduction of the active-duty force, budget reductions in recruiting and advertising, a steady, high operational tempo and deployment schedule with fewer people, new missions, increasing pressure to change the "culture" of military service, renewed efforts toward population representation of women and racial/ethnic minorities throughout the force, a high rate of first-term attrition among new recruits, declining levels of personnel retention in certain critical areas, a number of high-profile "scandals" and others. As the active-duty force was reduced and missions changed, it soon became clear that a smaller military had to be even more skilled and adaptable than the one that witnessed the end of compulsory service and performed so successfully throughout the early 1980s and early 1990s. These challenges confronting defense manpower policy makers are recognized by the MSA group as opportunities for research that will have a lasting impact on the future of the force. MSA research areas can be summarized as follows:

- Manpower supply and force requirements
- Improvements in selection and classification of enlisted personnel
- Innovations in recruiting and the application of new technologies
- Improvements in selection of officers and pre-commissioning programs
- Effectiveness of equal opportunity and diversity management programs

- Training effectiveness and efficiency
- Innovations in instructional technologies
- Innovations in enlisted assignments and auctions for assignment incentive pay
- Personnel retention in critical fields and communities, including auction based approaches
- Reduction of first-term attrition rates among enlisted personnel
- Force management programs and planning
- Force structure and cost analysis
- Auction-based approaches to force shaping
- Career-force modeling
- Officer promotion and performance
- Civil-military relations and the All-Volunteer Force
- Manpower management in Reserve components

Sponsors for this research include: Office of the Chief of Naval Personnel (N-1, N-1H, N-1Z, N-12, N-13, and N-14), Navy Personnel Research, Studies and Technology and the Office of the Assistant Secretary of Defense.

Economics and Finance. GSBPP also maintains an expertise in general defense economics and finance. Rather than focusing on specific areas within the defense department, this capability represents a set of skills that has been applied to a wide range of applications over time. Past areas of interest have involved burden-sharing and the economics of defense alliances, game theory approaches to terrorists' decisions and defense strategy, defense requirements (e.g., aerial refueling and operational support aircraft), and incentives in defense decision-making. Current interest focuses on several areas:

- Transaction cost economics in defense acquisition
- Technology innovation and diffusion in the Department of Defense
- Business case analysis for new defense technologies
- Consolidation in the defense industrial base
- Discount rates and personal decision making in the defense sector
- Healthcare Economics, incentives, ownership and patient outcomes

Sponsors for this research have included the Acquisition Research Program, the Under Secretary of Defense (Advanced Systems and Concepts), internal NPS research funding and other external non-defense sponsors.

Organization, Management, and Policy Analysis. Faculty members in this functional area pursue basic and applied research on key management issues at a variety of organizational levels. Faculty members bring a strategic perspective to this work, seeking to identify courses of action that will best achieve organizational goals in a given setting. Individual faculty members are acknowledged experts who publish leading-edge research

on a variety of issues. Top management issues include strategy and entrepreneurship, appreciative inquiry and positive change, organizational design (including the use of self-managing groups), social network analysis, ethics, collaboration in teams, managerial communications and the development of culture.

There is a developing interest in management innovation in the defense sector, embodied in the recently formed Center for Defense Management Reform. This multi-disciplinary research center initially focused on personnel management initiatives, such as those enacted in the Homeland Security Act of 2002 and the National Security Personnel System. Interest is extending to other areas including budgeting and financial management, organizational resilience, and market-based approaches to workforce and acquisition-related issues.

In addition to their subject area and methodological expertise, faculty members have developed considerable knowledge of current military organizations through their research. Most of this work has been with Navy organizations, such as the NAVSUP, NAVAIR, CNET, NETWARCOM, Naval Reserves and CINCLANTFLEET. However, faculty members have also worked with organizations in other service branches, including extensive work with the U.S. Army Reserve Command and Coast Guard Headquarters. Recent DoD-wide research includes work for the Office of Force Transformation. Individual faculty have also conducted research for other US government agencies, including the Office of Personnel Management, the Department of Homeland Security and the Center for Disease Control, and consulted with state government agencies, the United Nations, and private-sector organizations. Supervising student theses has broadened this knowledge even more. This organizational expertise increases the value of faculty as applied researchers for DoN and DoD organizations.

5.42E Research Labs and Centers

In 2007, the Graduate School of Business and Public Policy was the "home" of two research centers: the Center for Defense Management Reform (Director – Professor Douglas Brook; Sponsors – Defense Logistics Agency, Office of Personnel Management); the center for Positive Change (Director – Professor Frank Barrett; Sponsors – NETWARCOM, NAVSUP IT, Office of Force Transformation and NETC).

5.42F Scholarly Productivity

Over the past four years (AY2003 – 2006) faculty productivity in the graduate School of Business and Public Policy has increased dramatically. This increase reflects two factors: new hires and a new Policy on Lecturer and Senior Lecturer Appointments. After several years with very limited new tenure-track faculty hires, the school has been involved in an aggressive hiring process. Supported by institutionally provided research

support during their first three years of employment, the new tenure-track hires have contributed significantly to the school's scholarly output. Much of this output is focused on mainstream academic journals, as required for a successful tenure decision. This complements the more applied defense policy research typically conducted by the tenured faculty.

In addition, the Graduate School of Business and Public Policy recently adopted a new Policy on Lecturer and Senior Lecturer Appointments. This policy specifies a scholarship expectation for non-tenure track faculty members, which emphasizes more applied research. Coupled with the concurrent increase in applied research funding through the Acquisition Research Program described above, the lecturers and senior lecturers have contributed significantly to scholarly output in the Graduate School of Business and Public Policy.

Over the four year evaluation period (2003-2006), faculty members in GSBPP have appeared as authors or co-authors for: 146 refereed journal publications (up from 74 in the last evaluation cycle); 74 conference papers (up from 32); 9 books (up from 3); 58 book chapters (up from 53), 146 technical reports (up from 25); and 105 non-refereed papers, case studies, notes, editorials, letters, etc. Conference presentations over this period numbered 298 (up from 169).

Table 5.42F shows that our faculty members are active and their work has increased over this period. This data indicates the two trends described above. The increase in journal publications largely reflects the recent increase in tenure-track hires; the increase in technical report and other publications, including non-refereed papers, largely reflects the contribution of the non-tenure track faculty in response to their new appointment policy and Acquisition Research Program funding. In this table, "participating faculty" refers to all nucleus faculty members who are expected to participate in scholarship. Essentially, this includes all civilian faculty members -- tenure-track and lecturers/senior lecturers. Excluded are faculty members who fill positions where there is, by the nature of the position, no scholarship expectation. This includes all active duty military faculty members, as well as a couple of retired military officers holding administrative faculty positions.

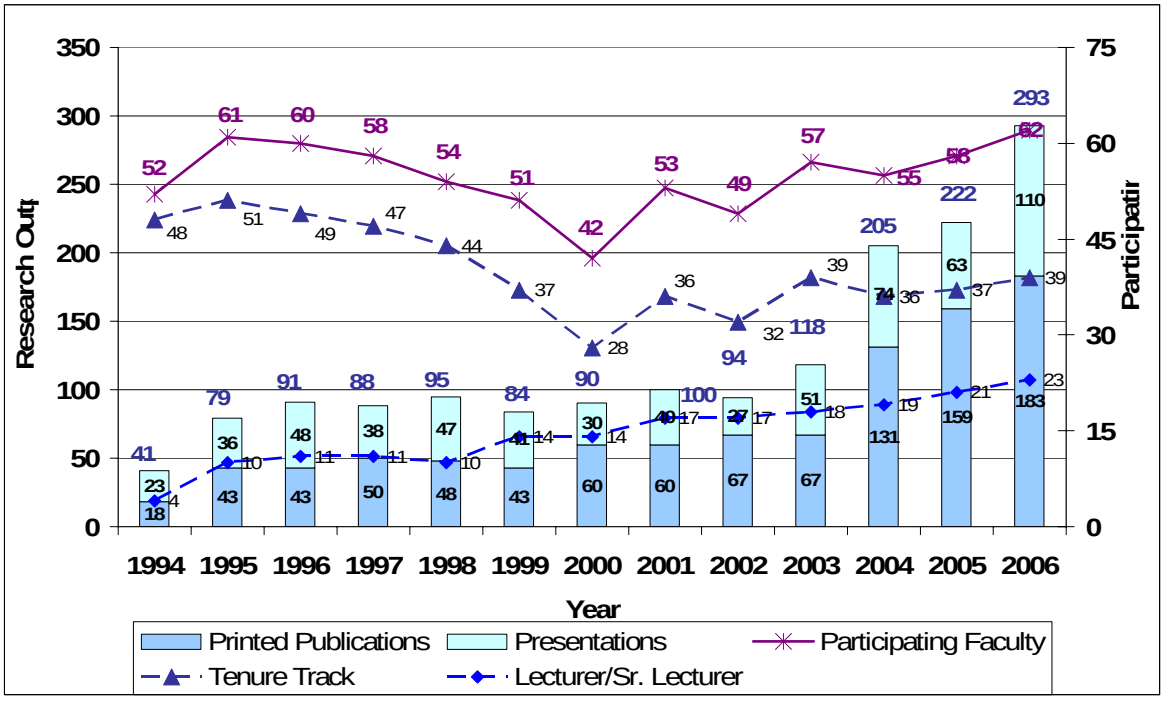
Figure 5.42F below shows the number of full-time, faculty members expected to participate in scholarship in the Graduate School of Business and Public Policy superimposed over scholarly output over the period 1994 through 2006. As the graph illustrates, full-time faculty numbers have increased since the low in 2000. However, the significant increase in scholarly output over the study period is not the result of an increase in full time faculty; the number of full time faculty members averaged 58 over the current study period, essentially equivalent to the 58.25 average over the previous study period.

Figure 5.42F
GRADUATE SCHOOL OF BUSINESS AND PUBLIC POLICY
SCHOLARLY CONTRIBUTIONS AND NUCLEUS FACULTY
AY 1994-2006



In fiscal 2006, Graduate School of Business and Public Policy faculty members received a total of $4.16 million in funding for research and other sponsored projects

(including projects carried over from previous years). This funding supported over 40 projects. Of these projects, 7 were umbrella contracts secured by the Acquisition Chair for the Acquisition Research Program. Each of these umbrella contracts supported several additional faculty and student projects; a list of these projects can be found at the Acquisition Research Program's website: http://www.acquisitionresearch.org/.

In addition to this external funding, the Graduate School of Business and Public Policy distributed approximately $640 thousand in internal research funding to tenure-track faculty through the Workload Relief Funding Program. This program earmarks a particular funding line to support tenure-track faculty research. It is distributed to the four schools within NPS according to the number of tenure-track faculty in each school. The Graduate School of Business and Public Policy allocates its share of these funds as follows: all untenured tenure-track faculty are entitled to two months (44 days) of workload relief funding, if needed; all tenured tenure-track faculty equally share the remaining funds, as needed, after receiving approval for their proposed research program from the school's Faculty Research Committee. In AY2006, 18 tenured faculty members received 33 days in research funding through this process. This research funding primarily helps underwrite research projects supported by other sponsors, making NPS faculty proposals more competitive and cost-effective.

Finally, 10 newly hired tenure-track faculty were eligible for NPS Research Initiation Program (RIP) funding in AY2006. RIP funds six months of research labor for all tenure-track hires in their first two years at NPS. In addition, RIP candidates can submit proposals for non labor support, including travel, equipment, research assistance, etc., as required by their research. On average, the 10 RIP faculty members received $13,800 in non-labor funding for FY2006. The total value of the RIP funding exceeded $1.1M in FY2006 for the Graduate School of Business and Public Policy, and this funding was credited with supporting, at least in part, 21 different research projects. This funding varies by year depending on the number of eligible faculty members. RIP funding supported 7 faculty members in FY2004 and 10 faculty members in FY2005.

Detailed information for individual faculty's publications, conference presentations and research projects is presented in the Faculty Data Sheets - Volume II of this Self-Study report.

Standard 5.43 Experience and Service
Professional experience and public service with government, industry, non-profit agencies, or consulting assignments.

5.43 Experience and Service

Faculty from GSBPP have a broad range of professional experience as detailed in the Faculty Data Sheets - Volume II. From the self-reports in the Faculty Data sheets, more than 70% of the nucleus faculty members have significant practitioner experience that directly relates to their field of study. As would be expected, given their role in supporting the school's mission and programs, all (100%) of the non-tenure-track faculty have significant practitioner experience.

About 42% of the nucleus faculty report they are currently, or have recently been, engaged in public service activities. Scanning the kinds of public service activities reported by the faculty, in general, most of the reported activities outside of their regular professional or academic positions, often of a voluntary nature. An alternative way to think of public service is in terms of the jobs or careers the faculty members have pursued. Given that all faculty members at the Naval Postgraduate School are federal government employees, in a sense, all are engaged in public, governmental service by their current employment. Additionally, as noted before, a significant portion (41%) of the faculty have had prior service, or full careers, in the military, with military service representing a distinct form of public service.

About 37% of our faculty members report specific consulting activities in which they are currently, or have recently been, engaged. Participation is spread across all ranks of the nucleus faculty. Several faculty members serve as consultants to senior leaders within the Department of Defense. Most of this type of consulting is done is conjunction with research projects or as members of advisory boards, etc.

Standard 5.5 Faculty Diversity
There should be evidence that specific plans are being implemented to assure diversity of the composition of the faculty with respect to the representation of minorities, women, and persons with disabilities. Programs and plans to insure faculty diversity shall generally reflect NASPAA's Diversity Guidelines.

5.5A Diversity Plans

While GSBPP has no explicitly articulated program targeted to assure diversity in the faculty composition, we nonetheless have a serious commitment to achieving and maintaining a high level of faculty diversity. Although we have set no quotas or numerical goals, we actively strive to provide a supportive and positive atmosphere where diversity among the faculty and staff can thrive and grow. We have a shared philosophy among the School's leadership that guides our efforts in the area of diversity management. This philosophy requires and involves equitable recognition and reward for one's contributions, openness to individual difficulties (with students, programs, etc.) and sensitivity to

challenges that might affect one's feeling of effectiveness in their jobs and professional lives. We believe this is a continuing accomplishment in the School. We have no "second class citizens". Faculty members are recognized, treated and valued as faculty; not as "Adjunct" or "Military" or "Tenure Track"; not as "junior" or "senior"; and, certainly, not as "minorities", "women" or "handicapped".

In terms of how our faculty recruitment plans and efforts support faculty diversity, we often find that the uniqueness of our academic mission and our focus on defense-relevance works against us. In many instances, the types of experience and military-relevant perspective we seek in a faculty member dramatically restrict the total pool of applicants, and most certainly the possibility of finding a well-qualified diversity hire. For example, we have a frequent recruiting need in the Acquisition area. The necessity of a relevant experiential background in the area often means that plausible candidates will come principally from retired military officers or senior defense civilian employees. There are few minorities, women, and almost no handicapped candidates in these fields. While there has been an increasing number of women and minorities among the officer corps of the military, their percentages do not mirror the general public, and most of those that have reached retirement age are quickly recruited into industry at salaries well above our salary scales. There are somewhat analogous limitations when seeking faculty candidates in the Transportation and Logistics area, the Manpower area and the Defense Financial Management area. Nonetheless, we encourage all 'diversity candidates' in these specialized fields, using our current faculty members' contacts and taking advantage of the fact that the communities from which qualified candidates derive are small and usually well known to our senior faculty in these fields. The result is that despite the difficulties outlined, we have had only modest success at hiring women and minority faculty in these fields.

While we have difficulties in those fields with small candidate pools, we can and have been successful in hiring and retaining women in particular, and minorities to a lesser extent, in areas where the related candidate pool is large and mature enough to provide many competitive applicants. For example, we have had no serious difficulty in attracting 'diversity candidates' in areas such as Organization and Management, Managerial Communications and Accounting, where we've hired well qualified women and minority faculty colleagues.

In terms of recent changes in faculty diversity, Table 5.5A is a list of all new nucleus faculty hires during the past six years (2002-2007), indicating their diversity status.

Table 5.5A

GSBPP NUCLEUS FACULTY HIRES 2002 - 2007

Year of Hire	Academic Appointment	Status	NPS Start Date	Race/Ethnicity	Gender
2002	Assistant Professor	Resigned	10/7/2002	White	Female
2002	Assistant Professor	Untenured	7/29/2002	White	Female

2004	Lecturer	Non-TT	7/12/2004	Hispanic	Male
2004	Lecturer	Non-TT	5/3/2004	White	Male
2005	Assistant Professor	Untenured	6/27/2005	White	Female
2005	Senior Lecturer	Resigned	10/3/2005	White	Male
2006	Associate Professor	Untenured	9/20/2006	White	Male
2006	Assistant Professor	Untenured	9/20/2006	White	Male
2006	Assistant Professor	Untenured	9/20/2006	White	Female
2007	Lecturer	Non-TT	9/16/2006	White	Female
2007	Senior Lecturer	Non-TT	6/25/2007	White	Male
2007	Assistant Professor	Untenured	To start 9/07	Asian/Pacific Islander	Male
2007	Associate Professor	Untenured	To start 9/07	White	Male

As indicated in the table, GSBPP has been growing significantly during recent years, with a total of 34 nucleus faculty members hired since 2002. About 74% of the new faculty members have been hired as tenure-track faculty. As a result of this, the tenure-track proportion of the nucleus faculty has increased in recent years. Concerning diversity,

only 6 of the new faculty members (18%) are from racial/ethnic minorities, but 17, half, are women. Considering both race/ethnicity and gender, 59 percent (20/34) of the newly hired nucleus faculty members are diversity faculty.

The School is aware of the need to retain women and minority faculty members once recruited. The table also shows that eight of the 34 faculty members hired in the last six years have resigned to accept other job opportunities; five of the eight accepted university positions; three accepted industry positions. Six of the eight lost were diversity faculty members. We are personally and organizationally conscious of the importance and sensitivities of each faculty member and encourage behavior which respects that. Efforts directed toward retention of faculty apply to all faculty members and are based on faculty members' individual contributions.

5.5B Faculty Diversity Data

Table 5.5B provides data on the current diversity of the nucleus faculty. Nineteen faculty members are listed, representing 31% of the 61 total current nucleus faculty members.

Table 5.5B

NUCLEUS FACULTY DIVERSITY 2007

Faculty	Gender	Race/Ethnicity	Rank	Tenure Status
A	Male	Asian/Pacific Islander	Professor	Tenured
B	Male	Hispanic	Professor	Tenured

5.5C Faculty Searches

Because of the curricular and discipline diversity in the School, major responsibility for the development, implementation and monitoring of our affirmative action effort remains vested in the Dean, with the assistance of the Associate Deans and the five faculty members acting as Area Chairs. Faculty recruitment efforts are largely carried out by the faculty group involved, with the designated Area Chair as the lead person. The Senior Associate Dean assists the School's leadership team in determining hiring needs, monitoring the recruiting process and candidate hiring recommendations.

The Naval Postgraduate School's administration is actively supportive of the EEO/Affirmative Action efforts of all schools and departments. When GSBPP begins faculty recruitment, the Area Chairs who will lead each search coordinate with the Dean and Senior Associate Dean to plan search activities. EEO factors are discussed so that all advertisements and notices bear the proper invitation for attracting a diverse pool of applicants. When applications are received we ensure that women, minorities, or identifiable handicapped individuals are objectively considered and we make a special effort to invite a diverse range of candidates for on-campus interviews.

For any particular faculty position, the number of candidates invited for on-campus interviews will vary, depending on the size and strength of the candidate pool. After on-campus interviews of the set of candidates deemed most qualified, they are compared with one another so that we may judge the best qualified for the appropriate position. Since we recognize that "best" is a relative word, and since criteria are multiple, we examine all candidates to be sure we are not overlooking opportunities to add diversity to our faculty. If in our opinion other factors are approximately equal, we enhance diversity. Additionally, a report is compiled for each search that outlines the pool of applicants in terms of diversity characteristics and that report is included with the hiring requests forwarded to the Dean and Provost for action. (Admittedly, when screening possible candidates based on resumes, it may be difficult to identify all candidates who are members of a minority group, or handicapped.) Table 5.5C summarizes applicant data for faculty searches during the past five years.

Table 5.5.C

SEARCH HISTORY 2002 - 2007

Year of Search	Position Type	Position Area	Ethnicity of Hired	Gender of Hired	Total Apps/Intv	Women Apps/Intv	Minority Apps/Intv

STANDARD 6.0 -- ADMISSION OF STUDENTS

Standard 6.1 Admission Goals and Standards
Admission goals, policy and standards, including academic prerequisites, should be clearly and publicly stated, specifying any differences for pre-service or other categories of students.

6.1A Mission

The mandate for NPS is clearly stated by Congress. The purpose of the Naval Postgraduate School is to serve the Nation by educating military officers and DoD civilians in defense-focused business and public policy, by conducting scholarly research in defense management and public policy and by providing intellectual resources for leaders and organizations concerned with national defense management practice and policies.

With a focus on preparing military officers and government civilians for professional positions, NPS and the Graduate School of Business and Public Policy in conjunction with sponsoring agencies determine admission standards and processes.

6.1B Admission Processes

Admissions standards and processes reflect two dimensions: Academic and Professional. GSBPP/NPS set academic standards for admissions. The Navy, and other sponsoring agencies, select students -- who have met the academic standards -- for admission based on professional and career considerations. Thus admission to GSBPP/NPS, and the MSM Program, is accomplished through the joint efforts of the School and students' sponsors.

During the earlier years of their career, all Navy officers have are initially screened for graduate study, based on their undergraduate academic performance (officer transcripts may be reviewed by the NPS Admissions Office). In addition to the academic admissions standards, U.S. Navy officers are reviewed for selection to graduate school based on their professional performance and promotion potential. Selection boards and Senior Officer Reviews occur annually to select eligible officers. The selection board evaluates both the officer's professional performance in the Navy and his/her prior academic record. Officers selected for graduate study are then offered the opportunity to attend a specific graduate curriculum. No one is ordered to graduate school against his/her will. Similar selection procedures are employed by the other U.S. services and by federal agencies wishing to nominate civilian employees for graduate study.

The Graduate School of Business and Public Policy does not select individual Navy students. However, in the case of prospective students from other services, including U.S. and allied nations, the appropriate Academic Associate reviews all individual transcripts and offers recommendations to the director of admissions about acceptance or rejection. The Academic Associate's recommendation is normally the determining factor in the admission decision.

6.1C Representation

As indicated above, selection of students originates with the sponsoring military service or agency, not with NPS. Given the mission and admissions process for GSBPP, diversity among GSBPP students, and within the MSM program, will be significantly influenced by diversity policies within the larger Navy, and the population of officers from which students will come.

US Navy Diversity Policy: Diversity is recognized as a strategic goal of the Navy and expressed as Navy policy:

Diversity is a strategic imperative for the United States Navy:

We defend the greatest nation in the world. It is a nation that welcomes, indeed encourages, the active participation of every citizen regardless of race, gender, creed or color - - a democracy founded on the promise of opportunity for all. It is also a nation whose demographic makeup continually changes, reflecting the influx of new immigrants and the growth of minority populations. The Navy must change with it. To the degree we truly represent our democracy, we are a stronger, more relevant armed force.

Diversity is critical to mission accomplishment:

Everyone in our Navy contributes to mission success, and everyone brings to that collective effort unique capabilities and individual talent. How we harness those capabilities and foster that talent bears considerable effect on our ability to successfully accomplish the mission. Like an organization in time of change, we thrive on the infusion of new ideas and the diversity of thought. This is particularly true today, when understanding the mores, customs, and ideals of diverse cultures, as well as the perspectives of other people, remains critical to winning the long war.

Diversity is a leadership issue, and everyone is a leader:

We will promote and engender a culture that embraces our diversity. Through our communications, education, policies, programs, and conduct, each of us will actively foster work environments where people are valued, respected, and provided the opportunity to reach their full personal and professional potential. We will recruit, develop, educate, and retain leaders from and for all parts of our Navy and nation.

We defend the greatest nation in the world. The strength of our diversity directly and irrefutably helps us do so. The Navy will stay committed to improving that strength. (US Navy Diversity Policy, Chief of Naval Operations)

Student Demographics: As indicated above, selection of individual students for admission originates with the sponsoring military service or agency, not with NPS. Hence GSBPP does not have direct influence on the diversity characteristics of students. Student diversity will depend significantly on the diversity characteristics of the wider Navy and Defense community.

Presented here are data on the diversity demographics of GSBPP's resident student population, as compared with the university (NPS) and the wider Navy officer Corp. Broadly speaking, GSBPP student characteristics with respect to Race/Ethnicity and to Gender are reflective of the university and defense community which it serves.

Table 6.1C1
RACE / ETHNICITY
Comparison of GSBPP / NPS / Navy Officer Corps

	GSBPP	NPS	Navy
Caucasian	73%	78%	81%
African American	12%	7%	8%
Hispanic	7%	6%	6%
Asian	8%	7%	4%
Other	<1%	<1%	1%

Table 6.1C2
GENDER
Comparison of GSBPP / NPS / Navy Officer Corps

	GSBPP	NPS	Navy
Male	88%	89%	85%
Female	12%	11%	15%

One way in which the student population in GSBPP will, by design, differ from the officer population in the wider U.S. defense community is through the recruitment and enrollment of international students. Through an admissions and selection process roughly analogous to that used for U.S. students, allied nations may select and send officer students to NPS. Through various programs, NPS actively seeks enrollment of international officers, and values the range of backgrounds and experiences they bring to the academic experience. Student representation for specific countries varies over time, as does the proportion of GSBPP students from other countries. Currently GSBPP enrolls students from 13 different nations, with international students comprising about 15% of the student population. The MSM Program is approximately 20% international students.

Table 6.1C3 CITIZENSHIP Comparison of MSM / GSBPP / NPS / Navy Officer Corps				
	MSM	**GSBPP**	**NPS**	**Navy**
U.S.	80%	85%	84%	~100%
International	20&	15%	16%	

No military students with significant physical handicaps have been admitted; the physically or mentally handicapped are not considered fully qualified to serve on active duty in the military services and therefore are not assessed into the force. Nothing precludes an academically qualified handicapped DoD civilian employee from attending.

Officers from foreign military services who enter the Graduate School of Business and Public Policy are expected to meet the same admission requirements as U.S. students. They must also demonstrate proficiency in English before enrolling

6.1D Admission Process for Beginning Part-time Graduate Students

A very small number of the officers and civilians assigned to the Naval Postgraduate School staff have taken courses on a part-time basis in a program leading to a master's degree. These persons must meet the same admission qualifications as full-time students. In addition, their enrollment must be approved by their immediate supervisor.

Standard 6.2 Baccalaureate Requirements
Admission shall normally be limited to applicants with a baccalaureate degree from a regionally accredited institution and appropriately evaluated applicants from non-US universities.

6.2 Baccalaureate Requirements

Admission to the Naval Postgraduate School is normally limited to military officers and other DoD employees with baccalaureate degrees.

Special Conditions: The Academic Council may approve the admission of students who do not hold baccalaureate degrees. Such applicants must have a minimum of 120 quarter hours of acceptable college credit. At least 100 hours must have been completed in accredited institutions and the applicant must have a B average for this work. No more than 20 semester hours of credit may be allowed for study in non-degree granting service schools. In addition, the applicant must have a score on the Graduate Record Examination high enough to indicate probable success in graduate study.

Standard 6.3 Admission Factors
Admission shall be limited to applicants that show good potential for success in professional graduate study and public service. Admission standards shall include several of the following factors about each applicant (a) performance on the aptitude part of the GRE or the GMAT, or equivalent tests; (b) undergraduate grade point average and trend of grades; (c) rank in graduating class; and (d) biographical and career interest data and essays; (e) evaluation of the quality of professional experience.

6.3A Admission Factors

Admission standards are determined by the Graduate School of Business and Public Policy based on discussions and agreement with school faculty, Deans and the Provost. In particular, the Dean, Senior Associate Dean, and the Academic Associates are responsible for the academic standards and programs offered within the school. Academic standards for all programs must be approved by NPS's Academic Council.

All military officers who are enrolled at NPS have been assigned an Academic Profile Code (APC) by the registrar's office. This code is a three-digit code that summarizes an officer's prior college performance. Each curriculum has a specified APC. The code is 345 for all curricula in the MSM program, which means a minimum of a baccalaureate degree with a 2.20 grade-point average, two or more pre-calculus courses with a B or better and no requirement for science courses. College algebra or trigonometry is considered to be the minimum mathematical preparation. In addition to meeting the established academic standards, students are screened by their sponsoring agencies. Selection by sponsoring agencies is based on outstanding professional performance and promotion potential

A summary of the NPS registrar's records which are presented in Table 6.3A show that 84% of the students enrolled the MSM program in AY2007 had GPAs of 2.60 or better.

Table 6.3A
UNDERGRADUATE GPAs FOR MSM STUDENTS
Enrolled 2007

NPS Academic Code 1st Digit	GPA	Number of Enrolled Students	Percent of Enrolled Students
0	3.60-4.00	8	14%
1	3.20-3.59	15	26%
2	2.60-3.19	26	45%
3	2.20-2.59	8	14%
4	1.90-2.19	1	2%
Unknown		6	
	Total	**64**	100%

6.3B Admissions Record

As explained above, officers are screened for NPS each year. Many are considered to be unqualified and are rejected. Hence, the total number of students screened is not a meaningful surrogate for the number of applications.

Officers selected for graduate study are given military orders to the School (in effect, admitted). Consequently, the numbers admitted and matriculated are equal. No data are available on the number of officers who decline the opportunity of graduate study. During AY 2007, a total of 337 officers entered degree programs in GSBPP; 29 of them into the MSM program. See Table 6.3B for the number of students entering the various programs in the Graduate School of Business and Public Policy AY2003-2007. The students in the MSM program are at the top of the table.

Table 6.3B

6.3C Probationary Students Assessments

Generally, no students are admitted to GSBPP on a "probationary" status. All admitted students are required to satisfy minimum admissions standards described above.

6.3D Enrollment/Size of Programs

For the most part, the number of students selected for the GSBPP resident curricula, and thus the MSM program, is determined by the military services. Each year a board convenes to establish a quota for students who will be sent for fully-funded education at the Naval Postgraduate School. Navy quotas are based on a complex system designed to determine the number of professionals requiring advanced education in the various subspecialties.

Table 6.3D1 displays the trends in student enrollment in the various GSBPP programs, and in the specific curricula in the resident MSM program. Due to the increased emphases on graduate education by the leadership of the U.S. military services over the past several years, overall enrollment in GSBPP programs has grown from 340 to 612, an 80% increase, over the past five years. The resident enrollment at NPS has increased by about 55% during that same period. Enrollment in the MSM Program has remained stable over that period. GSBPP continues to enroll more than 20% of the resident students at NPS.

Table 6.3D2 provides a breakdown of students in the combined resident MSM and MBA programs by their military service, and points to the source of the growth in the resident program. Overall, the number of students from most branches of the U.S. military services has remained relatively unchanged, with the notable exception of the U.S. Air Force. Air Force students have grown from a nominal amount to now represent, after the Navy, the second largest service in GSBPP. In 2002, the graduate institutions of the Navy and the Air Force, the Naval Postgraduate School and the Air Force Institute of Technology, formed a partnership to better serve the graduate education needs of their officer corps. As a result, NPS and GSBPP have seen a significant increase in Air Force officer enrollments. In GSBPP, the majority of this enrollment increase has been in the Acquisition Management and the Financial Management curricular areas. Starting in 2007, however, The Air Force has reduced its student input, with the resulting effect on total enrollment experienced in GSBPP.

STANDARD 7.0 -- STUDENT SERVICES

Standard 7.1 Advisement and Appraisal
Strong and continuous program advisement, career guidance, and progress appraisal shall be available for all students from the point of admission through graduation.

7.1A Advising System

Academic counseling is the responsibility of the Academic Associates, Program Officers, and the individual faculty members. The counseling program is designed to encourage students to seek assistance when advice is desired or the first indications of academic difficulties develop.

The Academic Associate (AA) is a Graduate School of Business and Public Policy faculty member who is assigned to a particular specialization curriculum, within the MSM Program. The AA is responsible for maintaining academic standards for the program. The Program Officer and staff support the school's mission and objectives by providing administrative support to accomplish Navy needs and academic requirements.

The Academic Associate reviews the records of all students assigned to the curricula under their purview and, in consultation with each student and based on academic background, develops a program of study within the framework of the established standard curricula. Student academic progress is monitored via the AA/Program Office Team and program changes or inter-curricular transfer made, when deemed necessary.

Both members of this team are responsible for the overall quality of a student's program. It is incumbent upon both members of the team to provide counseling for all students in the curricula under their purview. The Academic Associate will hold primary responsibility for the academic counseling of the student.

The Program Officer performs requisite administrative duties pertaining to the officer students, evaluates their military-related performance and counsels them on pertinent military matters.

Career guidance is not a need of the student at NPS since all students already have well-established careers.

7.1B Financial Assistance

None is needed since all students are on full salary.

7.1C Attrition

Data for AY 2006 was examined to determine the percentage of students who completed their degrees and those who did not. Of the 35 students in the MSM Program eligible to graduate in AY 2006, all but two did graduate. The two non-graduating students were disenrolled from the MSM Program for violation of military rules, rather than for academic reasons. One of the two was female. Minority status data were not available.

In general attrition in the MSM program is low, with efforts made to assist struggling students. When non-graduation does occur, the most common reason is non-completion of the master's thesis requirement. According to NPS policy, students have up to three years to complete their project/thesis after leaving the school. If a student does not complete their project/thesis, no degree is awarded. .

Standard 7.2 Placement Service
The program and/or the institution shall provide an adequate placement service oriented to public affairs and administration.

7.2A Number of Graduates

Table 7.2A provides data regarding the number of graduates per year in all GSBPP degree programs. Data for the MSM Program curricula are at the top. As mentioned earlier, the resident MSM program is six or seven quarters in length or 18-21 months long.

7.2B Follow-up of Graduates

All Graduate School of Business and Public Policy graduates are employed by the U.S. government or by foreign governments and return to government service upon graduation. U.S. Navy officers make a commitment to remain on active duty after graduation for three years for their first year of graduate study and for one additional year for each subsequent year of graduate work. As a practical matter, most military officer graduates will remain on active duty until retirement (20 years after their date of first entry into the service). Frequent informal contacts are maintained between individual graduates and faculty members.

STANDARD 8.0 -- SUPPORT SERVICES AND FACILITIES

Standard 8.1 Budget
The program shall have the financial resources sufficient to support its stated objectives.

8.1A GSBPP Resources and Budget

The budget for the Graduate School of Business and Public Policy is composed of two main types of funds: "Mission" or "Direct" funds and "Reimbursable" funds. Mission/Direct funds are funds allocated directly from the Naval Postgraduate School from the annual budget it receives from the Navy. Reimbursable funds are received from organizations or agencies outside of NPS, by agreement, and in exchange for specified services (e.g., research or education programs) provided to those external organizations. In general, GSBPP activities will fall in one of four broad categories:

- Mission-Funded Education
- Mission-Funded Research
- Reimbursable Education
- Reimbursable Research

Mission Funded Budget: The mission funded budget is the main budget for day-to-day school operations. This includes instruction, thesis or project advising, faculty and staff development, travel and departmental management and administrative support of the School. As currently structured, the faculty workload plan, which includes consideration for instruction and project/thesis advising, is developed by the Senior Associate Dean, using input from the faculty. This forms the basis for the most significant portion of the GSBPP budget. It is reviewed by the School Dean prior to the start of the new fiscal year of October 1. Once approved by the Dean, it is submitted to the Office of Academic Planning for input into the overall GSBPP budget. The remainder of the mission funded budget is allocated to the School for the fiscal year that is reflective of GSBPP's 'fair share' of the Navy's overall allocation to the entire university, based on number of students served, faculty size and infrastructure support requirements. In essence, the total Naval Postgraduate School's mission allocation is divided among the four academic schools and the supporting structure, based on submitted needs, the constraint of the allocation received from the Navy, and the Deans' and Provost's determined priorities. In addition to faculty and staff salaries, categories included in the mission funded budget are:

- Supplies and materials, including computer peripherals and software, furniture
- Travel and honoraria
- Training and staff development programs
- Instructional laboratory equipment maintenance
- Faculty instructional & organizational development
- Service contracts

Mission funded budget dollars are made available to the School from two main sources: direct funds from the Naval Postgraduate School's overall mission funded account and indirect funds, collected by NPS on all reimbursable activities and allocated to the university's operating units through the NPS Sponsored Programs Office. Direct funds are related to the size of the nucleus faculty and the volume of instructional activities in the resident degree programs. Indirect funds are related to the size and nature of the School's reimbursable research programs or reimbursable education programs.

Mission-Funded Research Budget: NPS provides two categories of mission-funded research funds for use by each school annually. One category of funds supports research projects of new tenure-track faculty research and is known as the Research Initiation Program (RIP). The other category supports research work by tenure track and tenured faculty not on RIP and is known as Workload Relief (WR).

RIP research money is provided for new professors with less than two years of service. These professors must prepare formal research proposals and in turn receive two quarters of salary support annually as well as additional funds to purchase equipment, software, supplies and project-related travel. Proposals for RIP are submitted to the Dean of Research with the GSBPP Dean's endorsement 30 days prior to the quarter starting research.

Workload Relief funding is pro-rated across the campus based on numbers of tenured and tenure-track (non-RIP eligible) faculty in each school. Internal to the Business School, the untenured tenure-track faculty members are given priority and they receive two months of WR funding. Tenured faculty may then request up to two months of WR funding, as needed. All faculty members requesting such funding must submit a brief proposal describing their research and the research products expected from their work. The Faculty Research Committee reviews the research summaries and proposals for the tenured faculty and allocates the available WR funds based on both past research productivity and future promise.

Reimbursable Budget: The Reimbursable Budget is determined by the efforts that the School and faculty make to obtain funding from either Navy or non-Navy sponsors. Reimbursable funds may be for research activities (reimbursable research) or instruction programs (reimbursable education). Proposals for this type of funds may be submitted at any time during the fiscal year. The funds received from these sources may be used from a one-year period up to an indefinite period of time, depending on the nature of the agreement and financial arrangement with the sponsor, but funds with an expiration date within the current fiscal year comprise the vast majority of reimbursable funds.

For **reimbursable research**, the sponsor sets the dollar amount based upon the scope of the work and funding constraints. Reimbursable money may be used to fund any expenses necessary to complete the research project. These expenses may include support for students while conducting their theses/projects in the form of travel, equipment or software. Reimbursable research, while variable each year depending on research projects that may be

arranged, provides a substantial portion of the Business School's total support (see Table 8.1A).

For **reimbursable education**, GSBPP establishes a price necessary to recover the costs of program delivery, and announces the availability of programs and the opportunity for sponsorship and student enrollment. Different arrangements are possible whereby potential sponsors may "purchase" full degree programs, or individual courses, or "seats" within courses within degree programs (tuition). The distance education programs in GSBPP are generally reimbursably funded. These include the Master of Science in Program Management (MSPM), Master of Science in Contract Management (MSCM) and Advanced Acquisition Program (AAP). The distance learning Executive Master of Business administration program (EMBA) is something of a hybrid between a mission-funded program and a reimbursable program. Technically, the EMBA funds are mission/direct funds in that they are received as part of NPS's annual budget and then allocated down to GSBPP. But the annual funds are specifically set aside for the EMBA program, and provided by a sponsor for the intended delivery of a specified level of the program, and thus are operationally more like reimbursable funds.

Overall Budget for GSBPP: The following table summarizes the School's operating budget for the past four years.

Table 8.1A
GSBPP BUDGET
(in $1000)

	FY 04	FY 05	FY 06	FY 07*

*For FY 07, Reimbursable Education and Research amounts are the current Authorized amounts. Mission Operations, EMBA and Direct Research amounts are year-to-date obligations plus projected expenses for the remainder of the fiscal year.				

MSM Program Budget: GSBPP does not plan, budget, or account for funds separately for the "MSM Program". GSBPP does, however, plan, budget and account separately for the "resident" instruction program. The resident instruction program consists of 1) MSM program courses and 2) MBA program courses (and a few service courses provided to other NPS degree programs outside of GSBPP). The delivery of the resident program is highly integrated in that the large majority of courses are attended by both MSM and MBA students and thus exist to support both programs. The budget number most directly applicable to the resident program is the Mission Operations budget, provided in the top panel of Table 8.1A ($7,534K in 2007). This is the funding allocated to GSBPP annually by NPS to provide for delivery of resident instruction -- and the student advising, administrative and support activities associated with that resident instruction. This then represents one measure of the budget available for the MSM Program. **MSM Program Budget 1 = $7,534K.**

If support for the research activities of the faculty is considered to be support for the instruction program, then Mission-Funded Research ($1,322K in 2007) should additionally be considered as part of the budget for the resident instruction programs. There is some sense to this perspective since the resources available for mission-funded research are, in some respects, amounts that remain available after having fully provided for the successful delivery of the resident instruction program. From this perspective, a second measure of the budget available for the MSM Program would include Mission Research. **MSM Program Budget 2 =** $7,534K + $ 1,322K **= $8,856K.**

It is possible to divide the Mission Operation total into a smaller amount associated "only" with the MSM Program, but this can be done only through use of a somewhat arbitrary proration. During 2007, approximately 62% of the courses delivered within the resident instruction program were attended by students who were enrolled in

the MSM Program. Applying this percentage to the Mission Operations budget results in a third measure of the budget available for the MSM Program. **MSM Program Budget 3** = $7,534K x 62% = **$4,671K.**

8.1B Budget Sufficiency

Mission Budget: Overall the funding levels have been adequate to support the School's mission and objectives. As can be seen in Table 8.1A, both mission operations and direct research funding for faculty and staff have grown slightly over time. This follows the growth in full time equivalent faculty since FY04 and also parallels the increased volume of instruction (# of courses) that has occurred due to increased enrollments over the same period. Faculty salaries are always the largest component of the mission budget, and one where control can be exercised at most on the margins. Faculty salaries in GSBPP/NPS are Congressionally capped at their current rate, but the high cost of living in the local economy stresses these salaries, especially in the housing market.

Reimbursable Budget: Our reimbursable education numbers were down in FY06/07 primarily due to the requirement that reimbursable education programs increase their price in order to collect indirect costs. Both reimbursable education sponsors and our own DL operations have transitioned to this new price structure and the School's DL activity is expected to recover in 2008 to earlier levels. Our reimbursable research, however, has increased significantly in FY07 as the faculty continues to pursue opportunities for research in their respective academic areas and as our ties to our customer base strengthen and grow.

Non-Labor Costs: Allocations for travel and supplies have been a challenge, especially in keeping up with our increasing needs to establish and build partnership relations with other academic and sponsoring organizations. Additionally, we are experiencing sharply increased costs of instructional technology that our faculty and students have come to need and expect to enhance the quality of our classroom and distance learning educational experiences. It is our expectation that future revenue streams that support instructional technology (equipment, software, databases and staff support) will have to be developed. Developing such revenue streams is a priority for the Dean and the NPS leadership.

8.1C Salary Information

Table 8.1C presents the average and median 10-month salary for faculty in the Graduate School of Business and Public Policy. While the table presents 10-month salaries, almost all GSBPP faculty members work and are paid for a full 12 months each year. The management of GSBPP operations, and of faculty labor, assumes the objective of 12-month salaries for all faculty members who desire. The reimbursable activities of the School generally supplement the mission-funded activities, providing sufficient work

activities for 12-month compensation for faculty. Appendix 8.1 shows NPS's Faculty Salary Schedule, which was effective 7 January 2007.

Table 8.1C

2007 GSBPP AVERAGE 10-MONTH FACULTY SALARY

2007	# Faculty	Average	Median
Professor (Tenure Track)	11	$118,528	$118,528
Assoc. Professor (Tenure Track)	15	$117,770	$118,528
Assistant Professor (Tenure Track)	12	$107,137	$108,608
Senior Lecturer (Non-tenure Track)	13	$114,817	$115,568
Lecturer (Non-tenure Track)	6	$110,548	$112,096
Adjunct (Non-tenure Track)	26	$99,065	$102,776

Standard 8.2 Library Services
All students and faculty shall have reasonable access to library facilities and services that are recognized as adequate for master's level study in public affairs and administration. This would normally include texts, monographs, periodicals, serials, pamphlets, and research reports. The program faculty should have a major role in selecting library acquisitions for its program.

8.2A Overview of Dudley Knox Library's Resources and Services

The Dudley Knox Library (DKL), 2004 Federal Library of the Year, provides the Naval Postgraduate School (NPS) and the broader defense and security communities with an information rich environment supporting academic and research pursuits. DKL's annual budget of $3.5 million is used to provide a rich combination of collections, staff, and associated services that support and facilitate graduate education and research in all subject areas taught at NPS. DKL anticipates and responds to current and emerging requirements, and seeks innovative and creative ways to provide scholarly information to patrons by investing in leading edge technology and services. Level funding for the past 6 years in conjunction with spiraling inflationary increases for personnel and content

(databases, journals, and monographs), has impacted Library collections and services. In the current global economy, no library can stand alone. DKL actively partners with federal, special, and academic libraries—particularly the Consortium of Naval Libraries (CNL) and the National Research Library Alliance (NRLA)--to leverage limited budget dollars and invest jointly in collaborative acquisitions, joint-licensing agreements, and resource sharing that extend content offerings to NPS patrons beyond what we could afford alone.

DKL's staff of highly qualified librarians and support personnel is committed to providing excellent service to all faculty, staff and students and to developing and maintaining strong collections and services to support all areas of research at NPS. DKL has 9 full-time professional librarians who hold Masters in Library Science degrees and approximately 20 additional staff.

Five reference librarians serve as Subject Specialists providing collection development, research guidance, outreach and instructional support to all NPS Schools and curricula. One librarian serves this role for the Graduate School of Business & Public Policy (GSBPP). In addition, all reference librarians provide service at the reference desk and through DKL's Ask a Librarian Live virtual reference service, which has been in place since September 2004. In 2006, nearly 45% of reference questions were received and answered through DKL's *Ask a Librarian Live* chat reference service and e-mail.

The GSBPP Subject Specialist works closely with faculty and students to evaluate and select print and electronic materials, provide classroom and individual instruction on library resources and research skills and assist with research and teaching information needs. Because Public Administration is interdisciplinary and therefore can include political science and political theory, it is important to recognize that support to this area is covered not only through the Subject Specialist's relationship with the GSBPP but also by the Subject Specialist for National Security Affairs (NSA), who also works closely with GSBPP students and faculty depending on their research needs. In addition, DKL's acquisitions to support NSA are often relevant to GSBPP.

DKL's holdings include more than 600,000 print volumes, including bound journals and all books. DKL's usable space totals approximately 100,000 sq. ft. DKL provides photocopying, scanning and printing facilities, 135 individual study carrels and 19 group study rooms (collaboratories), and provides a telephone paging service. DKL is open for service 7 days a week, 343 days a year and is accessible to students an average of 81 hours a week with building hours being extended for study purposes the week prior to and during finals. DKL is closed on official federal holidays and reduces hours during school breaks.

Whenever possible, DKL is replacing traditional paper journals and indices with subscriptions to electronic journals and databases accessible from the user's desktop. Many of these databases provide information in full-text and/or image format. DKL's online catalog, web pages and database access is available to faculty, staff and students in

DKL, campus labs, classrooms, offices as well as from off campus. DKL continuously updates and adds links to individual journal titles through the online catalog as well as from a web page entitled "Find Journal Online". In late 2006 DKL implemented electronic resource management tools (ERM) including “link resolver” software (called SFX) that makes it easy for library patrons to determine whether DKL provides electronic access to journals and with a few keystrokes provides access at the full-text article level. Detailed information about DKL’s print and electronic journal subscriptions and electronic databases is provided below in the section on Library Support.

DKL has been a Federal Depository since 1964. Through the depository program, DKL selects and receives free materials from various government agencies, including Congress, the Congressional Budget Office, the Department of Commerce, the Department of Defense, the Government Accountability Office, the International Trade Administration and others. The Library staff includes a professional Documents Librarian who regularly reviews the materials available to DKL and assists students and faculty with specialized research questions that require an in-depth understanding of government documents.

To support classroom teaching, research and other NPS mission-related tasks, DKL provides Interlibrary Loan and Document Delivery (ILL) service to the school’s faculty, staff and students, including distance learning students. DKL loans more resources to libraries worldwide than must be borrowed for needs of our local patrons. Faculty, students and staff are regularly encouraged to make use of this service, which is provided at no cost to the end-user. GSBPP students and faculty currently account for approximately 15% of ILL requests. Table 8.2A below provides detailed information on GSBPP use of ILL.

In June 2005, DKL implemented ILLiad Interlibrary Loan management software to automate routine functions, increase staff productivity and reduce paperwork. This suite of software tools enables patron-initiated borrowing, is fully integrated with the Library’s online catalog and ERM systems and provides tools that allow patrons to: check against local resource holdings; place requests for items not owned by DKL; monitor the status of each request from copyright compliance to delivery; and retrieve e-documents as they are delivered. This service is available to authorized patrons 24/7, extending the Library’s ability to manage requests and deliver resources to patrons, including distance learners, regardless of their time zone/location.

Materials not owned by DKL are obtained as quickly as possible through a variety of resources including the Online Computer Library Center (OCLC), regional library consortia -- the Monterey Bay Area Cooperative Library System (MOBAC) and the Military Education Research Library Network (MERLN) -- as well as electronic and Web resources and document delivery vendors. The Subject Specialist is able to review the titles of items that have been requested so they can be considered for purchase for the Library collection. Most articles are posted to the Web or delivered by PDF attachment to the user's email. Turn-around times are fast – 45% of article requests are filled within 3 days, with 6% being filled within 1.6 hours. DKL responds quickly to "rush" requests

where faculty or students have an immediate need for books or papers and cannot wait for the normal purchase or Interlibrary Loan processes.

DKL has 52 computers and 14 circulating laptops available for public use. All provide access to the Internet and to a variety of programs including the Microsoft Office and Adobe suites. The Library Systems Department worked with our international students in 2006 to add additional languages to standard Library computer configurations to provide additional support for non-native English speakers. Many of DKL's study rooms and carrels provide wired network access. DKL provides nearly 100% wireless coverage as well, so that an increasing number of students and faculty connect via laptop while in the building.

DKL provides 19 group study rooms (collaboratories) as well as a large group study area. These spaces are heavily utilized by GSBPP students as their program of study involves many collaborative projects. Two of the public rooms and one in our Restricted Resources and Services Library are equipped with advanced technology including plasma screens, speakers, and dual laptop switchers to enhance patron experience and promote teamwork for assignments, study, and group projects.

DKL provides a secure, service-oriented environment for cataloging, preservation and access to classified and limited distribution resources through its Restricted Resources and Services (RRS) unit. RRS is accessible to approved members of the NPS community and provides retrieval and research support. RRS catalogs all received materials and is the repository of NPS generated restricted reports and theses. Many limited distribution reports held by RRS are relevant to the faculty and students in the GSBPP, including those published by agencies such as CNA (Center for Naval Analysis), Rand Corporation and LMI (Logistics Management Institute). DKL also provides access to the classified internet (SIPRNET) for those NPS personnel with the appropriate security clearance.

The online catalog (BOSUN) is available to anyone via the Internet. In addition to listing the materials DKL owns or provides electronic access to, it also includes a digital archive of NPS-produced documents as well as relevant full-text documents from other sources. The archive contains NPS theses and MBA Professional Reports, most of which are available as full-text PDF files if they were published after 1995. Other archived collections relevant to GSBPP include Congressional Research Service and Defense Science Board reports. As they become available, DKL adds and regularly updates web links to both journals and books that are concurrently, or in some cases, only available in electronic form.

BOSUN allows those with Library accounts to place holds and renew materials electronically, as well as link to ILL forms or make book purchasing suggestions to the appropriate Subject Specialist.

DKL's web pages can be used to access most Library resources and services, including: placing Interlibrary Loan/Document Delivery requests; accessing electronic

databases and electronic journals; contacting the reference desk with questions or contacting the appropriate Subject Specialist; and making book purchase suggestions. DKL's web site includes many pages developed by the subject specialist librarians to support specific areas of interest at NPS. Some of those that are relevant to GSBPP include: Acquisition and Contracting, Congressional Information Resources, Defense Budget Information, Military Manpower, Military Information, Military Publications, Finding Company and Industry Information, Marketing, and Military Transportation and Logistics.

As part of an ongoing effort to ensure that Library services, facilities and resources meet the needs and expectations of NPS students, faculty, and staff, DKL conducted a standardized survey assessing service quality (LibQual) in 2003 and 2005. Additionally, in early 2006 DKL developed and conducted a survey to assess whether reference service hours meet the needs of the NPS community. Input from these surveys has informed DKL's planning. In spring 2007, the GSBPP Subject Specialist provided reference and research consultations from an office in the department's building for four hours each week. DKL is currently reviewing the results of a recently conducted survey about this pilot outreach project.

8.2B Library Support: Relevant Library Collections and Expenditures

The Library's collection is one of the primary assets supporting both educational and research efforts across the campus. The main collection is comprised of monographs (books and reports), journals, theses, and maps/nautical charts, in print and digital formats. Resources are catalogued and access to metadata and full-text is provided via the BOSUN online catalog. DKL shares its bibliographic records with the international OCLC database so DKL materials are available for searching by anyone in the world. Digital copies of NPS theses, for example, are catalogued and accessible throughout the world within weeks of graduation. DKL has been a selective federal depository since 1963. DKL also houses a secure collection of classified and limited distribution resources in our Restricted Resources and Services department. Content, including journals, electronic databases and monograph expenditures averaging $1.6 million/year over the past four years comprise approximately 46% of DKL's annual budget. Journal expenditures average 36% of the total content budget; databases average 34%; and monograph expenditures average 30%.

Books/Monographs

Librarians are Subject Specialists who work with faculty to continuously review and evaluate requirements and select/acquire monographs to meet evolving curricular and research needs. Overall, DKL allocates fewer budget dollars to monographs than to databases and journals.

DKL's book budget is allocated by fund code to the Subject Specialists, who expend these funds based on regular review of publisher catalogs, use of the reviews

published in CHOICE magazine, book reviews in curriculum related journals and other appropriate professional sources. Specialists also solicit and consider input and suggestions from faculty, staff and students. GSBPP faculty provide significant input which ensures that DKL's collection continues to meet the needs of GSBPP students and faculty.

DKL holds more than 231,090 unique print monographic titles. This total does not include items in our Government Documents, theses or journals collections. Approximately 41% of the monograph budget supports GSBPP and other NASPAA-related areas (such as political science, national security affairs, and military).

Table 8.2B1 presents the number of GSBPP- and NASPAA-relevant books added to the DKL collection by Library of Congress (LC) classification areas -- of HA-HJ (Business and Economics) and J-JZ (political science). The figures listed in the ALL SUBJECTS column include all items within the LC classification areas plus all the materials added into DKL's Federal Document collection.

Table 8.2B1
NUMBER OF BOOKS ADDED 2000-2006

Year	HA-HJ	J-JZ	All Subjects
2000	953	236	14202
2001	1224	317	14470
2002	1367	271	24793
2003	1325	288	24336
2004	1394	474	26150
2005	1448	428	31527
2006	1186	1572	24492

Table 8.2B2 presents the figures for the funds allocated for the purchase of single title or monographic materials only and does not include additional publications DKL purchases that are considered to be publisher renewals or standing orders due to a regular publication cycle. There is often overlap in materials across related disciplines and the subject specialists can use their discretion about which fund code is appropriate for a particular purchase. To more accurately reflect DKL's ability to adequately cover the larger elements of public policy and political science, the expenditures of the three relevant fund codes are all listed in Table 8.2B2. The areas represented are: BIZ/BPP (Graduate School of Business & Public Policy), NSA (National Security Affairs) and MIL (Military Science). The MIL code is not curriculum specific but rather more of a "catch-all" area to ensure DKL is able to purchase items that might not fit well into any one curriculum or which, conversely, could be charged to several different curricula.

Table 8.2B2
FUNDS EXPENDED FOR PURCHASE OF MONOGRAPHIC MATERIALS
(Does not include standing orders or publishers' renewals*)

Fiscal Year	A BPP/BIZ Fund	B NSA fund	C MIL Fund	D BPP+BIZ+ NSA+MIL	All Funds	D as % of All Funds
2002	$9,129,25	$10,160.15	$5,841.46	$25,130.86	$69,249.88	36%
2003	$8,165.91	$12,297.32	$4,058.45	$24,521.68	$59,651.28	41%
2004	$9,571.51	$10,965.33	$3,731.72	$24,268.56	$78,156.05	31%
2005	$8,961.45	$9,641.12	$3,612.54	$22,215.11	$63,588.82	35%
2006	$5,392.38	$4,724.52	$1,790.93	$11,907.83	$29,027.55	41%

*does not include funds spent on Brookings Publications which the Library collects extensively and which are particularly relevant to NASPAA-related research.

Table 8.2 B3 below shows DKL circulation statistics for selected GSBPP areas.

Table 8.2B3

Periodicals

DKL has historically purchased print journals that support NPS curricular and research needs. The advent of online journals, coupled with steep price increases per title and changing publisher access models, have impacted libraries' ability to procure content, particularly in the fields of science and technology. The Association of Research Libraries reports journal unit price increases of 188% in the period 1986-2004 and a 2007 report demonstrates a 33% increase in the average price for business and economics journals and a 53% increase for political science journals in the last 4 years alone (Van Orsdel and Born, *Library Journal*, 4/15/2007). DKL is aggressively moving away from print in favor of licensing online access to current volumes and backfiles. Such access, which we procure locally as well as through library consortial licenses, extends access to critical journals 24/7. Table 8.2B4 gives a snapshot of DKL-licensed e-journals supporting GSBPP subject areas.

Table 8.2B4
NASPAA-Relevant E-Journals Accessible Through DKL (2007)

Subject	# Titles
Accounting & Auditing	113
Business Management	761
E-Commerce	59
Economics	877
Finance	434
Marketing & Sales	285
Material & Supply Chain Management	65
Operations Research	61

Organizational Communication	47
Organizational Psychology	55
Personnel Management & Training	131
Political Science	175
Public Policy & Administration	527
Quality Management	61
Strategic Management & Business Policy	119

DKL provides electronic access either by direct subscription or through one or more databases to the full-text of articles from many top scholarly journals. To provide a sense of this, a selective list of some of these titles in business, economics, and management is provided in Table 8.2B5.

Table 8.2B5 **Selective List of Top Business, Economics and Management Journals** Available Full-Text Online

Organization Science
Quarterly Journal of Economics
Sloan Management Review
Strategic Management Journal

DKL expended nearly $670,000 to fund periodicals for 2007 (excludes database subscriptions which are discussed below). Of this total, approximately $94,000 (14%) was for periodicals directly related to GSBPP. Many additional titles of a military, political science, or general nature also support GSBPP teaching and research needs.

Databases

Information discovery is facilitated by general and subject-specific databases, such as *ProQuest's ABI INFORM, EBSCO'S Business Source Complete, and the Web of Knowledge.* DKL provides access to a wide array of licensed and open access databases that support business and public policy and administration topics. Most of the databases contain or link out to full-text content via enhanced ERM services supported and maintained by DKL staff. DKL has expended approximately $605,000 on electronic databases for FY 2007. Of this, approximately $124,000 was spent on databases that directly support GSBPP (20%). These databases provide full-text access to articles from

more than 9,000 journals. A partial listing of databases most relevant to GSBPP students, faculty and staff is listed in Table 8.2B6.

In the past, GSBPP has collaborated with DKL to fund subscriptions to databases and other online resources such as *EBSCO's Business Source Complete*, *Inside Defense* and *CQ Budget Tracker*. These resources (and GSBPP funding of them in tight budget circumstances) have been critical to meeting the needs of NPS business, public policy and administration researchers.

Table 8.2B6 **SELECTIVE LIST OF DATABASES RELEVANT TO GSBPP ***

8.2C Program Role: Library Instruction and Outreach

Five Subject Specialist librarians share responsibility for providing reference and research assistance services, which are actively promoted to NPS students, faculty and staff in tours, classes, Blackboard, the NPS intranet, DKL web site and other means. Students and faculty are also encouraged to make appointments with their Subject Specialist for in-depth assistance.

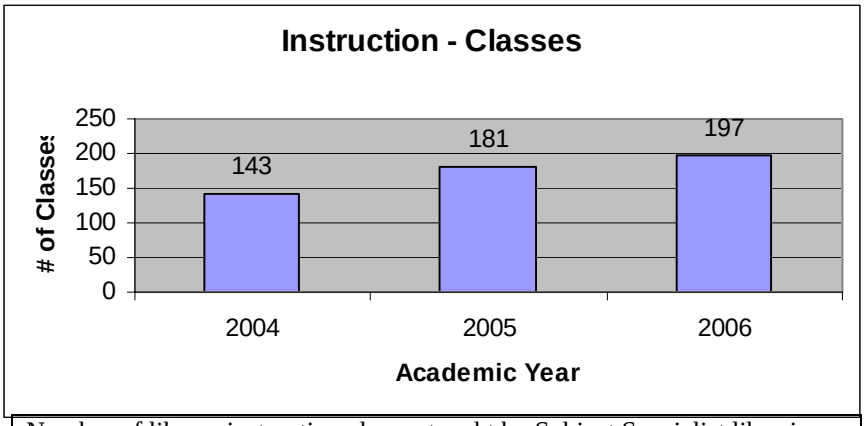
DKL provides instruction to resident GSBPP students in a variety of ways. All incoming resident GSBPP students participate in a mandatory tour of DKL's facilities and services. This is soon followed by a two hour "hands on" Library session which is regularly included in one of the required first quarter classes (Introduction to Information Technology). Many GSBPP students also later take an elective course (Managerial Inquiry) which includes an additional two hour segment on research skills. In addition, GSBPP faculty members occasionally include a specialized presentation from the subject specialist librarian in their courses.

To supplement these GSBPP-specific courses, many students take advantage of the numerous 50-90 minute drop-in classes offered by DKL on various research tools and techniques. These classes include both database-specific instruction (*BOSUN*, *ProQuest*, *LexisNexis*, *CSA*, Defense Technical Information Center *STINET*) and skills-specific classes (Using RefWorks to Manage Citations, Searching the Web, Searching the Deep Web, Finding Military Information, and Staying Current With RSS News Feeds).

GSBPP distance students also routinely receive Library instruction. Depending on the program, this may be in the form of face-to-face instruction while on campus, or via Video Teleconferencing or other technologies if they are at a remote location. Interested GSBPP faculty members receive instruction and support from DKL to ensure that their Blackboard course sites include information about appropriate Library resources and services.

Table 8.2C below provides information on the number of instruction sessions DKL has provided to NPS resident and distance students over the past few years.

Table 8.2C
Library Instruction (2004-2006)



Number of library instruction classes taught by Subject Specialist librarians. In 2006 more than 3,200 students and faculty (onsite and distributed attendees) participated in these classes.

DKL posts instructional materials on DKL's web site in a variety of formats (PDF handouts, *PowerPoint* presentations, *Flash* tutorials, web pages, links to vendor-created tutorials) so that NPS students will be able to better learn how to use Library resources at their point of need.

The GSBPP Subject Specialist interacts with the faculty in a variety of ways including regularly participating in faculty meetings, selectively e-mailing faculty members about new documents, services and resources of interest, and consulting with faculty on their research topics. The Subject Specialist works closely with interested faculty to ensure that Library resources and services are integrated into their Blackboard course sites.

The Subject Specialist encourages faculty members to provide book and journal purchase suggestions and if desired, they are notified as soon as recommended titles are available. The Subject Specialist also works closely with the faculty to identify and evaluate possible additions to DKL's online databases. DKL also regularly considers faculty input as part of the periodic review of print and online journal subscriptions.

The Subject Specialist provides guidance and support to faculty members involved in the Promotion, Tenure and Review process, using appropriate tools such as the *Social Science Citation Index* and other online sources providing the capability to do cited reference searches and journal "impact" analysis. DKL recently added significant back files and *Social Science Citation Index* coverage now goes back to 1965.

Standard 8.3 Support Personnel
Adequate secretarial and clerical personnel should be available to enable the program to meet its educational objectives.

8.3 Support Personnel

The Graduate School of Business and Public Policy currently employs 19 full-time staff personnel and 4 part time research assistants. Job functions are as follows:

Administrative Officer (1)
Sponsored Programs Financial Specialist (1)
Admin Support Service Specialist (1)
Information Technology Specialists (1)
Dean's Secretary (1)
Office Automation Assistants/Clerk (1)
Educational Technician (1)
Administrative Support Assistant (2)
Purchasing Agent (1)
Contractors Admin (6)
Contractors Financial (2)
Contractor Information Technology (1)
Research Assistants* (4)

*These research assistants support various faculty members.

In addition, the department maintains research and department support positions for students. These students work full-time during the summer and school breaks and part-time during the school year.

Standard 8.4 Instructional Equipment
Program faculty and students should have access to appropriate equipment for coursework and research including computer facilities, visual aid devices, audio and video tapes and films.

8.4A Computer Support

GSBPP Computer Lab 1 (I-224)

Current Configuration: This lab holds 18 student computers, one instructor station and two print servers, for a total of 21 systems. The standard computer configuration is a Pentium IV 2.8Ghz with 1GB RAM and 19" LCD monitor. The

instructor's station is also tied to a ceiling mounted projector.

Functional Requirements: The lab is heavily used by many MBA courses that employ statistical programs, spreadsheet programs, simulation programs and other specialized decision support programs. The lab is also used to teach various information technology courses such as Web design and networking.

GSBPP Computer Lab 2 (I-250)

Current Configuration: This lab holds 24 student computers, one instructor station and one print server, for a total of 26 systems. The standard computer configuration is a Pentium IV 2.8Ghz with 1GB RAM and 19" LCD monitor. The instructor's station is also tied to a ceiling mounted projector.

Functional Requirements: The lab is heavily used by many MBA courses that employ statistical programs, spreadsheet programs, simulation programs and other specialized decision support programs.

Applied Network Technology Lab (I-380)

Current Configuration: This lab holds 9 student computers, one multi-media workstation and one Windows Server. The standard student computer configuration is a Pentium IV 2.8Ghz with 1GB RAM and 19" LCD monitor.

Functional Requirements: This lab is used for hands-on computer hardware orientation and network design/installation. Students routinely install and remove various network-related hardware and software to experiment with multiple system configuration options. When not being used for instruction, this lab is also used to support student thesis and faculty research projects.

Smart Classroom (I-260)

Current Configuration: This classroom includes a dual projection system capable of displaying the same or different images on each screen. In addition to the standard instructor podium suite of equipment, each student seat includes a permanently mounted laptop computer tied to the school's network backbone. The classroom holds 45 students and serves as a substitute computer lab for those MBA courses too large for the traditional computer labs. The classroom is also equipped with VTC capability to facilitate guest lecturers from remote sites.

Functional Requirements: This classroom is used for multimedia-based instruction, including audio material, video material, computer-based analysis, Internet-based instruction, and VTC capability.

Smart Classroom (I-271)

Current Configuration: This classroom includes a dual projection system capable of displaying the same or different images on each screen. In addition to the standard instructor podium suite of equipment, each student seat includes a thin-client computer tied to the school's network backbone. The classroom holds 36 students and serves as a substitute computer lab for those MBA courses too large for the traditional computer labs.

Functional Requirements: This classroom is used for multimedia-based instruction, including audio material, video material, computer-based analysis, and Internet-based instruction.

8.4B Audio-Visual Support

GSBPP has set a priority on upgrading classrooms with instructional technology. The standard suite of equipment installed in each GSBPP classroom includes the following:

- Ceiling mounted multi-media projector
- Instructor podium with projector controls
- Internet ready instructor computer
- Document camera
- Combination DVD/VCR player

NPS has state of the art distance learning facilities to accommodate courses that are taught by VTC. These facilities include three studios that are equipped with PictureTel 4000 Video conferencing Systems using Integrated Services Digital Network, Basic Rate Interface (ISDN BRI) lines. This setup allows two-way, interactive audio and video between the distant sites and NPS classroom. The NPS-owned video bridge makes multi-point classes possible.

At the NPS end, three 26-student classrooms are equipped with VCRs, electronic whiteboards, document cameras, facsimile machines, and PCs for computer generated presentation. Student sites have a standards-based (H.320-compatible system) connection to a dial-up network (FTS2000).

Standard 8.5 Faculty Offices
The offices for faculty should provide adequate space and privacy for student counseling, course preparation, and other faculty responsibilities.

8.5 Faculty Offices

Each permanent faculty member in the Graduate School of Business and Public Policy has an individual office with reasonable space for a desk, computer, table, books and student or colleague meeting area.

Depending on availability, part-time faculty are housed in offices comparable in size to those occupied by permanent faculty or in a multi-office space that provides a desk, computer, table, and some book or storage space. For individuals in the latter office space, there are two conference rooms available for reservation should the faculty member desire complete privacy in meeting with students or colleagues.

Standard 8.6 Classrooms
Appropriate classrooms should be available for the courses being offered. This would normally include rooms suitable for seminars, case discussions, and simulation exercises, and lectures.

8.6 Classrooms

Overall, classrooms are the size and the type needed for graduate classes in management. The classrooms are various sizes, holding from 20-40 students, and are assigned by the NPS scheduler based upon class size and other requirements. While maintenance and upgrades to these rooms are not directly funded from GSBPP allocated resources, we have undertaken a classroom lifecycle management effort to reflect more clearly the needs within these rooms. This plan, which is a work in progress, will allow our business school leadership to provide ready documentation and cost estimates as opportunities arise for additional funding.

Standard 8.7 Meeting Area
An appropriate area should be available for students and faculty to meet informally and discuss class projects, internship experiences, and other program matters.

8.7 Meeting Area

Informal meetings between students and faculty to discuss course projects or other program matters usually occur in the faculty member's office or after class in the classroom. GSBPP has two conference rooms available for faculty and faculty/student meetings. Other conference rooms around campus are available upon request. Students have easy access to private study rooms in the library located next to Ingersoll Hall.

STANDARD 9.0 -- OFF-CAMPUS AND DISTANCE EDUCATION

Standard 9.1 Definition and Scope
Off-campus and distance education programs are offerings and arrangements in which (a) students are located in facilities or at sites other than the main [parent] campus of the program and/or (b) the students do not engage regularly in face-to-face interaction with an instructor who is in physical proximity. Off-campus and distance education programs can satisfy legitimate educational needs. When off-campus and distance education versions of the program serve different missions, student populations, or utilize education technology or learning methods that differ from the parent program, the burden is on the program to provide adequate information that demonstrates:

-the extent to which educational offerings are consistent with and contribute to the mission;

-the extent to which assessment and guidance processes ensure the comparability of the education offered;

-the effects of these differences on students, faculty, administrators, systems, processes, and the allocation of program resources and, therefore;

-the effects of these differences on the education received by all students in the program seeking accreditation regardless of where they are located.

9.1 Definition and Scope

The Graduate School of Business and Public Policy (GSBPP) has three active off-campus or distance learning (DL) degree programs:

- The Executive Master of Business Administration (EMBA)
- The Master of Science in Program Management (MSPM)
- The Master of Science in Contract Management (MSCM).

Until June 2006, GSBPP also offered a fourth DL program, which has since been contracted to another university.

- The Master of Science in Leadership and Human Resource Development (LEAD)

The NPS Academic Council has approved all of these programs. All of these programs are accredited by WASC and by AACSB.

Each of these programs is a distinct degree program by itself, and none is an off-campus or distance version of either the resident MBA Program or the resident MSM Program. **GSBPP does not seek NASPAA accreditation for any of the School's off-campus/distance programs**. As such, these programs are not presented here. For background, a full description of these programs, following the Standard 9 format, is provided in Appendix 9 of the Volume III Appendices document that accompanies this Self-Study report.

Aruna Apte
AD-03, Assistant Professor
June 2005

Academic Degrees:

1992 - 97 **Southern Methodist University**, Dallas, TX.

Ph.D. in Operations Research with minors in operations management and mathematics. GPA: 3.95

Dissertation: Disjunctive Programming Methods for Interval Flow Networks.

Research Fellowship with Naval Research Grants.

1978 - 82 **Temple University**, Philadelphia, PA,

Ph. D. student in Mathematics. Teaching and Research Fellowships.

Master of Arts in Mathematics (1980).

Primary Teaching Areas:

Operations management, operations research, and mathematics courses at the undergraduate and graduate levels.

Graduate Teaching Experience

Naval Postgraduate School, Monterey, Ca

Sum 2005 - Present Assistant Professor, **Graduate School of Business and Public Policy.**
Naval Postgraduate School, Monterey, Ca

Fall 2004 Visiting Lecturer, **Graduate School of Business and Public Policy.**

1999 - 05 **Southern Methodist University**, Dallas, TX.

Lecturer, **Cox School of Business**. Teaching core operations management course in the executive education, graduate, and undergraduate programs using spreadsheets and interactive games as vehicles of learning.

1994 - 97 Instructor, **School of Engineering and Applied Science**. Taught operations research courses in the graduate and undergraduate programs.

Publications, Papers, Presentations:

Refereed Journal Articles

- Apte, A., Apte, U., Beatty, R., Semple, J., and Sarkar, I, "The Impact of Check Sequencing on NSF Fees," Interfaces, Volume 34 (Number 2). March-April 2004, 97 – 105.
- Apte, A., Jayasuriya, A., Kennington, J., Krass, I., Mohamed, R., Sorensen, S., and Whitler, J., "Class Scheduling Algorithm for Navy Training Schools", Naval Research Logistics Volume 45, 1998, 535 - 551.

- **"**Disjunctive Programming Methods for Interval-Flow Networks," Ph.D. Dissertation, Southern Methodist University, Dallas, TX, 1997. **Unfunded** Research Project

Refereed Proceedings

- Apte, A., "An Interval Pivoting Heuristics for Finding Quality Solutions to Variable-Bound Interval-Flow Transportation Problem," Submitted to the Proceedings of Regional and Global Logistics and Supply Chain Management, 2nd International Conference on Operations and Supply Chain Management. *Accepted and Forthcoming.*

Technical Reports

- Apte, A. and E. Dutkowski, "Microwave Power Tube Reduction in Total Ownership Cost (R-TOC) Initiative", Acquisition Research Sponsored Report Series, Graduate School of Business and Public Policy, Naval Postgraduate School, Monterey, CA. October 2006.
- Apte, A., "Spiral Development: A Perspective", Acquisition Research Sponsored Report Series, Graduate School of Business and Public Policy, Naval Postgraduate School, Monterey, CA. June 2005.
- Apte, A., "Optimizing Phalanx Weapon System Life-Cycle Support," Acquisition Research Sponsored Report Series, Graduate School of Business and Public Policy, Naval Postgraduate School, Monterey, CA. January 2005.

Submitted Papers

- Apte, A., R. S. Barr and R. Jones, "An Interval-Pivoting Heuristic Algorithm for Uniform-Bound Interval-Flow Transportation Problem," Submitted to European Journal of Operational Research, First Review.

Submitted Patents

- "SONET Ring Designer Tool", (with N. Venugopal)

Working Papers Based on Research Projects

- "Optimal Force Sizing and Prepositioning for Natural Disasters," (with Javier Salrmeron and Ee Shen Tean), Working Paper, Naval Postgraduate School, Monterey, CA. To be submitted to Production and Operations Management.
- "Supply Chain Network for Perishable and Essential Commodities: Design and Vulnerability," Working Paper, Graduate School of Business and Public Policy, Naval Postgraduate School, Monterey, CA. To be submitted to Manufacturing and Service Operations Management.
- "A Review of Applications of the Traveling Salesman Subtour Problem," (with Susan Heath), Working Paper, Graduate School of Business and Public Policy, Naval Postgraduate School, Monterey, CA. To be submitted to Operations Research.

Presentations

- May 2007, Paper presented at the 2nd International Conference in Logistics and Supply Chain Management
- May 2007, 3 Papers presented at the Production and Operations Management Annual Conference
- June 2006, Paper presented at the 4th US-European Workshop on Logistics and Supply Chain Management

- April 2006, Paper presented at the Production and Operations Management Annual Conference
- May 2005. Paper presented at the NPS's 2nd Annual Acquisition Research Symposium

Significant Practitioner Experience:

Consulting Engagements

- 2000 - 2002 **MCI,** Richardson, TX

  Primarily responsible for researching and developing high-level algorithm designs and mathematical models for optimally allocating MCI resources to the telecommunications network. Provide expertise for continually improving other software tools that have already been released.

Academic and Professional Associations:

- Member of the Institute Operations Research and Management Science (INFORMS), Production and Operations Management Society (POMS), and Decision Sciences Institute (DSI).

Uday Apte
Professor of Operations Management
Initial date of appointment at NPS: June 28, 2004

Academic Degrees:

- Ph.D. in Decision Sciences (1982) with specialization in Operations Management.
  Wharton School, University of Pennsylvania, Philadelphia, PA.
  Ph.D. Dissertation Topic – "Decision Models for Regional Industrial Planning".
- Master of Business Administration (1975) (General Management)
  Asian Institute of Management, Makati, Philippines.
- Bachelor of Technology (1973) (Chemical Engineering)
  Indian Institute of Technology, Bombay, India.

Primary Teaching Areas:

- Operations and Logistics Management

Graduate Teaching Experience:

- Graduate School of Business and Public Policy, Naval Postgraduate School, Monterey, CA(2004 -).
  Professor of Operations Management, Logistics and Operations Management.
- Cox School of Business, Southern Methodist University, Dallas, TX (1990 – 2005).
  Department Chairperson (1998 – 99) and Associate Professor, Information Technology and Operations Management Department.
- Helsinki School of Economics and Business, Helsinki, Finland.
  Visiting Professor (Fall 1998), Logistics and Operations Management.
- The Wharton School, University of Pennsylvania, Philadelphia, PA.
  Visiting Associate Professor (Spring 1994), Adjunct Faculty (1980 – 90), Operations and Information Management Department.

Publications, Papers, Presentations:

Books

- Managing in the Information Economy: Current Research Issues (with U. S. Karmarkar), Springer-Verlag (Forthcoming 2006).
- Manufacturing Automation, (with M. A. Cohen), Irwin (McGraw Hill), New York, NY, 1997.

Refereed Articles Published/Forthcoming in Journals/Books

- "Size, Structure and Growth of the US Information Economy," (with H. Nath). Accepted for publication in U. S. Karmarkar and U. M. Apte, eds., Managing in the Information Economy: Current Research Issues, Kluwer Academic Publishing (Forthcoming 2006).
- "Business Process Outsourcing (BPO) and Globalization of Information Intensive Services," Accepted for publication in U. S. Karmarkar and U. M. Apte, eds., Managing in the Information Economy: Current Research Issues, Kluwer Academic Publishing (Forthcoming 2006).

- "OM In the Information Economy: Information Products, Processes and Chains," (with U. S. Karmarkar). Accepted for Publication, Journal of Operations Management (Forthcoming 2006).
- "History of Research in Service Operations: What is the Big Idea?," (with R. B. Chase). Accepted for Publication, Journal of Operations Management (Forthcoming 2006).
- "Analysis and Improvement of Delivery Operations at San Francisco Public Library," (with F. Mason). Journal of Operations Management (2005).
- "The Impact of Check Sequencing on NSF Fees," (with A. Apte, R. Beatty, I. Sarkar and J. Semple). Interfaces, Vol. 34 (2), March-April 2004, pp. 97-105.
- "Assessing Cross-Industry Effects of B2B e-Commerce," (with H. Nath). Journal of Strategic E-commerce., Vol. X(X), Fall 2004
- "Applying Lean Manufacturing Principles to Information-Intensive Services," (with C. Goh). International Journal of Service Technology and Management. Fall 2004.
- "Using Knowledge to Transform Enterprises," (with R.O. Mason), in Kahin, Brian, et al., eds., Transforming Enterprises, Boston: MIT Press, 2004.
- "Supply Chain Management at TI: A Study Focusing on Procurement Solutions." (with S. Joshi and V. Vellanki). Review of the Electronic and Industrial Distribution Industries, Vol. 2, No. 2, 2004, pp. 72-96.

Presentations

- "Managing the Service Supply Chain in the U.S. Department of Defense: Opportunities and Challenges", Conference of the POMS College of Service Operations, Carmel, CA (June 2006).
- "Managing the Service Supply Chain in the U.S. Department of Defense: Opportunities and Challenges", 3rd Annual Symposium on Acquisition Research: Creating Synergy for Informed Change, Naval Postgraduate School, Monterey, CA (May 2006).
- "Focusing on Customer Time in Field Service". Annual POMS Conference, Boston, MA (May 2006).
- "A Decision Support Model for Valuing Proposed Improvements in Component Reliability", 2nd Annual Symposium on Acquisition Research: Creating Synergy for Informed Change, Naval Postgraduate School, Monterey, CA (May 2005).
- "Analysis and Improvement of Delivery Operations at San Francisco Public Library," Research Seminar, Marshall School of Business, University of Southern California, Los Angeles, CA (May 2005).
- "Process Drivers and Performance Indicators for Insurance Claims Operations: An Empirical Investigation," (With R. Cavaliere and S. Kulkarni) POMS College of Service Operation Conference at Columbia University, New York, NY. (December 2004).
- "A Model Focusing on Customer Time in Field Service Delivery" and "Analysis and Improvement of Delivery Operations at San Francisco Public Library," Annual POMS Conference, Cancun, Mexico (May 2004).

- "The Impact of Check Sequencing on NSF Fees" S. J. Mehta School of Management, Indian Institute of Technology, Bombay, India (September 2003).

Research Projects:

- "A Decision Support Model for valuing Proposed Improvements in Component Reliability." (2006) (Joint Sponsors: PEO Ships and PEO Integrated Warfare Systems).
- "Managing the service supply chain in DoD: Opportunities and Challenges," (2006) (Joint Sponsors: NPS RIP and PEO Ships).
- "What is the right RFID for your process?" (2006) (Sponsor: PEO Integrated Warfare Systems).
- "A Decision Support Model for valuing Proposed Improvements in Component Reliability." (2005) (Joint Sponsors: PEO Ships and PEO Integrated Warfare Systems).

Significant Practitioner Experience:

- **CIGNA Corporation** (1984 – 90), Philadelphia.

  -As **Director**, **Planning and Finance** in Claims Division, prepared annual plan and budget for this division of 4000+ people. Developed analytical models for estimating staffing needs and instituted Variable Budgeting Process in the Division. Responsible for monitoring and control of operational and financial performance of the Division. Conducted numerous analytical studies.

  -As **Director**, **Electronic Distribution Channel** in Systems Division, developed conceptual architecture of Electronic Distribution Channel (EDC). Managed design, development, and implementation of the File Transfer Facility for Individual Insurance Products. Managed Turnkey Expert Systems for analysis of underwriting operations. As Strategic Systems Planner, developed Strategic Technology Plan for the Division.

- **Mellon Bank** (1982 – 84), Information Management & Research, Philadelphia.

  -As **Manager of Systems Planning Unit**, led seven senior professionals. Designed systems architecture and developed prototype of the bank's next-generation transaction processing system. Promoted to Assistant Vice President.

- **The World Bank** (1979, 1980), Washington, D.C.

  -As **Summer** Intern in the Industrial Projects Department, evaluated project involving production of Alcohol from Molasses in Sudan, and studied economics of Petrochemical Industry in the Andean Group Countries.

Academic and Professional Associations:

Institute for Operations Research and Management Science
Production and Operations Management Society
Decision Sciences Institute

Public Service Activities:

- None.

Consulting Activities:

- **San Francisco Public Library**, Study of the delivery system operations (2005)
- **Kinko's**, Development of Operations Strategy (2004)

Frank J. Barrett
Professor
September 1990.

Academic Degrees

- Ph.D. in Organizational Behavior. Case Western Reserve University. Graduation: January 1990.
- M.A. in English with minor in Music. University of Notre Dame. August 1977
- B.A. in Government and International Relations. University of Notre Dame. May 1975

Primary Teaching Areas:
Management of Change in Complex Organizations
Organizational Behavior

Graduate Teaching Experience

- 1996- 2006 Associate Professor of Management, Graduate School of Business and Public Policy
- Boer and Croon Chair of Change Management, TIAS Business School, Tilburg University
- Visiting Associate Professor of Applied Economics, Department of Applied Economics Katholieke University of Leuven, Leuven Belgium
- 1997 - 2000 Adjunct Professor , Department of Organizational Development, Benedictine University, Lisle, Illinois.
- Instructor of Management, Penn State University , Behrend College, Erie, Pennsylvania

Publications, Papers, Presentations:

Research Projects

- Leadership, Empowerment and Large Scale Change. Research Sponsor: Naval Education and Training Command. 2001-2005

- Acquisition Research. 2006.

Academic and Professional Associations

- Elected to Executive Committee of Division of Organizational Development and Change, National Academy of Management.
- Member Academy of Management Division of Organizational Development and Change 1988 - present.
- Member of Managerial and Organizational Cognition Interest Group, National Academy of Management 1993 - present.
- 2005 – present. Member of editorial board of Organization Studies.
- 2004 – present. Member of editorial board of Journal of Applied Behavioral Science.
- 1993 - present. Member of editorial board of Journal of Management Inquiry.
- 2002 – present. Member of advisory board of Action Research Journal.

Michael W. Boudreau
Senior Lecturer
December 1995

Academic Degrees:

- MBA, Santa Clara University, December 1966, finance.
- Bachelor of Mechanical Engineering, Santa Clara University, December 1964, thermo-fluid mechanics.

Primary Teaching Areas:

- Acquisition: program management, manufacturing, and quality management

Graduate Teaching Experience

- Naval Postgraduate School, December 1995 to present. Resident, Distance Learning, and International short courses.

Publications, Papers, Presentations:

- NPS International Defense Acquisition Resource Management (IDARM) Report: "Proposed Blueprint for Polish National Acquisition Strategy," 25 October 2000 (co-authored)
- Publication: *Army AL&T*: "Transitioning From Fielding to Steady-State Sustainment," Jan-Feb 2001
- Research paper: entitled "Reduction of Total Ownership Cost," NPS-AM-03-04, published in the Acquisition Research Sponsored Report Series, September 2003 (co-authored)
- Paper Presentation: "Total Ownership Cost: An Exercise in Discipline," at *The Acquisition Research Inaugural Symposium, Charting a Course for Change: Acquisition Theory and Practice for a Transforming Defense*, Panel, *Total Ownership Costs: The Future*, May 2004. (co-presented)
- Journal Publication: "Total Ownership Cost (TOC) Considerations In Key Performance Parameters And Beyond," published in the *Acquisition Review Journal*, February-March 2005, Volume 12, Number 1 (co-authored)
- Paper Presentation: "Cost As an Independent Variable (CAIV): Front-End Approaches to Achieve Reduction in Total Ownership Cost," presented at the NPS *Second Annual Acquisition Research Symposium: Acquisition Research: The Foundation for Innovation*, Monterey, CA, May 2005
- Research Paper: "A Decision Support Model for Valuing Proposed Improvements in Component Reliability," NPS-GSBPP-05-006, 30 June 2005 (co-authored)
- Research paper: "Cost As an Independent Variable (CAIV): Front-End Approaches to Achieve Reduction in Total Ownership Cost**,"** published in the *Acquisition Research Working Paper Series*, June 2005
- Workshop Presentation: "Setting Up Acquisition for Total Life Cycle Supportability Performance," presented at the Institute for Defense and Government Advancement Conference: *Total Life Cycle Systems Management*, Arlington VA, July 2005 (co-presented)

- Research Paper: Using Cost as an Independent Variable (CAIV) to Reduce Total Ownership Cost, NPS-GSBPP-06-004, January 2006
- Paper Presentation: "Acoustic Rapid COTS Insertion – Case Study," Panel on Implementing an Open Systems Approach in Weapon System Acquisitions, presented at the NPS *Third Annual Acquisition Research Symposium:* Acquisition Research: Creating Synergy for Informed Change, May 2006
- Research Paper: "Acoustic Rapid COTS insertion: A Case Study in Spiral Development," NPS-PM-06-041, October 2006
- Paper Presentation: "Acoustic Rapid COTS Insertion (A-RCI): A Case Study in Modular Open Systems Approach for Spiral Development," presented at the IEEE ICSoSE, San Antonio, TX, April 2007

Research Projects:

- Research into Total Ownership Cost. Sponsor was U.S. Naval Sea Systems Command. 2003. Resulted in research paper, journal article, and two conference presentations (2004 NPS & 2005 IDGA); see above.
- Research into Cost as an Independent Variable (CAIV). Unfunded. 2005. Resulted in research paper and conference presentation (2005 NPS); see above.
- Acoustic Rapid COTS Insertion (A-RCI) Case Study. Sponsor is Program Executive Office IWS, U.S. Naval Sea Systems Command. 2006 Resulted in conference presentations (NPS 2006 and IEEE 2007 – see above) with research paper published October 2006.

Significant Practitioner Experience:

- Retired Army Colonel with specialties in defense acquisition and field logistics.
- Project Manager, Family of Medium Tactical Vehicles 1992-1995.
- Commander, U.S. Army Materiel Support Center, Korea, 1989-1991.
- Commander, Detroit Arsenal Tank Plant, 1982-1984.

Academic and Professional Associations:

- None.

Public Service Activities:

- None.

Consulting Activities:

None.

Douglas E. Brinkley
Senior Lecturer and Director of GSBPP Instructional Technology
July 1998

Academic Degrees:

- Doctor of Education, Nova Southeastern University, 2003, Instructional Technology and Distance Education. Dissertation: "*The Effect of Computer-Mediated Communications on Graduate Student Interactions*"
- Master of Science, Naval Postgraduate School, 1990, Information Systems
- Bachelor of Science, University of the State of New York, 1980, Economics

Primary Teaching Areas:

- Information Technology, Computer Systems Management, Network Security and Administration

Graduate Teaching Experience

- July 1998-Present; Senior Lecturer, Graduate School of Business and Public Policy, NPS, Monterey, CA. Lecturer of Information Systems and Computer Networks. Responsible for course and program development, management and administration, teaching and thesis advising. Below are significant positions held during this timeframe.

Publications, Papers, Presentations:

- NPS-GSBPP Instructional Report: Brinkley, D.E., "A Multinational Assessment of Thin Client Technology," NPS-GSBPP-07-004IR, June, 2007.

- Conference paper and presentation: Brinkley, D.E., "Thin-Clients in the Classroom; Software Compatibility and a Survey of Systems," Proceedings of the 2006 Conference on Global Leadership, Learning and Research, Honolulu, HI, 13-17 October, 2006.

- Conference paper and presentation: Brinkley, D.E., "The Effect of Computer-Mediated Communications on Graduate Student Interactions," Proceedings of the 2004 Conference on Global Leadership, Learning and Research, Orlando, FL, 25-30 July, 2004.

Research Projects:

- Thin-Client Computer Usability Study, 2005 – 2006

    - Objective: To analyze the interoperability of thin client terminals configured in a client/server architecture with instructional software used at the Naval Postgraduate School (NPS). The study also evaluates the responsiveness and usability of the thin client systems in comparison to the existing stand-alone PC environment.

- Funded by: Sun Microsystems and the Naval Postgraduate School Foundation

- Research product: Conference paper and presentation accepted for the 2006 Conference on Global Leadership, Learning and Research, Honolulu, HI, 13-17 October, 2006

Significant Practitioner Experience:

- January 1993 - June 1995; Officer in Charge, Defense Information Processing Center (DIPC), Guam - Responsible for all aspects of the activity's operational and administrative mission to provide data processing and information technology support to fleet and shore commands throughout the western pacific.

- October 1990 - January 1993; Chief Information Officer, Commander Naval Air Forces, U.S. Atlantic Fleet - Responsible for information systems guidance and technical support to 8 aircraft carriers, 11 naval air stations and 144 staffs/squadrons. Also served as Senior Information Systems Inspector and ADP Security Officer.

Academic and Professional Associations:

- Microsoft Certified Systems Engineer
- Microsoft Certified Trainer
- Oracle Certified Database Administrator
- Novel Certified Netware Engineer

Public Service Activities:

- None

Consulting Activities:

- None

Douglas A. Brook
Professor
Director, Center for Defense Management Reform
February 2002

Academic Degrees:

- Ph.D. George Mason University, 2001. Public Policy. Dissertation: "Business Style Financial Statements Under the CFO Act: An Examination of Audit Opinions."
- MPA. University of Michigan, 1967. Public Administration.
- BA. University of Michigan, 1965.

Primary Teaching Areas:

- GB 3013: Problem Analysis and Ethical Dilemmas
- GB 4053: Defense Budget and Financial Management Policy

Graduate Teaching Experience

- Naval Postgraduate School, 2006-Present.

Publications, Papers, Presentations:

PUBLICATIONS:

Research Projects:

- "Civil Service Reform: The Homeland Security Act of 2002." An analytical history of enactment of the Homeland Security Act with emphasis on the personnel management provisions of the legislation. Sponsor: U.S. Office of Personnel Management.
- "Benchmarking for Organizational Transformation." Public and private sector transformation benchmarking models applicable to Navy's Sea Enterprise Initiative. Sponsor: Deputy Chief of Naval Operations (Material Readiness and Logistics).

Significant Practitioner Experience:

- Dean, Graduate School of Business and Public Policy, Naval Postgraduate School, 2002-2005
- Vice President, Government Affairs, LTV Corporation 1993-2002
- Acting Director, U. S. Office of Personnel Management 1992-1993
- Assistant Secretary of the Army (Financial Management) 1990-1992

Academic and Professional Associations:

- American Society of Military Comptrollers
- American Society for Public Administration
- Fellow – National Academy of Public Administration

Public Service Activities:

- Monterey Symphony Chorus
- Member, Visiting Committee, Gerald R. Ford School of Public Policy, The University of Michigan, 1993-2002
- Trustee, U.S. Naval Academy Foundation, 1993-2004
- Member, M.P.A. Advisory Committee, George Mason University, 2000-2002
- Business Advisory Board, Sodexho USA 2004-present

Consulting Activities:

- Research Paper Reviewer – Rand Corporation 2006
- Business Advisory Board – Sodexho USA, 2004 – present

Philip J. Candreva
Senior Lecturer of Budgeting
August 2002

Academic Degrees:

- M.S., Management (with distinction), Naval Postgraduate School, 1996
  - Thesis: "The Use of Financial Scoring Models for the Prediction of Business Failure: Implications for Department of Defense Financial Analysis" (Advisors: Doug Moses, Shu Liao)
- B.S., Mineral Economics, Pennsylvania State University, 1984

Primary Teaching Areas:

- Public budgeting and financial management with an emphasis on the U.S. Department of Defense.

Graduate Teaching Experience

- Military Lecturer, Naval Postgraduate School, August 2002-August 2006
- Senior Lecturer of Budgeting, Naval Postgraduate School, September 2006-present.
- Center for Executive Education, Naval Postgraduate School, 2006.

Publications, Papers, Presentations:

- "Tell Me How I'm Measured, I'll Tell You How I'll Perform," American Society of Military Comptrollers annual Professional Development Institute, San Diego, June 2006.
- Sole discussant for panel, *Issues in International Public Budgeting and Financial Management*, Association for Budgeting and Financial Management conference, Washington DC, November 2005.
- "The Sword and the Purse: The Why and How of Congressional Delegation of Budget Authority to DoD," American Society of Military Comptrollers annual Professional Development Institute, Salt Lake City, June 2005. Reviewed in *Armed Forces Comptroller*, Vol. 50, no. 3, Summer 2005, 41-44.

- "Paying for the War on Terrorism," (with L. R. Jones) a paper presented in the panel discussion *Current Issues in Federal Budgeting*, Association for Budgeting and Financial Management Conference, Chicago, October 2004.

Research Projects:

- Public sector management reform agendas – issues related to leadership transition, implications for resource allocation, and change management, unfunded, ongoing.
- Issues of performance evaluation and goal ambiguity with respect to military housing privatization, unfunded, 2004-present. Paper in draft.
- Researching Policy Network Management: Cybernetics in Navy Programming Decisions, unfunded, 2004-2005. Paper accepted for 2005 Networking and Electronic Commerce Research Conference (NAEC 2005), Riva Del Garda, Italy, October 2005, but I was unable to attend.

Significant Practitioner Experience:

- Director, Navy Supply Information Systems Activity, Mechanicsburg, PA (1999-2002)
- Deputy for Financial Management, Research and Engineering, Naval Air Systems Command, Patuxent River, MD (1996-1999)
- Supply Officer, USS JOHN RODGERS (DD-983), ported in Charleston, SC (1991-1994)
- Faculty and Assistant Planning Officer, Navy Supply Corps School, Athens, GA (1989-1991)
- Supply Support Officer, USS PUGET SOUND (AD-38), ported in Norfolk, VA (1985-1989)

Academic and Professional Associations:

- Senior Associate, Center for Defense Management Reform (2006-)
- American Society of Public Administration (2003-)
- ASPA Section on Public Performance and Management (2006-)
- Association for Budgeting and Financial Management (2003-)
- International Public Management Network (2003-)
- American Society of Military Comptrollers (2003-)

Public Service Activities:

- Vice-President and President, Monterey Chapter, American Society of Military Comptrollers, 2004-2006.
- Ad hoc peer reviewer for *Public Administration Review*, 2005-2006
- Ad hoc peer reviewer for *International Public Management Journal*, 2005-2006
- Ad hoc peer reviewer for Hawaii International Conference on System Sciences (HICSS), 2004-2005
- MBA/MS Student Thesis Advisor, 33 students, 2002-2007.

- Naval Postgraduate School Awards Board (2002-2006)
- Navy-Marine Corps Relief Fund Drive (Monterey peninsula 2004 campaign chairman)
- U.S. Navy Supply Corps Association, Monterey CA (faculty advisor, 2002-2004)

Consulting Activities:

- "Depreciation of Capital Assets: Management Alternatives and Implications," prepared for the Deputy Chief Financial Officer, U.S. Department of Defense, November 2005.

- Dozens of relatively minor consulting engagements with former students and colleagues throughout the Defense Department.

Peter J. Coughlan
Associate Professor
June 2004

Academic Degrees:

- Doctor of Philosophy, California Institute of Technology, June 1999, Social Sciences (Economics & Political Economy), dissertation title: Essays on the Economics of Institutions.
- Master of Science, California Institute of Technology, June 1995, Social Sciences (Economics & Political Economy).
- Bachelor of Arts with Distinction, University of Virginia, May 1992, Economics and Mathematics.

Primary Teaching Areas:

- Strategic Management
- Economics

Graduate Teaching Experience

- *Strategic Management* (M.B.A. & M.S.), School of Business & Public Policy, Naval Postgraduate School, 2005–2006.
- *Economics and the Global Defense Environment* (M.B.A. & M.S.), School of Business & Public Policy, Naval Postgraduate School, 2005–2006.
- *Management and Markets: Organizational Economics and Strategy* (Ph.D.), Harvard Business School, 2004.
- *Competitive Dynamics: The Rise and Fall of Competitive Advantage* (M.B.A.), Harvard Business School, 2003–2004.
- *Economics of Markets* (M.B.A.), Harvard Business School, 2001–2003.
- *Strategy* (previously *Competition & Strategy*) (M.B.A.), Harvard Business School, 1999–2002.

Publications, Papers, Presentations:

Refereed Journal Publications

- American Rule vs. English Rule: A Theoretical and Experimental Analysis of Alternative Legal Fee Institutions (with Charles R. Plott, California Institute of Technology), *Journal of Economic Behavior and Organization*, Revise & Resubmit.
- In Defense of Unanimous Jury Verdicts: Communication, Mistrials, & Strategic Voting, *American Political Science Review*, Vol. 94, No. 2, June 2000.
- A Social Choice Function Implementable via Backward Induction with Values in the Ultimate Uncovered Set (with Michel Le Breton, CORE, Belgium), *Review of Economic Design*, Vol. 4, No. 2, June 1999.

Research Papers

- Adoption, Non-Adoption, & De-Adoption of New Technologies in the Presence of Network Effects (with William R. Gates and Nicholas Dew, Naval Postgraduate School), Work in Progress.
- Auctions as a Force-Shaping Tool for the U.S. Navy (with William R. Gates, Naval Postgraduate School), Work in Progress.
- The Manpower Assignment Problem: Applying Auction Theory, Matching Markets, & Experimental Simulation (with William R. Gates, Naval Postgraduate School), Work in Progress.
- Optimal Re-Enlistment Bonuses: Applications of Signaling & Auction Theory (with William R. Gates, Naval Postgraduate School), Work in Progress.
- Friend or Foe: Competition vs. Cooperation in High-Stakes Prisoner Dilemmas (with William R. Gates and Elda Pema, Naval Postgraduate School), Work in Progress.
- An Efficient Mechanism for Allocation of an Excludable Public Good with Consumption Externalities, Harvard Business School Working Paper, 2004.
- Connecting Backward and Competing Forward: Incentives for Backward Compatibility and the Sustainability of Competitive Advantage, Harvard Business School Working Paper, 2004.
- Strategic Deterrence and Simultaneous vs. Sequential Decision-Making: An Experimental Investigation (with Richard D. McKelvey and Thomas R. Palfrey, California Institute of Technology), California Institute of Technology Working Paper, 2000.

Published Case Studies and Course Notes

- The Leader's (Dis)Advantage, Harvard Business School Course Note #701-084 (2001).
- Competitor Analysis: Anticipating Competitive Actions, Harvard Business School Course Note #701-120 (2001).
- Pricing for Profit: Multi-Part Pricing in the U.K. Credit Card Industry, Harvard Business School Case #706-407 (2005).
- The Ready-to-Eat Breakfast Cereal Industry: Coupon Competition and Price Discrimination, Harvard Business School Case #706-409 (2005).
- The Ready-to-Eat Breakfast Cereal Industry: Product Proliferation and Preemption, Harvard Business School Case #706-408 (2005).
- The Golden Age of Home Video Games: From the Reign of Atari to the Rise of Nintendo, Harvard Business School Case #704-487 (2004).
- Blockbuster Inc. & Technological Substitution (A) – (D), Harvard Business School Case #704-404, 704-407, 704-462, & 704-463 (2003), Coauthored with Jennifer Illes (Research Associate).
- Lamoiyan Corporation of the Philippines: Challenging Multinational Giants, Harvard Business School Case #703-467 (2003), Coauthored with Jennifer Illes (Research Associate).

- WebMD (A) &(B), Harvard Business School Cases #701-007 (2000) and #701-133 (2001), (A) case coauthored with Michael Rukstad & Carl Johnston (Research Associate), (B) case coauthored with Debbie Freier (Research Associate).
- DaimlerChrysler Post-Merger Integration, Harvard Business School Case #703-417 (2002), Coauthored with Richard Meyer; Michael G. Rukstad, & Stephan A. Jansen (Research Associate).
- DaimlerChrysler Knowledge Management Strategy, Harvard Business School Case #702-412 (2001), Coauthored with Michael G. Rukstad and Carl Johnston (Research Associate).
- Note on Home Video Game Technology and Industry Structure, Harvard Business School Case #700-107 (2000).
- Competitive Dynamics in Home Video Games (A) – (K), Harvard Business School Cases #701-091 through #701-101 (2001).

Research Projects:

- None other than research papers and publications documented above.

Significant Practitioner Experience:

- *Incentive Markets, Inc.,* Co-Founder and Chief Economic Advisor, 2001-2004.
  - Start-up company that designs "prediction markets" to assist business clients in forecasting performance of products, research projects, and other initiatives.
  - Initial emphasis in pharmaceutical industry, with Eli Lilly as the flagship client.
- *ASE, Inc.,* Independent Management Consultant, 1997-1998.
  - Participated in various management studies while completing doctoral research.
  - Analyzed product pricing, systems safety, and customer sampling methodologies.
- *Booz•Allen & Hamilton, Inc.,* Senior Management Consultant, 1995-1997.
  - Conducted organizational evaluations, process redesign, cost reduction studies and other management studies for private and public sector clients worldwide.
  - Developed several analytical computer tools including an elasticity-based pricing model and a probabilistic queuing model

Academic and Professional Associations:

Academy of Management
Strategic Management Society
The Econometric Society
Institute for Operations Research and Management Science
American Law and Economics Association
Public Choice Society
American Political Science Association

Public Service Activities:

(I have interpreted this to include professional service activities)

- Faculty Instruction Committee, Graduate School of Business & Public Policy, NPS
- Dean Search Committee, Graduate School of Business & Public Policy, NPS
- Conference on Management Strategy and the Business Environment
  - Annual conference series rotating among HBS, Wharton, and Stanford GSB
  - Co-founder and co-organizer
- Harvard Business School Strategy Unit Field Studies Coordinator
- Harvard Business School Academic Performance Committee
- Journal Referee:
  - Journal of Economics and Management Strategy
  - Games and Economic Behavior
  - Economic Inquiry
  - American Political Science Review
  - Journal of Theoretical Politics
  - Interfaces

Consulting Activities:

- None in past three years.

Alice M. Crawford
Senior Lecturer
June 1988

Academic Degrees
- MA San Diego State University, Experimental Psychology
- BA San Diego State University, Experimental Psychology

Primary Teaching Areas
- Foundations of Learning: Military Training and Education
- Educational Theory
- Organizational Behavior
- Leadership
- Motivation
- Conflict
- Teams
- Capstone Project Research Methods and Processes

Graduate Teaching Experience

All teaching experience has been at the graduate level in the following programs at NPS since 1988:
- NPS Leadership Education and Development Program (on-site delivery for MS program at United States Naval Academy)
- Resident courses for the MBA program and, before that, the MS program
- Executive MBA program (on-site delivery for an accelerated course in Teams)
- Product Development 21 (distance learning by VTE)
- Various short courses for the Naval Bureau of Medicine and Surgery, the National Reconnaissance Office, and the NPS Center for Executive Education
- Thesis advising: approximately 6-12 per year

Publications, Papers, Presentations 2003-2007:

Technical Reports

Crawford, A.M., Thomas, G.F., Mehay, S.L., and Bowman, W.R. *Successful Women in the US Navy Surface Warfare Community: Is the Navy Losing the War for Talent?* Naval Postgraduate School, December 2006.

Crawford, A.M., Malina, M., and Kocher, K. *Truancy Abatement and Prevention in the School Attendance Enhancement Program.* Naval Postgraduate School, March 2003.

Crawford, A.M., Thomas, G.F., and Estrada, A.X. *Best Practices at Junior Reserve Officers Training Corps Units.* Naval Postgraduate School Technical Report 04-005, August 2004.

Conference Presentation

Crawford, A.M., Thomas, G.F., Mehay, S.L., and Bowman , W.R. *Successful Women in the US Navy Surface Warfare Community: Is the Navy Losing the War for*

Talent? Presentation at the Seventh Annual Navy Workforce Research and Analysis Conference, Washington, DC, 1-2 May 2007.

Crawford, A.M., and Miller, S. *Navy Retention and the Battle for Talent.* Presentation at the Executive Life/Work Integration Summit, Monterey, CA 31 May – 1 June 2007.

Pendergast, G., and Crawford, A.M. *Applications of E-Learning in the Military and Defence Services.* Invited presentation at the Fernausbildungskongress der Bundeswehr, Helmut Schmidt Universitat, Hamburg, Germany, 20-22 September 2005

Research Projects 2003 - 2007

● Study of Retention of Surface Warfare Officer Women, funded by Chief of Naval Personnel (N14), October 2005 to present
● JROTC Comprehensive Review project, funded by Office of the Secretary of Defense, January 2002 – March 2003
● Safe Schools / Healthy Students project, funded by US Departments of Health and Human Services, and Justice, September 2002 to March 2003

Significant Practitioner Experience 2003--2007
● Delivered 360-degree feedback to PXO/PCO and NCBC students

Academic and Professional Associations
● None 2003 – 2007

Public Service Activities
●Member Hamming Teaching Award Committee, September 2007
● Member, NPS CHSD Director Search Committee May 2006—May 2007
● GSBPP-CEE Liaison June 2006--present
● Associate Dean for Distance Learning, GSBPP, June 2004 – June 2006
● Academic Associate for the LEAD Program, November 2005 – June 2006
● Academic Associate for International Student Curricula April 2006 – present
● Academic Associate for the LEAD Program, June 1997 – June 2004
● Member, GSBPP Dean Search Committee, January – September 2006
● Member, NPS Provost Search Committee, May 2005 – May 2006
● Member, Human Systems Integration Curriculum Committee for the OR Department, April 2004 to 2006
● Member, Faculty Instruction Committee, June 2005 – present
● Chair, Business Education Continuum Development Committee, Fall 2005
● Member Hamming Teaching Award Committee, September 2005
● Member Hamming Teaching Award Committee, September 2004
● Chair, Lecturer/Senior Lecturer Task Force, January 2003 – March 2003
● Member, Core Curriculum Review Task Force, April 2004
● Chair, MBA Operations Committee, January 2002 - January 2004

- Member, MBA Policy Committee, January 2002 – January 2004
- Member, MBA Ad Hoc Review Committee
- Member, Institutional Review Board 2002 – 2004
- Member, Organization Structure Task Force, September – December 2004

Consulting Activities
None 2003 - 2007

Jeffrey R. Cuskey
Lecturer
July 1997

Academic Degrees:

- Master of Science in Management, Naval Postgraduate School, Monterey, CA, March 1997 (Acquisition and Contract Management)

- Bachelor of Arts and Sciences, University of Delaware, June 1978 (Political Science)

Primary Teaching Areas:

- Since 1997, employed by the Naval Postgraduate School (NPS), Monterey, California as a Graduate School of Business & Public Policy Faculty Member and Course Coordinator for various advanced acquisition and business financial management courses.

Graduate Teaching Experience

- Naval Postgraduate School: July 1997 to Present

Publications, Papers, Presentations:

- "Privatization of the Naval Air Warfare Center Aircraft Division, Indianapolis" Case Study by William Lucyshyn, Jeffrey R. Cuskey, and Jonathan Roberts, University of Maryland Center for Public Policy and Private Enterprise, School of Public Policy, July 2004

Significant Practitioner Experience:

- Business Financial Manager for the U.S. Navy's F/A-18 Strike Fighter Program.
- Deputy Contracting Officer for the U.S. Navy's F/A-18E/F Strike Fighter Program.
- Contract Specialist, Defense Contract Administration Services Management Area, Philadelphia, PA.
- United States Naval Officer. In July 2000 completed 20 years of active duty military service as a Navy Supply Corps Officer.
    - In addition to significant acquisition and business management experience, held various operational, administrative, staff and management positions,
    - Fleet Plans Officer and Assistant Strike Warfare Officer for Commander Sixth Fleet
    - Assistant Supply Officer of a Combat Stores Ship during Operations Desert Storm and Desert Shield.

Academic and Professional Associations:

- Designated an Acquisition Career Professional by the Assistant Secretary of the Navy for Research, Development and Acquisition.

- Awarded “Level III” Defense Acquisition Workforce Improvement Act (DAWIA) in Contracting, Level III Certification signifies an acquisition professional has attained the requisite training, education and experience to fill critical acquisition leadership positions.

Public Service Activities:

- 2004 – Board Member, Del Monte Forrest Property Owners’ Association

Consulting Activities:

- 20 – 31 August 2005: Provided Program, Contract and Business Management services to a medium sized defense technical and engineering services company on the East Coast. Supported the company’s development of a detailed response to a $19.1 billion Proposal Request for Strategic Program Management Support Services.

2002 – Present: Board Member and Business Management consultant to a high tech Semi-Conductor Packaging Company in Silicon Valley.

Nicholas Dew
Assistant Professor
August 2003

Academic Degrees:

- *Ph.D. in Management, August 2003.* **Darden Graduate School of Business Administration, University of Virginia, Charlottesville, U.S.A, 1999-03**
  Dissertation: "Lipsticks and Razorblades: How the Auto ID Center used pre-commitments to build the Internet of Things"
  Coursework: entrepreneurship, strategy and business ethics.

- *Masters in Business Administration, May 1999.* Darden Graduate School of Business Administration, University of Virginia, Charlottesville, U.S.A., 1997-99
  Recipient of faculty award for academic excellence (top 10% of class).
  Recipient of General Motors scholarship award for international students.

- *Bachelor of Arts (Honors) in History, July 1989.* **University of York, York, U.K., 1986-89**
  Graduated with First Class Honours (top 5% of class).

Primary Teaching Areas:

- Strategic management GB4014

Graduate Teaching Experience

- None.

Significant Practitioner Experience:

- Various positions held at British Petroleum 1989-1997.

Academic and Professional Associations:

- None to mention.

Public Service Activities:

- None to mention.

Consulting Activities:
None to mention.

John T. Dillard
Senior Lecturer
November 2000

Academic Degrees:

- **MS** - University of Southern California LA, 1985
- **BA** - University of Tennessee Chattanooga, 1974

Primary Teaching Areas:

- Defense Systems Acquisition Management
- Project Management
- Test and Evaluation
- Strategic Leadership for Senior Leaders
- Joint Systems and Processes (Acquisition, Force Management, Security Assistance)

Graduate Teaching Experience

- 11/2000 to present as member of the Acquisition Faculty of GSBPP
- 07/1994 to 07/1996 as Senior Army Faculty Member

Publications, Papers, Presentations:

- *Centralized Control of Acquisition Programs*. NPS Technical Report, Sep 2003.
- *Organizational Excellence in the Public Sector*. Presentation to 53rd Annual Quality Congress, Annaheim, CA. 26 May 1999.
- *Army TACMS Initial Operational Test and Evaluation – From the PM's Perspective*. Redstone Arsenal, AL. 1991. (Revised for use by DAU as instructional text material in TST 202)
- *The Acquisition of Strategic Airlift.* US Army War College, Carlisle, PA. 1996 – 1997.
- Presentation to Naval Postgraduate School *Acquisition Research Symposium*, Monterey, CA. 19 May 2004. From Market to Clan: How Organizational Control Affects Trust in Defense Acquisition"
- Presentation to Naval Postgraduate School *Acquisition Research Symposium*, Monterey, CA. 19 May 2004. "Determining the Best Loci of Knowledge, Responsibilities and Decision Rights in Major Acquisition Organizations,"
- "Computational Modeling of Project Organizations Under Stress" Project Management Journal, March 2007.
- "Spiral Development Considerations," Center for Strategic and International Studies, Washington, D.C., Spiral Development, Real Options, and Other Development Methodologies. 5 June 2006. http://www.csis.org/component/option,com_csis_events/task,view/id,985/

- Presented to Monterey Chapter Project Management Institute "*Progressive Elaboration*" 11 January 2006, and the Silicon Valley Chapter "*Strategies for Evolutionary Product Development*" 16 Oct 2006.

Research Projects:

-

Significant Practitioner Experience:

- 1998 – 2000 Commander, Defense Contract Management Command - Long Island, NY, Garden City, NY
- 1993-1994 Product Manager (PM), Joint Advanced Special Operations Radio System US Army Communications and Electronics Command, Fort Monmouth, NJ
- 1991-1993 Assistant Project Manager (APM), Javelin Missile System Program Executive Office - Tactical Missiles, Redstone Arsenal, AL
- 1989-1991 Assistant Project Manager (APM), Army Tactical Missile System (ATACMS) Program Executive Office - Tactical Missiles, Redstone Arsenal, AL
- 1985-1987 Manager, Light Close Combat Systems Advanced Systems Concepts Office, Armament Research Center, Picatinny Arsenal, NJ

Academic and Professional Associations:

- Project Management Institute – Scheduled speaker at the Silicon Valley Chapter, November 16, 2006.

Public Service Activities:

- Past Chairman, NPS Faculty Retirement and Special Functions Committee

Consulting Activities:
As adjunct faculty member at the University of California, Santa Cruz: consults and trains Silicon Valley public and private organizations on project management and organizational excellence, including Santa Clara Valley Water District, Iowa State University, Rockwell-Collins Electronics, 3Com, and others.

Kenneth H. Doerr
Associate Professor
July 2001

Academic Degrees:

- Ph.D., University of Washington, Seattle, December 1994. Major: Operations Management. Minors: Mathematics, Research Methods.
- B.S., Indiana University, Bloomington, December 1984. Major: Quantitative Business Analysis.

Primary Teaching Areas:

- Operations Management

Graduate Teaching Experience

- Associate Professor, Naval Postgraduate School, 2001-Present
- Assistant Professor, University of Miami, 1997-2001

Publications, Papers, Presentations:

Publications

- Doerr & Gue (2003), "A Tune-Able Performance Metric And Goal-Setting Procedure For A Warehouse." Presented to the International Technology and Strategy Forum's workshop on Information Technology in Logistics, Berkeley CA. Also presented to the Decision & Information Technology research seminar at the Robert H. Smith School of Business, University of Maryland.
- Doerr, Gates & Mutty (2003), "An Integrated Multi-criteria and Simulation Approach to Cost Benefit Analysis of Inventory Tracking," Invited Presentation to the National INFORMS conference, Atlanta.

Research Projects:

- Metrics for Performance Based Logistics Naval Postgraduate School (2004-2005). Two grants ($70,000 and $91,600) from the Naval Sea Systems Command to develop and evaluate metrics for outsourced weapon-systems logistics.
- Capacity and Contingency Planning for the Voluntary-Intermodal Sealift Agreement (VISA) Naval Postgraduate School (2004). $45,000 grant from the Military Sealift Command to develop a simulation-based analysis of capabilities related to the VISA program.
- Cost Benefit Analysis of Advanced Technology Ordnance and Surveillance, Naval Postgraduate School (2003). $50,000 grant from the ATOS program office to perform cost-benefit analysis for RFID-related technology.

Significant Practitioner Experience:

- Senior Optimization Engineer, Peoplesoft, 1996-1997

- Systems Analyst, Shell Oil, 1984-1989

Academic and Professional Associations:

- Member of the editorial review board of Production and Operations Management.
- Colloquium Chair for INFORMS Teaching Effectiveness Colloquium, Miami (2001).
- Session Chair for two invited sessions at the POMS conference in Chicago (2005), and sponsored sessions at the INFORMS Conference in Washington, D.C. (1996), the INFORMS Conference in Montreal (1998), and the INFORMS Conference in Salt Lake City (2000). Discussant and session chair at the National Decision Science Institute Conference in Orlando (2000).
- Journal Referee: Academy of Management Review (2004, 2006, 2007) Decision Sciences (2003, 2007), European Journal of Operational Research (1995, 1996), IIE Transactions (1995, 2007), International Journal of Flexible Manufacturing Systems (1998), International Journal of Production Economics (2006), Journal of the Operational Research Society (1994), Journal of Operations Management (2000), Management Science (2004), Manufacturing & Service Operations Management (1998, 1999, 2003, 2004), Naval Research Logistics (1995, 1999, 2006), Operations Research (1998), Production and Operations Management (2003).
- Referee for M&SOM doctoral student paper competition (1997).
- Referee for conferences: national Decision Sciences Institute Conferences in Honolulu (1994) and New Orleans (1999); national Academy of Management Conferences in Chicago (1999), Toronto (2000), Washington, D.C. (2001), Denver (2002), Seattle (2003), and Hawaii (2005); and the 36^{th} & 37^{th} annual Hawaii International Conference on Systems Science (2002, 2003).

- None

Consulting Activities:

- None

Richard B. Doyle
Associate Professor of Public Budgeting
January 1990

Academic Degrees:

- PhD, Political Science, University of Washington, 1984. Dissertation Title: Administrative Law and the Legal Order
- M.A., Political Science, University of Washington, 1976.
- B.S., International Affairs, United States Air Force Academy, 1969.

Primary Teaching Areas

Public Budgeting

Graduate Teaching Experience

Naval Postgraduate School, 1990-present

Publications, Papers, Presentations

Research Projects

- Development and deployment of online module on the US National Security Strategy for NATO's Partnership for Peace Information Management System (PIMS) (http://www.nps.navy.mil/dl/dlrc/PFP/), 2006. Funded by NPS Office of Continuous Learning
- Development of online module on NATO's Security Strategy for NATO's Partnership for Peace Information Management System (PIMS), 2007. Funded by NPS Office of Continuous Learning.
- Development of budget simulation for GB 4053 (see above) to be used within asynchronous online course, 2004. Funded by NPS Office of Continuous Learning. Simulation has been each time the course is taught, i.e., several times per year.

Significant Practitioner Experience

- 1987-1989: Senior Analyst for Defense, Committee on the Budget, United States Senate, Washington, D.C.
- 1986-1987: Legislative Assistant, Defense and Foreign Policy, U.S. Senator Slade Gorton, Washington, D.C.

Mark Jan Eitelberg
Professor of Public Policy
October 1982

Academic Degrees:

- Ph.D., New York University, 1979, Public Administration (Public Policy and National Security). Dissertation: *Military Representation: The Theoretical and Practical Implications of Population Representation in the American Armed Forces*.
- M.P.A., Wagner School of Public Service, New York University, 1973, Public Administration (Theory and Practice).
- A.B., Franklin and Marshall College, 1970, Government and Religious Studies (Dual Major).

Primary Teaching Areas:

- Military Manpower Policy
- Research Methods
- Public Policy Analysis

Graduate Teaching Experience

- Naval Postgraduate School, 1982-Present

Publications, Papers, Presentations:

Department of Defense. *A Comparison of Current Army and Marine Corps Recruit Quality Requirements*. Washington, DC: Office of the Assistant Secretary of Defense (Force Management and Personnel), May 1986. (Sole Author.)

Department of Defense. *Population Representation in the Active Duty Military Services.* Washington, DC: Office of the Assistant Secretary of Defense (Manpower, Installations, and Logistics), *June 1985*, *June 1986*, and *August 1987* editions. (Contributing Author and Editor.)

Department of Defense. "ASVAB Testing in Languages Other Than English." Information Paper. Washington, DC: Office of the Assistant Secretary of Defense (Manpower, Installations, and Logistics), 1985. (Sole Author.)

Department of Defense. *Profile of American Youth: 1980 Nationwide Administration of the Armed Services Vocational Aptitude Battery*. Washington, DC: Office of the Assistant Secretary of Defense (Manpower, Reserve Affairs and Logistics), March 1982. (Principal Author and Editor.)

Research Projects:

- No funded research projects through the Naval Postgraduate School during the self-study period. However, since 1976, directed approximately 35 research projects for the Office of the Secretary of Defense and U.S. Defense agencies. Funding for projects has totaled several million dollars.

Significant Practitioner Experience:

- 1975-1982, Senior Scientist, Human Resources Research Organization. Research project director and principal investigator; author of numerous technical reports, papers, and government documents.
- 1975, Personnel Analyst, State of New Jersey.
- 1970-1976, Staff Sergeant, US Army Reserve and US Army National Guard

Academic and Professional Associations:

- Editor, *Armed Forces & Society*, official journal of the Inter-University Seminar on Armed Forces & Society (1998-2001)
- Board of Editors, *Military Psychology* (2001-2005) and *Armed Forces & Society* (2001-Present)
- Elected Member (Fifth Term) of Governing Council and Fellow, Inter-University Seminar on Armed Forces and Society, Chicago, Illinois. Founder and Chair of the Pacific Coast Chapter (1988-Present)

- American Psychological Association, Division 19 (Military Psychology), Washington, DC. Recipient of "Robert M. Yerkes Award" for career achievement and notable contributions to military psychology by a non-psychologist, August 2000.

Public Service Activities:

- U.S. Department of Defense representative on The Technical Cooperation Program (TTCP), an international, cooperative program in the defense sciences and technologies. Member of HUM-TP3 (formerly UTP-3), panel on "Military Human Resource Issues." (1990-2001)
- Board of Directors, Toro Little League and Board of Directors, Toro Pony League (Toro Park, Corral de Tierra, and Salinas, California). (1997-2001)
- Commissioner, University of California Blue Ribbon Commission on Estimating the Costs of Excluding Homosexuals from the US Military. (2005-2006)

Consulting Activities:

- Visiting Research Collaborator, Office of Population Research, Woodrow Wilson School of Public and International Affairs, Princeton University. (2001-2002)
- Member and Contributing Author, Committee on the Youth Population and Military Recruitment: Physical, Medical, and Mental Health Standards, National Research Council of the National Academies. (2004-2005)
- Member and Contributing Author, Committee on Techniques for the Enhancement of Human Performance, National Research Council of the National Academy of Sciences. (1997-2000)
- Consultant, RAND Corporation. (1998-2000)
- Consultant, Campbell-Ewald (US Navy's ad agency), Warren, Michigan. (2000-Present)
- Consultant and Author, National Commission on Testing and Public Policy, University of California, Berkeley. (1988-1989)
- Consultant and Author, Global Demographic Trends Group, President's Commission on Integrated Long-Term Strategy, National Defense University, Washington, DC. (1987-1988)
- Consultant, Human Resources Research Organization (HumRRO). (1983-1986; 2005-Present)
- Associated Staff, Foreign Policy Studies Program, The Brookings Institution, Washington, DC. (1980-1982)
- Member and Contributing Author, Military Service Working Group, The Atlantic Council of the United States, Washington, DC. (1980-1981)

Kenneth J. Euske
Professor
August 1978

Academic Degrees:

- Ph.D, Arizona State University, 1978, Accounting.
- MBA, Amos Tuck School of Business Administration at Dartmouth College, 1969, Finance and Organizational Theory.
- AB, Gonzaga University, 1969, Economics.

Primary Teaching Areas:

- Managerial accounting and control
- Financial accounting

Graduate Teaching Experience

- Naval Postgraduate School, Monterey, California. Graduate School of Business and Public Policy, August 1978 – Present
- School of Accounting, University of Southern California, Los Angeles, California. Visiting Professor of Accounting, January 1996 - May 1996.
- Darden Graduate School of Business Administration, University of Virginia, Charlottesville, Virginia. Visiting Associate Professor of Accounting, September 1989 - May 1990.
- University of California, Berkeley, California. Visiting Assistant Professor of Accounting, August 1983 - July 1984.

Publications, Papers, Presentations:

ARTICLES:

- The Role of Management Control Systems in Planned Organizational Change: An Analysis of Two Organizations. With R. H. Chenhall. *Accounting, Organizations and Society*, In press.
- Enhancing the ABC Cross. With A. Vercio. *Management Accounting Quarterly*, In press.
- The Pyramid of Organizational Development as a Performance Measurement Model. With M. Malina. *Advances in Management Accounting*, 2005, *14*, 167-175.
- Public, Private, Not-for-Profit: Everybody Is Unique? *Managing Business Excellence*, 2003, *7* (4), 5-11.

RESEARCH MONOGRAPH AND BOOK CHAPTERS:

- History of Performance Measurement. With L. Zander. In *The Encyclopedia of Social Measurement.* Academic Press, 2005.

BOOKS:

- *Activity-Based Cost Management Design Framework: Getting It Right the First Time*. With R. Bleeker. (Ed.) CAM-I, 2004.
- *Service Process Measurement: Breaking the Code.* With N. Frause, T. Peck, B. Rosenstiel, and S. Schreck. CAM-I, 1998.

- *Management Control: Planning, Control, Measurement and Evaluation.* Addison-Wesley, 1984.

REFEREED PROCEEDINGS AND PAPERS PRESENTED:

- The Role of Management Control Systems in Planned Organizational Change: An Analysis of Two Organizations. With R. H. Chenhall. *3rd Conference on Performance*
- *Measurement and Management Control, September 21-23, Nice, France. An earlier version was presented at the AIMA World Conference on Management Accounting Research, Monterey, California, May 12-13, 2005.*
- Public, Private, Not-for-Profit: Everybody is Unique? *Performance Measurement Symposium 2003, INSEAD, July 27-29, 2003.*

Research Projects:

- Summer 2007. Support to the Fleet Resources Center Southwest.
- Fall 2004, Winter 2006. Performance Metrics Project for the Project Executive Office (Integrated Warfare Systems). Sponsor: Project Executive Office (Integrated Warfare, Systems).
- Fall 2005. Performance Metrics Project for the Project Executive Office (Littoral and Mine Warfare). Sponsor: Project Executive Office (Littoral and Mine Warfare).
- Summer 2005. Performance Metrics Project for the Naval Warfare Center – Port Hueneme. Sponsor: Naval Warfare Center - Port Hueneme .
- Fall 2004, Spring 2005. Performance Metrics Project. Sponsor: Assistant Secretary of the Navy (Research, Development, and Acquisition).
- Summer 2002 - Fall 2003. Improving Performance Measurement. Sponsor: Safe Schools/Healthy Students. Salinas, California.

Significant Practitioner Experience:

- August 2006 - Present. President-Elect of the Management Accounting Section of the American Accounting Association.
- January 2007 – Present. Member of the editorial board of *Management Accounting Research*.
- August 2005 – August 2006. President-Elect of the Management Accounting Section of the American Accounting Association.
- August 2004 – August 2005. Chair of the Outstanding Dissertation Award Committee of the Management Accounting Section of the American Accounting Association.
- July 2000 - Present. Member of the Advisory Board of the Performance Measurement Association.
- September 1971 - August 1972. Heler Associates Incorporated, Flagstaff, Arizona. Vice President.

Academic and Professional Associations:

- Member of the American Accounting Association

- Member of the European Accounting Association
- Member of the Institute of Management Accountants
- Member of the Society for Business Ethics
- Member of the Institute for Operations Research and the Management Sciences
- Member of the Academy of Management
- Member of Beta Gamma Sigma

Public Service Activities:

- January 1998 - July 2001. Member of the Board of Directors. Evan-Moor Publishing Company, Inc.
- March 1991 - November 1992. Member of the Committee to Save Rocky Shores, Pacific Grove, California.

Geraldo Ferrer
Associate Professor
October 2004

Academic Degrees:

- Ph.D. in Management, INSEAD (European Institute of Business Administration), 1997, Technology Management, and "Managing the Recovery of Value from Durable Products".
- MBA, Dartmouth College, 1992, General Management.
- BS Engineering, IME (Military Institute of Engineering), 1981, Mechanical and Automobile Engineering.
- BA Management, UFRJ (Federal University of Rio de Janeiro), 1980.

Primary Teaching Areas:

- Operations Management
- Supply Chain Management

Graduate Teaching Experience

- Supply Chain Management (NPS, since 2005)
- Operations Management (NPS, since 2005)
- Sustainable Operations (UNC – Chapel Hill, 1997-2005)
- Project Management (UNC – Chapel Hill, 2002-2004)
- Special Issues in Operations Management (doctoral seminar) (UNC – Chapel Hill, 1997-2000)

Publications, Papers, Presentations:

- Speaker at the Acquisitions Research Conference: Monterey 2006, 2007.
- Speaker and session organizer in POMS conferences: Rio de Janeiro 2007, Savannah 2003, San Francisco 2002, Orlando 2001, Seville 2000.
- Invited speaker of the research group Closed-Loop Supply Chains, sponsored by Carnegie Bosch Institute: Penn State University 2003, INSEAD 2002 and Carnegie Mellon University 2001.
- Invited Speaker at the Frank Batten Young Scholars Forum, College of William & Mary, June 2001.
- Co-Organizer of the Teaching Workshop on Global Supply Chain Management, Charlottesville (2001) and Chapel Hill (1999).

Research Projects:

- "The Economic Impact of Open Architecture in the Life-Cycle of Reusable Assets." Competitive research grant of the Acquisitions Research Program in the Naval Postgraduate School. Period: FY2007
- "RFID Implementation Process in the Department of Defense." Competitive research grant of the Acquisitions Research Program in the Naval Postgraduate School. Period: FY2007
- "Managing the Remanufacturing Process of Defense Assets." Competitive research grant of the Acquisitions Research Program in the Naval Postgraduate School. Period: FY2007
- "What Is the Right RFID for Your Process." Competitive research grant of the Acquisitions Research Program in the Naval Postgraduate School. Period: FY2006
- "Managing the Service Supply Chain in the Department of Defense: Opportunities and Challenges." Competitive research grant of the Acquisitions Research Program in the Naval Postgraduate School. Period: FY2006
- Research Initiation Program. Competitive research grant at the Naval Postgraduate School. Period: FY2005 and 2006
- DEVISO – Global Development and ISO 14000 Research Project. Principal Investigator. Grantor: Kenan Institute of Private Enterprise, Chapel Hill, NC. Period: 11/2002-11/2003. Amount: $20,000.

Significant Practitioner Experience:

- Founder and Director of Superserv Ltd, Rio de Janeiro, Brazil (1982-1990).

Academic and Professional Associations:

- *National Science Foundation*: ad-hoc member of the review panel for Unsolicited Proposals received by the Service Enterprise Engineering (SEE) Program.
- *Social Sciences and Humanities Council* (Canada): grant reviewer.

- *INFORMS*: Institute for Operations Research and Management Science
- *POMS*: Production and Operations Management Society.
- *MSOM*: Manufacturing and Service Operations Management Society.
- *DSI*: Decision Science Institute (member of the Strategic Planning for International Affairs Committee)

Raymond E. Franck
Senior Lecturer
October 2000

Academic Degrees:

- PhD, Harvard University, Graduate School of Arts and Sciences (GSAS), 1983, Economics, "The Option of War and Arms Race Behavior"
- AM, Harvard University, GSAS, 1969, Economics.
- BS, US Air Force Academy, 1967, International Relations

Primary Teaching Areas:

- Economics: basic MBA course, cost-benefit analysis
- Modeling
- Military Leadership
- Engineering Economics, Cost Estimation
- Systems Analysis

Graduate Teaching Experience

- Joint Military Intelligence College
    - Intelligence and National Security Strategy
    - Intelligence and National Military Strategy
    - Special Topics in Strategy
- Naval Postgraduate School: see subjects above.

Publications, Papers, Presentations:

Articles, books, monographs, manuals, reports or other published material published 2003-2006.

- with Francois Melese, "A Game Theory View of Military Conflict in the Taiwan Strait," *Defense & Security Analysis*, Vol. 19, no. 4, (December 2003), 327-348.

<u>Conference presentations and other significant presentations, 2003-2006.</u>

- Analyzing Conflict: Insights from the Natural and Social Sciences," UCLA, 24-26 April 2003. Presented paper, "Innovation and Military Conflict: Leaders and Followers in RMAs,"
- WEAI Annual Conference, Denver, 11-15 July 2003. Chaired one session, discussed one paper and presented one paper.
- WEAI Annual Conference, Vancouver, BC, 29 June – 3 July 2004. Organized two sessions, chaired one session, presented one paper, discussant for three papers.
- NPS Annual Acquisition Research Symposium, Monterey, CA, 17-18 May 2005.
  - Chaired panel on "Competitive Sourcing."
  - Papers: "A Transactions Cost Economics View of DoD Outsourcing," and "Business Case Analyses and Contractor vs. Organic Support."
- WEAI Annual Conference, San Francisco, CA, 4 – 8 July 2005.
  - Organized two sessions, title "Economic Analysis and National Security" (I & II), with Sonmez Atesoglu (Clarkson Univ.); chaired one of those sessions;
  - Also chaired session on "Defense Strategy and Alliances."
  - Three papers presented: "Analytical Foundations of Business Case Analyses," "Military Innovation and the Macrotechnology of Conflict," and (with Francois Melese) "One Size Does Not Fit All: Transactions Costs in Government Contracting."
  - Discussant for two papers: Toshihiro Ihori (Univ. of Tokyo) and Martin McGuire (UC, Irvine), "Collective Risk Management," and Thomas Hamilton (RAND), "Cost-Effectiveness of Airport Security"
- NPS Annual Acquisition Research Symposium, 16-17 May 2006. Presented paper titled "A Transaction Cost Economics Approach to Defense Acquisition Management." Paper published in Symposium *Proceedings*.
- WEAI Annual Conference, San Diego, CA, 29 June – 3 July 2006.
  - Organized two sessions, titled "Economic Analysis and National Security" (I&II), with Sonmez Atesoglu (Clarkson Univ); chairing one session
  - Presented one paper, "A Transactions Cost Economics Approach to Optimal Contracts"

    - Discussant for two papers: Martin McGuire (UC, Irvine), "Two Concepts of Security from Conquest;" Francois Melese (NPS), "Six Ways to Structure a Cost-Effectiveness Analysis of Alternatives."
- NPS Annual Acquisition Research Symposium, 16-17 May 2007, "Applying Insights from Transaction Cost Economics (TCE) to Improve DoD Cost Estimation." Paper published in Symposium *Proceedings*.
- WEAI Annual Conference, Seattle, WA, 29 June – 3 July 2007.
    - Organizing one session, "Economic Analysis and National Security," with Sonmez Atesoglu (Clarkson Univ); chairing two sessions
    - Presenting three papers: "US and EU Defense Industrial Base Issues," "Transaction Cost Economics: Insights on Cost Estimation," "Coercively Deficient WMD Powers: Characteristics and Countermeasures"
    - Discussing two papers.

Research Projects undertaken 2003-2006.

- "Transactions Cost Economics and Optimal Contract Type," with John Dillard and Francois Melese, sponsored by GSBPP Acquisition Chair, 2005-06.
- "Business Case Analysis for Production Support", sponsored by GSBPP Acquisition Chair, 2003-04.
- Autumn Project (or Solarium II): Served on NPS team led by Dr. Patrick Parker. Fairly extensive activities in the Fall and Winter of AY 2003. NPS plus three other groups produced recommendations for national security strategy for the war on terror. Results were briefed to the Director of Net Assessment and Deputy Secretary of Defense in January 2003. Coauthored chapter on energy policy in NPS team's written report of March 2003.

Significant Practitioner Experience:

- Thirty-three years of commissioned service in US Air Force. Retired 2000 in grade of Brigadier General. Assignments with significant public policy involvement included the following:
    - April 1985 - February 1989. Deputy Chief, Programs Analysis Division; CINCSAC Special Assistant, Headquarters SAC, Offutt AFB, NE.
    - July 1980 - November 1982. Staff Analyst, Strategic Offensive Forces Division, Office of the Director, Program Analysis and Evaluation (PA&E), Office of the Secretary of Defense; The Pentagon, Washington, DC.
- Educational Administration
    - Professor and Head, Department of Economics and Geography, United States Air Force Academy, 1989-2000
    - Associate Dean, School of Intelligence Studies, Joint Military Intelligence College, 1995-96. (Sabbatical from USAF Academy.)
    - Interim Chair, Department of Systems Engineering, Graduate School of Engineering and Applied Sciences, NPS, 2002-2004.

Academic and Professional Associations:

- American Economic Association

- Western Economic Association International

Public Service Activities:

- Congregation President, Faith Lutheran Church, Seaside, CA.

Consulting Activities:

- 2001 to present. Occasional consultant with RAND Corporation: Activity includes supporting analysis for study of costs of mobility for the US Army, and reviews of two draft RAND reports.
- Consulting in support of Quadrennial Defense Review (QDR). Sponsor was Office of the Secretary of Defense (Program Analysis & Evaluation). With Dr. Hildebrandt, the principal member. Major focus was possible peer (or near-peer)competitors. Activities included trips to Washington, DC, several analyses and memos, a briefing to the National Intelligence Officers (NIOs) for General Purpose Forces and Economics (Apr 97), and presentation at OSD-Intelligence Community Conference on in Revolutions in Military Affairs (RMAs), " Costing the Reconnaissance-Strike Complex: Capital as an Indicator in the Contemporary RMA" (Sep 97).

William R. Gates
Associate Professor
Associate Dean of Research
June 1988

Academic Degrees:

- Ph.D. in Economics, Yale University, May 1984.
  Areas of Specialization: Industrial Organization and Public Finance.
  Dissertation: "Federal Participation in Commercial Technology Development: The Case of Solar Thermal Technologies
- B.A. in Economics (Highest Honors), University of California at San Diego, June 1975.

Primary Teaching Areas:

GB4071 Economic Analysis and Defense Resource Allocation
GB4043 Business Modeling and Analysis
MN2039 Basic Quantitative Methods in Management
GE3070 Economics for Defense Managers
MN3140 Microeconomic Theory
MN4145 Policy Analysis

Theses/Projects Completed – Spring AY07

Principal Advisor	103 Thesis students	28 Project Students
Co-Advisor	77 Thesis students	10 Project Students
Associate Advisor	115 Thesis students	25 Project Students
Total	295 Thesis students	63 Project Students

Graduate Teaching Experience:

- Graduate School of Business and Public Policy, Naval Postgraduate School, Monterey, CA – MS in Management and MBA: April 1988-Present
- Golden Gate University, Monterey, CA campus – MBA, 1991 – 2001.
  Managerial Economics
- Monterey Institute of International Studies, Monterey, CA – MBA, 1990 – 1996.
  Microeconomics, International Economics

Publications and Presentations 2004 – 2007

  Chief Of Naval Personnel, N1 ($88.6K)
- **Efficiency of Alternative Assignment Incentive Pay Processes** (AY2007/2008)
  Office of the Chief of Naval Personnel, N130/132 ($61.1K)

Significant Practitioner Experience

- **Economist, Systems Analysis Section, Jet Propulsion Laboratory**, Pasadena, CA 91109: October 1979-June 1988, Summer 1977, Summer 1976

Academic and Professional Associations

- Member American Economics Association
- Member Western Economics Association; attend annual conference serving as presenter, discussant and session chair.
- Member Navy Workforce Research and Analysis Group; attend annual conference serving as presenter, discussant and session chair.

Public Service Activities

- Volunteer coach, Stevenson High School JV Softball, 2002 – present
- Volunteer, Monterey County Alzheimer's Association 2003-2004
- Volunteer, Walk for Juvenile Diabetes, 1998-2004
- Judge, Monterey County History Day, 1996-2004
- Course Director, Run in the Forest 5K and 10K (Stevenson School), 1999-2003
- Volunteer, RL Stevenson School Football Snack Bar (cook) 1997-2003
- Co-Director, Run, Pacific Grove Triathlon, 1996-2003
- Guide, Monterey Bay Aquarium, 1990-2002

Consulting Activities

- **Almond Board of California** (2004 – 2005): helped prepare a return on investment analysis (ROI) of the promotional and research expenditures made by the Almond Board of California (ABC) to promote the California almond industry

Deborah E. Gibbons
Associate Professor
July 2007

Academic Degrees:

- Ph.D. Carnegie Mellon University, December 1996, Organizational Behavior and Theory with a minor in Statistics,
    - Dissertation Title: Headlines, Grapevines, and Masterminds: Understanding the Transmission Capacity and Propensity of Social Relations in Organizations
- M.S. Carnegie Mellon University, June 1994, Organizational Behavior and Theory
- B.A. University of Washington, August 1992, Psychology

Primary Teaching Areas:

- Organizational behavior and theory, power and politics, organizational learning and design, management of groups and teams, social relations and networks

Graduate Teaching Experience

- Managing for Effectiveness
    - Organizational behavior and theory course with a public administration and defense orientation (graduate students, Naval Postgraduate School 2004-2007)
- Organization Theory
    - Lecture-based course in organization theory (MBA students, Georgia State University 1997-2001)
- Organizational Behavior
    - Introductory organizational behavior course (MBA students, Georgia State University 1997-2004)
- Organizational Design
    - Project-based course applying organization theory to organizations and events (MBA students, Georgia State University 2001-2004)
- Power in Organizations
    - Readings and discussion-based course covering historical and current views and applications of power (Master's and doctoral students, Georgia State University 2001-2004)
- Organization Theory
    - Special Topics course for doctoral students (Georgia State University, as needed)

Reports

- A Framework for Quantitative Assessment of Public Health Systems. (with Sergey Sotnikov and Subhashish Samaddar) Issues and guidelines for assessment of inter-organizational networks that support public health. Project report submitted to Georgia State University and the U. S. Centers for Disease Control, October 2005, in fulfillment of a research-funding agreement.
- Satisfaction, Attitudes, and Intended Turnover among Employees of the City of Atlanta. (with Murray Bradfield, Human Resources Director for City of Atlanta and Norman Bryan, GSU Professor) Examination of social and personal factors related to job satisfaction, attitudes, and intentions among city employees. Project report submitted to the Atlanta Mayor's office and cabinet, 2003.

Conference Presentations

- *Individual and Network Influences on Team Composition for Business Strategy, Negotiation, and Crisis Intervention Teams*, presented at the Intra-Organizational Networks Conference, Lexington, KY, March, 2007. (with Georgios Baltos and Zoi Mitsopolou)
- *Monotheistic Faiths, Freedom, and Society*, presented at the International Public Management Network Biennial Conference, St. Gallen, Switzerland, June, 2006.
- *Networks Analysis*, presented at University of Otago Doctoral Retreat, Clyde, New Zealand, November 2005.
- *Preventing a Pandemic* and *Assessing Public Health Networks*, presented at University of Otago, Dunedin, New Zealand, November 2005.

- *Preventing a Pandemic: Internal and External Professional Network Effects on Citizenship Behaviors by Health Workers*, presented at the Intra-organizational Networks Conference, Emory University, Atlanta, GA, October, 2005.
- *Social Networks Analysis Methods to Define and Quantify Dimensions of Public Health Systems*, Presented to the Centers for Disease Control and Georgia State University, Atlanta, GA, October 2005. (with Sub Samaddar and Sergey Sotnikov).
- *Dynamics of Friendship Imbalance among Professional Adults*, presented at the Western Academy of Management Conference, Las Vegas, NV, April, 2005 (with Paul Olk).
- *Social Networks Analysis Methods to Define and Quantify Dimensions of Public Health Systems*, Presented at the AcademyHealth Annual Research Meeting, San Diego, CA, June, 2004 (with Sergey Sotnikov).
- *Interorganizational Public Health Networks: Structural Effects on Information Diffusion*, Presented at the Public Health Systems Research Meeting of the AcademyHealth Annual Research Meeting, San Diego, CA, June, 2004 (with Sergey Sotnikov).

Research Projects:

- STRUCTURAL CONSTRAINT ON PUBLIC HEALTH INFORMATION DIFFUSION
    - Agent-based models were used to simulate local information sharing processes and observe system level diffusion outcomes. Graphs of diffusion curves demonstrated differences among inter-group structures, and regression models tested effects of parameterized and emergent network variables on diffusion. Differing tie patterns among subgroups produced observable differences in diffusion curves at all levels of density and partnering tendencies. Fully connected subgroups diffused information faster than more constrained networks, but hierarchical inter-group structures outperformed decentralized group-to-group chains. Although variance in centralities did not significantly affect the process, the effective size of the diffusing organization's network influenced information diffusion, particularly near the beginning of the process.
    - By identifying which network structures facilitate natural dissemination of information through the health system, the results provide guidelines for strategic development of partnerships.
    - This work was funded by the U.S. Centers for Disease Control. It has yielded project reports, conference presentations, an article in the American Journal of Public Health, and ongoing work to develop public health network interventions.
- HOW DO SOCIAL RELATIONS AND NETWORK STRUCTURES INFLUENCE COWORKER COOPERATION AND SYSTEM-LEVEL OUTCOMES?
    - Deborah E. Gibbons and Ajay Mehra
    - Existing research has built foundations for understanding interaction among personal tendencies to help others, social structures, and

professional cooperation, but standard research methods are unable to systematically test effects of varying social conditions on coworker cooperation and organizational outcomes. Computational modeling enables us to test effects of personal and social variables on outcomes of interest, based on behaviors that are likely to occur at the individual or partner level. By modeling pairwise interactions throughout a simulated system, it is possible to predict the accumulated results of varying social conditions.

- USING METHODS OF SOCIAL NETWORKS ANALYSIS TO DEFINE AND QUANTIFY DIMENSIONS OF PUBLIC HEALTH SYSTEMS
  - Sergey Sotnikov, Deborah E Gibbons, and Subhashish Samaddar
  - This study uses social network analysis to create a framework for quantitative evaluation of health partnerships of community health systems. The authors used a combination of case study and social network measurement methods to assess attributes and effects of five public health networks within the same community. They graphed and calculated quantitative measures of network structures, relating them to respondents' perceptions of public health system performance. The five networks operated almost independently, with connections primarily through joint partnerships with insurance providers. The networks varied in form, and their structural attributes were related to perceived public health outcomes. The project also developed a web-based network surveying system to support quantitative evaluation of inter-organizational relationships within public health systems
  - This work was funded by the U.S. Centers for Disease Control and Prevention/Georgia State University Seed Grant Awards in Social and Behavioral Sciences. It has yielded a project report and conference presentations.

Significant Practitioner Experience:

- Partnerships with colleagues at the U.S. Centers for Disease Control and Prevention, developing methods to assess and support public health networks

Academic and Professional Associations:

- Academy of Management

Public Service Activities:

- Various public schools, 1995-1997, to help them identify networking patterns and outcomes.
- City of Atlanta Government, 2002-2003, to help them conduct a survey of employee satisfaction and morale.
- Centers for Disease Control, various public health agencies, 2003-present, to help them map their participant networks and identify better partnering approaches.

Consulting Activities:

- none

Susan K. Heath
Assistant Professor of Logistics and Operations Management
September 2006

Academic Degrees:

- Doctor of Philosophy in Management Science and Information Systems, The University of Texas at Austin, August 2006, Operations Management, "Scheduling Multiple Product Families on Identical Parallel Assembly Lines With Space Constraints in a Lean Production Environment".
- Master of Engineering, Cornell University, May 1997, Operations Research and Industrial Engineering.
- Bachelor of Arts, Cornell University, January 1995, Psychology.

Primary Teaching Areas:

- Simulation, Optimization.

Graduate Teaching Experience

- Naval Postgraduate School, Winter 2007 and Summer 2007.

        - Upcoming presentation at 2007 INFORMS Annual Meeting
- A Review of Applications of the Traveling Salesman Subtour Problem
    - Sponsor: Naval Postgraduate School RIP Program
    - Product: Upcoming presentation at 2007 INFORMS Annual Meeting

Significant Practitioner Experience:

- Senior Business Analyst, Kraft Foods, Inc., 1997 to 2000
    - Supported information systems in a large manufacturing facility
    - Co-lead cross functional team to evaluate and improve all systems support services within Kraft Foods North America; worked with corporate support teams, site support teams and call management center
    - Served as site systems project manager for $1MM product weight control system implementation on the shop floor
    - Performed contractor management on several projects
    - Developed a core support reduction plan, implemented plan, and significantly reduced site support issues and support time spent in factory

Academic and Professional Associations:

- INFORMS member, 2002 to present
- POMS member, 2004 to 2006

Public Service Activities:

- Refereed papers for Interfaces and Naval Research Logistics
- Attended Community Emergency Response Team training, Summer 2007

Consulting Activities:

- None

- David R. Henderson, "How Three Economists Switched from Socialist to Pro-Free Market: An Exploration in Oral History," American Economics Association annual meetings, January 3, 1999, New York, NY.

Research Projects

- Study of the role of economists in ending the draft, 2005.
- Study of the hidden inequality in socialism, 2003-2006.

Significant Practitioner Experience

- 1982-1984: Senior economist for health policy and energy policy, Council of Economic Advisers, White House.
- 1979-1980: Senior Policy Analyst, Cato Institute, San Francisco, California.

Academic and Professional Associations:

Member of American Economic Association (1982 to present) and Mont Pelerin Society (1980 to present.)

Public Service Activities:

- Active in various ad hoc groups to control or limit spending and taxation at local level.
- Regular columnist for www.antiwar.com

Consulting Activities:

Microsoft antitrust case, 2002 to 2003.

Nayantara Hensel
Assistant Professor
September 2004

Academic Degrees:

- Ph.D., Harvard University Graduate School of Arts and Sciences, Applied Economics (Business Economics), June, 2001
- M.A., Harvard University Graduate School of Arts and Sciences, Applied Economics (Business Economics), November, 1999
- B.A., Harvard College, Phi Beta Kappa, Magna cum Laude, Economics, June,1997

Primary Teaching Areas:

- Corporate Finance, Financial Institutions, International Economics, Industrial Organization, International Business Management

Graduate Teaching Experience:

- US Naval Postgraduate School, Graduate School of Business and Public Policy, 2004-present
- Stern School of Business, New York University, 2003-2004

    - Discussant, "The Stock Return Predictability of the European Banking Sector"
- Discussant, "Missions, Market Quality, Recruiter Effort, and Enlistments," Western Economics Association, July, 2005.
- "Sovereignty and Efficiency: The Transformation of Global Banking" Presented at the 5th International CISS Millennium Conference, Salzburg, Austria, June, 2004.
    - Panel chair for "Emerging Trends and the New Economy"

- Panel Chair and Discussant, European Financial Management Association Conference, Basle, Switzerland, June, 2004:
    - Session Chair, Market Microstructure III
    - Discussant, "Modeling Price Pressure in Financial Markets" (Market Microstructure III)
    - Discussant, "Divergence of Opinion and Equity Returns" (Behavioral Finance II)
    - Discussant, "Integrated Volatility and UHF-GARCH Models: A Comparison Using High Frequency Financial Data" (Methodological Issues I)
- "The Impact of Corporate Governance Reform on M&A Activity." Presented at the International Studies Association Conference, Budapest, Hungary, June, 2003. Also served as panel chair.
- "Strategic Management of Networks: Empirical Evidence from European Branch Banking."
    - Presented at the London Business School Strategy Seminar, February, 2002
    - Presented at the University of Tennessee and the Naval Postgraduate School Graduate School of Business in February, 2003.

Research Projects:

- "Economics of Network-Based Industries," Sponsor; US Naval Postgraduate School's Office of Research. September, 2004-September, 2006.
- "An Empirical Analysis of the Patterns in Defense Industry Consolidation and their Subsequent Impact:,"Sponsor: US Naval Postgraduate School Acquisitions Research Program Grant , September 2006- September 2007.

Significant Practitioner Experience:

Senior Manager / Senior Economist, Ernst & Young LLP, New York City (March, 2003-August, 2004)

- Played a leadership role in developing both the bankruptcy litigation practice and the economics litigation advisory practice.
- Served as the primary economist for the 300+ person Investigative and Dispute Resolution Services Group at Ernst & Young, LLP.
- Brought in over $7.2 million dollars in sales during 2003-2004 with various litigation projects involving economics, bankruptcy, and accounting restatement work.
- Worked with Ernst & Young Corporate Finance, LLC in performing valuation work.
- Developed a new methodology for measuring enterprise value of companies with opaque financial statement data through using event studies to reprice stock, repricing debt, and moving the results to earlier periods (for fraudulent conveyance analysis purposes).

Managing Economist, LECG, New York City (2002-2003)

- Played leadership role in the development and growth of the New York City office of this West Coast-based firm. Developed the practice of the New York City office through marketing and client presentations.

- Helped to grow the utilization of this office from one of the least utilized in the 13 office system to one of the most utilized offices.
- Directed research, wrote expert reports, and conducted economic analyses in a variety of projects.

Consulting Economist, National Economic Research Associates (NERA) / Marsh & McLennan, Securities and Finance Practice, New York City (2001-2002)

- Extensive experience in directing research and writing expert reports in breach of contract cases, market efficiency cases, securities valuation cases, 10b-5 securities class actions, mass torts claims valuation cases and bankruptcy cases.

Academic and Professional Associations:

- Program Committee, National Association of Business Economists Conference, San Francisco, CA, September, 2007
- Policy Content Reviewer, NBER
- Reviewer, International Journal of Industrial Organization, Review of Financial Economics, European Financial Management Journal
- Program Committee, European Financial Management Association Annual Meeting, 2004 and 2006.
- Current Member, European Financial Management Association, National Association of Business Economists, Western Economics Association, Academy of Management, and Midwest Economics Association
- Current member, Harvard Faculty Club, Harvard Business School Club of New York, Harvard Club of Boston, Harvard Club of New York City
- Program Committee, Harvard Business School Club of New York, 2002-2003
- Chair, Younger Members Committee, Harvard Club of Boston, 2000-2003

Consulting Activities:

- See under practitioner experience

Susan Page Hocevar
Associate Professor
September 1990

EDUCATION

- Ph.D., Business Administration. University of Southern California, 1989.
- M.A., Educational Psychology and Measurement. Cornell University, 1975.
- B.A., Psychology. University of Rochester, 1970.

PRIMARY TEACHING AREAS

- Organizational Behavior
- Organizational Power, Politics and Conflict Management
- Negotiation and Consensus Building

GRADUATE TEACHING EXPERIENCE

- Graduate School of Business and Public Policy, Naval Postgraduate School, Monterey, CA Associate Professor (7/01-present); Assistant Professor, Department of Systems Management, (7/95 – 7/01). Visiting Assistant (Adjunct) Professor 9/90 - 6/95.
- Center for Executive Education, Naval Postgraduate School, Monterey, CA. Modules on organization design; and negotiation and collaboration for both the Navy Corporate Business Course (NCBC), Navy Intelligence Business Executive Course (NIBEC), and the Executive Business Course (EBC). 2002; 2006-present
- Adjunct Faculty for University of San Francisco's MPA in Managing Nonprofit Organizations teaching statistics and advising thesis research. (11/85-9/90)

TECHNICAL REPORTS

- Thomas, G.F., Hocevar, S.P., Jansen, E. (2006). A Diagnostic Approach to Building Collaborative Capacity in an Interagency Context. NPS Technical Report (NPS-PM-06-026). Naval Postgraduate School. Monterey, CA.
- Hocevar, S.P., Jansen, E.; Thomas, G.F. (2004). Building Collaborative Capacity for Homeland Security. NPS Technical Report (NPS-GSBPP-04-008). Naval Postgraduate School. Monterey, CA.

RESEARCH PROJECTS (2004-2007)

- 1998-PRESENT: Investigator research effort entitled Adaptive Architectures for Command and Control (A2C2). Funded by Office of Naval Research (ONR).

NPS Principal Investigator is Professor William Kemple, GSOIS (Graduate School of Operations and Information Sciences). This research program involves a team of researchers from U. of Connecticut, Michigan State U., Carnegie Mellon U., George Mason U. as well as government and industry members. The focus of this research is on identifying structural design characteristics and processes that facilitate organizational adaptability. Our research team has advised the Chief of Naval Operations's Strategic Studies Groups in their activities related design and adaptation. Published products are presented annually at the Command and Control Research and Technology Symposium. Received funding of approximately $200,000 per year 2004-present.

- 2003-2004: Investigator for project entitled "Interagency Coordination for Homeland Security: Building Flexible, Collaborative Networks." Funded by Department of Justice funded program (through NPS Department of Homeland and Security and Defense) (approx $95,000) Principal Investigator was Professor Gail Thomas, GSBPP. The purpose of this project was to derive a model for collaborative capacity focusing on data gathered from homeland security professionals. The primary product of this effort is the Technical Report published 2004 (cited above).

- FY06 & FY07: Investigator for two research projects related to inter-organizational "Collaborative Capacity." Funded by Acquisition Research Program, Naval Postgraduate School. Principal Investigator is Professor Gail Thomas, GSBPP. The purpose of this project is to develop a conceptual model and instrumentation to assess the collaborative capacity of agencies to work together. To date, we have gathered data from the context of homeland security and defense acquisition. This work is on-going. Funding approximately $90,000 per year.

OTHER SCHOLARLY CONTRIBUTIONS TO DOD (2004-2007)

- 2004 -- I was invited to be a participant at a 3-day workshop on Network-Centric Operations (NCO) conducted at NPS, hosted by the Cebrowski Institute and Center for Executive Education. This event combined formal presentations and workshops in which the participants engaged in ways to advance our understanding of NCO.

- 2005 -- I was invited to be a "peer reviewer" for a three-day workshop for the NATO Code of Best Practice for C2 (Command and Control) Assessment. The purpose of the workshop was for a panel of peer reviewers to examine and critique new C2 concepts developed by the SAS-050 Research Group that was established by NATO in 2003. The product of this work will be published as a revised edition of NATO Code of Best Practice for C2 Assessment in 2006.
- 2006 – I was requested, along with Professor Nancy Roberts to design and conduct a workshop sponsored by the NPS Center for Stability and Reconstruction Studies. Participants in this 5-day workshop included forty

representatives from Non-Government organizations (e.g., International Rescue Committee, Save the Children), Inter-national Organizations (e.g., UN Office for the Coordination of Humanitarian Assistance (UNOCHA), International Organization for Migration), U.S. and international military officers and members of the U.S. Department of State Humanitarian Information unit. The focus of this workshop was to make advances in the challenging domain of inter-organizational information sharing in complex humanitarian emergencies. Conducted 21-25 May, 2006. Technical report in preparation.

- 2007 – I was invited to assist in the design, delivery and facilitation of a "Strategic Communication Summit" convened by VADM Stufflebeem and VADM Ulrich for key members of COMNAVEUR and C6F. In addition to my design and facilitation contributions, I made a presentation on inter-agency collaboration as it relates to strategic communication planning.

PROFESSIONAL ASSOCIATIONS AND ACTIVITIES (2004-present)
Memberships:

- Fellow in the Inter-University Seminar on Armed Forces and Society, 1993-present.
- Member of the National Academy of Management, 1982-present.

Reviewing:

- Journal reviewer for Homeland Security Affairs 2005-present.
- Member of editorial review board for Military Psychology, 2002 to present.

PUBLIC SERVICE ACTIVITIES

CONSULTING ACTIVITIES

Lt Col Bryan J. Hudgens, USAF
Military Lecturer
Air Force Acquisition Representative
Academic Associate, Master of Executive Management Degree
March 2005

Academic Degrees:

- ABD, University of Oklahoma, 2003 (Marketing and Supply Chain Management)
- Air Command and Staff College (Non-residence), Maxwell AFB AL, 2003 (Professional Military Course)
- Intermediate Developmental Education (Residence), University of Oklahoma (Professional Military Education Course, 2000-2003
- Master of Science, Air Force Institute of Technology, 1997 (Contract Management),
- Squadron Officer School (Residence), Maxwell AFB AL, 1995 (Professional Military Education Course)
- Bachelor of Arts, University of Pennsylvania, 1989 (Mathematics)

Primary Teaching Areas:

- Strategic purchasing
- Research methods
- Corporate entrepreneurship
- Operations management
- Acquisition
- Supply chain management

Graduate Teaching Experience

- Lecturer and Director, Graduate Strategic Purchasing Program, Air Force Institute of Technology, 2003-2005

- Military Lecturer; Air Force Acquisition Representative; Academic Associate, Master of Executive Management Program; 2005-Present

Research Projects:

Center for Defense Management Reform (Current):
Customer: Office of the Deputy Chief of Naval Operations (Material Readiness and Logistics)
Topic: Benchmarking Best Practices in Transformation.
Anticipated deliverable: Technical report due in Fall 2006.

Significant Practitioner Experience:

- Sep 1989 – Feb 1992, Contract Management Officer, 2d Contracting Squadron, Barksdale AFB LA
- Feb 1992 – Mar 1993, Chief, Construction Flight, 2d Contracting Squadron, Barksdale AFB LA
- Sep 1992 – Feb 1993, Chief of Contracting, Riyadh Air Base, and Contracting Officer, HQ Joint Task Force Southwest Asia (JTF-SWA/J4-C)
- Apr 1993 – Apr 1996, Contract Administrator and Administrative Contracting Officer, DCMA San Antonio, Austin Residency, Defense Contract Management Command, Defense Logistics Agency, Austin TX
- May 1996 – Sep 1997, Student, Graduate Contract Management Program, Air Force Institute of Technology, Wright-Patterson AFB OH
- Sep 1997 – Jul 2000, Contract Negotiator, Procuring Contracting Officer, and Chief, Management Operations Division, F-16 System Program Office, Wright-Patterson AFB OH
- Jul 2000 – Aug 2003, Student, Marketing and Supply Chain Management, University of Oklahoma, Norman OK
- Aug 2003 – Mar 2005, Director, Graduate Strategic Purchasing Program, Air Force Institute of Technology, Wright-Patterson AFB OH
- Present, Military Lecturer; AF Acquisition Representative; Director, Master of Executive Management Program, Naval Postgraduate School, Monterey, CA
- Military awards include:
    - Meritorious Service Medal
    - Joint Service Commendation Medal
    - Air Force Commendation Medal x 2

Academic and Professional Associations:

- Level III Certification in Contracting, Department of Defense Acquisition Professional Development Program
- Senior Air Force Acquisition Badge
- Member, Institute for Supply Management
- Lifetime Member, Air Force Association

Public Service Activities:

- Reviewer, Journal of Business Logistics (2001-2003)
- Reviewer, Southern Management Association (2002)
- Invited Presentation. Hudgens, B.J. (2004). Trends in Global Purchasing and Supply Management. *Presentation to the Institute for Supply Management*, Dayton, OH, February 2004.

Consulting Activities:

- Center for Defense Management Reform (see "Research Projects" above)

Thomas J. Hughes, VADM, USN (ret.)
Distinguished Visiting Professor
Conrad Chair for Financial Management
July 2007

Academic Degrees:

- MS in Operations Analysis, NPS Monterey, 31 May 1962
- BS in Applied Sciences, Harvard University, 5 June 1946

Primary Teaching Areas:

- MBA, Financial Management

Graduate Teaching Experience:

- GSBPP, NPS, 8 Sept 2002 to present.
- Acting Dean, GSBPP NPS, 1 July 2005 to 4 October 2005

Publications, Papers, Presentations:

- None

Research Projects:

- None

Significant Practitioner Experience:

- 43+ years active duty in U.S. Navy (1 March 1944 to 1 August 1987)
- At rank VADM, USN 4 years
- President/CEO Navy Federal Credit Union (2 August 1987 to 19 April 1996)

Academic and Professional Associations:

- MORS, ASMC, ASNE, Credit Union Trade Associations NFCU, and CUNA; AASCB Conference

Public Service Activities:

- Episcopal Church "sideman" and collector

Consulting Activities:

- None

Recent Awards at NPS:

- NPS Distinguished Alumni Award
- Navy Meritorious Civilian Service Award

Becky D'Addea Jones
Lecturer
June 2007

Academic Degrees:

- MBA - Marketing, Golden Gate University (1998)
- MA Chapman University (1990)
- BS Arizona State University (1978)

GRADUATE TEACHING EXPERIENCE

- Naval Postgraduate School, Marketing Lecturer (2002 – present)
- Golden Gate University, Business & Marketing Lecturer (1998 - 2003)

Significant Practitioner Experience:

- Whirlpool Corporation/Integrated Home Solutions (2001 – 2002)
  National Field Marketing Manager - Internet enabled appliances (e-homes)
- Cisco Systems - 2000 to 2001
- Channel Development Manager
  Develop a channel with homebuilders and land developers for the Cisco vision of the Internet lifestyle. Working with homebuilders and land developers, create a program whereby Cisco leverages their strong ecosystem of partners towards new "internet home" developments.
- ReplayTV - Feb. 2000 to July 2000 Director of Marketing Communications
  Direct the creation of strategic marketing plans, collateral materials & associated marketing schedules and budgets. Determine messaging and marketing requirements for the consumer markets.
- SONY Electronic Publishing Services - Feb. 1996 to May 24, 1999
  - Director of Marketing (Electronic Publishing Services for CD-ROM-DVD-ROM, Audio & Video)
  - Established and enhanced customer relationships across market segments. Increased company's presence from startup position in the software services industry to becoming the premier provider for electronic publishing services through extensive use of Internet services. Initiated company's web presence & established company's market position through tradeshows, direct & relationship marketing/selling, and advertising activities. Identified target audience and prospected for new customers while maintaining and enhancing services to existing client base. Continually increased project volume and annual revenues over a 3-year period.
- The McGraw-Hill Companies - April 1992 to Feb. 1996
  Business Unit Manager/Vice President, Product Development,
- McGraw-Hill School Systems (9-93 – 2-96)
  Managed and directed the activities of the Monterey business unit which included educational software development, usability/human factors engineering, technical support, technical documentation, quality assurance, product marketing, training and network administration, budget and personnel administration. Business Unit

contributions included the two fastest growing market opportunities; classroom products and library automation, representing 40% of the company's overall revenue. Additional product offerings included student-assessment and instructional-management software for Windows and Macintosh platforms.

- CTB/McGraw-Hill (Columbia Software) (4-92 – 9-93)
  Directed and managed the activities and staff for major accounts, marketing, product management, technical support, training, and remote operations for educational administrative software. Created & managed P&L of 6 product lines, 11 cost center budgets and $18M annual revenue. Established and maintained standards for product management and customer satisfaction. Developed proposals/bids for state and school district software contracts. Promoted to V.P. Product Development.

Lawrence R. Jones
Wagner Professor of Public Management
September 1987

Academic Degrees:

- Ph.D University of California, Berkeley, Doctor of Philosophy. 1977
  Field: Budgeting and Finance in Higher Education, Dissertation
  Topic: Critical Mass Planning and Budgeting
- M.A. University of California, Berkeley, Master of Arts in Public Affairs, 1971
- B.A. Stanford University, Bachelor of Arts in Political Science, American Government and International Relations, 1967

Primary Teaching Areas:

- Public Budgeting and Financial Management;
- Budgeting and Financial Management for National Defense

Graduate Teaching Experience:

- Naval Postgraduate School, 1987 to present
- University of New Mexico, 1985-1987
- University of Oregon, 1979-1985

Publications, Papers, Presentations:

Research Projects:

- Budgeting for National Defense Acquisition (2005-2007)
- Capital Budgeting for the Federal Government and National Defense (2005-2007)
- Management, Budgeting and Control of the Navy Flight Hour Program (2003-2008)

Significant Practitioner Experience:

1977 Director of Research, California Student Aid Commission
State of California, Sacramento, California
1975-1977 Budget and Academic Planning Director
California Postsecondary Education Commission
State of California, Sacramento, California
1973-1975 Budget and Planning Officer, Office of the Chancellor
University of California, Berkeley
1971-1973 Budget Analyst and Management Auditor, Department of Finance, Budget Division, State of California, Sacramento, California
1967-1968 Sales and Marketing Manager, Kaiser Steel Corporation, Los Angeles, California
1963-1964 & 1967 Production Line Engineer, Kilo Engineering, Inc., La Verne, California

Academic and Professional Associations:

- Recipient of the Aaron Wildavsky Award for Lifetime Achievement in the Field of Public Budgeting and Finance from the American Association for Budgeting and Financial Management, Washington, DC, November, 2005.
- Member, American Society for Military Comptrollers (1990-2006)
- President, International Public Management Network (1995-2007) (1150 members from more than 90 nations)
- National Chairman, Section on International and Comparative Administration, American Society for Public Administration (2005-2007)
- Chairman, International Policy Issues Steering Committee, Association for Budgeting and Financial Management, American Society for Public Administration (900 members) (2006-2007)

Public Service Activities:

Invited addresses, lectures and visiting scholar residencies: Visiting Research Scholar at: Asia Pacific Governance Institute (2006), All Souls' College, Oxford University (2002), the London School of Economics (2002), JFK School of Government, Harvard University (2001), National Defense University, Taipei, Taiwan (2002), Department of Public Administration, Government of Italy, Rome (2001 and 2000) Thammasat University, Bangkok, Thailand (2001), Asian Development Bank, the Philippines (2001), ENAP, Government of Brazil, Brasilia (2001), Government of Chile, Santiago (2001), Peoples' Friendship University, Moscow, Russia (2000), University of St. Petersburg, Russia (2000), University of Siena, Italy (2000), University Ca'Forcari, Venice (2000), University of Southern Denmark (2000), The Berlin Science Center (2000), Macquarie University Graduate School of Business, Sydney, Australia (2000), University of St. Gallen, Switzerland (1999), University of Geneva, (1996), Fudan University, Shanghai, PRC (1980).

Consulting Activities:

- President, Management and Policy Associates, Inc. Monterey, California and Portland, Oregon, Research and consulting for public private sector organizations

- 2005-2006 Research Consultant, Economic Development and Regional Cooperation, Asian Development Bank
- Evaluation Consultant, The Ford Foundation, International Division, Asia and the Pacific, New York City, New York, Evaluation of Foundation funded programs

Keebom Kang
Associate Professor
July 1988

Academic Degrees:

- Ph.D. (1984): Industrial Engineering, Purdue University
  Ph.D. Dissertation: Confidence Interval Estimation via Batch Means and Time Series Modeling
- M.S. (1979): Operations Research, University of Texas at Austin
- B.S. (1976): Industrial Engineering, Seoul National University

.

Primary Teaching Areas:

- Logistics Engineering, Modeling and Simulation of Military Systems

Graduate Teaching Experience

Naval Postgraduate School (1988-present)

- Taught graduate-level courses: Simulation Modeling and Analysis, Logistics Engineering, Business Logistics, Operations Research, Probability, Statistics
- Distance Learning (VTC) courses in Simulation Modeling & Analysis
- Thesis Supervision: (more than 100 theses as an advisor or associate advisor)

University of Miami (1983-1988)

- Taught graduate-level Operations Research courses, and Executive MBA Management Science courses.

Publications, Papers, Presentations:

- Kang, K., Sanchez, S., and Doerr, K., "A Decision Design of Experiments Approach to Readiness Risk Analysis for Performance-Based Logistics, Naval Postgraduate School Technical Report, NPS-LM-06-037, Sep 2006.
- Kang, K., Doerr, K., Apte, U. and Boudreau, M., "A Decision Support Model for Valuing Proposed Improvements in Component Reliability," *Proceeding of the Second Defense Acquisition Research*, Monterey, CA, May 2005
  (Also appeared as Naval Postgraduate School Technical Report, NPS-LM-05-008, June 2005.)

Chapters in Books

- Kang, K. and R. J. Roland (1999), Military Simulation, *Handbook of Simulation* (ed. J. Banks), Chapter 19, John Wiley.

Presentations:

- "On Budget Allocation to Increase Operational Availability and Reduce Readiness Risk through Improvements in Weapon Systems," Third Defense Acquisition Research Conference, Monterey, CA May 2006
- "Metrics and Performance Evaluation in Performance Based Logistics," Workshop at the Future Naval Plans & Requirements West Conference, San Diego, CA October 2005.
- "A Decision Support Model for Valuing Proposed Improvements in Component Reliability," *Second Defense Acquisition Research*, Monterey, CA, May 2005

Research Projects:

- Co Principal Investigator, On Budget Allocation to Increase Operational Availability and Reduce Readiness Risk Through Improvements in Weapon Systems Logistics, PEO SHIPS and PEO IWS via NPS Acquisition Research, Funding Level: $80,000, (2005-2006).
- Co Principal Investigator, A Decision Support Model for Valuing Proposed Improvements in Component Reliability, PEO SHIPS and PEO IWS via NPS Acquisition Research, Funding Level: $80,000, (2004-2005).
- Principal Investigator, Military transportation network analysis, sponsored by the U.S. Transportation Command (USTRANSCOM), Funding Level: $30,000, (2003).

Significant Practitioner Experience:

- None.

Academic and Professional Associations:

- Member of INFORMS (Institute for Operations Research and Management Science) and IIE (Institute of Industrial Engineering)
- Associate Editor for *Naval Research Logistics* (2006 – present)
- Associate Editor of *IMA Journal of Mathematics for Management Science* (2001-2003)
- Editorial Board member, *IIE Transactions* (1996-2003)
- Program Chair for the Winter Simulation Conference 2000
- Co-Editor of the *Proceedings of the 1995 Winter Simulation Conference*
- Transportation and Logistics Track Coordinator for the Winter Simulation Conference, 2005
- Referee for
  Operations Research, IIE Transactions, Management Science, Simulation,

  Operations Research Letters, European Journal of Operational Research,

  Naval Logistics Research, International Journal of Computer Simulation,

  Computers and Industrial Engineering, Communications of ACM,

  ACM Transactions of Modelling and Computer Simulation

Public Service Activities:

- None

Consulting Activities:

Driscoll's, Inc.: Developed a simulation model and helped them improve the logistics processes (November 05 – February 06)

Cynthia L. King, Ph.D.
Assistant Professor
August 2007

Academic Degrees:

- Ph.D., Communication, University of Washington, 2005, Rhetorical Communication
    - Dissertation: "Examining proper communicative conduct in the discursive construction of racialized others: An analysis of perspectives in the case of Saul Bellow and Brent Staples."
- M.S., Technical Communication, University of Washington, 1995, Management
- B.A., English, University of Washington, 1992, Expository Writing

Primary Teaching Areas:

- Management Communication
- Public speaking
- Rhetorical criticism
- Communication Theory
- Technical Communication
- Interviewing
- Interpersonal Communication

Graduate Teaching Experience

- Communication for Managers, Naval Postgraduate School, 2004-present
- Theoretical Dimensions of Technical Communication, University of Washington 2001-2003

Publications, Papers, Presentations:

Refereed Journal Articles

- Brook, D., & King, C. (2007). "Civil service reform as national security: The Homeland Security Act of 2002." *Public Administration Review 67*(3). 399-407.
- Thomas, G., King, C. (2006). "Reconceptualizing email overload." *Journal of Business and Technical Communication.*

Book Chapters

- Brook, D., & King, C. (forthcoming, 2007). "The Department of Homeland Security: A case study in legislating innovation in Human Capital Management." *Innovations in Human Capital Management* (Hanna Sistare & Terry F. Buss, Eds.) New York: M.E. Sharpe.

Invited Presentations

- Thomas, G. & King, C. (2007). "Reconceptualizing email overload." Invited speakers for the annual meeting of INFORMS Computing Society, Seattle, WA.

- Brook, D., & King, C. (2006). "Legislating civil service reform: The Homeland Security Act of 2002." Keynote speakers for the *Standing Panel on Public Service* Meeting, presented at the Fall Meeting of the National Academy of Public Administration, Washington DC.

Conference Presentations

- Salem, A., King, C. (2007). "Beyond ROI: UCD as a catalyst for organizational change—Results from the workshop." Paper presented at BayCHI Usability Engineering Birds-of-a-feather meeting, Mountain View, CA.
- Salem, A., King, C., Boyd, S., Kleimann, S., Simonds, K., Rose, E. (2007). "Beyond ROI: UCD as a catalyst for organizational change." Workshop presented at the annual conference of the Usability Professionals Association, Austin, TX.
- King, C. (2006). "Reconceptualizing communication strategy: A rhetorical perspective." Paper presented at the annual conference of the Association for Business Communication, San Antonio, TX.
- Pope-Ruark, R., King, C., Williams, L. (2006). "Rhetoric is not a dirty word: A history of rhetorical scholarship in the Journal of Business Communication and Business Communication Quarterly. Paper presented at the annual conference of the Association for Business Communication, San Antonio, TX.
- Thomas, G., King, C. (2006). "Reconceptualizing e-mail overload." Paper presented at the annual conference of the Association for Business Communication, San Antonio, TX.
- King, C., Dubinsky, J., Kryder, L., Vielhaber, M., Martin, J. (2005). "Exploring the significance of rhetorical theory for business communication research and teaching." Paper presented at the annual conference of the *Association for Business Communication*, Irvine, CA.
- King, C. (2005). "Subduing the Chaos of Disorganized Documents: Teaching "Reverse Outlining" as a Method for Editing." Paper presented at the annual conference of the *Association for Business Communication*, Irvine, CA.
- May, G., King, C., & Vielhaber, M. (2005). "Consulting demystified: Preliminary results of research." Paper presented at the annual conference of the *Association for Business Communication*, Irvine, CA.
- King, C. (2004). "Discursively constructing racialized others: An analysis of Saul Bellow's communicative conduct regarding black characters in Humboldt's Gift and Mr. Sammler's Planet." Paper presented at annual conference of the *National Communication Association convention*, Chicago, IL.
- King, C., & Salem, A. (2003). "Dialogic probing: Collaborating versus information retrieval in interviews." Paper presented at the President's Panel at the annual conference of the *Northwest Communication Association*, Ceour d'Alene, ID.
- King, C. (2003). "The importance of method in phronetic social science: An analysis and response to a critique of Philipsen's empirical approach in case study research." Paper presented at annual conference of the *Western States Communication Association*, Salt Lake City, UT.

Research Projects:

- Project: *History of Enactment of the National Security Personnel System*. Sponsored by the Under Secretary of Defense (Personnel & Readiness). Funded April 2007-December 2007.
    - Technical Report forthcoming
- Project: *Effective Communication Practices During Organizational Transformation: A Benchmarking Study of the U.S. Automobile Industry and U.S. Naval Aviation Enterprise.* Sponsored by the U.S. Navy, Readiness and Logistics, Sea Enterprise. Funded October 2006-July 2007.
    - Technical Report, NPS-CDMR-GM-07-001. "Effective Communication Practices During Organizational Transformation: A Benchmarking Study of the U.S. Automobile Industry and U.S. Naval Aviation Enterprise."
- Project: *Legislating Civil Service Reform: The Homeland Security Act of 2002.* Jointly sponsored by the Office of Personnel Management, Washington D.C. and the Center for Defense Management Reform, Naval Postgraduate School. Funded. July 2005 – June 2006.
    - Technical Report, NPS-CDMR-HR-06-006. "Legislating Civil Service Reform: The Homeland Security Act of 2002.
- Project: *Violence Involving Sailors: Approaches for reducing the rates of violence*. Sponsored by Commander, Third Fleet. Unfunded. May 2005-May 2006.
    - Technical Report, NPS-GSBPP-06-008. "Violence Involving Sailors: Approaches for reducing the rates of violence."

Significant Practitioner Experience:

- Consultant, SalemSystems, Inc., Seattle, WA (1999-2005)
    - Executive coaching, communication training, marketing communication, user-centered design, and product research and testing for various information technology clients.
- Director of Business Development, Chase Bobko, Inc., Seattle, WA (1997-1999)
    - Responsible for revenue generation, sales management, and marketing and branding consultation for software development firm.
- Director of Information Design, Chase Bobko, Inc., Seattle, WA (1996-1997)
    - Responsible for research and development of design and architecture strategies of information systems, and managed team of designers for software development firm.
- Director of Training, Sakson & Taylor, Inc., Seattle, WA (1995-1996)
    - Responsible for training and development of over 1000 contract technical communication professionals.
- Technical Writer/Editor, CKM Services, Seattle, WA (1993-1996)
    - Technical writing, editing, and marketing for consulting civil and structural engineering firms
- Czech and Slovak Cryptologic Linguist, U.S. Air Force (1983-1988)

Academic and Professional Associations:

- Founder/Coordinator, Rhetoric Special Interest Group, Association for Business Communication (2006/2007)

- Board member, Association for Professional Communication Consultants (2003-2007)
- Web Manager, Association for Professional Communication Consultants (2005-2006)
- Editorial board member, Kaleidoscope: A Graduate Journal of Qualitative Research, (2003/2004)
- Online forum coordinator, Association for Professional Communication Consultants (2003)

Public Service Activities:

- Editorial review board member, Journal of Business Communication (2005-2007)
- Editorial reviewer, Organization Science, (2006-2007)

Consulting Activities:

- Bellevue Public Utilities, Bellevue, WA: Consulted and delivered training on "Writing for the Web: Designing for Use, Accessibility, and Information Retrieval," 2004
- State of Washington, Labor & Industries, Olympia, WA: Consulted and delivered training on "The *Active Interview* as an Interviewing Technique in Product Design Interviews," 2003

Alan Laverson
Assistant Professor of Economics and Public Policy
September 2006

Academic Degrees:

- Ph.D., Policy Analysis, RAND Graduate School, September 1999, Policy Analysis, *A Study of Overhead Rate Behavior at a U.S. Air Force Base in the Context of A-76 Competition*
- M.S., RAND Graduate School, September 1999, Policy Analysis
- M.B.A., Oklahoma City University, May 1989, Business Administration
- M.S., University of Maryland, May 1985, Computer Science
- B.A., University of Maryland, December 1981, Economics

Primary Teaching Areas:

- Finance

Graduate Teaching Experience:

- Naval Postgraduate School, September 2006 - Present

Publications, Papers, Presentations:

- *A Study of Overhead Rate Behavior at a U.S. Air Force Base in the Context of A-76 Competitions*, RAND, 2000.
- *An Evaluation of Jump-Ahead Techniques in Menu Selection*, Behavior and Information Technology, Vol. 6, No. 2, 1987.

Research Projects:

- An Empirical Analysis of Submarine Deployment Costs and Cost Drivers; sponsored and partially funded by the Comptroller - SUBPAC; research product expected to be a probabilistic budgeting model and a published article; Mar 2007 – Dec 2007.
- Review of Lead Systems Integrator (LSI) Roles in the Army's Future Combat System and the Coast Guard's Deep Water program; sponsored and funded by the PEO Ground Combat Systems; research product expected to be a technical report; Feb 2007 – Feb 2008.

Significant Practitioner Experience:

- **Senior Financial Economist,** Asst. Secretary of the Air Force for Financial Management (SAF/FM) (Pentagon), 1999-2002
  - Financial/economic advisor to SAF/FM, Asst. Secretary of the Air Force for Acquisition (SAF/AQ), and Asst. Secretary of the Air Force for Installations, Environment, and Logistics (AF/IL).
  - Developed/defended/critiqued financial analyses supporting Air Force acquisition programs for SAF/FM and SAF/AQ.
  - Led financial analysis division of negotiating team on $28 billion KC-767 aircraft acquisition and maintenance support program.

- Advised SAF/FM and AF/IL on privatization initiatives (e.g., military family housing, utilities, etc.), pilot and special projects.
- Worked with investment bankers to raise low-cost private funds for government lease and privatization programs.
- Ensured projects complied with all financial policies and regulatory requirements.
- Performed cost-benefit analyses for programs, including determining program trade-offs, to determine best alternative.
- Developed and used mathematical models to analyze program lifecycle costs.
- Conducted research/analysis on key topics such as aerospace company financial health, military health care costs, and special projects.

- **Research Fellow,** RAND (Santa Monica, CA), 1996-1999
  - Researched Air Force base overhead rate behavior as base operating support activities are outsourced.
  - Researched various military acquisition reform topics.
  - Researched viability of various reusable space launch systems.
  - Researched criteria to be used to allocate national park resources to maximize visitor utility.

- **Economist,** Economic Research Service, U.S. Dept. of Agriculture, (Washington, DC), 1980-1985
  - On development and maintenance team of one of the largest working econometric models in the world, the Grains-Oilseeds-Livestock (GOL) model, to forecast worldwide supply/demand of agricultural products.
  - Designed, developed and applied software to perform agricultural economic research.

Academic and Professional Associations:

- Western Economic Association International (WEAI)
- American Society of Military Comptrollers (ASMC)
- Institute of Electrical and Electronics Engineers (IEEE)
- Association for Computing Machinery (ACM)
- Armed Forces Communications and Electronics Association (AFCEA) International
- Air Force Association (AFA)

Public Service Activities:

- Volunteer, Carmel Bach Music Festival
- Volunteer, Special Olympics of Northern California

Consulting Activities:

- Develop a more accurate method of predicting and allocating the annual operating and repair budget for submarines; Comptroller - SUBPAC; Mar 2007 – Dec 2007.

- Evaluate alternative production and acquisition tools for Spin Out 1 of the Future Combat System and recommend most promising strategies; PEO Ground Combat Systems; Feb 2007 - Feb 2008.

Ira Lewis
Associate Professor of Logistics
September 1998

Academic Degrees:

- PhD in Business (Logistics and Operations Management), Arizona State University, 1992
- MBA, University of Ottawa, 1982
- BA (Geography), University of Ottawa, 1980

Primary Teaching Areas:

- Logistics, Transportation, Operations Management

Graduate Teaching Experience

- Naval Postgraduate School, MBA and EMBA programs, 1998 to present

Publications, Papers, Presentations:

Refereed Publications 2004—2007

Ira Lewis and Alex Talalayevsky, "Improving the Interorganizational Supply Chain through Optimization of Information Flows," *Journal of Enterprise Information Management*, 17(3), 2004, 229-237.

Ira Lewis, "Analysis of Alternative Institutional Arrangements for Reform of U.S. Air Traffic Control," *International Public Management Journal*, 7(3), 2004, 385-414.

Ira Lewis and Roxanne Zolin, "The Public to Private Continuum Measure and the Role of Stakeholder Boards as a Proxy for Markets in the Governance of Air Navigation Services," *International Public Management Review*, 5(2), 2005, 52-77.

Ira Lewis, “Analysis of Alternative Institutional Arrangements for Reform of U.S. Air Traffic Control,” *International Public Management Journal*, 7(3), 2004, 385-414.

Research Projects:

During 2005-2007, four research projects were funded by the NPS Acquisition Research Program: Performance Based Logistics, Logistics Impact of Evolutionary Acquisition, Gap Analysis in Acquisition, and US-EU Defense Industrial Relations.

Significant Practitioner Experience:

Internal Audit Officer, Program Evaluation Officer, Program Analyst, Department of National Defence, Ottawa, 1982-1998.

Academic and Professional Associations:

INFORMS, American Society for Transportation and Logistics

Public Service Activities:

Editorial Board Member of *Transportation Journal*, *Acquisition Review Journal* and *Journal of Public Procurement*.

Consulting Activities:

None

David F. Matthews
Senior Lecturer
June 1994

Academic Degrees:

- Master's Degree, Middle Tennessee State University, January 1974, Macro Sociology.
- Bachelor's Degree, Vanderbilt University, June 1966, History and Political Science.

Primary Teaching Areas:

- Program Management, Defense Systems Acquisition, and Acquisition Logistics.

Graduate Teaching Experience:

- Naval Postgraduate school, June 1994 to date.

Publications, Papers, Presentations:

- NPS-PM-04-017 "The New Joint Capabilities Integration Development System (JCIDS) and Its Potential Impacts upon Defense Program Managers," 30 December 2004.
- NPS-GSBPP-05-002 "The New Joint Capabilities Integration Development System (JCIDS) and Its Potential Impacts upon Defense Program Managers," 04 March 2005.
- Presentation to 2nd Annual NPS Acquisition Symposium May 2005. "The New Joint Capabilities Integration Development System (JCIDS) and Its Potential Impacts upon Defense Program Managers."

Research Projects: None

Jerry McCaffery
Professor of Public Budgeting
August 1984

Academic Degrees:

- Doctor of Philosophy in Political Science, University of Wisconsin, Madison, 1972, Public Administration. The Politics of Tax Exemption.
- Master of Arts in Political Science, University of Wisconsin, Madison, 1969.
- Bachelor of Science, University of Wisconsin, Madison. 1959. History and English.

Primary Teaching Areas:

- Public Budgeting

Graduate Teaching Experience

- Professor of Public and Environmental Affairs, Indiana University, Bloomington Indiana, April, 1982-Aug.1984.
- Visiting Associate Professor and holder of the Goudy Chair in Public Administration, Willamette University, January to May, 1981.
- Associate Professor, School of Public and Environmental Affairs, Indiana University, Bloomington, 1975-1982.
- Assistant Professor, Department of Political Science, University of Georgia. Sept. 1972 to August 1975.

Publications :

Books:

- Budget Decision Making for Defense with L. R. Jones. Greenwhich, CN: Information Age Publishing. 2004: 476 pages.
- Budgeting and Financial Management in the Federal Government. With L. R. Jones. Greenwhich, CN: Information Age Publishing. 2001. 472 pages.

Journal Articles

- Jerry L. McCaffery and L. R. Jones, "Reform of Program Budgeting in the Department of Defense." International Public Management Review, Vol. 6, Issue 2, 2005: 141-176. www.ipmr.net

Stephen L. Mehay
Professor of Economics
Initial date of appointment at NPS: 1985

Academic Degrees:

- Ph.D., UCLA, Economics, 1973.
- M.A., University of Illinois, Economics,1967
- A.B., Indiana University, 1965, Economics.

Primary Teaching Areas:

- Labor Economics, Applied Manpower Analysis, Econometrics, Cost-Benefit Analysis

Graduate Teaching Experience

- Labor Economics, Applied Manpower Analysis, Econometrics, Cost-Benefit Analysis

Publications, Papers, Presentations:

Journal Articles

- "Workplace Drug Prevention Programs: Does Zero Tolerance Work?" *Applied Economics*, forthcoming 2006. (with N. Webb).

John E. Mutty
Senior Lecturer
July 1995

Academic Degrees

- Master of Science, The George Washington University, 1975, Finance
- Bachelor of Science, US Naval Academy, 1967, Mechanical Engineering

Primary Teaching Areas

- DoD Financial Management
- DoN Financial Management
- Public Policy

Graduate Teaching Experience

- Naval Postgraduate School, 1995 to Present

Publications, Papers, Presentations

Refereed Journal Article

- Doerr, K.H, Gates, W.R., and Mutty, J.E., A hybrid approach to the valuation of RFID/MEMS technology applied to ordnance inventory, International Journal of Production Economics.(Accepted for publication, March 06)

Book Chapter

- McCaffery, Jerry and Mutty, John E., The Hidden Process of Budget Execution, Journal of Public Budgeting, Accounting & Financial Management, Summer 1999

Technical Report

- Doerr, K.H, Gates, W.R., and Mutty, J.E., A Hybrid Approach to the Valuation of RFID/MEMS Technology Applied to Ordnance Inventory, Naval Postgraduate School, November 2005

Conference Presentation

- Mutty, John E. and Rendon, Rene: DoD Contract Termination Liability: An Analysis of Special Termination Cost Clause (STCC) at the 4th Annual Research Symposium, Monterey CA., May 2007

Research Projects

- Special Termination Cost Clauses, Funded, OUSD, Acquisition, Technology and Logistics, 2006 (With Rendon, Rene)
- Advanced Technology Ordnance Surveillance, Funded, Naval Surface Warfare Center, 2003 (With, Gates, William R, and Doerr, Kenneth H.)

Significant Practitioner Experience

- Comptroller, Naval Air Systems Command, 1990-1994, responsible for all aspects of financial management for a multibillion dollar budget

- Deputy Director, Investment and Development Division, Office of Budget, Assistant Secretary of the Navy, (Financial Management and Comptroller); 1992-1994, Responsible for all investment, military construction, and research and development appropriations for the Department of the Navy.

Academic and Professional Associations

- Member, American Society of Military Comptrollers

Public Service Activities

- Course Director, Big Sur International Marathon, 1997-Present
- Executive Board Member , Big Sur International Marathon, 2005-Present

Brad R. Naegle
Senior Lecturer
August 2000

Academic Degrees

- M.S., Naval Postgraduate School, 1994, Management (System Acquisition Management)
- B.S., Weber State University, 1977, Economics (Decision Theory)

Military Schools

- US Army Command and General Staff College, 1990
- US Army Combined Arms and Services Staff School, 1984

Primary Teaching Areas

- Acquisition, Contracting, Project Management and System Acquisition Logistics Teaching Experience, Naval Postgraduate School 1997- Present
- Defense Acquisition University 1997 – 1999
  Advisor for over 50 theses/MBA Projects 1997 – Present

Courses Taught

- MN 3221 Principles of Acquisition and Program Management – 1 (2-1)
- MN 3222 Principles of Acquisition and Program Management – 2 (3-2)
- MN 3331 Principles of Acquisition and Program Management (5-1)
- MN 4307 Program Management, Policy and Control (4-0)
- MN 2303 Seminar for Program Management (0-3)
- MN 4366 Program Leadership, Management, Policy and Control (4-0)
- MN 3309 Acquisition of Embedded Software Intensive Weapon Systems (4-1)
- MN 3361 Advanced Acquisition Program – Software Acquisition Management (2-0)
- MN 3363 Advanced Acquisition Program – Production & Quality Management (2-0)
- MN 4602 Test & Evaluation Management

Publications

- Boudreau, M. W. and Naegle, B. R., (2005). *Total Ownership Cost Considerations in Key Performance Parameters and Beyond.* Defense Acquisition Review Journal, Vol. 12, No. 1. (February/March 2005, Communities of Practice Supplemental Edition), pp.108-119.

- Naegle, B. R., (2005). *Developing System Software Requirements and Performance Specification Development Supporting Open Systems Architecture.* NPS-06-001 (15 November 2005) Sponsored Research Project for US Navy Program Executive Officer for Integrated Weapon Systems (PEO-IWS).

- Naegle, B. R., (2006). *Software Architecture: Managing Design for Achieving Warfighter Capability*. (17 April 2007) Sponsored Research Working Paper Series for US Navy Program Executive Officer for Integrated Weapon Systems (PEO-IWS).

Significant Practitioner Experience

- U.S. Army, Program Executive Office for Tactical Wheeled Vehicles, Product Manager for Tactical Wheeled Vehicle Remanufacture Programs, Deputy Project Manager for Light Tactical Vehicles, program management, human resources management, financial management, systems engineering management, technical management, contracting, test management, risk management, and system automation management, 1994 - 97.
- U.S. Army, 7th Infantry Division, Fort Ord, California, Division Materiel Management Officer, Chief of Division Materiel Management Center (DMMC), logistics management, human resources management, training management, materiel readiness, aviation maintenance, logistics automation management, financial management, and supply chain management, 1990 - 93.
- U.S. Army, 34th Support Group, Pusan Korea, Director of Operations, Plans & Security, Area VII, Korea, operations management, intelligence, training management, human resources management, Korean Military Forces liaison, Korean National Police Liaison, Non-combatant Evacuation Operations (NEO), port operations, and security operations, 1987 - 89.
- U.S. Army, Army Development and Deployment Agency (ADEA), Fort Lewis Washington, Test Program Manager, Operational Test Manager, Chief of Appraisals Branch, human resources management, operational test manager, test schedule manager, contracting officer's technical representative (COTR), live and simulated testing, combat warfare, 1984 - 87.
- Acquisition and Program Management Qualifications:
    - Program Management: Level III Certified
    - Contract Management: Level II Certified
    - Acquisition Logistics: Level III Certified
    - Test & Evaluation: Level II Certified
    - Systems Engineering: Level II Certified
    - Software Acquisition Management: Level II Certified

Professional Service

- Academic Associate for Program Management Curricula (816 Resident & 836 Distance Learning)
- Developer and Program Manager, NPS Advanced Acquisition Program (AAP)

- Course Coordinator for MN4366, MN3309, MN3361 and MN3331
- Served on Academic Awards Committee, 1997 – 2005
- Led the GSBPP Reimbursable Fund Management Redesign Committee, 2001 – 2002
- Served on the GSBPP Dean's Offsite Planning Committee, 2002
- 836 & 835 Curricula Evaluation Committee, 2001 – 2002
- Senior Army representative, 1998 – 2000

Public Service

City of Pacific Grove Youth Sports Program Volunteer; 97-present

Consulting: None

CDR Richard M. Nalwasky
Military Lecturer, GSBPP
June 2007

Academic Degrees:

- Name of doctoral degree - None.
- Name of master's degree – MBA, NPS, December 2003, 815 Acquisition and Contract Management.
- Name of bachelor's degree – MS, Penn State University, 1990, Metallurgical Engineering.

Primary Teaching Areas:

- Contracting, Program Management

Graduate Teaching Experience

- None prior to NPS.

Publications, Papers, Presentations:

- List all articles, books, monographs, manuals, reports or other published material published in the self-study year and the three preceding years (2004-2007) - None.
- Additionally include in the list significant publications from earlier years (2003 or earlier) - None.
- List Conference presentations and other significant presentations during the self-study year and the three preceding years (2004-2007) - None.

Research Projects:

- Research projects undertaken in the self-study year and three preceding years (2004-2007). Note sponsors, funded or unfunded, research products and dates.

Significant Practitioner Experience:

- Identify significant practitioner experience, with organizations, titles, dates and duties:
    - Contracting Officer, Naval Air Systems Command, Jan 2004 – Jun 2007.
    - Contingency Contracting Officer, Coalition Provisional Authority, Mar – Sep 2004.

Academic and Professional Associations:

- Defense Acquisition Corps.

Public Service Activities:

- None.

Consulting Activities:

- None.

Walter E. Owen
Senior Lecturer
November 1995

Academic Degrees:

- **DPA** - Golden Gate University, 2003, *Public Administration.*
- **MS** - Naval Postgraduate School, 1992, *Management (Financial Management).*
- **BS** - U.S. Naval Academy, 1979, *Naval Engineering (Management and Technology).*

Primary Teaching Areas:

- Financial Management, Project Management, Performance Assessment, Leadership.
- Systems Engineering, Systems Acquisition, Product Development, Test and Evaluation.
- Public Policy, Policy Analysis, Defense Resource Analysis, Policy Evaluation.

Graduate Teaching Experience

- 2006- Present Senior Lecturer, NPS, Graduate School of Business and Public Policy and Graduate School of Engineering and Applied Sciences, Department of Systems Engineering.
- 2002-2005, Senior Lecturer, NPS, Wayne E. Meyer Institute of Systems Engineering and Graduate School of Business and Public Policy.
- 2001- 2002, Senior Lecturer, NPS, Graduate School of Business and Public Policy.
- 1995-2001, Lecturer, NPS, Department of Systems Management.
- 1992-1995, Military Lecturer, NPS, Department of Systems Management.

Publications, Papers, Presentations:

- Hocevar, S. P. and Owen, W. E. (1998, December). Team-Based Redesign as a Large Scale Change: Applying Theory to the Implementation of Integrated Product Teams. *Acquisition Review Quarterly, Special Edition.*

Research Projects:

- 2007- Distance Learning Research- Co-Investigator on a new DL research project with another colleague assessing DL education and learning methods and their effects on leadership succession and promotion.
- 1998- Present; Distance Education Programs- Principal Investigator for numerous funded graduate courses and degree programs with over 20 Department of Defense and Defense Contractor sponsors.

Significant Practitioner Experience:

- 1979 – 1992; Acquisition/Military Experience: Naval Officer (F4/F14 flight and weapon systems operations, carrier aviation operations, test and evaluation, aircraft maintenance, facilities management, support equipment logistics management, financial management, human resources and program development, recruitment and leadership).

Academic and Professional Associations:

- Project Management Institute (PMI).
- International Council on Systems Engineering (INCOSE).
- American Society for Public Administration (ASPA).

Public Service Activities:

- Little League- Baseball Coach.
- Boy Scouts- Volunteer.
- Community Board Member.

Consulting Activities:

- None.

Elda Pema
Assistant Professor of Economics
August 2003

Academic Degrees:

- Ph.D., Economics, Michigan State University, East Lansing, Michigan. December 2003
  Fields: Applied Econometrics, Labor Economics, Public Economics.
  Dissertation: "Essays on Compensation Structures and Human Capital Migration."
- M.A., Economics, Michigan State University, East Lansing, Michigan. 2001.
- B.A., Applied Economics, B.A. Business Administration, American University in Bulgaria, Blagoevgrad, Bulgaria**.** 1998 (magna cum laude).

Primary Teaching Areas:

Graduate School of Business & Public Policy, Naval Postgraduate School

- GB3070 - Economics and the Global Defense Environment (Winter & Summer 2004, Summer 2005, Summer 2006)
- MN3760 – Manpower Economics I (Fall 2004, Fall 2005)
- MN4110 – Manpower Data Analysis I (Winter 2004, Summer 2004)
- MN4111 – Manpower Data Analysis II (Fall 2004, Fall 2005, Fall 2006)

Graduate Teaching Experience

Department of Economics, Michigan State University

- Taxes, Government Spending, and Public Policy (Summer 2001)
- Introductory Macroeconomics (Summer 2000, Summer 2003)

Publications, Papers, Presentations:

Publications

- "The Impact of JROTC on Post-High School Employment and Educational Attainment, Evidence from *High School and Beyond*," book chapter in "Americans in Arms: Diversity and the Modern Military," Praeger Publishers, *forthcoming*, with Steve Mehay.
- "Impact of High School JROTC on Student Academic Achievement, Post-Secondary Education, and Military Enlistment." Technical Report to the Navy Personnel Command (N-14).
- "Publications over the Academic Life-cycle: Evidence for Academic Economists," *Economics Bulletin*, Vol. 1 no. 1 pp. 1-8, 2004, with Onur Baser.
- "The Return to Publications for Economics Faculty in the Big Ten Universities," *Economics Bulletin*, Vol. 1 no. 1 pp. 1-13, 2003, with Onur Baser.

Papers under review/working papers

- Pema, E. and Mehay, S., "Impact of High School JROTC on Student Academic Achievement and Military Enlistment" under review at the *Economics of Education Review*.
- "Special Provisions of State and Federal Age Discrimination Laws for Postsecondary Faculty" under review at the *Atlantic Economic Journal.*

- "Internal Labor Markets Revisited: Tournaments in Academia," Submitted to *Economic Inquiry*.

- MSA Curriculum hiring, January 2004, 2007

Consulting Activities:

None

Diana Petross
Lecturer
September 2006

Academic Degrees:

- MPA, University of Oklahoma, 1991, Public Policy & Law
- BS, University of Central OK, institution, 1983, Science & English

Primary Teaching Areas:

- Principles of Acquisition & Program Mgt, Logistics Strategy

Graduate Teaching Experience

- NPS, 2002, NPS 2006-Current

Publications, Papers, Presentations:

- None

Research Projects:

- Software Architecture: Managing Design for Achieving Warfighter Capability, 2007, Naval Open Architecture. Not funded.

Significant Practitioner Experience:

- 8/05 to 9/06 - Source Selection Evaluation Chairman, 327th TSG/SP, Tinker AFB OK Executive Officer for Source Selection for $4.5B Programmed Depot Maintenance (PDM) Re-Competition for the KC-135. Personally requested by the Air Logistics Center Commander to direct a twenty-five person source selection team responsible for developing and publishing a Performance Work Statement, reviewing defense contractor's proposals and awarding a contract. Reported directly to the Air Force Program Executive Office for Combat Mission Support.

  10/03-8/05: Division Chief, Special Airlift Mission Operations, 327th Contractor Logistics Support Group, Tinker AFB OK. Program Manager responsible for the total system performance of the Air Force commercial derivative aircraft for the Special Air Mission (SAM) fleet. Directs all aircraft program management, acquisition, sustainment, engineering, configuration control, and financial management for VC-25 (Air Force One), C-20 (Gulfstream III/IV), T-43 (B-737), Navy E-6 (B-737) and the Air Force Academy aircraft.

  8/02-10/03. Lecturer. Graduate School of Business and Public Policy, Naval Postgraduate School. Taught graduate level Business Administration (MBA) and Executive MBA courses in Principles of Acquisition and Program Management and Acquisition of Embedded Weapon System Software. Organized and conducted Defense Acquisition University (DAU) certification training for acquisition, software acquisition, and program management for the Army and Navy.

10/01 – 8/02. Supervisory Logistics Management Specialist - Chief, Resources and Program Management Branch, Tinker AFB OK. Responsible for the management and oversight responsibilities for the business infrastructure of the B-1 System Program Office, the management information systems, funds availability, expenditures, cost estimating/analysis, contract performance, financial integration, budgeting, and administrative support. Managed total life cycle support to the B-1B including a $5B multi-year budget for sustainment and acquisition programs and a $1B software upgrade program and executed $17M for automatic test/support equipment for both the depot and field level support delivering critically needed tester's that improved mission capable rates five (5) percent.

10/00-10/01. Supervisory Logistics Management Specialist, Chief, Program Control, Tinker AFB OK. Successfully executed approximately $15M for the upgrade of fourteen high frequency stations throughout the world in a joint Air Force / Navy venture which incorporated information technology solutions to communication problems.

6/99-10/00. Program Manager/Financial Analyst, USAF/ILM-T Air Force Pentagon, Washington, DC Served as staff advisor for Director of Maintenance for logistics programs and policies.

Academic and Professional Associations:

- Tinker Management Assoc 1985-2006

Lisa F. Potvin
CDR, Military Instructor
October 2006

Academic Degrees:

- MBA, University of Denver, August 1997, Finance
- BS, University of Main, May 1984, Marketing

Primary Teaching Areas:

- Budgeting
- Defense Financial Management

Graduate Teaching Experience

- Naval Postgraduate School, October 2006 to present

Publications, Papers, Presentations:

- Potvin, L., Bay, D., and Smith, A., "The Next Katrina: A New Process for Reimbursement," American Society of Military Comptrollers, Vol 51, no. 4, pp. 39-41, 2006.
- "Educational Opportunities in DoD," American Society of Military Comptrollers annual Professional Development Institute, Kansas City, May 2007.

Research Projects:

- N/A

Significant Practitioner Experience:

- North American Aerospace Defense Command – United States Northern Command (NORAD-USNORTHCOM), Budget Analyst, February 2003 – October 2006. Primary duties:

    - Established $.6M budget for newly transferred Security Assistance missions in Mexico and Canada. Budgeted and executed over $2M annually in International Military, Education, and Training (IMET) and military engagement. Provided oversight to the entire $15M USNORTHCOM counterdrug program. These funds are fences and require significant policy and program expertise as well as inter and intra-departmental and interagency knowledge and engagement.
    - Wrote budget and execution guidance and policy governing the execution of all Security Assistance, Counterdrug, and Traditional Commander Activity (TCA) funding. These funds have unique attributes that require specialized budgeting and execution process and procedures.
    - Lead Budget Analyst for FY05 and FY06 NORAD-USNORTHCOM (N-NC) Financial Plan. Designed and developed N-NC Financial Plan process. Briefed the FY05 and FY06 Financial Plans to the AF Operating

Budget Review Committee and recognized as the only command to link programming to budget, a DoD benchmark.

- Developed a Contingency Cost process. This cost process was in response to Combatant Commander's and SECDEF interest. Cost model used for quick response, complex issues that require precise answers in a timely fashion. Used mostly for O&M scenarios. Specific cost exercises include:
- Cost analysis project to determine the cost of post-911 Combat Air Patrols (CAPs) across the U.S. Analysis focused on ABC methodology with multiple layers of activity and multiple variables in each layer. A 6 month effort for 2.5 FTEs. Results were ultimately used by the Combatant Commander to brief SECDEF and POTUS.
- Cost analysis to identify and justify NORAD's Forward Operating Locations (FOL) in Canada. Analysis simplified long misunderstood cost sharing agreements between Canada and the U.S. Documented the FOLs value to the U.S.
- Conducted cost analysis on U.S. and Canadian support to Superbowl XXI, a National Special Security Event (NSSE) for NORAD-USNORTHCOM. This event involved the Canadian Defence Ministry, DoD, and other U.S. government agencies. Significant skill required to understand the task, to identify cost variables, both actual and simulated, and to decide which cost variables are relevant to the task. Results presented to the Commander as part of mission analysis.
- Developed a Financial Management Concept of Operations (CONOPS) for USNORTHCOM's Defense Support of Civil Authorities (DSCA) mission. DSCA FM Operations was brought to the forefront during Hurricanes Katrina and Rita in Sep 2005, a $.5B event in DoD. Led a team and assembled a community of DSCA participants, both DoD and interagency. Wrote a CONOPS to better support DSCA FM Operations. Coordinated the CONOPS with numerous DoD organizations. CONOPS was accepted by OSD and praised as work that will close the gap between government agencies.
- Lead Analyst for FY06 fiscal closeout for both NORAD and USNORTHCOM. Responsible for ensuring over $256M was obligated. Included coordination with over 35 Resource Advisors and 12 Budget Analysts. Complicated by a conversion to a new contract mechanism for both commands. Developed strategy to ensure optimal use of FY06 dollars while providing maximum flexibility in FY07.

- North American Aerospace Defense Command – United States Space Command (NORAD-USSPACEOM), Program Analyst, October 2001 – January 2003. Primary duties:

    - Assisted with the development of planning, programming, and budget guidance for senior leadership within NORAD and USSPACECOM. Interfaced with Office of the Secretary of Defense (OSD), Joint Staff,

Unified Command Staffs, and other DoD and non-DoD Agency personnel to address NORAD and USSPACECOM PPBES issues and requirements.

- Assisted in the development of the NORAD and the newly stood up Combatant Command USNORTHCOM FY04 Program Objective Memorandum (POM). Assisted in preparing the final POM submission, fully documenting USNORTHCOM and NORAD requirements.
- Interfaced with Financial Management Division to ensure coordination between execution year and future year budget issues. Established and maintained liaison with counterparts within OSD, Joint Staff, Air Staff, force providers organizations, component organizations, and other Federal agencies.
- Completed PPBES course in Washington, DC. Participated in Issue Cycle, resulting in successful adjustments of $82M funding for Command and Control (C2) programs. Participated in POM cycle, resulted in complete and succinct submission of $2.7B (includes $1.4B of advocacy). Personally recognized by the CDR NORAD-USSPACECOM for outstanding efforts in the POM submission.
- Coordinated with Combatant Commander's Congressional Liaison Officer for Congressional Plus-up on FY03 President's Budget. Critical effort in seeking over $40M for NORAD C2 programs.

- IBM Global Services, Finance and Planning, February 1998 – September 2001. Primary duties:

  - Lead Financial and Budget Analyst for Customer Service Center. Responsible for project accounting, cost analysis, budgeting, planning, and forecasting for 1000+ employee division with gross costs in excess of $150M. Presented detailed monthly financial reports to Senior Management. Responsible for cost reduction of $11.8M in 1999.
  - Managed Capital Program spending of $125M in cost. Achieved 2000 capital spending target in a dynamic and technical environment. Designed Capital Database to link capital planning and spending with expense planning and forecasting, closing a gap between expense and capital forecasting. Coordinated a team of 9 Capital Planners supporting over 5000 employees generating over $864M in total gross cost. Teamed with Procurement Department to maintain audit controls on capital items.
  - Created unique e-business capital process to meet extremely short delivery timelines while meeting all audit requirements. Negotiated unique process guidelines with Senior HQ staff who were unaware of operational challenges. The process was adopted and implemented across the Americas divisions.
  - Cost Analyst for IT Distributed Services division. Streamlined a cost infrastructure which resulted in the elimination of 4 cost pools (similar to DoD working capital funds). Defined cost pool theory, practice, and process. Reduced manual procedures for managing cost pools by 75% allowing for increased time on analysis and productivity improvements.

As a result, one service pool eliminated $1.1M in labor cost in a 9 month period. Educated service providers on interpreting financial data. Changed service provider's focus from 'meeting budget' to 'year-to-year cost reduction and savings.'

- Provided leadership to a team of new Financial Analysts in a multifaceted, technical environment. Educated new analysts on business acumen and cost pool theory. Created automated measurement tools to assist analysts in providing consistent, user friendly financial reports. Clearly defined a cost and recovery flow process within a large, complex billing system. Resulted in a solid, productive team that came quickly up a steep learning curve. The team has earned the respect of the most challenging Director who requested the team not be reassigned.

Academic and Professional Associations:

- Active member of the American Society of Military Comptrollers. Participated in two panels at the Professional Defense Institute in May 2007.
- Active member of the Naval Reserve Association. Acted as President of the Colorado Springs chapter, 2006.

Public Service Activities:

- *Military Service*. As a military faculty member, my duties include service as a role model and mentor for the students. Routinely conducted career counseling and academic sessions to ensure success of the junior officers. Participated in military functions on base.
- *NPS Service.* Participated in the evaluation of potential faculty members in a variety of disciplines by attending symposia, conducting interviews and evaluating vitas.
- *Professional Service*. Routinely provided brief consulting assistance to military commands with financial questions; often at the request of alumni.

Consulting Activities:

- N/A

Edward H. Powley
Assistant Professor of Management
October 2006

Academic Degrees:

- PhD Organizational Behavior, Case Western Reserve University, 2005, relationship connections in crisis; thesis title: Connective Capacity in Crisis: Mechanisms of Organizational Resilience.
- MA Organizational Management, The George Washington University, 2000.
- BA Anthropology, Brigham Young University, 1997.

Primary Teaching Areas:

- Organizational Behavior
- Management

Graduate Teaching Experience

- Managing for Effectiveness (core MBA course), Naval Postgraduate School, 2006-2007.
- Human Value in Organizations (core MBA course), Case Western Reserve University, 2004.

Conference Presentations

- "Organizational healing." Edward H Powley. Presentation given at the Positive Organizational Scholarship Conference, Ann Arbor, MI, 7-9 December 2006.
- "Positive Organizational Change: Prudential Retirement." Edward H Powley. Presentation given at the Positive Organizational Scholarship Conference, Ann Arbor, MI, 7-9 December 2006.
- "Compassion in organizational trauma." Edward H. Powley. Paper presentation at the Academy of Management 2006, Atlanta.
- "The engagement continuum: Exploring the impact of appreciative inquiry on high quality connections in interpersonal relationships." David S. Bright, Edward H. Powley, & Ronald E. Fry. Paper presentation at the Academy of Management 2006, Atlanta.
- "Organizational resilience: A social mechanisms perspective." Michelle Barton, Marlys Christianson, Jody Hoffer Gittell, Carlos Martin-Rios, Edward H. Powley, & Kathleen Sutcliffe. Symposium presentation at the Academy of Management 2006, Atlanta.
- "The Appreciative Inquiry Summit methodology: New visions for leading large-scale change." James D. Ludema, Larissa Marczak, Frank J. Barrett, Edward H. Powley, Ronald E. Fry, David S. Bright, & David L. Cooperrider. Professional Development Workshop presented at the Academy of Management 2005, Honolulu.
- "Uncovering New Variables, Methods, & Mechanisms from Positive Organizational Scholarship (POS)." Kim S. Cameron, Jody Hoffer Gittell, Fiona Lee, Gretchen M. Spreitzer, Robert E. Quinn, Amy Wrzesniewski, Michele Williams, Ryan Quinn, Wayne E. Baker, & Edward H. Powley. Professional Development Workshop presented at the Academy of Management 2005, Honolulu.

Research Projects:

- Center for Positive Organizational Scholarship, Ross School of Business, University of Michigan. Prepared case study on the implementation of a POS culture at Prudential Retirement. Funded and sponsored through the University of Michigan, 2006.
- Center for Business as an Agent of World Benefit, Institute for Advances in Appreciative Inquiry. Conducted research on large system change at the U.S. Environmental Protection Agency, Office of Research and Development. Funded and sponsored through Case Western Reserve University, 2005
- Center for Positive Change at the Naval Postgraduate School. Conducted research on large system change initiatives in the U.S. Navy; projects included work with the Navy Personnel, Naval Reserves, and Navy Information Professional communities. Funded and sponsored by several Navy communities, 2002-2004.
- Society for Organizational Learning. Interviewed members of the Society for Organizational Learning's Sustainability Consortium about its effectiveness, produced report used to facilitate discussions at semi-annual meetings; supported by a grant from the National Science Foundation, 2001-2004.

Academic and Professional Associations:

- Academy of Management
    - Organizational Management and Theory division (OMT), conference paper reviewer
    - Organizational Development and Change (ODC), conference paper reviewer
- Naval Postgraduate School Toastmasters International Club

Public Service Activities:

- Work with youth in local church group

Rene G. Rendon
Senior Lecturer

Academic Degrees:

- D.B.A. Argosy University, Orange County California Campus, 2003
  Dissertation: *A Systematic Approach to Assessing Organizational Contract Management Maturity*
- M.B.A. University of North Dakota, 1985 (sponsored by the Air Force Institute of Technology)
  Thesis: *Computer Simulation of Credit Union Teller Operations*
- B.B.A. Angelo State University (San Angelo, Texas), 1981

Professional Certifications:

- PMP Project Management Professional
  Certificate #27068
  Project Management Institute, 2000

- C.P.M. Certified Purchasing Manager
  Certificate #27940
  Institute for Supply Management 1997

- CPCM Certified Professional Contracts Manager
  National Contract Management Association 1988
  Certificate #3684

- CACM Certified Associate Contracts Manager
  National Contract Management Association 1987
  Certificate #64

Primary Teaching Areas:

Acquisition, Contract Management, Program/Project Management

Graduate Teaching Experience

Jan 2001 - Jul 2004: Senior Faculty, Keller Graduate School of Management
Los Angeles, CA (Project Management, Contract Management)

Significant Practitioner Experience:

- 2003-2004: Director of Contracts, Evolved Expendable Launch Vehicle (EELV) Program Office, Air Force Space and Missile Systems Center, Los Angeles AFB, California
- 2000-2003: Director of Contracts, Space Based Infrared Systems Program Office, Air Force Space and Missile Systems Center, Los Angeles AFB, California
- 1997-2000: Squadron Commander, 47th Contracting Squadron, 47th Flying Training Wing, Laughlin AFB, Texas
- 1995-1997: Flight Commander, Mission Support Contracting Flight, Air Education and Training Command Contracting Squadron, Randolph AFB, Texas
- 1994: Supply Chain Manager, NCR Inc., Dayton, Ohio
- 1989-1994: Contracting Officer (Maverick Missile, C-20, F-22), Aeronautical Systems Center Wright-Patterson AFB, Ohio
- 1987-1989: Contracting Officer (Peacekeeper ICBM, Minuteman ICBM),Air Force Contract Management Division, Warren AFB, Wyoming
- 1986-1987: Detachment Commander, Detachment 7, Air Force Institute of Technology (AFIT), Warren AFB, Wyoming
- 1982-1986: Missile Combat Crew Commander; Combat Crew Instructor, 91st Strategic Missile Wing, Minot AFB, North Dakota

Academic and Professional Associations:

- **National Contract Management Association (NCMA)** Member since 1985. Member of NCMA Corporate Board of Advisors. Previously on Board of Directors for Wyoming, Dayton, Alamo, and Los Angeles Chapters. Currently, Associate Editor for *Journal of Contract Management* and member of NCMA Education Outreach Committee.
- **Project Management Institute (PMI)** Member since 2000. Currently active in the Project Management Institute (PMI) and a member of the Monterey Bay PMI chapter.
- **Institute for Supply Management (ISM)** Member since 1997. Currently, Editorial Reviewer for *Inside Supply Management.* Currently serving as Chair for ISM's Certification Committee. Spearheading the development of a new professional qualification reflecting the transformation from purchasing to supply management. Developing the body of knowledge and Knowledge, Skills, and

Abilities (KSAs) for new certification exam. Also active in ISM's Certification Exam item writing committee. Represent all Federal Government procurement sector in ISM's certification programs. Currently serving as Chair for the ISM Federal Acquisition and Subcontract Management Group (FASMG).

Public Service Activities: None

Consulting Activities: Providing training and education for the Institute for Supply Management and the National Association for Purchasing Management.

Benjamin J. Roberts
Senior Lecturer
May 1984

Academic Degrees:

- Ph.D., The Pennsylvania State University, 11/77, Social and Industrial Psychology, "Reference Groups and Orientations of Black Students in a Predominantly White University."
- MS, Louisiana State University, 6/72, Social and Clinical Psychology
- BS, Louisiana State University, 6/70, Psychology

Susan M. Sanchez
Professor
Director, SEED Center for Data Farming
August, 2000

Academic Degrees:

- Ph.D. in Operations Research, Cornell University, August 1986.
- Dissertation: *Contributions to the Bernoulli Selection Problem*
- M.S. in Operations Research, Cornell University, May 1984.
- B.S.E. (summa cum laude) in Industrial and Operations Engineering, University of Michigan, May 1981.

Primary Teaching Areas: Statistics, Simulation

Graduate Teaching Experience

- ***Naval Postgraduate School***: August 2000-present
  Statistics; Advanced Simulation; Statistics for Technical Management; Introduction to Management Science; Statistics and Experimental Design for MOVES and HSI; Data Analysis for MOVES and HSI; Analytic Tools for Management Decisions
- ***University of Missouri – St. Louis***: Jan 1993 – Jun 2001
  Statistical Decision-Making; Business Forecasting; Management Science Elective (Manufacturing Strategy)
- ***University of Arizona***: Aug 1985 – Dec 1992
  Multivariate Stat I: Linear Regression; Multivariate Stat II: Experimental Design

Publications, Papers, Presentations:

Refereed journal articles, 2003-2006

- Sanchez, S. M., F. Moeeni, and P. J. Sanchez, (2006) "So many factors, so little time...simulation experiments in the frequency domain," *International J. Production Economics*, forthcoming.
- Sanchez, S. M. and P. J. Sanchez (2005). "Very large fractional factorial and central composite designs." *ACM Transactions on Modeling and Computer Simulation* 15(4): 362-377.
- Kleijnen, J. P. C., S. M. Sanchez, T. W. Lucas, and T. M. Cioppa (2005). "A user's guide to the brave new world of designing simulation experiments, *INFORMS J. Computing*, 71(3): 263-289. (with 5 page online supplement).
- Smith, L. D. and S. M. Sanchez (2003). "Assessment of business potential at retail sites: Empirical findings from a U.S. supermarket chain," *The International Review of Retail, Distribution and Consumer Research,* 13(1): 37-58.

Invited papers in refereed proceedings, 2003-2006

- Kang, K., K. Doerr, and S. M. Sanchez (2006). "A design of experiments approach to readiness risk analysis." *Proc. 2006 Winter Simulation Conference*, ed. L. F. Perrone, F. P. Wieland, J. Liu, B. G. Lawson, D. M. Nichol, and R. M. Fujimoto. IEEE: Piscataway, NJ, forthcoming.
- Sanchez, S. M. (2006). "Work smarter, not harder: Guidelines for designing simulation experiments," *Proc. 2006 Winter Simulation Conference*, ed. L. F. Perrone, F. P. Wieland, J. Liu, B. G. Lawson, D. M. Nichol, and R. M. Fujimoto. IEEE: Piscataway, NJ, forthcoming. (An earlier version appeared in *Proc. 2005 Winter Simulation Conference*, ed. M. E. Kuhl, N. M. Steiger, F. B. Armstrong, and J. A. Joines. IEEE: Piscataway, NJ, 69-82.)
- Sanchez, S. M. and R. K. Wood. 2006. " The BEST algorithm for solving stochastic mixed integer programs." *Proc. 2006 Winter Simulation Conference*, ed. L. F. Perrone, F. P. Wieland, J. Liu, B. G. Lawson, D. M. Nichol, and R. M. Fujimoto. IEEE: Piscataway, NJ, forthcoming.
- Sanchez, S. M., H. Wan, and T.W. Lucas (2005). "A two-phase screening procedure for simulation experiments." *Proceedings of the 2005 Winter Simulation Conference*, ed. M. E. Kuhl, N. M. Steiger, F. B. Armstrong, and J. A. Joines. IEEE: Piscataway, NJ, 223-230.
- Cioppa, T. M., T. W. Lucas, and S. M. Sanchez (2004). "Military applications of agent-based simulations," *Proc. 2004 Winter Simulation Conference*, eds. R. G. Ingalls, M. D. Rossetti, J. S. Smith, and B. A. Peters, IEEE: Piscataway, NJ, 2004, 171-180.
- Allen, T. E., A. H. Buss and S. M. Sanchez (2004). "Assessing obstacle location accuracy in the REMUS unmanned underwater vehicle," *Proc.2004 Winter Simulation Conference*, eds. R. G. Ingalls, M. D. Rossetti, J. S. Smith, and B. A. Peters, IEEE: Piscataway, NJ, 2004, 940-948.
- Sanchez, S. M. and H.-F. Wu (2003). "Frequency-based designs for terminating simulation experiments: A peace-enforcement example," *Proc. 2003 Winter Simulation Conference*, eds. D. Ferrin, D. J. Morrice, P. J. Sanchez, and S. Chick, IEEE: Piscataway, 952-959.

Book chapters, 2003-2006

- Lucas, T. W., S. M. Sanchez, T. M. Cioppa, and A. I. Ipekci, "Generating hypotheses on fighting the global war on terrorism," *Maneuver Warfare Science 2003*, Marine Corps Combat Development Command, 2003, 117-137.

Other proceedings articles, 2003-2006

- Lucas, T. W. and S. M. Sanchez. "Design of experiments for analyzing systems of systems." *Proc. Defense Analysis Seminar XIII*, conference in Seoul, Korea, 24-27 April 2006, 20 pages.
- Forsyth, A. J., S. M. Sanchez, H. Wan, K. M. Chang, and P. J. Sanchez. "Exploring edge organizations for network centric operations." To appear in *Proc.2006 CCRTS Conference*, conference to be held in San Diego, CA, June 20-22 2006, 15 pages.

Significant publications from 2002 or earlier

- Sanchez, S. M. and P. Konana. "Efficient data allocation for frequency domain experiments," *Operations Research Letters*, Vol. 26, No. 2, 2000, pp. 81-89.
- Smith, L. D., S. M. Sanchez and E. Lawrence, "A comprehensive model for managing credit risk and forecasting losses on home mortgage portfolios," *Decision Sciences*, Vol. 27, No. 2, 1996, pp. 291-317. **Winner**: Best Application Paper Award at the 1994 Decision Sciences Meeting.
- Kannan, P. K. and S. M. Sanchez, "Competitive market structures: A subset selection analysis," *Management Science*, Vol. 40, No. 11, 1994, pp. 1484-1499.
- Wholey, D. R., J. B. Christianson, and S. M. Sanchez, "Organizational size and failure among health maintenance organizations." *American Sociological Review*, Vol. 57, 1992, pp. 1-14.
- Christianson, J. B., D. R. Wholey and S. M. Sanchez, "State responses to HMO failures," *Health Affairs*, special issue on managed care, Vol. 10, No. 4, 1991, pp. 78-92.

Conference presentations and other significant presentations during 2003-2006

Note: presentations were also given for all proceedings papers listed above

- Lucas, T. W., S. M. Sanchez, and P. J. Sanchez. 2006. "The brave new world of designing simulation experiments for defense and homeland security applications." Joint Statistical Meetings, August 2006.
- Lucas, T. W., S. M. Sanchez, and F. Martinez Tiburcio. 2005. "Using simulation to study the protection of critical maritime assets." International Maritime Protection Symposium, Honolulu, HI, 13 December 2005.
- Forsyth, A., S. M. Sanchez, and H. Wan. 2005. "Exploring edge models for network-centric operations." Edge Project Workshop, Naval Postgraduate School, 9 December 2005.
- Sanchez, S. M., T. W. Lucas, and P. J. Sanchez. "Experimental designs for large-scale military simulation studies." Army Conference on Applied Statistics, Naval Postgraduate School, Monterey, CA, 20-22 October 2005.
- Sanchez, S. M., G. Schwarz, S. K. Gun, and H. H. Ang. "Peace support for elections: insights into voter participation and escalation." MORS Symposium on *Agent-based models and other analytic tools in support of stability operations*, SAIC, MacLean,, VA, 25-27 October 2005.
- Sanchez, S. M. and T. W. Lucas. "Experiments at NPS," Project Albert International Workshop 10, Pre-conference Technical Session Briefing, Stockholm, Sweden, 16-22 May 2005. A shorter version was briefed to Critical Infrastructure Protection (CIP) Roundtable participants, Project Albert International Workshop 9.5, Referentia Systems, Inc., Honolulu, HI, 15-25 February 2005.
- Cioppa, T. M., T. W. Lucas, and S. M. Sanchez. "Advances in large-scale simulation experiments." Full day tutorial, MORS Mini-Symposium on *New*

Analysis Techniques: Understanding and Applications. Johns Hopkins University Applied Physics Lab, 25-27 January 2005. (CD-ROM distributed)

- Wood, K. and S. M. Sanchez, "The BEST method for stochastic integer programming," 39th Annual Conference of the Operational Research Society of New Zealand, University of Auckland, Auckland, New Zealand, November 28-29, 2004.
- Sanchez, S.M., and T.W. Lucas, "Experimental Design and Analysis in the Data Farming Environment," Project Albert 9th International Workshop, Wellington, New Zealand, Nov. 2004. An earlier version was given at the Project Albert 8th Intl. Workshop, Singapore, April 2004.
- Sanchez, S.M., T.W. Lucas, B. Widdowson. "Data Farming: Accidental VV&A," INFORMS Annual Meeting, Denver, Colorado, October 2004.
- Sanchez, S.M. and G. Schwarz. "Modeling Peace Support Operations," INFORMS Annual Meeting, Denver, Colorado, October 2004.
- Steele, M.J., S.M. Sanchez, R. Gottfried, "Agent-Based Simulation of Unmanned Surface Vehicles: A Force in the Fleet," MORS Symposium, Naval Postgraduate School, Monterey, California, June 22-24, 2004.
- Sanchez, S. M. and E. S. Wolf. "Using agent-based models for expeditionary logistics." INFORMS Annual Meeting, Atlanta, GA, October 19-23, 2003.
- Sanchez, S. M. "Through the looking glass: reflections on an unexpected career in simulation." Ph.D. Colloquium Keynote, Winter Simulation Conference, December 6-9, 2003.

Research Projects: 2003-2006 (most recent first)

- Office of Naval Research: "Emerging and Advanced Technologies for Capable Manpower," $987,463 for 10/1/06-9/30/09. Pending.
- National Science Foundation: "Collaborative Research: Efficient Hybrid Factor Screening Procedures for Stochastic Simulation" (with Purdue University). $235,920 for 10/1/06-9/30/09. Unfunded.
- U.S. Army Training & Doctrine Command Analysis Center: "Modeling Individual Soldiers in Close Combat." $20,000 for 6/1/06-9/30/06. Funded.
- U.S. Army Training & Doctrine Command Analysis Center: "Enhancing Computational Capabilities in Support of Analysis for the Future Force Warrior." $10,000 for 6/1/06-9/30/06. Funded.
- U.S. Marine Corps Warfighting Laboratory: "Applying Simulation Experiments and Efficient Design to Analyze Complex Transformational Issues." $451,843 for 10/1/05-9/30/06. Funded.
- U.S. Army Training & Doctrine Command Analysis Center: Assessing Distributed Capabilities and Tactics, Techniques, and Procedures for Future Army Systems." $29,527 for 12/1/06-9/30/06. Funded.
- OASD: "Exploring Edge Organization Models for Network-Centric Operations." $25,905 for 12/05-9/06. Funded.

- U.S. Marine Corps Warfighting Laboratory: "Exploring Command and Control Issues in Networked Forces." Approx. $405,000 for 10/1/04-9/30/05. Funded.
- U.S. Marine Corps Warfighting Laboratory: "NPS Exploration of Agent-based Simulations." Approx. $350,000 for 5/03-9/04. Funded.
- U.S. Marine Corps Combat Development Command: "Adaptive Exploration of Agent-based Command and Control Simulations." Approx. $250,000 for 1/02-4/03. Funded.

Significant Practitioner Experience: N/A

Academic and Professional Associations:

- Simulation Area Editor, *INFORMS Journal on Computing*, Jan 2001-present
- Board of Directors, Winter Simulation Conference: American Statistical Association Representative (2004-present); Secretary (2006)
- INFORMS Subdivision Council member (2003-2005)
- INFORMS Simulation Society Council member (2004-2006)
- INFORMS College on Simulation President (2002-2004)
- INFORMS Forum on Women in OR/MS President (2003)
- National Science Foundation review panel
- Organizing committee, Project Albert International Workshop 6, March 2003

Public Service Activities:

- Pacific Grove Middle School Music Boosters
- Pacific Grove Middle School drama program
- Pacific Grove High School Music Boosters
- Big Sur Marathon volunteer

Consulting Activities: N/A

Yu-Chu Shen
Assistant Professor
September 2004

EDUCATION

- Ph.D. in Health Policy (field: Health Economics), Harvard University. 2001
  Dissertation: The Effects of Market Reforms and Ownership Choice on Hospital Quality
- A.B. with magna cum laude in Applied Mathematics (field: Decision and Control), Harvard University. 1996

RESEARCH INTEREST

- Primary Fields: Health Policy and Health Economics
- Current Research Topics and Interests:
  - Organizational changes in health care markets and their effects on quality of care
    - Racial disparity in health and health care
    - Access to care and health insurance coverage for the vulnerable population
    - Provider payment systems

PROFESSIONAL EXPERIENCES

- Assistant Professor of Economics, Graduate School of Business and Public Policy, Naval Postgraduate School, Monterey, CA. 2004—present
- Faculty Research Fellow, National Bureau of Economic Research, Stanford, CA. 2004—present
- Research Associate, Health Policy Center, the Urban Institute, Washington, DC. 2001—2004
- Research Assistant, National Bureau of Economics Research, Cambridge, MA. 1997—2001
- Webmaster, Ph.D. Program in Health Policy, Harvard University, Cambridge, MA. 1997—2001
- Teaching Fellows, Kennedy School of Government, Harvard University. 1998—1999
- Research Assistant, Harvard School of Public Health, Boston, MA. 1996—1999
- Junior Partner, Murray Research Center for the Study of Lives, Cambridge, MA. 1994—1997

PRESENTATIONS

- "Managed care and cost containment," presented at the National Yang Ming University, Taipei Taiwan, May 17 2007.
- "Financial pressure and the continuity of safety net services," presented at the National Yang Ming University, Taipei Taiwan, October 27 2006.
- "Applications of the propensity score methods in health policy studies," guest lecture at the National Yang Ming University, Taipei, Taiwan, October 19 2006.
- "The effects of managed care and its for-profit expansion on the survival of specialized hospital services." presented at the Stanford Research-in-progress seminar, Stanford CA, October 11 2006.
- "Systematic review of hospital ownership and quality of care: what explains the different results in the literature?" presented at the Academy Health Annual Research Conference, Seattle, WA, June 25 2006.
- "Hospital ownership and performance: a quantitative review." presented at the

American Society of Health Economists 2006 Conference, Madison, WI, June 5 2006.

- "Is managed care still an effective cost containment device?" presented at the Ninth Annual Frontiers in Health Policy Research Meeting, Cambridge, MA, November 4 2005.
- "Is managed care still an effective cost containment device?" presented at the Research-in-Progress seminar, Stanford University. Stanford, CA. September 28 2005.
- "Hospital ownership and financial performance: an integrative research review," presented at the Academy Health Annual Research Conference, Boston, MA, June 28 2005.
- "Hospital ownership and performance: an integrative research review," presented at the Research-in- Progress Seminar, Stanford University. Stanford, CA. May 11 2005.
- "What explains racial and ethnic disparity in health insurance coverage and access to care?" presented at the American Public Health Association (APHA) Annual Meeting, Washington, DC, November 8, 2004.
- "The effects of financial incentives on health care access and quality." Invited talk at the Bureau of National Health Insurance, Taipei Taiwan, March 3 2004.
- "Welfare implications of hospital ownership conversions to for-profit status." Invited talk at the National Health Research Institute, Taipei Taiwan, March 8 2004.
- "Low-income workers with employer-sponsored insurance: Who is at risk when employers drop coverage?" presented at the Association for Public Policy Analysis and Management (APPAM) Annual Research Conference, Washington DC, November 8 2003.
- "Welfare implication of hospital ownership conversion to for-profit status," presented at the American Economics Association (AEA) 2003 Annual Meeting, Washington DC, January 4 2003.
- "Do insurance coverage and access to care influence emergency room use?" presented at the U.S. General Accounting Office seminar series, Washington DC, November 2002.
- "Changes in hospital performance after ownership conversions: an application of the propensity score method," presented at the Urban Institute Modeling Group seminar, April 2002.
- "The effect of financial pressure on the quality of care in hospitals: evidence from patient outcomes after treatment for acute myocardial infarction," presented at the poster session of NRSA Conference, Los Angeles CA, June 2000.

TEACHING EXPERIENCE

- Graduate School of Business and Public Policy, Naval Postgraduate School
  - Economics in the Global Defense Environment, instructor
  - Multivariate Data Analysis I, instructor

- Kennedy School of Government, Harvard University
  - Regulation and Management in the Health Care System, teaching fellow
  - Quantitative Analysis and Empirical Methods, teaching fellow

GRANTS

- Naval Postgraduate School Research Initiative Program. Effects of Organizational and Market Changes on Hospital Behavior. $65,587. 10/1/2004–9/30/2006.

- Robert Wood Johnson Foundation, #56110. The Effect of Health Plan Concentration on Hospital Prices, Costs, Capacity, Charity Care and Outcomes. Co-principal investigator (with Glenn Melnick). 2/2006-1/2008.

- Robert Wood Johnson Foundation, #050953. Hospital Ownership and Performances: An Integrative Research Review. Co-principal investigator (with Karen Eggleston). 6/2004-11/2005.

- University of Southern California, #07398-000-00. Analysis of Hospital Data. Principal investigator. 1/2002-8/2004.

PROFESSIONAL ACTIVITIES

- Referee for the Journal of Health Economics, Inquiry, Health Services Research, Journal of American Medical Association, Health Affairs, Health Policy, Contemporary Economic Policy, Journal of Health Care for the Poor and Underserved
- Member of American Economics Association
- Member of Academy for Health Services Research and Health Policy
- Member of International Health Economics Association
- Invited Conference: *NSF Symposium on Quasi-Experimental Methods*, University of California, Berkeley, August 1999.

PERSONAL

Female; Fluent in English and Mandarin; Taiwan citizen and US permanent resident.

Dr. Cary Alan Simon
Lecturer
October 1999

Academic Degrees:

- **DBA** Doctorate Business Administration
  U.S. International University, 1997
  Dissertation Title: *Organizational Performance in the Public Sector: A Comparison of 77 Federal Bureaus Receiving or Not Receiving the President's Quality Award 1992-1997*
- **MS** Management, Naval Postgraduate School, 1996
- **MBA** Brenau University, 1991
- **BS** Chemistry, Houston Baptist University, 1974

Primary Teaching Areas:

- Strategic Management
- Organizational Behavior (including International)
- Managing Change

Graduate Teaching Experience:

- Lecturer, Naval Postgraduate School 1999 – present
- Adjunct Professor, Monterey Institute of International Studies 2004 - present
- Adjunct Professor, Golden Gate University 2000 - 2004
- Adjunct Professor, Georgia Military College 1990-1991
- Military Instructor: Royal Australian Navy 1987-1988
- Military Instructor: U.S. Navy, Kings Bay, GA 1989-1991

Publications, Papers, Presentations:

- Sekerka, L., Zolin, R. & Simon, Cary (2005). "Change Now Because I Say So! Specialized Management Identy and Coercive Rapid Transformation." *Naval Postgraduate School Technical Report* #NPS-GSBPP-05-003, Monterey CA..
- Sekerka, L., Zolin, R. & Simon, Cary (2005). *Change Now Because I Say So! – Specialized Management Identity and Coercive Rapid Transformation,* Academy of Management Conference, August 2005.
- Sekerka, L., Zolin, R. & Simon, Cary (February 27, 2005). *Change Now Because I Say So! –Specialized Management Identity and Coercive Rapid Transformation,* Australian Defense Force Academy, Canberra, Australia, Research Seminar presented by R. Zolin.
- Presentation: *Systems Thinking and Acting* for 12 Army Directors, Two-star General and senior staff at the Aviation and Missile Research, Development, and Engineering Center in Huntsville, Alabama, March 2005. Facilitated a Strategic Planning Session for the same group/same location.

Significant Practitioner Experience

Consulting Activities:

- California Commission on Police Officer Standards and Training:
  Executive Education seminars for CA. Police Officers 2000 - present
- Strategic Planning Facilitation for California Cities:
  Marina 2001-2002
  Porterville 2002-2003
  Vacaville 2006
- Monterey County, Public Authority In-Home Support Services:
  Executive Board planning seminars 2000 - 2003
- Moss Landing Harbor District Board of Commissioners:
  Executive Board planning seminars 2001 - 2002
- U.S. Air Force, Civil Air Patrol Regional Strategy Workshop 2002
- Sierra Army Depot, Leadership Council Strategic Planning 2002 - 2003
- California Governor's Regional Summit 2002
  Large Group Intervention and Strategy Presentation
- California Soccer Association North:
  Executive Board, Strategic Planning Workshops 2003
- U.S. Army Ground Systems Industrial Enterprise, Strategic Planning 2003
- U.S. Army Tank-automotive & Armaments Command Strategic Planning 2003
- Shelter Outreach Plus, Executive Board Strategic Planning 2003
- Commander, Naval Forces Europe Strategic Planning 2005

Academic / Professional Associations:

Certified Professional: Society for Human Resource Management (SHRM) 2006
Certified Executive Coach, 360 degree Feedback 2007

Keith F. Snider
Associate Professor
Area Chair, Acquisition Group
August 1996

Academic Degrees:

- Ph.D., Virginia Polytechnic Institute and State University, 1997, Public Administration and Public Affairs.
- M.S., Naval Postgraduate School, 1982, Operations Research
- B.S., United States Military Academy, 1976 (no major).

Primary Teaching Areas:

- Defense acquisition policy
- Defense project management
- Public organizations

Graduate Teaching Experience

- Naval Postgraduate School – 1993-present

Publications, Papers, Presentations:

Refereed Papers:

Conference Presentations:

"Acquiring Public Goods and Services: Connecting Research to Administrative Practice and Teaching," 2005 Annual Meeting of the National Association of Schools for Public Affairs and Administration, Washington, DC, 13-15 October 2005.

Research Projects: Principal investigator and administrator for Naval Postgraduate School's Acquisition Research Program from December 2003 to present. Numerous Department of Defense/Navy sponsors have provided annual funding in amounts ranging from $50,000 to $1,000,000, resulting in several dozen technical reports, journal articles, and conference papers by faculty both from NPS and from other universities. The principal product of this program is the Acquisition Research Symposium, held in annually since 2004, and scheduled again for May 2008.

Practitioner Experience:

- U.S. Army, 1976-1996. Retired from active duty in August, 1996 with the rank of Lieutenant Colonel

- 1976-1980; 1986-1989: Command and staff positions in U.S. Army field artillery organizations in the U.S., Korea, and Germany.
- 1982-1985: Operations research analyst, Army Training and Doctrine Command Analysis Center at the Naval Postgraduate School.
- 1989-1993: Staff analyst, Strategic Defense Command, Washington, DC.

Academic and Professional Associations:

- Project Management Institute
- American Society for Public Administration
- Inter-University Seminar on Armed Forces and Society
- International Defense Acquisition Resource Management program (2001-present). Lecturer on acquisition-related topics to international students and delegations at the Naval Postgraduate School. Also conducted seminars for acquisition professionals in the ministries of defense in Egypt, Chile, Bulgaria, Slovenia, and the Slovak Republic.

Public Service Activities:

- Editorial Board, *Acquisition Review Quarterly*, 1996-present
- Manuscript reviewer, *American Review of Public Administration*
- Board of Directors, Sanctuary Bible Church, Carmel, CA, 2002-present. Chairman, 2004-present.

Consulting Activities: none

Jim Suchan
Professor
January 1986

Academic Degrees

- Ph.D. University of Illinois, 1980, English Literature, "The Ambivalent Attitude Toward the Orphan in the Early-Victorian Novel
- M.A. State University of New York at Buffalo, 1973, Humanities
- B.A. State University of New York at Buffalo, 1971, English Literature and Film Studies

Primary Teaching Areas

- Managerial Communication
- Crisis Communication and Media Relations
- Organizational Behavior

Graduate Teaching Experience

- The Naval Postgraduate School, 1986-present
- The University of Alabama, 1981-1985
- The University of Arizona, 1976-1980

Research Presentations:

- "Strategic Financing of DoD Resources and Budget Policies." Chaired panel and presented overview of research. Fourth Annual Acquisition Research Symposium, Monterey, California, 17 May 2007.
- Presented and discussed our "Budget Scoring" research project as the guest speaker at the Joint Meeting of the American Bar Association (ABA) and Competitive Sourcing Committee and the ABA Public Contract Financing and Transaction Committee, Washington D.C., 15 February, 2007.
- San Miguel, Joseph G. and Donald E. Summers. Presented research finding and coordinated a panel discussion on Public-private partnerships with representatives from Hannon-Armstrong and Argent Group titled: "Alternative Methods for Financing Defense Acquisitions," for the Third Annual Acquisition Research Symposium, Monterey, California, 18 May 2006
- "Leasing Combat Support Equipment: Lessons from the Maritime Prepositioned Ship (MPS) Experience," with J. Shank, Second Annual Acquisition Research Symposium, Monterey, California, 19 May 2005.

Research Projects:

- Alternative Forms of Financing the Acquisition Budget**,** funding from the NPS Acquisition Chair, 2004 – 2007, products listed in the above section (Publications, Papers, Presentations)

Significant Practitioner Experience:

- Institute for Defense Education and Analysis (IDEA), Naval Postgraduate School (1995 – 2001)
    - Director, International Defense Acquisition Resources Management (IDARM) Program (1999 – 2001)
    - Director, Distributed Learning Division (1999 – 2000)
    - Program Manager, International Health Resources Management (IHRM) Program (1997 – 1999)
    - Research Associate engaged in developing an executive education program for DoD health care financial managers in a managed care environment (1995 – 1997)

- Morrison Knudson Corporation, Office of the Chairman, Carmel, CA (1994 – 1995), Executive Assistant/Business Manager for the Chairman/CEO (Mr. Bill Agee)

- Household Credit Services, Inc., Salinas, CA (1993 – 1994), Senior Financial Analyst

- U.S. Marine Corps (1973 - 1993)

- Marine Corps Representative, Director of the Marine Corps Practical Comptrollership Course, and Financial Management Instructor (MN2155), Naval Postgraduate School (1989 – 1993)
- Program Budget Coordinator for the Fiscal Director of the Marine Corps, Headquarters, Marine Corps, Washington D.C. (1985 – 1989)
- Financial Management Graduate Student, NPS (1983 – 1985)
- Executive Officer/Deputy Camp Commander, Camp Fuji, Japan (1982 – 1983)
- Rifle Company Commander, 29 Palms, CA (1980 – 1982)
- Student, Amphibious Warfare School, Quantico, VA (1979 – 1980)
- Series Commander, Company Commander, and Aide-de-Camp to the Commanding General, U.S. Marine Corps Recruit Depot, San Diego, CA (1976 – 1979)

Academic and Professional Associations:

- Institute of Management Accountants (IMA), Certified Management Accountant (CMA) and Certified Financial Manager (CFM).
- American Society of Military Comptrollers (ASMC)

Public Service Activities:

- Member of the Superintendent of the Monterey Peninsula Unified School District's (MPUSD) Business Advisory Committee. (2001 – present)
- Board Member and Treasurer for the Monterey High School's nonprofit Friends of Monterey Academy of Oceanographic Science (MAOS). (2002 – 2005)
- Co-chair of the Monterey Peninsula Unified School District (MPUSD) Budget Advisory Committee. (2002)
- Member of the Monterey Peninsula Unified School District (MPUSD) Blue Ribbon Committee (2000 – 2001), a committee of community members appointed by the MPUSD School Board to investigate the MPUSD financial crisis and make recommendations for improvement. I served as the Chairman of the Business Process Improvement Subcommittee.

Consulting Activities:

- National Parking and Valet, activity-based costing study and business process improvement, 2003 – present.
- Monterey Unified School District, informal consulting as part of various committees to improve business processes and reduce costs, 2001 – present.

Nicole Thibodeau
Assistant Professor
July 2005

ACADEMIC DEGREES:

- Ph.D. in Accounting, 2003 – University of Pittsburgh

  Thesis: "Improving The Organizational Architecture of Public Enterprise: An Investigation of the Effect of the Federal Government's Latest Effort through the Veterans Health Administration", chaired by Professor John Harry Evans, III
- BBA, 1988 – Université Laval, Québec, (QC), Canada

PRIMARY TEACHING AREA

- Financial accounting

GRADUATE TEACHING EXPERIENCE

- Naval Postgraduate School, Graduate School of Business and Public Policy, MBA

  Financial Accounting and Analysis (2005 - 2006)
- Université Laval, School of Accountancy, Masters in Accounting, Quebec, QC (Canada)

  Performance measurement and incentives and governmental management issues (2003 - 2005) and Thesis director
- Lecturer in accounting, Université de Moncton, New Brunswick, Canada, Executive MBA

  Intermediate Financial Accounting (1991 -1992)

PUBLICATIONS, PAPERS, PRESENTATIONS

- "La comptabilité intermédiaire", collaborator, French Canadian adaptation of "Intermediate Accounting, 10th Edition", Kieso et al., Chlala and Louis Ménard Editors, les Éditions du Renouveau Pédagogique, Montréal (QC), 2004
- Report on "Specialized Health Care Services Abroad" submitted to the Health Care and Social Services Ministry, Government of Quebec, 2003
- N. Thibodeau, Evans, J. H., Nagarajan, N. and Whittle, J. 2007. "Value Creation in Public Enterprises: An Empirical Analysis of Coordinated Organizational Changes in the VA Hospital System", *The Accounting Review* 82 (2): 483-502.

Conference presentations:

- "New Public Sector Reforms at Work: Transforming the United States Veterans Health Administration".
  - Presented at the International Conference on Accounting, Auditing and Management in Public Sector Reforms in Oslo, Norway, October 2004.

- "Value Creation in Public Enterprises: An Empirical Analysis of Coordinated Organizational Changes in the VA Hospital System" with John Harry Evans, III and Nandu Nagarajan, University of Pittsburgh
    - Presented at the American Accounting Association, Managerial Accounting Mid-year Meeting, Scottsdale, Arizona, January 2005.
    - Presented at the Canadian Academic Accounting Association Annual Meeting, Quebec, Quebec, Canada, June 2005.
    - Presented at the American Accounting Association Annual Meeting, San Francisco, California, August 2005.
- "Revisiting the Value of Repeated Contacts on Mail Survey Response Rates in Management Accounting Research" with Jean-François Henri, Université Laval.
    - Presented at the American Accounting Association Managerial Accounting Mid-year Meeting, Tampa Bay, Florida, January 2006.

RESEARCH PROJECTS

- "Value Creation in Public Enterprises: An Empirical Analysis of Coordinated Organizational Changes in the VA Hospital System – Phase 2" with John Harry Evans and Nandu Nagarajan, University of Pittsburgh (Under second revision at the The Accounting Review, June 2006).
- "Revisiting the Value of Repeated Contacts on Mail Survey Response Rates in Management Accounting Research" with Jean-François Henri, Université Laval (Presented at the Management Accounting Section of the American Accounting Association's annual meeting in January 2006).
- "New Public Sector Reforms at Work - Transforming the United States Veterans Health Administration" (Presented at the International Conference on Accounting, Auditing and Management in Public Sector Reforms in Oslo, Norway, October 2004)
- "A Critical Review of the Development of Financial Accounting Research: The Case of LIFO/FIFO"

SIGNIFICANT PRACTITIONER EXPERIENCE

- Audit Manager, Leblanc Nadeau Bujold Chartered Accountants, Edmundston, NB (Canada)
    - Auditing, consultation, professional education (1990 – 1994)
- The Canadian Institute of Chartered Accountants' Final Exam Marking Center Toronto (ON). 1990 -1993
    - Team Leader (1993), Assistant Team Leader (1992), Marker (1990-1991)
- Auditor, Maheu Noiseux Chartered Accountants, Québec (QC)
    - Systems auditing, public sector and health care (1988 – 1990)

ACADEMIC AND PROFESSIONAL ASSOCIATIONS:

- CPE session coordinator for the Government and Non-profit Section of the American Accounting Association: 2007
- Committee for the Notable Contribution to Management Accounting Literature Award – American Accounting Association: 2007
- Chair of the Canadian Accounting Academic Association's Public Sector Exposure Draft response committee to the Canadian Institute of Chartered Accountants: 2005 - 2006
- International accounting representative for the Government and Nonprofit Section of the American Accounting Association: 2005 - 2006
- Financial Managers' Institute (public sector), Université Laval Representative, 2003 – 2004
- Business Faculty Scientific Committee, Faculty Representative, 2003 – 2004
- Business Faculty Undergraduate Curriculum Committee, Department Representative, 2001 – 2004
- Financial Accounting Undergraduate Curriculum Coordinator, 2000 - 2004

CONSULTING ACTIVITIES

Consultation mandate on "Specialized Health Care Services Abroad" for the Health Care and Social Services Ministry, Government of Quebec, 2003

Gail Fann Thomas
Associate Professor of Management Communication
July 1989

Academic Degrees:

- Ed.D., Arizona State University, 1986, Business and Education, *Women Entrepreneurs: Entering the Economic Mainstream*.
- M.Ed., Arizona State University, 1979, Business and Education.
- BS, Northern Arizona University, 1976, Business and Education.

Primary Teaching Areas:

- Managerial Communication, Strategic Communication, Management of Teams

Teaching Experience:

- *Executive Education - NPS*
  Strategic Communication 2005-present; Teams and Leadership 2006
- *Graduate Resident Programs – NPS*
  Managerial Communication 1989-present; Organization and Management 1990; Teams, Power and Politics 2001-2004
- *NPS Distance Learning Programs*

Conference papers (published in proceedings):

Kraatz, M. and Ventresca, M.J., "Pragmatism and Institutional Theory: Contested Diffusion of Higher Education Management Reforms, 1975-2000, *Best Paper Proceedings, Academy of Management*, Atlanta, GA, August, 2006.

Conference presentations

Ventresca, M.J., Zhao, M. and Martí, I., "'Rationalized Myths' and the Spirit of Entrepreneurial Activity," Conference on Entrepreneurship Beyond the Enterprise, School of Management, University of Warwick, Warwick UK, September 2006.

Ventresca, M.J. and H. Sommerfeldt, "The evolution of the European Financial Services Market: Post-trade services and the dynamics of strategic opportunity." Academy of Management annual meetings, Philadelphia. August 2007; also presented at Entrepreneurship Conference, London Business School, May 2007.

Ventresca, M.J. and S. Rosenberg, 'Towards a social sciences of services: Evidence from services industry statistics," American Sociological Association annual meetings, New York, August 2007.

Ventresca, M.J. and M. Zhao, "Institutional innovation," European Group on Organization Studies, Vienna Austria. July 2007.

Conference presentations (refereed):
Academy of Management: 2006, 2005, 2004, 2003
European Group for Organization Studies: 2006, 2004
American Sociological Association: 2006, 2004, 2003

Invited seminars, colloquia:
2007 Melbourne Business School; University of Wisconsin, Madison; UC Davis
2006 Wharton, Warwick, Aston, LBS, Stockholm School of Economics (Skevik)
2005 IESE, Barcelona; Wolfson College.

Research Projects:

- Ongoing research, funded internally and without sponsors: Topics in institutions, industry, and innovation (see publications).

Significant Practitioner Experience:

- Executive education and other service engagements, 2006-2007: US 3rd Fleet senior staff; British Energy, Standard Chartered Bank, Zurich Insurance

Academic and Professional Associations:
Editorial Boards
Organization July 2006- present
Organization Studies July 2006-June 2007
European Management Review July 2005- June 2007
Organization Science. August 2002-July 2005
Ad hoc Reviewer
Aspen Institute, UC Berkeley Energy Forum, University of Chicago Press, National Academy of Sciences/NRC, Sage Publications, University of Oxford Press

Academy of Management
2007 Faculty Fellow, Organization&Management Theory Junior Faculty Consortium
2006-2007 Technology & Innovation Management (TIM), 'best dissertation' committee;
2006-2008 OMT Research Committee (selects 'best paper,' 'best symposium' prizes)
2004 Organization and Management Theory (OMT), Coordinator, Junior Faculty Consortium, with M. Schultz.
2002-2005 OMT Division, Executive Council Representative-At-Large.

Elliott Cory Yoder
Lecturer and Academic Associate
June 2000

Academic Degrees:

- • **MA** – Master of Arts in National Security and Strategic Studies, Naval War College, Newport, 1997
- • **MS** - Master of Science in Management, Naval Postgraduate School, Monterey, 1993
- • **BS** - Indiana University, Kelly School of Business, Marketing, Bloomington, 1983

Primary Teaching Areas:

• Acquisition and Contracting, MGT, Supply
• Advanced Contract Management
• Contingency Contracting (Operations and Strategy)
• Contracting for Field Operations and Shore Stations
• Acquisition Streamlining, Efficiencies and Effectiveness, Protocol Analysis
• Contract Cost and Price Analysis
• Contract Negotiations and Maximizing Value

Graduate Teaching Experience

• Naval Postgraduate School, Monterey, CA, from June 2000 through today's date.

Publications, Papers, Presentations:

Publications:

- "The Yoder Three-tier Model for Optimal Planning and Execution of Contingency Contracting", NPS Working Paper NPS-AM-05-002, 05 December 2004.

- "Engagement Versus Disengagement: How Structural & Commercially-Based Regulatory Changes Have Increased Government Risks in Federal Acquisitions", NPS Working Paper NPS-AM-05-001, 01 November 2004. Note: this working paper was posted in the Project for Government Oversight (POGO) web-site (pogo.org) at the request of the POGO director.
- "Contingency Contracting Operations- Achieving Better Results", Army AL&T Magazine, January – February 2004.
- "The Naval Postgraduate School's Defense-Focused Master's Programs in Acquisition and Contracting", Navy Supply Corps Newsletter, March- April 2004.
- "Lessons for Contingency Contracting, Humanitarian Operations in Uzbekistan", Army AL&T, September-Additionally include in the list significant publications from earlier years (2002 or earlier).

Presentations:

- Presentation and Plenary Panel Member, NPS Acquisition Symposium, May 2006. Presented research work on the Capitalization of Commercial Item Acquisition Legislation for Simplified Acquisition Procedures.
- Presentation and Plenary Panel Member, NPS Acquisition Symposium, May 2005. Presented research work on Engagement versus Disengagement: How Structural & Commercially-Based Regulatory Changes Have Increased Government Risks in Federal Acquisitions.

Research Projects:

- "Contracting Out Procurement Functions," NPS Acquisition Sponsored Research Report Series, sponsored by the Assistant Secretary of the Navy, Research, Development and Acquisition (ASN, RDA). Completion scheduled September 2007.
- "Getting the Most from Acquisition Reforms: FAR 13.5 Test Provisions for Simplified Acquisition Procedures, Commercial Item Acquisition," NPS Acquisition Sponsored Research Report Series NPS-AM-06-049, 30 December 2006.
- "The Yoder Three-tier Model for Optimal Planning and Execution of Contingency Contracting", NPS Working Paper NPS-AM-05-002, NPS 2004. This research was conducted at the initiative and personal contribution of the author.
- "Engagement Versus Disengagement: How Structural & Commercially-Based Regulatory Changes Have Increased Government Risks in Federal Acquisitions", NPS Working Paper NPS-AM-05-001, 01 November 2004. This research was conducted at the initiative and personal contribution of the author.

Significant Practitioner Experience:

- 2000- Present -- Lecturer and Academic Associate (Program Manager)- Naval Postgraduate School
- Director and Chief of Logistics, Headquarters, Allied Forces Southern Command (AFSOUTH), Naples, Italy

- Post Commander/Commandant and Support Group Commander, Kosovo Verification Coordination Center (KVCC), Kumanovo (Skopje), Macedonia
- Stock Control Officer, USS TARAWA (LHA-1)
- Aviation and Surface Stores Officer, USS TARAWA (LHA-1)
- Officer-in-Charge, Fleet and Industrial Supply Detachment, Long Beach, California
- Naval Acquisition and Contracting Officer (NACO) internship, Naval Regional Contracting Center (NRCC), Washington, D.C.
- Supply Officer, USS FANNING (FF-1076)

Academic and Professional Associations:

- DAWIA Contract Level III Certified (Defense Acquisition Workforce Improvement Act)
- Institute for Supply Management (ISM), Direct National Member.
- Beta Gamma Sigma International Honor Society for Graduate Degree Holders, lifetime membership.

Public Service Activities:

- Active member of a local church community.

Consulting Activities:

- Boeing, St. Louis, MO. Investigated contract incentive structures to enhance the Performance-Based Service Contract for the F/A-18 support contract. August-September 2004.
- OPALSOFT, Sunnyvale, CA. Co-Developed a market analysis and business plan to enhance OPALSOFT's ability to market to DOD entities. June-December 2003.
- Northrop-Grumman, Sunnyvale, CA. Reviewed business case elements and the effects of reduced business activity on current Government contracts. September 2005 through March 2006.

Roxanne Zolin
Assistant Professor
July 2002

Academic Degrees:

- Ph.D. in Construction Engineering Management, Stanford University, Stanford, CA, 2002. DISSERTATION: "Modeling Trust in Cross-Functional Global Teams*": A study that unites the major theories of trust in a model of trust development in cross-functional, globally distributed teams. The study refines and validates the model by conducting case studies of cross-functional globally distributed student teams engaged in construction projects in a learning environment.*
- MA degree in Sociology, Stanford University, Stanford, CA, 2001.
- MBA in Marketing, Monash University, Vic, Australia, 1991.
- Bachelor of Business in Management, Queensland University of Technology, QLD, Australia, 1980

Primary Teaching Areas:

- Collaborative problem solving
- Entrepreneurship
- Organization design
- Organizational behavior
- Management and organization theory
- Management of innovation, technology, R&D, and engineering
- Project management and project lifecycle

Graduate Teaching Experience

2002 - present **Naval Postgraduate School**, Monterey California

Research Projects:

2007 *Grassroots Business Redevelopment* funded by Center for Stabilization and Redevelopment Studies.

Numerous large scale natural disasters, civil conflicts and military actions have created the need for grassroots business redevelopment, but first responders, such as the military, government officials and non-government organizations do not typically have business expertise. The objective is to document and analyze grassroots business redevelopment success stories and lessons learned.

2007 *HARMONIEweb.org : Humanitarian Assistance: Response Monitoring and Operations Network Internet Enterprise*, funded by Office of Naval Research, U.S.A.

No single point of contact existed for information sharing and collaboration between DoD and other humanitarian disaster response organizations. But HARMONIEweb.org, developed for this purpose, found it difficult to attract NGOs to the site to share information. The goal of this project is to identify and test alternative organizational structures.

2007 *Interactive Learning Environment for Managing Multinational, Interagency, and Other Interactions in Stability, Security, Transition and Reconstruction Operation* , funded by US Army RDECOM Acquisition Center, Adelphi, MD, U.S.A.

Social, cultural and organizational differences between U.S. military and non-government organizations (NGOs) make interactions between members of these organizations engaged in stability, security, transition and reconstruction operations (SSTR) less effective. An opportunity existed to develop an interactive computer based simulation to educate and exercise USMs in the principles of effective interactions with MNFs, OGAs and NGOs.

2007 *Moss Landing Sustainable Fishing Feasibility Study*, funded by Coastal Conservancy, U.S.A.

Moss Landing Marine Laboratories (MLML) identified the opportunity to partner with the local fishing industry, to create a sustainable fishery that could save local jobs and promote a partnership that would benefit research, education and fishing interests. The goal of the project is to develop a plan for the new sustainable fishery facility and facilitate the Public-Private Partnership dialogue with the local fishing industry.

- *Principles of Reachback. How to reduce the forward footprint*, funded by United States Joint Forces Command, , Norfolk, Virginia, U.S.A., 2006

Significant Practitioner Experience:

- Contract Programmer, 1997 to 2001
  - Persona Computing for Pacific Gas and Electricity Company
  - Advanced Technology Staffing for Corsair Communications
  - PC Personnel for Bain & Co.
- Educational Software Developer, Executive Information Services Pty. Ltd., Vic, Aust., 1992 to 1997

- Trainer and Consultant, Marketing Visions Co., Vic, Aust., 1988 to 1991
- Marketing Manager, Companies such as Suncorp Building Society, Myers Stores, Ltd., Fisher-Price Toys (Aust.), Northern Permanent Building Society and Duesbury's Chartered Accountants, 1980 to 1987

Academic and Professional Associations:

- Academy of Management,
- INFORMS The Institute for Operations Research and the Management Sciences.
- USASBE the U.S. Association for Small Business and Entrepreneurship.
- ICSB the International Council of Small Business.
- Research Network for a Secure Australia.

Public Service Activities:

- Commissioner**,** Economic Development Commission, Marina, CA, 2002-2006
- Teacher**,** Bible Study, Juvenile Hall, San Jose, 1999-2002
- Board of Directors, YWCA, Victoria, Australia, 1989-1991
- Board of Directors, Southern Cross Capital Exchange, Melbourne, Australia, 1985-1990

Consulting Activities:

- Contract Programmer, 1997 to 2001
    - Persona Computing for Pacific Gas and Electricity Company
    - Advanced Technology Staffing for Corsair Communications
    - PC Personnel for Bain & Co.
    - PC Personnel for Mercer Management

Course Abstracts

Common Curriculum Components:

MBA / MSM Core Courses

GB3010: Managing for Organizational Effectiveness (4-0)

Course Instructor(s):

Professor Deborah Gibbons (AY05 - AY07)
Professor Cary Simon (AY06)
Professor Leslie Sekerka (AY06)
Professor Edward Powley (AY07)

Prerequisites for the Course:

None

Course Objectives:

GB3010, Managing for Effectiveness, teaches students to analyze, understand, and influence the public and private organizations with which they work. To do this, the course introduces psychological, behavioral, and structural principles that can be applied in organizations. From a public management perspective, we identify ways to improve structures, systems, and performance. From the perspective of an organization member, we discuss how to work more effectively with individuals and groups.

The course combines theoretical and practical knowledge to prepare students for situations that commonly arise and give them the tools to deal with unexpected or unusual situations. First, we develop foundational understanding of how people and organizations work. Then we apply this understanding to a variety of public and private organizational environments and circumstances. Finally, we build skills to facilitate students' success in organizations.

Students who successfully complete this course will be able to:

(1) design motivational programs for themselves and coworkers
(2) assess and compare cultures and their effects within and among organizations
(3) evaluate appropriateness of an organization's structure for its environment and activities
(4) identify leadership behaviors and determine when they are most appropriate
(5) coordinate team decision making and problem solving
(6) bargain collaboratively with individuals and across groups
(7) map social and power structures
(8) analyze organizational problems and opportunities, apply relevant theory to the situation, and propose appropriate interventions
(9) clearly and concisely present a case analysis

Course Description:

Organizations, including defense organizations and other government agencies, are complex, purposive, open systems. As open systems, they face challenges of external adaptation and effectiveness and of internal coherence and efficiency. Our purpose is to understand the structures and processes that make up organizations in order to appreciate how they succeed and why they falter or fail. Our focus is on "organizational diagnosis", which requires us to apply relevant theories to evaluate organizational performance. To do this, we examine topics that include: organizational structure, motivation and reward systems, organizational culture, power and conflict, effective teams, and the leadership characteristics involved in effectively managing today's organizations. Although these topics are relevant to all organizations, we pay special attention to their application in the context of the Department of Defense and other government organizations.

Major Topics Covered:

- Stakeholders, Systems and Change
- Organizational Structures
- Motivation of Individuals and Groups
- Motivational Systems and Management
- Applied Performance Practices
- Decision Making and Creativity
- Groups and Teams
- Group Decision Making
- Team Leadership and Crisis Management
- Organizational Culture and Ethics
- Organizational Research and SWOT Analysis
- Managing in an International Environment
- Social Interactions and Structures
- Power and Influence
- Conflict Management and Negotiation
- Leadership for Growth and Change
- Managing Change, with Practical Applications

Typical textbooks and readings:

Organizational Behavior Essentials, by McShane & Von Glinow

Harvard case by Balbaky, "Strike in Space"

Harvard case by Hill, "A Note for Analyzing Work Groups"

Kim, *Levels of Understanding: Firefighting at Multiple Levels*

Kolb: *Learning Style Inventory*

Heylighen: *Basic Concepts of the Systems Approach*

Senge: *Fifth Discipline*

Daniel and Herbig, *Perception: Why Can't We See What Is There To Be Seen?*

and Deal, *Reframing Organizations* (2nd Ed.)

Janus, Irving. "Groupthink"

Kotter, *What Leaders Really Do*

Burns, *Transactional and Transforming Leadership*

Mintzberg, *Organizational Design: Fashion or Fit?*

Soeters: *Culture in Uniformed Organizations*

Garvin and Roberto, M. "What You Don't Know About Making Decisions"

Samantha Power. "A Problem from Hell"

Bryant, "The Psychology of Resistance to Change"

Kotter: *Eight-Stage Process*

Bodaracco: *The Discipline of Building Character*

Useem, "Eugene Kranz Returns Apollo 13 to Earth"

Kerr, "On the Folly of Rewarding A while Hoping for B"

Krackhardt & Hanson, *Informal Networks*

Jick, *Implementing Change*

GB3012: Communication for Managers (3-0)

Course Instructors: Professor Jim Suchan (AY 07, AY 08)

Professor Gail Thomas (AY 07, AY 08)
Professor Cindy King (AY 07, AY 08)
Professor Leslie Serkerka (AY 07)
Professor Lisa Lindsey (AY 08)

Prerequisites for the Course: GB 3010

Course Objectives:

This course provides officers with theory, strategies, and skills to perform effectively the writing, speaking, listening, and feedback tasks in their *future* staff and command positions. After completing this course, students will be able to

- Examine and become more aware of the language they use to define and describe communication, the origins or sources of that language, and the influence that language has on their communication thinking and practice.

- Assess the strengths and weaknesses of various communication media and choose the right medium or combination of media for the communication situation and the message.

- Organize messages efficiently so that their audience quickly understands the message's purpose.

- Employ stylistic and document design strategies that enable their audience to quickly and efficiently process and understand the message.

- Develop a concrete language about writing and speaking that will help them to provide useful feedback to subordinates and peers.

- Know what is persuasion and what are the primary persuasion theories, understand a process that will help students construct persuasive messages, and demonstrate the ability to effectively construct a persuasive message.

- Understand the processes and factors that are important to managing their bosses

- Understand what are framing and metaphorical crafting and their relationship to leadership and organizational sense making.

Defense-related cases and scenarios are used to challenge officers to analyze complex public-sector contexts and choose the appropriate communication strategies for those contexts.

Course Description:

This course provides DoD and international military officers and civilians with the communication theories, strategies, and skills to manage and lead in the complex DoD environment. Instruction focuses on writing informative and persuasive documents, giving, succinct, easy-to-understand briefings, developing associates' communication competencies through various feedback roles and strategies, and listening analytically and empathetically. DoD cases, scenarios, and readings are used to analyze complex communication situations unique to defense organizations.

Major Topics Covered:

- The Role of Language in Shaping Conceptualizations of Communication
    - The Role of Metaphor
    - Common Metaphorical Constructs of Communication
    - Root Organizational Metaphors
    - The Metaphors of Communication Models
        - Information Transfer
        - Transactional Process
        - Strategic Control
        - Symbolic Interaction and Dialogue
- Strategic Models for Government Communications
- Media Choice Strategies
    - Message Equivocality and Media Richness
    - Context Factors Shaping Media Choice
    - Symbolic Perceptions of Media Choice
- Constructing Readable Documents Within Public Sector Contexts
    - Bottom-Line Organization
    - Schema Theory
    - Discourse Communities
    - Short-term memory and Information Chunking
- Giving Effective Briefings Within DoD
    - Coping with Briefing Apprehension
    - Effective Briefing Process: Goals, Audience, Targeted
    - Information, and Support
    - Impromptu Speaking Strategies
- Persuading in the DoD Context
    - Interests Behind Positions
    - Power and Credibility
    - Logos, Pathos, and Ethos

    - Rebuttals, Warrants, and Claims
- Listening: Selective, Active, and Empathetic Feedback Roles
    - Organizational Constraints: Judging versus Developing
    - Coaching, Evaluating, Educating, and Confronting
- Language and Leadership
    - Framing and Metaphor Making
    - Rhetorical Crafting of Vision and Values

Textbooks and Readings:

Communication for Managers. University Readers. A collection of articles from professional journals, books, and the popular press that focus on managerial communication issues germane to military officers.

Fielden, J. and Dulek, R. (1994) Bottom-Line Business Writing, New Jersey: Prentice-Hall

Correspondence Manual, D.O.D. SECNAVINST 5216.5C, 1983 (class handout).

GB3013: Problem Analysis and Ethical Dilemmas (0-2)

Course Instructor: Douglas Brook, Professor (AY06)

Prerequisites for the Course: None

Course Objectives:

The seminar has three objectives:

1. To educate BPP students in theories and models of ethics, and to explore the application of this understanding of ethics to real problems of military leadership and Defense business management.

2. To examine some management decision-making models involving complex environments, ambiguous conditions, incomplete information and uncertain outcomes.

3. To introduce incoming BPP students to each other and to the teaching methods employed in the School, including lectures, case studies, problem solving, and discussion groups.

Course Description:

As military officers advance to higher levels of responsibility, the organizational environments in which they operate become more complex and the decisions that they must make become more clouded by uncertainty. Business leaders face similar challenges. Under these conditions, ethical problems and issues also emerge in complex and uncertain ways leading to questions that go beyond simply "following the rules." The purpose of this seminar is to gain familiarity with problem analysis and the moral and ethical issues arising in the normal pursuit of business practices. We accomplish this through the presentation, analysis, and discussion of a number of representative case studies treating the ethical issues of business in society, as well as the ethical issues that arise within business organizations. These cases illustrate the interdisciplinary character of moral dilemmas, and show how such dilemmas draw on insights from organizational and management theory, law, political science and social psychology, as well as from philosophical ethics.

Major Topics Covered:

- Seminar overview
- Introduction to Problem Analysis and Decision-Making Models
- The Ethics OF Business: "Playing Monopoly: The Microsoft Corporation
- Ethics In Business: "Gap's Labor Problems"

- Business and Society: “GlaxoSmithKline, BristolMyersSquibb, and AIDS in Africa”
- Team case study projects

Typical textbooks and readings:

- John Shank, “Gas Stations in the Sky”
- “Playing Monopoly: The Microsoft Corporation”
- “Gap’s Labor Problems”
- “GlaxoSmithKline, Bristol-Myers Squibb, and AIDS in Africa”
- “B.F. Goodrich and Aircraft Brakes”
- “The MV-22 Osprey”
- “Wal-Mart’s Women”

Mitsubishi Motors in Normal, Illinois”

GB3040: Managerial Statistics (4-0)

Course Instructors: George W. Thomas, Professor (AY07, AY08)
Kathryn Kocher, Labor Economist (AY07)
Jeremy Arkey, Assistant Professor (AY08)

Prerequisites for the Course: College Algebra and Excel experience.

Course Objectives:
The goals of GB3040 are threefold:

1. To develop fundamentals needed to conduct appropriate managerial statistics analysis.
2. To provide students with the basis for continuing their education in statistical analysis both in subsequent GSBPP coursework and project work.
3. To provide a foundation for self education in appropriate statistical techniques in post-GSBPP public sector endeavors.

Course Description:

GB3040 is an introduction to the science and art of converting data into information for the resolution of managerial problems. Statistical concepts covered in this course include measurement scales, descriptive statistics for quantitative and qualitative data, basic probability concepts and distributions, sampling theory and sample design, sampling distributions, point and interval estimation, hypothesis testing, contingency table tests, and correlation and regression analysis. Excel statistical tools will be utilized for data analysis and presentation. Follow-on courses in GSBPP will build on the statistical foundations in GB3040.

Major Topics Covered:
Upon successful completion of this course, students should be able to:

- understand the role and nature of business statistics
- apply descriptive statistics for qualitative and quantitative data using Microsoft Excel
- select and work with various measurement scales
- employ appropriate graphical techniques both for insight and for information presentation
- apply basic probability concepts
- discuss and employ selected discrete and continuous probability distributions
- understand the logic of sampling and be familiar with sample design considerations
- construct point and interval estimates of population means and proportions
- formulate and test hypotheses about population means and proportions
- understand basic applications, interpretations, and limitations of correlation and regression analysis.

Typical textbooks and readings: Keller, Statistics for Management and Economics, 7th Edition.

GB3050: Financial Accounting and Analysis (4-0)

Course Instructor(s):

Nicole Thibodeau, Assistant Professor
Carmelita Troy, Assistant Professor
Danny Matthews, Senior Lecturer

Prerequisites for the Course: None

Course Objectives:

- This course is designed for the graduate student with no prior exposure to accounting. Its main objective is to provide students with the basic tools and knowledge to understand and interpret the content of financial reports in the private sector with an introduction to public sector financial reporting. To do this, the course covers a variety of fundamental topics, starting from the use and role of financial information, on through the core concepts of financial accounting and reporting, and the understanding and interpreting of financial reports. The core of the course is built around the core concepts and issues of financial reporting in the private sector so that students acquire a good working knowledge of the financial reporting model as well as a good base of the accounting ethos in how to organize, analyze and record transactions. However, throughout the course, examples of government transactions and financial accounting systems are contrasted and discussed in relation to the students' experiences. Students are also introduced to public sector financial reports which are contrasted to private sector annual financial statements.

Course Description:

- This course covers theory, concepts, and practices underlying Financial Accounting and Financial Reporting. The course is organized around the basic activities of an economic organization: operating, investing and financing. Through the successful use of invested capital, for-profit organizations produce goods or services that are valued by its customers and thus allow it to operate and provide a return on investment to investors. Similarly, not-for-profit or publicly owned organizations use capital to produce the goods or services for its members or constituents, according to its organizational objectives. The course focuses on understanding these functions and the role of accounting in supporting them.
- The first part of the course introduces the fundamental concepts and tools that underlie the production financial statements. It thus revolves around the accounting equation and the core concepts and rules that govern the recording and the measurement of economic transactions. It then follows with the reporting of these events in financial statements through the statement of financial position (balance sheet), the statement of operations (income statement) and the statement of owners' equity. The second part of the course follows with particular emphasis on more advanced transactions as well as the measurement and classification of

specific asset, liability, and owners' equity accounts. Students learn how to record as well as find and interpret that information in publicly available financial statements. In the process students also learn the concept of time value of money and how to apply it in various economic transactions. The third part of the course covers the financial reporting regulation environment, the cash flow statement and follows an introduction to ratio analysis, all using current examples of public financial statements. As in any MBA program, the course covers these topics in the context of the economic environment that privately owned corporations. However, this setting is contrasted with alternative settings that students will face or have faced in their work environment. In the process, the objectives and information needs of government entities such as DoD organizations are revealed and contrasted to that of for profit entities. This leads to the contrast of private sector financial statements with that of government entities. Thus, every attempt is made to link the topics covered to the current economic context, business and environment as well as to students' various experiences in business and government and to particular applications in their program of study.

Major Topics Covered:

- Accounting and Organizations: Overview of business and other organizational objectives and process, financial accounting uses and users in the context of various organizational forms (private, public, not for profit)
- Business Activities & the Accounting Equation: The accounting equation and its basic elements, concepts and application.
- Measuring and Recording Revenues and Expenses: Understanding more advanced transactions and events as well as the rules that govern their recording and valuation in the accounting equation. Recording and interpreting the resulting ledger accounts.
- Reporting Earnings and Financial Position: Building financial statements from ledger accounts and interpreting the resulting amounts in terms of how they represent the economic events they are purported to represent.

- Operating Activities: More detailed view of the income statement, earnings per share and related balance sheet accounts, including inventory and account receivable valuation and more advanced revenue recognition issues and related expenses, including returns, warranties, cost of goods sold.
- Investing Activities: Particularities of long lived assets (i.e., fixed assets, goodwill and other intangible assets): definition, cost and periodic valuation (depreciation and impairment), recording transactions and interpreting financial statements.
- The Time Value of Money: Understanding the concept of time value for money and how to value economic transactions that involve future payments and receipts, including sales and purchase transactions as well bonds. Involves calculating the value of resulting assets or liabilities, streams of payments or receipts and the interest component, the recording of these components and the interpretation of amounts related to the resulting accounts and line items in publicly available financial statements.

- Financing Activities: The nature of liabilities, current and long term, including operating liabilities, long term debt, contingencies and bonds as well as a more detailed understanding of owners' equity share and retained earning type of accounts, in particular their interpretation in financial statements.
- Reporting Cash Flows: Understanding and preparing a basic cash flow statement, with operating, investing and financing sections and interpreting real time cash flow statements of current publicly available statements.
- Full and Fair Reporting: The environment of financial reporting, including governance mechanisms such as board, rules governing the preparation and disclosure of annual reports as well as regulating authorities, with a case example focusing on the broader reporting content, including the auditor's report; current state, history, implications.
- Introduction to Ratio Analysis: Builds on knowledge acquired throughout the quarter and introduces more formally the use of ratio analysis as well as other types of financial statement and market based indicators so that students can calculate and interpret them at a basic level.

Typical textbooks and readings:

Custom textbook based primarily on

Ingram, R. W., and T. L. Albright. 2007. *Financial Accounting: A Bridge to Decision Making – 6th Edition*. Thomson South-Western, Canada and on Stice and Stice, 2007

With added analysis chapter from

Stice, E. K.,and J. K. Stice. 2006. *Financial Accounting: Reporting and Analysis - 7th Edition.* Thomson South-Western, Mason, OH.

Additional readings and documents, as needed, including financial and business press current news, cases and publicly available financial statements.

GB3051: Cost Management (3-0)

Course Instructor(s):

- Don Summers, Lecturer (AY06, AY07)
- Mary Malina, Assistant Professor (AY06)
- Ken Euske, Professor (AY07)

Prerequisites for the Course:

- GB3050: Financial Reporting and Analysis

Course Objectives:

- The primary objective of this course is to provide the students an opportunity to learn and apply concepts and theory related to the effective use of costing and management accounting data as elements in decision making to determine the cost of products and services, plan and control operations, measure performance, motivate employees, manage external relationships and make other related business decisions. The course will emphasize the decision-making and control functions of a manager using managerial accounting information in the public sector.

- The use of financial data and analyses for decision-making and allocation of resources is equally applicable in public and private organizations. Special considerations and applications in the Federal government and the Department of Defense (DoD) are presented as appropriate. The desired working capability is achieved through working a series of problems that illustrate those analytical techniques in the context of specific circumstances and data.

Course Description:

- The course consists of three major sections, as follows: (1) the determination of the costs of goods and services produced by an organization, (2) financial data relevant to planning future operations and making specific decisions among alternative courses of action, and (3) evaluating the effectiveness and efficiency of actual operations and using that information to help control future operations. Cost determination depends on the purpose for which it is to be made. Different product costs are appropriate for different purposes. The financial data relevant to a decision depend on the specific features of that decision and may be quite different from those relevant to some other decision that may involve the same operations. Evaluating actual performance depends partly on comparing relevant actual financial data with some plan or standard for desired performance. However, it depends also on the actual circumstances of the situation in which costs were incurred.

Major Topics Covered:

- Cost determination:

- Cost classifications for manufacturing, for assigning costs to objects, and for predicting cost behavior
- The flow of product costs through merchandising, service, and manufacturing operations
- Job order cost accounting in service and manufacturing operations
- Measurement and allocation of overhead costs
- Activity-based costing

- Planning and decision making:
  - Cost behavior patterns
  - Analysis of mixed costs
  - Analysis of the relationships among revenue, costs, and volume
  - Break-even analysis
  - Cost concepts for decision-making
  - Determining impacts of specific decisions on relevant revenue and costs
    - Make or buy (outsourcing) decisions
    - Dropping a product line or segment
    - Special offers
    - Product profitability analysis under capacity constraints
    - Nonfinancial considerations in decision analysis

- Performance evaluation and control:
  - Standard costs
  - Standard costs and variances between them and actual costs
  - Flexible budgets and overhead analysis
  - Balanced scorecard
  - Financial performance measures of segments of an organization
    - Segment reporting and profitability analysis
    - Return on investment
    - Residual income and economic value added

Typical Textbooks and Readings:

- Garrison and Noreen, Managerial Accounting, 12th edition, Irwin/McGraw-Hill

Supplementary readings are provided on topics covered in the text to illustrate the relevance and applications of the concepts addressed in the course to the DoD. Examples include: the cost analysis requirements of OMB Circular A-76, the Indirect Cost Management Guide for the Department of Defense, and various articles from newspapers and periodicals that illustrate the applications of the concepts covered in the course to the public sector and the DoD.

GB3070 Economics and the Global Defense Marketplace (4-0)

Course Instructors: Yu-Chu Shen
Peter Coughlan
Raymond Franck
David Henderson
Elda Pema

Prerequisites for the Course: College Algebra

Course Objectives:

The main goal is to impart an understanding of economic principles that will be useful for managers in defense organizations. The course focuses on resources and defense: how much is available for defense (macroeconomics); how much is provided for defense (provision of public goods); and how well defense resources are used (microeconomics). A second goal is to provide principles necessary for follow-on courses in the resident MBA core sequence, especially GB 4071.

Course Description:

Develops the fundamental tools of microeconomics and macroeconomics, and applies them to defense management and resource allocation. Course centers on defense applications of economic theory. Topics covered include: defense and the macroeconomy; markets and their interactions with defense acquisition and contracting; national security implications of globalization; and efficiency in defense decision making. PREREQUISITE: MA2XXX College algebra or equivalent.

Major Topics Covered:

- Basic Economic Concepts (scarcity, role of incentives, economic systems, …)
- Defense and the Macroeconomy
    - Concepts (GDP, inflation, unemployment, …)
    - Equilibrium
    - Macroeconomic Policy
    - Economic Growth
- Provision of Defense as a Public Good
- The Defense Marketplace
    - Theory of Markets (supply, demand, equilibrium)
    - Theory of the Firm
        - Cost, Production, Profit-Maximizing Model
        - Effects of Market Structure

- Special Topics (as time permits)
    - Economics of Corporate Strategy (e.g., Five Forces, "Co-opetition")
    - Principal-Agent Model
    - Outsourcing (Transaction Cost Economics)
    - Defense Industry Cases

Typical Textbooks and Readings:

Heyne, Paul, et. al., *The Economic Way of Thinking*, 2005.
Lieberman, Marc and Robert E. Hall, *Introduction to Economics*, 2005
Mankiw, N. Gregory 1997, *Principles of Economics*, 2006

GB4014: Strategic Management (4-0)

Course Instructors: Nick Dew, Assistant Professor (Course coordinator)
Pete Coughlan, Assistant Professor
Marc Ventresca, Associate Professor
Cary Simon, Senior Lecturer

Prerequisites for the Course: All previous required courses for the curricula.

Course Description:

This course introduces strategic management with a focus on strategic analysis, formulation, innovation, and implementation, and develops key concepts and tools in both public sector and commercial context. The primary learning objective is for students to develop analytic skills in topics which are central to any understanding of strategic management. By the end of the course students should be able to provide concept- and tool-based responses to these questions: What is strategic management? How can we evaluate a strategy overall and also analyze specific strategic situations? How do we tell a good strategy from a bad one? How does implementation shape both the good/bad distinction and what are key features of effective strategy implementation? What determines whether an organization wins or loses in strategic interactions with other organizations? What are sources of innovation and what are typical obstacles to innovation? What factors distinguish effective implementation, transformation initiatives?

The objectives of the course are direct and practical. The course is devoted to building a working knowledge of commonly applied strategy concepts for the business world and public sector. By the end of the course, students should have an understanding of these frameworks, such that they are able to hold an intelligent conversation about strategy with peers, consultants, suppliers, etc., evaluate available and needed data to assess a strategy, and recognize potential opportunities and pitfalls.

A recent expert study proposes this definition of strategic management[1]:

> "The field of strategic management deals with a) the major intended and emergent initiatives b) taken by general managers on behalf of owners, c) involving utilization of resources d) to enhance the performance e) of firms f) in their external environments."

Given this definition, the GB4014 course alerts students to important differences between this course and other courses students take in an MBA program. First, most courses concentrate on a specific element of management—the management of people, structures, processes, and functions (so-called "silos"), i.e. accounting, finance, acquisition, logistics, etc. In strategic management the whole organization is our unit of analysis. We

[1] Rajiv Nag, Donald C. Hambrick and Ming-Jer Chen, 2007. What Is Strategic Management, Really? Empirical Induction of a Consensus Definition of the Field. Strategic Management Journal.

address strategic issues of managing the total system, not only the parts, and distinguish between strategy and operations.

This change in perspective is accompanied by a second shift: the course focuses *outwards*, towards the external environment, i.e. industry context, stakeholders, competitive organizations and the non-market environment. The internal functioning of organizations is seen in light of their external effectiveness, i.e. in coping with stakeholders, competition, regulators and funding agencies, etc.

We discuss applications in government, non-profit, and commercial organizations. The cases used in the course are often based on private sector organizations; however, the concepts developed in the course generally apply across many different kinds of settings, and the transferability of these concepts to the public sector occurs in many parts of the course. In many ways, public sector strategic managers face even greater challenges than their private-sector counterparts because they are limited in the amount of control they have over the organization's direction, personnel, budgets and resources. They also face scrutiny by the media and the public, and they are expected to share power with other agencies, branches, and levels of government when making decisions and executing policy. However, the general principles of strategic management apply to all organizations – public, private and not-for-profit.

Of course, strategy in principle without effective practice offers little in the way of practical impact. Therefore the course also addresses how managers confront the challenge of implementing strategies under dynamic market and non-market conditions. In too many cases, 'strategy' fails because of poor execution or a lack of understanding of institutional and organizational dynamics. Issues of strategy implementation are vivid in large established companies and in technology startups, in public agencies and in community initiatives and non-profit organizations. Effective implementation of strategy requires both the ability to 'see' organization and strategy as complex systems and also practical managerial intuitions and skills.

Students should also note what strategic management is *not* about. Certain issues won't be a major focus of our attention in class. Topics such as job satisfaction, group behavior and other human factors are the purview of other classes. Broader societal implications of organizational strategy are also not major topics: we do not spend much time worrying about the social impact of organizations because the economic performance of individual organizations is our foremost concern. This doesn't mean we neglect stakeholders: because stakeholders can have a major impact on an organization, we build them into our analyses. What we don't do is take the perspective of government policymakers – that's the purview of other classes.

Typical course materials (exact cases and readings differ by instructor):

The Cola Wars (Harvard case collection HBS #9-702-442)

The USA Today Decision (HBS #9-792-030)

Wal*Mart in 1994 (HBS #9-794-024)

Intel Corp. 1968-97 (HBS #9-797-137)

Sunk Cost: The Plan to Sink the Brent Spar (HBS #9-903-010)

Bitter Competition (A) (HBS #9-794-079)

The Walt Disney Company: The Entertainment King (HBS #9-701-035)

GE's Two-Decade Transformation: Jack Welch's Leadership (HBS #9-399-150)

NYPD New (HBS # 9-396-293)

Xerox PARC: From Closed to Open Innovation (Chesbrough 2005)

Military Innovation and the Defense Industry (Dombrowski & Gholz 2006)

Southwest Airlines (Darden case collection UVA-OM-0743)

Eurotel vs. Globtel (A): Launching GSM Mobile Services in Slovakia.

Nucor at a Crossroads (HBS #9-793-039)

Ben & Jerry's (HBS 9-796-109)

Lesser Antilles Lines (A) (Darden UVA-QA-0355)

Apple Computer 2006 (HBS 9-706-496)

Unbuilding the World Trade Center (UO course instructor case)

Kodak and the Digital Revolution (HBS #9-705-448)

The US Combat Aircraft Industry, 1900-1988 (RAND report, 2003)

The MBA Program at the Naval Postgraduate School: Competitively Unique or Out on a Limb? (Coughlan, 2007).

War Made New (Max Boot – chapter excerpts)

GB4043: Business Modeling and Analysis

Course instructor: Prof. Aruna Apte, Prof. Franck, Prof. Doerr

Prerequisites for the course: GB3040

Course objective:

This course is required for all the students. This course introduces modeling for a sound conceptual understanding of decision–making process. The course will familiarize students with applications, assumptions, and limitations of the quantitative methods in modeling.

Course description:

Forecasting is an essential aspect of managing any business. Experience, good judgment, intuition, and understanding of the economy may give a manager some insight into the forecast of what is to come and therefore what is needed. However, validating that feeling and converting 'the feeling' into a tangible decision is not easy. Some time-series models are presented as tools for this decision making.

A situation of allocating scarce resources amongst competing activities is commonplace in the real world. The tools of optimization help model this situation, find an optimal solution, and perform a 'what-if' analysis. A generic linear programming model can help find planning of various production levels in a manufacturing plant, advertising in marketing companies, blending in chemical plants and refineries. Transportation problems, assignment problems, scheduling problems form the backbone of logistic operations. Selection of projects within a given budget such as investments in financial companies and the decision whether to build a warehouse can be easily solved using integer programming models. These are some of the numerous situations where optimization techniques can prescribe a solution.

Simulation is one of the most widely used quantitative approaches to decision making. It is a method for learning about a real system by experimenting with a model that represents the system. Some of the instances where simulation has been successfully used are, new product development, inventory models, waiting lines.

Major topics covered

Some of the fundamental concepts covered will be in optimization, simulation, and forecasting.

GB4053: Defense Budget and Financial Management Policy (4-0)

Course Instructor(s):
Lawrence Jones (course coordinator), Douglas Brook**,** Richard Doyle, John Mutty

Prerequisites for the Course:
GB3010: Managing for Organizational Effectiveness, GB3070: Economics of Global Defense Environment.

Course Objectives:
The objectives of the course are to provide participants with an understanding of (i) budgets as instruments of economic policy, (ii) federal and defense budget process events, timing and the roles of major participants, (iii) the political dynamics of budgeting, (iv) budgeting in the Navy and DoD including PPBES, (v) budgetary competition within the Pentagon, (vi) strategies of advocacy in budget formulation and execution, (vii) budget execution dynamics, (viii) alternative budget processes, e.g., zero-base, results and performance budgeting, (ix) budget reform initiatives, (x) contemporary defense budget resource policy issues, (xi) budgeting under fiscal stress, (xii) reform in the public sector and its budgetary and financial implications. In addition, the course presents brief overviews of the application of net present value (NPV) and net benefit computation in budget analysis, and of fund accounting and how it relates to the annual budget in terms of cash flow management and the relationship between sources and uses of money accounted for under the federal government fund accounting system.

Course Description:
This course is designed to provide an understanding of the budget and, to an extent, financial management processes of the federal government, Navy and Department of Defense. Material presented in lecture and readings analyzes how the process operates and the roles played by major participants and decision makers. The course evaluates the manner in which public policy is translated into resource allocation decisions. Budgets are documents in which policy and planning are expressed quantitatively and qualitatively as resource commitments. The budget process is comprised of a series of decision points at which policy and program priorities are analyzed, debated, established and implemented. Budgeting is highly competitive. The budget process evidences vigorous competition between and within federal departments and agencies as well as cooperation, conflict, compromise and, at times, some degree of strategic misrepresentation. These factors are inevitable characteristics of resource decision making in democratic political systems. Budgets make policy priorities explicit. Elected and appointed officials and public managers debate at great length about policy priorities and objectives. However, to understand the true nature of commitments it is necessary to analyze how public money is appropriated, allocated and spent, what is purchased and consumed in labor, services, goods, and then what benefits result. Annual and multiple year budget authorizations and appropriations represent programmatic priorities and commitments to meet requirements. Agency budget requests and internal resource allocation decisions reflect the policy priorities, political power and leverage applied in

the political system. Budget formulation and execution are intended to implement prevailing political priorities in response to public demand and need for services.

Major Topics Covered:
Fiscal Policy Objectives of Government; Definition of Policy; Federal Government Budget Process Analysis; Budgeting for National Defense Planning, Programming, Budgeting, Execution System; Congress and the Defense Budget; Supplemental Appropriations for Defense; Defense Budget Execution; Budget Process Participants: The Pentagon; Budget Process Participants: The Claimants; Navy Working Capital Fund Basics; National Defense Financial Management; Budgeting and Management of Weapons Acquisition; Budgeting under Fiscal Stress; Defense and Federal Budgeting and Management Reform: History, Transformation and the Future

Typical textbooks and readings:
Jerry L. McCaffery and L. R. Jones, Budgeting and Financial Management for National Defense. Information Age Publishing, 2004.

GB4071: Economic Analysis and Defense Resource Allocation (4-0)

Course Instructors: Bill Gates (Fall AY2006, Fall AY2007)
Chip Franck (Fall AY2006, Fall AY2007)
David Henderson (Spring AY2006)

Prerequisites for the Course: GB3070

Course Objectives:

Upon successful completion of this course, student should be able to:

- Use analytical methods to solve public sector resource allocation problems problems, especially those with a resource allocation flavor.
- Discuss the implications of market and government imperfections and measure their efficiency implications using producer and consumer surplus.
- Demonstrate a sophisticated understanding of cost-benefit and cost effectiveness analyses of government policies, particularly those in the Department of Defense
- Describe marginalism and opportunity cost and how they relate to efficiency in constrained and unconstrained resource allocation problems.
- Discuss the relevance of imperfect information and asymmetric incentives on agent behavior in principal-agent relationships, and the relevance of this to cost-benefit and cost effectiveness analyses.

Course Description:

GB4071 uses the analytical tools of economics, including Cost-Benefit Analysis (CBA), to solve resource allocation problems in the public sector (primarily defense). Building on GB 3070, GB4071 expands the students' understanding of "efficiency" as a central concept for defense decision making. It covers problem-solving methods with the intention of improving the students' skills for (1) making poorly-structured situations into well-structured problems, and (2) solving those well-structured problems.

This course focuses on analysis of problems in public policy and defense resource allocation. It emphasizes developing the principles of cost-benefit analysis (CBA) and cost-effectiveness analysis (CEA) and their application to specific investment projects, programs and policies in the federal government, especially in the Department of Defense.. The basic intent is not necessarily to make the students expert analysts, but to provide a sophisticated understanding of analytical processes.

Major Topics Covered (Case Studies TBD by Instructor):

- **Valuing Costs and Benefits** 8 hrs
  - Introduction to Economics and Problem Solving

- Cost-Benefit/Cost-Effectiveness Analysis
- Producer and Consumer Surplus)
- DoD or Other Government Case Study

- **Market and Government Failures** 8 hrs
  - Externalities
  - Public Goods
  - Government Failures
  - DoD or Other Government Case Study

- **Cost-Benefit and Cost-Effectiveness Analysis** 10 hrs
  - Inflation and Discounting
  - Decision Making under Risk and Uncertainty (e.g., Crystal Ball)
  - DoD or Other Government Case Study

- **Efficiency in Defense Resource Allocation** 10 hrs
  - Marginalism (Constrained and Unconstrained Optimization)
  - Multiple Inputs – Multiple Outputs
  - Multi-Attribute Decisions (e.g., Logical Decisions for Windows)
  - DoD or Other Government Case Study

- **Asymmetric Information and Incentives** 4 hrs
  - Information and Incentives
  - Introduction to Game Theory (Prisoner's Dilemma/Auctions)
  - DoD or Other Government Case Study

Typical Textbooks and Readings:

Typical Primary Textbooks

Public Finance by Rosen
Cost-Benefit Analysis: Concepts and Practice by Boardman, et al.
A Primer for Policy Analysis by Stokey and Zeckhauser
OMB Circular A-94: Guidelines and Discount Rates for Benefit-Cost Analysis of Federal Programs

Typical Supplementary Textbooks

Introduction to Economics by Lieberman and Hall
Principles of Economics by Mankiw
Case study readings supplied by instructor as appropriate

Course Abstracts

Common Curriculum Components:

MBA Only Courses

GB3031 Principles of Acquisition Management (2-0)

Course Instructors: Dr. Rene G. Rendon, Senior Lecturer

Prerequisites for the Course: None

Course Description

This course introduces the fundamental principles of public and private sector acquisition management by examining current acquisition policy issues, strategies, contractual decisions, and program management concepts. The aspects of planning, organizing, staffing, directing and controlling efforts within a risk managed process will be examined. Acquisition functional areas addressed in this course include: logistics, test and evaluation, systems engineering, manufacturing management, quality assurance, funds management, budgeting, research and development, and contracting management.

Course Objectives

1. Understand the basic principles of acquisition management in the public and private sectors.
2. Understand the overarching political environment as it relates to industry and government partners in acquisition management.
3. Be able to identify, define, and explain the various disciplines that must be integrated into effective teams for managing major acquisition programs.
4. Be familiar with management policies, processes and organizations associated with acquisition management.
5. Understand the product life-cycle, and the systems management process across development and production and support phases.
6. Understand the linkage to other processes that advance customer needs and allocate resources to develop and procure goods and services.
7. Be familiar with the policies governing contracting, particularly within government acquisition.
8. Understand the fundamental concepts, techniques, and challenges of system acquisition and program management of major systems.
9. Possess a basic vocabulary of systems acquisition and contracting terminology.
10. Apply knowledge of acquisition to optimize decision-making within a broad field of assignments that will bring the student into contact with the DoD acquisition process.

Major Topics Covered:

- Acquisition Management and Project Management
- Project manager and Project Team
- Project Organizations
- Needs Identification
- Proposed Solutions
- Projects
- Project Planning
- Project Scheduling
- Schedule Control
- Resource Considerations
- Cost Planning and performance
- Project Communications and Documentation

Textbooks and Readings:

Required: *Successful Project Management*, Jack Gido and James P. Clements, 2006. ISBN: 0-324-22428-1

Optional: *Introduction to Defense Acquisition Management*, Defense Acquisition University Press, 2005. (Posted on Blackboard).

Additional reading assignments are listed on the course outline and may be accessed via the NPS On-Line Blackboard (http://nps.blackboard.com)

GAO Reports (topically specific)
Numerous topical handouts
Various readings from defense acquisition regulations, journals, and periodicals.

GB4052: Managerial Finance (3-0)

Course Instructors: Professor Nayantara Hensel
Professor Shu Liao
Professor Randall Howard

Prerequisites for the Course: None.

Course Objectives:

This course seeks to provide MBA students with a strong foundation in the principles of corporate finance. The course is a mixture of lectures, cases, interactive discussion and problem-solving. By the end of the course, students should be able to understand the different financial markets and the securities issuance process, use finance theory in project finance, understand how investment portfolios are constructed, value equity, debt, and companies, and understand the rationale and the process for mergers and alternative forms of financial architecture.

Course Description:

The course is divided into six modules: Module I provides an introduction to financial markets and exchanges, the trading process, the IPO issuance process, and market efficiency; Module II focuses on project finance and topics such as NPV and other types of capital allocation decision rules; Module III focuses on investment portfolio theory and why diversification reduces risk; Module IV provides students with an understanding of how to read a company's financial statements and how to understand ratio analysis, working capital management, and leases. Module V focuses on valuing stocks, bonds, and companies, with an emphasis on financial forecasting. Module VI focuses on financial architecture—why firms merge, the merger process, the historical merger waves, measuring merger efficiencies, evidence on gains from mergers, takeovers and LBO's, financial architecture as a solution to principal-agent problems, and an international comparison of corporate governance mechanisms.

Major Topics Covered:

- Overview of Corporate Financing
- Securities Issuance and Financial Markets
- Market Efficiency
- Introduction to NPV and the Opportunity Cost of Capital
- Calculating NPV's and Annuities
- Decision Rules based on NPV
- Alternative Project Decision Rules to NPV
- Portfolio Theory I and Diversification
- Portfolio Theory II
- Ratio Analysis and Reading Financial Statements

- Working Capital Management and Leasing
- Valuing Stocks I: The DDM Model
- Valuing Stocks II: The FCFF and FCFE Models
- Valuing Stocks III: Marsh & McLennan and the Insurance Industry
- Valuing Debt
- Mergers: History, Mechanics, and Effects
- Financial Architecture as a Solution to the Agency Problem
- Agency Theory and Compensation Structure
- LBO's, Carve-Outs, Conglomerates, and International Perspectives on Corporate Governance
- Case: Defense Industry Mergers
- Bankruptcy:
- Case: LTV's Bankruptcy
- Case: Delta Airlines and Financial Distress

Typical textbooks and readings:

The text is Principles of Corporate Finance, by Richard Brealey and Stewart Myers, McGraw Hill (8^{th} edition)

Course Abstracts

Common Curriculum Components:

MSM Only Courses

MN2039 Basic Quantitative Methods in Management (4-0)

Course Instructors: Bill Gates (Fall AY08)
Dave Roberts (Fall AY07)
Eva Regnier (Spring AY2006)

Prerequisites for the Course: ***College Algebra***

Course Objectives:

This course introduces the mathematical basis required for advanced management and cost-benefit analysis. Math topics include algebra, graphs, differential calculus, including both single and multiple variable functions, and indefinite and definite integrals. Management concepts include cost-benefit and cost-effectiveness analysis, marginal analysis, unconstrained and constrained optimization, and welfare analysis. Students in this course have diversified backgrounds. For some, many topics may be review. For others, they may be challenging new concepts.

Course Description:

This course is designed to introduce students to the mathematical basis required for advanced management and cost-benefit analysis. It begins with a detailed review of algebra and graphs. This forms the foundation for analyzing introductory management concepts including willingness to pay and opportunity cost, forming the basis for the welfare economics models required by OMB circular A-94 for cost-benefit analysis in the public sector. The class will then introduce differential calculus. In particular, students will learn techniques of differentiation for both single and multi-variable functions. Corresponding management concepts include resource allocation in constrained and unconstrained optimization involving one and multiple variables. Finally, students will learn techniques for solving indefinite and definite integrals. Economic applications for this material include consumer and producer surplus.

Major Topics Covered:

- Algebra 6 hrs
- Graphs 6 hrs
- Differentiation Techniques 6 hrs
- Differentiation Applications 8 hrs
- Functions of Two Variables 8 hrs
- Integration 6 hrs

Typical Textbooks and Readings:

Typical Primary Textbooks

Brief Calculus and Its Application by Goldstein, Schneider and Lay

Applied Calculus for Business, Economics and the Social and Life Sciences by Hoffmann, Bradley and Rosen

Calculus for Business, Economics, Life Sciences and Social Sciences, by Barnett, Ziegler and Byleen

MN4110: Multivariate Manpower Data Analysis I (4-1)

Course Instructors: Elda Pema, Assistant Professor
Yu-Chu Shen, Assistant Professor

Prerequisites for Course: A course in statistics (GB3040)

Course Objectives:

This course provides the fundamentals needed to conduct empirical manpower research. One of the main goals is to provide the tools and intuition required to correctly interpret empirical research and to understand the implications of empirical studies and their policy suggestions. This course also lays the foundation for developing research methods at the level where one can independently analyze data to further the scope of social and behavioral science and to generate policies as a manpower analyst.

Course Description:

An introduction to multivariate data analysis. This course provides an overview of general research methodology and the multivariate techniques most frequently used in empirical studies. Emphasis will be placed on model specification, application, and interpretation: understanding the various multivariate statistical techniques and assumptions upon which they are based, selection of appropriate techniques, properties of the estimates they produce, correcting for violation of the assumptions, interpretation of computer results, and the art of model testing and building.

The course uses multiple data sets on both civilians and military personnel from various sources to provide exposure to a multitude of topics, data, and empirical issues. Students gain substantial competence in Stata during lab sessions.

Major Topics Covered:

- Simple linear regression
- Multiple linear regression
- Ordinary Least Squares (OLS)
- Mechanics of OLS
- Properties of estimators (unbiased, efficient, and consistent estimators)
- Statistical properties of OLS
- Multicollinearity
- Omitted variable bias
- Fitted values and residuals
- Goodness of fit
- Confidence intervals
- The variance and sampling distributions of OLS estimators

- The Gauss-Markov theorem
- The Central Limit Theorem
- Testing hypotheses about a single linear combination of the parameters
- Testing multiple restrictions (F-test)
- Interaction terms
- Binary variables
- Chow test
- Linear probability model
- Model specification
- Introduction to Stata (reading data, OLS estimation, generating new variables)

Typical Textbooks and Readings:

Wooldridge, *Introductory Econometrics* (3rd edition)
Wooldridge, *Student Study Guide with Solutions*
Other readings distributed in class.

Course Abstracts

Additional Components:

MBA Core Elective Courses

GB3030: Marketing Management (3/0)

Course Instructor(s): Becky Jones, Lecturer (AY06, AY07)

Prerequisites for the Course: None

Course Objectives:
Successful students will be able to:

1. Define marketing and understand the major marketing concepts
2. Understand how marketing fits into DoD, our society and the economy
3. Articulate and defend a code of marketing ethics
4. Gain the ability to develop marketing strategies and marketing plans

Course Description:
This course focuses on the managerial skills, tools and concepts required to produce a mutually satisfying exchange between consumers/users/organizations and providers of goods, services and ideas. The emphasis is on understanding the marketplace, strategic formulation (orientation, target segmentation, positioning) and how to manage the marketing. Although many examples will be drawn from the defense industries, an overview of marketing management in consumer and industrial markets will be provided.

The course is designed to provide graduate students with a basic understanding of the concepts and tools used to guide marketing decisions.

Students are expected to apply general marketing theory to the DoD environment. Each quarter an organization is selected as the client and students take on the role of the marketing department. The course is designed to provide hands-on, practical experience, with the fundamentals of marketing – market research, marketing strategy, campaign design, advertising, public relations, and campaign assessment. Students are given the opportunity to directly apply what they learn with the client.

Major Topics Covered:

- Marketing strategy
- Competitive analysis
- Market research
- Targeted markets
- Market Segmentation
- Product Position
- Pricing strategy
- Distribution
- Product Promotion

- Public Relations
- Relationship marketing
- Business to Business Marketing
- Consumer Marketing
- Packaging
- Customer Service
- Marketing Communications
- Development of a Marketing Plan

Typical textbooks and readings:
Kotler, Philip, Keller, Kevin Lane (© *2006 Prentice Hall*), Marketing Management, 12th Edition. ISBN#0-13-145757-8

GB4021: Strategic Management of IT (3-0)

Course Instructor(s):

- Glenn R. Cook, Lecturer, Information Sciences Department (2006-2007)

Prerequisites for the Course:

- GB-3020 Fundamentals of Information Technology (4-0)

Course Objectives:

- Provide the student with an understanding of the key components and underlying concepts of related to the management of information technology.
- Provide a fundamental understanding of IT infrastructures and architectures and their impact on Department of Defense activities.
- Understand how e-business applications provide a mechanism for transformation.
- Explore the relationship between IT strategy and Department of Defense Transformation.
- Examine various strategies for managing an IT unit and study key issues such as out sourcing and integration.
- Expand upon the curriculum discussions of Information Technology as an enabler for specific functional applications (e.g. Accounting, Budgeting, Inventory Management etc.) to a broader discussion of the integration of enterprise functions.
- Demonstrate how technology and systems decisions expand the complexity and inter-relationships within and between organizations.

Course Description:

- The management of Information Technology (IT) within the Government and Corporate environments has become a function that is shifting from the traditional IT management structure to the General Manager. In today's environment it is imperative to understand the importance of and unique issues related to technology. Since the traditional functional approach to IT/IS decision making has proven to be sub-optimizing, this course focuses on an approach to the holistic view of the organization as the target for technology integration. Additionally, because Network Centric Warfare has been deemed mission critical to the success of the military now and in the future, this course will cover the manner in which the application of technology between organizations can overcome traditional stovepipes. . This course will cover the role of IT in an organization and the critical areas where the general manager plays an important role. Lectures, case analysis, classroom discussions and individual challenge questions, will be used to both understand and apply e-business business models and strategies.

Major Topics Covered:

- The value proposition of Technology in organizations
- E-Business/E-Government approaches to organizational integration
- Strategic Outsourcing: Approaches to determining how technology can be be implemented and managed.
- Enterprise Applications: Integration within the confines of the enterprise
- Business Enterprise Architecture: Integrating strategic architecture to Business strategy in order to achieve full technological potential.
- Value Chain Integration: Integration between enterprises
- Business Process Transformation with Technology: Internal transformation of processes to efficiency and effectiveness using technology
- Force Transformation with technology: The application of technology to solve business process issues between government enterprises and between private industry and government.

Typical textbooks and readings:

This course has no textbooks, all reading assignments are articles and other documents

- Department of the Navy IT Capital Planning Guide
- Department of the Navy IT Investment Portfolio Model
- "How to build a case for SMB IT Initiatives", Rossner, Bill, Gartner Group, 2001
- "Strategy and the Internet", Porter, Michael, Harvard Business School, 2001.
- "Ten Attributes of a successful e-business", Technology republic.
- "New Rules for the New Economy", Kelly, Kevin, Viking Books, 1998.
- "How to think strategically about outsourcing", Craumer, Martha, Harvard Management Update, 2002.
- "Manage IT as a business service", Gartner Insight, 2002.
- "Army Logistics Marches Ahead", Caterinicchia, Dan, 2002
- "Linking Outsourcing to Business Strategy", Insinga and Werle, 2004
- "The Essential ERP: Its Genesis and Future", Jakoveljevic, P.J., Technology Evaluation, 2000.
- "Nestle's ERP Odyssey", Worthen, Ben, CIO Magazine, 2002.
- "Easy ERP: A Challenge to conventional thinking", Holt, Emmitt, Technology Evaluation, 2005.
- "Thinking without the Box: New Approaches for New Results", Housel, Thomas and Arthur Bell, 2004.

"ForceNet: A functional concept for the 21st Century", Department of the Navy, 2004.

GB4044: Defense-Focused Managerial Inquiry (3-0)

Course Instructor(s):
- Mark J. Eitelberg, Professor (AY07, AY08)
- Bryan J. Hudgens, Lecturer (AY07, AY08)

Prerequisites for the Course:
- None

Course Objectives:
To better understand and appreciate the following:
- The nature and logic of research and its various types
- How to recognize different degrees of quality in research
- Relationships between managers and research, managers and researchers
- The value, for managers and students alike, of learning research process skills
- The distinctions between various approaches to problem-solving
- The terminology of research
- The value of a research proposal
- Ethical issues associated with research
- How to frame a research question
- How to formulate a solid research hypothesis
- How to design a study to test a hypothesis
- How to present and support a research argument
- How to collect data for various types of research
- How to select from among available approaches in data analysis
- How to avoid common errors in research
- How to tell the "research story"
- How to select, develop, and execute an MBA project or thesis
- How to create a (your) research proposal
- How to express creativity in problem-solving
- How to make research enjoyable

Course Description:
Fundamentally, this is a course in thinking critically and analytically. Research can be as complicated or as simple—as organized or as disorganized—as we make it or as a task demands. Each of us, in our own way, is engaged almost constantly in some form of information collection and processing, some form of inquiry. Whether it pertains to an issue at our job or in the many personal decisions of a typical day, we are problem-solving and seeking informed choice. The methods we employ as researchers, problem-solvers, and decision-makers, regardless of the time or place, are basically similar, and may differ only in degree.

Some describe research as “organized common sense,” since it “supports the idea that good research is within the grasp of many people.” In this way, we can “simplify the more technical aspects of research methods, and enhance understanding, by showing the logic behind them.” This course similarly seeks to examine the logic of research methods—recognizing that these methods may differ across disciplines and subspecialties—rather than focus on detailed models or procedures that may hold limited meaning for the military’s managers. It is not a course in rules or required steps; rather, it is a course in understanding the principles, concepts, and range of techniques that define the craft of research.

Major Topics Covered:

- Introduction to the Course
- Review of Course Outline, Projects, Assignments, Grading, Policies
- Course Organization: Status of Projects and Theses
- Familiarity with Search Tools
- Navigating Blackboard
- Research, Researchers, Readers, and Users: Overview
- Research in Defense and Business
- Performing Research
- Data, Information, and Knowledge Management
- Managing Research; Sponsoring Research
- Applying Scientific Thinking to Management Problems
- From Questions to Problems
- From Problems to Sources
- Problem Definition and the Research Proposal
- Research Design
- Asking Research Questions and Finding Answers
- Framing the Research Question: A Critical Step
- Research Claims
- Making Good Arguments
- Reasons and Evidence
- Acknowledgments and Responses
- Warrants: What, How, & Why
- Gaining Readers’ Trust: Recognizing Opposing Views
- Why Conduct Exploratory Research?
- Types of Exploratory Research
- Collecting Data
- Primary vs. Secondary Sources
- Advantages and Disadvantages of Secondary Data
- Secondary Data Research Designs
- Types of Secondary Data
- Selected Sources for General Business, Government, and Defense Research

- Exploratory Search Strategies
- Qualitative Approaches: Overview
- The Nature of Surveys
- Survey Research Methods
- Errors in Survey Research
- Methods of Communication
- Overview of Quantitative Approaches
- Four Requirements: Reliable; Objective; Applicable; Measurable
- Analyzing Data
- Observation Methods
- Scientific Observation
- Content Analysis
- Experimental Research
- Classification of Experimental Designs
- Common Errors in Research
- The Iterative Process
- Questioning Assumptions
- Pitfalls Introduced by Researcher
- Dealing With the Unknown
- Poor Data; Small Numbers; Chance Occurrence
- Telling the "Research Story"
- Thinking Like a Reader; Writing Like a Thinker
- Exploring, Displaying, and Examining Data
- Establishing Credibility
- Voice, Tense, and Trimming the Fat
- An Idiot's Guide to Readability, Readability, Readability
- Making it Memorable
- Resources for Writers of Research Papers, Reports, and Theses
- Cases Drawn From Subspecialties
- The Ethics of Research
- The Creative Process

Typical textbooks and readings:

- Paul D. Leedy and Jeanne Ellis Ormrod, *Practical Research: Planning and Design*, Eighth Edition (Upper Saddle River, NJ: Pearson/Merrill Prentice Hall, 2005).

- Wayne C. Booth, Gregory G. Colomb, and Joseph M. Williams, *The Craft of Research*, Second Edition (Chicago: The University of Chicago Press, 2003).

- Michael J. Polonsky and David S. Waller, *Designing and Managing a Research Project: A Business Student's Guide* (Thousand Oaks, CA: Sage, 2005).

Course Abstracts

Additional Components:

Acquisition

MN2302: Seminar for Acquisition and Contracting Students (0-3)

Course Instructors: Rene Rendon

Ron Tudor

Bryan Hudgens

Marshall Engelbeck

Dave Mirano

Prerequisites for the Course: None.

Course Objectives:

This seminar is designed to expose students to current acquisition and contracting issues and problems. Specific objectives include:

- Interact with acquisition and contracting managers from government and industry.
- Prepare for professional certification exams.
- Present and discuss research work and conclusions regarding acquisition and contracting issues.
- Visit government acquisition organizations and contractor plants to obtain an understanding of the various facets of defense acquisition and contracting.

Course Description:

This seminar is designed to expose students to current acquisition and contracting issues and problems. Guest speakers from government and industry, field trips, and student thesis research presentations are employed in achieving this objective.

Major Topics Covered:

Topics covered are dependent upon guest speakers, student research areas, and organizations visited on field trips. Recent examples include:

- Guest Speaker: Director, Defense Procurement. Topic: Acquisition Reform.
- Guest Speaker: Major Defense Contractor Vice President for Contract Policy. Topic: Consolidations in the Defense Industry.
- Guest Speaker: Author, Historian, and Law Firm Partner. Topic: A History of Government Contracting.

- Guest Speaker: Naval Officer, recently deployed to Bosnia. Topic: Contingency Contracting.
- Field Trip: Missile Plant, Tucson Arizona.
- Thesis Research Presentation Topic: Risk Management.

Typical Textbooks and Readings: None.

MN2303: Seminar for Program Management Students (0-3)

Course Instructors: Keith Snider

Thom Crouch

Todd Kros

Prerequisites for the Course: None.

Course Objectives:

This seminar is designed to expose students to current program management issues and problems. Specific objectives include:

- Interact with acquisition and program managers from government and industry.
- Prepare for professional certification exams.
- Present and discuss research work and conclusions regarding acquisition and contracting issues.
- Visit government acquisition organizations and contractor plants to obtain an understanding of the various facets of defense program management.

Course Description:

This seminar is designed to expose students to current program management issues and problems. Guest speakers from government and industry, field trips, and student thesis research presentations are employed in achieving this objective.

Major Topics Covered:

Topics covered are dependent upon guest speakers, student research areas, and organizations visited on field trips. Recent examples include:

- Program Management in Army Future Combat Systems Office
- Program Management in Air Force B-52 System Program Office
- Project Management Institute professional certification program
- Navy Operational Test & Evaluation
- Congressional affairs

Typical Textbooks and Readings: None.

MN3303: Principles of Acquisition and Contracting (4-0)

Course Instructors: CDR Jeffrey R. Cuskey, SC, USN (Ret)
Professor Rene Rendon

Prerequisites: None

Course Objectives:

- Develop a fundamental understanding of the principles, policies and practices of the acquisition and contracting processes.
- Develop a framework for management and control of these processes.
- Develop managerial competence to identify and deal with the key issues and concepts in acquisition and contracting.

Course Description:

This course is a study of the principles of acquisition and contracting including the fundamentals of the Federal Acquisition Regulation (FAR) and the DOD FAR Supplement (DFARS); the acquisition and contracting processes including requirements determination, acquisition environment, acquisition strategies, basic contract law, contract types and methodologies, source selection; and acquisition and contracting management, particularly ethics/standards of conduct and professionalism.

Major Topics Covered:

- Acquisition and Contracting
  - Environment/Policy
  - Processes/Functions
  - Acquisition Reform

- Contracting
  - Laws and Regulations
  - Organizations

- Methods of Contracting
- Contract Types
- Sourcing
- Negotiation Principles
- Pricing, Cost & Audit Principles
- Contract Administration
- Value Analysis
- Quality Assurance
- Specifications
- Automated Procurement

- Simplified Acquisition Procedures
- Ethics in Acquisition and Contracting
- Major Systems Acquisition
- International Procurement

Typical Textbooks and Readings:

World Class Supply Management, Dobler, Burt and Starling, 2003

Handouts:

(1) Statement of Guiding Principles, FAR 1.102
(2) ARQ "Acquisition Reform: It's Not As Easy As It Seems", Summer 1995
(3) DODIG Indicators of Fraud
(4) DODD 5500.7, Standards of Conduct, 30 Aug 1993 & Joint Ethics Regulation (JER), Sections 5 & 6.
(5) Selected Chapters, Government Procurement Management, Sherman 1999

MN3304: Contract Pricing and Negotiations (5-2)

Course Instructors: CDR (Ret) Cory Yoder
(others as required)

Prerequisites for the Course: MN3303 or MN3331 preferred, but not mandatory

Course Objectives:

- Develop a fundamental understanding of pricing theory and pricing strategies.
- Understand the fundamentals of cost principles, cost and price analysis, cost accounting standards, and profit issues.
- Develop and sharpen negotiation skills.

Course Description:

This course involves the study of pricing theory and strategies, costing methodologies, and contract negotiations.

Major Topics Covered:

- Pricing Theory
- Pricing Arrangements
- Price Analysis
- Cost Principles
- Price-Based Acquisition
- Parametric Cost Estimating
- Cost Analysis
    - Direct Costs
    - Indirect Costs
    - Facilities Capital Cost of Money
    - Profit
- Profit Theory
- Cost Accounting Standards
- Estimating Systems
- Cost Realism
- Post-Award Pricing
- Negotiations
    - Preparation
    - Conducting Negotiations
    - Strategy/Tactics
    - Ethics

- Improvement Curve Theory
- Business Clearances
- Defective Pricing
- Contract Audit

Typical Textbooks and Readings:

Contract Pricing Reference Guide, Vols I-V, current

Contract Negotiation Cases: Government and Industry, Lamm, 1993

Hydrostream I, II, III, IV Case, Learning Curve Application, Yoder, 2007.

Gillette Generator and the ELF Transmitter, Yoder, 2005.

Contracting with the Federal Government, Worthington & Goldsman, 4th Edition (or as updated).

Accounting Guide for Government Contracts Trueger, 10th Ed., 1991

DCAA Contract Audit Manual, as updated 2007 online.

Handouts:

Parametric Cost Estimating Handbook, 1995

MN3304 Course Slide Set, Yoder, 2005-2007.

MN3306: Strategic Purchasing (3-0)

Course Instructor(s):

Lt Col Bryan Hudgens, USAF (AY06, AY07)

Prerequisites for the Course:

None

Course Objectives:

By the end of this course, you should:

a) Understand and appreciate the evolution of purchasing from a functional activity to an element of organizational strategy;
b) Comprehend and apply the concept of purchasing's strategic role within the context of total supply chain management;
c) Comprehend and apply concepts regarding how companies use strategic sourcing as a method of achieving a competitive advantage;
d) Comprehend and apply the factors involved in making strategic decisions regarding outsourcing organizational functions;
e) Comprehend and apply concepts regarding the importance of supplier relationships within the larger activity of supply-base management;
f) Understand the future sourcing trends for the twenty-first century and appreciate their implications for industry and DoD;
g) Consider how commercial strategic purchasing practices would be useful to—and analyze how they could be implemented in—the DoD acquisition environment.

Course Description:

This course is a graduate-level seminar in strategic purchasing. The course will be taught through a combination of formal lecture, guided discussion, and case analysis. My primary goal of this course is for you to appreciate purchasing not as a functional activity but rather as a ***strategic component*** of total ***supply chain management***. In this course we'll explore the argument that ***companies with world-class purchasing practices derive a competitive advantage in their industries from their procurement and sourcing strategies***. We'll also assess whether (and if so, how) this notion of competitive advantage through strategic purchasing generalizes to the Department of Defense. Our emphasis on world-class purchasing practices means we'll spend a fair amount of time observing and analyzing commercial organizations and their purchasing practices. Your task will be to assess whether these commercial purchasing practices are in fact world-class, and whether (and again, if so, how) they should be implemented practically in the DoD acquisition and sustainment environments.

Major Topics Covered:

- **Module 1: Course Introduction**
  - Course Administration
  - The World We Live In
  - Transformation
  - Strategic Purchasing

- **Module 2: A Strategy Primer**
  - Industry Analysis, Scanning, Spanning, Market Analysis
  - Firm-Level Analysis
  - Capabilities and Competencies
  - Transaction Cost Analysis

- **Module 3: Strategic Alliances & Interorganizational Relationships**
  - Alliance Formation
  - Buyer/Seller Relationships
  - Relationship Management

- **Module 4: Supply Chains**
  - Functions
  - Integration
  - Demand Management
  - Customer Satisfaction

- **Module 5: Purchasing Basics**
  - Purchasing Process
  - Purchasing Policies
  - Purchasing Organization

- **Module 6: Sourcing Strategy**
  - Insourcing/Outsourcing
  - Product Classification

- **Module 7: Supplier Management**
  - Supplier Selection, Evaluation, and Management/Development

- **Module 8: Supplier Measurement**
  - & Quality
  - SPC
  - Performance Measurement

- **Module 9: Strategic Analysis**
  - Techniques
  - Total Cost Analysis

- Spend Analysis
- Value Analysis

- **Module 10: Issues & Trends**
  - Social Responsibility
  - Global PSCM
  - Purchasing Ethics
  - Course Wrap-up

Typical textbooks and readings:

Monczka, Robert, Robert Trent, and Robert Handfield (2005), *Purchasing and Supply Chain Management*, 3rd Ed. Cincinnati, OH: South-Western College Publishing.

OR…

Burt, David N., Donald W. Dobler, and Stephen L. Starling (2003), *World Class Supply Management*, 7th Ed. New York: McGraw-Hill.

Many journal articles will be assigned. These articles will provide additional background, elaborate on areas in the text, and give you additional examples of how the concepts play out in "real life".

The readings support each learning module as shown in this table. Readings reflect the use of the Monczka text (designated MTH); if the Burt text is used, similar readings would replace those from the MTH text.

MN3307: Entrepreneurship in Strategic Purchasing (3-0)

Course Instructor(s):

Lt Col Bryan Hudgens, USAF (AY06, AY07)

Prerequisites for the Course:

None

Course Objectives:

- At the end of this course, you will be familiar with the following entrepreneurial mindset concepts and processes:

h) Understand the characteristics of corporate entrepreneurship and the entrepreneurial mindset
i) Comprehend the characteristics of ideas capable of worthwhile contributions to the organization
j) Comprehend the role of opportunity recognition in corporate ventures
k) Apply opportunity recognition in the creation of new business models
l) Comprehend the role of the entrepreneurial landscape in recognizing breakthrough opportunities
m) Apply assessment tools to diagnose the progress of entrepreneurial projects
n) Comprehend the organization's portfolio of initiatives and the importance of strategic focus and trade-offs within the portfolio
o) Understand various implementation strategies
p) Apply discovery-driven planning
q) Understand the role and practice of entrepreneurial leadership and management

Course Description:

- This course is a graduate level seminar on corporate entrepreneurship. The course focuses on entrepreneurship within the corporate environment and especially on the development of what is called the entrepreneurial mindset. What is the entrepreneurial mindset? Briefly, it's a way of thinking about organizations that is designed to exploit opportunities in uncertain environments. My primary goal for the course is to familiarize you both with the entrepreneurial mindset and with specific methods for deploying it. We'll look at how the entrepreneurial mindset is applied in entrepreneurial ventures and we'll investigate how we can deploy the mindset within DoD including acquisition. The foundation of the course will be an analysis of the process by which the entrepreneurial mindset generates new ideas, researches the ideas' likelihood of success, and successfully implements the idea. The course will also investigate the critical role of entrepreneurial leadership and scanning the environment for opportunity. The course will be taught through a combination of informal lecture, guided discussion, case study, and student presentations.

Major Topics Covered:

- Course Introduction:
  - Corporate Entrepreneurship

- The Entrepreneurial Mindset:
  - The Entrepreneurial Mindset
  - Framing the Challenge

- Opportunity Recognition:
  - Opportunities
  - Organizational Learning
  - Entrepreneurial Innovation

- Creating Opportunities:
  - Breakthrough Competencies
  - Blockbuster Products/Services
  - Redifferentiation
  - Disrupting the Rules

- Opportunity Selection:
  - Selecting the “best” from among your options

- Planning and Managing:
  - Discovery-Driven Planning
  - Managing Projects with
  - Uncertain Outcomes

- Entrepreneurial Strategy:
  - Portfolio Strategies
  - Growth Strategies

- Policy Entrepreneurs:
  - Who they are; why and how they operate

- Entrepreneurial Management & Leadership:
  - Entrepreneurial Organization
  - Entrepreneurial Culture
  - Leadership

- Corporate Entrepreneurship & the Entrepreneurial Mind:
  Course hot-wash

Typical textbooks and readings:
McGrath Rita Gunther & Ian MacMillan (2000). *The Entrepreneurial Mindset*, Boston MA: Harvard Business School Press.

Burns, Paul (2005). *Corporate Entrepreneurship*, New York, NY: Palgrave MacMillan.

Luecke, Richard (1994). *Scuttle Your Ships Before Advancing, and Other Lessons from History on Leadership and Change for Today's Managers*. New York: Oxford University Press, Inc.

Journal articles will be assigned for many of the blocks of instruction.

The readings support each learning module or topic as shown in this table:

Topic	Reading Assignment
Course Introduction:	
Corporate Entrepreneurship	Burns Chp 1 Hall & Wecker Chp 107 & 110
The Entrepreneurial Mindset:	McGrath Chp 1 & 2
The Entrepreneurial Mindset	Covey (2001)
Framing the Challenge	
Opportunity Recognition:	
Opportunities	Burns Chps 3 & 4
Organizational Learning	Burns Chps 12 & 13
Entrepreneurial Innovation	Buchanan (2002) Hopkins (2001) Luecke Chp 7
Creating Opportunities:	
Breakthrough Competencies	McGrath Chps 3-6 Kuznetsov & McDonald
Blockbuster Products/Services	(2000)
Redifferentiation	Higdon (2000); Inc (2002) Wetlaufer (2000); Lewis
Disrupting the Rules	(2001) Luecke Chp 8
Opportunity Selection:	
Selecting the "best" from among your options	McGrath Chp 8 Luecke Chp 2 Review Burns Chp 3
Planning and Managing:	

Discovery-Driven Planning	McGrath Chps 10 & 11
Managing Projects with Uncertain Outcomes	Luecke Chp 5 Fishman (2002)
Entrepreneurial Strategy:	
Portfolio Strategies	Burns Chps 9-11
Growth Strategies	D'Aveni (1995) D'Aveni (1999) Eisenhardt & Brown (1998, 1999)
Policy Entrepreneurs:	
Who they are; why and how they operate	Mintrom (1997) Mintrom & Vergari (1996) Drumwright (1994)
Entrepreneurial Management & Leadership:	
Entrepreneurial Organization	Burns Chps 6 & 7
Entrepreneurial Culture	Whitley (1999)
Leadership	Hornsby & Kuratko (1999) McGrath Chp 12 Collins (2001)
Corporate Entrepreneurship & the Entrepreneurial Mind:

MN3309: Acquisition of Embedded Weapon System Software (4-1)

Course Instructors: Brad Naegle
Diana Petross

Prerequisites for the Course: MN3331 or, MN3302 or, MN3221 & MN3222 series or, DAU PM Level 2 Certification, or DAU SAM 101 course

Course Objectives:

Students will possess abilities to:

- Recognize the unique management challenges and DoD's critical role associated with the development of the software component of software-intensive systems.
- Identify the DoD acquisition environment, policies, guidance and directives that influence development of software-intensive systems.
- Analyze software life-cycle management models and select models that support the overall developmental approach for varying systems.
- Recognize basic software engineering concepts and terms.
- Analyze risk areas associated with software development including risk identification, assessment, mitigation, risk handling, and documentation requirements. Select and apply appropriate risk management tools.
- Apply evaluation methodologies to assess the software development maturity (including CMM) in potential software development contractors.
- Integrate effective software management concepts into the DoD Acquisition Model and recognize necessary software elements of technical reviews, audits and baselines.
- Assess the most appropriate software management, process, and quality metrics for effective control and monitoring of the software development process.
- Recognize and differentiate different software development tools across the spectrum of the developmental and Sustainment phases.
- Apply effective management tools in the development of software requirements, performance specifications, and architectural design.
- Recognize the increasing impact of the software component on supportability burden and Total Ownership Cost (TOC).
- Assess and apply estimating tools for Post Deployment Software Support (PDSS) planning and resourcing.

Course Description:

MN3309 is designed to introduce software development management challenges, development concepts, and methods and tools for effectively managing software-intensive programs within predictable cost and schedule thresholds. Students are introduced to the critical role DoD plays in the successful development of software-intensive systems. Effective management tools are introduced and applied to control the DoD functions, drive the critical software design effort, and monitor technical progress in the development and delivery of the

software component. Software supportability concepts are emphasized and effective estimation tools are applied for predicting and planning supportability functions and resources. Notional and actual military cases are used for examples and exercises. Student teams analyze notional JCIDS input documents, identify derived and implied software requirements, develop a Work Breakdown Structure (WBS), and draft performance based software specifications.

Major Topics Covered:

Topics include the DoD acquisition environment, software life-cycle management, software risk management, developer maturity evaluations, software engineering, software development within the DoD acquisition model, metrics, DoD tools for software development, software developer tools, and Post Deployment Software Support (PDSS) planning and resource estimation.

Typical textbooks and readings:

- Guidelines for Successful Software Acquisition Management (GSAM), Third Edition, 2002
- *Managing the Software Process*, Humphries, Watts S., August 1990
- Software Engineering Institute (SEI) products, readings, and website
- USAF Software Technical Support Center (STSC) products, readings, *Crosstalk* Magazine, and website

GAO reports and periodical articles on software acquisition management issues, notional and actual case studies

MN3312: Contract Law (4-0)

Course Instructor: Sandra Desbrow, JD
Ron Tudor, JD

Prerequisites: MN 3303

Objectives:

- Develop an understanding of federal contract law analysis and legal principles associated with the acquisition process.
- Acquire the skills and competence for researching, briefing, and analyzing judicial and regulatory opinions.
- Understand and analyze the basic legal rights and obligations of the parties to a Government contract.
- Understand the roles and jurisdiction of the various agencies and judicial bodies empowered to render decisions.
- Understand the contract law associated with military operations.

Description:

This course involves a study of United States Federal Government contract law and fiscal law, federal legislation, regulations and administrative agency actions. The course covers a wide variety of legal areas of study from methods of contracting, types of contracts, ethics, fraud, fiscal law, and intellectual property in government contracting. Extensive materials are used in the class to address a wide variety of legal subjects associated with contracting. These materials include current cases as decided by the Government Accountability Office on protest decisions, and the Boards of Contract Appeals and Federal Courts. These cases date from the Civil War era to last minute decisions issued moments before the class begins. These cases are analyzed to ascertain the legal principles associated with valid contract formation, funding actions, competitive actions under the Competition in Contracting Act, the Economy Act, problems arising during contract administration under the changes clause, and other significant legal concepts. Students are required to read all materials and participate in extensive class discussions. Students must show a mastery of the materials by answering evaluation questions posed to them during sessions in the classroom.

Major Topics Covered:

- Sealed Bidding
- Negotiations
- Bid Protests
- Contract Changes
- Contract Terminations for Convenience
- Contract Terminations for Default

- Contract Disputes
- Availability of Appropriations as to Purpose
- Availability of Appropriations as to Time
- Obligating Appropriated Funds
- Construction Contracting
- Anti-Deficiency Act
- Intragovernmental and Required Source Acquisitions
- Intellectual Property
- Types of Government Contracts
- Simplified Acquisition Procedures
- Ethics in Government Contracting
- Procurement Fraud
- Government Information Practices
- Non-Appropriated Fund Contracting
- Contracting for Military Operations

Typical Text Materials:

Materials as compiled by Ron Tudor, JD with permission of the US Army Judge Advocate General's School, Charlottesville, Virginia, and from various internet attorney sites.

MN3315: Acquisition Management and Contract Administration (4-0)

Course Instructors: CDR (Ret) Cory Yoder
CDR (Ret) Jeff Cuskey

Prerequisites for the Course: MN3303 or MN3331 preferred, but not mandatory

Course Objectives:

Effective management of government contracts requires advanced understanding of the life-cycle nature of the acquisition process. This course builds on the fundamental knowledge and skills the acquisition and contracting student has developed through intensive studies in the prerequisite courses. A common theme of the course is identifying, evaluating and managing risks in the acquisition process; in this context, the effective management of the acquisition planning function is emphasized throughout the course. Specific objectives of this course include:

- Develop a complete understanding of the requirements for planning and awarding a government contract under the competitive proposal methodology.
- Acquire and refine the skills necessary to perform acquisition planning, market research, source selection evaluation, discussions/negotiations, and contract award.
- Develop managerial competence to identify and deal with the key issues in pre-award contracting.
- Perform an evaluation of technical, cost and management proposals.
- Develop a fundamental understanding of the principles, policies and practices of contract administration.
- Develop a framework for management and control of contract administration.
- Develop managerial competence to identify and deal with the key issues in contract administration.
- Develop a fundamental understanding of the nature of risk in the procurement process, and the basic skills necessary to assess, control and monitor identified risks.

Course Description:

This course focuses on the management functions and decision-making techniques involved in the award and administration of best value competitively negotiated contracts. The course is presented in three phases to coincide with the phases of the acquisition process. The first phase of the course concentrates on procurement planning, the second phase emphasizes contract formation, and the third phase focuses on contract administration. Students are required

to participate in a series of group projects and case studies that emphasize the importance of integrated teamwork in the achievement of acquisition objectives.

Major Topics Covered:

- Risk Management and the Acquisition Process
- Procurement Planning Phase:
    - Determining Requirements
    - Market Research
    - Acquisition Planning
    - Source Selection Planning
- Contract Formation Phase:
    - Describing Requirements
    - Solicitation Development
    - Proposal Evaluation
    - Negotiations and Discussions
    - Source Selection
    - Contract Award
    - Offeror Debriefings
    - Protests
- Contract Administration Phase:
    - Organizing for Contract Administration
    - Initiating Contract Administration
    - Performance Management
    - Financial Management
    - Subcontract Management
    - Property Management
    - Change Management
    - Claims Management
    - Terminations Management
    - Closeout Management

Typical Textbooks and Readings:

Lamm, D.V. (1993). *Contract Negotiation Cases: Government and Industry.* Wordcrafters Publications.

Yoder, E. C., MN3315 Course Slides, 2005-2006.

MN3318: Contingency Contracting (3-0)

Course Instructors: CDR (Ret) Cory Yoder
CDR (Ret) Jeff Cuskey

Prerequisites for the Course: None.

Course Objectives:

Objectives (Overarching):

- The Naval Postgraduate School's MN3318 is structured, designed and delivered to achieve DAU CON 234 equivalency for graduate students attending the Naval Postgraduate School.
- Develop a fundamental understanding of contingency contracting principles, policies, processes and practices.
- Develop a framework for management and control of these processes.
- Develop managerial competence to identify and deal with key contingency contracting issues and concepts.

Objectives (Specific Terminal Learning Objectives (TLOs) and Enabling Learning Objectives (ELOs):

In addition to the above broad course objectives, the student will be expected to accomplish the following specific objectives:

- Types of Contingencies -- Identify the contracting laws, regulations, and procedures unique to various types of contingencies.
    - Define and explain contingency contracting.
    - Identify contingency contracting sources of guidance.
    - Compare and contrast various types of contingencies.
    - Explain the four phases of typical support.
    - Discuss Waivers and Deviations for contingency operations.
    - Discuss expedited contracting procedures.
    - Equivalent to DAU CON 234 Lesson #2.

- Cross-Cultural Awareness -- Recognize cross-cultural behavior patterns and anti-terrorism vulnerabilities and explain their impact on contingency contracting.
    - Introduce students of "cross-cultural" concepts.
    - Based on readings and discussion, understand how enculturation may lead to obstacles in communication.
    - Identify cross-cultural behaviors and discuss adaptation and assimilation.

- Compare and contrast U.S. values with other world views.
- Discuss awareness to culture as it affects behaviors, perspectives, and the ability to function and conduct business in a dissimilar culture.
- Equivalent to DAU CON 234 Lesson #3.

- Roles and Responsibilities -- Identify the key personnel and organization in a contingency, their roles and responsibilities and required coordination.
  - Describe the mission and capabilities of DoD contracting organizations which support contingency operations.
  - Describe the roles and missions on non-DoD and non-governmental organizations in contingency operations.
  - Describe and discuss joint contingency contracting to include: Command structure from the national level down to the JTF, role of the CINC Acquisition and Contracting Board, differences between the operational and contracting authority, key players in a JTF and the CCO's relationship with them.
  - State the most significant differences between US and multinational contingency contracting operations.
  - Explain the responsibilities of a CCO in a JTF.
  - Compare and contrast the roles, responsibilities, and contractual authority (including training requirements) of OOs, CORs, GCPC holders, and Disbursing Agents.
  - Identify and establish with potential customers and other key personnel and agencies on the contracting officer's area of responsibility.
  - Discuss the roles of the CCO, Army Corps of Engineers, Army Material Command, Air Force Civil Engineer Support Agency, Defense Contract Management Command, and supported commands in using civilian augmentation contracts (LOGCAP / CONCAP / AFCAP) to support a contingency.
  - Describe an effective program to train customers, OOs, COR / COTR / QAEs, GCPC holders, and Disbursing Agents for their respective roles in contingency contracting operations.
  - Develop an unobstructed avenue for customers to submit procurement requests to the contingency contracting office.
  - Equivalent to DAU CON 234 Lesson #4.

- Automated Tools -- Assess customer requirements and select, justify, and execute the appropriate procurement action. Apply automated procedures to assemble, prepare, and close-out documents, files and reports.
  - Identify and demonstrate familiarity with the automated resources required for optimization of the contingency contracting office.
  - Conduct automated tool familiarization.
  - Identify, select, and complete specific contract vehicles based on case scenarios.
  - Equivalent to DAU CON 234 Lesson #5.

- Deliberate and Crisis Action Planning -- Identify, summarize and discuss the key elements of Deliberate and Crisis Action planning as they relate to contingency contracting planning.
    - Describe the major elements of Joint Operational planning and discuss the importance of Joint Planning to the contracting function.
    - Describe the Joint Uniform Lessons Learned System (JULLS) and discuss how a CCO would use this system.
    - Describe and discuss the contents of a Contingency Contracting Support Plan.
    - Discuss Contingency Contracting Officer pre-deployment actions.
    - Equivalent to DAU CON 234 Lesson #7.

- Anti-Terrorism and Security -- Recognize anti-terrorism vulnerabilities and explain their impact on contingency contracting.
    - Identify and discuss effective anti-terrorism practices necessary for:
        - Personal security
        - Travel security
        - Vehicle security
        - Operational, information, personnel, and physical security
    - Equivalent to DAU CON 234 Lesson #6.

- Funding of Contingency Operations -- Identify and apply the contracting laws, regulations, and procedures for funding and operations unique to various types of contingencies.
    - Demonstrate familiarity with various types of funds used in contingencies.
    - Describe the various fiscal controls on appropriate funds.
    - State the approval level required for the amount and the type of funds being used for specific contracting actions.
    - Explain the circumstances in which augmentation may be authorized.
    - Describe the proper use of O&M funds for deployment and contingency operations (including Humanitarian and Civil Assistance).
    - Explain the difference between MILCON appropriations and their proper use.
    - Describe the proper use of funds from other U.S. appropriations.
    - Discuss the proper use of funds received from other countries and alliances.
    - Equivalent to DAU CON 234 Lesson #8.

- Administration, Termination, and Closeout of Contingency Contracts -- Apply automated and manual procedures to assemble, prepare, and close out contract documents, files, and reports.
    - Identify the duties and responsibilities of the personnel involved in contingency contract administration and describe the training each requires to adequately perform contract administration functions.
    - Compare and contrast the types of contract modifications which are used in contingency contracting and their effect on timely performance.
    - Explain the procedures for ratifying unauthorized commitments and definitizing unpriced actions.

- Explain the procedures used to transfer open contracts and orders to other contracting offices and agencies.
- Discuss the judgmental, ethical, and environmental factors considered when terminating and closing out contracts.
- Discuss the typical reasons for contractor submission of claims and list the documentation required for negotiation and settlement of modifications, claims and disputes.
- Describe the record keeping required in administering and closing out contingency contracts and discuss procedures for monitoring the performance of contracting personnel.
- Demonstrate proper conduct of administration and termination actions.
- Equivalent to DAU CON 234 Lesson #10.

- Case Studies and Integrating Concepts -- Prepare and brief the class on various case scenarios designed to enhance and capitalize on the major lessons (from the ELOs and TLOs).
  - Various cases may be, and are, utilized thoughout the course modules.
  - The LOGCAP case co-developed by NPS, GW University and contractors directly supporting the Balkans operations, is the recommended backbone for the final graded case work. However, other imbedded cases should be utilized in modules to achieve highest educational results.
  - Details of the LOGCAP Balkans case are provide
  - Equivalent to DAU CON 234 imbedded cases and Lesson #11.

- Ethical Business Conduct -- Exercise and apply ethical principles in performing the duties of a contingency contracting officer.
  - Assess ethical dilemmas facing the CCO.
  - Determine best approach and course of action in dealing with challenging scenarios.
  - Make sound recommendations and choices based on operational, ethical, and theater objectives.
  - These objectives should be in every module.
  - This has no direct DAU stated equivalent, although DAU certainly teaches these principles.

Course Description:

This course is a study of the principles of contingency contracting and the fundamental skills required to provide direct contracting support to joint tactical and operational forces participating in the full spectrum of armed conflict and military operations other than war, both domestic and overseas. Topics include: Types of Contingencies, Cross-Cultural Awareness, Contingency Contracting Officer Authority, Roles and Responsibilities, Anti-terrorism and Security, Planning, Contractual Methodologies and Instruments, Automated

Tools, Deliberate and Crisis Action Planning, Funding and Execution, and Contract Administration (including terminations and closeouts), and Ethics/Standards of Conduct.

The Naval Postgraduate School's MN3318 is structured, designed and delivered to achieve DAU CON 234 equivalency for graduate students attending the Naval Postgraduate School.

Major Topics Covered:

See objectives above.

Typical Textbooks and Readings:

Yoder, MN3318 Course Slides, 2005-2007 (as updated)

Handout sets, see current edition for recent updates.

MN3331: Principles of Systems Acquisition & Program Management (5-1)

Course Instructors: Brad Naegle
Keith Snider
Mike Boudreau
Jeff Cuskey
Rodney Tudor
Dave Matthews
Dave Mirano
Todd Kros
Rene Rendon
Marshall Engelbeck
Dan Motherway

Prerequisites for the Course: None

Course Objectives:

- Understand the basic principles of weapon systems program management in the Department of Defense.
- Understand the Washington D.C. political environment as it relates to weapon systems acquisition.
- Identify, define and explain the various disciplines that must be integrated into effective teams for managing major acquisition programs.
- Be familiar with the management systems and organizations associated with DoD weapon systems acquisition.
- Understand the DoD resource allocation process, with emphasis on the planning, programming, budgeting, and execution system (PPBE), with the life cycle management process.
- Be familiar with policies governing DoD systems acquisition.
- Attain a basic understanding of the concepts, techniques and challenges of systems acquisition and program management of a major weapon system.
- Possess a basic vocabulary of acquisition and contracting terminology.

Course Description:

This course provides the student with an understanding of the underlying concepts, fundamentals and philosophies of the defense systems acquisition process and the practical application of program management methods within this process. The course examines management characteristics and competencies, control policies and techniques, systems analysis methods, risk management, and functional area concerns. Techniques for interpersonal relationships are examined in team exercise settings. Topics include the evolution and current state of systems acquisition management; the systems acquisition life cycle; user-producer

acquisition management disciplines and activities; and program planning, organizing, staffing, directing and controlling. Case studies are used to analyze various acquisition issues.

This course is designed to meet the Defense Acquisition University (DAU) education equivalency requirements for Acquisition 101, Acquisition 201, and PMT 250 courses. These courses are mandatory for defense acquisition professionals as specified in the Defense Acquisition Workforce Improvement Act (DAWIA).

Major Topics Covered:

Project Management
Capabilities Integration Development
Acquisition Management
Systems Engineering
Contract Management
Defense Resource Allocation
Test and Evaluation
Software Management
Earned Value Management
Acquisition Logistics

Typical Textbooks and Readings:

Forsberg, K., H. Mooz, and H. Cotterman. 2005. *Visualizing Project Management*. New York: Wiley. ISBN: 0-471-64848-5
DoD Directive 5000 (series)
Various readings from defense acquisition regulations, journals, and periodicals.

MN3384: Acquisition Production and Quality Management (5-1)

Course Instructor: COL (Ret) Michael W. Boudreau, Senior Lecturer

Prerequisites for the Course: MN3331

Course Objectives:

The purpose of Defense systems acquisition is to obtain warfighting materiel. Implicit in this endeavor are the conceptualization, initiation, design, development, test, contracting, production, fielding, deployment, and logistic support, modification, and disposal of weapon and other systems, supplies, or services (including construction) to satisfy DoD needs.

In this course we examine acquisition processes from the perspective of production of quality materiel. We focus on Government contract administration in the manufacturing environment. We consider design from the perspective of producibility. We examine development and modification of system designs as they relate to manufacturing and quality through consideration of configuration management, correction of design deficiencies, and product performance feedback.

During class, lab exercises, and examinations, students are confronted with typical problems and must work out solutions. Not only do they gain insights into manufacturing and quality assurance, but they also make connections with the broader universe of systems acquisition.

Course Description:

Acquisition Production and Quality Management (MN 3384) emphasizes production, manufacturing, and quality management principles, policies, processes and practices used in the Department of Defense. Students follow a curriculum that exposes them to manufacturing and quality processes, scheduling and control techniques, surveillance activities, and systems level production and quality management planning. Students analyze processes and practices involved in monitoring production operations and quality functions. Course content includes systems engineering, initiatives and trends, Federal Acquisition Regulation, specification and standards, source selection, environmental management, material control, quality assurance, and analytical tools

Major Topics Covered:

- Acquisition Reform / Acquisition Excellence
    - Performance Specifications
    - Warranties and Incentives
    - Knowledge Point Management
- Federal Acquisition Regulation (FAR)
    - Production and Quality, FAR Parts 42 and 46
    - Source Selection

    - Technical Support
- Acquisition Management
    - Environmental Management
    - Risk Management
    - Industrial Capabilities
    - Production Readiness
    - Producibility
- Operations Management and Quality Management
    - Integrated Management Planning
    - ISO 9001-2000 Quality Management System
    - Six Sigma
    - Manufacturing Management Systems
    - Electronic Tools
    - Current Initiatives
    - Analytical Tools
- Lab Exercises
    - Performance Based Statement of Work Lab
    - Warranty Lab
    - EXCEL Solver Lab
    - Quality Management Lab
    - Bottleneck Analysis Lab
    - Design for Manufacturing and Assembly Lab
    - Process Mapping Lab
    - Manufacturing Risk Management Lab
    - Lean Thinking Lab
    - Statistical Process Control Lab

Textbooks and Readings:

Chase, Richard B.; Aquilano, Nicholas J and Jacobs, F. Robert (2006). ***Operations Management for Competitive Advantage***, 11th Edition. Burr Ridge: Irwin / McGraw-Hill.

Womack, James P. and Jones, Daniel T. (1996). ***Lean Thinking, Banish Waste and Create Wealth in Your Corporation.*** New York: Simon & Schuster.

Acquisition Knowledge Sharing System (AKSS) website. https://akss.dau.mil/default.aspx.

Multiple readings in policy, best practice, reports and articles.

MN4304: Defense Systems Contracting (2-0)

Course Instructors: Professor Jeffrey R. Cuskey
Professor Rene Rendon

Prerequisites for the Course: MN 3331, MN 3222, or MN 4473

Course Objectives:

- To develop an understanding of concepts, policies, techniques, and problems of contracting for major systems.
- To experience the decision making environment faced by the Defense Acquisition Executive (DAE), Program Executive Officers (PEOs), Program Managers (PMs) and Procuring Contracting Officers (PCOs).
- To develop an understanding of the various disciplines and functional areas which must be integrated to acquire a major defense system.
- To keep abreast of real-time acquisition related news and acquisition reform initiatives that may influence the future acquisition environment.

Course Description:

This course is the study of the Department of Defense's major systems contracting policies, processes, procedures, and practices. A review of major systems acquisition and program management is provided but the primary focus is on the contracting process used to acquire Defense systems for the Service's Systems and Material Commands.

Major Topics Covered:

- Acquisition Environment
- Major Defense Acquisition Program (MDAP) Policies
- Acquisition Strategies
- Strategic Acquisition Considerations and Issues
- Multi-Year Procurement Strategies
- Acquisition Cycle Time Reduction Initiatives
- Alpha Contracting
- Source Selection
- Incentive Contracting
- Award Fee Planning
- Program Life Cycle Cost and Affordability Initiatives
- Competition
- Industrial Base Issues
- A-12 Lessons Learned
- Warranties

- Contractor Support Service (CSS) Contracting
- Contractor Engineering and Technical Support (CETS) Contracting
- Post-Award Contract Administration
- Termination Issues
- Ethics

Typical Textbooks and Readings:

The Federal Acquisition Regulations
Department of Defense Directive 5000.1 dtd 12 May 2003
Department of Defense Instruction 5000.2 dtd 12 May 2003
Defense Acquisition Deskbook,
Office of Management and Budget Circular A-109
Numerous Government Accountability Office (GAO) Reports
Numerous Topical Handouts (provided separately)

MN4307: Advanced Acquisition: Program Management Policy and Control

Course Instructor(s):
Keith Snider, Associate Professor (AY05 – 07)
Mike Boudreau, Senior Lecturer (AY03 – 07)
John Dillard, Senior Lecturer (AY01 – 07)
Brad Naegle, Senior Lecturer (AY03 – 07)

Prerequisites for the Course:
Prerequisites: MN3331/or MN3302, MN3309, MN3371, MN4602 or equivalent, SE4011 and MN3384.

Course Objectives:

- Integrates all acquisition and contracting concepts using topical and real-life program management cases and exercises.
- Provides the student an understanding of the processes involved in policy formulation and execution in the defense acquisition environment and methods to influence these processes.
- Provides the student current examples of the problems and issues facing senior defense acquisition managers, particularly the program manager.
- Describes the business and operating concepts essential to effective contractor program management
- Provides a basis for the ethical considerations of acquisition management

Course Description:

This course is the *capstone* to the Program Management Curriculum and is intended to integrate the various functional areas essential to successful program management. The course provides the student with knowledge of management control processes and tools, and an application of control systems with emphasis on real world, practical systems for performance, cost, and schedule control. Topic areas include: acquisition reform; acquisition strategies; industrial base; ethics & procurement integrity; requirements determination; contract solicitation, proposals, negotiations, award and administration; test and evaluation management; Earned Value (EV), and other technical performance measurements; technical reviews and audits; configuration management; program documentation; program baselines; production and manufacturing; logistics support; deployment and fielding; total quality management; risk management; costing and budgeting; and international program management issues. Integrative case studies involving managerial problem-solving and decision-making in the program management environment are used.

Major Topics Covered:

- Acquisition Environment and Acquisition Reform
- Acquisition Requirements Generation

- DoD Planning, Programming & Budgeting System (PPBS)
- Financial Management
- DoD Acquisition Management
- Acquisition Analysis & Controls
- Risk Management
- Data Management
- Configuration Management
- Market Analysis & Surveys
- Technical Performance Measurement
- System Test & Evaluation
- Operational T&E
- Developmental T&E
- Live-fire T&E
- Contract Management
- Production Management & Fielding
- Total Ownership Cost

Typical Textbook and Readings:

Program Manager, selected articles,
Government Executive, selected articles,
General Accounting Office, selected reports,
Best Practices NAVSO P-6071, selected chapters,
National Defense, selected articles,
Selected Sections of the Following Guides/Handbooks (Handed out at commencement of 816 Curriculum):
Systems Engineering Management Guide, DSMC, 1990, (SEMG)
Risk Management Concepts and Guidance, DSMC, 1989, (RISK)
Mission Critical Computer Resources Management Guide, DSMC, 1990, (MCCR)
JLC Guide for Management of Joint Service Programs, DSMC, 1987, (JSP)
Guide for the Management of Multinational Programs, DSMC, 1987, (MMP)
Scheduling Guide for Program Managers, DSMC, 1990, (SKED)
Test and Evaluation Management Guide, DSMC, 1988, (T&E)
Cost Realism Handbook, DSMC, 1985, (CRH)
Subcontracting Management Handbook, DSMC, 1988, (SMH)
A Program Office Guide to Technology Transfer, DSMC, 1988, (TT)
Warranty Guidebook, DSMC, 1992, (WAR)
Proceedings of the "Managing The Industrial Modernization Process" Conference, DSMC, 1990, (MOD)
Commercial Practices for Defense Acquisition, DSMC, 1992, (CPFDA)

DoD 5000.2R

MN4371: Acquisition and Contracting Policy (4-0)

Course Instructors: CDR Jeffrey R. Cuskey, SC, USN (Ret)

Prerequisites: MN4301 or MN4304

Course Objectives:

1. Develop an understanding of important issues, concepts and problems related to acquisition/contracting policy and its implementation within the Federal Government.

2. Develop an ability to conceptualize implications of alternative policies and choose effectively among alternatives.

3. Develop an ability to manage effectively within the Federal acquisition/contracting environment, with due consideration for policy formulation, implementation and execution.

Upon successful completion of this course, students should have the requisite skills to assume mid-grade to senior acquisition policy and leadership positions within the Department of Defense. As such, they should be able to:

- Develop their acquisition leadership and management skills, enabling them to be an effective business advisor.
- Use ethics, problem solving, and critical thinking to make sound business decisions.
- Use innovative/creative thinking to develop viable alternatives.
- Effectively communicate internally and externally.
- Identify and fulfill customer expectations by managing for results.
- Manage the implementation of change and transformation.
- Manage the acquisition and contracting Body of Knowledge (BOK) for currency.
- Understand, participate and contribute in cross-functional collaborative environments to optimize solutions.
- Incorporate FAR Guiding Principles, senior leadership vision and private sector perspectives in the decision making process.

Course Description:

This seminar analyzes business and Government acquisition and contracting policies. Emphasis is on policy formulation and decision-making utilizing studies, the current literature and topical issues.

Major Topics:

- Acquisition Management
  - Acquisition Environment
  - Acquisition Reform
  - Ethics
  - Outsourcing
  - Privatization
  - Depot Maintenance
  - Specifications and Standards
- Contract Management
  - International Procurement
  - Field Contracting
  - Major Weapon Systems
  - Services Contracting
  - Contract Administration
  - Source Selection
  - Past Performance
  - Environmental Contracting
  - Cost and Price Analaysis
  - Other Transactions Authority
  - Alternative Dispute Resolution (ADR)
- Government Peformance Results Act (GPRA)
- Current Acquisition Issues and proposed acquisition policies

Examples of Typical Reading Assignments:

"Statement of Guiding Principles," FAR 1.102

“Ten Guiding Principles” 7/18/98

"Priorities and Business," USD (AT&L) Presentation, 17 Mar 2003

"The Unfinished Agenda" Steven Kelman, Government Executive, September 03, pp.72,74

“A Vision of the Government as a World-Class Buyer: Major Procurement Issues for the Coming Decade’” J.S. Gansler, January 2002

“Sourcing and Acquisition Challenges Facing the Department of Defense, “ GAO-03-574T, March 19, 2003

"Acquisition as Business", Corey M. Rinder, Contract Management, May 2001

"Government Contracting Pathologies", Robert E. Llyod, Acquisition Review Quarterly, Summer 2000

"The Federal Acquisition System Transitioning to the 21st Century," Procurement Roundtable 2000, December 1999

"Assessing Federal Procurement Reform: Has The Procurement Pendulum Stopped Swinging?", Joseph A. Pegnato, Journal of Public Management, Volume 3, Issue 2, 145-175, 2003

"Making Sacrifices for the Future", George Cahlink, Government Executive, August 2003

"Major Management Challenges and Program Risks", GAO-03-98, January 2003

"Best Practices – Setting Requirements Differently Could Reduce Weapon Systems' Total Ownership Costs", GAO-03-57, February 2003

MN4374: Capstone Seminar in Acquisition Management
(Strategic Purchasing) (3-0)

Course Instructor(s):

- Lt Col Bryan Hudgens, USAF (AY06, AY07)

Prerequisites for the Course:

- None

Course Objectives:

- At the end of this course, you should be familiar with the major areas of interest to strategic purchasing and contracting professionals to include.

  r) Identify purchasing requirements, establish procurement plans, determine appropriate methods of procurement and perform cost benefit analysis.

  s) Understand the preparation of solicitations: development/review of specifications, location of potential sources of materials and services, solicitation of competitive bids, and management of recommended sources lists.

  t) Comprehend supplier analysis, evaluate competitive offerings, conduct supplier visits, and assess supplier-rating systems.

  u) Understand contract execution, implementation and administration, preparation of purchase orders, obtaining legal review as appropriate, resolving payment problems, and managing files.

  v) Prepare for negotiation: develop negotiation strategies and tactics, and conduct subsequent negotiations.

  w) Understand the role of information technology, develop a computerized purchasing system, maintain database specifications, and computerized inventory systems.

  x) Comprehend quality issues, resolve quality problems with suppliers, and develop measurements of supplier quality.

  y) Understand internal relationships, participate in cross-functional team management, and implement changes to purchasing procedures.

  z) Understand external relationships, manage effective relationships with suppliers, review product availability, respond to supplier inquires, and develop and implement small business programs.

  aa) Conduct sourcing analysis, make or buy decisions, and develop leveraging and financing strategies.

  bb) Comprehend supply and inventory management: organize, control and minimize the storage of materials, reconcile inventory discrepancies, and handle obsolete materials and scrap.

  cc) Understand value-enhancing methods, standardization programs, process improvement, cost reduction, cost avoidance and cost containment plans.

  m) Comprehend forecasting and supply plan strategies: plan sourcing based on projections, develop and maintain market awareness, provide data on current and future market conditions to management and other departments.

  n) Develop strategic plans, goals, and objectives, analyze and resolve purchasing issues, prepare and administer department budget.

o) Supervise and lead purchasing staff: hire and promote, evaluate performance of human resources, resolve performance problems, implement programs to prevent and respond to discrimination and harassment.

Course Description:

- This course is the capstone seminar for the strategic purchasing program. My primary purpose for the course is to provide you an opportunity to synthesize the course material from the strategic purchasing program. A second purpose is to investigate the specific topics that are projected to be of high interest to DoD acquisition in the future. An underlying focus of the course is to prepare the student for the Certified Purchasing Manager examination. This professional certification administered by the Institute of Supply Management (ISM) identifies the holder as one of a select number of purchasing professionals. The course will be taught through a combination of informal lecture, guided discussion, and (primarily) student expert presentations.

Major Topics Covered:
(These topics correspond directly to the course objectives. The course objectives correspond to the modules of the Certified Purchasing Manager exam, and form a useful organizing construct for a "capstone" review of the entire curriculum.)

- Course Introduction
- Identifying Requirements
- Preparation of Solicitations
- Supplier Analysis
- Contract Implementation, Etc
- Negotiation
- Information Technology
- Quality Issues
- Internal Relationships
- External Relationships
- Sourcing Analysis
- Supply & Inventory Mgmt
- Value Enhancing Methods
- Forecasting & Strategies
- Mgmt & Organization Pt 1
- Mgmt & Organization Pt 2
- Human Resources Mgmt
- Human Resources Mgmt

Typical textbooks and readings:
CPM Study Guide, 7th Ed. Available through the ISM website (www.ism.ws).

The Purchasing Handbook, 6th Ed, by Joseph Cavinato and Ralph Kauffman. (Beginning in approximately 2008 or 2009, this text will change to: The Supply Management Handbook, 7th Ed, by Joseph Cavinato.)

Journal articles as assigned by each student seminar leader.

Additional references (OPTIONAL): Essentially, anything you feel is helpful is fair game. I have many references available for you to borrow. The single constraint is that the CPM guide information—as a practical matter—should be the final arbiter of the "right" information.

MN4602: Test and Evaluation Management (2-2)

Course Instructors: Brad Naegle
Keith Snider
Wally Owen

Prerequisites for the Course: MN3331 or, MN3302 or, MN3221 & MN3222 series or, DAU PM Level 2 Certification

Course Objectives:

Students will possess abilities to:

- Describe T&E's role in the acquisition process
- Develop T&E inputs for a TEMP or other test plans.
- Select a T&E strategy for alternative acquisitions, such as Non-Developmental Items (NDI), Commercial Items & non-traditional acquisitions such as Advanced Concept Technology Demonstrations (ACTDs).
- Distinguish between suitability and effectiveness to plan for the testing issues in an acquisition program
- Analyze issues associated with collecting and managing T&E data
- Identify the strengths and weaknesses of modeling and simulation (M&S) in defense T&E, and identify appropriate uses of M&S to support T&E
- Identify appropriate tools, processes and procedures to conduct software T&E
- Incorporate lethality and survivability considerations in the T&E process for a weapons system

Course Description:

Designed to cover Developmental, Operational and Joint Test and Evaluation, including planning concepts and procedures frequently used in test and evaluation programs. Taught from the perspective of the Program Manager, Test Project Officer and Test Engineer. Notional and actual military cases are used for examples and exercises. Topics include the role of Test and Evaluation in Systems Engineering and Acquisition Management, DT and OT test planning, introduction to test design, conduct of tests, live fire testing, modeling and simulation, human systems integration (HSI), reporting of test results, range and resource issues, and use of statistical methods and tools. Student teams will produce and brief a detailed test plan.

Major Topics Covered:

Topics include the role of T&E in the Systems Engineering Process, T&E policy structure and oversight mechanism, Joint Capabilities Integration & Development System (JCIDS) in the T&E process, modeling and simulation, conduct of test, use of descriptive and inferential statistics, alternative acquisition program T&E, human systems integration and live fire T&E.

Typical textbooks and readings:

- TEST AND EVALUATION MANAGEMENT GUIDE, Fifth Edition, Jan 2005
- Guidelines for Successful Software Acquisition Management (GSAM), Third Edition, 2002
- GAO reports and periodical articles on T&E management issues, notional and actual case studies

Course Abstracts

Additional Components:

Financial Management

GB3510: Defense Financial Management Practice (3-0)

Course Instructors:	CDR Phil Candreva, (USN ret.), Senior Lecturer John Mutty, Senior Lecturer
Prerequisites for the Course:	None, although in the course sequence, it is presumed that students will have already taken GB4053

Course Objectives:

At the end of the course, the student should:

- Understand the legal and administrative foundations for defense financial management and how they enable or constrain other aspects of defense management.
- Understand the primary processes in defense financial management, including how resource allocation decisions are made, how resources are requested and provided, how they flow within DoD, and the constraints on using them once provided.
- Know how to solve common problems encountered as a participant in DoD financial management processes.
- Understand the parameters and constraints that determine how funds can be obligated and moved within DoD. Understand the origins and purposes of those limitations.
- Understand DoD accounting principles in conjunction with principles of corporate accounting (financial and managerial), and identify and understand DoD accounting goals and challenges.
- Discriminate between proper and improper use of appropriated funds, reimbursable funds and revolving funds. Understand the management issues associated with these three funding mechanisms.
- Understand and apply the critical issues of stewardship related to DoD finances, including managing significant cost drivers, the relationship between contracting and financial management, and administering internal control programs.
- Comprehend contemporary issues in DoD financial management to increase situational awareness and to hone relevant analytical skills.

Course Description:

This course is designed for MBA students and presumes the student has a foundation including the PPBE system and Congressional Authorization and Appropriation processes (provided in GB4053). This course concentrates on financial management practices within DoD as distinct from policy and budgeting theory. The course covers the actors and activities and mechanics of building and defending budgets. It covers funding mechanisms for government programs and activities, addressing the proper use and management of appropriated, reimbursable, and revolving funds. Basic

principles of federal fiscal law are explored. It then addresses financial management and stewardship topics including budgetary accounting, management of cost drivers, the relationship between comptrollership and contracting, and internal controls. Contemporary financial management issues are discussed. Exercises and case studies are used to develop the students' ability to apply financial management concepts to real life situations.

Major Topics Covered:

- Appropriated funds and basic fiscal law
- Intragovernmental transactions
- Revolving fund management
- Budget Building and Defense
- Budget Execution
- Governmental (obligation-based) accounting and how it differs from corporate (accrual-based) accounting
- Performance measurement
- The relationship between contracting and financial management

Typical textbooks and readings:

Practical Financial Management: A Handbook of Practical Financial Management Topics for the DoD Financial Manager, 6th Ed., 1st Rev. (January 2005). This is a locally-produced text.

Cases include:

"National Service Trust: A Case Study," NPS-GSBPP-05-010IR, Naval Postgraduate School, Monterey, CA, July 2005.

"Case Studies in Basic Fiscal Law (A) and (B)," NPS-GSBPP-05-011IR & -012IR, Naval Postgraduate School, Monterey, CA, July 2005.

Other readings are assigned as appropriate from public sector academic and practitioner journals such as *Public Administration Review, Public Budgeting & Finance, Armed Forces & Society,* and *Armed Forces Comptroller*.

GB4510: Strategic Resource Management (4-0)

Course Instructor: J. Shank, Professor (AY04, AY05, AY06)
J. San Miguel, Professor (AY03, AY07)

Prerequisites for the Course: GB3051
GB4052
GB4014

Course Objectives:

For survival and growth in the global marketplace an organization must effectively allocate its strategic resources, which include human, physical, and financial assets, across operations and processes. Strategy must be supported by cost management systems that assist managers in decision-making and performance assessment.

The objective of this course is to apply strategic thinking to cost management concepts and practices. Case studies of real companies and readings will be used to illustrate the importance of financial analysis, business analysis, and strategic analysis to basic business decisions concerning allocation of resources. These management tools are used for assessing costs, profits, strategies, and performance measurement. Topics to be covered include activity-based management, value reengineering, value-chain analysis, target costing, economic value added, and cost of total quality management.

Course Description:

GB4510 is a required Subspecialty course in the Financial Management and the Defense Systems Analysis curricula. The course makes use of major strategic management concepts such as Porter's five forces, market positioning strategies, strategic resource management, and strategic core competencies to examine cost management issues. This is a case study course that demands both quantitative and qualitative analyses. Each case discussion concludes with the students' recommendations to management or actions that the managers should take. Analysis of the case numbers is prerequisite. To reinforce individual preparation of the assigned questions, small study teams of three or four students are strongly encouraged. There are two exams given in the course. The exams and class participation are equally weighted in assigning a course grade.

Major Topics Covered:

- Strategic, Business, and Financial Analysis of a New Market Segment Opportunity
- Activity-Based Management of Strategic Resources and Capacity Allocation
- Activity-Based Management, Customer Profitability, and Value Engineering
- Strategic and Competitive Analysis for a Bundled Line of Business

- Profit Analysis of Marketing Activities and Performance Measurement
- Value Chain Analysis for Assessing Competitive Advantage
- Value Chain Analysis, Target Costing, and Reengineering Business Processes
- Pricing Strategy, Cost Analysis, and Total Quality Management
- Strategic Resource Management and the Balanced Scorecard
- Strategic Cost Management and the Cost Accounting Standards

Typical Textbooks and Readings:

Hammer, E. (1990) "Reengineering Work: Don't Automate, Obliterate," *Harvard Business Review*, July-August 1990.

Kaplan, R. & Norton, D. (1992) "The Balanced Scorecard—Measures That Drive Performance," *Harvard Business Review*, January-February 1992.

Prahalad , C.K. & Hamel, G. (1990) "The Core Competence of the Corporation," *Harvard Business Review*, May-June 1990.

Porter, M. (1979) "How Competitive Forces Shape Strategy," *Harvard Business Review*, March-April 1979.

San Miguel, J.G. (1996) "Value Chain Analysis for Assessing Competitive Advantage," Management Accounting Guideline #41, The Society of Management Accountants of Canada.

Shank, J.K. (1996) *Cases in Cost Management: A Strategic Emphasis*, Southwestern.

Shank, J.K. & Govindarajan, V. (1993) *Strategic Cost Management*, Free Press.

GB4520: Internal Control and Auditing (2-0)

Course Instructor: J.Webb, Assistant Professor (AY05)

Prerequisite for the Course: GB3051

Course Objectives:

With regard to internal control, the objectives are to understand the purposes and the components of internal control in an organization and to be able to diagnose the controls present or absent in a specific situation. That is, the students should be able (1) to identify controls in place and their objectives, (2) to identify weaknesses in controls or important controls that are missing and the errors or fraud that may occur as a consequence, and (3) recommend improvements in controls. With regard to auditing, the objectives are to understand the purposes of financial, operational, and compliance audits and to be familiar with the types of evidence used and the tests employed to obtain that evidence.

Course Description:

GB4520 is a required Subspecialty course in the Financial Management and the Defense Systems Analysis curricula. The course begins with an overview of internal control and of the audit function in the economy. It then examines generally accepted auditing standards and Government Auditing Standards and auditors' reports. There is then a detailed analysis of the objectives of financial and operational audits, the roles of risk and materiality in the audit process, and audit evidence and tests. The course concludes with several case studies designed to develop a facility for diagnosing internal controls in specific applications.

Major Topics Covered:

- Internal control:
  - Objectives for both accounting and operations
  - Components, with emphasis on the control environment and control activities
- The audit process:
  - Audit objectives, including management assertions and misstatements
  - Audit risk and its components
  - Materiality in audit planning and reporting
  - Audit sampling
  - Types of audit evidence
  - Audit tests
- Financial audits:
  - Auditing standards

    - Auditors' reports and types of opinions on financial statements
- Operational audits:
    - Phases of the audit process
    - Performance measures and standards
    - Audit reports

Typical Textbooks:

Arens and Loebbecke, Auditing, 10th edition, Prentice-Hall.
Knapp, Cases in Auditing, Thompson, 2006.

GB4530: Management Control Systems (3-0)

Course Instructors: Mary Malina, Assistant Professor (AY04, AY05, AY06)
Danny Matthews, Senior Lecturer (AY06), K. J. Euske (AY07)

Prerequisites for the Course: GB 3051

Course Objectives:

The goal of this course is to aid students in developing an analytic framework for the design and evaluation of management control systems. Specifically, the objectives of this course are to help you develop your abilities to:

- Operationally define and describe management control systems
- Identify problems or concerns with management control systems
- Identify appropriate concepts to analyze problems or concerns
- Understand how to apply the concepts so that practical workable solutions to the problems and concerns can be found.

Course Description:

This course covers theory, concepts, and practices underlying management control. The course focuses on the interaction of behavioral and structural e;ements in the design, implementation, and operation of management control systems in large organizations in all three sectors of the economy..

Major Topics Covered:

- The Control Function of Management
- Management Control Alternatives and Their Effects
    - Results Control
    - Action, Personnel, and Cultural Controls
    - Designing and Evaluating Management Control Systems
- Financial Results Control Systems
    - Planning and Budgeting Systems
    - Transfer Pricing and Responsibility Centers
- Performance Issues and Their Effects
    - Performance Dependent Rewards
    - Accounting Performance Measures and Their Effects

- Ethical Issues and Management Control
- Environmental Factors Influencing Management Control Systems

Typical Textbooks and Readings

Simons, Robert. *Performance Measurement & Control Systems for Implementing Strategy: Text & Cases*, Prentice-Hall, 2000.

Merchant, K. A. and W. A. Van der Stede. *Management Control Systems: Performance Measurement, Evaluation and Incentives,* Prentice-Hall, 2003.

GB4540: Conrad Seminar in Financial Management

Course Instructors:

- VADM Thomas Hughes, USN (ret.), Conrad Chair for Financial Management (AY06, AY07)
- CAPT John Mutty, USN (ret.), Senior Lecturer, AY06, AY07)
- Lt Col Fred Bellamy, USAF, Lecturer, (AY07)
- Joe San Miguel, Professor, (AY07)

Course Description:

- **Curricula served:** Financial Management (837)

- **Course Description**: This course provides DoD military officers with an awareness of real life implementation of the education they have received (MBS (FM) curriculum). There are lectures on the Budgeting process and pending changes thereto, an exercise in taking a hypothetical reduction, and five VTCs originating in the Pentagon by FMB, Director of Navy Resource Requirements (N-8), Resource Director for the JCS (J-8), ASN (FM&C) Council (FMC), Director of Navy Budget (N-82) and Graduates presently in their "Pay Back" tour. There is also an Air Force Cohort, which covers about 40% of their course and addressing Air Force "Unique" processes and paralleling the framework of the Navy/Marine Cohort. Sixty percent of the Air Force course is jointly conducted with the Generic part of the Navy/Marine allowing for more Joint education. International Students are welcomed to participate as an elective.

- **Prerequisites:** GB3510. defense Financial Management Practice.

- **Security Classification**: N/A

- **Pass/Fail status**: Currently P/F, but required for MBA (FM) Degree.

Course Syllabus: Copy Appended below.

Justification- Nature of Request: This course is part of the Financial Management curriculum and is required to satisfy ESRs and meeting the requirements for award of MBA (FM) Degree. This is simply a **request to update the course description**. A significant portion of this course is devoted to: (1) VTC seminars with top-level financial management personnel in the DoD; and (2) a practical budget process simulation exercise. The nature of both of these activities is better suited to a pass/fail assessment.

Duplication: Modification to existing course. No duplication.

Resources: Modification to existing course. Results in no effect on resources.

Schedule: Continuing, every Winter and Summer quarter.

Typical textbooks and readings:

- Fiscal Law Cases and Materials (NAV50 P-3685)
- Fiscal Year Appropriations Act (including General Provisions)
  Power Point Slides before each VTC

Conrad Seminar in Financial Management GB4540 (837)

Course Objectives:

- Provide an opportunity to appreciate reality in implementing the Graduate Education being received.
- Reinforce students knowledge of Budget Formulation; Process (Past, Present, Future Trends); and Execution.
- Help transition from academic environment to Financial Management operational environment.
- Lead military Financial Management Education into more "JOINTNESS" wherever feasible.

Course Outline:

- Intro/Fy06 Appropriations Act (2 hours)
- Budgeting (2 hours)
- Four VTCs (8 hours) plus two 2 hour "In person" lectures
- Problem/ Data/ Homeland Security (2 hours)
- Exercise (hours)

Course Schedule:

1000-1150 PDT 07	**NPS Location	Topic	Delivery By
Thurs 05 Jul (All)	IN-260	INTRO/FY07 APPN Act	Hughes (Conrad Chair)

GB4550: Advanced Financial Reporting (4-0)

Course Instructors: C. Troy, Assistant Professor (AY06)
J. San Miguel, Professor (AY06, AY05, AY04)

Prerequisites for the course: GB3050
GB3051

Course Objective:

The overall course objectives are to broaden our knowledge of financial accounting and reporting by organizations and develop skills for understanding and analyzing the information contained in financial reports.

Course Description:

GB4550 is a required Subspecialty course in the Financial Management and the Defense Systems Analysis curricula. The course is taught as a seminar, with each class session devoted to discussion and analysis of relevant case studies. The central purpose of the case-course is to provide students with advanced instruction in financial reporting concepts and practices such that they may informed users of financial information. Emphasis is placed on (a) the conceptual models underlying financial reports, (b) the principles underlying the measurement and communication of accounting information and the environmental factors that influence the application of those principles in practice, and (c) the analysis of the information contained in financial reports. Reporting and analysis issues related to financial position and operating performance are addressed. The course takes the perspective of managers and users of financial information.

Major Topics Covered:

- The Financial Reporting Model
  - Overview of Reporting Models
  - The Accounting Cycle and Recording
  - The Content and Structure of Financial Statements
  - Accounting Elements / Interrelationship
  - Financial Reporting Theory and Policy
  - The Conceptual Framework
  - Economic Consequences of Accounting
- Financial Reporting Questions
  - Recognition of Revenue & Assets
  - Capitalization of Costs
  - Amortization of Costs
  - Valuation of Assets
  - Recognition of Liabilities
  - Valuation of Liabilities (leases)

    - Measurement of Uncertain Obligations
    - Owners Equity
- Accounting and Financial Analysis
    - Quality of Earnings Analysis
    - Cash Flow Analysis
    - Financial Ratio Analysis:
    - Profitability Analysis
    - Risk Analysis
    - Valuation Analysis
- Alternative Financial Reporting Models
    - Not for Profit
    - State & Local Government
    - International
    - Federal Government
        - Agency Level
        - Defense/Navy
        - Appropriated Funds Activity
        - Working Capital Funds
        - Field Level
        - Ship Level

Typical Text:

Stickney and Brown, Financial Reporting and Statement Analysis, Dryden press, 8th ed.

Case studies written by the instructors and related readings and articles from the business press (e.g., Wall Street Journal, Business Week, Forbes, Fortune, etc. are assigned for each topic.)

GB4560: Defense Financial Management (3-0)

Course Instructors: John E. Mutty, Senior Lecturer (AY06, AY07)

Prerequisites for the Course: None

Course Objectives:

As the Department of Defense continues to consolidate activities and looks for other efficiencies, it has become increasingly important that the financial management community understands how all the parts fit together as well as the contribution of each sector. Too often, we have a tendency to focus only on our daily responsibilities and are oftentimes unaware of where we fit in the "big picture". To address this shortcoming, this course is designed to provide students with the knowledge necessary to:

- Identify and understand the primary processes in DOD financial management, including the cycle, timing, negotiation and resolution of financial issues.
- Identify and understand the primary participants in DOD financial management including their roles, biases, influences, and strategies.
- Understand the parameters and constraints that determine how funds can be obligated and moved within DOD. Understand the origins and purposes of those limitations.
- Understand DOD accounting principles in conjunction with principles of corporate accounting (financial and managerial), and identify and understand DOD accounting goals and challenges.
- Understand Defense Manpower Management both military and civilian, as used in financial management, the processes for estimating manpower requirements for budgetary purposes and reporting manpower numbers to the Office of Management and Budget (OMB).
- Understand internal control standards, techniques, and documentation required in the DOD Management Control Program.
- Understand the laws regarding availability of appropriations as to purpose, time, and amount, applicable Comptroller General decisions, special purpose laws (Credit Reform, Foreign Assistance, Arms Export Control Acts), and penalties and sanctions under law
- Understand the purpose and authority for audits, DOD standards and policy, the role and authority of Audit Policy boards and Comptroller General auditing standards.

Course Description:

This course focuses on the competencies required of a Defense Financial Manager. It examines the diverse concepts, theories, and practices addressed in numerous specialty courses and ties them together in the framework of Defense Financial Management. The areas of coverage include: the Government Resource Management Environment, the Defense Resource Management Environment, Personnel Management,

Manpower Management, Management and Internal Controls, Fiscal Law, the Planning, Programming, Budgeting, and Execution System (PPBE), Cost and Economic Analysis, Business Management Process Improvement, Accounting, Finance, and Auditing.

Major Topics Covered:

Module 1

- The Government Resources Management Environment
- The Defense Resource Management Environment
    - Defense Manpower Management
        - Personnel Management
        - Manpower Management
- Management and Internal Controls

Module 2

- The Planning, Programming, Budgeting, and Execution (PPBE) System
- Cost and Economic Analysis
- Business Management Process Improvement

Module 3

- Accounting
- Finance
- Auditing
- Fiscal Law

Typical textbooks and readings:

Enhanced Defense Financial Management Training Course; American Society of Military Comptrollers, October 2006

GB4570 Advanced Finance (3-0)

Course Instructor(s):

Nayantara Hensel, Assistant Professor (AY 07 and AY08)

Prerequisites for the Course:

GB 4052

Course Objectives:

This course seeks to provide MBA students with additional tools in finance to build on their preexisting foundation of corporate finance. The course is a mixture of lectures, cases, interactive discussion and problem-solving. By the end of the course, students should be able to understand the different players in the financial markets and the trading process, the portfolio management process and the portfolio measurement, how to value derivatives (futures and options) and how to use them to hedge against risk, international finance (exchange rates, currency hedging, financial crises), as well as the impact of different corporate governance structures around the world on aligning the incentives of managers and shareholders.

Course Description:

The course is divided into four modules: Module I begins with an introduction to financial players, the trading process, and the organization of financial exchanges, then examines the venture capital industry and its application to DoD, and, finally, discusses market efficiency and technical analysis. Module II focuses on portfolio management, diversification across countries and asset classes, applications to DoD, and evaluating and measuring portfolio performance. Module III examines the pricing of options and futures (with an application to stock index futures) and how they can be used to manage risk. Finally, Module IV focuses on international finance—basics of exchange rates (fixed and floating exchange rates, currency pegs, the gold standard), hedging currency risk with options and futures, financial crises, European monetary union, and the impact of corporate governance on economic growth.

Major Topics Covered:

The course covers:

- The basic layout of financial exchanges in the US and the trading process, as well as recent developments in financial exchange mergers
- The venture capital process within the context of DoD,
- Review of market efficiency and the various evidence supporting the different forms
- Technical analysis,
- Review of portfolio theory and applications of diversification across foreign markets and across different asset classes

- Portfolio management strategies and evaluation and measurement of portfolio performance (Treynor measures, Sharpe measures, Jensen's alpha)
- Pricing futures contracts and using them to hedge risk
- Pricing options, various options strategies to hedge risk
- Determinants of exchange rates (purchasing power parity, covered and uncovered interest parity, impact of interest rates, economic growth, government spending, inflation, etc.)
- Various exchange rate regimes' (gold standard, currency pegs, currency boards, etc.) history and costs /benefits
- Using options and futures to hedge currency risk,
- Financial crises,
- (m)European monetary union
- Impact of various corporate governance mechanisms across countries on economic growth.

Typical textbooks and readings:
Main textbook is Investment Analysis and Portfolio Management (8th edition), by Frank K. Reilly and Keith C. Brown (Thomson Southwestern, 2006).

Other readings include chapters from Foreign Exchange, by Tim Weithers (Hoboken, NJ: John Wiley, 2006), International Investments, by Bruno Solnik and Dennis McLeavey (Boston: Pearson / Addison Wesley, 2003), Manias, Panics, and Crashes. 4th edition, by Charles P. Kindleberger, (John Wiley & Sons, 2000), An Introduction to Global Financial Markets, 4th edition. by Stephen Valdez and Julian Wood (New York: Palgrave MacMillan, 2003), and Global Political Economy, by Robert O-Brien and Marc Williams (New York: Palgrave Macmillan, 2004).

Examples of journal articles which are required reading for the class include: R. La Porta, F. Lopez-de-Silanes, and A. Schleifer. "Corporate Ownership Around the World," Journal of Finance, 54 (April, 1999), and R. La Porta, F. Lopez-de-Silanes, A. Schleifer, and R. Vishny, "Legal Determinants of External Finance," Journal of Finance 52 (July, 1997).

MN4157: Seminar in Management Accounting (3-0)

Course Instructor:

- Don Summers, Lecturer (AY06, AY07)

Prerequisites for the Course:

- GB3050: Financial Reporting and Analysis
- GB3051: Cost Management

Course Objectives:

Title 10, United States Code (USC), section 1104 established professional certification and credential standards for professional accounting position within the DoD. Therefore, the primary objective of this course is to provide the students with an opportunity become professionally certified by reviewing and learning new management accounting concepts to successfully pass the Certified Management Accountant (CMA) exam in order to obtain the CMA professional certification. The Institute of Management Accountants (IMA) certification programs objectives are:

- To establish management accounting and financial management as recognized professions by identifying the role of the professional, the underlying body of knowledge, and a course of study by which such knowledge is acquired
- To encourage higher educational standards in the management accounting and financial management fields
- To establish an objective measure of an individual's knowledge and competence in the fields of management accounting and financial management; and
- To encourage continued professional development.

The benefits, according to the IMA, of the certification programs are to:

- Communicate your broad business competency and strategic financial mastery.
- Obtain contemporary professional knowledge and develop skills and abilities that are valued by successful businesses.
- Convey your commitment to an exemplary standard of excellence that is grounded on a strong ethical foundation and lifelong learning.
- Enhance your career development and professional promotion opportunities.

Course Description:

- MN4157 complements the financial management program by covering significant topics not otherwise included in the program to prepare students to obtain the Certified Management Accountant (CMA) designation. This course covers topics in the theory and application of management accounting and reviews in more depth topics covered in the introductory cost management course. Emerging

issues include practical problems in activity-based costing, accounting for manufacturing costs, cost and profitability analysis, short-run and long-run decision-making, constrained resource allocation, and performance measurement, including non-financial as well as financial indicators. Topics may vary.

Major Topics Covered:

Part 1
Business Analysis

A. Business Economics
Factors affecting the individual firm including demand, supply, and elasticity; consumption of goods; production factors and their cost; market structures and pricing; issues in macroeconomics such as inflation, employment, and economic growth; GDP; the nature of business cycles; fiscal and monetary policies.

B. Global Business
Comparative advantages of trade; free trade and protectionism; barriers to international trade; nature and theory of foreign exchange; international capital investments; financing international trade; legal and ethical issues.

C. Internal Controls
Internal control environment, procedures, and standards; responsibility and authority for internal auditing; types of audits; assessing the adequacy of the accounting information system.

D. Quantitative Methods
Quantitative methods and techniques including regression analysis, learning curves, linear programming, sensitivity analysis, network analysis, probability concepts, expected values, decision trees, simulation, and other appropriate aids to decision making.

E. Financial Statement Analysis
Development of accounting standards; financial statement assurance; interpretation and analysis of financial statements including ratio analysis and comparative analysis; limitations of ratio analysis; market value vs. book value; international issues.

Part 2
Management Accounting and Reporting

A. Budget Preparation
(Planning process, purposes of planning and budgeting; budgeting concepts; annual profit plans and supporting schedules; types of budgets, including activity-based budgeting, kaizen budgeting, project budgeting, and flexible budgeting.

B. Cost Management

Cost concepts, flows and terminology; alternative cost objectives; cost measurement concepts; cost accumulation systems including job order costing, process costing, and activity-based costing; overhead cost allocation.

C. Information Management
Nature of management and accounting information systems; systems development and design; techniques and terminology applicable to the development of computer-based accounting information systems; networks and client/server systems; electronic commerce; ERP systems.

D. Performance Measurement
Factors to be analyzed for control and performance evaluation including revenues, costs, profits, and investment in assets; variance analysis based on flexible budgets and standard costs; responsibility accounting for revenue, cost, contribution and profit centers; balanced scorecard; quality considerations.

E. External Financial Reporting
Principal financial statements and their purposes; limitations of financial statement information; asset and liability recognition and measurement; equity recognition and measurement; revenue, expenses, extraordinary items, and earnings per share; the SEC and its reporting requirements; the annual report.

Part 3
Strategic Management

A. Strategic Planning
Strategic and tactical planning; manufacturing paradigms such as JIT, MRP, and theory of constraints; value chain analysis; benchmarking; ABM and continuous improvement.

B. Strategic Marketing
Strategic role of marketing; market segmentation; managing products and services; pricing strategies; promotional mix and distribution strategy.

C. Corporate Finance
Types of risk; measures of risk; portfolio management; options and futures; capital instruments for long-term financing; dividend policy; factors influencing the optimum capital structure; cost of capital; and managing and financing working capital.

D. Decision Analysis
Logical steps to reach a decision; relevant data concepts; cost-volume-profit analysis; marginal analysis; cost-based pricing; income tax implications for operational decision analysis.

E. Investment Decision Analysis
Cash flow estimates; time value of money; discounted cash flow concepts; net present value; internal rate of return; non-discounting analysis techniques; income tax

implications for investment decision analysis; ranking investment projects; risk analysis; real options.

Part 4
Business Applications

All topics from parts 1, 2, and 3, plus organization management, organization communication, behavioral issues, and ethical considerations.

Typical Textbooks and Readings:

- Text: Gleim and Flesher, CMA Review, Parts 1 – 4, 12th edition, Gleim Publications.

Software: Gleim's CMA Test Prep

Course Abstracts

Additional Components:

Operations & Logistics

GB3420: Supply Chain Management

Course Instructors: Associate Professor Geraldo Ferrer

Prerequisites for the Course: GB 3042 Operations Management

Course Objectives:

The objectives of this course include:

- Developing a basic competence with the tools and techniques used in Supply Chain Management.
- Understanding the tradeoffs involved in designing and implementing different types of supply chain structures.
- Understanding the strategic supply chain management issues and their relationships with the other functional areas of the organization.

Course Description:

This course is designed to provide an introduction to supply chain management (SCM). A supply chain is a network of organizations that supply and transform materials, and distribute final products to customers. Supply chain management is a broadly defined term for the analysis and improvement of flows of material, information, and money through this network of suppliers, manufacturers, distributors, and customers. The objective of SCM is to deliver the right product to the right customer at the right time. SCM emphasizes inventory-service level tradeoffs across the chain of players that together provide the product to a customer.

There is probably no universal agreement on the distinction between logistics and supply chain management. However, we might say that logistics has traditionally focused on materials issues within and downstream from the factory while SCM looks at the entire network of players, both up and down stream, and perhaps has more of an emphasis on information flows through the network. Logistics has traditionally been considered a more tactical topic and less likely to capture the attention of upper management while SCM has risen to prominence in last few years, attracting high level attention. Many companies and/or divisions have added Supply Chain Analyst positions that frequently report to high level managers.

Ultimately, logistics and SCM activities are concerned with coordinating demand and supply. Common elements in that coordination are the management of materials (inventories), the location of materials (warehouses), and the movement of materials (transportation). As part of the coordination an analyst must consider product and process designs as well as information flows between various players in the networks. These elements will form the basis of this course. We will review some elements of basic theory and consider applications of the theory in cases that span operational and strategic concerns.

Major Topics Covered:

- Supply Chain Information – The Bullwhip Effect
- Network Design
- Facility Location
- Supply Chain Management in Practice
- Outsourcing
- Risk Pooling
- Postponement
- RFID and SCM
- Reverse Logistics
- Opportunities and Advances in SCM
- E-Business and the Supply Chain

Typical Textbooks and Readings:

Simchi-Levi & Kaminski. Designing and Managing the Supply Chain

GB4410: Logistics Engineering (4-0)

Course Instructor: Professor Keebom Kang

Prerequisites for the course: GB3420 (Operations Management)

Course objectives:

The objective of this course is to provide the student with the *ability to be credible, proactive and influential in the logistics **process***. Logistics is concerned with the entire life-cycle of a system: from the requirements determination through the acquisition process and from the fielding process to sustainment and retirement processes. Logistics Engineering constitutes all system support-related activities that concern the overall system design and development. Logistics Engineering covers (1) the design of mission equipment and related system for supportability, and (2) the design of the overall support capability for the system.

Course description:

The course will cover analytical tools, computer models, and the state-of-the art software packages. The student will obtain an understanding of elements of logistics and the knowledge pertaining to the design for optimum supportability so that the student should be able to define and discuss the maintenance concept, hardware and software design, production and operational support, life-cycle analysis, total ownership cost, and final decision-making. The course will also cover Lean Six Sigma methodologies applicable to logistics process improvements.

Major topics covered:

- Reliability, Availability and Maintainability (RAM)
- Spare parts management
- Stock consolidation
- Integrated Logistics Support (ILS)
- Performance Based Logistics (PBL)
- Sea-based Logistics/ Velocity Management/ Agile Logistics
- Test and Evaluation
- Life Cycle Cost computation for major weapon systems

References:

Blanchard, B. S. (1998), *Logistics Engineering and Management*, 5th Edition, Prentice-Hall. :

Lecture notes and other handouts (GAO reports, DoD documents)

GB4420: Technology and Information Systems for Logistics and Operations (3-0)

Course Instructors: Dr. Tom Housel, Professor
Dr. Johnathan Mun, Professor

Prerequisites for the Course: None

Course Objectives:

- Survey current logistics IT options (e.g., RFID technology, intelligent agent logistics planning software, enterprise resource planning systems)
- Be able to use ROI and real options value/risks estimates for logistics IT portfolio management
- Understand and apply portfolio, integrated risk management frameworks in the development of logistical and operational objectives and strategies.
- Understand how to use ROI and real options valuation/riskiness models to make the business case for IT investments to support logistics and operations processes under uncertainty.

Course Description:

The course will examine the most promising currently used information technologies to support new approaches to logistics and operations. Understanding how to interpret ROI estimates is critical in managing a portfolio of logistics IT options. It is also important for the logistics leader to know how to frame and interpret risk and net value estimates for various logistics IT options. Managing these options as a portfolio should lead to improved supply chain management, reductions in inventory costs while improving productivity and management flexibility. Transformation of the DoD requires that logistics leadership manage limited resources to ensure that mission critical capabilities will be provided the war fighter. The focus of this course is to provide this future leadership with the tools and frameworks they will need to help ensure the success of the transformation.

Major Topics Covered:

- IT valuation: What is the value of IT in Logistics?
- IT Logistics in the Information Age
- Enterprise Resource Planning
- Intelligent Agents in Logistics
- RFID/ Active RFID / Sensor Networks
- Making the Business Case for Logistics IT
- IT Logistics Portfolio Management
- IT Logistics Integrated Risk Analysis Evaluation
- IT Logistics Portfolio Management Analysis
- Valuing IT Logistics Options

Typical textbooks and readings:

Management Information Systems - Custom Edition. (2007). This is a custom text developed specifically for this course and contains three original defense oriented IT logistics cases.

Cases taken from the custom textbook include:

- **Estimating the Performance of an ERP for Flight Operations**
- **The Cryptologic Carry On Program Case**
- A Comparable Market Study of RFID for Manual Item-Level Accountability Inventory and Tracking Systems

GB4430: Defense Transportation System (4-0)

Course instructor: Professor Ira Lewis

Prerequisites for the course: GB3420

Course objectives in relation to the total curriculum:

This course is required for students in the logistics curricula. The purpose of the course is to understand how the Defense Transportation System, including both DOD resources and commercial transportation partners, supports the DOD mission, including:

- The role of transportation within logistics
- Commercial transportation modes
- Defense transportation doctrine and policy
- The Defense Transportation System

Course description:

The course provides an overview of the structure and environment of the Defense Transportation System. Topics include the modes of commercial transportation that are relevant to DOD, the strategic lift triad and tradeoffs concerning their roles and capabilities, and studies and analyses of commercial and defense transportation.

Topics include the overall logistics context of freight and passenger transportation services; carrier and modal competition; regulatory and legal considerations; and managerial resource problems. Carrier and shipper decision perspectives are both developed in general and then related to the DOD as a provider and consumer of freight and passenger service.

Major topics covered:

- Introduction to defense transportation
- The role of transportation and logistics
- Transportation doctrine and policy
- Defense Transportation System

GB4440: Simulation Modeling For Managerial Decision Making (3-0)

Course Instructors: Professor Keebom Kang, Professor Susan Heath

Pre- or Co-requisites for the Course: Introductory Statistics

Course Objectives:

Simulation and modeling has been extensively and successfully applied to a wide range of military problems. In a military context, simulation is a tool for analyzing the performance and operations of weapons, logistics, and communications systems. As the systems have become ever more complex, analytical approaches are intractable or impossible, and extensive field tests are impractical. Naturally, simulation becomes one of the most widely used techniques as a decision support tool in military as well as in civilian sector. Within DoD, the Defense Modeling and Simulation Office (DMSO) was created to lead the implementation of the Defense Modeling and Simulation Initiative (DMSI) that was created in 1990 by the Deputy Secretary of Defense as a new initiative to strengthen the application of modeling and simulation. This course will provide students with modeling and simulation skills that can help them for complex decision making processes.

Course Description:

This course will cover simulation modeling, methodologies, statistical analysis, and model validation/ credibility. The course will cover various case studies in managerial decision making in military as well as in civilian sector problems. Simulation package, ARENA will be used for simulation modeling and graphics animation.

Major Topics Covered:

- Overview of Modeling and Simulation
- Modeling and Case Studies (military applications)
- Modeling Techniques
- Statistical Analysis of Simulation Input/Output
- Verification, Validation and Accreditation (VV&A)
- Military Simulation

Typical Textbooks and Readings:

Kelton, W. D., Sadowski, R. P. and Sturrock, D. (2007), *Simulation with Arena*, Fourth Edition, McGraw-Hill.

Kang, K. and R. J. Roland (1998), Military Simulation, Chapter 19 of *Handbook of Simulation* (ed. J. Banks), John Wiley.

Law, A. M., and Kelton, W. D. (2000) *Simulation Modeling and Analysis*, Third Edition, McGraw-Hill, 1991.

Piplani, L. K., Mercer, J. G. and Roop, C. R. (1994*), Systems Acquisition Manager's Guide for the Use of Models and Simulations,* Defense Systems Management College, 1994.

GB4450: Logistics Strategy (4-0)

MN4470: Strategic Planning and Policy for Logistics Managers (4-0)

This course has two course numbers. (GB4450 from MBA and MN4470 for MSPM program.)

Course Instructor: Senior Lecturer Donald R. Eaton

Prerequisites for the Course: Permission from the Instructor

Course Objectives:

This course explores and analyzes the role of the service Acquisition Logistician in Systems Acquisition in DoD. The course emphasizes the concepts, processes and methods of strategic logistics planning and execution. The course stresses proactive techniques for the timely insertion of logistics elements and influence on major weapon systems acquisition as well as optimizing cost effective life-cycle management of fielded systems.

This course will examine and focus on key opportunities for effective logistics influence in requirements development, reliability and maintainability, test and evaluation, support planning, program planning, support analysis and effective teaming. It will also examine the methods to optimize logistics outcomes for contracting, source selection, and contractor incentivization.

Course Description:

The course employs lectures, guided discussions, case studies, role-playing, and major team projects. The focus of the course is to develop critical thinking from a logistics perspective to recognize, develop and produce logistics elements in such a way as to ensure maximum effectiveness in life-cycle support. Starting with Operational Requirements Determination, the entire life-cycle is critically examined from the logistics requirements perspective. For the final examination project, the class is divided into teams and produces a comprehensive strategic plan for logistics life-cycle management for a fictitious major program.

MN3370: Leadership in Supply Chain Management (0-2)

Course Instructors: Professor Keebom Kang

Prerequisites for the Course: None

Course Objectives:

Being a leader in managing end-to-end supply chain elements requires a broad perspective that includes sharing experiences with leaders in eminently successful private enterprises. It is intended that the student will get first-hand presentations that they can integrate into their course-work experience to optimize course value.

Most of the seminars will be given my experts in military and commercial logistics and supply chain management fields. This seminar enables the student to interview proven leaders in a classroom forum in such areas as: production, manufacturing, air transportation, electronic commerce, Sealift, rail shipment, and Defense policy formulation.

The objective of the seminar will be achieved by engaging the students with the concepts and issues of leaders in logistics, transportation and supply chain management.

Course Description:

This course is built upon carefully selected experts and leaders in any of the transportation and supply chain elements, i.e. from acquisition to factory to foxhole. This seminar experience provides the students with insights that enrich their understanding of logistic requirements in all of its modes, from concept, performance verification to delivery to sustainment.

Major Topics Covered:

- Transportation Modes and Nodes
- Logistics Support Planning
- System Support Sustainment

Typical Textbooks and Readings: None

Course Abstracts

Additional Components:

Manpower Systems

MN2111: Navy Manpower, Personnel and Training Issues I (2-0)

Course Instructors: Bill Hatch
CDR Kim Hill

Prerequisites for the Course: None

Course Objectives:

By the end of the course the student should have a higher level understanding of the MPTE processes, how they can be applied it to a business model. In addition the student should be able to relate the MPTE processes to other courses in the MBA program.

Course Description:

This course will use a workforce planning model and will overlay Military manpower processes on the model. It is intended to expose the students to not only a business model for workforce planning but also the current MPTE processes employed by the US Navy, USMC and other military organizations. In addition, during each class session a MPTE issue will be discussed to bring current ongoing MPTE events to the attention of the students.

A pair of students will lead a 30-50 minute discussion on a current military MPTE issue. This issue could come from a periodical (Navy Times, Marine Corps Time, Link, or professional journal). The article is not limited to USN or USMC topics and can be from another service or country.

Major Topics Covered:

- Business Strategy/Business Plans
- Work Demand
- Manpower Demand
- HR IT systems
- Workforce supply
- Matching Demand to Supply

Typical Textbooks and Readings:

National Defense Strategy
National Military Strategy,
CNO Guidance, Commandant Guidance
Singapore DS21
German Strategic Plan

MN2112: Seminar in Manpower, Personnel and Training Issues II (0-2)

Course Instructors: Bill Hatch
CDR Kim Hill

Prerequisites for the Course: MN2111 or consent of instructor

Course Objective:

Upon completion of this course the student will complete a thesis proposal and have an understanding of the process for writing and routing a thesis. In addition the course will be a forum for MPTE discussions as they relate to the military MPTE process and issues.

Course description:

The course will be taught through a series of lectures and discussions of thesis requirements, thesis topics, and the thesis process in support of accomplishing a Masters of Business Administration as part of the Manpower Systems Analysis curriculum**.**

Major Topics Covered:

- Thesis vs. MBA project
- Thesis topics
- Ongoing research within GSBPP
- Thesis processing
- Thesis day

Typical Textbooks and Readings:

Articles and studies relating to the MPTE enterprise within the Department of Defense.

MN3111: Analysis of Human Resource Management

Course Instructors:

- Benjamin J. Roberts, Senior Lecturer, Course Coordinator (AY 06-07)
- William Hatch, Lecturer (AY 06-07)

Prerequisites for the Course: GB 3070

Course Objectives:

While this course will familiarize you with some technical details of issues that are primarily relevant to human resource practitioners (such as the psychometric aspects of test validation, the specifics of job evaluation methodologies, or the intricacies of employment law), the primary orientation adopts the perspective of a general manager and addresses human resource management topics from a strategic perspective, considering how managers and organizations have been able to leverage their human intellectual capital for competitive advantage. Success as a general manager requires the integration of a wide range of knowledge and skills, which include theoretical, operational, environmental and political aspects. The general manager's job is to resolve complex situational issues, to make judgments as to the most appropriate actions to take, to make long-range directional decisions for the organization as a whole, and to marshal the complex of human, physical, and informational resources of the organization.

Course Description:

This course represents a broad coverage of human behavior in the work situation, with key emphasis on the issues of work in the Navy Manpower Personnel and Training Environment. Topical areas covered include selection, placement, training development, and evaluation of personnel; motivation, remuneration, morale, supervision, and working conditions in military organizations; job design and organization development within complex military bureaucracies; equipment design and man-machine interface, and the impact of technological programs within the military. PREREQUISITES: GB3070

Major Topics Covered:

- Criteria and Predictors
- Organizational Planning
- Requirements Generation
- Recruitment
- Selection
- Organizational Factors and Retention
- Jobs and Job Analyses
- National Security Personnel System
- Training and Development
- Performance Management
- Performance Appraisal

- Compensation and Motivation
- Unions

Textbook:

Human Resource Management. Mathis and Jackson, Thompson, 11th Edition. 2006.

Cases in Management, Organizational Behavior and Human Resource Management. Schuler and Buller, West, 6th Ed. 2005.

Readings updated and posted on Blackboard Site and distributed on CD.

MN3760: Manpower Economics (4-0)

Course Instructors: Stephen Mehay, Professor
Elda Pema, Assistant Professor

Prerequisites for the Course: GB 4071

Course Objectives:

The goal of this course is to introduce students to the principles of labor economics, describe the way that labor markets function, and how pay and employment are determined in equilibrium. These principles are applied to the military labor market.

Course Description:

The U.S. military must meet its manpower requirements with volunteers. Hence, it must compete with civilian employers on open, competitive markets for new enlistees and re-enlistees. This course attempts to do several things. First, it seeks to introduce students to the principles of and operations of labor markets in competitive and non-competitive environments. These principles are applied to numerous civilian and military manpower policy problems. Second, the course develops aspects internal labor markets within organizations, which are used in determining pay and in motivating and rewarding employees. Finally, the course attempts to provide an appreciation for the methodology used by labor economists in analyzing labor market and manpower problems.

Major Topics Covered:

- Competitive labor markets
- Demand for labor; demand elasticities
- Applying demand theory
- Labor Supply;
- Compensating wages;
- Principles of investment in human capital
- Worker turnover
- Compensation and internal labor markets
- Gender and race; earnings inequality
- Applications of concepts to military labor markets

Typical Textbooks and Readings:

Modern Labor Economics, 9th edition, by R. Ehrenberg and R. Smith.

Study Guide: *Labor Market Problems and Applications* (optional).

Other readings will be handed out in class.

MN4106: Military Manpower/Personnel Policy Analysis (4-0)

Course Instructor(s):

- Mark J. Eitelberg, Ph.D.
  Professor of Public Policy

Prerequisites for the Course:

- Capstone course for the Manpower Systems Analysis Curriculum

Course Objectives:

- Understand how to *apply* various scientific methods, as learned in prerequisite courses, in analyzing manpower/personnel policy issues and aiding the decision-making process.
- Evaluate and discuss military manpower/personnel issues, situations, problems, and policies from an analytical frame of reference.
- Appreciate the nature, aims, capabilities, and limitations of policy analysis; recognize the contributions one can expect from policy analysis and related aids to decision-making in the military manpower/personnel arena.
- Appreciate the importance of products resulting from policy analysis; and demonstrate the ability to communicate effectively, both orally and in writing.
- Approach manpower/personnel policy issues thoughtfully, objectively, and knowledgeably, as a skilled analyst.

Course Description:

"Study and analysis of military manpower/personnel policy alternatives, with emphasis on identifying the trade-offs involved, the dynamic impact of major policy decisions, and the short-term and long-term consequences of decisions. The course focuses on reviewing, using, and evaluating tools to aid in selecting policy alternatives. Cases are drawn primarily from current issues in US military manpower policy. International perspectives are likewise examined. Credit Hours: 4-0 Prerequisites: MN3760, MN4111."

Fundamentally, this is a course in thinking critically and analytically. The very best policy analysts are skeptics extraordinaire; they ask tough questions; they accept little, if anything, at face value; and they tear away the veneer of seemingly simple issues to find answers. The process of analysis can be as complicated or as simple—as organized or as disorganized—as we make it or as a task demands. Each of us, in our own way, is engaged almost constantly in some form of information collection and processing, some form of inquiry. Whether it pertains to an issue at our job or in the many personal decisions of a typical day, we are constantly problem-solving and seeking informed choice. The methods we employ as researchers, analysts, problem-solvers, and decision-makers, regardless of the time or place, are basically similar, and may differ only in degree.

This course is a "capstone" in the Manpower Systems Analysis Curriculum. It is designed to demonstrate how the knowledge and skills obtained from other courses can be integrated and applied to support the creation of effective manpower/personnel policies.

Major Topics Covered:

- Orientation
- Scope and Objectives of the Course
- Guidelines for Critique of Policy Analysis
- Strengths and Weaknesses of MPT Policy Analysis
- Understanding (Military Manpower/Personnel) Public Policy: Discussion of Concepts
- Topics for Research; Groundwork for Critiques and Class Projects
- Introduction to the Craft of Research
- Policy Analysis in Fact and Fiction: The Case of VEAP (Part 1)
- Hybrid Approach: The Policy Analysis Process
- Tips for Critiques (See Blackboard Posting)
- Applying "The Steps" to Specific Cases
- The End of the Draft and Start of the All-Volunteer Force: Case Study
- Hot Issues in Military Manpower/Personnel Policy Analysis
- Discussion of "Critique of Policy Analysis" Project
- Goldilocks Project: Critique of Policy Analyses
- Don't Ask, Don't Tell, Don't Pursue, Don't Harass: Case Study
- Policy Analysis Mini-Project: Smoking and First-Term Attrition
- Further Discussion of Smoking and First-Term Attrition: Case Study
- The Craft of Research, Parts I, II, and III
- Policy Team Presentations

Typical Textbooks and Readings

- William N. Dunn, *Public Policy Analysis: An Introduction*, Third Edition (Upper Saddle River, NJ: Pearson Prentice Hall, 2004). (Optional; see professor)
- E.S. Quade, *Analysis for Public Decisions*, Third Edition (Englewood Cliffs, NJ: Prentice Hall, 1989). (Required)
- Dan Bednarz and Donna J. Wood, *Research in Teams: A Practical Guide to Group Policy Analysis* (Englewood Cliffs, NJ: Prentice Hall, 1991). (Required; copies distributed)
- Wayne C. Booth, Gregory G. Columb, and Joseph M. Williams, *The Craft of Research*, Second Edition (Chicago, IL: The University of Chicago Press, 2003). (Required)
- Giandomenico Majone, *Evidence, Argument, & Persuasion in the Policy Process* (New Haven, CT: Yale University Press, 1989). (Optional; see professor)

- Aaron Belkin and Geoffrey Bateman, eds., *Don't Ask, Don't Tell: Debating the Gay Ban in the Military* (Boulder, CO: Lynne Rienner Publishers, 2003). (Required)
- Mark J. Eitelberg, "The Theory and Practice of Policy Analysis: Notes and Quotes," July 2006. (Required; handout)

A selection of readings provided in class.

MN4111: Multivariate Manpower Data Analysis II (4-2)

Course Instructors: Elda Pema, Assistant Professor

Prerequisites for Course: A course in statistics and introductory econometrics (GB3070 and MN4110)

Course Objectives:

This course furthers the basic econometric skills introduced in MN4110. The main goal is to provide the tools and intuition required to correctly interpret empirical research and to understand the implications of empirical studies and their policy suggestions. This course also lays the foundation for developing research methods at the level where one can independently analyze data to further the scope of social and behavioral science and to generate policies as a manpower analyst.

Course Description:

An introduction to advanced multivariate techniques used for data analysis. Topics include panel data analysis, two-stage models, binary choice models, and survival analysis. The course also covers special techniques for policy evaluation and reduction of estimation bias due to omitted variables or sample selection. Students apply techniques to manpower databases. The culmination of this course is an individual research project, which employs the econometric tools introduced in class and a dataset of choice to answer various empirical questions.

Emphasis is placed on model specification, application, and interpretation. In addition, the course highlights the differences between the various available techniques and assumptions upon which they are based. Students are trained to select appropriate techniques based on the properties of the estimates they produce, correct for violation of the assumptions, interpret estimation results, and test relevant hypotheses.

A major goal is to provide the basis for continuing education in manpower data analysis on an individual basis. The formal topics covered are intended to provide the basics of statistical education while also laying a foundation for professional growth as a manpower analyst.

Major Topics Covered:

- Heteroskedasticity and heteroskedasticity-robust inference
- Testing for heteroskedasticity (Breusch-Pagan and White tests)
- Functional form misspecification and the Ramsey RESET test
- Proxy solution to the omitted variables problem
- Measurement error
- Missing data, non-random samples, and outliers
- Pooling independent cross sections across time
- Panel data analysis

- First differencing
- Fixed effects estimation
- Random effects estimation
- Policy analysis with pooled and panel data
- Instrumental variables (IV) and two-stage least squares (2SLS)
- Testing for endogeneity and overidentifying restrictions after 2SLS.
- Logit and Probit models
- Correcting for sample selection bias (Heckman model)
- Survival model
- Stata programming and data manipulation.

Typical Textbooks and Readings:

Wooldridge, *Introductory Econometrics* (3rd edition)
Wooldridge, *Student Study Guide with Solutions*
Other readings distributed in class.

MN4114: Foundations of Military Sociology/Psychology (4-0)

Course Instructors:

- Mark J. Eitelberg, Ph.D.
  Professor of Public Policy

Prerequisites for the Course:

- MN3105; curriculum option for MSA (847) students, who are given priority enrollment.

Course Objectives:

- Describe and synthesize sociological/psychological concepts, principles, and theories used in the study of the military.
- Apply scientific method to the study of the military from a sociological/psychological perspective.
- Explain the military as a social institution in the U.S. and in other nations.
- Analyze and discuss contemporary military issues, situations, and problems from a social-psychological perspective.
- Evaluate sociological/psychological research findings related to concepts used in the two fields (as applied to the military).
- Demonstrate the ability to communicate all of the above effectively, both orally and in writing.

Course Description:

Exploration of the concepts, theories, and methods of military sociology and military psychology as applied historically and in the current setting. Study of the military as a social institution, focusing on the internal organization and practices of the armed forces as well as the relationship between the military and society. Review and evaluation of psychological and sociological principles employed in a variety of research areas such as recruit screening and job classification, personnel adaptability and trainability, the military family, population representation, diversity, equal opportunity, personnel security, institutional versus occupational constructs, the military life course, and civil-military relations. Emphasis on representative cases in DoD and the US armed forces as well as cases in the militaries of other nations.

Major Topics Covered:

- Orientation
- Scope and Objectives of the Course
- Introduction to Military Sociology and Military Psychology
- Brief History and Overview of Military Sociology
- Changes in Military and Research Approaches Over Time
- Discussion of Current Research

- The Immigrant Tradition
- Excluded Groups: The Right to Fight
- Social Class and Military Service
- Contemporary Issues in Diversity Management
- On Killing: The Psychological Cost of Learning to Kill in War and Society
- Issues in Population Diversity: Race and Ethnicity
- Issues in Population Diversity: Gender
- The Military and the Media
- The Military and Society: Similarities and Differences
- Contemporary Issues: A Conceptual Model of Population Participation in the Military
- The "Benefits and Burdens" of Military Service
- The "Military Representation Model" Reexamined
- The Evolution of the All-Volunteer Force from a Sociological/Psychological Perspective
- Disciplinary Battles: Economists vs. Psychologists and Sociologists
- Citizenship and the Military: The Case for National Service
- Civil-Military Relations
- Institutional vs. Occupational Constructs
- Other Conceptual Models of Military Service
- Women and Minorities in the Officer Pipeline
- The Military and the Family as Greedy Institutions
- The Civil-Military Gap Reexamined
- History of Testing
- Screening for Service: Selection, Classification, and Assignment
- Becoming Brass: Recruiting, Selection, and Assignment of Military Officers
- The Future of Military Testing and the Role of Military Psychology
- Future Topics in Military Psychology
- Future Topics in Military Sociology

Typical textbooks and readings:

- Charles C. Moskos and Frank R. Wood, eds., *The Military: More than Just a Job?* (Washington, DC: Pergamon-Brassey's, 1988). (Available from the professor.)
- David R. Segal, *Recruiting for Uncle Sam* (Lawrence: University of Kansas Press, 1989). (Available from the professor.)
- Martin Binkin, *Who Will Fight the Next War?* (Washington, DC: Brookings Institution, 1993). (Available from the professor.)
- David R. Segal and H. Wallace Sinaiko, eds., *Life in the Rank and File* (Washington, DC: Pergamon-Brassey's, 1986). (Available from the professor.)
- Mark J. Eitelberg, *Manpower for Military Occupations* (Washington, DC:
- Department of Defense, 1988). (Available from the professor.)
- Mark J. Eitelberg, *Screening for Service* (Washington DC: Department of Defense, 1984). (Available from the professor.)

- Mark J. Eitelberg and Stephen L. Mehay, eds., *Marching Toward the 21st Century* (Westport, CT: Greenwood Press, 1994). (Available from the professor.)
- William Darryl Henderson, *Cohesion: The Human Element in Combat* (Honolulu, HI: University Press of the Pacific, Reprinted, 2003). (Available from the professor.)
- Pat Conroy, *The Great Santini* (New York: Bantam Books, 1976). (For purchase.)
- Lieutenant Colonel Dave Grossman, *On Killing: The Psychological Cost of Learning to Kill in War and Society* (Boston: Little, Brown, and Company, 1995). (For purchase.)
- Robert Eberwein, ed., *The War Film* (New Brunswick, NJ: Rutgers University Press, 2005. (Available from the professor.)
- Lawrence H. Suid, *Guts and Glory: The Making of the American Military Image in Film*, Revised and Expanded Edition (Lexington, KY: The University Press of Kentucky, 2002). (Available from the professor.)
- Series of Photocopied Articles, Papers, and Reports. (Available from the professor.)
- References for "Population Participation in the Military" can be found on Blackboard, MN4114 Foundations of Military Sociology/Psychology.

MN4115: Training Foundations and Management (4-0)

Course Instructors: Alice M. Crawford
Steve Mehay
William Hatch

Prerequisites for the Course: MN3111
GB3010

Course Objectives:

This course compliments the fundamentals in organization and management for the MS degree in Management, and is a component of the Manpower Systems Analysis (MSA) subspecialty curriculum. Course concepts are applicable to general management situations as well as training and education environments.

In the general management context, this course compliments GB3010 and MN3111 by utilizing a systems perspective to examine the relationships between training and the other components of organizational systems. It can be argued that understanding and managing learning processes is central to effective management. In this respect, the course provides another perspective that can be used by military officers to manage subordinates.

As a component to the MSA curriculum, the emphasis of the course is on analysis of the relationships among manpower, personnel, and training in the Department of the Navy and allied countries.

The key objective of the course is to enable students to systematically and critically analyze issues related to training and education. Subordinate objectives include:

- Understanding the system in which training and education take place. Students learn how the components of organizational systems interact with training, and with each other, to impact training effectiveness. The systems perspective of training and education is revisited throughout the course. From this general concept, students move to study the scope of the military system, and current trends in military and civilian learning systems.

- Understanding and managing learning processes. Students examine three predominant models of learning and explore the different situations in which each model might apply. Additionally, students study learning styles and their implications for pedagogy.

- Understanding the design and development of training and education. Students study research on a wide variety of conditions in which learning takes place, and

examine specific examples of practice in designing and developing training and education.

- Understanding implementation and evaluation of learning programs. Students study technology-mediated learning, media selection as a function of learning theory, and principles of evaluation.

- Understanding research in training and education. In addition to research-based course materials, students engage in training and education research through a course final project.

- Understanding leadership development. Students look at the differences and similarities among training, education, and leadership development.

Course Description:

The course covers a broad range of issues in the domain of training and education. Pedagogy is primarily based on interactive discussions and exercises in which students can discover applications for course readings.

Major Topics Covered:

- The Training System
  - Knowledge, skills, and abilities required for naval and Marine Corps officers in their future roles.
  - The systems view of training and education
  - A systematic approach for analyzing, designing, developing, implementing, and evaluating training
  - The scope of military training and education: structure, trends, and costs
  - Changes to Military training and education
- The Learner
  - Operant conditioning
  - Observational learning
  - The cognitive model of learning
  - Learning styles
- Design and Development
  - Needs analysis
  - Conditions necessary for effective learning. e.g., motivation, feedback, transfer, mental models, etc.
  - Design as a function of what is to be learned
  - Adult learning
- Implementation and Evaluation
  - Methods and media of training and education
  - Media Selection
  - Principles of evaluation

- Integrating Concepts of Training and Education
  - Becoming a teacher to develop leadership
  - Final project research

Typical Texts:

Goldstein, I.L., and Ford, K.J. *Training in Organizations: Needs Assessment, Development, and Evaluation,* 4th Ed. Wadsworth, Thomson Learning, 2002.

O'Connor, Bridget N., Michael Bronner, and Chester Delaney. *Training for Organizations*, 2nd ed. Cincinnati: South-Western Educational Publishing, 2001.

MN4118: Human Resource Information Systems (3-2)

Course Instructors: William Hatch

Prerequisites for the Course: MN2111 or consent of instructor.

Course Objectives:

This course supports educational skill requirements three and five. Advanced Quantitative and Qualitative Analysis - The graduate will have the ability to apply a wide range of advanced organizational, economics, statistical, and mathematical techniques and concepts to manpower and personnel polices and issues. These include the use of econometric techniques in the quantitative analysis of large-scale DoN/DoD manpower and personnel databases, of qualitative techniques in the analysis of survey and personnel data, of manpower decision support systems, and of Markov models in the analysis of force structure and manpower planning, forecasting and flow models. Automated Data Analysis - The graduate will possess the skills in data manipulation, statistics, and exploratory data analysis to be able to formulate and execute analyses of a wide variety of manpower, personnel and training issues. The graduate will have proficiency in computing with mainframe and microcomputer systems to interactively apply a variety of methods to large-scale DoN and DoD databases. The graduate will have a thorough understanding of the manpower information systems.

Course Description:

Analysis of DoD Human Resource Information Systems (HRIS). Major course theme focus on understanding military HRIS from a systems perspective; analyzing instructional program design, implementation, and technologies; and applying methods of needs analysis and program evaluation. Guest speakers, military publications, student cases, and discussion based on experiences of the instructor and students are utilized to maintain the necessary focus on current military applications.

Major Topics Covered:

- Military Human Resource Systems
- Navy & Marine Corp HRIS
- Navy Assignment Information Process
- Knowledge Management
- Group and individual projects
- Decision support systems

Typical textbooks and readings:

- Handouts
- Navy MPT HRIS

- **MN1119: Navy Manpower Requirements Determination (3-0)**

Course Instructors: William Hatch

Prerequisites for the Course: MN2111 or consent of instructor

Course Objective:

Upon completion of the course the student will have an in depth understanding of the Navy fleet and shore Manpower and Personnel system, processes and documents.

Course description:

The course will examine the determination/validation process of fleet requirements as they pertain to deploying unit's Required Operational Capabilities and Projected Operational Environment (ROC/POE) and the resulting Ship Manpower Document (SMD), Squadron Manpower Document (SQMD), and Fleet Manpower Document (FMD).

It will examine the Shore Manpower Requirements Determination (SMRD) process as it pertains to the Mission, Function and Task (MFT) statement and the resulting Statement of Manpower Requirements (SMR). Further analysis will link fleet and shore manpower documents to the Activity Manpower Document (AMD). The Personnel assignment sub-process will be reviewed as it relates to the previous documents and the Enlisted Distribution and Verification Report (EDVR) in support of fleet readiness.

Major Topics Covered:

- Manpower Policy
- Manpower terms
- Analyzing various manpower and personnel documents
- Fleet requirements determination process
- Shore requirements determination process
- Manpower as it applies to graduate education

Typical Textbooks and Readings:

Department of the Navy manpower and personnel governing instructions, documents and various handouts as well as articles and studies relating to the manpower, personnel, training and education enterprise within the Department of Defense as provided from the instructor.

MN4130: Marine Corps Manpower Requirements (3-0)

Course Instructors: William Hatch

Prerequisites for the Course: MN2111 or consent of instructor

Course Objectives:

Upon completion of this course the student will have an in depth understanding of USMC Manpower Management and implementation of management policy techniques through analysis, procedures, organizational and administrative actions to better staff Headquarters Marine Corp management policy issues.

Course Description:

Each student will develop an understanding of the system relationship between the Table of Organization (T/O), Troop List (TL) and the Authorized Strength Report (ASR). Each Officer will complete a Universal Needs Statement (UNS). Each student will be assigned a process with in the Marine Corps HRDP and present the process as a project at the end of the class.

Major Topics Covered:

- Marine Corps Manpower Policy
- Marine Corps Manpower terms
- Analyzing various manpower and personnel documents
- Marine Corps Human Resource Development Process (HRDP)
- Marine Corps Requirements Oversight Council (MROC)
- Total Force Data Warehouse (TFDW)

Typical Textbooks and Readings:

Marine Corps manpower and personnel governing instructions, documents and various handouts as well as articles and studies relating to the HRDP enterprise.

MN4761: Applied Manpower Models (4-0)

Course Instructor: Professor Stephen Mehay

Prerequisites for the Course: MN3760
MN4110
MN4111

Course Objectives:

ESRs for the Naval Postgraduate School state that upon graduation a student will have "the ability to recognize scientific advancements of potential value to the Navy, formulate a research program, perform the necessary research, and report the results." The goal of this course is to acquaint students with the current issues and literature in Navy and DoD manpower and research methodologies employed in the field. In addition, the goal is to build on earlier statistical modeling classes by developing the students' abilities to carry out an assigned data analysis project.

Course Description:

The course surveys various research methodologies and their application to manpower problems. Students are assigned specific readings from the literature on each of several major topic areas. Class meetings involve a discussion of the assigned readings; the readings are read in advance of the class meeting. The following questions will guide the in-class discussions:

- What are the policy or planning issues? Why are they important?
- What methodology (research design) is used in the study?
- What type of data are used?
- How do the conclusions assist policy makers?
- What are the strengths and weaknesses of the study?

Students must complete a term project that involves using a manpower data file provided by the instructor. The project requires that they use the literature to specify and estimate a multivariate statistical model of a manpower issue.

Major Topics Covered:

- Issues in Program Evaluation and Research Design
- Cost-Benefit and Cost-Effectiveness Analysis
- Modeling and Forecasting Enlistment Supply
- Enlisted Attrition
- Modeling and Forecasting Reenlistment
- Officer Retention Issues
- Military Manpower Costs and Productivity
- Compensation

Typical Textbooks and Readings:

"Manpower and Personnel IWAR 2000: Aging the Force," Center for Naval Analyses, 2001

"Analysis of Navy's Cap on Non-High School Diploma Graduates," Center for Naval Analyses, 2001

"Enabling Officer Accession Cuts While Limiting Laterals," Center for Naval Analyses, July 2004.

"Effectiveness of the Voluntary Education Program," Rand Corporation, 2000
"Measuring Return on Investment in Navy Compensation Initiatives," Navy Workforce Conference, 2002.
"The Military Recruiting Productivity Slowdown," Defense and Peace Economics, v. 14, October 2003.

"Predictors of Attrition," Center for Naval Analyses , 2004.

"The Army's Delayed Entry Program," *Armed Forces & Society*, 1992.

"Cost Effective use of Selective Reenlistment Bonuses," CNA, 1994, pp. 19-38

"Why Do Pay Elasticities Differ? CNA, pp. 1-48.

"Economic Analysis of SWO Bonus," SAG Corp., 1997.

"Military Compensation Reform in the Department of the Navy," Center for Naval Analyses, 2005.

Rossi & Freeman, "Randomized Designs for Impact Assessment," and "Non-randomized Designs for Impact Assessment," in Evaluation: A Systematic Approach.

Barnow, et al., "Issues in the Analysis of Selection Bias" Evaluation Studies Review Annual.

Afifi & V. Clark, "Regression Analysis Using Survival Data," chapter in Computer-Aided Multivariate Analysis, 2d edition.

"Human Capital and Productivity in a Hierarchical Organization," Economics of Education Review, October 1999.

CHARTER
ADVISORY COMMITTEE
GRADUATE SCHOOL OF BUSINESS AND PUBLIC POLICY
NAVAL POSTGRADUATE SCHOOL

Authority: The Advisory Committee is chartered in accordance with NAVPGSCOL INSTRUCTION 5420.1

Official Designation: Advisory Committee to the Dean, Graduate School of Business and Public Policy (BPP), Naval Postgraduate School.

Objective and Scope of Activity: The Committee shall:

(1) Advise the Dean on BPP education programs with particular emphasis on assessing and assisting the School in accomplishing its mission with relevance to the current needs of the Navy, USMC and the Department of Defense. The Committee will inquire and make recommendations to the Dean in the areas of research, curricula, instruction, physical facilities, administration, student body, fiscal affairs, resources, and other matters relating to the operation of School programs.

(2) Support the Programs of the School through such activities as sponsorship of curricula and research, and enrollment of students.

(3) Assist the School in identifying new opportunities for support within the Navy and the Department of Defense and by assisting the Dean and the School in developing relationships with potential new sources of research and instructional sponsorship, programs or students. Members of the Committee help to increase the visibility of the School among its stakeholders.

Meetings: The Advisory Committee shall meet for one day twice each year, in April/May and October/November in Washington, DC or Monterey, CA, or other location at the discretion of the Chair. In addition, individual members may be asked to devote addition time for specific assignments related to accomplishing the Committee's mission.

Membership: In accordance with applicable instruction(s) membership shall be comprised of senior military officers and civilians from the services and/or subspecialties represented in the student body of the School. Terms of office shall be two years, renewable for one additional two-year term. Non-federal government civilians from industry and academic institutions may be invited to participate as guests.

Sponsor: Dean, Graduate School of Business and Public Policy, Naval Postgraduate School.

Supporting Agency: Naval Postgraduate School

Estimated Annual Cost: $15,000 per year

Termination Date: Continuing

Adopted: 22 April 2002

Naval Postgraduate School
Graduate School of Business and Public Policy

ADVISORY COMMITTEE

VADM Patricia A.Tracey
Director, Navy Staff

VADM Joseph W. Dyer
Commander, Naval Air Systems Command

VADM Keith Lippert
Commander, Defense Logistics Agency

RADM Albert T. Church (Tom)
Director, Office of Budget of the Assistant SECNAV for Financial Management and Comptroller/Director, Fiscal Management Division (N82)

RADM J. D. McCarthy
Commander, Naval Supply Systems Command

Appendix 2.1I1

DEAN'S STRATEGIC REPORT

July 2002

DRAFT (7/21/02)

NAVAL POSTGRADUATE SCHOOL
GRADUATE SCHOOL OF BUSINESS AND PUBLIC POLICY

DEAN'S REPORT

The Background and the Challenge

The Graduate School of Business and Public Policy (BPP) is in a period of simultaneous change, consolidation and growth. This "trifecta" presents special short-term challenges in terms of strategic direction; program selection, development and management; internal organization; faculty and staff resources and financial support. This document provides a strategic assessment of where the School stands today and addresses the question of strategic direction for the next five years; sets decision guidelines by which questions of organization, staffing and resources can be addressed; and identifies some representative actions and measures of achievement.

BPP was founded in 2001 largely out of the Department of Systems Management. Over the course of 2001 the faculty developed a new curriculum leading to a Master of Business Administration degree and the first students in the new MBA program matriculated in January 2002. The MBA program will is the central resident program for the School. In addition, a resident Master of Science in Management (Manpower Systems Analysis curriculum) is offered to serve the needs of educating and qualifying Naval officers in the human resources specialty. These new resident programs are in a continuous process of review, revision and improvement.

The School also offers a number of non-resident DL degree programs in contract management, program management, leadership development, sponsored by various Navy and other DoD entities. Non-degree management development programs are also offered, with Navy and DoD sponsorship support, in fields such as acquisition, comptrollership, diversity management, change management, and others. In response to demand for the MBA degree and in recognition of the difficulty for Unrestricted Line officers to attend the resident program, the School is beginning a pilot test of an Executive MBA program at Lemoore and Pensacola. If successful, it is anticipated that EMBA programs could grow substantially. Finally, BPP has partnered with the Smith School of Business at The University of Maryland to offer a joint defense-focused MBA program (JMBA) serving the needs of the Washington, DC defense and national security community.

The BPP faculty consists of tenured and tenure track scholars who conduct research, teach and lead programs, non-tenure track faculty who teach and lead programs, and active duty military officers who teach and bring operational perspectives to the

classroom. Many of the faculty are engaged in administrative duties and service within the School. Funding models over the past decade have driven the faculty into individual entrepreneurship, seeking external funding for research and teaching outside the resident programs to secure a full year of earnings.

The School of Business and Public Policy currently operates with the organization, staffing, financial models and administrative processes of the old Department of Systems Management. These legacy systems are not adequate to meet the requirements of a School, particularly as the School is changing and growing its academic programs. BPP is faced with challenge of consolidating the changes that have already taken place and aligning its internal organization and process flows to serve its new role. At the same time, BPP operates within NPS staffing models and financial baselines that are rooted in the old SM Department. BPP and NPS are thus challenged to develop a plan to complete the transition to full School status.

The Strategic Planning Process

This document has been compiled by the Dean but it has been derived from an extensive faculty-led strategic planning process. This process began with a one-day faculty offsite on 5 April 2002. At this session the faculty spent a half-day discussing the history of the School, dating from the original Department of Administrative Sciences, to understand how we got to where the School is today. In the afternoon session, the faculty considered four strategic imperatives that the Dean had identified for consideration. Visions, strategies and resources were discussed for each. The four strategic imperatives are:

- Maintaining a Strong Foundation
- Academic Excellence in Teaching and Research
- Distinctive Relevance
- Growth by Identifying the Right Opportunities

Following on the offsite, a faculty Strategic Planning Task Force was formed to develop the outlines of a strategic plan for the School. Fifteen faculty members, or about one-fourth of the faculty, served on the task force. Others were consulted through an organized reporting and outreach effort during the six weeks that the group deliberated.

On 7 June 2002 a presentation was made to the faculty for discussion. The task force had reached consensus on the following six strategic questions, with the first three being the top priorities. While the strategic direction that follows is organized according to the above four pillars, at least partial answers to these six strategic questions are embedded throughout.

- Identity. What business model and identity do we want to pursue?
- Research. How can we revitalize our research productivity, including increasing our output of DoD relevant and open-literature research?
- Teaching. How can we continually improve our teaching, and make teaching excellence a priority?

- Faculty Cooperation. How can we increase faculty cooperation and work toward a shared identity?
- Decision-Making Criteria. What are our decision-making criteria for adding, maintaining, and dropping academic programs, and our processes for evaluating new and existing businesses?
- Organizational Structure. What structure can we realistically create that fits our business model and identity?

After that session, the Dean assumed responsibility for developing this document based on the faculty work done to date. The Dean also is implementing a recommendation of the Task Force to form a smaller and more permanent Dean's Strategic Advisory Council to provide continuous faculty participation in the ongoing development and refining of the School's strategic direction.

NPS Vision, Mission and Strategic Initiatives

The Naval Postgraduate School has articulated a vision, mission and strategic initiatives for the institution.

NPS Vision

Before 2005, NPS will provide relevant, flexible, cutting-edge academic, research, and continuing education programs to military officers and DoD civilians from around the world at every stage in their careers.
By 2010, NPS will be ranked by education experts as among the top research universities in the Nation.

NPS Mission

Provide relevant, excellent and innovative education to Navy and Marine Corps officers throughout their careers.
Incorporate military and defense civilians worldwide in the education process
Produce technologically competent warriors, rigorous analysts schooled in the most promising innovative military technologies, and critical thinkers.
Focus on the integration of the core elements of teaching, research, and continuing education.
Partner with industry and academia to produce flexible, integrated, interdisciplinary and systems oriented education.
Provide the education when, how and where it is needed.

NPS Strategic Initiatives

Increase the number of Navy Unrestricted Line Officers (URL) with graduate education.
Increase the number of meaningful partnerships and available markets for our services.
Improve the quality and applicability of our research and teaching.
Cut the right costs; invest resources in the right things.

The alignment of the strategic direction of NPS and the strategic imperatives of BPP are shown in the chart at the back of this paper.

BPP Vision, Mission and Goals

To guide the further development and implementation of a strategic direction and action plan for the School of Business and Public Policy, the following are the Dean's vision, mission and goal for the School, consistent with the strategic direction of NPS.

Vision: To transform our students intellectually, professionally and personally; and to transform organizations that engage us.

Education has transformational power. The students we teach, the sponsors we serve, and the organizations we counsel expect something different to result from their interaction with us. Our students should have the opportunity to become different intellectually, personally or professionally through interaction with world-class faculty using innovative teaching strategies and the best instructional technology. Our sponsors should perceive a positive change in their personnel and the management of their programs as a result of their support for the School. Organizations that engage us should experience the opportunity for change and improvement because of the expertise and experience we offer.

Mission: To serve the Nation by educating military officers and DoD civilians in defense-focused business and public policy, by conducting scholarly research in defense management and public policy, and by providing intellectual resources for leaders and organizations concerned with national defense management policy.

As an element of the Naval Postgraduate School, the School of Business and Public Policy serves the national interest. Our work is focused on providing defense-focused scholarship, graduate education, and intellectual support for the Navy and Marine Corps, the Department of Defense, and other individuals and organizations concerned with national security and national defense.

This mission is operationalized clearly in what had been the SM Department mission statement, slightly revised, as follows.

> Our purpose is to improve the managerial capabilities and leadership qualities of US and international officers and government civilians through graduate education, research, and professional service.
>
> *Education.* To develop students' abilities to analyze, think critically, and take intelligent action so they can more effectively carry out their professional responsibilities, and lead their organizations in complex, and sometimes life-threatening, environment.

Research. To conduct research that supports military decision-making, problem solving, and policy setting, improves administrative processes and organizational effectiveness, contributes knowledge to academic disciplines, and advances the mission of graduate education.

Service. To provide professional expertise that supports the development of the Naval Postgraduate School, the Departments of Navy and Defense, and other branches of Government, as well as our professional and academic organizations.

Goal: To be, and to be recognized as, the Nation's premier defense-focused business management and public policy school.

We strive to be the "school of choice" for students and organizations seeking defense-focused graduate education, research, and intellectual resources in business and public policy management. Our programs will compete successfully with other Schools that offer business and public policy programs to military communities. Our faculty and their scholarship will be recognized for quality by peers in the academic community. We will achieve national recognition for the special educational institution that we are.

The Strategic Direction

The four pillars identified above form a useful framework for the continuous process of planning, decision-making, and acting in the School over the next five years. The following are brief elaborations of these pillars along with listings of considerations and actions that might be taken under each.

Maintaining A Strong Foundation

The foundation of the School of Business and Public Policy is the resident MBA program. This program, accredited by AACSB and NASPAA, anchors the School as an academic institution. It largely defines our reputation and serves as the core for all of our other academic programs. It both requires and justifies a high quality, permanent resident faculty.

- Maintain full enrollment in the resident MBA program
- Maintain a fully-staffed resident research and teaching faculty
- Initiate outreach programs to underrepresented officer communities, particularly Unrestricted Line (URL) officers
- Strengthen ties and stay current with the needs of curriculum sponsors
- Maintain high senior tenured faculty participation in MBA instruction
- Meet the requirements for and keep certification by AACSB and NASPAA
- Increase the technology content of the resident degree programs

- Seek and exploit opportunities to publicize and get public recognition for the MBA program

Academic Excellence in Teaching and Research

Excellence in teaching and research are essential to meeting the demands of our students, our sponsors, professional and scholarly communities, and accrediting agencies. Quality is essential to our competitiveness in the educational marketplace. Excellence is central to our reputation, to the standing of our faculty among their peers, to our ability to recruit good faculty, and to the esteem of our students and alumni. The School is currently accredited by AACSB and NASPAA, the top accrediting organizations for business schools and public administration schools. The BPP Senior Faculty Council is undertaking a review to make recommendations for actions to improve the overall academic excellence of the School.

Teaching

Excellence in teaching is essential to performing the mission of the School. Considerations in teaching include both good course development and effective course delivery. We aim to be excellent teachers across all disciplines, utilizing a broad range of teaching methodologies, in a culture that promotes and encourages excellent teaching. The following policies and actions are intended to foster a supportive environment for continuous improvement in teaching.

- Annual faculty award for teaching excellence
- Teaching quality will be a factor in faculty evaluation and rewards
- Institute teaching workshops and mentorship
- Improved instruction facilities in Ingersoll Hall
- Encourage team teaching
- Widespread teaching by tenure track faculty
- Develop a best practices database to disseminate innovative teaching ideas
- Resource course development adequately
- Instructional mentoring for new faculty

Research

During the recent accreditation process by AACSB, the research productivity of the faculty, as measured by publications in scholarly journals, was cited as marginal and in need of attention. A report to AACSB is required in 2003 with a plan and progress report to demonstrate how the School is addressing this issue. The following actions are contemplated to address the need for improving the climate for research within the School and increasing research capability and publication output.

- Monthly research colloquia
- Inaugural lecture series by arriving and newly promoted faculty

- Encourage production of scholarly papers and technical reports to document and disseminate research results
- Encourage publication of conference presentations
- Host conferences and colloquia, seek opportunities to publish the papers from these events
- Distribute funds for new faculty workload model based on research and publication proposals
- Mentoring on research issues for junior tenure track faculty
- Link student theses and projects to appropriate faculty research
- Release time for publishing and mentoring
- Adequate support staff, including research assistants
- Research "brokering"

Distinctive Relevance

Our defense-focused education programs, research initiatives and intellectual resources comprise our competitive advantage. BPP is a Navy School serving the defense and national security communities. It is our responsibility to retain and nurture that defense focus, stay current on defense management issues, remain connected to defense sponsors, and be responsive to Navy and defense leaders.

- Create sponsored chairs in each concentration area with aligned sponsors, the concentration curricula, and chairholders
- Increase active engagement of the BPP Advisory Board
- Maintain a regular schedule of curriculum reviews
- Create Chair or a Center for Defense Management Research to provide professional service and applied research workshops for Navy and DoD

Prudent and Responsive Growth

BPP is awash in growth opportunities. Challenging new markets appear to exist for both DL degree programs and management development programs. Demand from Navy and other defense communities requires a response. Opportunities exist to expand well beyond the confines of Monterey and to establish a national presence and reputation for the School. If we do not respond to these markets, other institutions will, to the possible disadvantage of the Navy, the students, NPS and BPP. On the other hand, we are resource constrained, and not every new market is the right one to pursue. We commit ourselves to growth in markets that strengthen the School and are the most responsive to the communities that we serve.

- Determine BPP stakeholders' current, short, and mid-term expectations about DL instruction. Develop a plan to respond to these expectations.

- Review current DL programs to assess their congruence with the mission and long-term strategies of the School; identify candidates for consolidation, spin-off, realignment or termination.

- Target potential DL instructional groups, prioritize them, and determine the appropriate programs—degree and management development-- that can be reached using DL technologies.

- Assess the competitive environment for DL instruction and determine BPP's distinctive competence and competitive advantage. Identify partnership opportunities where appropriate.

- Assess, price and scope alternative models for DL VTE instruction that would enable us to better leverage faculty from our current 25:1 student/instructor ratio to a 100:1 ratio.

- Provide all BPP faculty with high-quality, education about learning technology.

- Hire skilled Instruction Design (ID) specialists to assist faculty developing asynchronous DL modules and courses.

- Develop a DL lessons learned and best practices database.

Decision-Making in an Option-Rich Environment

BPP has many options in terms of programs, courses, and faculty activities. Choices will have to be made between many opportunities and ideas that, on their own, will appear meritorious and worth undertaking. Decisional aids will be required to facilitate good decision-making. Among these guideposts will be:

- Consistent with NPS and BPP vision, mission and objectives
- Adequately resourced
- Within our capabilities
- Meets a Navy/DoD need
- Potential "return" for the School

Organization

The School has very little formal organization structure. That which does exist is largely a carryover from the Department of Systems Management. In addition, a number of informal organizations exist – academic, administrative, research, programs – that tend to reflect various process flows among the School's faculty, sponsors, staff and administration. The NPS Functionality Assessment has recommended a standardized

staff organization. The current organization, or lack of organization, does not serve the School adequately. There are uncertainties about processes, unclear lines of authority and responsibility, barriers to effective communication and cooperation, and a resulting high level of organizational stress. A new organization is needed for the School that accomplishes the following objectives.

- Integrates academic, administrative, and programmatic processes
- Recognizes the scholarly community(ies) of the School
- Strengthens and empowers program management within the School
- Simplifies process flows and reduces the overall administrative workload performed by faculty members
- Clarifies relationships and responsibilities within the School
- Is flexible enough to accommodate change and to meet new opportunities

A faculty task force has been appointed and is currently working with the Dean to address these issues and recommend a new organizational configuration for the School.

Organization is closely related to process flows, particularly the flow of financial resources to and through the School. The NPS financial processes are complex and difficult to understand or manage. Within the School they have become even more complex. A faculty group is examining the way we plan for and account for faculty and staff labor with the goal of making the system simpler and easier for faculty and staff to administer.

Resources

The School is inadequately resourced -- in terms of faculty, staff, facilities, and funds -- to meet its current commitments and to pursue the growth opportunities that exist. There is insufficient faculty to meet the current demand for teaching, research and service, let alone to plan for future expansion. There are vacancies in the current staff allocation that cannot be filled due to the hiring freeze, but even after the freeze is lifted the FA staffing model provides insufficient staff to support the mission of the School. Financial resources are severely inadequate to support facilities that are competitive with other top-tier business or public policy schools or to provide the "investment capital" needed to support the marketing and development of new growth opportunities

Faculty. One of BPP's competitive advantages is the mix of the faculty – strong tenure track scholars, excellent non-tenure track teachers and subject matter experts, and active duty military with current fleet experience. Over the past decade, however, faculty recruitment patterns have resulted in tenure track faculty falling to less than 50% of the total faculty. Teaching remains strong and program growth has been made possible largely through the employment of non-tenure track, intermittent and military faculty. Non-tenure track faculty members, however, are not expected to conduct scholarly research. Thus both the number and the percentage of faculty who are available to conduct scholarly research has diminished. The result is the dilution of the scholarly community within the School and the risk of a perceived erosion of academic quality.

Faculty workload varies widely within the School but is, on average, high and not distributed in the optimal pattern for teaching and research. BPP has 27 percent of the students in NPS but only 13 % of the faculty. An analysis of AY 2002 faculty work plans indicates that thirty-two faculty members, half of the faculty, actually planned overloads at the start of the year ranging from 4 to 22 days. Planned faculty workload for AY '02 fell into the following categories:

	All Faculty	TT	NTT
Teaching in Resident Program	26.84%	26.69	27.01
Non-Resident Teaching	15.77%	8.48	23.84
Short Courses	7.35%	2.63	12.58
Course Development	4.89%	3.33	6.63
Thesis Advising	10.59%	10.42	10.78
Reimbursable Research	14.21%	26.59	0.50
NPS Funded Research	4.12%	7.83	0.00
Administration	16.23%	14.03	18.66

This workload distribution is clearly misaligned with the strategic direction of the School.

The following actions are necessary to deal with the issues of faculty resources.

- To address the problem of planned overloads:
  1. Aggressively complete the current (AY '02) faculty recruiting effort to secure a total of ten new tenure track faculty.
  2. Review the non-resident and short course offerings to determine if low priority programs with high faculty demand can be redesigned, reduced or eliminated.
  3. Recognize the campus-wide imbalance with a one-time "catch-up" for BPP in the NPS faculty labor plan, in order to adjust for the one-year lag in the current method of determining the annual baseline.
- To address the distribution of faculty effort:
  1. Reduce the total number of faculty engaged in administration by consolidating and streamlining internal administrative procedures and organization and by hiring or designating full-time professional non-teaching faculty administrators.
  2. Recognize the need for administrative faculty in BPP as it is in other schools at NPS by providing for an increase in time allocation for administration in the NPS BPP faculty labor plan from the current 1.5 work years to 6.0 work years.
  3. As a result of #2 above, realize a shift of faculty activity away from lower priority administration and service to higher priority teaching and research.
- To address the faculty mix issue:

1. Hire at least five new tenure track faculty with strong research and publication potential in AY '03 and five in AY '04.
2. Review current and future requirements for non-tenure track faculty.

Staff. The staffing of BPP is a legacy of the previous departmental organization. It is inadequate to meet the needs of the School in three respects. First, there are vacancies in four key staff positions -- procurement clerk, academic support assistant (ASA), office automation assistant, and program & instructional support assistant -- that cannot be filled during the current hiring freeze. (It is anticipated that some of these positions will be filled as the RIF process is completed over the next sixty days.) Nor can overtime be ordered for the existing staff. While this can be endured for a short period, it is causing severe stress as "workaround" solutions are being employed. Second, and more critically, the planned staffing under the FA study is based on the old departmental model. It is inadequate in both its overall staffing levels and in its inflexibility to meet the future needs of a dynamic organization. Third, the Dean is concerned that some staff personnel (both incumbents and new hires) may not be capable of doing the required tasks in an evolving and dynamic School.

The following actions are necessary to deal with the issues of staff resources.

- Expedite the process for hiring actions for any staff positions not expected to be filled by the RIF process.
- Reflect these positions in the baseline for the AY'02 NPS BPP staff labor budget allocation.
- Revise the FA staffing for BPP to resemble more closely that of other Schools at NPS. Specifically, the following new staff positions should be added.
    1. Three additional ASAs to serve the six concentration areas (similar to support provided to departments in other NPS schools).
    2. One additional program and instructional support assistant.
- One full time Director of EMBA programs (probably more likely an administrative faculty, rather than staff position).
- Appropriate training for all supervisory staff.

Facilities. Improvements accomplished in 2001 and early 2002 have brought Ingersoll Hall up to an acceptable level in most material respects. The building is freshly painted, faculty offices are in good condition, the classrooms are clean and well organized, and the Ingersoll "Museum" makes an attractive entrance. However, the restrooms remain in disgusting condition, making the building an overall negative experience for everyone.

While the material condition of Ingersoll is generally fine, it is a challenge to keep the instructional facilities current with technology. Our students are very technology-oriented. They expect NPS to reflect the technological world they in which they otherwise live and work. BPP has only one "classroom of the future" with fully integrated multi-media presentation technology and computer connectivity. Even here, however, the student laptop ports are not yet operational. This does not make us competitive with other business schools nor does it reflect the technologically

sophisticated Navy we are serving. A long-term capital improvement program, with budget, is needed along with some short-term "catch-ups" to bring the School up to an appropriate standard.

- Immediate Needs
  1. Renovate restrooms in Ingersoll Hall
  2. Connect laptop ports, ISDN lines and power lines in Room 271.

- Short-Term Capital Requirements
  1. Complete Room 325 renovation.
  2. Replace projection screens in Rooms 250 and 224.

- Ingersoll Hall Improvements Recommended for Long Term Capital Investment Plan

1. Ventilation: Install quiet ceiling fans in the classroom.

2. Wired for Network Connection: Another in-class network system is needed to spread the loads of our two Learning Resource Centers (I-224 and I-250), which are heavily used, including 36 notebook computers, two secure laptop cabinets, and NetOp Classroom Software.

3. Adjustable Lighting: All classrooms in Ingersoll Hall with the exception of I-221 and I-271 require installation of individual switches and variable dimming control for each bank of lights.

4. Tiered, Circular Seating: Of the seven classrooms that are not tiered, four can be reconfigured in the tiered circular seating form.

5. VTE Studio: To support our rapidly growing URL targeted EMBA program, an additional VTE studio modeled after the studio in Root 260 is needed. Based on our Root 260 experiences, we know that the studio design significantly increases faculty satisfaction with VTE and increases faculty's ability to generate interaction with remote sites. Numerous DL research studies indicate that interaction is a key factor in student learning.

6. Flexible Seating Arrangement: Remove the long tables fixed to the floor and replace with modular tables in four classrooms.

7. Student chairs: Replace 25-year-old chairs in twelve classrooms.

8. Student Work Area: Install a student work area with computers and network connection to relieve congestion in computer labs.

9. Projection Systems: Staged replacement of multimedia projection systems in all classrooms as they age and deteriorate.

10. Computer and Lab Upgrades: BPP has submitted to NPS a proposed Lab upgrade plan and related equipment request for FY '02 through FY '09.

Financial Resources

It is clear that the financial resources available to NPS and BPP through mission funding have not and will not be sufficient to meet the above requirements in their entirety. In the past, shortfalls in mission funding have been partially met with combinations of deferred maintenance, delayed improvements, cash infusions from generous sponsors, and creative use of reimbursable funding. These strategies will not be adequate to meet the demands of a School that is growing in student enrollment, faculty population, and program growth. Nevertheless, there are some funding strategies that could be employed over the next five years to address these issues.

- A planned "catch-up" for BPP over the next two fiscal years, admittedly involving difficult internal reallocations of NPS mission funds, to bring BPP more into line with the other Schools at NPS in terms of faculty/ student/ curricula ratios, administrative faculty work-year allocations, and staff positions.
- Explore opportunities for targeted non-DoD appropriations to support selected program and growth initiatives.
- Fully-fund Chairs in each academic concentration area.
- Identify infrastructure support for EMBA and other DL growth initiatives to the NPS Resource Sponsor as a new requirement for additional mission funding support.
- Working with the NPS foundation, proactively identify opportunities for private and foundation support for BPP such as:
  1. Endowed faculty awards
  2. Endowed student research support and awards
  3. Endowed faculty chairs
  4. Endowed seminar or colloquia series
  5. Corporate support for upgrades in instructional technology
  6. Dean's discretionary fund
- Obtain annual funding support from curriculum sponsors and Advisory Committee members.
- An organized and staffed communications and advancement program for BPP, coordinated with NPS institutional advancement initiatives.

Measures of Attainment

As we move through the next five years, several interim measures of progress will be developed as part of our management and budget processes: numbers of faculty, students and programs, size of budget, number of faculty publications, number of colloquia and

conferences held, number and funding of chairs, etc. Ultimately, however, our success, or our progress toward success, can probably be measured by a few indices.

- Number and mix of students graduating from our programs
- AACSB and NASPAA accreditation
- Satisfaction of Sponsors and Navy/DoD leadership

Conclusion

In summary, NPS and BPP must achieve three critical management objectives.

1. Complete the Transition from a Department to a School
2. Organize and Resource to Meet Today's Requirements
3. Position the School to Meet Tomorrow's Opportunities

This is an ambitious agenda. It represents further departures from the status quo, but it also rejects a total redesign (such as a complete shift to distance learning). It requires fuel – human energy and financial resources. It requires hard decisions. It changes the models for how we conduct our business. It could fall short or even fail.

On the other hand, there is evidence of high demand for our products. There are signs of support from the Navy and DoD. There is creativity among our faculty. New technologies and new educational models can help us. NPS and BPP are aligning internal processes to facilitate better management, growth, and flexibility. New resource sources are available for exploration. And, status quo is not really an option: in today's environment, organizations that stand still slip backward.

Finally and most important, our students, the Navy and DoD, and the Nation need what we offer – This is work worth doing and worth trying to do well.

Appendix 2.1I2

GSBPP STRATEGIC ISSUES

Draft 11/30/04

Contents

BPP Vision and Mission

Vision: Through scholarship-based education and research to transform our students intellectually, professionally and personally; and to transform the organizations that engage us.

Mission: To serve the Nation by educating military officers and DoD civilians in defense-focused business and public policy, by conducting scholarly research in defense management and public policy, and by providing intellectual resources for leaders and organizations concerned with national defense business management practice and policies.

Means: We pursue our vision and perform our mission through graduate education, research, and professional service.

- *In Education*: Through resident and distance learning degree and non-degree programs, we strive to develop students' abilities to analyze, think critically, and take intelligent actions so they can more effectively carry out their future professional responsibilities to manage organizations, resources, people, and programs in complex and sometimes life-threatening environments.

- *In Research*: Conduct scholarly, technical, and applied research that supports military decision-making, problem solving, and policy setting; improves business management processes and practices; contributes knowledge to academic disciplines; and advances the development of graduate education.

- *In Professional Service*: Provide professional expertise that advances knowledge and business management within NPS, The Department of the Navy, the Department of Defense, and other government agencies; as well as in our professional and academic organizations.

Goal: To be, and to be recognized as, the Nation's premier school for defense-focused business management and public policy. To be the institution that national leaders look to for education, information, and innovation in the management of the business of defense.

Overview of Goals

Stakeholders

BPP will manage our interactions with our primary stakeholders, including those responsible for resource flows, student inputs, curriculum content, and those who "consume" our educational and research outputs, and mitigate the conflicting and confounding factors that result from having multiple stakeholders.

Scholarship

BBP will ensure that faculty in all ranks and tracks maintain their intellectual qualifications and currency in their expertise by fostering a research-supportive environment. BPP policies and practices will encourage, facilitate, and reward defense- and discipline-relevant scholarly activity, including contributions to scholarship and practice. As a result, BPP will maintain accreditation and become recognized as the premier institution for defense-focused management and public policy scholarship. Faculty and student research will be highly valued and respected.

Instruction

BPP will be recognized as the Nation's premier school for defense-focused business management and public policy, so that the Navy and other services place a high value on a BPP degree to help improve Navy/defense business practice, particularly as officers move up in their careers. As such, BPP will be

- The nation's top school for Defense Management scholarship and education.
- The institution that national leaders look to for education, information and innovation in the management of the business of defense.
- The 'go to' place for graduate-level Defense Business Management education.

Resident Education Programs: the BPP resident MBA will be the foundation for all BPP education programs, and be widely recognized, in academia, DoN/DoD, the defense industry, the private sector, and internationally as a top-quality MBA.

Distance Learning (DL) Education Programs: BPP will extend the impact of its educational programs by using appropriate DL technologies to provide graduate education to officers, particularly Navy URL, and DoD civilians unable to attend NPS. We will maintain academic standards consistent with our residential programs. We will also ensure that these DL programs complement, not overtake, our residential programs and that our DL programs not "cannibalize" our residential programs in terms of resources or students.

Management Development and Executive Education: BPP will maintain its niche in the defense educational continuum. As such, we will take a measured approach toward

management development and executive education (MDEE) programs, focusing on those opportunities that exploit our unique capabilities and priorities.

People

Faculty: BPP will recruit and retain quality faculty with the requisite academic and applied skills to satisfy our unique research and instructional mission. We will maintain a workload model for all faculty types that is similar to comparable faculty at other research-oriented business schools. We will support programs to mentor and develop faculty in both research and instruction at all points in their careers. We will foster a collegial community within the BPP faculty.

Students: Our graduates will be sought after to fill jobs within and beyond their military careers because they enter with strong academic qualifications; they experience a unique degree program that blends business and defense relevance; their courses are taught by faculty who are highly skilled in the classroom and ultimately knowledgeable of student backgrounds and needs. All of our national and international students will graduate and leave to tell others that their degree—whether obtained in residence or distance learning—is second to none.

Staff: BPP will fully integrate the staff as participating members of the BPP family, including civilian and military faculty and staff. BPP will provide the support staff with state-of-the-art tools and equipment, including financial management information systems, to enable the staff to provide timely support to BPP's research and educational mission.

Community

Culture: We will create a culture of high-quality scholarship and mutual respect among faculty and staff based on shared identity and motivation to work as a strong team to achieve our strategic goals. Without each part of our BPP community, civilian tenure-track and non-tenure-track faculty, military faculty, and staff we cannot achieve our goal to be the Nation's premier school for defense-focused business management and public policy. Without all of the parts working together as a team, we are only another business school or government organization. We will value collegiality by recognizing that our diversity of professional experience does not translate into divisiveness. Our excellence is in fact due in large measure to our diversity. That diversity is what makes us unique. We should seek ways to achieve true collegiality and a sense of one team by promoting greater understanding and appreciation for our unique cultures, which will in turn allow us to create a whole that is greater than the sum of the parts.

Identity: BPP will develop and maintain a shared BBP identity that highlights BPP's contributions to defense-focused business and public policy education and research; makes BPP faculty, staff, students, and sponsors boastingly proud of their connection to

BPP; and establishes BPP as an essential resource to defense and government decision and policy-makers.

Resources

Financial: To maintain BPP's instructional and research quality, BPP will secure stable and sustainable sources of funding independent of NPS mission funds and independent of NPS internal budgeting process. Collectively, the sources of funds will be sufficient to support faculty at the level of the BPP target faculty workload model.

Facilities: BPP will seek to continually upgrade facilities for research, residential education, and distance learning, including classrooms, DL studios, computer labs, and faculty offices, to ensure BPP has state-of-the-art facilities consistent with our standing as the Nation's leading institution of defense-related business and public policy research and education.

Stakeholders

Goal 1: Stakeholders: BPP will manage relations with stakeholders to maximize the resources, students, and support that are available to support the elements of this strategic plan and to reduce the conflicting and confounding factors that result from having multiple stakeholders.

BPP's stakeholders can be seen as internal and external. Internal Stakeholders are the students, faculty, and staff, whose education, profession, career, or jobs are dependent upon the successful operation of the School. External Stakeholders are the various entities who send students, sponsor education programs and research, provide funds, and determine policies that impact the School. Some external stakeholders have a direct stake in the successful operation of the School (e.g., curriculum and student sponsors); others impact the School through policy, oversight, or funding. A representative listing of external stakeholders includes:

OPNAV
- NETC
- BUPERS
- VCNO
- CNO
- N1
- N82
- NAVSUP
- URL Communities: Aviation, Surface, Submarines
- N00T
- Curriculum Sponsors

Accrediting Agencies: AACSB, NASPAA
DAU
Academic/Professional Communities
Student Sponsors/Detailers
Services: Army, Air Force, USMC
Research Sponsors
Employers of BPP Graduates
NPS Community
- Mezzanine
- Other NPS Schools and Departments
- Alumni

BPP interaction with these stakeholders is varied and complex. (Figure 1 [pg. 9] provides a diagram.) We have extensive and direct involvement with the NPS Mezzanine, and we interact with some OPNAV entities both directly and through the Mezzanine. We negotiate programs and research engagements directly with sponsors, but these

agreements are subject to NPS oversight. NETC impacts us directly through oversight of the EMBA but they stand between BPP and the resource sponsor (N00T).

Similarly, the relative importance of individual stakeholders to BPP is different, may vary over time, and may receive attention that is disproportionate to their importance. Resource stakeholders can be very important and demand a lot of time and attention during key points in the budget cycle. On the other hand, OPNAV policy makers also have significant potential and real impact on BPP, yet we tend to spend relatively little time with them. There is also considerable interaction between stakeholders: faculty-sponsor, students-detailers, Mezzanine-curriculum sponsors. Occasionally their interests conflict and no stakeholder is consistently dominant over time.

This confounded stakeholder picture explains some of the organization tensions that BPP experiences as it attempts to respond to and serve these disparate interests. At the same time, the lack of a dominant stakeholder helps define a strategic position for BPP that comes with a diversified portfolio.

Strategic Objectives

- *Students*: Optimize the number of academically qualified students selected for BPP resident and DL programs.

- *Resource Stakeholders:* Increase and diversify the amount and sources of financial resources available to support BPP programs.

- *Policy and Oversight Stakeholders*: Be proactive in working with policy/oversight stakeholders to align policies and oversight with the strategic objectives and operational requirements of BPP.

GSBPP STAKEHOLDERS

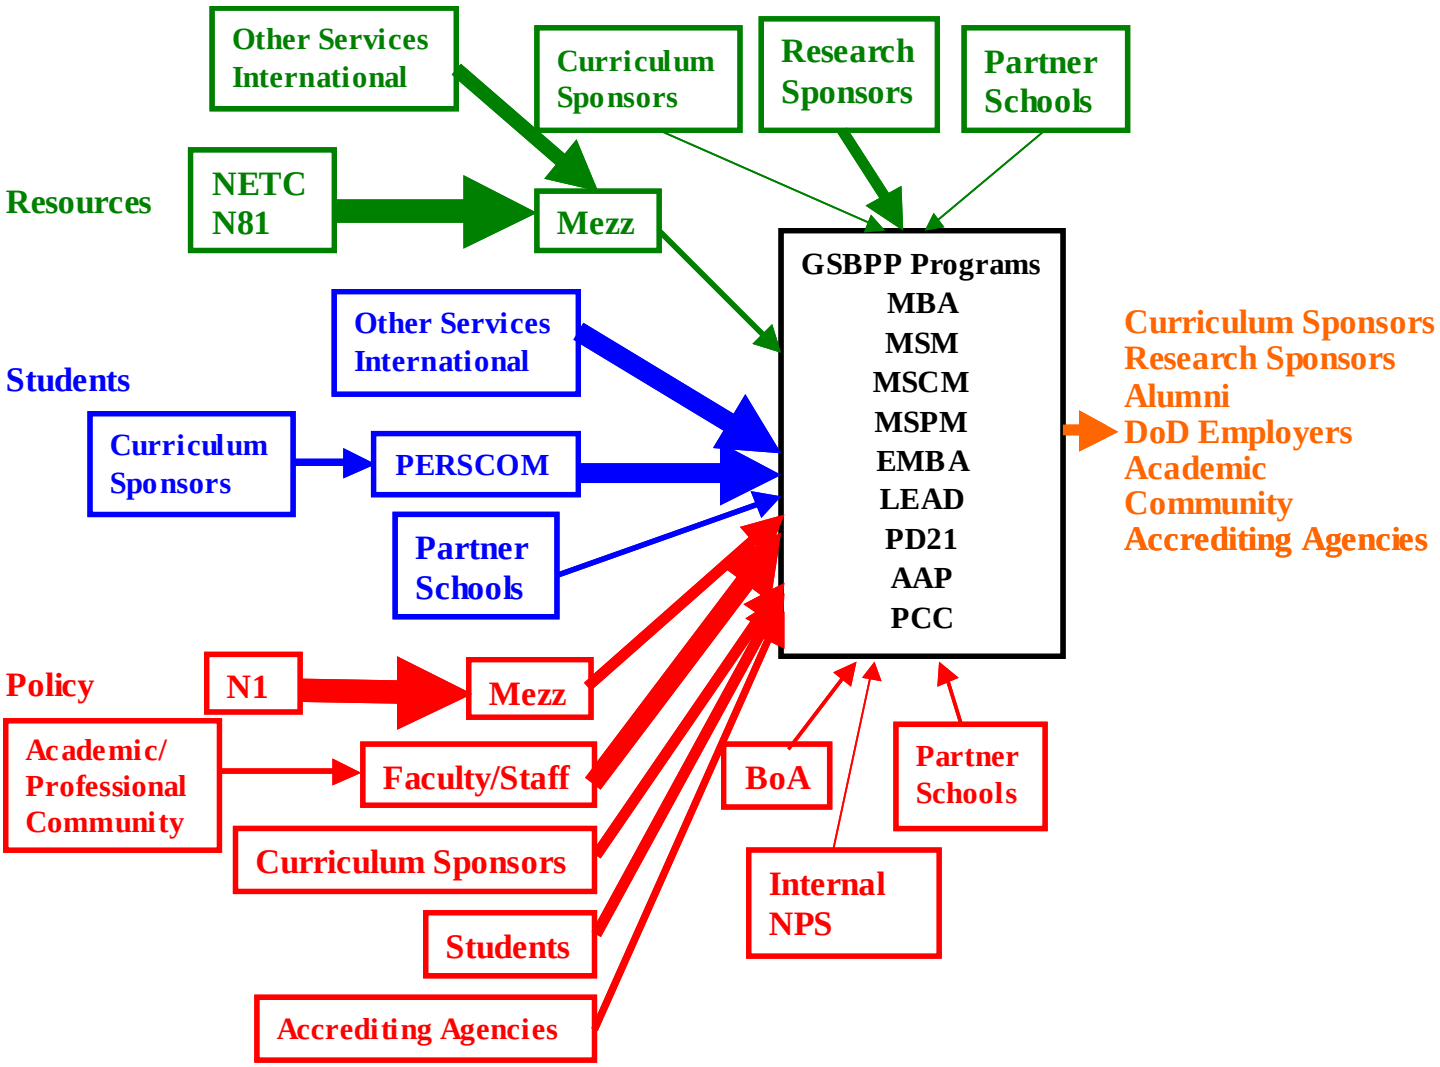

Figure 1

Scholarship

Goal 2: <u>Scholarship</u>: BPP will ensure faculty in all ranks and tracks maintain their intellectual qualifications and currency in their expertise by fostering a scholarship-friendly environment in BPP. BPP policies and practices will encourage, facilitate, and reward defense- and discipline-relevant scholarly activity, including contributions to discipline and practice.

Strategic Objectives:

- *BPP Scholarship Focus:* Promote on-going faculty dialogue and continual self evaluation to ensure that BPP is accomplishing its scholarly objectives, that these objectives are appropriately aligned, and that scholarly activities receive the appropriate attention and support relative to other BPP activities.

- *Scholarship Incentives:* Establish incentives that reward continued scholarly productivity for both tenure- and lecturer-track faculty members, including faculty release time and funding for travel and equipment, and celebrate the faculty receiving these incentives.

- *Scholarly Productivity:* Monitor faculty contributions to discipline-based scholarship and practice to ensure that the quality, quantity, and mix of BPP research outputs are appropriate to BPP's mission and faculty mix, including our need to maintain intellectual qualifications and currency.

- *Tenure-Track Workload Model:* Ensure that NPS and BPP continue to provide internal research funding, including workload relief funding and cost-sharing, to maintain a workload model that is consistent with a research university.

- *Lecturer-Track Workload Model:* Promote scholarly activity within the lecturer-track faculty by providing the opportunity for release time, supporting efforts to secure reimbursable research funding, and funding scholarly activity through internal cost-sharing and direct research funding, as possible.

- *Faculty Collaboration:* Exploit the diverse knowledge and experience in the BPP faculty by encouraging collaboration between all faculty constituencies, including tenured and untenured tenure-track faculty, lecturers, senior lecturers, and the military faculty.

- *Faculty Mentoring:* Hire highly qualified tenure- and lecturer-track faculty members and maintain a robust mentoring program that provides all faculty members the best possible chance for successful promotion and tenure decisions.

- *Scholarship-Oriented Environment:* Through research seminars and informal brown bag lunches, create a scholarship-oriented environment that encourages intellectual discovery and exchange within the BPP faculty, and between the BBP

faculty and subject matter experts from other universities and throughout the government and industry.

- *DoN/DoD Connectivity:* Maintain connectivity to DoN, DoD, and other government and international policy and decision makers to ensure our scholarly products remain relevant and at the forefront of our academic disciplines.

- *Funding Relationships:* Develop long-term funding relationships to support BPP faculty scholarship, drawing on MOUs and other long-term relationships established by the Dean, BPP Chairs, and entrepreneurial faculty members, and broker this funding through an objective, transparent internal proposal evaluation process.

- *Scholarship Support Capabilities:* Facilitate BPP scholarly productivity by maintaining a qualified and properly resourced support establishment, including BPP staff and research assistants, research faculty, and post-doctorates, where appropriate.

Graduate Education

Goal 3: <u>Graduate Education Programs</u>: To be, and to be recognized as, the Nation's premier programs for defense-focused, graduate-level management education, and hence the 'go to' programs for Defense Business Management education. To have the Navy and other services place a high value on a BPP degree, particularly as officers move up in their careers, to help improve Navy/defense business practice. As such, BPP graduate programs are to be

- **Uniquely tailored to the educational needs of the US and international defense communities**
- **Recognized for exceptional quality and relevance**
- **Adaptable and responsive**
- **Coherent with the Navy PME Continuum**

Strategic Objectives:

- *Instructional Excellence*: Encourage and facilitate excellence in instruction by creating programs and opportunities to support faculty teaching development and recognition of faculty instructional accomplishments. Solidify and expand the Teaching Effectiveness Program. Develop and provide significant and recognized rewards and acknowledgments for teaching excellence.

- *Faculty Capabilities*: Move toward all faculty becoming capable and experienced in both resident and DL instructional modes and competent with technologies that support each mode.

- *Accreditation*: Maintain current AACSB and NASPAA accreditations. Expand NASPAA accreditations to encompass DL programs. Develop learning objectives and Assurance of Learning programs for all degree programs.

- *Sponsor Relationships*: Establish or maintain program sponsorship (or championship) for all BPP degree and non-degree programs. Maintain connectedness to sponsors and promote sponsor involvement to send students, fund chairs, provide speakers, generate project research topics, and provide resources.

- *Marketing and Promotion*: Create a well-developed marketing plan for instructional programs within the larger framework of a marketing plan for BPP. Support the marketing effort with staff attention and resources to develop persuasive marketing materials and develop channels to officers and sponsors. (Slogan: "Scholarship-Based Education"; "Management for Defense")

- *Educational and Curriculum Leadership*: Provide participation and leadership in defining the business and public management educational needs of the Navy and Defense Community

- *Financial Stability*: Generate strong support for high-quality Navy/defense-focused degree programs, resulting in stable and adequate students loads and dependable financial resources.

Resident Education Programs

Goal 4: <u>BPP Resident Education Programs</u>: The BPP MBA will be widely recognized in academia, DoN/DoD, the defense industry, and the private sector as a top quality MBA, and the pre-eminent defense-oriented MBA. The resident Defense-Focused MBA will continue to be, and be recognized as, one of the School's flagship degree programs. As such,

- **The MBA remains a foundation of the School's reputation as the leading school for defense management education.**
- **Our graduates stack up with top programs in the country and are sought after to fill jobs within and beyond their military careers.**
- **The MBA program acts as a foundation for, and a source of, innovation and development valuable to all BPP education programs.**

Strategic Objectives:

- *Program and Curriculum Development*: Develop hybrid programs combining the MBA with technical concentrations from other NPS schools (e.g., MBA-OA, MBA-IT, MBA-SE, MBA-ENGR, MBA-NSA). When presented with the appropriate opportunities and sponsorship, develop new resident curricula within the MBA program (e.g., Shore Installation Management). Establish a Defense Management curriculum, independent of sub-specialty code requirements.

- *Certificate Development*: Examine the opportunities to create and market graduate certificate programs for each of the major BPP curricula (FM, ACQ, LOG, MSA, MGMT). Potential markets for certificates may include students from other NPS schools who are able to extend one quarter or graduates from the EMBA program able to attend NPS for one quarter to establish a specialization just-in-time prior to a utilization tour.

- *Curriculum Integration*: Reinvigorate BPP efforts to achieve integration of the resident MBA program by further development and acceptance by faculty of the Integration Framework. Rely on incremental integration as a means toward program coherence horizontally, vertically, across disciplines, with project.

- *Student Growth*: Promote and accept gradual growth in resident student enrollment toward a capacity of 225 new students (9 cohorts) per year. Promote growth in underutilized curricula. Promote growth of URLs.

- *Student Quality*: Attract high-quality, well-prepared students motivated by future career benefits from their BPP MBA, both in and after their military careers. Increase the quality and academic preparation of resident students. Consider heightened academic admissions qualifications, participation in the admissions process, refresher opportunities, and expanded pre-arrival outreach activities.

- *Student Intellectual Life*: Create an academic environment that encourages, permits, and provides opportunities for intellectual exploration and discovery. Elements of this include relaxing student workload, providing flexibility within standard curricula programs, developing a seminar/workshop program (a la PAED), and a BPP speakers program.

- *Instructional Facilities***:** Maintain a continuing program of renovation and retrofitting to assure all classrooms are presentable (at least as nice as IN271 or CEE spaces) and state-of-the-art technologically. Create a classroom within Ingersoll capable of holding 150. (Reconfigure IN122.)

- *Resident Program Funding*: Annually, establish a recognized pool of funds to support resident instructional initiatives and delivery (e.g., course development, case development, Teaching Effectiveness Program, integration entrepreneurship, and workload relief).

Distance Learning Education

Goal 5: <u>Distance Learning Programs</u>: The NPS strategic plan says, "NPS must provide education to officers wherever they are." With a 52 percent decrease in URL officers at NPS between 1995 and 2004, we are encouraged to find ways to provide graduate education not only to those officers who can come to Monterey, but also to those who cannot. To support the NPS strategy, BPP will use appropriate DL technologies to provide our unique, defense-focused management education to DoN URL officers, and DoD civilians. .

Strategic Objectives

- *EMBA Enrollment*: Stabilize the EMBA program at four cohorts until there is significant demand from other Navy communities or other services to increase beyond this level.

- *MS Programs Enrollment*: Maintain MSPM, MSCM, and LEAD input at one cohort per year

- *Evaluate New Programs*: Create new DL programs only if there is strong customer demand. If there is strong demand, establish new programs only if they meet the following criteria: program pricing not only breaks even but supplies at least a 10 percent cost contingency, student target market does not cannibalize our residential programs, and the program mix of instructors mirrors the BPP faculty mix discussed in Goal 7.

- *Development of DL Faculty*: Encourage faculty to complete Introduction to Distributed Learning (IDL) so each faculty member can determine to what extent web-based learning can be incorporated into his/her class. The BPP objective is to have all new faculty complete IDL within 3 years of coming to BPP and to have all current faculty complete IDL by 2008. All faculty teaching in DL programs should be required to take the IDL course, and if possible the VTE course. Where this is not possible, a faculty member experienced in the DL should be assigned to mentor the new DL teacher.

- *Development of Web-based Instruction*: Provide incentives that spur faculty to incorporate web-based materials and modules into our programs to the maximum extent possible.

- *Staff Support*: Insure that an adequate number of skilled DL support staff are in place to meet student and faculty needs so that they can focus exclusively on learning. Provide DL support staff with office space enabling them to easily interact, the technology needed to do their jobs efficiently and well, the incentives and rewards to recognize their work, and the leadership and administrative structure to coordinate their work.

- *DL Technology*: Provide high-quality DL technology (e.g., VTE studios, streaming video) that support faculty-student interaction and the full range of instructional strategies faculty use to meet learning goals

Management Development and Executive Education

Goal 6: <u>Management Development</u>: BPP will take a measured approach toward involvement in management development and executive education (MDEE) programs.

Although at this time we will not initiate these type of programs, we will participate in NPS- or CEE-created programs only if program content requires the current expertise of BPP faculty, BPP and its faculty are adequately compensated for their time, and participation adds to BPP's instructional and/or research mission as well as furthers NPS's strategic goals. Faculty participation in these programs will not compromise the quality of instruction we provide in our residential and distance learning degree programs.

Strategic Objectives

- *Stakeholders*: Monitor the needs of our stakeholders to determine their MDEE requirements. Act as fair brokers to help our stakeholders determine whom they should turn to for MDEE programs

People: Faculty, Students, Staff

Faculty

Goal 7: Faculty: BPP will recruit and retain quality faculty with the requisite academic and applied skills to satisfy our unique research and instructional missions. We will maintain a workload model for all faculty types that is similar to comparable faculty at other research-oriented business schools. We will support programs to mentor and develop faculty in both research and instruction at all points in their careers. We will foster a collegial community within the BPP faculty.

Strategic Objectives: Faculty Composition:

- *Faculty Mix*: Hire new faculty as needed to support instruction programs, but governed by the future target mix of faculty to be 70 percent tenure-track, 30 percent lecturer-track.

- *Military Professors*: Develop a model for the creation of positions for Permanent Military Professors, one for each concentration area. Officers complete doctorates funded by the service with follow-on positions at NPS. PMP officers have comparable careers to their civilian counterparts. A PMP career path leads to promotion for successful service as professors.

- *Military Faculty (MILFAC)*: Establish wider Military Faculty representation across BPP curricula areas. Re-establish a MILFAC billet in FM. Create a MILFAC billet in Logistics.

- *Adjunct Professors*: Establish a stable group of academically-qualified, part-time instructors with continuing attachment to BPP to accommodate the fluctuations in instructional demand. The use of lesser-quality adjunct faculty hired ad hoc to fill teaching gaps should be minimized. Academic Associates should monitor the performance of adjunct faculty.

- *Chaired Professors*: Establish a chaired professor position in the Management area. (One role: chaired professors serve as executive advisors to new faculty, providing a strong link to research opportunities within DoD that are matched to the new faculty member's expertise and interests.)

- *Research Professors*: Attract high-quality Research Professors to support BPP's research mission on a short-term and continuing basis as research opportunities and funding allow.

Strategic Objectives: Faculty Workload:

- *Tenure-Track Standard*: Develop funding mechanisms to provide tenure-track faculty with 3 months of release time for scholarly activities (refereed publications). Continued support should be conditional on successful productivity. Standard annual workload profile to be: 6 months instruction, 3 months direct research (2 from NPS, 1 from BPP), 3 months self-generated support.

- *Lecturer-Track Standard*: Develop funding mechanisms to provide lecturer-track faculty with 1 month of release time for scholarly activities (practictioner publications). Continued support should be conditional on successful productivity. Standard annual workload profile to be: 9 months instruction, 1 month direct support, 2 month self-generated support.

- *Sabbaticals*: Endorse and encourage a sabbatical program for BPP faculty. Every 7 years tenure-track faculty should be provided sabbaticals to "recreate" themselves. The requirement that a faculty member spend the sabbatical away from NPS is rescinded due to recognition that this requirement creates undue financial and familial hardships for faculty with young children and working spouses.

Strategic Objectives: Faculty Development and Assessment

- *Faculty Development*: Establish a robust mentoring program that provides all faculty members the best possible chance for successful promotion and tenure decisions. Establish faculty development processes modeled on those at top business schools and other outstanding employers.

- *Performance Agreements*: Establish a program of performance agreements for both new and existing faculty with their mentors and the Dean that outline expectations and provide a clear roadmap towards tenure or promotion.

- *Performance Assessment*: Consolidate and integrate the different currently existing feedback mechanisms (collegial review, performance review, SOFs, pay step review, promotion and tenure, etc.). Align performance assessment systems with the actual work and activities required to be performed by faculty.

- *Faculty-wide Contributions*: Monitor faculty contributions to discipline-based scholarship and practice to ensure that the quality, quantity, and mix of BPP research outputs are appropriate to BPP's mission and faculty mix, including our need to maintain intellectual qualifications and currency.

- *Incentive and Reward Systems*: Institute a faculty incentive system that encourages and rewards activities that are consistent with faculty expectations and performance agreements. Ensure that these incentives are clearly linked to the behavior they reward.

Students

Goal 8: <u>Students</u>: Our graduates will be sought after to fill jobs within and beyond their military careers because they enter with strong academic qualifications; they will experience a unique degree program that blends business and defense relevance; their courses will be taught by faculty who are highly skilled in the classroom and ultimately knowledgeable of student backgrounds and needs. All of our national and international students will graduate and leave to tell others that their degree—whether obtained in residence or distance learning—is second to none.

Strategic Objectives

- *Student Qualifications:* To create a superior learning experience for both students and faculty, increase the quality and academic preparation of students selected for BPP resident and DL programs. Consider heightened academic admissions qualifications, participation in the admissions process, refresher opportunities, and expanded pre-arrival outreach activities.

- *Student Intellectual Life***:** Our students come to us as talented managers and leaders. We will transform them to also value intellectual exploration and discovery. To create this environment, we should explore relaxing student workload and providing flexibility within standard curricula programs.

- *Faculty Qualifications:* To truly transform our students intellectually, personally, and professionally, our students must leave our programs, highly satisfied, knowing that we have provided the best teachers for every aspect of their learning experience. To do this, and to back up our claim that we have a defense-focused MBA, we must ensure that all faculty members are fully qualified to teach in a manner that meets the needs of our unique students. This implies an understanding and appreciation of the national and international defense cultures from where our students come.

- *Faculty Assignments:* Consideration should be given to assigning our best teachers in the first quarter of all of our programs. “Best” refers to good teaching skills, experience with our students, and those willing to help “set the tone” for the graduate education experience and NPS standards. New faculty and adjuncts should not be used in first-quarter classes.

- *Program Integration:* Regardless of whatever formal program integration mechanisms are developed, all faculty members should attempt to stay abreast of content and scheduling of courses taught in the same quarter. To further enhance the learning experience, faculty should seek means of integrating content across quarters, within subspecialty or core curricula.

- *Student Input:* To acquire data to improve our programs, and to communicate that we value student experience and opinion (i.e., that we truly see them as a stakeholder), we should continue to give students a mechanism to give us feedback periodically, e.g., every other quarter, during the time they are in a resident or DL program.

Staff

Goal 9: <u>Staff</u>: Ensure that BPP staff are fully integrated and participating members of the BPP family, i.e., faculty, military members, and civilian staff. That endeavor consists of:

- **One School – designed to be responsive, competitive, and a partner with DoD sponsors to meet the needs of an ever changing world environment and that is accomplished by working as…**
- **One Team – all faculty, military, and civilians appreciate and value what each group brings to the table in order to meet…**
- **One Mission – to deliver the best defense focused graduate education in order that our graduates are fully prepared to meet the needs of the defense department**

Strategic Objectives

- *Hiring*: To hire qualified people and ensure that they receive the training and tools necessary to carry out their duties

- *Organization:* To ensure that all the positions are organized in such way that is the most productive and efficient and that all those positions are filled. To cross train the staff to optimum utilization of their abilities

- *Facilities*: Ensure that the staff has access to all the necessary equipment and facilities so that they can do their jobs effectively and efficiently, which then enables the faculty (both military and civilian) to deliver the best possible education to officers

- *Integration*: Staff is considered an integral part of the team. To create a pleasant, challenging, and exciting work environment where all factors come together to create an atmosphere of mutual respect and teamwork.

Community

Culture

Goal 10: <u>BPP Culture</u>: To create a culture of high-quality scholarship and mutual respect among faculty and staff based on shared identity and motivation to work as a strong team to achieve our strategic goals. Without each part of our BPP community, civilian tenure-track and non-tenure-track faculty, military faculty, and staff we cannot achieve our goal to be the Nation's premier school for defense-focused business management and public policy. Without all of the parts working together as a team, we are only another business school or government organization. We should value collegiality by recognizing that our diversity of professional experience does not translate into divisiveness. Our excellence is in fact due in large measure to our diversity. That diversity is what makes us unique. We should seek ways to achieve true collegiality and a sense of one team by promoting greater understanding and appreciation for our unique cultures, which will in turn allow us to create a whole that is greater than the sum of the parts.

Strategic Objectives

- *Commitment:* Create a strong sense of commitment to our mission and continual self-improvement in research, instruction, and service.

- *Morale and Collegiality*: Act to develop high morale and collegiality in the BPP community. Develop an environment such that faculty/staff will look forward to coming to work. Encourage participation in BPP functions, such as faculty meetings, seminars, brown-bags, etc.

- *Culture of Scholarship:* Hold a distinguished scholars series where top-notch researchers in a wide variety of areas give lectures on a topic of interest to almost all faculty. Also, each area should have its own brown bag research discussion forum where faculty from that area (and other areas, if appropriate) talk about their work in a relaxed, collegial venue. Invite students to attend where appropriate.

- *Collaboration:* Seek numerous avenues of collaboration across disciplines and between tenure-track and non-tenure-track faculty through team teaching, service, and research. Provide equal support for tenure-track and non-tenure-track faculty to conduct research and publish their work in both A-journals and practitioner publications.

- *Commitment to continual professional development:* Provide resources for faculty to engage in a variety of means of self-improvement in research and instruction. Identify and provide opportunities for staff development, such as short courses related to particular fields plus courses in leadership and management, so that

they, too, share in the value the culture places on learning. Encourage interested staff to enroll in the MBA program.

- *Military culture:* Continue to educate civilian faculty about the values of the military cultures through military "field trips" and talks given by members of the military faculty. Such talks could include discussions of the work, structure, and values of a military organization in which officers have served, and the core values of their service .

- *Academic culture:* Provide information to our new faculty members about the linkages between the academic culture and the NPS mission. For example, new military faculty may interpret the BPP culture in a negative manner that reflects a lack of awareness of academic traditions and scholarship. Be clear on what the underlying values are of the academic culture.

- *Staff culture:* Survey staff to determine their concerns and values, share with faculty, and take action to improve the staff work quality of life.

- *Staff roles in the BPP system:* Provide tasks and communications that help staff to understand the bigger picture of NPS/BPP mission, their parts in the system, and the meaning and significance of the work they do. Hold staff meetings in which faculty members give short briefs on research, programs, and/or curricula. Where possible, send staff TDY to work on off-site projects or programs. Encourage staff to visit at least one class per quarter. The staff needs to be considered as an integral part of the BPP team.

- *Celebrations:* Hold periodic, joint celebrations of faculty and staff achievements. Schedule events only for the purpose of recognizing progress and achievements such as significant publications, high SOFs, faculty and staff awards, etc. Encourage everyone to attend.

- *We vs. They:* We work in the cumbersome, often-difficult NPS/DoD system. To fully accomplish the goals of that system, BPP administration should commit to problem solving and protecting from interference the faculty and staff who are doing the work toward the mission. Faculty and staff should commit to support BPP administration through willing and quick responses to information needed. Faculty should also value and support their colleagues who have chosen to undertake administrative responsibilities, whether on a full- or part-time basis.

- *Respect:* We have had a limited but significant history of harassment, insults, and other derogatory behavior on the part of faculty and staff. Harassment, insults, and other derogatory behavior should not occur and where they do, there should be appropriate action taken by the administration. Faculty and staff are not expected to tolerate such behavior in the workplace, nor should they suffer any consequences for reporting it.

A Shared BPP Identity

Goal 11: Identity: Develop and maintain a shared BBP identity that highlights BPP's contributions to defense-focused business and public policy education and research; makes BPP faculty, staff, students, and sponsors boastingly proud of their connection to BPP; and establishes BPP as an essential resource to defense and government decision and policy-makers.

Strategic Objectives:

- *BPP Signature Events:* Establish conference, symposia, and workshop series that exploit BPP's comparative advantage in defense-focused business and public policy education and research to reach a broader audience in academia, the military, the government, and business. Examples might include the Acquisition Research Conference; symposia on the "Business of Defense," etc.

- *BPP Signature Publications:* Develop a publication series highlighting defense-focused business and public policy research, such as the "BPP Journal of Defense Management," the "Working Paper Series in Acquisition Research," etc. Publications may or may not be peer-reviewed, open to submission from outside BPP, and distributed in hard copy or electronically as appropriate.

- *Distinguished Speakers Program:* Establish a Distinguished Speakers Program that periodically brings inspiring speakers to BPP and enables BPP faculty and students to interact with the speaker during their visits.

- *Distinguished Professor/Researcher Program:* Establish Distinguished Professor and Distinguished Researcher Programs to bring noteworthy experts to BPP for extended periods to interact with BPP faculty and students in both research and instruction.

- *BPP Case Study Series:* Establish the BPP Case Studies series to focus on defense-related cases studies for use within BPP, the service academies, and other defense-related educational programs.

- *Collegial Interaction:* Promote shared BPP identity through BPP events, such as BPP golf tournaments, softball/volleyball teams, parties, potlucks, 5K runs, and logo merchandise.

RESOURCES

Financial Resources

Goal 12: **<u>Resource Independence</u>: BPP will have stable, sustainable sources of funding independent of NPS mission funds and independent of NPS internal budgeting process. Collectively, the sources of funds will be sufficient to insure faculty support at the level of the BPP target faculty workload model.**

Strategic Objectives

- *Chair Professorships*: Each Chair should bring in between 500-750K to help support reimbursable research in that area.

- *Umbrella Projects*: Establish funding in the form of umbrella projects, with minimal direction for end products expected.

- *Reimbursable Education*: Insure the financial resources are raised to provide compensation aligned with the BPP DL workload model.

- *Sponsor Support*: Develop significant funding from each/all major DoD/DoN communities.

- *NPS Foundation*: Continue relationship with NPS Foundation as a means for developing private sector sponsorship of BPP activities and programs.

- *Fenced Direct Funds*: Move toward additional fencing of direct funds within the NPS mission budget (a la EMBA) for specific BPP programs currently funded from the NPS Mission budget.

- *Classroom Sponsorship Program*: Continue renovation and technological upgrades of individual classrooms through extension of the classroom sponsorship approach.

- *Resident Instruction Fund*: Annually, establish a recognized pool of funds to support resident instructional initiatives and delivery (e.g., course development, case development, Teaching Effectiveness Program, integration entrepreneurship, workload relief).

Facilities and Systems

Goal 13: **<u>Productive Facilities and Systems</u>: BPP will seek to continually upgrade facilities for research, residential education, and distance learning, including classrooms, DL studios, computer labs, and faculty offices to ensure BPP has state-of-the-art facilities consistent with our standing as the Nation's leading institution of defense-related business and public policy research and education. BPP will establish and upgrade management systems and processes to provide for the effective support of Faculty and School activities.**

Strategic Objectives:

- *Resident Instructional Facilities***:** Maintain a continuing program of renovation and retrofitting to assure all classrooms are presentable (at least as nice as IN271 or CEE spaces) and state-of-the-art technologically. Create a classroom within Ingersoll capable of holding 150. (Reconfigure IN122.)

- *DL Instructional Facilities*: Build sufficient state-of-the-art VTE studios to support all faculty teaching in DL programs. Build one studio in 2005.

- *Labs*: TBD

- *Financial Systems*: Create financial system and processes to provide readily available managerial financial information. System to provide information on budget execution and program/activity costs. Create a financial management system that is, to the extent possible, transparent to the faculty so they can focus on mission.

- *Management Systems*: TBD

‘just thinking….

META- ISSUES

Continuing strategic tensions

Trajectory:	Growth vs Consolidation
Direction:	Navy vs Wider Defense Community
Orientation:	Academic vs Military
Focus:	Core Business vs Diversification
Mission:	Instruction vs Research

Appendix 2.1I3

SWOT Analysis:
Opportunities, Threats, Strengths and Development Needs

July 2006

As part of our self-study and planning process we identified the following opportunities, threats, strengths and areas to develop:

Opportunities

- High demand for distance learning and off-campus programs
- Untapped opportunities to develop programs for government civilians
- Partnership opportunities with other business and public policy schools
- Short courses and certificate programs as part of life long learning
- Research opportunities in a constantly evolving defense environment
- Management expertise required to address the complex environment inherent in DoD's organizational changes
- Research and instruction opportunities to address the significant changes associated with the Global War on Terror

Threats

- Continual pressure to reduce the Navy's infrastructure
- Limited ability of officers from some career fields to participate in resident programs
- Constrained defense resources in the near-term and possibly beyond
- Senior military decision makers under-valuing unique, defense-relevant educational programs
- Navy and NPS bias toward science and technology
- Loss of flexibility and agility as NPS computer and other support services and process are centralized at NPS, regionalization in San Diego and standardized
- Expanding competition from other institutions (resident and part-time degree programs, distance learning, etc.)

Program Strengths

- Highly motivated and mature students with significant professional experience
- International students with diverse perspectives
- Growing service diversity in resident programs
- Student camaraderie and common defense focus
- A diverse faculty from a wide variety of disciplines and experiences

- Senior military officers and civilian equivalent faculty members that provide program relevance
- A proven, integrated core curriculum
- Active faculty involvement in curriculum development
- Rapid adaptation to change
- Sponsor-focused student-centered programs
- Regular interaction between faculty, students, sponsors, graduates and the research and professional communities
- Innovative, entrepreneurial, quality-focused faculty engaged in both classroom instruction and research
- Customized high quality academic programs driven by sponsors' needs and defense relevance
- Cohesive faculty sharing a common vision and mission
- A “can do” staff sharing the same vision and mission
- A research environment promoting forward thinking
- Significant output of solutions to DoD problems (student and faculty research)

Areas to Develop

- Updated and expanded facilities to modernize and meet growing student enrollment
- Classrooms that promote innovative instructional methodologies, including case studies and student collaboration and discourse
- Faculty expertise in distance education and innovative instructional technology
- Involving non-DoD organizations in the School
- Geographic separation and isolation from Washington, DC
- Excessive faculty workload to support innovative programs
- Incorporating lessons learned regarding instructional innovations
- Inconsistent instructional and research priorities due to constantly changing senior military leadership
- Bureaucratic rules and processes inconsistent with an innovative academic environment

Appendix 2.1I4

Dean's Vision and Goals

July 2006

In 2005, Robert N. Beck became Dean of the Graduate School of Business and Public Policy. At the beginning of his appointment he shared his vision for the School. This vision has provided direction for the school as it goes through the many changes taking place in the Department of Defense and the global economy.

Dean Beck's vision is for GSBPP to be known as the leading defense-focused business and public policy school, which, through scholarship-based education and research, transforms our students intellectually and professionally and transforms the organizations that engage us.

In order to achieve that vision, the Dean believes we must achieve the following broad goals:

- **BE RECOGNIZED FOR SUPERIOR CUSTOMER SATISFACTION -- SPONSORS AND STUDENTS**

Have those who leave the School proudly testify that they learned a lot that will help them in their careers, had a great experience and made life-long friends while they were here. (Our alumni are ambassadors of our School!)

Practice what we teach, both faculty and staff -- be great role models. Demonstrate good management and use resources effectively.

- **HAVE EXCEPTIONAL ASSOCIATES -- FACULTY AND STAFF**

Attract exciting people – people who have passion about what they do and want to be engaged in all aspects of our School. Recognize and respect diversity as an asset. Have fun at what we do! Recognize and reward those who go above and beyond their normal job expectations and make GSBPP a truly great place to work.

- **BE KNOWN EVERYWHERE FOR QUALITY IN EVERYTHING WE DO**

Do fabulous work, known around the world for its innovation and impact. Dot the 'i's, cross the 't's, answer the phones in a helpful way, respond to emails promptly, and never forget to do it right the first time. Constantly ask ourselves and our customers "How are we doing?"

Have no question ever surface about our ethics or integrity. It is one of our hallmarks.

- **REMEMBER THAT IT IS OUR SCHOOL; IT IS WHAT WE MAKE IT**

Respect each other regardless of position and promote a collegial, supportive, fun-filled environment. Raise hell when necessary and question "the way things are done around here" when they don't seem to make sense. Never rest on our laurels ("today's laurels are tomorrow's compost"). Expect to have some new ideas that don't work the first time as we explore new approaches. Learn from those experiences.

Recognize our people are smart and experienced. Rely on people -- faculty and staff -- for leadership, not on rules and unnecessary bureaucracy.

- **MAKE GSBPP A GREAT PLACE TO WORK FOR ALL**

Hold each member of our School responsible for creating and growing the kind of culture in which we want to work; a culture that reflects our passion to be the best at what we do. Attract exciting customers who see us as the educators and researchers of choice, who stretch us, and from whom we can learn and grow.

Create an environment where sponsors, students, other educational institutions, professional organizations and the community enjoy working with GSBPP and want to participate in our venture to be the best.

Appendix 2.1I5

GSBPP STRATEGIC DIRECTIONS
July 2007

GSBPP Vision and Mission Statements

Vision

To be recognized as the nation's premier school for defense-focused business management and public policy education and research. To be the institution that national leaders look to for education, research, information, and innovation in the management of the business of defense. To be recognized by our students, alumni, and other stakeholders for our excellence in defense-focused education and research.

Mission:
To serve our Nation by educating US and international military officers as well as defense civilians in defense-focused business and public policy, by conducting research in defense management and public policy, and by providing intellectual resources for leaders and organizations concerned with defense business management practices and policies.

Means: We pursue our vision and perform our mission through graduate education, research, and professional service.

- *In Education*: Through resident and distance learning degree and non-degree programs, we develop students' abilities to analyze, think critically, and take intelligent actions so they can more effectively carry out their future professional responsibilities to manage organizations, resources, people, and programs in complex, sometimes life-threatening environments.

- *In Research*: Conduct research, using the scholarships of discovery, application, integration, or teaching, that supports defense enterprise decision-making, problem solving, and policy setting; improves business management processes and practices; contributes knowledge to academic disciplines via dissemination in high-quality refereed research journals or suitable practitioner-oriented journals; and advances the development of graduate education.

- *In Professional Service*: Provide professional expertise that advances knowledge and business management within GSBPP, NPS, the Department of Navy, the Department of Defense, and other government agencies, as well as in our professional and academic organizations.

Research / Scholarship Directions

Research Assumptions

1. GSBPP is viewed as a graduate research school with prominent corporate stakeholders.
    a. Scholarship and effective instruction are intrinsically intertwined.
    b. Scholarship is critical to maintaining NASPAA and AACSB accreditation.

2. The four categories of scholarship include: discovery, application, integration and pedagogy.

3. All participating faculty should engage in scholarship appropriate for their rank and career status.

    a. Anonymous peer-reviewed articles are an important measure of tenure-track research quality.
    b. Non-tenure track faculty members are encouraged to engage in non-peer-reviewed publications appropriate to their field of study as well as peer-reviewed articles where appropriate.
    c. All faculty members are encouraged to participate in conferences where they report their research results.

4. NPS direct funding will support faculty instructional activities and no more than one quarter of tenure-track faculty research activity.
    a. Tenure-track faculty will need to attract either one or two quarters of research support to maintain the standard tenure-track faculty workload model (two quarters instruction/two quarters scholarship)
    b. Non-tenure-track faculty members will need to attract one quarter of research support to maintain the standard non-tenure-track faculty workload model (three quarters instruction/one quarter scholarship)

5. GSBPP's scholarship strategy should be consistent with the NPS strategy.
    a. NPS is moving in a direction that increases the value of research/scholarship.
    b. Body of research produced by the faculty should largely support the GSBPP/NPS mission.

Strategic Planks -- Scholarship

Vision: GSBPP will sustain a level of scholarship productivity consistent with being a graduate research school. GSBPP will ensure faculty in all ranks and tracks maintain their intellectual qualifications and currency in their expertise by fostering a scholarship-friendly

environment in GSBPP. GSBPP policies and practices will encourage, facilitate, and reward defense- and discipline-relevant scholarly activity, including contributions to discovery, application, integration and pedagogy.

A. Scholarship Culture

1. *Scholarship-Oriented Environment:* Promote a scholarship-oriented environment that encourages intellectual discovery and exchange within the GSBPP faculty, and between the BBP faculty and subject matter experts from other universities and throughout the government and industry.

2. *GSBPP Scholarship Focus:* Promote on-going self evaluation to ensure that: GSBPP is accomplishing its scholarly objectives; these objectives are appropriately aligned; and scholarly activities receive appropriate attention and support relative to other GSBPP activities.

3. *Scholarly Productivity:* Monitor faculty contributions to scholarship to ensure that the quality, quantity, and mix of GSBPP research outputs are appropriate to GSBPP's mission and faculty mix, including our need to maintain intellectual qualifications and currency.

4. *Scholarship Incentives:* Establish incentives that reward continued scholarly productivity for both tenure- and lecturer-track faculty members, including faculty release time and funding for travel and equipment, and celebrate the faculty receiving these incentives.

5. *Faculty Collaboration:* Exploit the diverse knowledge and experience in the BPP faculty by encouraging collaboration between all faculty constituencies, including tenured and untenured tenure-track faculty, lecturers, senior lecturers, and the military faculty.

B. External

1. *DoN/DoD Connectivity:* Maintain connectivity to DoN, DoD, and other government and international policy and decision makers to ensure our scholarly products remain relevant and at the forefront of our academic disciplines.

C. Financial

2. *Funding Relationships:* Develop long-term funding relationships to support GSBPP faculty scholarship, drawing on MOUs and other long-term relationships established by the Dean, GSBPP Chairs, and entrepreneurial faculty members, and broker this funding through an objective, transparent internal proposal evaluation process.

3. *Chair Professorships*: A role of the Functional Chairs associated with each academic area is to help support faculty and student scholarship activities,

increasing the amount of external or reimbursable funds for support through established relationships and processes.

4. *Umbrella Projects*: Establish funding in the form of umbrella projects with a mix of directed end products and open-ended research funding.

D. Workload

1. *Tenure-Track Workload Model:* Ensure that NPS and GSBPP strive to provide internal research funding, such as workload relief funding and cost-sharing, to maintain a workload model that is consistent with a research university.

2. *Tenure-Track Standard*: Develop funding mechanisms to provide tenure-track faculty with 3 months of release time for scholarly activities (refereed publications). Continued support conditional on successful productivity. Standard annual workload profile to be: 6 months instruction, 3 months direct research (2 from NPS, 1 from GSBPP), 3 months self-generated support.

3. *Lecturer-Track Workload Model:* Promote scholarly activity within the lecturer-track faculty by supporting efforts to secure reimbursable research funding and funding scholarly activity through internal cost-sharing and direct research funding, as possible.

4. *Lecturer-Track Standard*: Develop funding mechanisms to provide lecturer-track faculty with 1 month of release time for scholarly activities (practictioner publications). Continued support conditional on successful productivity. Standard annual workload profile to be: 9 months instruction, 3 months research (1 month direct, 2 months self-generated).

E. Support

1. *Faculty Development*: Establish a robust mentoring program that provides all faculty members the best possible chance for successful promotion and tenure decisions. Establish faculty development processes modeled on those at top business schools and other outstanding employers.

2. *Scholarship Support Capabilities:* Facilitate GSBPP scholarly productivity by maintaining a qualified and properly resourced support establishment, including GSBPP staff and research assistants, research faculty, and post-doctorates, where appropriate.

F. Scholarship Events & Activities

1. *GSBPP Signature Events:* Establish conference, symposia, and workshop series that exploit GSBPP's comparative advantage in defense-focused business and public policy education and research to reach a broader audience in academia, the

military, the government, and business. Examples include the Acquisition Research Conference, co-hosting the Navy Workforce Research and Analysis Conference.

2. *GSBPP Signature Publications:* Develop a publication series highlighting defense-focused business and public policy research, such as the "GSBPP Journal of Defense Management," the "Working Paper Series in Acquisition Research," etc. Publications may or may not be peer-reviewed, open to submission from outside GSBPP, and distributed in hard copy or electronically as appropriate.

3. *Distinguished Speakers Program:* Establish a Distinguished Speakers Program that periodically brings inspiring speakers to BPP and enables GSBPP faculty and students to interact with the speaker during their visits.

4. *Distinguished Professor/Researcher Program:* Establish Distinguished Professor and Distinguished Researcher Programs to bring noteworthy experts to GSBPP for extended periods to interact with GSBPP faculty and students in both research and instruction.

Instruction Directions

Instruction Assumptions

1. Instruction and Scholarship: GSBPP is viewed as a graduate school where effective instruction and scholarship are intrinsically intertwined.

2. Accreditation: GSBPP will continue to achieve both NASPAA and AACSB accreditation.

3. NPS Strategy: GSBPP's instruction strategy should be consistent with the NPS strategy. Instruction themes included in NPS's strategy are:

    a. Focus on Quality
    b. Provide comprehensive graduate-level education
    c. Sustain continuous improvement in the highest quality and relevance in graduate education
    d. Operate as a geographically distributed educational system, extending education to the Total Force
    e. Increase executive and non-degree educational opportunities
    f. Maintain excellence of the in-residence education program and extend that excellence to branch campus activities and distance learning programs.
    g. Attention to URLs. (In DL, increase enrollment level to 600 URLs within the next 5 years.)
    h. NPS is moving in a direction that increases the value of scholarship.

4. Environment: GSBPP's instruction strategy should be cognizant of the current and anticipated future environment. Aspects of the environment suggest:

    a. Fiscal constraints will be tight, both at NPS and among potential program sponsors.
    b. Residential degree programs do not appear to present opportunities for significant growth. Opportunities for program growth appear stronger in the DL arena.
    c. Requirements for DON subspecialty-based (P-Code) degree education has declined slightly, but is relatively stable. Demand for degree education not tied to subspecialty requirements has grown but is unstable and uncertain.
    d. The DoD community is rich with interest in graduate-level education, and lean with resources to support it.

Strategic Planks -- Instruction

<u>Vision</u>: GSBPP will be recognized as the Nation's premier school for defense-focused, graduate-level business and public management education, so that the Navy and other services place a high value on a GSBPP degree to educate officers and civilians and help improve Navy/defense business practice. As such, GSBPP will become

- **The nation's top school for Defense Management scholarship and education.**
- **The institution that national leaders look to for education, information and innovation in the management of the business of defense.**
- **The 'go to' place for graduate-level Defense Management education.**

<u>Brand</u>: GSBPP graduate education programs will be consistent with a GSBPP brand. Characteristics of the GSBPP brand are (will be):

- **Graduate level**
- **Scholarship-based education**
- **Uniquely tailored to the educational needs of the defense communities**
- **Recognized as high quality, relevant, and current.**
- **Adaptable and responsive**
- **Defense-relevant specializations**
- **Coherent with the Navy continuum of education**

Strategic Actions (in support of vision and brand):

A. External:

1. *Sponsor Relationships*: Establish or maintain program sponsorship (or championship) for all GSBPP degree and non-degree programs. Maintain connectedness to sponsors and promote sponsor involvement to send students, fund chairs, provide speakers, generate project research topics, and provide resources.

2. *Educational and Curriculum Leadership*: Be a principal advisor to DoD/DoN leadership in defining the business and public management educational needs of the Navy and Defense Community

3. *Market Analysis:* Comprehensively catalog all business/management education within the DOD community: programs, providers, funding sources, customers, needs. Identify fit between GSBPP "brand" programs and opportunities. Create a well-developed marketing plan for instructional programs within the larger framework of a marketing plan for GSBPP.

B. Programs & Curricula:

1. *Resident Program Foundation*: The GSBPP resident MBA/MSM program will remain a flagship program of GSBPP. The resident program will act as the

foundation for all GSBPP education programs, and be a source of innovation and development, valuable to all GSBPP education programs. The resident program will be widely recognized, in academia, DoN/DoD, the defense industry, the private sector, and internationally for providing a top-quality Masters degree.

2. *Differentiated Degrees*: GSBPP will continue to offer differentiated degree programs to meet student and sponsor needs. (GSBPP will continue the course of differentiating its resident MBA and MSM degrees. The focus of the MBA is "managerial"; the focus of the MSM is "analytical").

3. *Program and Curriculum Development*: Develop hybrid programs combining the MBA/MSM with technical concentrations from other NPS schools (e.g., MSM-OA, MBA-IT, MSM-SE, MBA-NSA). When presented with the appropriate opportunities and sponsorship, develop new resident curricula within the MBA/MSM program (e.g., Shore Installation Management).

4. *Certificate Development*: Examine the opportunities to create and market graduate certificate programs for each of the major GSBPP curricula (FM, ACQ, LOG, MSA, DefMgt). Potential markets for certificates may include 1) students from other NPS schools who are able to extend one quarter, 2) graduates from the EMBA program able to attend NPS for one quarter to establish a specialization just-in-time prior to a utilization tour, 3) stand-alone products offered via distance learning, 4) recognized specialization components of exiting degree programs.

5. *Accreditation / Assessment*: Develop learning objectives and Assurance of Learning programs for all degree programs.

6. *Curriculum Integration*: Reinvigorate GSBPP efforts to achieve integration of the resident MBA/MSM Core program by further development and acceptance by faculty of the integration framework. Rely on incremental integration as a means toward program coherence horizontally, vertically, across disciplines, with project/thesis.

7. *GSBPP Instructional Materials Series:* Establish the GSBPP Instructional Materials / Case Studies series to focus on defense-related cases studies and instructional products for use within GSBPP, the service academies, and other defense-related educational programs.

C. Growth:

1. *Current Programs*:
    a. *Resident mission-funded MBA/MSM Program*: GSBPP will respond to all opportunities and enroll all qualified students.
    b. *Mission-funded EMBA Program*: GSBPP will maintain enrollment at current levels (8 cohorts, 200 students).

c. *Reimbursable MSCM/MSP Programs*: GSBPP will target an enrollment of two cohort starts each (MSCM & MSPM) per year. (AAP ~ 3)

2. *New Programs*: GSBPP will evaluate new program opportunities in accordance with the established program acceptance criteria. Provided at the end, but listed here:
    a. Customer Need
    b. Core Expertise
    c. Comparative Advantage
    d. Faculty Capability
    e. Control
    f. Financial Viability
    g. Leverage Benefit / Risk

3. *DL Education Programs*: GSBPP will extend the impact of its educational programs by using appropriate DL technologies to provide graduate education to officers, particularly Navy URL, and DoD civilians unable to attend NPS. The DL programs will be widely recognized, in academia, DoN/DoD, the defense industry, and the private sector for providing a top-quality Masters degree. We will also ensure that these DL programs complement, not overtake, our residential programs and that our DL programs not "cannibalize" our residential programs in terms of resources or students.

4. *Management Development and Executive Education:* GSBPP will maintain its niche in the defense educational continuum. As such, we will take a measured approach toward management development and executive education (MDEE) programs, focusing on those opportunities that exploit our unique capabilities and priorities. We will participate in MDEE programs if program content requires the current expertise of GSBPP faculty, if GSBPP and its faculty are adequately compensated, and if participation adds to GSBPP's instructional and/or research mission as well as furthers NPS's strategic goals. Faculty participation in these programs will not compromise the quality of instruction we provide in our residential and distance learning degree programs.

D. Faculty

1. *Instructional Excellence*: Encourage and facilitate excellence in instruction by creating a commitment to continual professional development. Provide programs and opportunities to support faculty teaching development and recognition of faculty instructional accomplishments. (Solidify and expand the Teaching Effectiveness Program. Develop and provide significant and recognized rewards and acknowledgments for teaching excellence.)

2. *Faculty Capabilities*: Move toward sufficient faculty becoming capable and experienced in both resident and DL instructional modes and competent with technologies that support each mode. (Support faculty to complete Introduction

to Distributed Learning (IDL) to extend the incorporation of learning technologies into classes. The GSBPP objective is to have all new faculty complete IDL within 2 years of coming to GSBPP and to have all current faculty complete IDL by 2009.)

3. *Faculty Qualifications and Orientation:* To truly transform our students intellectually, personally, and professionally, our students must leave our programs, highly satisfied, knowing that we have provided the best teachers for every aspect of their learning experience. To do this, and to back up our claim that we have defense-focused programs, we must ensure that all faculty members are fully qualified to teach in a manner that meets the needs of our unique students. This implies an understanding and appreciation of the national and international defense cultures from where our students come.

E. Students

1. *Student Quality:* Attract high-quality, well-prepared students motivated by future career benefits from their GSBPP degree, both in and after their military careers. To create a superior learning experience for both students and faculty, increase the quality and academic preparation of students selected for GSBPP resident and DL programs. Consider heightened academic admissions qualifications, participation in the admissions process, refresher opportunities, and expanded pre-arrival outreach activities.

2. *Student Intellectual Life*: Create an academic environment that encourages, permits, and provides opportunities for intellectual exploration and discovery. Elements of this include relaxing student workload, providing flexibility within standard curricula programs.

F. Financial

1. *Financial Stability*: Generate strong support for high-quality Navy/defense-focused degree programs, resulting in stable and adequate student loads and dependable financial resources.

2. *Fenced Direct Funds*: Move toward additional fencing of direct funds within the NPS mission budget (a la EMBA) for specific GSBPP programs currently funded from the NPS Mission budget.

3. *Instruction Fund*: Annually, establish a recognized pool of funds to support instructional initiatives and delivery (e.g., course development, case development, Teaching Effectiveness Program, integration entrepreneurship, workload relief). The Instruction Fund to be resourced from direct and reimbursable programs, and used to support all.

G. Facilities and Support

1. *Resident Instructional Facilities*: Maintain a continuing program of renovation and retrofitting to assure all classrooms are presentable (at least as nice as IN271 or CEE spaces) and state-of-the-art technologically. Create a classroom within Ingersoll capable of holding 150. (Reconfigure IN122.)

2. *Classroom Sponsorship Program*: Continue renovation and technological upgrades of individual classrooms through extension of the classroom sponsorship approach.

3. *DL Instructional Facilities and Technology*: Provide high-quality DL technology (e.g., VTE studios, streaming video, Elluminate) that support faculty-student interaction and the full range of instructional strategies faculty use to meet learning goals. Maintain sufficient state-of-the-art VTE studios to support all faculty teaching in DL programs. Evaluate and introduce emerging DL technologies that enhance the quality of distributed education.

4. *Staff Support*: Insure that an adequate number of skilled resident and DL support staff are in place to meet student and faculty needs so that they can focus exclusively on learning.

5. *DL Business Office*: Organize the direct program support activities for GSBPP DL programs within an integrated, coordinated office. Maintain the DL business office to provide administrative assistance and support to DL Program Managers and faculty to make their teaching experience more productive and effective.

INSTRUCTION PROGRAM EVALUATION CRITERIA

Criteria to Assess Whether GSBPP Offers or Develops a Program

Customer Need: The program meets a well defined stakeholder need:

Core Expertise: The program should be an extension of, and related to, GSBPP's vision and core mission of Defense Business Management graduate degree education and research:

Comparative Advantage: GSBPP should possess an identifiable comparative advantage in providing the program over existing providers or competitors:

Faculty Capability: GSBPP faculty should have the capability (both expertise and capacity) to deliver the program:

Control: GSBPP should be assured sufficient control to maintain academic quality and standards and influence admissions criteria:

Financial Viability: The program pricing must be expected to at least breakeven on all costs (direct and indirect):

Leveraged Benefit / Risk: New programs have consequences that extend beyond the program itself. Mere recovery of costs does not warrant developing or offering a new program. GSBPP should benefit from the program in other ways such as additional financial resources to support GSBPP activities, significant recognition within the defense community for developing and/or offering the program, academic/professional development of faculty, or establishing valuable relationships within academic or professional communities. New programs shouldn't put existing programs at risk, although risks of other sorts are relevant to consider also.

Appendix 2.2B1

NPS FACULTY HANDBOOK – EXCERPT

ACADEMIC ASSOCIATES AND PROGRAM OFFICERS

Program Officers/Academic Associates. The Program Officer/Academic Associate team is an organizational entity unique to the Postgraduate School. The team is responsible for developing, maintaining, and updating curricula to accommodate the needs and academic requirements of the Navy and the Department of Defense and for monitoring the planning and progress of individual students through a program of study.

A naval officer of suitable experience and rank is assigned as the Program Officer, serving as the executive director of the office. One or more assistant program officers may also be assigned to a Program Office and responsibility for a curriculum may be delegated to an assistant.

A civilian member of the faculty thoroughly familiar with the Naval Postgraduate School, the Navy, DoD, and other sponsoring agencies is assigned part-time duty as the Academic Associate. Where the Program Office supports multiple curricula, more than one Academic Associate may be appointed and assigned responsibility for specific curricula.

The Program Officers are responsible to the Director of Programs for the overall operation of their respective Program Offices. The Academic Associates are responsible to the Associate Provost for Academic Affairs, through their Department or Group Chair, for the integrity of the academic features of the Program Office operation. As a consequence of this arrangement, the Program Officers and Academic Associates are close professional associates and their relationship should develop accordingly.

Academic Associates are appointed to this duty by the Provost, on the recommendation of the Associate Provost for Academic Affairs and the Director of Programs, for specific terms not in excess of three years. The budgeted time allotted to perform the duties of Academic Associate are determined by the Associate Provost for Academic Affairs.

General responsibilities associated with the Program Offices are described below. Specific responsibilities of the individuals are covered in either Naval Postgraduate School Instructions or policy directives. Their general responsibilities are:

- Curriculum Sponsor Liaison. The Program Officer/Academic Associate team works with program sponsors and consultants to define pertinent sponsor needs, including professional objectives; to delineate projected utilization of program graduates; and to consult with Department/Group Chairs and faculty to propose useful courses and curricula. These plans and projections consider the impact of developing technology, evolving bodies of knowledge, and changing mission of the Navy and other sponsors. They are prepared, reviewed, and updated during sponsor reviews of curricula.

- Curriculum Development and Management.

    - The Program Officer/Academic Associate team, working with the NPS faculty and staff, develops and maintains a statement of professional objectives for each curricular program under their purview. Consistent with these objectives, they establish and keep current appropriate standard curricula.

- Ensuring that the curriculum meets the professional needs of the Navy or other sponsors rests primarily with the Program Officer. Ensuring that each student's curriculum meets curriculum degree requirements and that the selection and sequence of courses are in accordance with Department/Group or degree requirements rests primarily with the Academic Associate.
- The Program Officer/Academic Associate team develops and maintains procedures for effectively monitoring programs for their continuing adherence to professional and academic requirements. These procedures may be partially standardized for all programs. The Program Officer holds primary responsibility for collaborating with the Naval Postgraduate School staff, sponsors, and OPNAV and for adopting general procedures to meet the particular needs of individual programs. The Academic Associate is responsible for maintaining liaison with academic Departments/Groups, sustaining the relevance of current course content, and fostering faculty participation in the development of useful new courses and programs.
- In the development of new curricula or major revision of existing ones, the Program Officer/Academic Associate team includes each concerned academic Department or Group in the deliberations leading to formulating each proposal.
- Both the Program Officer and Academic Associate are knowledgeable with respect to “transfer field” programs, i.e., other graduate programs appropriately related to those under their purview. They should also be familiar with Navy-related programs offered at civilian educational institutions which might be effectively utilized by sponsors.

- Supervision and Counseling of Students.
  - The Program Officer/Academic Team reviews the records of all students assigned to their curricula and, in consultation with each student – and based on his/her academic background – develops a program of study within the framework of the established curricula. Student academic progress is monitored and program changes or intercurricular transfers made, when deemed necessary, within the limitations of curricular quotas, Navy policies, and academic feasibility. Both members of this team are responsible for the overall quality of a student's program. The Academic Associate holds primary responsibility for evaluating the student's academic qualifications, based on academic Department/Group standards, for pursuing a specific sequence of study. The Program Officer is responsible for ensuring that the program selections are in consonance with curriculum Sponsor policies and needs.
  - Both members of the team counsel all students in the curricula under their purview. The Academic Associate is responsible for academic counseling of the students.
  - The Program Officer, in accordance with prescribed policies and procedures, exercises supervision and direction of students assigned to his/her office. He/she performs requisite administrative duties pertaining to these students, evaluates their performance, and counsels them on pertinent military matters, as necessary.

Subj: GUIDELINES FOR CONDUCTING CURRICULAR REVIEWS

Ref: (a) OPNAVINST 1520.23 (SERIES)
(b) OPNAVINST 1000.16 (SERIES)

Encl: (1) Primary Subspecialty Consultants (Sponsors) for Curricula Offered at the Naval Postgraduate School
(2) Curriculum Review Primary Consultant Presentation
(3) BUPERS Management of Subspecialties Review Slide
(4) Curriculum Review Report
(5) Curriculum Review Status

1. Purpose. To provide guidance for the conduct of biennial reviews of fully funded graduate educational programs taught at the Naval Postgraduate School (NPS) and Civilian Institutions (CIVINS).

2. Cancellation. NAVPGSCOLINST 1550.1A and NAVPGSCOLINST 1524.1A

3. Background. The mission of NPS is to serve as the Navy's Corporate Research University. It exists to increase the Combat Effectiveness of U.S. and Allied Armed Forces and enhance the security of the United States. This mission is accomplished by providing advanced professional studies at the graduate level for military officers and defense officials from all services and other nations. To

accomplish this goal, educational programs are structured around curricula of study that fulfill the present and future needs of the Navy and other stakeholders for technical and managerial education. The various curricula are designed to educate officers in specific Educational Skill Requirements (ESRs). ESRs are the fully funded graduate education component established by the Primary Consultants (PC) or sponsors for each subspecialty in the Navy. Educational Skill Requirements define a specific set of skills that officers should possess to function effectively in a given subspecialty. ESRs are developed by the PCs with the concurrence of NPS. Considering the diverse enrollment of NPS as both the Navy's Corporate University and one of the Department of Defense's (DoD's) critical Research Universities, joint stakeholders play an increasingly important role in defining the requirements for certain curricula. These special joint needs are considered and evaluated as part of defining overall curricula content. Additionally, the curricular review process serves to meet the overall need for continuous improvement of the curriculum and its contents. Curricula and PCs are listed in enclosure (1). To ensure continued quality of education and provide the skills and knowledge needed in the future, references (a) and (b) direct biennial curricular reviews. This instruction assigns responsibility for specific curricular review actions and outlines a structured sequence of events that comprise this continuing cycle of review.

4. Responsibilities. The Superintendent is charged with implementing the Navy's graduate level education programs, acting as academic coordinator for all Navy graduate education programs and maintaining approved curricula. The Superintendent and PC/Stakeholders will jointly approve ESR's and validate curricula at the completion of the formal review.

The PC and joint stakeholders are responsible for defining the current and future community needs in terms of ESR's. The PC/stakeholders will also assemble the data for the Subspecialty Requirements Review (SRR) and other analyses of graduate education requirements. The PC and stakeholders will provide that information to the Program Officer (formerly known as Curriculum Officers). The PC will attend the formal review.

NPS staff and faculty will carry out the following

curricular review actions for programs taught at NPS. For programs taught at CIVINS, paragraph. 5c. applies.

a. The Director of Programs and Associate Provost for Academic Affairs are jointly responsible for coordinating all curricular reviews. They will schedule, standardize and attend all curricular reviews.

b. The Dean of each school is responsible for the direct oversight of the curricular review process and leadership of the curricular review team within their school, which includes the Associate Dean(s), Department Chair(s), Academic Associate(s) and Program Officer(s). The Dean and the Department Chair are responsible for carrying out specific curriculum improvements identified during the review process.

c. Academic Associates and Program Officers work as a team providing the primary interface between the curriculum PC's/stakeholders and NPS.

(1) Academic Associates are responsible for reviewing and matching the delivery of education to PC requirements as outlined in the ESR's. The Academic Associate ensures the curriculum meets NPS degree requirements and is consistent with accreditation standards.

(2) Program Officers will maintain regular communication with the PC/Stakeholders as the NPS representative. Program Officers are responsible for initiating action and assembling data for the curricular review process, and is the primary briefer during the formal review. If a Program Officer is not assigned to the curriculum, then the Academic Associate will perform this function.

5. Procedures.

a. Curricular reviews will be conducted in accordance with the schedule detailed below. These reviews focus on providing the highest quality advanced education tailored to specific ESR's for a given curriculum. The curricular review process includes revision and validation of ESR's by NPS, the PC, and stakeholders. Participants will develop ESR's that reflect current and future graduate education

needs of officer communities and DoD personnel. The curricular review process occurs throughout the two-year period between formal reviews including the collection of appropriate data, such as accreditation documents. Additionally, the following milestones establish a structured approach to accomplishing required tasks in a timely basis:

(1) Twelve months prior: Program Officers and Academic Associates begin coordination with PC's/stakeholders on issues for the next curricular review. All action items from previous reviews should be complete or become discussion/action items for the next review. Dialogue with the PC should occur on a regular basis.

(2) Eleven months prior: Program Officers and Academic Associates will request PCs and major manpower claimants to examine subspecialty coding related to curricula to determine strategic planning guidelines and initiatives. This review will identify graduate education requirements in the short term, long term, and changes needed to existing billets. The Program Officers and Academic Associates will begin collecting required internal data such as exit and alumni interviews, accreditation results, and course content for analysis.

(3) Seven months prior: The school Dean chairs the internal curricular review. The Director of Programs, the school's Associate Dean, Program Officer, Academic Associate and Department/Group Chair assess the quality and relevancy of the curriculum. This assessment is the objective of the internal curricular review and basis for the upcoming formal curricular review.

(4) Two months prior: Program Officer and Academic Associate consult with the PC/stakeholders on the status of the review and gather expected issues. This consultation may be done via VTC, but it is recommended that the Program Officer and Academic Associate visit the PC/stakeholders. Action plans will be drafted for the expected issues.

(5) One month prior: Program Officer and Academic Associate pre-brief the Superintendent, Provost, Associate Provost for Academic Affairs, and the Director of Programs. The pre-brief will include a review of issues and the proposed presentation to the PC. Issues should be

clearly defined and coordinated with the PC. Enclosures (2) and (3) are guidelines for developing the presentation.

(6) Formal curricular review: The formal curricular review will be held at NPS over two days. The review will include a: 1) tour of the school's classrooms, laboratories, and research facilities, 2) meeting with students, 3) meeting with faculty, and 4) a final summary brief of the curriculum status given to the PC Flag Officer and the Superintendent.

The objectives for the above events are listed below:

- 1) The tour of the school's classrooms, laboratories, and research facilities allow the PC/Stakeholders to examine equipment and facilities that support the curriculum. The Department Chair, Academic Associate, Program Officer and the research faculty will attend this tour.

- 2) The meeting between the students and the PC/Stakeholders allows the PC/Stakeholder(s) to gauge the quality of our students, get direct student feedback on the curriculum, and have an opportunity to mentor the students. The Program Officer and Academic Associate will attend this meeting.

- 3) There are several objectives for the faculty/PC-Stakeholder meeting. The Program Officer will lead the meeting. The Dean, Associate Dean, Department Chair, Academic Associate, and select faculty will also attend the meeting. The specific objectives are listed below:
  - Validate ESRs and propose new ESR's if required
  - Validate any joint stakeholder requirements
  - Review degree requirements that may be independent of the ESR's
  - Conduct an assessment of design and execution of the curriculum
    - Does the **design** of curriculum support customer needs
      - Examine fulfillment of ESR's by specific Courses

        - Evaluate curriculum length including effects of JPME, refresher pre-requisites, thesis, USMC-Command & Staff courses
        - Examine faculty specialties and tracks required for the curriculum

    - Does **execution** of curriculum support customer needs
        - Quality metrics/measures (student surveys/promotion rates)
        - Accreditation status
        - Thesis quality and relevance

    - Does the curriculum have sufficient **resources**
        - Faculty – quantity and expertise
        - Internal and sponsor funding
        - Support staff (administrative and technical)
        - Equipment and facilities that support the curriculum

    - Review **research** being done by curriculum faculty
        - Thesis research
        - Faculty research
        - Present summary of research capabilities of NPS schools/institutes
        - Solicit input from PC/Stakeholder for research opportunities

- 4) Lastly, the summary brief will present the Superintendent and PC a summary of the issues discussed during the above events and obtain the Superintendent's and PC's final decision on any issues that may need to be resolved. These decisions should be documented in action items.

(7) Within one month after curricular review: Program Officer originates post review letter/report to N7 via the PC. For joint service curricula, NPS will ensure a copy of the post curricular review letter is sent to N7 and requisite stakeholders. The letter should be structured

similar to enclosure (3) and include, as a minimum, general overview, list of attendees, summary of action items and restatement of ESRs. Action items will identify party responsible for action and due date.

b. The Director of Programs will maintain an up-to-date schedule of curricular review milestones.

c. CIVINS PROGRAMS. The primary consultant will review curricula offered through the Civilian Institutions (CIVINS) program with the assistance of the Director of CIVINS. Factors to be considered include a review of the ESRs, how well the universities on the approved list of schools are meeting the ESRs, additions or deletions to the approved list of schools, budgetary constraints and student administrative issues. The following guidelines are provided to assist in the curricular review process.

(1) Site Visits. In order to assess how well universities are meeting ESRs, and to meet with the students, PC's often conduct site-visits to one or more of the universities on the approved list of schools. These site-visits can be made at any time during the curricular review cycle. NPS will generally send the Director of CIVINS and, if desired by the PC, an NPS faculty member, to assist in these site-visits. Coordination with the Commanding Officer, NROTC or other administrative unit, which provides student support, is recommended.

(2) Location. The formal curricular review will be conducted at a location determined by the PC. For programs with a single approved university, it will often be done at that university. Curricula offered through CIVINS, which have a common PC with NPS programs, may be formally reviewed at NPS at the same time as review of NPS resident programs.

(3) Results. The PC will forward results of the review to N7 via NPS within one month after completion of the review. The results should include a general overview of the review, list of attendees, status of new and old action items, a copy of the ESRs and a list of approved universities. For programs reviewed in conjunction with NPS programs, results may be forwarded by NPS to N7 via the primary consultant.

(4) Changes to Approved List of Schools Changes to

the approved list of universities may be made at any time during the review cycle. The PC should forward recommended additions or deletions to the list to N7 via NPS. Justification for changes should be provided which addresses how the university meets the ESRs, availability of year-round study, proximity to naval activities that can provide administrative support, and budget considerations.

6. Reports. Correspondence with PCs will be as required by paragraph 4 of this instruction. Curricular review reports will be structured in the form of enclosure (4) and will be forwarded by the Superintendent, via the cognizant PC to CNO (N7). Post-review report is due one month after completion of the curricular review.

SUMMARY BRIEF

1. The following is a recommended structure for the Flag Officer, Executive Review presentation to be briefed to the Superintendent, the primary consultant, and important stakeholders. This guidance is provided in the interest of standardizing presentations to the PCs and stakeholders, and to aid in preparing for preliminary reviews. This list includes core elements for the brief and is not intended to be limiting in any way.

a. Provide Summary of Last Curricular Review
   - Date of last curriculum review
   - Status of former action items
   - Any other information relevant to the current review

b. Issues from Qualitative Curricular Review
   - Validate existing ESR's/Propose New ESR's
   - Validate any existing joint stakeholder, i.e.(USMC/USA/USAF/CIV)requirements
   - Propose new requirements
   - Review degree requirements that may be independent of the ESR's

c. Issues from Quantitative Curricular Review Aspect
   - Validate quantitative billet/quota function
   - Examine subspecialty inventory versus requirements
   - Examine subspecialty code utilization and payback
   - Examine joint stakeholder utilization

d. Issues from PC, Stakeholder & Faculty Curriculum Assessment for Design and Execution. The brief should only contain the top-level issues only.

   - Does the **design** of curriculum support customer needs
     - Examine fulfillment of ESR's by specific courses
     - Evaluate curriculum length including effects of JPME, refresher pre-requisites, thesis, USMC-Command & Staff courses

- Examine faculty specialties and tracks required for the curriculum

- Does **execution** of curriculum support customer needs
  - Quality metrics/measures (Student surveys/promotion rates)
  - Accreditation status
  - Examine thesis quality and relevance
- Does the curriculum have sufficient **resources**
  - Faculty – quantity and expertise
  - Examine internal and sponsor funding
  - Evaluate support staff (administrative and technical)
  - Evaluate equipment and facilities that support the curriculum
- Review **research** being done by curriculum faculty
  - Thesis research
  - Faculty research
  - Present summary of research capabilities of NPS schools/institutes
  - Solicit input from PC/Stakeholder for research opportunities

e. Examine all new initiatives in view of meeting customer needs from one year to ten years in the future.
   - Provide status on any Distance/Distributive Learning initiatives within the curriculum
   - Provide status on any initiatives pertaining to the Learning Continuum as it applies to the curriculum
   - Other topics as appropriate (i.e. Centers of Excellence, Institute interfacing, industry partnering)

f. Conclusion
- Action item assignment and review
- Summary of assessment
- Required documentation

2. Course matrices and other details/data pertaining to the curriculum, students, research, etc., should be available at the Executive Summary and all preparatory meetings if asked for, and then used later during the curriculum review working sessions.

Appendix 2.2C

MBA / MSM Core Curriculum Survey

Below are the GSBPP Exit Survey Questions. All surveys are created and administered in Zoomerang. All surveys are anonymous and confidential.

1. Please indicate your Service:

2. Please indicate your curriculum:

3. Please indicate your rank:

4. Please enter your approximate QPR (also known as your Grade Point Average):

5. How would you describe your overall level of satisfaction with your FM or Defense Systems Analysis program at NPS? How would you describe your overall level of satisfaction with your FM or Defense Systems Analysis program at NPS?

6. Ratings of Individual Courses

This part asks you to rate each of the MBA core courses along each of three dimensions:

- Value of the course in your future career
- Degree of Defense relevant content in the course
- Overall satisfaction with the course

Each of these is discussed a bit more here:

A. Value in your Future Career:

We intend the education in the MBA core to have value to you in both your military and, perhaps later, civilian career, both by providing specific knowledge and skills and also developing analytical and critical thinking abilities. How do you perceive each course in terms of its value in your future career? The scale will be:

"I perceive this course as having…"

4 = High value in my future career
3 = Moderate value in my future career
2 = Little value in my future career
1 = No value in my future career

Course Number	Course Title	VALUE
GB3010	Managing for Organizational Effectiveness	
GB3012	Communication for Managers	
GB3013	Problem Analysis and Ethical Dilemmas	
GB3020	Fundamentals of Information Technology	
GB3040	Managerial Statistics	
GB3042	Operations Management	
GB3050	Financial Reporting and Analysis	
GB3051	Cost Management	
GB3070	Economics of the Global Defense Environment	
GB4014	Strategic Management	
GB4043	Business Modeling and Analysis	
GB4052	Managerial Finance*	
GB4053	Defense Budget and Financial Management Policy	
GB4071	Economic Analysis and Defense Resource Allocation	
GB3031	Acquisition and Program Management**	
GBxxxx	Core Elective***	
NW3230	Strategy and Policy: The American Experience****	

B. Defense Relevant Content of Individual Courses:

It is our intent that the "Defense-Focused MBA" lives up to its name. It should provide a graduate level education that is unique and of particular relevance to individuals within the Defense community. Clearly, the Specialization part of the MBA program is designed with this intent.

The MBA Core courses are also designed to contribute to the Defense relevance of the program, although different courses may contribute to different degrees.

This asks you to score the specific courses in the MBA Core in terms of the degree to which each course was Defense-focused and/or contained Defense-specific content. The scale will be:

"I would assess this course as having...."

4 = High Defense focus or Defense content
3 = Moderate Defense focus or Defense content
2 = Little Defense focus or Defense content
1 = No Defense focus or Defense content

Course Number	Course Title	DEFENSE RELEVANCE
GB3010	Managing for Organizational Effectiveness	
GB3012	Communication for Managers	
GB3013	Problem Analysis and Ethical Dilemmas	
GB3020	Fundamentals of Information Technology	
GB3040	Managerial Statistics	
GB3042	Operations Management	
GB3050	Financial Reporting and Analysis	
GB3051	Cost Management	
GB3070	Economics of the Global Defense Environment	
GB4014	Strategic Management	
GB4043	Business Modeling and Analysis	
GB4052	Managerial Finance*	
GB4053	Defense Budget and Financial Management Policy	
GB4071	Economic Analysis and Defense Resource Allocation	
GB3031	Acquisition and Program Management**	
GBxxxx	Core Elective***	
NW3230	Strategy and Policy: The American Experience****	

C. Overall Satisfaction with individual courses:
On the SOFs that you have filled out at the end of each quarter, one question asked to rate "the course". We would like to get your impression again now, having completed all of the courses within the MBA Core. The scale will be:

"Overall, I would rate this course...."

4 = Outstanding

3 = Very Good
2 = Fair
1 = Poor

Course Number	Course Title	SATISFACTION
GB3010	Managing for Organizational Effectiveness	
GB3012	Communication for Managers	
GB3013	Problem Analysis and Ethical Dilemmas	
GB3020	Fundamentals of Information Technology	
GB3040	Managerial Statistics	
GB3042	Operations Management	
GB3050	Financial Reporting and Analysis	
GB3051	Cost Management	
GB3070	Economics of the Global Defense Environment	
GB4014	Strategic Management	
GB4043	Business Modeling and Analysis	
GB4052	Managerial Finance*	
GB4053	Defense Budget and Financial Management Policy	
GB4071	Economic Analysis and Defense Resource Allocation	
GB3031	Acquisition and Program Management**	
GBxxxx	Core Elective***	
NW3230	Strategy and Policy: The American Experience****	

7. Identify three courses that you were MOST SATISFIED with, and briefly explain why:

8. Identify three courses that you were MOST DISSATISFIED with, and briefly explain why:

9. In the following space please make any comments you wish concerning the Curriculum. Do not feel constrained, but in thinking about comments you may make, you

might consider the following general question: "What changes to the curriculum at NPS do you believe might have made your experience here more valuable to you in your subsequent career?"

10. For USN: Did you complete JPME? If not, why?

11. For USMC: Did you complete Command & Staff? If not, why?

TO: Financial Management Curriculum Graduating Class

SUBJECT: ASSESSMENT OF THE FINANCIAL MANAGEMENT (837) CURRICULUM

With you now in your final quarter here at NPS, you have completed most of the courses that make up your FM curriculum. We're interested at this point in getting your thoughts on your academic experience. The link below will take you to a short, anonymous survey that asks for your assessment of the FM curriculum. Please take a few minutes to fill it out and submit it (by ---date--). Your feedback on your BPP experience is valuable to us and helps us to improve the program for those who will follow after you

Put Zoomerang link here

Additionally, a feedback meeting has been scheduled on __fill in date__. The purpose of the meeting will be for us to hear further from you about the curriculum. We will have tabulated your responses from the survey prior to the meeting. We'll let you know what you "said' in the survey and then use that as a starting place for further discussion of your experience in the Financial Management curriculum.

Thanks for your help

Joe San Miguel, Academic Associate for FM

EVALUATION OF THE FM PROGRAM – CONTINUOUS IMPROVEMENT

How would you describe your overall level of satisfaction with your program at NPS?

____ Very Satisfactory
____ Satisfactory
____ Neither Satisfactory Nor Unsatisfactory
____ Unsatisfactory
____ Very Unsatisfactory

The following question asks for your assessment of specific **courses** in your graduate program at NPS. On the SOFs that you filled out at the end of each quarter, you were asked to rate the value of courses. We would like to get your impression again now, at the end of your program here.

Please use the following five numbers to indicate your level of satisfaction with courses: "Overall, I would rate this course...."

5 = Very Satisfactory
4 = Satisfactory
3 = Neither Satisfactory Nor Unsatisfactory
2 = Unsatisfactory
1 = Very Unsatisfactory

If you did not take a specific course, just leave your response for that course blank.

In the following space please make any comments you wish concerning the Financial Management Curriculum. Do not feel constrained, but in thinking about comments you may make, you might consider the following general question: " What changes to the curriculum at NPS do you believe might have made your experience here more valuable to you in your subsequent career?

Did you complete JPME? Yes No If not, why?

Thanks for your comments.

Appendix 2.2C1

NPS ALUMNI SURVEY

Introduction

Information for Participants

1. Introduction. You are invited to participate in a survey of NPS alumni. Answering these questions will provide you the opportunity to evaluate and comment on the educational processes you experienced at NPS. Please read the statements below and indicate if you agree to participate in the survey.

2. Background Information. The Naval Postgraduate School Office of Institutional Research is conducting this study.

3. Procedures. Please click on the appropriate answer for each survey question. Mandatory questions are marked with an asterisk. These questions must be answered for the survey to be submitted correctly.

4. Risks and Benefits. This research involves no risks or discomforts greater then those encountered in use of a computer.

5. Compensation. No tangible reward will be given. A copy of the results will be available to you at the conclusion of the experiment.

6. Confidentiality. The records of this study will be kept confidential. No information will be publicly accessible which could identify you as a participant.

7. Voluntary Nature of the Study. If you agree to participate, you are free to withdraw from the study at any time without prejudice. You will be provided a copy of this form for your records.

8. Points of Contact. If you have any further questions or comments after the completion of the study, you may contact the research supervisor, Dr. Fran Horvath (831) 656-2228, rfhorvat@nps.edu

NAVAL POSTGRADUATE SCHOOL, MONTEREY, CA PRIVACY ACT STATEMENT

1. Purpose: Survey data will be collected to evaluate the benefits and effectiveness of the education programs at the Naval Postgraduate School.

2. Use: This data will be used for statistical analysis by the Naval Postgraduate School and potentially by the Departments of the Navy and Defense, and other U.S. Government agencies, provided this use is compatible with the purpose for which the information was collected. Use of the information may be granted to legitimate non-government agencies or individuals by the Naval Postgraduate School in accordance with the provisions of the Freedom of Information Act.

3. Disclosure/Confidentiality:
a. I have been assured that my privacy will be safeguarded. The database created from the survey data will not contain individual identification information. In all cases, the provisions of the Privacy Act Statement will be honored.
b. I understand that a record of the information contained in this Consent Statement or derived from the experiment described herein will be retained permanently at the Naval Postgraduate School or by higher authority. I voluntarily agree to its disclosure to agencies or individuals indicated in paragraph 3 and I have been informed that failure to agree to such disclosure may negate the purpose for which the experiment was conducted.
c. I also understand that disclosure of the requested information is voluntary.

PARTICIPANT - VOLUNTARY CONSENT TO BE A RESEARCH PARTICIPANT IN: NPS Alumni Survey

1. I have read, understand and been provided "Information for Participants" that provides the details of the below acknowledgments.
2. I understand that this project involves research. An explanation of the purposes of the research and a description of procedures to be used, have been provided to me.
3. I understand that this project does not involve more than minimal risk. I have been informed of any reasonably foreseeable risks or discomforts to me.
4. I have been informed of any benefits to me or to others that may reasonably be expected from the research.
5. I understand the data will be kept confidential and reported only on a summary level. I have read and understood the “Privacy Act Statement.”
6. I understand that my participation in this project is voluntary, refusal to participate will involve no penalty or loss of benefits to which I am otherwise entitled. I also understand that I may discontinue participation at any time without penalty or loss of benefits to which I am otherwise entitled.

Statement of Consent. I have read the above information. I have asked all

questions and have had my questions answered. I agree to participate in NPS ALumni Survey.

- ◯ Yes
- ◯ No

Survey Questions

Please note: throughout the survey, an asterisk (*) in front of the question indicates a mandatory question. All mandatory questions must be answered to submit the survey correctly. Please answer all questions as completely as possible.

What is your current status?

- ◯ Active Duty Military
- ◯ Retired Military
- ◯ Civilian employed by Federal Government
- ◯ Civilian employed elsewhere
- ◯ Other (please specify)

Military Questions

While enrolled at NPS what was your branch of service?

- ◯ U.S. Air Force
- ◯ U.S. Army
- ◯ U.S. Coast Guard
- ◯ U.S. Marine Corps
- ◯ U.S. Navy
- ◯ Other U.S. Service
- ◯ Non-U.S. Service

What is (was) your current (highest) rank or grade?

- ◯ 01
- ◯ 02
- ◯ 03
- ◯ 04
- ◯ 05
- ◯ 06
- ◯ Other (please specify)

How many years have (had) you been an officer?

- [ ] 10 or fewer
- [ ] 11 to 19
- [ ] 20 or more

Survey

At what college or university did you receive your bachelor's degree? (If more than one, please indicate them all.)

Did you have a post-baccalaureate degree before enrolling at NPS?

- ◯ Yes
- ◯ No

As a student at NPS, were you in-residence or distance learning?

- ◯ Resident only
- ◯ Distance Learning only
- ◯ Both
- ◯ Other (please specify)

For how many months were you enrolled as a student at NPS? (Respond for highest NPS degree)

	1-Certificate	2-Bachelor	3-Master	4-Engineer	5-PhD
18 or fewer	◯	◯	◯	◯	◯
19-24	◯	◯	◯	◯	◯
25 or more	◯	◯	◯	◯	◯

What was your primary curriculum as a student at NPS?

What is the highest degree that you received from NPS?

- ◯ Certificate
- ◯ Bachelor
- ◯ Engineer

- ◯ Master
- ◯ PhD
- ◯ No Degree
- ◯ Other (please specify)

In what field was your highest NPS degree? (If other, please specify in lower block)

In what year did you receive that degree?

What was your average grade as an UNDERGRADUATE?

What was your average grade at NPS?

Was it relatively difficult or relatively easy for you to transition SOCIALLY from military or other government duty to student life at NPS?

- ◯ Relatively difficult
- ◯ Relatively easy

Was it relatively difficult or relatively easy for you to transition ACADEMICALLY from military or other government duty to student life at NPS?

- ◯ Relatively difficult
- ◯ Relatively easy

Did the amount of your NPS course work seem generally appropriate to the requirements of your degree(s) or certificate(s)?

- ◯ Yes
- ◯ No

Please skip if not military. If military, to what extend did you find your course work at NPS relevant to your military career?

- ◯ Low relevance
- ◯ Moderate relevance
- ◯ High relevance

Did you have a satisfactory relationship with your NPS curricular/program officer or officers?

- ◯ Yes
- ◯ No (Please comment)

How would you generally rate faculty relationships with students at NPS?

- ◯ Cool
- ◯ Indifferent
- ◯ Warm

While a student at NPS, approximately how many hours in a typical week of about 100 active hours did you spend on each of the following? (Please respond with one answer for each activity)

	10 or less	11-20	21-30	31-40	41 or more
Class attendance	◯	◯	◯	◯	◯
Homework	◯	◯	◯	◯	◯
Research	◯	◯	◯	◯	◯
Community service	◯	◯	◯	◯	◯
Outside employment	◯	◯	◯	◯	◯
Family or other personal	◯	◯	◯	◯	◯

What best describes the FREQUENCY with which you used the following NPS facilities or services? (Please respond with one answer for each service)

	At least once a day	At least once a week	At least once a month	At least once a quarter	Never	Other
Library	◯	◯	◯	◯	◯	◯
Computer Labs	◯	◯	◯	◯	◯	◯
Bookstore	◯	◯	◯	◯	◯	◯
Registration	◯	◯	◯	◯	◯	◯
Academic counseling	◯	◯	◯	◯	◯	◯
Laboratories	◯	◯	◯	◯	◯	◯

How would you generally rate the QUALITY of the following NPS services or facilities? (Please respond with one answer for each service)

	Less than adequate	Adequate	More than adequate
Library	◯	◯	◯
Computer services	◯	◯	◯
Computer access	◯	◯	◯
Bookstore	◯	◯	◯
Registration	◯	◯	◯
Academic counseling	◯	◯	◯
Laboratories	◯	◯	◯

Generally rate the following at NPS (Please respond with one answer for each):

	Less than adequate	Adequate	More than adequate
Overall quality of instruction	◯	◯	◯
Overall quality of faculty	◯	◯	◯
Amount of contact with faculty	◯	◯	◯
Currency of course content	◯	◯	◯
Relevance of education to national security and/or defense	◯	◯	◯
Overall experience	◯	◯	◯

How would you rate the advising you received for your thesis, dissertation, or terminal-project at NPS?

- ◯ Poor
- ◯ Fair
- ◯ Good
- ◯ Excellent
- ◯ Did not seek advisement

How would you rate the overall relevance of your thesis, dissertation, or terminal-project to your career after departing NPS?

◯ Low relevance ◯ Moderate relevance ◯ High relevance

If a recipient of an NPS doctorate, how helpful were your advisors in preparing you for successive academic hurdles on the way to your degree?

◯ Less than helpful ◯ Helpful ◯ More than helpful

Did you attend any workshops to help you write your thesis or dissertation?

- ◯ Yes
- ◯ No

Indicate the importance to your career of the following abilities:

	Low importance	Moderate importance	High importance
Decicison-making	◯	◯	◯
Analytical skills	◯	◯	◯
Leadership	◯	◯	◯
Teamwork	◯	◯	◯
Writing	◯	◯	◯
Research	◯	◯	◯
Ethics	◯	◯	◯

Indicate the extent to which your experience at NPS has enhanced the following abilities:

	Low Enhancement	Moderate Enhancement	High Enhancement
Decicison-making	◯	◯	◯
Analytical skills	◯	◯	◯
Leadership	◯	◯	◯
Teamwork	◯	◯	◯
Writing	◯	◯	◯
Research	◯	◯	◯
Ethics	◯	◯	◯

Would you recommend attendance at NPS to any other service members?

- ◯ Yes
- ◯ No

What one thing did you value most about NPS?

What one thing did you value least about NPS?

What changes would you recommend at NPS?

Have you served in a position which was, or is, appropriate to your NPS certificate or degree?

- ◯ Yes
- ◯ No

If military, to what extent have you found your NPS education useful in any of your subsequent OPERATIONAL assignments?

- ◯ Less than useful
- ◯ Useful
- ◯ More than useful

If military, which one of your NPS courses, if any, have you found most useful in your OPERATIONAL assignments after NPS?

If you are a civilian now, to what extent have you found your NPS education to be useful in your current employment?

- ◯ Less than useful
- ◯ Useful
- ◯ More than useful

My education in GSEAS provided me advanced technical and scientific knowledge so that I am / was confident that I understand / understood the capabilities and limitations of current / future technologies in battle space environments.

- ◯ clearly true
- ◯ mostly true
- ◯ mostly false
- ◯ clearly false
- ◯ no opinion/not observed

My education in GSEAS provided me advanced technical and scientific knowledge so that I am/was confident that I am/was able to represent the technical needs and interests of my service both within my service, as well as to other services, constituencies and communities (including OSD, Joint Staff and industry)

◯ clearly true ◯ mostly true ◯ mostly false ◯ clearly false ◯ no opinion/not observed

THANK YOU!

Thank you for your responses. Your efforts will assist NPS in evaluating its programs for future military and defense personnel.

A summary of results, when completed, will be placed on the NPS website (www.nps.edu).

Appendix 2.3C

MBA/MSM PROGRAM CHANGES
Excerpts from 2002-2004 NASPAA Annual Reports

From 2002 NASPAA Report:

The comprehensive review of BPP resident degree programs led to several significant decisions and actions:

- Change of the name of the degree awarded from Masters of Science in Management (MSM) to Masters of Business Administration (MBA). BPP's resident graduate program now leads to a "Defense-Focused MBA".
- Ground up redesign of the set of Core courses within the resident program
- Merging of the Masters of Science in International Resource Management and Planning into the Defense-Focused MBA degree program
- Reorganization of 12 "subspecialty curricula" within the MSM into 6 broader Curricula within the MBA.

BPP's accredited degree programs were significantly revised during the past year. BPP's resident programs have consisted, and continue to consist, of three major parts: (1) a common Management and Public Policy Core, required of all students; (2) a specialization, *i.e.*, subspecialty curricula designed to serve identified Navy education needs; and (3) a thesis/project. The most fundamental changes made were to the Core set of courses.

To initially provide a summary of the revisions, five tables below provide a "previous" vs. "revised" overview of the following aspects of our accredited resident degree program:

- Degree title
- Structure of the degree program
- Graduation requirements
- Required core courses
- Organization of the specialization curricula

A sixth table provides a statement concerning the uniqueness of the program and how it serves our mission to provide graduate level education focused on the defense community.

A detailed (NPS catalog) description of the revised program is in appendix B

DEGREE TITLE	
Previous	**Revised**
• Masters of Science in Management	• Defense-Focused Masters of Business

• Masters of Science in International Resource Management and Planning	Administration

STRUCTURE OF DEGREE PROGRAM	
Previous	**Revised**
Management Fundamentals: 9 courses / 34 credit hours	**Graduate Management Core**: 16 courses / 44 credit hours
Graduate Management Core: 6 courses / 23 credit hours	**Mission-Related Core**: 6 courses / 17 credit hours
Specialization Curriculum: Varies by curriculum 28+ credit hours	**Specialization Curriculum** Varies by curriculum 28+ credit hours
Thesis (or equivalent): 12 credit hours	**Applications Project** (or thesis) 6 (or 12) credit hours
Total: ~97 credit hours	Total: ~95 credit hours

MINIMUM DEGREE REQUIREMENTS	
Previous	**Revised**
Completion or validation of Management Fundamentals (32 credit hours)	Completion of Management Core (44 credit hours)
	Completion of Mission-related Core (17 credit hours)
Completion of an approved sequence of courses in a concentration area	Completion of approved concentration area consisting of a minimum of 24 graduate credit hours
Beyond the Fundamentals, completion of a minimum of 48 graduate credit hours (at least 12 at the 4000 level)	Completion of a minimum of 58 graduate credit hours (at least 22 at the 4000 level)

Completion of a thesis or equivalent	Completion of a thesis or application project report

From 2003 NASPAA Report

Since the major modification to the Core portion of our resident degree program last year, we have continuously sought feedback, particularly from the initial student cohorts starting January 2002, to monitor all aspect of the program. It became clear early on that the effect of the structure of the new Core was to exacerbate materially a problem our students had been experiencing to a lesser degree for a number of years: Excessive academic workload. In responding to evolving and increasing educational requirements of the sponsors of our specialization curricula, we have in recent years added required courses. A significant number of those courses were "small" course (less than the 4-credit hour standard). The cumulative effect on students of added requirements in the specialization curricula (over recent years) and the redesign of the Core portion of our program into smaller, but more, courses (last year) was to increase student workload beyond a level conducive to successful learning.

During Fall 2002, we engaged in a process to correct the student workload problem. Objectives were to:

- Reduce the absolute number of courses (particularly 2-credit courses)
- Reduce the total credit hours in specialization curricula
- Adjust student work assigned in individual courses to correspond to course credit hour size.

The process involved the faculty as a whole in examining the Core portion of the MBA program, the Academic Associates (heads of specialization curricula), in conjunction with group faculty, in examining the Concentration portion of the program, and individual instructors in examining the workload in their courses.

One result of this process was to consolidate a number of the smaller courses within the Core. Overall, the number of courses in the core were reduced by five (from 21 to 16). Total credit hours in the Core were reduced by only one. The table below lists the courses affected and the changes made, with comments.

MBA CORE COURSES -- MODIFICATION CHART

Old Structure			New Structure			
Course #	**Credits**	**Course Title**	**Course #**	**Credits**	**Course Title**	**Comments**
GB3010	(2-0)	Organizations as Systems and Structures	same	(3-0)	Managing for Organizational Effectiveness	Expansion of course by 1 credit hour
GB3011	(2-0)	Teams, Power, Politics				Delete course. Topics redistributed to GB3010, 3012, 4014, 4015
GB3012	(2-0)	Communications for Management	same	(3-0)	Communications for Managers	Expansion of course by 1 credit hour
GB4013	(2-0)	Leadership and Ethics	same	(1-0)	Problem Analysis & Ethical Dillemmas	Reduce by 1 credit. Leadership topics distributed to GB3010, 3012, 4014, 4015
GB4014	(2-0)	Strategy Making	same	(3-0)	Strategic Management	Expansion of course by 1 credit hour
GB4015	(3-0)	Management of Change	same	same	same	Incorporates some of GB3011
GB3070	(3-0)	Economics for Defense Managers	same	(4-0)	same	Incorporates Defense Mkt topics. Expand by 1 credit.
GB4071	(3-0)	Economics & Cost Benefit Analysis	same	(4-0)	Economics & Defense Resource Allocation	Incorporates Defense Mkt topics. Expand by 1 credit.
GB4072	(2-0)	Global Defense Marketplace				Delete course. Topics transferred to GB3070 & GB4071.
GB3041	(3-0)	Analytical Tools for Managerial Decisions	same	(4-0)	same	Incorporates Risk Analysis. Expand by 1 credit.
GB4043	(2-0)	Risk Analysis & Management				Delete course. 1 credit transferred to GB3041.
GB3051	(4-0)	Cost Management	same	(3-0)	same	Transfer Cap. Budgt to GB4052. Reduce by 1 credit
GB4052	(2-0)	Corporate Finance	same	(3-0)	same	Incorporate Cap. Budgt. Expand by 1 credit.
GB3031	(2-0)	Principles of Acquisition Management				SubSpecialty Curricula have Superior Substitute. Keep requirement. Delete Course

A second result of the process was to reduce course and credit hour requirements within each of the specialization curricula. The steps involved deletion of some specialization courses as requirements and reduction of credit hours in selected specialization courses. The table below summarizes the reduction in both the number of courses and total credit hours in our major specialization curricula. (The table reflects the changes to the core course, above.)

Curric	# Qtrs	Old # Courses	New # Courses		Old # Credits	New # Credits		Ave Credits per Qtr
Fin Mgt	6	33	26		97.5	96		16
Def Anal	6	30	25		97.5	96		16
Def Mgt	6	30	24		98	90.5		15.1
REPMID	6	30	25		98	94.5		15.8
LOG	6	36	28		100	95		15.8
Cont Mgt	6	36	29		110.5	99.5		16.6
Prog Mgt	7	43	31		128	111.5		15.9
Manpwr	7	31	29		n/a	111		15.9

Across the curricula, the number of courses have been reduced by at least 5 (17%), up to as many as 12 (28%), across the curricula. The reduction in total credit hours has been significant, although less dramatic, ranging from 1.5 to 16, with the curricula that were most heavily overloaded making the greatest reductions. With these credit reductions, the curricula now average somewhere around 16 +/- hours per quarter, which is a "normal" load.

From 2004 NASPAA Report

Our NASPAA-accredited resident MBA degree program consists of three major parts: A business and public management Core, a defense-relevant Concentration (several specializations available), and an Applications Project. As described in earlier annual reports, this degree program was completely revised during 2001, with the first new class of students enrolled January 2002. The faculty had agreed to conduct a systematic review of the program after the first class had graduated at June 03. This review was initiated during Fall 03 and is continuing. There have been changes in each of the three parts of the program during the past year:

1. Core: The following changes were made to the Core courses. The effect is to reduce the Core by one course and one credit.

MBA Core Courses -- Modifications						
Previous Courses			**Revised Courses**			
Course #	Credits	Course title	Course #	Credits	Course title	Comment
GB4015	(3-0)	Management of Change				Delete course. Change topics transferred to GB3010 &

						GB4014
GB3010	(3-0)	Managing for Organizational Effectiveness	Same	(4-0)	Same	Incorporate Change Management topics. Increased 1 credit.
GB4014	(3-0)	Strategic Management	Same	(4-0)	Same	Incorporate Change Management topics. Increased 1 credit.
GB3040	(4-0)	Research Methods and Data Analysis	Same	Same	Business Statistics and Data Analysis	Focusing of statistics topics in one course. Re-named
GB3041	(4-0)	Analytical Tools for Managerial Decisions				Delete course. Reconstitute topics into GB4043
			GB4043	(3-0)	Business Modeling and Analysis	Re-introduction of course into core.

2. Specialty Concentrations: A new concentration was made available within the MBA program: Information Systems Management. Course within this concentration include:

Required Concentration Courses:

IS3302	(3-2)	Database Management and Decision Support
IS3502	(3-2)	Computer Networks: Wide and Local Area
IS3200	(4-0)	Systems Analysis and Design
IS4182	(4-0)	Information System Policy and Strategy

Career Track Elective Courses

IS3202	(3-2)	Web-Enabled Databases
IS3301	(3-2)	Fundamentals of Decision Support Systems
IS3504	(3-2)	Modern Network Operating Systems
IS4188	(3-2)	Coordination and Collaborative Systems
IS4220	(4-0)	IT-Enabled Re-engineering
IS4300	(4-0)	Software Engineering and Project Management
CS3600	(3-2)	Information Assurance: Fundamentals of Computer Security

3. Application Project: The Application Project was a new part of the curriculum, added at the time of the major program revision in 2001. The Faculty had agreed permit a wide

variety of team-based activities to occur within the Application Project part of the degree program in order to experiment with new and different varieties of student-based learning models. Experience with the Project lead the Faculty to provide some additional structure to the Application Project, in three ways:

- Limits on team size: Student teams were limited to a maximum of three students.
- Limits on Project topics: Application Projects were to address a topic or subject that is “defense-focused” or “defense-relevant”.
- Project Coordinator: A faculty position of “Project Coordinator” was created to facilitate connections between students, advisors and potential Project topics.

Appendix 3.4C

GSBPP Faculty Governance Committees

Proposal for
Faculty Advisory Board

7/07/04

- This proposal recommends the establishment of a standing BPP Faculty committee to serve as the principle faculty advisory body to the Dean.

Domain: The primary role of the Faculty Advisory Board will be to consult with and advise the Dean on BPP-wide issues of policy, strategy, and organization. It is envisioned that both the Dean and the members of the FAB will initiate and propose matters for discussion. Through consultation with faculty, students, administration, sponsors and staff, the FAB will identify issues for consultation with and advice to the Dean. Similarly, the Dean will consult with the FAB to receive faculty advice on matters under his purview

Membership: Membership of the Faculty Advisory Board should satisfy two major criteria:

- Experience: Sufficient experience at NPS so as to understand the mission, organization and operation of the institution. Sufficient experience in BPP so as to know and understand the viewpoints of faculty, students, administrators and staff and the ability and interest to take a School-wide perspective on matters of policy, strategy and organization.

- Representation: Membership of the committee should reflect the types and categories of faculty in BPP.

A suggested membership for the FAB is a committee composed of representatives of faculty groups as follows

- Two members from the tenured faculty
- One member from the untenured, tenure track faculty
- Two members from the Senior Lecturer/Lecturer faculty
- One member from the military faculty
- One faculty member at-large

Members of the Committee shall be selected for two-year staggered terms by election held by each faculty group according to processes decided by each group. The at-large member shall be appointed by the Dean.

Roles, Responsibility and Organization: The responsibility of the FAB is to serve as the standing faculty committee with the broadest perspective on School-wide issues, and to lead the processes of faculty governance in BPP. In this context, the FAB could, for instance:

- Provide recommendations and advice to Dean on policy, strategy and organizational issues, at the initiative of the FAB or at the request of the Dean.
- Act as a task force for developing specific policy recommendations for the Dean
- Recommend that a faculty task force or other ad hoc group be formed to investigate an academic matter or other BPP issue.
- Act as a task force to develop recommendations to be brought to the BPP faculty.
- Exercise oversight and coordination, as necessary, with other groups within in the faculty governance structure.
- Address policies regarding faculty matters such as workload policy, planning and recruiting, orientation, mentoring collegial review, tenure and promotion and quality of worklife.
- The Dean and the FAB will determine the appropriate faculty group to discuss and decide on particular issues.

The FAB shall elect a Chair, and such other officers as deemed necessary. The FAB shall determine its own meeting schedule and agendas in coordination with the Dean.

Proposal for
Faculty Instruction Committee
5/02/04

This proposal recommends the establishment of a standing BPP Faculty committee to serve as the focal point for instructional matters. It comments briefly on three aspects of such a committee:

- Domain: It's sphere of authority
- Membership: Who and why
- Roles and Responsibility: What it's supposed to do

Domain: A first question is what is the domain over which a Faculty committee concerned with instruction and curriculum should have responsibility? Some possibilities, in order of increasingly wider domain, include:

1. MBA Core
2. MBA Program (Core + Subspecialties + Project/Thesis)
3. Resident Programs (MBA + MSM)
4. BPP Degree Programs (Resident Programs + 6 DL Programs)
5. BPP Instructional Programs (Degree + Non-Degree Programs)

As a practical matter, issues related to domain 1 inevitably take place within the context of and involve 2 & 3. Due to the age, history, size and interconnectedness of the resident program, BPP's experience has been characterized by significant faculty interest and attention to the resident program (domains 1-3), with more passive attention to non-resident programs (domains 4 & 5). Without much discussion here, it's recommended that the committee's authority span domains 1-3.

Can't live without an acronym, so a proposed label for the faculty committee focused on resident instruction is the **Resident Instruction Committee (RIC)**.

Membership: Membership of the Resident Instruction Committee should satisfy two major criteria:

- Knowledge: Each member should be expected to be well informed about the Program and it's issues. This argues for the membership to have, through position or activity, significant ongoing involvement with the resident program beyond simply membership on the RIC.

- Representation: Collective membership of the committee should reflect the information and insights of various BPP perspectives on the resident programs.

A suggested membership for the RIC is a committee consisting of the "big 5" AAs, the AA for Internationals, the EARs committee members and the associate dean for

instruction. Each of these individuals would be expected to bring particular relevant and unique knowledge to the committee. Each of these individuals might also be expected to view instructional issues from different perspectives. (The makeup of the committee is designed to encompass all perspectives but permit domination by none.) Here's a table intended to suggest the particular knowledge and perspectives of the committee members:

Title	Incumbent	Area Faculty	Sub-Specialty Students	Core Students	Curric Sponsor	Core Course Sequence	Core Instructors	Core	Admin
AA - FM	San Miguel	X	X		X	X			
AA - OLM	Gue/Kang	X	X		X	X			
AA - ACQ	Snider	X	X		X				
AA – MP&E	Mehay	X	X		X	X			
AA – MGT	Hocevar	X				X			
AA – INTL	Crouch		X						
EARs #1	Crawford			X			X	X	
EARs #2	Doerr			X			X	X	
ADI	Moses			X			X	X	X

Roles & Responsibility: The broad responsibility of the Resident Instruction Committee is to oversee resident instruction programs for the Faculty. In that capacity the RIC would act in three roles:

As Standing Faculty Task Force: Engages major curriculum issues within resident programs. Studies and evaluates issues and proposed actions, and makes recommendations to the BPP Faculty for consideration, as appropriate. (i.e., Acts, on a continuing basis, in the role performed by the Jerry Task Force.) Some examples of matters addressed in this role:

- Content of Core curriculum
- Size, number of credit hours, in the Core
- Size, number of credit hours, in the MBA Program
- Addition & deletion of Core courses
- Creation of new curricula
- Oversight of Sub-specialty curricula

As Instructional Policy Board: Act for the Faculty in making operational policy decisions relevant to resident programs. Some examples of matters addressed in this role:

- Student absences
- Cheating
- Validation
- Part-time students
- Instructor substitutes
- Minimum class meetings

As Advisory Board: Acts as a faculty forum for BPP administration (e.g., ADI) to discuss instructional program issues and initiatives. Provides consultation and advice. Some examples of matters addressed in this role:

- Methods of program integration
- Initiation of a BPP instructional case development program
- Incorporation of JPME into curricula
- Instructional Objectives Program

Proposal for
Faculty Research Committee

7/08/04

This proposal recommends the establishment of a standing BPP Faculty committee to serve as the principle faculty advisory body to the Associate Dean of Research (ADR).

Domain: The primary role of the Faculty Research Committee will be to consult with and advise the ADR on BPP-wide issues of policy and strategy, with the objective of continually improving BPP's scholarly productivity, broadly defined. Both the ADR and the FRC members will initiate and propose matters for discussion.

Membership/Organization: Membership of the Faculty Research Committee should have sufficient research experience and activity to understand the NPS and BPP research organizations and environment. To offer a school-wide perspective on research policy issues, membership should also reflect all types and categories of BPP faculty involved in scholarly activities. Membership for the FRC will include five faculty members representing the diversity of faculty in BPP, including:

- Tenured Professors/Associate Professors
- Untenured tenure-track faculty member
- Lecturers/Senior Lecturers

Members of the Committee shall serve for two year terms, and be selected by the Associate Dean of Research. The FRC will elect a chair or other officer(s) as deemed necessary. The FRC shall determine its own meeting schedule and agendas in coordination with the ADR.

Roles, Responsibility and Organization: The FRC will serve as a standing advisory faculty committee with overall responsibility for promoting the health and vitality of scholarly activity in BPP. In this context, the FRC could:

- Develop recommendations or provide advice to the ADR or the Dean on research policy, strategy and organizational issues, at the initiative of the FRC or at the request of the ADR. Issue might include:
    - Research productivity incentives
    - Distribution and accountability for workload relief funding
    - Internal BPP research funding allocation processes (chair funds)
    - Research mentoring policies (transition from RIP, etc.)
    - Internal research publication outlets (technical reports, e-journal, etc.)
    - Student application project coordination
- Act as a task force to develop recommendations for the BPP faculty.

Appendix 3.4D

NPS Academic Council Policy on adding and Modifying Courses

Chapter 8

Modifying the NPS Curriculum

8.1 Adding and Modifying Courses in the Course Catalog

(Approved: May 17, 1995)

Before offering a new course, a request for approval must be made to the Academic Council Course Review Committee at least four months in advance of its intended initial offering. All requests for adding a new course or changing the NPS Course Catalog description of an existing course must be addressed as shown below:

From: _____Chair, Department of _____
Via: _____Associate Provost for Academic Affairs (Code 06)
To: _____Chair, Course Review Committee
Copy: _____Code 611, all Departments and Curricular Offices

A valid request must contain all of the following information:

1. Catalog description, including the following:
   - Course Number, title and credit hours;
   - Curricula served (if restricted to one or a few);
   - Course description (must highlight DoD/DoN relevance, if any);
   - Prerequisites
   - Security Classification, if any;
   - Pass/Fail status, if applicable

For minor changes to an existing course, an annotated copy of the current Catalog description satisfies (a) and (b).

1. Course Syllabus. This need not be a day-by-day account, but must be detailed enough so that the Academic Council and all affected Departments can determine how much time is spent on each topic.
2. Justification. This is to be a free-form discussion on the rationale for adding new course or changing an existing one. This must include:
   - Whether the course is required to satisfy a degree requirement or Educational Skill Requirement, or is an elective.
   - Whether the course is a prerequisite or a terminal course.
   - Justification for the level of classification of the course.
3. Duplication. A list of courses covering similar topic must be provided. If applicable, a justification of course duplication is also required. If no existing course at NPS covers a similar set of topics, a no-duplication statement must be included.
4. Resources. A statement indicating whether a new or revised course will require a non-negligible increase in extra-departmental resources, such as a new instructor, new laboratory space, or new laboratory equipment. If a significant increase in extra departmental resources is required and endorsement from the appropriate School Dean indicating these resources will be made available must be attached.

5. Schedule. Indicate the proposed schedule for the course (e.g. Every Spring, starting in 1994).

Appendix 3.4G

FACULTY WORKLOAD PLANNING IN GSBPP
9/05

This document attempts to do three things:

- Describe broadly the Workload Planning process in BPP.
- Outline policies and guidelines related to that process.
- Identify normal workload rates for some specified activities

ANNUAL WORKLOAD PLAN PROCESS:

Annual workload plans are filled out by each faculty member shortly before each new academic year. One metric used in the plans is credit hours (ch). A quarter is 11 ch, a full year is 44 ch. All faculty members who plan to be paid for a full calendar year need to identify expected workload totaling at least 44 ch. (Sometimes work is not specified in terms of ch, but rather directly in terms of $ salary or number of days. Translation between the three metrics is possible given that 1 ch equates to about 6 days of work, and faculty have a daily salary rate.)

The workload planning process takes place during summer quarter. Prior to the workload planning process, the annual teaching plan has been developed for faculty in each academic area, coordinated by the AA s and ADI. This teaching plan provides one input to the faculty and serves as a starting point for completion of individual workload plans.

Communication may occur between a faculty member and the SAD or Dean, if desired, or necessary for a workload plan to be completed. The workload plan is a planning document, viewed as an initial agreement, although not a rigid one. Revisions may occur throughout the year in response to changing circumstances.

BBP WORKLOAD PLANNING GUIDELINES

1. The norm for an annual workload is 44 credit hours (ch) of work activities in a year. (1 ch is equal to approximately 6 workdays, with typically about 262 workdays in a year.)

2. Tenured track faculty are normally expected to teach for a minimum of two quarters a year in BPP degree programs (i.e., have 22 ch dedicated to instruction-related work, including teaching, project or thesis supervision, or instructional development.) Lecturers are normally expected to teach a minimum of three quarters a year. Faculty may devote more time to instruction than the expected minimum, if they desire. Faculty may devote less time to instruction than the expected minimum if their instructional services are not required to cover necessary BPP courses, with approval by the Dean.

3. In both cases (lecturers and tenure track faculty), the rest of the year may be made up of a variety of activities including reimbursable projects, BPP or NPS funded research, non-degree instruction, administration, and service work for which BPP offers workload credit.

4. Faculty work does not come in easily separable parts. It is OK to work 46 or 47 ch where work is not divisible. Faculty who face a larger workload year than this should seek relief as soon as the forecast becomes apparent. Faculty whose workload year is in the 50's should seek to shift work to colleagues.

5. Should a "direct-funded" course (i.e., resident and EMBA courses) be cancelled during the school year, tenure track faculty may still be paid. The Dean may assign the faculty member alternative work of benefit to the School. If a reimbursable funded activity falls through, then the faculty member may be expected to bear the responsibility of replacing the workload or accepting leave with out pay. (This is no change from how it has always been done.)

6. For accounting purposes, faculty should at the planning stage try to distribute their activities across the four quarters so that workload in each quarter reaches an 11 ch minimum.

7. Faculty whose workload year does not approximate these guidelines should meet with the Dean or SAD to develop an acceptable profile within the context of BPP needs and faculty considerations.

FACULTY ACTIVITIES

Workload generally falls within four broad areas. What follows is more detail about those categories and indications of workload compensation for particular kinds of activities.

INSTRUCTIONAL ACTIVITIES:

Instructional activities consist of **Teaching**, **Advising**, and **Instructional Development** Activities. The norm (often departed from) for an "Instructional Quarter" is perhaps 8 ch of teaching, with advising and/or instructional development activities filling out an additional 3 ch.

Resident Teaching: BPP develops its annual teaching plan starting during Spring qtr each year. The Associate Dean for Instruction (ADI), in conjunction with AAs and Program Managers (PM), forecasts expected courses needed. AAs, in consultation with their area faculty, coordinate the staffing of those courses.

Workload compensation for resident teaching is:

- *MBA Core courses: 1ch of workload for 1 ch of course credit*
- *Concentration courses: 1ch of workload for 1 ch of course credit*
- *Service courses: 1ch of workload for 1 ch of course credit*

Distance Leaning Teaching: Includes instruction in the BPP DL programs – i.e., EMBA, MSPM, MSCM, AAP, AMDLP, MSSEM (PD21).

Workload compensation for reimbursable teaching: During 2001, GSBPP faculty approved the "DL Matrix", a table that specifies the expected compensation for DL teaching. Expected rates vary depending on mode (VTE or travel) and other factors. (Actual rates have also been affected by a program's ability to pay.)

The broad standard for VTE is:

- *1.5 ch of workload for 1 ch of course credit.*

Instruction in LEAD program:

- *As determined by LEAD program manager. Approximately 1 ch of workload for 1 ch of course credit.*

The actual compensation rate available in AY06 to Acquisition faculty teaching in the MSCM and MSPM programs is to be determined and will depend on the outcome of an Indirect cost relief request. Should the request be rejected, compensation may be reduced to

- *1.2 ch of workload for each 1 ch of course credit*

*Thesis/Project Advising**: Individual faculty specify in their workload plan the amount of workload they expect to come from advising theses or projects. Actual thesis workload accomplished at the end of a year may vary (higher or lower) from the amount planned. No action is taken on annual basis under the assumption that overloads and underloads will average out over the long haul. Continual underloads may lead to the Dean requiring extra course teaching or some other assignment.***

During 2006, MBA project advising will continue to be compensated at the same rate as thesis advising. Regardless of the number of students on a project team, each student carries 1.5 ch of workload. Guidelines for advising workload compensation are:

Workload compensation for <u>thesis or project advising</u>:

- *Primary Advisor:* *1 ch*
- *Co-Advisor:* *.75 ch*
- **Associate Advisor (Reader):** **.5 ch**

Instructional Development Activities: Instructional Development includes various activities directed toward improvement of BPP's instructional programs. These may include activities such as

Development of courses, new or adapted.
Development of teaching cases or other instructional materials
Integration projects
Faculty teaching development
Faculty participation in IDL course
Miscellaneous instruction-related projects

The ADI (for the resident MBA program) and the ADDL and PMs (for DL programs) arrange with individual faculty for development projects. Ch compensation depends on the nature and scope of the project or task.

Some previous examples of workload compensation for course development:

- *EMBA: Approx 1-3 ch range, depending on scope*
- *MBA core: new course: 1 ch of workload for 1 ch of course credit*
- **MBA core: adapted course: .25 ch of workload for 1 ch of course credit**
- *PD21: new course: Up to .75 qtr of workload for 4 credit course*
- *PD21: adapted course: Up to 1/2 qtr of workload for 4 credit course*

Standard compensation for participation in the IDL course: 3 ch.

Compensation for IMET instructional development project: As determined via proposal.

RESEARCH ACTIVITIES

Reimbursable Research: Individual faculty develop their own plans for research, working with sponsors to secure reimbursable funding. Principle investigators (PI) may coordinate with other faculty for their participation on a particular reimbursable research project. Experience is that there may be considerable uncertainty concerning the actual availability of reimbursable research funding for some projects until after the start of the AY.

Workload compensation for reimbursable research: As negotiated with sponsor.

Direct Funded Research: Faculty may have time funded by NPS or BPP to conduct research. NPS funds the Research Initiation Project (RIP) program for newly hired faculty. BPP receives some mission funding from NPS for direct-funding of research. These funds consist principally of a share of the faculty "workload relief" funds secured by NPS starting 2003.

Since NPS has usually not settled on the final budget distribution to the Schools, the amount of funds available to BPP to direct-fund faculty scholarship is typically uncertain at the time faculty are asked to complete their workload plans. The faculty workload planning process helps determine the expected demand for these funds and then permits a comparison with the future 06 budget.

Anticipated workload compensation from direct funds:

- *RIP for new faculty from NPS: Generally 2 quarters for the first two years.*
- *Third year RIP from BPP: Up to 4 months, as necessary to supplement other research funding opportunities.*
- *BPP Workload Relief funds: Nominally, 2 months per tenure track faculty member, but depends on funds available and acceptance of a proposal. Two months, if desired, for untenured junior faculty.*

ADMINISTRATION

GSBPP-Funded Administrative Positions: Responsibility for staffing of these positions rests with the Dean. The period of appointment for these positions rarely coincides with the AY, so incumbents are generally known prior to the annual workload planning process. Workload compensated positions include the Associate Deans (ADR, ADI, ADDL, ADFA), the Academic Associates (AAs) and selected Directors.

Workload compensation for administrative positions:

- *AAs: ½ to 1 quarter, depending on curriculum.*
- *ADs: Has ranged from 1 to 2 quarters.*

Sponsor-Funded Administrative Positions: Resources for these programs are controlled through the Dean. Responsibility for staffing of these positions falls to the Dean. Examples of these positions include the ADDL and PMs of AAP, LEAD, MSCM, MSPM, EMBA.

Workload compensation: As determined through consultation among Dean, PM, and program budget. Nominally, one quarter, 11 ch.

SPECIAL PROJECTS AND OTHER ACTIVITIES

This is catch-all category for any other activities. Faculty may be given "release time" to accomplish activities non-trivial in scope. Special projects may be direct funded by the Dean, by NPS, or through reimbursables. Examples are many and the list below is not exhaustive. (Some of these items could as well have been listed under Administrative activities.

- Program development (e.g., Spadework on the EMBA, Development of Continuing Ed. for alumni)
- Advisors (e.g., Advisor for LEAD program students, NPS Supply Corp Advisor, Army Sponsorship advisor)
- Heading up the BPP accreditation process (e.g., NASPAA, AACSB)
- Development of BPP systems (e.g., development of GSBPP web site)
- Development of a Research Center
- Significant NPS service activity (e.g., NPS Faculty Chairman)
- Significant BPP service activity (e.g., MBA Policy Committee Chair)
- Significant external professional position (e.g., NCMA President)
- Significant external academic position (e.g., Journal editor)
- Program marketing activities
- Management of DAU equivalency
- Quick-time response to request for "consulting" by DoD command.
- Faculty development

Workload compensation for special projects: As negotiated with, or set by, the Dean, PI, PM or other party.

PROFESSIONALISM: UNCOMPENSATED ACTIVITIES

There are activities performed by faculty that carry no explicit workload credit, but are typically expected of faculty in their role as academics. Some broad areas are:

- Routine service on BPP/NPS standing or ad hoc committees (e.g., Faculty Council, Academic Council, FAB, FIC, FRC, Collegial Review committee, DEC committees)
- Routine service to Professional/Academic communities (e.g., journal paper reviewer, membership on professional society committees, membership on DoD boards).
- Faculty Citizenship (e.g., participation in P&T process, participation in faculty meetings, participation in faculty recruiting process)

Appendix 3.4I1

GSBPP Policy on Recruiting and Appointment of Tenure Track Faculty

Approved by the GSBPP faculty, May 15, 2003

Initiation of Recruiting Process

The Academic Associates (AAs) and the Associate Dean for Faculty Affairs (ADFA) are responsible for identifying vacancies to be filled. The AA will consult with other faculty in the area for consensus on the need for recruiting. Recruiting is to be clearly based on specific teaching requirements.

If there is a consensus with the area on the need for recruiting, the AA requests the approval of the Dean through the ADFA to begin the recruiting process.

Recruiting Strategy and Scheduling

The AA consults with all colleagues in the area to determine the recruiting strategy. The strategy will include the selection criteria specific to the position, planned advertising (journals, professional society Web sites, conference interviews), and the schedule for campus visits by candidates. The ADFA then endorses the recruiting strategy and forwards it to the Dean for approval.

The ADFA is responsible for arranging advertising in consultation with the AA, and for ensuring compliance with EEO requirements

All applications, whether hard copy or electronic, are to be addressed to the Dean.
The ADFA forwards all applications to the appropriate AAs.

Where faculty members receive applications directly, they are to be passed to the appropriate AA. Each AA is responsible for reviewing the resume and if appropriate, forwarding it to other AAs where the applicant may have skills corresponding to other areas.

Review of applications

Following receipt of applications, the AA is to circulate the resumes of all candidates to the area faculty, who will conduct preliminary resume evaluation, and create a short list of qualified candidates. Applicants must then be interviewed by phone or in person (such as at a conference) by at least one of the area tenure track faculty prior to be considered for a campus visit.

For candidates under consideration in more than one area, the AAs will coordinate the evaluation effort, while agreeing among themselves as to who will act as lead AA.

Following phone or in-person interviews interviewing faculty will provide a short assessment to all area faculty members, who are responsible for reviewing and ranking the candidates on the short list.

The AA is to request three letters of reference from candidates being considered for a campus visit.

The AA forwards a ranked list of potential candidates for on-campus interviews to the Dean through the ADFA, along with campus visit scheduling recommendations. The Dean approves all campus visits for faculty candidates.

The ADFA is responsible for determining visit dates in consultation with the Dean and AAs. At least three weeks should be allowed between the approval of the visit by the Dean and the start of the candidate's travel to NPS.

Interviews that have the likelihood of resulting in accepted offers early in the year are best. Candidates for tenure track positions should have the potential for achieving promotion and tenure at NPS.

Citizenship Status

For candidates under consideration for a campus visit, the AA should obtain the immigration status of the applicant, i.e.: U.S. citizen, permanent resident of the U.S., or other status. Where the candidate is a permanent resident of the U.S., also determine the foreign citizenship(s) held. For those applicants currently residing in the U.S. that are not U.S. citizens or permanent residents, ascertain the type of visa and expiry date as well as foreign citizenship(s) held.

When a candidate under consideration for a campus visit is not a U.S. citizen, the ADFA will consult with HRO prior to recommending the candidate for a campus interview to the Dean. HRO will advise whether the candidate would potentially be eligible for employment authorization and if applicable, sponsorship for permanent resident status and citizenship.

Candidate Visits

In arranging campus visits, the goal is to invite in no more than four candidates per vacant position. As much as possible, only one candidate should be invited at a time per area. The goal is to stop the process as soon as we have acceptable candidates. We want to avoid canceling someone's scheduled trip if an offer has not been accepted, or if it would be awkward. Area faculty will determine the most appropriate strategy for inviting multiple faculty candidates.

The highest ranked candidates should be scheduled first. Candidates must meet with the Dean, Associate Deans, all available faculty within the area, at least three faculty from other areas, at least two full professors (at least one of whom should be from another area), at least one civilian lecturer or senior lecturer, and at least one active-duty military faculty member.

The AA is responsible for organizing visits, including travel. AAs may share the responsibility for organizing individual visits with other faculty members; this is particularly desirable where a number of visits are planned, or where an individual faculty member has common interests or background with a candidate.

The expectation is that the candidate will be on campus for 1½ to 2 days. The preferred interview days are Thursday and Friday. The expectation will be that the candidates will leave Monterey on Saturday or Sunday, allowing time to visit the area.

The AA should also inquire whether the candidate wishes to meet with a real estate agent, and offer to make an appointment on behalf of the candidate, unless the candidate prefers to deal with an agent directly. The ADFA can recommend an agent to the candidate.

The candidate will give a research presentation to the faculty during the visit. The candidate should be asked to limit the presentation to one hour, and e-mail the presentation to the AA prior to departing for NPS.

The AA will announce the research presentation via e-mail to all GSBPP faculty members, and will post notices on the doors of the multi-purpose and photocopier rooms. The AA should also consider inviting faculty from other academic units who might be interested in hearing the presentation.

The AA will e-mail the Candidate Evaluation Form included at the end of this policy to all interviewers prior to meeting with candidate. The form should also be passed out to all attendees at the research presentation who have not previously received it by e-mail.

Candidate Evaluations and Offers

Following the interviews and research presentation, area faculty are to analyze the Candidate Evaluation Forms and consider candidates. The interviewed candidates are to be listed from best to worst, based on information provided by the candidate, interviews, letters of reference, and any other relevant information.

At the end of the recruiting process, the final ranking should be described and the process of arriving at it should be described in a memo to be included with the documentation described at the end of this policy.

For each candidate there will be written evaluations and a recommendation to the Dean of whether an offer should be extended.

If an individual is to be appointed at the rank of Professor, the candidate will be presented to the senior faculty for their recommendation before the Dean considers the application.

The Dean, in consultation with area faculty, determines who is to be offered positions and at what rank. The Dean negotiates salary, workload, and related compensation and benefits issues with the candidate, and makes offers in accordance with direction from the Provost.

Once the Dean and the candidate have come to an agreement on the prospective offer, the ADFA prepares a recruitment package in consultation with the AA. The Dean approves the recruitment package and forwards it to the Director of Academic Planning.

In preparing the recruitment package, the ADFA will consult with the Office of the Provost to determine the availability of funding to cover relocation costs for the candidate.

Following each offer, the ADFA will write a memo documenting the following:

a. The rank and tenure status of the position offered;

b. Any provisions related to workload; and

c. Any other unique characteristics of the offer.

Records Management

AAs and the ADFA are responsible for preparing records of the recruiting process. These records are to be maintained electronically on at least two Zip disks or compact disks held in separate locations by staff supporting the ADFA. All recruiting process records are to be retained for at least five years.

Documentation will include the following:

a. A register of applicants showing their status, what was done with them and when (i.e. when were they acknowledged, invited to visit, rejected, hired);

b. Resumes, covering letters, letters of reference, and other application materials;

c. All correspondence with candidates including acknowledgement and rejection letters;

d. The seminar announcement for the candidate's presentation;

e. Evaluations and evaluation summaries on candidates who visited NPS as well as travel information;

f. Correspondence between the AA, ADFA and the Dean with respect to the evaluation of candidates;

g. Advertisements in print publications and electronic media; and

h. Candidate travel orders and claims.

Graduate School of Business and Public Policy

Evaluation of Faculty Candidate

Name of Candidate:

Position: _____

Evaluator:

1. What opportunity did you have to evaluate the candidate? *(Check ALL that apply.)*

□ Reviewed vita □ Attended Seminar
□ Interview □ Other (describe)

2. What is your evaluation of the candidate's potential in the following areas? (5=Outstanding; 4=Excellent; 3=Good; 2= Fair; 1= Marginal; Blank= No Opinion)

Publishing in Scholarly Academic Journals _____

Conducting Research Related to DoN and DoD _____

Teaching at NPS _____

Supervising Student Theses/Research Projects _____

Contributing to NPS/GSBPP via Service Leadership _____

3. Comment briefly on overall strengths and weaknesses of the candidate. Use back of page to elaborate.

4. Recommended Action:

Seriously Consider Extending Offer: _____
Re-evaluate Candidate After Interviewing Other Candidates:_____
Reject Candidate: _____

Appendix 3.4I2
NPS Instruction for Annual Faculty Activity Report

7 February 2006

MEMORANDUM

From: Provost
To: Faculty

Subj: FACULTY ACTIVITY REPORTS FOR CALENDAR YEAR 2005

1. Each year, the Faculty Activity Report (FAR) allows you to tell your Chair and/or Dean what your professional accomplishments were for the past calendar year (1 January - 31 December 2005). Department/Group Chairs and Deans use the information in the FAR for your annual appraisal and for the purposes of determining merit pay increases. The FAR consists of the following sections:

A. Narrative Summary
B. Teaching Load
C. Theses Advised
D. Research Summaries
E. Publications
F. Quarterly Workload Forms
G. Suggestions for Improvement

2. Data for sections B and C are generated in Python by your Administrative Support Assistant. The two report titles are “Teaching Load Report” and “Thesis Advisor Report. Both are located in the “Planning” menu of Python. Section F should be on file in your School/Department/Group's office.

3. The Narrative Summary is a faculty member’s opportunity to highlight her/his most significant activities or accomplishments of Calendar Year 2005. The Narrative Summary should be kept brief, normally no longer than two or three pages. Although the format or style of a report may vary, based on the faculty member’s accomplishments and areas of concentration, the activities covered in a Narrative summary are typically divided into three general areas: Instruction, Research, and Service.

4. Suggestions for Improvement are encouraged, but not required.

5. The following documents are attached as background information and further guidance.

- (1) Pages 5-9 of this year's promotion & tenure guidelines. These are examples of information and activities that one could highlight in an activity report.
- (2) Faculty Activity checklist. You can use this as an aid in recalling your important activities of the past year.
- (3) Instructions for Sections D and E.

Please submit the following documents electronically (as a MS-Word file) and in hard copy (if hard copy requested) to the appropriate administrative officer for your Chair or Dean by **March 10, 2006**:

A. Narrative Summary (Faculty member *writes* this, required.)
B. Course sections taught (Faculty member *verifies* this, required.)
C. Theses advised (Faculty member *verifies* this, required.)
F. Quarterly workload forms (Faculty member *verifies* this, required.)
G. Suggestions for improvement (Faculty member *writes* this, optional.)

The submission deadline for sections D and E to the Research and Sponsored Programs Office is also **March 10, 2006**. Sections D & E will be forwarded to your Associate Chair/Dean for Research. Submission must be in Word. Please adhere to deadlines set within your activity to assure submission by March 10, 2006.

D. Research summaries (Faculty member *writes* this, required of Research PIs only.)
E. Publications (Faculty member *writes* this, required.)

EXCERPT FROM PROMOTION & TENURE GUIDELINES

INTERNAL NPS ACTIVITIES

1. Internal Teaching Activities

a. Course and laboratory development. Description of courses developed, instructional materials written, laboratory facilities acquired, and experiments developed. Indicate any development work that supported operational curricula.

b. DoN/DoD applications. Describe any contributions made in instructional-related activities, emphasizing DoN/DoD applications.

c. Teaching techniques developed. List any techniques developed; include information on planning, testing, and evaluation.

d. Thesis supervision. List all theses where the candidate served as
(i) advisor
(ii) co-advisor
(iii)second reader.

Subdivide the listing into the above three groups. Within each subdivision, list these in reverse-chronological order (i.e., the most recent appearing first) with student name, thesis title, NPS degree received, and the month and year of graduation.

e. Self-improvement efforts. Include any attendance at workshops and conferences to improve any aspect of instruction, any auditing courses at NPS or elsewhere, etc.

f. Reading courses taught. List quarter and year, number of students, and subject.

g. Instructional materials. List any materials prepared and updated, any courses administered.

h. Mentoring. Describe any efforts to improve instruction of other faculty, development of instructional staff, etc.

i. Course coordination. List any courses requiring significant efforts to coordinate.

j. Other instruction information. Describe any other contributions to instruction that might be relevant.

k. Other information on evaluation of instruction. Evaluation material must be offered that supplements the SOF. New guidance to offer those data are presented in the Chair's report section. (Summary SOF data are presented in the Chair's report section. Do not include any SOF comments.)

2. Internal Research Activities

a. Summary of research projects. List chronologically all research projects including

(i) title
(ii) sponsor(s),
(iii)funding level,
(iv) identification of the principal investigator,
(v) brief description of the project,
(vi) level of effort (i.e. fraction of WY supported by project funds),
(vii) students participating,
(viii) numbers of staff and other faculty supported,
(ix) the candidate's role in the project, and
(x) publications resulting from the project. (Use reference numbers from the publication subsection below [Subsection III.2.a] to identify the publications.)

b. Thesis Contributions. Describe any contributions to the research efforts of NPS student theses beyond those listed in Section II.1.d.

c. Contributions to interdisciplinary NPS research projects. Describe any contributions to interdisciplinary research. Also include any development of research facilities used for interdisciplinary work.

d. Visiting researchers attracted. Identify any research associates and postdoctoral fellows attracted, any technical staff developed/supported, and/or any development of research programs for improving or enhancing the skills of other faculty.

3. Internal Administrative and Service Activities

a. Committee Service. List NPS faculty committees and councils, department committees, and administrative service activities. Indicate level of effort, and significant contributions.

b. Service as Academic Associate. Summarize by curriculum, number of students, release time, and major activities.

III. EXTERNAL ACTIVITIES

1. External Teaching Activities

a. Courses presented at other universities, installations, etc.

b. Course materials used at other universities, title, and number of places used.

c. Other significant products used externally for instruction, such as computer-aided instruction case studies, laboratory experiments, computer design/graphics products, etc.

d. Short course initiation, coordination and participation. Include hours of instruction, where offered, when offered, evaluation results by course sponsors and attendees, and a summary statement of the responsibility of candidate.

e. Distance Learning course initiation, coordination and participation. Include hours of instruction, where offered, when offered, evaluation results by course sponsors and attendees, and a summary statement of the responsibility of candidate.

[Note: The DEC should make efforts to obtain critical external evaluation of any external instruction products in the above subsections.]

2. External Research Activities

a. Products distributed outside NPS. Chronological list of items segregated into following categories:

(i) books[1]
(ii) chapters in books[1]
(iii) refereed journal papers/cases[2]
(iv) non-refereed journal papers/cases[2]
(v) refereed conference papers[1]
(vi) invited conference papers[2]
(vii) presentations[2]
(viii) refereed technical reports[1]
(ix) non-refereed technical reports[2]
(x) published computer programs[1]
(xi) book reviews[2]
(xii) patents
(xiii) other

3. External Professional and Service Activities (Indicate membership, leadership role, nature of service and accomplishments.)

a. Navy/DoD Activity. List any contributions to the mission of the Navy and Marine Corps, or to other DOD activities, including consulting, workshops, and advisory boards, or temporary assignments to operational units, systems commands, laboratories or headquarters.

b. External Professional Activities. Professional societies, industrial or academic consulting, workshops/conferences/sessions organized (including dates, place, faculty member's role), paper discussant, seminars, etc.

c. Other external service activities including, e.g., community service.

1. For each item, indicate the nature of the review/refereeing process and include a complete citation. Sequentially number all publications so those can be referred to.
2. For these items, include any indicators of quality or significant. Note: a broad range of products is accepted as personal scholarly productivity, but it is crucial that creditable experts outside NPS judge the quality of the work. Methodologies for doing so are described in the report on measuring faculty productivity, aka "The Powers Report"

[Note: A broad range of products is accepted as evidence of external professional and service activities. When the candidate claims a major impact for the activity, it is required that creditable experts outside NPS judge the quality of the work. Methodologies for doing so are described in the report on measuring faculty productivity.][1]

1 The Powers Report

FACULTY ACTIVITY CHECKLIST
(Intended to be used as a memory jogger)

ACTIVITIES RELATED TO TEACHING:

- New courses you have created
- Existing courses you redesigned
- Thesis/dissertation committees on which you served
- Students you have taught individually in independent or directed studies
- Students who have co-authored a journal article or book chapter with you
- Students who have co-presented a paper at a professional meeting with you

ACTIVITIES RELATED TO SCHOLARSHIP:

- Print or electronic refereed journal articles, book chapters, and creative works you have published
- Print or electronic non-refereed journal articles, book chapters, and creative works you have published
- Single-author or join-author books or monographs you have written and have had published by an academic or commercial press
- Manuscripts (e.g., journal articles, books) you have submitted to publishers
- Books, collections, and monographs you have edited
- Books, journal articles, and manuscripts you have reviewed and formally submitted
- Editorial positions you held
- Briefings to sponsors
- Digital programs or development of applications and items for technology transfer (e.g., software development, web-based learning modules) you designed related to your field of expertise
- Provisional or issued patents registered in your name
- Works in progress (e.g., journal articles)
- Invitations you have received to present a professional talk
- Formal presentations you have made at state, regional, national, and international professional meetings
- External and internal grant, contract, and scholarly fellowship proposals you have submitted
- New external grants, contracts, and scholarly fellowships which have been formally awarded to you or NPS on your behalf

Attachment (2)

ACTIVITIES RELATED TO SERVICE:

- Activities related to service in your institution (e.g., faculty council, faculty committees, search committees, peer mentoring, recruiting efforts, reappointment committees, promotion/tenure committees, student activity advisor, other student activity involvement) in which you have engaged
- Outreach activities related to your field of expertise (e.g., community workshops, invited talks to community groups, seminars, lectures, demonstrations) in which you have engaged
- Activities related to your profession (e.g., service on a regional or national committee, service on a self-study visitation team for another institution) in which you have engaged
- Grant proposals you have reviewed related to your field of expertise
- Positions in professional associations where you held a leadership role (e.g., elected officer, committee chairperson, conference chair

INSTRUCTIONS FOR SECTIONS D and E
ANNUAL RESEARCH PROJECT SUMMARIES AND LIST OF PUBLICATIONS/PRESENTATIONS

Encl: (1) Instruction for the Preparation of Research Project Summaries
(2) Instructions for the Preparation of List of Publications and Presentations
(3) Sample Research Project Summary
(4) Sample Bibliographic Notations

1. In conjunction with your Faculty Activity Report (Sections D and E), the Research and Sponsored Programs Office (RSPO) compiles an annual summary of research projects and publications/presentations by faculty. We need to collect the data for the 2005 Research Summary Book. All faculty are expected to submit: (1) a summary for each research project undertaken in CY04, and (2) a listing of all publications/ presentations **completed** in CY05. These data are compiled and published and serve as the official record of faculty research, publication, and presentation activity. They will be posted on the World Wide Web and distributed electronically.

2. Your cooperation in providing complete, accurate, and timely information is very much appreciated. To assist you in the preparation of your project summary(s), the RSPO will provide you with a listing of your funded projects in FY05. This will be provided under separate cover. Please note that your publications/presentations are required even if you did not have a funded research project.

3. Instructions for preparation of the individual summaries and the publication/presentation list are provided as enclosures (1) and (2). Enclosure (3) provides a sample project summary. Enclosure (4) provides sample bibliographic citations.

4. The Associate Chair/Dean for Research will collect the data for each Department/Institute. All information is required in the Research Office by **10 March 2006**, so please adhere to the deadline established by your Associate Chair/Dean for Research in order to allow sufficient time for collection of the data and forwarding to the Research Office.

5. If you have any questions, please call Jodie Dodge (extension 3977 or e-mail rjdodge@nps.edu) or Danielle Kuska (extension 2099 or e-mail dkuska@nps.edu).

Attachment (3)

INSTRUCTIONS FOR PREPARATION OF RESEARCH PROJECT SUMMARY

1. All faculty must submit Research Project Summaries for research undertaken in CY05. Summaries must be provided for sponsored research, institutionally funded research, and any other significant, but unfunded, research project.

2. Only one summary should be submitted for each project unless the project is divided into distinct sub-projects. The project summary is the responsibility of the Principal Investigator, or joint responsibility of co-investigators.

3. The following information must be included for each summary:

   Heading: The heading includes the project title, the names of the investigators, and the sponsoring agency. The first line should list the title of the project, the second line should list the Principal Investigator(s), and the fourth line should indicate the sponsoring activity. The title should be in all capital letters. The investigator(s) name(s) and sponsor should be in upper and lower case. If the project is reimbursably funded, list the outside agency for whom the work was performed. If NPS Institutionally Funded Research (NIFR) funded research, please list NPS as a co-sponsor. If the work was funded by CDTEMS, please list the Center for Defense Technology and Education for the Military Services as the sponsor. If the project is unfunded, please indicate so.

   Objective: Provide a short statement of the research objective. If the work is part of a continuing project, please indicate so.

   Summary: Summarize the work accomplished in 100-200 words using the past tense. Summaries must be written in the third person. If the project is continuing, emphasize the current reporting period.

   Publications: List publications originating from the project, which have been published in CY05. List also any publications resulting from the project that are accepted for publication. Please use proper bibliographic format and do not abbreviate journal titles.

Presentations: List conference presentations originating from the project and delivered during CY05. List also, any presentations resulting from the project that are scheduled for delivery. Please use appropriate bibliographic format. Do not abbreviate conference titles. List city, state/country where conference was held, and date(s) of conference.

Theses Directed: List theses originating from the project and written by students who graduated during CY05 (March 2005, June 2005, September 2005, or December 2005).

Patent Applications: List patent applications originating from the project during CY05.

Other: List other relevant output originating from the project (working papers, papers in progress, software) during CY05. These items may be reported in a single brief paragraph.

Keywords: Provide at least three keywords under which your project can be categorized.

4. Please follow the format in enclosure (3). All faculty should submit this information electronically and in hard copy to their Associate Chair/Dean for Research. All submissions must be in Word.

INSTRUCTIONS FOR THE PREPARATION OF LIST OF PUBLICATIONS and PRESENTATIONS

1. All faculty must submit a List of Publications and Presentations for CY05. This listing will include only those items published/presented within CY05. Please list publications in the categories listed below following proper bibliographic notation as provided in the same at enclosure (4).

2. Categories of publication/presentation are:

Journal Papers/Articles: List only those published during CY05 in refereed journals.

Book Reviews: List critical analysis of a book published in CY05.

Discussion: List the published account of the discussion portion of a conference program' including discussion between individuals, post-paper discussions, round table symposia, clinical conferences, etc. during CY05.

Editorial: List editorials and editorial-like items published during CY05. These items typically contain opinions of a person, group or organization. This section also includes interviews.

Letter: List contribution or correspondence to a journal editor published during CY05, concerning previously published material.

Meeting Abstract: List abstract(s) of paper(s) presented at a symposium or conference during CY05.

Notes: List technical comments shorter than an article and restricted in scope; a brief article as designated as such by the journal, published in CY05.

Reviews: List review articles and surveys, published in CY05, of previously published literature.

Reprints: List articles published previously in other journals.

Conference Papers: List papers published in the proceedings of conferences, symposia, and meetings. List here and not under

“conference presentations” if the published paper was also the subject of a presentation.

Enclosure (2)

Conference Presentations (without paper): List presentations at conferences, symposia, and meetings that are not included in the proceedings.

Books: List books authored or co-authored and published during CY05.

Contribution to Books: List contributions to books published in CY05.

Technical Reports: List NPS Technical Reports and Progress Reports completed in CY05. Also list technical reports prepared and distributed by outside sponsor.

Patents: List any patents issued during CY05 on which you were the inventor or co-inventor.

3. All faculty should submit this information electronically and in hard copy to their Associate Chair/Dean for Research, or the Chair in the case of the Academic Groups. All submissions must be in Word.

SAMPLE RESEARCH PROJECT SUMMARY

TITLE OF RESEARCH PROJECT
David W. Jones, Distinguished Professor
Christopher Smith, Research Assistant Professor
Department of Computer Science
Sponsor: U. S. Air Force Research Laboratory

OBJECTIVE: Briefly state the objective of the research. The objective from your research proposal has been provided to you.

SUMMARY: Summaries are typically 100-200 words and are written in the third person in past tense. If the work is of a continuing nature, this should be stated and the summary should indicate what work was completed in 2005.

PUBLICATIONS:

Appendix 3.4J1

GSBPP Annual Collegial Review Process

February __, 200_

Memorandum

From: Collegial Review Convening Committee (Doug Moses and Steve Mehay)
To: GSBPP Faculty

Subj: **COLLEGIAL REVIEW MEETINGS** (CRM)

THE PURPOSE OF THIS MEMO IS TO INITIATE THE ANNUAL COLLEGIAL REVIEW PROCESS. THE MAIN OBJECTIVE AT THIS POINT IS TO PREVIEW THE PROCESS, ANNOUNCE THE SCHEDULE AND ENCOURAGE FACULTY TO IDENTIFY PRESENTERS AND BEGIN PREPARING VITA PACKAGES.

BACKGROUND: The Collegial Review Meeting process was initiated a few years ago by the tenured faculty. The initial objective was to provide a means by which the senior/tenured faculty might become aware of the progress of the tenure-track faculty toward eventual promotion and/or tenure, and by which the tenure-track faculty might receive some feedback concerning their progress. Participation by the faculty was initially voluntary.

Since 1997, the administration has required a formal review of all tenure-track faculty one year prior to re-appointment. Tenure-track faculty are typically hired with an initial 3-year contract, followed by annual reappointments, so reviews are required annually for untenured faculty, starting Spring of the second year of the initial contract, and continuing until award of tenure or failure to receive a contract renewal. The tenured faculty are expected to participate in the review process and to provide the GSBPP Dean with a formal vote for or against re-appointment. The Dean submits a re-appointment recommendation to the Provost. The faculty vote is not binding on the Dean, but serves as input in determining his recommendation.

In general, GSBPP policy has been to view visiting professors on a par with tenure-track professors. Consequently, most visiting professors seeking reappointment have also been required to participate in the review process.

NPS policy does not require an annual review of Lecturers by the faculty. However GSBPP practice has been to encourage Lecturers seeking reappointment and/or promotion to Senior Lecturer to participate in the review process. Such participation serves the same purpose as with the tenure-track faculty: The faculty becomes aware of the progress of the Lecturer toward promotion, and the Lecturer receives feedback from the faculty.

SCHEDULE: The associate and full professors will meet in April to discuss the progress the untenured faculty and lecturers. GSBPP practice has been to hold review meetings each Tuesday and Thursday in early April, until the process is complete. The following tentative schedule is currently anticipated and should be used for planning purposes. Changes to the schedule may become necessary, depending on the number of faculty to be reviewed or due to other GSBPP meeting commitments, and will be announced when known.

The meeting dates for the tenured associate and full professors to review untenured professors and lecturers are:

X **Tuesday, April 9, 3:00 - 4:30 pm**
X **Thursday, April 11, 3:00 - 4:30 pm**
X **Tuesday, April 16, 3:00 - 4:30 pm** (if necessary)

The meeting date for the full professors to review tenured associate professors is:

X **Tuesday, April 23, 3:00 - 4:30 pm**

Once a complete list of faculty to be reviewed is developed, a detailed schedule assigning individual cases to specific days will be announced.

PROCEDURES concerning these meetings are as follows:

1. Getting on the program: A list of the untenured faculty who must be reviewed will be distributed in the near future. Other untenured faculty and lecturers who additionally desire to participate in the collegial review process, please notify the CRM committee (Doug Moses) of your intent by **March 15**.

Tenured Associate Professors who desire to be reviewed by the Full Professors please notify the CRM committee (Steve Mehay) of your intent by **March 29**.

2. Vita Preparation. A concise written vita summarizing teaching experience, thesis supervision, publications/conference presentations, research projects, and service activities is desired. The vita should provide a summary of career accomplishments, not just the most recent year (i.e., not your faculty activity report).

In addition to the vita, faculty members may wish to provide:

* a one page discussion of future plans.
* if previously reviewed, a one page discussion of what has been done in response to the feedback given by the reviewing faculty at the previous review.
* accomplishments/changes that have occurred during the past year (one easy way to do this is just to show the new items in bold on your vita).

3. Case presentation. Each faculty member to be reviewed is expected to select a senior faculty member (a tenured professor for the assistant professors and lecturers, and a full professor for the associate professors) from GSBPP to make a presentation of her or his case at the meeting. (Your mentor is a logical candidate for this task, but you may choose someone else.) The presenter will make a brief, 10 minute maximum,

presentation of the case at the meeting, respond to questions, monitor the discussion, and provide a summary of the discussion as feedback to the reviewed faculty member.

Untenured faculty, provide the name of your presenter (and any schedule constraints) to Doug Moses by **March 22.**

Tenured Associate Professors choosing to be reviewed, provide the name of your presenter (and any schedule constraints) to Steve Mehay by **April 5**.

4. Vita submission. Vitae need to be submitted at least a week prior to a scheduled review in order to permit copying and distribution. Untenured faculty members please provide your vita to Doug Moses no later than **April 2**. Tenured faculty members, please give your vita to Steve Mehay no later than **April 16**.

5. Vita distribution. Once vitae and the names of presenters have been received, the Convening Committee will set up and distribute a schedule to the faculty indicating the date and order of presentation of individual cases. Vitae will be duplicated by the Convening Committee and distributed to the appropriate reviewing faculty about one week prior to the scheduled review meetings.

6. Feedback. After the presentation, the faculty will provide feedback to the presenter concerning the individual's case. The feedback will involve an assessment of what the candidate needs to do to enhance his or her chances of being promoted. This will consist of specific recommendations where weaknesses are perceived, and/or a general "thumbs up" where the candidate's progress looks strong.

The presenter will convey a written summary of the faculty's assessment to the candidate in a timely fashion. It may be that the candidate wishes more information after the feedback is provided by the presenter. No formal mechanism exists for this. Candidates should feel free to talk with additional faculty members as they desire.

SUMMARY OF IMPORTANT DATES

For untenured faculty and lecturers to be reviewed:

March 22:	Name of presenter (to Doug Moses)
April 2:	Vita due (to Doug Moses)
April 9:	First review meeting

For tenured faculty choosing to be reviewed:

March 29:	Intent to be reviewed communicated (to Steve Mehay)
April 2:	Name of presenter (to Steve Mehay)
April 16:	Vita due (to Steve Mehay)
April 23:	First review meeting

Collegial Review Feedback for <u>John Doe</u>

April 2005

- Circle one number for each category (***no 1/2 ratings, please!***)
- Comments are ***required*** for any category rated ***unacceptable progress*** toward tenure (score of 1-3).
- Laney will compile the distribution of scores and a list of comments in a single document. These scores and comments will comprise the feedback to the candidate, and serve as input to the Dean concerning reappointment decisions.

1. Rate progress toward tenure in terms of **Research**.

Unacceptable			Acceptable		
Very poor 1	2	3	4	5	Outstanding 6

Comments:

2. Rate progress toward tenure in terms of **Instruction**.

Unacceptable			Acceptable		
Very poor 1	2	3	4	5	Outstanding 6

Comments:

3. Rate progress toward tenure in terms of **Service**.

Unacceptable progress			Acceptable progress		
Very poor 1	2	3	4	5	Outstanding 6

Comments:

4. Rate **Overall** progress toward Tenure.

Unacceptable progress			Acceptable progress		
Very poor 1	2	3	4	5	Outstanding 6

Comments:

Appendix 3.4J1

GSBPP Annual Review and Promotion & Tenure Processes

(Approved by the faculty, August 2002)

A. The annual review should be mandatory for those contemplating P&T actions in three years. A minimum of two reviews should be required within three years prior to required P&T actions.

B. The candidate=s material should be distributed to all voting faculty members at least two weeks in advance. Anonymous written comments and questions should be submitted to the presenter who then transmits the comments and questions to the candidate. This way, the candidate would have a chance to clarify questions or issues, or prepare a response before the faculty meets to discuss his or her case. The presenter=s role is to present the candidate=s responses to the voting faculty and prepare a summary of feedback to the candidates. The review session should have 50% of eligible voting faculty in attendance. In addition, attendance in person plus written comments in absentia should have 75 % of the voting faculty to make this annual review official. Submission of written comments from those on travel is highly encouraged.

C. Feedback prepared by the presenter should be reviewed and approved by the voting faculty for accuracy of discussion. The approval is defined as 75% of voting faculty. Ensuing personnel actions such as a contract renewal recommendation should be solicited from the voting faculty.

D. As part of the GSBPP P&T process, a summary of annual reviews should be presented to the voting faculty in addition to, but separate from, the official NPS P&T documentation package as part of the documents for consideration in the P&T decision. (Note: NPS Promotion Council is considering the inclusion of annual review results in the P&T package)

E. The members of the DEC (Departmental Evaluation Committee) should be selected by the voting faculty. Normally, we invite the candidate to nominate one GSBPP faculty member for the DEC. However, the voting faculty should select the DEC members and the chair of the DEC, which may or may not include the faculty member nominated by the candidate, to provide an objective, independent evaluation of the candidate.

F. The candidate may suggest a list of names to serve as external reviewers, but no more than 50% of reviewers selected by the DEC may come from the candidate=s list. External letters from subject matter experts at universities and other organizations should be solicited from a broad cross section of individuals in fields related to the candidate=s work. The list of external reviewers should be reviewed by the voting faculty for independence and broad representation.

G. All unsolicited letters should be treated as part of the candidate=s personal file and included in the candidate=s own documentation if he/she chooses to do so. They should not be treated or labeled as external reviews and included in the section prepared by the DEC.

H. For junior faculty not required to have annual reviews, mentoring sessions should be organized by area faculty to help the junior faculty develop professionally. In addition to annual mentoring, a faculty member may request guidance in the preparation of dossier for P&T actions. The request should be made to the faculty body with the right to vote on the P&T action.

Appendix 3.4J1

GSBPP Faculty Promotion & Tenure Voting Policy

(Adopted by the faculty, August 22, 2002)

The official NPS policy on faculty promotion and tenure procedures is found in the NPS Faculty Handbook, Section IV - School Policies:

> Before a faculty member is recommended for promotion in rank or award of tenure on the Naval Postgraduate School faculty, there is a review of professional qualifications by a Departmental Evaluation Committee (DEC), appointed by the Chairman for this purpose. (The DEC consists of at least three faculty members who are senior to the candidate's current position; one member must be from outside the candidate's Department/Group.) The DEC submits its report to the Department Faculty Promotion Council (DFPC). The specific procedures for this colleague-review are at the discretion of the individual Department/Group, within policy guidelines provided annually by the Dean of Faculty to ensure equitable treatment of all faculty. (P. IV-3, Promotions and Award of Tenure (Civilian): A. Regular Procedures)

The NPS policy states that the specific procedures at the **GSBPP Faculty Promotion Council** level are at the discretion of GSBPP. This policy specifies the review, discussion, and voting of promotion and tenures cases at GSBPP.

1. GSBPP Faculty Promotion Council for promotion to Full Professor rank case is composed of Full Professors.

2. GSBPP Faculty Promotion Council for promotion to Associate Professor rank without tenure case is composed of Associate Professors and Professors.

3. GSBPP Faculty Promotion Council for award of tenure case is composed of tenured faculty regardless of rank.

4. GSBPP Faculty Promotion Council for promotion to Associate Professor rank with tenure is composed of Associate Professors and Full Professors. However, separate votes will be conducted for promotion and tenure decisions and only tenured faculty participate in the voting for award of tenure.

5. GSBPP Faculty Promotion Council for promotion to Senior Lecturer rank is composed of Professors, Associate Professors and Senior Lecturers. Votes from tenured faculty and nontenured faculty will be tallied separately and reported in the Dean's report to NPS Promotion Council.

6. Annual collegial review process is considered equivalent to GSBPP Faculty Promotion Council action for the respective case. Faculty member presenting the case for a candidate must be an eligible member of the GSBPP Faculty Promotion Council.

7. GSBPP Faculty members serving as DEC members must be GSBPP Faculty Promotion Council members. All DEC members, including outside member, must hold a rank senior to the candidate's current position.

Appendix 3.4J2

Policy Concerning Retention and Promotion of GSBPP Non-Tenure-Track Faculty

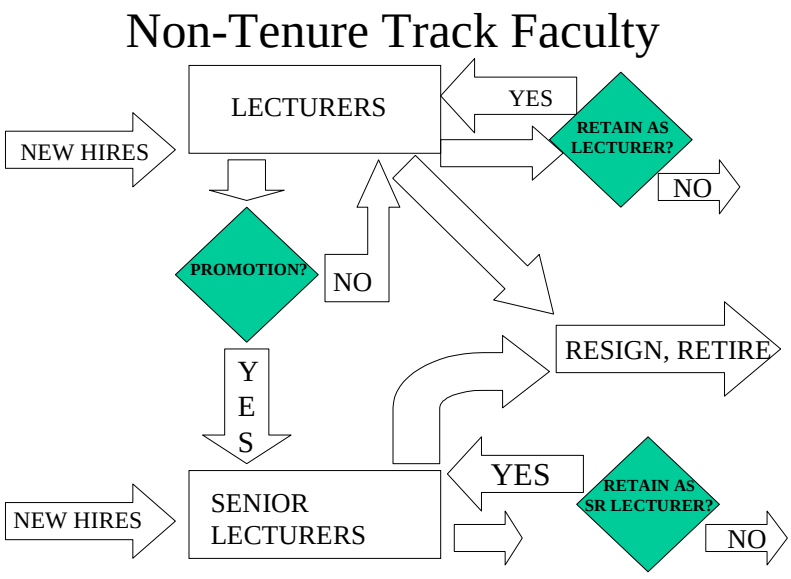
Adopted August 26, 2003

CONTEXT

This discussion applies to full-time lecturers. For purposes of this policy, full-time lecturer is defined as someone who is employed by NPS at least three quarters of the year and the work of the individual meets the GSBPP criteria for a full-time workload.

In the up-or-out system, promotion and retention are necessarily connected, with promotion within seven years being necessary for retention. This document assumes that the up-or-out requirement is removed. With the up-or-out system for Lecturers gone, personnel management of the non-tenure track faculty becomes accordingly more complicated.

In the new environment, GSBPP will make three classes of decisions: hiring, retention and promotion. This is diagrammed below.



- Possession of a combination of relevant academic and professional background is necessary for hiring.
- Satisfying the performance expectations of a Lecturer is necessary for retention as a Lecturer.
- Retention as a Lecturer is not sufficient for promotion to Senior Lecturer.
- Satisfying the performance expectations of a Senior Lecturer is necessary for promotion to Senior Lecturer.

- Satisfying the performance expectations of a Senior Lecturer is necessary for retention as a Senior Lecturer.

FACULTY ROLES

GSBPP makes a distinction between Academic Faculty roles and Administrative Faculty roles. Academic Faculty performs the principal academic activities of the GSBPP relating to instruction and scholarship. Administrative Faculty fill recognized administrative positions and perform activities relating to the management of the GSBPP and its programs. Recognized Administrative Faculty positions include Dean, Associate Dean, Academic Associate, Program Manager, and Program Director. It is recognized that faculty members may choose to divide their time and activities between academic and administrative roles. This document addresses performance expectations and promotion standards for faculty in their academic capacity.

PERFORMANCE EXPECTATIONS FOR NON-TENURE TRACK AS ACADEMIC FACULTY

The performance expectations for Adjunct Lecturers who specialize in the direct instructional activities of teaching, advising theses and projects, and holding office hours are:

1. Effective performance of instructional activities (teaching, advising)
2. Maintenance of currency of academic and/or professional knowledge and qualifications

The performance expectations for Lecturers, individuals whose role is not limited to performing the direct instructional activities of teaching, advising theses and projects, and holding office hours are:

1. Effective performance of instructional activities (teaching, advising)
2. Maintenance of currency of academic and/or professional knowledge and qualifications
3. Participation in the NPS/GSBPP community
4. Intellectual contributions, including contributions to learning and pedagogy, to practice, or to an academic discipline. Contributions in any of these areas are acceptable.

The performance expectations for Senior Lecturers include:

1. Effective performance of instructional activities (teaching, advising)
2. Maintenance of currency of academic and/or professional knowledge and qualifications
3. Participation in the NPS/GSBPP community
4. Intellectual contributions to learning and pedagogy, to practice, or to an academic discipline. Contributions in any of these areas are acceptable.
5. Intellectual contributions specifically to practice and/or academic disciplines.

RETENTION AND PROMOTION STANDARDS

Retention as a Lecturer depends on a) continued meeting of Lecturer performance expectations and b) a continuing GSBPP need.

Promotion to Senior Lecturer is based on demonstrated ability to meet Senior Lecturer performance expectations.

Retention as a Senior Lecturer depends on a) continued meeting of Senior Lecturer performance expectations and b) a continuing GSBPP need.

In determining GSBPP need, consideration is given to both

- The match between a faculty member's areas of instructional expertise and the GSBPP's need for staffing courses or curricula.
- The match between a faculty member's areas of intellectual contribution and the GSBPP's desired portfolio of contributions.

In order to satisfy fully the performance expectations in any of the faculty categories, a faculty member must achieve at least a satisfactory level of performance in all of the performance elements listed for that category.

EVIDENCE OF MEETING ACADEMIC FACULTY PERFORMANCE EXPECTATIONS

Effective Performance of Instructional Activities could be demonstrated by a mix of:

Teaching evaluations provided by current or former students
Teaching evaluations provided by peers
Nomination/selection for a recognized instruction award
Peer review of course materials.

Maintenance of Currency of Knowledge and Qualifications could be demonstrated by activities such as:

Attending professional meetings and conferences
Taking "experience tours" with appropriate functional commands
Continuing education
Earning and maintaining a recognized professional credential
DoD "consulting"
Significant service on national boards or committees in field of practice.

Participation in the NPS/GSBPP community includes activities such as:

Service on NPS and GSBPP committees, task forces, work groups
Interaction with curriculum sponsors

Acting as mentor for faculty or students.
Service as Academic Associate
Service as Program Manager

Contributions to Learning and Pedagogy could be demonstrated by identifiable outputs such as:

Creation of a new course
Creation of new learning materials
Creation of new teaching cases
Creation of a new curriculum
Textbooks or chapters
Presentations to education seminars or conventions
Articles on teaching innovation
Major editorial responsibilities such as editor-in-chief or executive editor of a pedagogical or learning-focused journal.

Contributions to Practice could be demonstrated by identifiable products such as:

Reports from sponsored research on practice issues
Documented practice software
Articles in practitioner journals
Presentations at practitioner seminars or conventions
Major editorial responsibility such as editor-in-chief or executive editor of a practitioner journal
Writing or contributing to technical reports
Conducting or contributing to applied research projects
Presentations at professional conferences
Significant consultation/advisement to senior public officials.

Contributions to Discipline-Based Scholarship could be demonstrated by identifiable products such as:

Published reports from sponsored research
Articles in academic journals
Presentations at academic seminars or conferences
Books, monographs, and chapters
Major editorial responsibility such as editor-in-chief or executive editor of an academic journal.

DEFINING ACTIVITIES AND PERFORMANCE ASSESSMENT

The performance expectations discussed above are applicable to all non-tenure track faculties. The specific activities to meet those expectations would reasonably be expected to differ across the faculty and will be determined for each non-tenure track

faculty member. These activities will be aligned with the previously discussed performance expectations.

Expected activities will be established by the dean and the faculty member at the time of hiring and reviewed periodically based on both the faculty member's professional goals and interests and the needs of the GSBPP. The activities will be defined in ways that make sense both for the faculty member and GSBPP. Both under- and over-specification of these activities reduce the individual's and the GSBPP's effectiveness. For any collegial review, the expected activities will be part of the information that is presented.

The degree to which the expected activities are successfully performed is assessed each year by the dean with input from appropriate faculty. Failure to perform the defined activities can constitute grounds for not retaining the faculty member.

Every five years, or more frequently at the request of the dean, a committee of GSBPP faculty will review the performance of each lecturer and senior lecturer and decide if the individual is qualified to remain on faculty. The dean and the senior faculty jointly appoint the committee. The decisions of this committee are provided to the dean and included as part of the information used during the collegial review process. Participation in the collegial review process is a substitute for a review by the committee.

Appendix 4.1

MEM Program Submission to NPS Academic Council

2 Sep 05

From: Doug Moses, Senior Associate Dean, GSBPP
To: Academic Council
Via: Thomas Hughes, Acting Dean, GSBPP

Subj: Approval request for new resident degree - **Master of Executive Management**

Ref: (a) Academic Council Policy Manual,
Section 5.2: Masters Degrees
Section 8.3: Adding Masters Degree Programs

1. In accordance with Ref (a), GSBPP requests approval for a new resident degree program, Master of Executive Management. Background, rationale, and description of the proposed program follow.

2. The faculty of GSBPP have reviewed and endorsed this proposal.

3. The proposed program is expected to start in Summer 2006. However, for planning purposes, the program sponsor, SAF(ACQ), desires notification prior to October 2005. Request attention of the Academic Council at the September 21st session.

4. Questions concerning this proposal may be directed to Doug Moses (x3218) or Keith Snider (x3621)

Doug Moses
GSBPP

MASTER OF EXECUTIVE MANAGEMENT (MEM)

The proposed MEM degree program satisfies requirements identified to GSBPP by the Air Force contracting career field sponsor (Deputy Assistant Secretary of the Air Force for Contracting (SAF(AQC)) for a 12-month resident Master's degree program for USAF officers selected for Intermediate Developmental Education (IDE).

While the initial motivation for MEM is to meet requirements USAF IDE contracting students, GSBPP recognizes that, once implemented, other sponsors may wish to enroll students in this program. These may be other USAF IDE sponsors or other service sponsors. If such additional enrollments lead to significant changes from the MEM program described in this document, GSBPP will notify or seek approval from the Academic Council as required by the Policy Manual.

1. Background and Discussion.

A. U.S. Air Force Intermediate Developmental Education (IDE).

(1) General. Intermediate Developmental Education (IDE) targets field grade (O-4 to O-5 (sel)) USAF officers. It includes both professional military education (PME) and advanced academic degree programs. Following completion of IDE**,** officers return to follow-on assignments for continued aerospace leadership development. (http://www.afpc.randolph.af.mil/pme/0-IDE-SDE.htm)

The USAF Major Selection Board selects the best qualified officers to be candidates for resident IDE. A percentage (approximately 20%) of selectees with the highest scores from the promotion order of merit list are selected to become candidates for possible school attendance. Thus, resident IDE officers are considered to be the top performers by their selection board. (http://www.afpc.randolph.af.mil/pme/ISS-SSS%20Candidacy%20Fact%20Sheet.htm). A central board also determines which school is most appropriate for the officer (AFIT, NPS, JMIC, ACSC, sister service school, etc.).

Because of their relative seniority, IDE officers can be expected to have a substantial amount of professional training and experience in their respective career fields. For example, an IDE student from one of the acquisition-related career fields will have had at least one acquisition assignment and will possess multiple Defense Acquisition University training certificates. ***This makes the typical IDE student quite different from the typical NPS student who has little or no subspecialty training or experience.*** The IDE student's educational needs are (1) an advanced degree and (2) courses that will provide opportunities for either more in-depth specialty skills or career-broadening skills.

(2) IDE at Air Force Institute of Technology (AFIT). AFIT developed a number of different 12-month management and technical curricula for IDE students. The first group of 80 students graduated in Sep 04; the second (140 students) graduated in Jun

05. In both groups there was also a wide diversity of academic backgrounds and career fields among the students. All of the students were majors, with many in the primary zone of consideration for O-5 promotion.

(3) IDE at NPS. Currently at NPS, IDE programs vary from 12-27 months depending on sponsor request and curriculum requirements. In FY05, NPS received 78 IDE students in a variety of curricula (fig. 1).

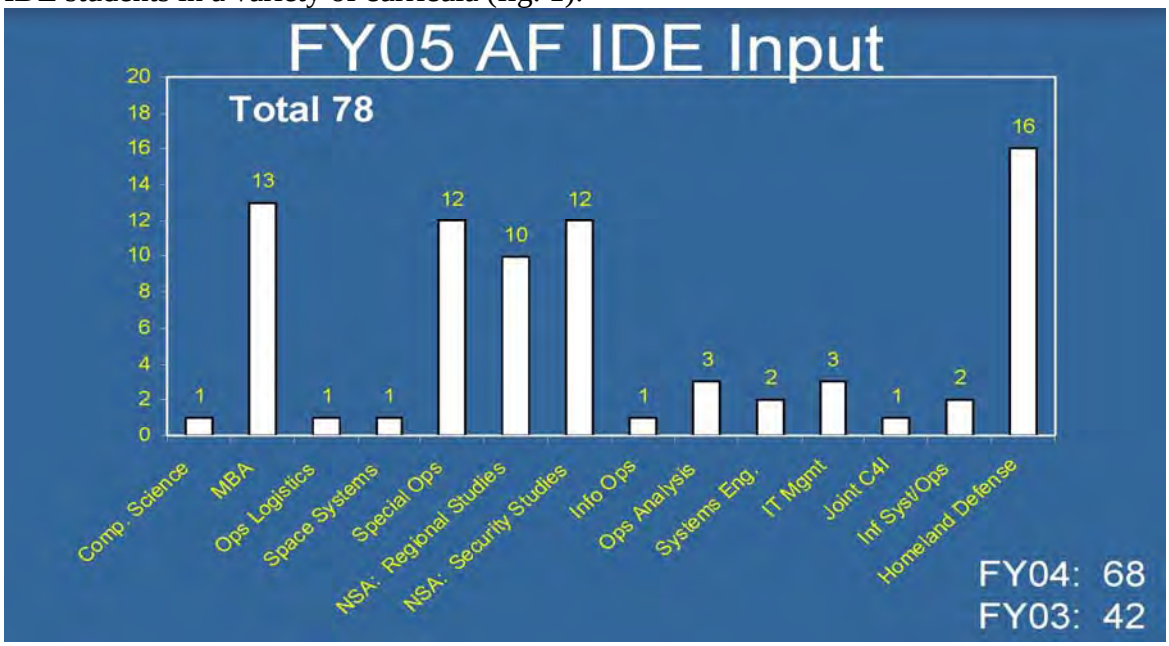


Figure 1.

(4) Contracting IDE students at NPS. Enrollment for students in the contracting career field is projected to be very low (3-6 students per year).

B. Motivation for the MEM degree program.

(1) NPS-AFIT Strategic Alliance. The SECNAV-SECAF Memorandum of Agreement of December 2002 directed that only NPS would offer acquisition graduate education programs. As of July 2005, ***with the exception of its 12-month acquisition program for IDE students***, AFIT had ceased its acquisition graduate education programs, and all USAF acquisition students were attending NPS.

(2) Need for a 12-month IDE program. The USAF contracting career field sponsor (SAF(AQC) has asserted the need for a 12-month curriculum for IDE contracting officers due to (a) USAF contracting command requirements and (b) the need for USAF contracting officers to remain competitive for promotion to O-6. AFIT maintains a 12-month program for acquisition officers to meet this stated need.

(3) 12-month IDE program at NPS. SAF(AQC) has requested NPS offer a 12-month resident program for contracting IDE officers. This request was supported by members of the Joint Oversight Board for Acquisition Curricula (JOBAC) and was an item of interest and discussion at the March 2005 AFIT Board of Visitors meeting. SAF(AQC) has also stated that if NPS cannot offer such a program, AFIT will continue to be the school of choice for acquisition IDE education.

2. Program Description. The MEM is designed for USAF IDE students who, as described in para. 1.A. above, differ from GSBPP's typical resident Master of Business Administration (MBA) students. MEM students:

- are more senior (O-4 to O-5 selects)
- have a career field specialization (i.e., they already have "P-code" equivalents)
- have substantial professional experience in that career field
- have been identified by service selection boards as the top performers of their promotion groups with the highest potential for further promotion

The MEM provides advanced general management education, along with opportunities for career broadening education, to this group of future executives.

A. Design concept. Because of the relatively small numbers of IDE students expected (at least initially) in GSBPP, the MEM relies on existing courses to satisfy degree requirements. MEM consists of:

(1) A required management core sequence of courses drawn from existing MBA core courses. This satisfies the requirement for advanced general education.

(2) A required specialty sequence of courses drawn from existing GSBPP and other schools' (e.g., SI, OA) courses. This satisfies the requirement for career broadening education or for more in-depth education in a student's specialty.

Essentially, students will satisfy MEM degree requirements by taking existing courses offered in other degree programs. MEM start dates will coincide with MBA start dates so that MEM students can "fall in" on MBA course offerings.

It should be noted that, if the number of MEM students increases as a result of other USAF sponsors directing their IDE students to MEM, there will be opportunities to form MEM-only sections of existing courses, or perhaps to develop new courses for MEM students. In this event, GSBPP will notify or seek approval from the Academic Council in accordance with the Policy Manual.

B. Degree requirements. The degree **Master of Executive Management** at the Naval Postgraduate School requires:

(1) Completion of a minimum of 54 credit hours of graduate-level courses, at least 12 hours of which are at the 4000 level;

(2) Completion of an MEM core sequence consisting of a minimum of 37 credit hours of 3000 and 4000 level GB or MN courses

(3) Completion of a specialty sequence of 3000 or 4000 level courses, to be approved by the Academic Associate, totaling not fewer than 15 credit hours in a specialty or specialties appropriate for the student's career field.

The specialty sequence satisfies the "thesis or equivalent" requirement for NPS degrees. These MEM degree requirements meet the NPS Master's Degree minimum standards and requirements set forth in Section 5.2 of the Academic Policy Manual.

C. MEM program:

1 Sum	**GB3010 (4-0) Managing for Organizational Effectiveness**	**GB3050 (3-0) Financial Reporting & Analysis**	**GB3020 (4-0) Fundamentals of Information Technology**	**GB3070 (4-0) Economics of the Global Defense Environment**	**GB3013 (0-2) Problem Analysis & Ethical Dilemmas**	**Credits 16**
2 Fall	**GB3051 (3-0) Cost Management**	**GB3040 (4-0) Managerial Statistics**	**GB4071 (4-0) Economic Analysis & Defense Resource Allocation**	**MEM Specialty Course(s) (var)**		**11 + Spec**
3 Win	**GB4053 (4-0) Defense Budget & Financial Management Policy**	**GB4043 (3-0) Business Modeling Analysis**	**GB3042 (4-0) Operations Management**	**GB3012 (3-0) Communications for Managers**	**MEM Specialty Course (var)**	**14 + Spec**
4 Spr	**GB4014 (4-0) Strategic Management**	**GB4021 (3-0) Strategic Information Technology**	**MEM Specialty Courses (var)**			**7 + Spec**

KEY

MEM core ≥ 37 hrs	**MEM specialty sequence** **1. 15 hrs min. required** **2. Satisfies "thesis or equivalent"** **3. Approved by AA** **4. Drawn from feasible GB, MN, OA, OS, SI, etc. course options.**

D. Sample specialty sequences - Examples of "career broadening" specialty courses appropriate for contracting IDE students:

Program Mgt Specialty Sequence Courses	SI4011 Sys Eng for Acquisition Managers	MN3309 Acquisition of Weapon Sys Software	MN3384 Principles of Acqn Prod & Qual Mgt	OS4602 Test & Evaluation	GB4410 Logistics Engineering
Financial Management Specialty Sequence Courses	GB3510 Defense Financial Management Practice	GB4510 Strategic Resource Management	GB4530 Management Planning & Control Systems	GB4550 Accountability, Control, and Auditing	OA4702 Cost Estimation
Logistics Management Specialty Sequence Courses	OA 4611 Joint & Combined Logistics	GB3420 (4-0) Supply Chain Mgmt	GB4410 (4-0) Logistics Engineering	GB3372 (4-0) Material Logistics	MN 4430 Defense Distribution & Transportation

E. Entry requirements. Entry requirements for MEM are intentionally set and enforced at high levels. This is necessary to achieve the desired "executive" character of the program and to distinguish MEM from other GSBPP degree programs.

- Senior O-4 or above
- Undergraduate degree from an accredited 4-year college or university
- APC of 245
- Identification as a top-performing officer through a service-wide evaluation and selection process. For USAF officers, this is IDE selection.
- Possession of a career field specialization with significant experience (multiple tours) and advanced training

F. Resource impacts. MEM is designed to meet the requirements of a small number of IDE students (3-6 contracting IDE students projected annually; 13 total IDE students entered GSBPP in FY05). With such small numbers, MEM uses existing courses and provides for MEM students to "fall in" on existing offerings of these courses. Thus, no new sections will be required for MEM, as long as student numbers stay low.

In the event that MEM inputs rise in future years, either through increased USAF IDE enrollment or through other service enrollments, it will become possible to offer MEM-only course sections (which may have pedagogical benefits). This increased enrollment may justify additional faculty hiring in GSBPP. Impacts on other schools will be minimal, since the number of MEM students taking any particular specialty course will likely be small.

Since MEM is a resident program, existing admissions, enrollment, and administrative processes are used. Since the number of students is small, impacts on these will be negligible.

G. Course descriptions. Following are course descriptions from GSBPP's existing MBA core courses. These selected courses compose the MEM core. Specialty courses are not shown, since there is such a wide diversity in what may be appropriate

courses for any particular student.

GB3010: Managing for Organizational Effectiveness (4-0)
Description: Organizations - and defense organizations - are viewed as complex, purposive, open systems. As open systems, they face challenges of external adaptation and effectiveness and of internal coherence and efficiency. Our purpose is to understand the structures and processes, which make up organizations in order to appreciate how they succeed and why they falter and fail. Our focus is on " organizational diagnosis", which requires applying relevant theories to better evaluate organizational performance. To do this, we will examine topics that include: organizational structure, motivation and reward systems, organizational culture, power and conflict, effective teams, and the leadership characteristics involved in effectively managing today's organizations. Although these topics are relevant to all organizations, we will pay special attention to their application in the context of the Department of Defense and military organizations. PREREQUISITE: Enrollment in MBA Degree Program

GB3012: Communication for Managers (3-0)
Description: OPEN TO MBA STUDENTS, OR BY PERMISSION OF INSTRUCTOR. This course provides DoD and international military officers and civilians with the communication strategies and skills to manage and lead in the dynamic DoD environment. Instruction focuses on assessing various communication models, making strategic media choices, writing effective informative documents, developing associates' communication competencies through various feedback roles, and giving lucid briefings. Prerequisite: GB3010 or consent of instructor.

GB3013: Problem Analysis & Ethical Dilemmas (0-2)
Description: OPEN TO MBA STUDENTS, OR BY PERMISSION OF INSTRUCTOR. The objective of the Problem Analysis and Ethical Dilemma (PAED) seminar is to provide an introduction to applied analytic decision making involving complex issues and applied ethical dilemmas in a wide variety of seemingly chaotic situations. Problem analysis and ethical dilemmas are two topics that are relevant in a variety of organizational settings. Thus, an essential part of a professional's education is the identification of issues, the analysis among alternatives, consideration of the implications and consequences of alternatives and making a decision that confronts the specific issue at hand, is timely, and ethical. Analysis of problems is a vital competence for leaders in arriving at a decision that may affect their command, the local environment, and even the course of future events. Ethical dilemmas are those unclear situations that seem to have a series of diverse, chaotic variables and where having the facts is not enough. Facts may not take in values, rightness, culture, moral up-bringing, or even religious convictions. This seminar provides an orientation to the process of awareness, identification, contemplation and reflection, consideration of alternative actions, and decision making when presented with an unclear situation.

GB3020: Fundamentals of Information Technology (4-0)
Description: Successful organizations in today's Information Age are more dependent than ever on information technology (IT). This course provides business students and other non-IT majors a broad overview of computer technology, information systems, database/knowledge management, networks and information security. The course focuses on IT as a tool to support business processes throughout an organization, regardless of functional specialty. The study of principles and theory is combined with hands-on laboratory exercises to improve both IT literacy and competency. The knowledge and skills acquired will make the students more effective IT users and help them recognize opportunities where the application of IT solutions can provide a strategic advantage. Prerequisite: Enrollment in the MBA Degree Program.

GB3040: Managerial Statistics (4-0)
Description: This course focuses on the statistical concepts useful for conducting basic managerial analysis. Statistical concepts covered include descriptive statistics for quantitative and qualitative data, basic probability concepts and distributions, sampling distributions, interval estimation, hypothesis testing, goodness-of-fit tests, contingency table tests, and multiple regression analysis. Prerequisite: College Algebra and knowledge of Excel.

GB3042: Operations Management (4-0)
Description: An overview of operations in military and commercial systems. The course has three sections: (1) Creating processes, including a survey of process types, capacity planning, and service system design; (2) Controlling processes, including MRP/ERP systems and the role of information; and (3) Coordinating processes, including inventory management, purchasing, and supply chain management. PREREQUISITE: GB3020

GB3050: Financial Reporting and Analysis (4-0)
Description: This course covers theory, concepts, and practices underlying financial Accounting and Financial Reporting. The conceptual structure underlying the reporting of economic events in the form of the balance sheet, the income statement, and the statement of cash flows is first presented. Accounting recognition and measurement issues surrounding revenues, expenses, assets, liabilities and equity are introduced and analyzed. Finally, different forms of financial analysis based on financial report information are addressed. Throughout the course, emphasis is placed on the manager or user perspective. Attention is given to the Federal Government financial reporting model and standards. PREREQUISITE: Enrollment in the MBA Degree Program.

GB3051: Cost Management (3-0)
Description: This course introduces students to cost management concepts and theories which are used by managers to make decisions on the allocation of financial, physical, and human resources to achieve strategic as well as short-term organizational goals and objectives and evaluate performance using financial and non-financial measures. The course is designed for those having a prior course in financial reporting and analysis or financial accounting. Cost management includes traditional tools and techniques such as cost behavior for decision making, activity costing, cost allocation, and standard costing. PREREQUISITE: GB3050

GB3070: Economics of the Global Defense Environment (4-0)
Description: Develops the fundamental tools of microeconomics and macroeconomics, and applies them to defense management and resource allocation. Course centers on defense applications of economic theory. Topics covered include: defense and the macro economy; markets and their interactions with defense acquisition and contracting; national security implications of globalization; and efficiency in defense decision-making. PREREQUISITE: MA1000 College Algebra or equivalent and enrollment in the MBA Degree Program.

GB4014: Strategic Management (4-0)
Description: This course focuses on strategic management in the public sector, particularly Defense organizations, federal bureaus and agencies. Strategic management includes the setting of an organization's direction and the implementation and evaluation of that direction based on forces and trends in the organization's external environment and the organization's internal capabilities. In previous courses you have concentrated on the functional elements of management-the management of people, structures, processes and tasks (e.g. accounting, finance, acquisition, logistics, contracting, etc.). Now we will address the concerns, issues, and challenges of setting direction and implementing strategies for the total system or whole organization. Cases and approaches from the public and private sectors will enable students to develop the knowledge, skills, and abilities to strategically think, plan, and manage. PREREQUISITE: GB3010, GB3012. .

GB4043: Business Modeling and Analysis (3-0)
Description: This course focuses on the development of mathematical and spreadsheet models, the verification of those models, sensitivity analysis of the solutions generated from a model, and the implementation of those solutions. Topics covered include linear programming, non-linear and integer programming, Monte Carlo simulation and forecasting. The process of modeling and particular modeling tools will be applied to business problems in finance, acquisition, logistics and manpower planning. PREREQUISITE: GB3040 and GB4071.

GB4052: Managerial Finance (3-0)
Description: This course provides an overview of the basic concepts and principles of financial management in the private sector and its implication on government contracting. It is designed to provide insights into the financial decision making process encountered by commercial enterprises. The major emphasis is on financial environment, risk and return analysis, valuation models, cost of capital determination, optimal capital structure, and short-term and long-term financing.

GB4053: Defense Budget and Financial Management Policy (4-0)
Description: This course analyzes the resource requirements process within the Department of Defense (DOD) and in the executive and legislative branches of the federal government. It begins with a summary of the current threat situation and potential changes to it. Once the threat is defined, the study of the resource allocation process to meet the threat begins. The course covers the resource planning and budgeting processes of the Department of the Navy, DOD and the federal government. It includes the politics of executive and congressional budgeting, and DOD budget and financial management processes and procedures including budget formulation and execution. It also includes analysis of the Planning, Programming, Budgeting and Execution system (PPBES) used by DOD to plan, budget and implement national defense resource management policy and programs. Other areas included are budget process and fiscal policy reform and the dynamics of internal DOD competition for resources. Executive and congressional budget processes are assessed to indicate how national security policy is resourced and implemented through the budget process. Spending for national security policy is tracked from budget submission through resolution, authorization and appropriation. Budget formulation, negotiation, and execution strategies are evaluated to indicate the dynamics of executive-legislative competition over resource allocation priorities. Supplemental appropriation patterns and current year budget execution patterns and problems are also considered. PREREQUISITE: GB3010, GB3070.

GB4071: Economic Analysis and Defense Resource Allocation (4-0)
Description: Develops the tools and techniques of economic efficiency to assist public sector decision makers in analyzing resource allocation in government activities. Focuses on developing the principles of cost-benefit analysis (CBA) and cost-effectiveness analysis (CEA). Stresses the application of CBA and CEA to specific investment projects, programs and policies in the federal government, especially in the Department of Defense. PREREQUISITES: GB3051, GB3070

President

Appendix 9.0

Distance Education

This Appendix describes four GSBPP distance learning graduate degree programs:

- **Executive Master of Business Administration (EMBA)**
- **Master of Science in Program Management (MSPM)**
- **Master of Science in Contract Management (MSCM)**
- **Leadership Education and Development Program (LEAD)**

These programs are separate from the GSBPP NASPAA-accredited programs, the MBA and MSM, and are not distance learning versions of either. As such they are described here in the Appendix, for background, and not under Standard 9.0 of the Self-Study document. The format for the presentation here does, however, follow the format for Standard 9.0.

The material in this Appendix was created August 2006 and has not been updated since. No significant changes have occurred to these programs during the past year.

Appendix 9.0 – Standard 9.0

Distance Education

Standard 9.1 Definition and Scope
Off-campus and distance education programs are offerings and arrangements in which (a) students are located in facilities or at sites other than the main [parent] campus of the program and/or (b) the students do not engage regularly in face-to-face interaction with an instructor who is in physical proximity. Off-campus and distance education programs can satisfy legitimate educational needs. When off-campus and distance education versions of the program serve different missions, student populations, or utilize education technology or learning methods that differ from the parent program, the burden is on the program to provide adequate information that demonstrates:

-the extent to which educational offerings are consistent with and contribute to the mission;

-the extent to which assessment and guidance processes ensure the comparability of the education offered;

-the effects of these differences on students, faculty, administrators, systems, processes, and the allocation of program resources and, therefore;

-the effects of these differences on the education received by all students in the program seeking accreditation regardless of where they are located.

Note: The Graduate School of Business and Public Policy does not seek accreditation for our distance learning programs. This standard provides context for our resident programs.

9.1 Definition and Scope

The Graduate School of Business and Public Policy (GSBPP) has three off-campus or distance learning (DL) degree programs: the Executive MBA, the MS in Program Management and the MS in Contract Management. The NPS Academic Council and WASC have approved all three of these programs. Until June 2006, we offered the MS in Leadership and Human Resources Development, which has since been contracted to another university and will only be described briefly here. These programs are not replicated in resident curricula.

Standard 9.2 Program Mission, Assessment and Guidance
The program shall present a statement of rationale that specifically addresses off-campus and distance education courses, sites, and programs and that explains how this rationale emerges from and contributes to the mission, goals and objectives of the institution's MPA program. The rationale for off-campus and distance education offerings shall be based on the distinctive aspects of the student population to be served and regional needs. The rationale also shall demonstrate its contributions to the mission, goals, and objectives of the program on the main (parent) campus.

9.2A GSBPP's Off-Campus Programs are Mission Driven

The increase in demand for off-campus graduate education for military officers and government civilians, as well as the emergence of new technologies, has caused the Naval Postgraduate School to pursue off-campus and distance education opportunities.

The Graduate School of Business and Public Policy has been exploring the market for graduate management education since 1998 with the inception of the MS in Leadership and Human Resources Development Program. The challenge for the School has been to develop off-campus and distance programs that are:

- Consistent with and contribute to our mission
- Unique and relevant to DoD
- Financially self-sustaining and do not require resources that detract from the resident programs
- In keeping with the academic standards set for our resident program
- Competitive in the market place

All four of our off-campus and distance degree programs are consistent with the NPS and GSBPP mission. All programs are designed to improve the managerial and leadership capabilities of people in public organizations and are offered to military officers or government civilians. These programs enable students who cannot easily come to resident programs to obtain graduate education (e.g., because of operational/ career constraints). This is consistent with NPS strategy that encourages the Schools to reach out to naval officers in Fleet Concentration Areas (i.e., areas of the country where naval officers are concentrated such as San Diego) and, increasingly, to officers in other services and DoD civilians. Within the past year, the highest levels of leadership in the DoD have encouraged this strategy for "Total Force Education".

Like our resident programs, all four of our distance and off-campus programs were generated from sponsors' needs. Similar to our resident programs in GSBPP, a needs assessment was conducted to determine the graduate education requirements for each of the respective sponsors.

Programs use a combination of face-to-face, video-tele-education (VTE) and Web-based delivery. The delivery mechanism is approved as part of the larger course proposal by GSBPP faculty and the NPS Academic Council.

Program objectives and Education Skill Requirements (ESRs) were developed for each of the programs to satisfy GSBPP's academic standards and the specific needs of the students and sponsoring agency. ESRs for each program are provided in Standard 9.4.

Each program has an Academic Associate just as in our resident curricula. Additionally, each program has a Program Manager. Essentially, academic quality is the primary function of the Academic Associate, as is the case with our resident curricula. The Program Manager position is added to deal with the coordination and other operational complexities that are added with conducting a program off site.

9.2B Assessment Practices for Off-Campus Programs

In general, assessment for the off-campus programs has been developed to meet standards for our resident programs. Programs are described in detail in section 9.4; assessment procedures are described in this section.

Master of Science in Program Management -- Program Assessment

The Master of Science in Program Management (MSPM) began operation in April of 1999 and has graduated six cohorts to date. The program uses the following mechanisms to measure student progress and program quality.

Satisfaction

- Graduation (exit) interviews
- Student Opinion Form (SOF) feedback
- Periodic student informal feedback sessions
- Assessment of the technologies used: VTC, on-site (input from students/instructors, and sponsors)
- Biennial Program graduate surveys (performed in conjunction with Curriculum Reviews): Instructor satisfaction, course journals, teaching faculty meetings to address issues and problems
- Continuous sponsor interaction; joint NPS/sponsor monitoring of the program
- Informal feedback system: Academic Associate, Programs Officer, Dean, Associate Dean for Instruction, Provost, Associate Provost for Instruction, President

Student Learning

- Course data (grades, etc.)
- Course assessment results: exams, written case studies, research papers, etc.

- Student critique methods: self, collegial, and instructor
- Evaluation of scholarly joint applied projects and progress (students, advisors, Academic Associate and program managers)
- Continuous review of validity, relevancy, and currency of Educational Skill Requirements (Curriculum Reviews)
- Time analysis: sufficient time for study and reflection

Behavior and Organizational Impact

- Adequacy of resources (libraries, Internet, NPS materials, etc)
- Interviews with managers (middle to top) concerning achievement and validation of learning objectives
- Interviews with students and supervisors to determine behavioral modifications and organizational impact such as, promotions, job enlargement, new initiatives generated, strategies developed or modified, policy formulation and/or execution, sound business practices, cost avoidance, cost savings, and contribution of the body of knowledge

Descriptions of Changes (resulting from assessments of the MSPM program)

- The accelerated resident quarter (DL students here TDY for eight weeks) has been eliminated due to the combined cost of the TDY and the students' lost work at their home station, as well as student desires to limit the amount of time away from work and family
- As a result of the above, students have the option of graduating here at NPS or having a graduation ceremony at their home station
- As students no longer spend an accelerated quarter at NPS, MN2303 (PM Seminar) was eliminated
- The thesis requirement has been replaced with a Joint Applied Project focusing on cross-functional team research, projects and applications
- MN3012 (Communication Strategies for Leaders) was added and subsequently moved earlier in the program as a result of student feedback
- OS4602 was changed from a two-credit course to a three-credit course and designated MN4602
- OS3302 was eliminated, as the content was repetitive with concepts presented in MN3384
- Course eliminations/consolidations allowed a program reduction from 27 months to 24 months
- MN3184 (Production and Quality Management) was placed in a quarter with no other classes due to the amount of team and individual work involved with the 5-2 credit hour course
- MN3115 (Managing from a Systems Perspective, 2-0) and MN4474, (Organizational Analysis, 2-0), were merged into MN4474 (Organizational Analysis, 3-1)

- At the recommendation of sponsors and sponsoring commands, a tuition-based funding approach is being implemented, replacing the program full-funding model used to date.

Master of Science in Contract Management -- Program Assessment

The Master of Science in Contract Management (MSCM) initiated curriculum delivery in October 1999 and has graduated four cohorts to date. MSCM conducts continuous evaluation, assessment and improvement. This process, on both a formal and informal basis, involves several individuals and organizations, including, but not limited to, the students, the instructors, the academic associate, the program's sponsor, the students' employers (immediate supervisor through organization head), NPS administrators and other appropriate individuals/organizations.

The process is intended, at a minimum, to include the traditional four levels of assessment and include appropriate mechanisms as follows:

Satisfaction

- Graduation (exit) interviews
- Student Opinion Form (SOF) feedback
- Periodic student informal feedback sessions
- Assessment of the technologies used: VTC, on-site (input from students/instructors, and sponsors)
- Biennial Program graduate surveys (performed in conjunction with Curriculum Reviews): Instructor satisfaction, course journals, teaching faculty meetings to address issues and problems
- Continuous sponsor interaction; joint NPS/sponsor monitoring of the program
- Informal feedback system: Academic Associate, Programs Officer, Dean, Associate Dean for Instruction, Provost, Associate Provost for Instruction, President

Student Learning

- Course data (grades, etc.)
- Course assessment results: exams, written case studies, research papers, etc.
- Student critique methods: self, collegial, and instructor
- Evaluation of scholarly joint applied projects and progress (students, advisors, Academic Associate and program managers)
- Continuous review of validity, relevancy, and currency of Educational Skill Requirements (Curriculum Reviews)
- Time analysis: sufficient time for study and reflection
- Associate joint applied project advisor from student's organization
- Joint applied project progress: proposal, student progress report (every 6-12 weeks), Academic Associate monitoring/review with principal/associate advisors

- Build on student experience/knowledge
- Parallel Defense Acquisition Workforce Improvement (DAWIA) Act education goals and objectives (including continuous learning)
- Adequacy of resources (libraries, Internet, NPS materials, etc.)

Student Behavior

- Interviews with managers (middle to top) concerning achievement and validation of learning objectives
- Student's culture of inquiry
- Interviews with students to determine behavioral modifications
- Student/supervisor report of learning application and outcomes
- Performance data (promotions, job enlargement, responsibility increases, new initiatives generated)

Benefits to Organization/Profession

- Evaluate the impact of course research papers and Joint Applied Projects
- Application of critical thinking
- Strategies developed or modified
- Impact on policy formulation and/or execution
- Organizational/program changes instituted
- Ethical culture and leadership
- Application of sound business practices
- Dollar impact (cost avoidance, cost savings, etc.)
- Contribution to the body of knowledge
- Organizational commitment extremely high in these programs (associate thesis advisor, time for study, supervisory inter-action, etc)

Program improvement adjustments are made on a continuous basis and as-required basis. The intent is that the same high quality standards achieved by NPS in the resident programs are also achieved in the distance learning programs.

Descriptions of Changes (resulting from assessments of the MSCM program)

- The accelerated resident quarter (DL students here TDY for eight weeks) has been eliminated due to the combined cost of the TDY and the students' lost work at their home station, as well as student desires to limit the amount of time away from work and family
- As a result of the above, students have the option of graduating here at NPS or having a graduation ceremony at their home station
- The thesis requirement has been replaced with a Joint Applied Project focusing on cross-functional team research, projects and applications

- The MSCM curriculum is delivered in eight quarters, vice nine quarters as a result of sponsoring commands' requests to deliver eligible recipients the MSCM degree within a two-year period
- Course eliminations/consolidations allowed a program reduction from 27 months to 24 months
- MN3184 (Production and Quality Management) was eliminated from the curriculum and replaced by MN3318 (Contingency Contracting, 3-1) at the request of sponsors, reducing the curriculum by three total credit hours; the curriculum still includes over 50 credit hours total
- MN3115 (Managing from a Systems Perspective, 2-0) and MN4474 (Organizational Analysis, 2-0) were merged into MN4474 (Organizational Analysis, 3-1)
- At the recommendation of sponsors and sponsoring commands, a tuition-based funding approach is being implemented, replacing the program full-funding model used to date; the "pilot" of the new tuition model is currently being marketed, with an expected class start in October 2006

Executive Master of Business Administration -- Program Assessment

The Executive Master of Business Administration was initiated in 2002. Through assessment mechanisms described above, the following changes have been implement since the beginning of the program:

- The Management Group combined GE4105 (Managing Complex Change in the DoD Environment, 3-0) and GE4016 (Policy Making in the DoD Environment, 3-0) into a single 4-0 course: GE 4016 (Managing Strategic Change) in the spring of 2005 effective in the summer quarter AY05
- The EMBA Academic Associate added GE3109 (Applied Ethics, 3-0) to replace the course that was deleted by above action
- The Financial Management group deleted GE4510 (Strategic Resource Management, 3-0) from the EMBA; after consulting with FM faculty, GE3510 (Financial Management in the Armed Forces, 3-0) was added as a substitute
- GE3306 (Strategic Purchasing and Supply Chain Management, 3-0) was inserted in the curriculum for several cohorts to fill the opening made by the combination of GE4105 and GE4016, where the Applied Ethics course could not be backfilled
- GE4460 (Military Supply Chain Management, 3-0) was developed as a new course for the EMBA to meet a professional skills and knowledge requirement for Naval officers in this area of study
- GE4021 (E-Business for Defense, 3-0) was deleted to make room for GE4460.
- GE4310 (Strategic Acquisition Management, 3-0) was deleted in the final quarter to free up the entire 8th quarter for GE4100 (Capstone)
- GE4100 was revised to add a lecture component (Collaborative Problem Solving, 2-0) and a capstone project (0-8) which fills the entire last quarter

MS in Leadership and Human Resource Development -- Program Assessment

The MS in Leadership and Human Resource Development was designed and managed for the United States Naval Academy (USNA) by NPS for nine years. In June 2006, USNA outsourced this program. The program was delivered in modularized courses one to two weeks in length by NPS faculty who traveled to USNA. Using assessment methods described above, the following changes were made in the nine-year run of the program.

- The counseling course (MN3112) was changed from a 2- to a 3-credit course
- A no-credit course in stress management was eliminated
- The yearly class schedule was changed twice to create an optimal schedule for thesis work, while still leaving time for project work in between classes
- Increasing use was made of VTC for faculty-student meetings, e.g., thesis meetings, meeting where it is desirable to convene the entire faculty to meet with the cohort, etc.
- USNA Institutional Research (IR) became involved in teaching statistical software (as part of the research methods course) to be used in the quantitative courses, providing the opportunity to concurrently teach students how to scope their data requests for their project and thesis work; this created a much more efficient process for both IR and our students
- The research methods class evolved to contain a bigger qualitative analysis component than it did originally, to met the needs of the students and the customers of thesis research
- Several classes evolved to use VTC or the Web to complement their on-site work so faculty members could teach their courses on site, return to Monterey, and allow students to brief project results via VTC; this provided the time students needed to work on these projects, but allowed real-time feedback and interaction with the professor
- The one-week orientation was changed to include a 1 ½-day team-building phase to "break the ice" and speed the group cohesion-building process; this change helped the students enter the first week of class feeling they were quite comfortable with challenging and exchanging ideas concerning the class materials
- The "academic preview" phase of the orientation was also changed to focus more on the nature of research, research writing, generating research questions, conducting research on a topic, integrating and briefing the results and how these apply to the LEAD curriculum

Standard 9.3 Program Jurisdiction
The program shall explain how and by whom educational, student services, and administrative policies and practices relating to off-campus and distance learning, courses, programs, sites, and arrangements are formulated, administered, and assessed, including how comparability is assured.

9.3 Program Jurisdiction

In regards to off-campus programs, the GSBPP faculty and administrators determine policy within guidelines established by NPS. In 1998, after the Leadership and Human Resources Development program began, the GSBPP Department developed a new policy for the development of new programs that subjects each new program to a rigorous internal review. A copy of the policy is provided in Appendix 9.3. This process requires each program to undergo a review by an ad hoc committee that makes a recommendation to the department's voting faculty members for final decision. Considerable debate and discussion has occurred with each new program. All programs that have been proposed to the faculty have been approved.

Standard 9.4 Curriculum
The Core curriculum shall be comparable to the curriculum in the main campus (parent) program. The program shall demonstrate the pertinence of the curriculum design and educational technologies to the program's mission, assessment, and guidance processes as well as with the educational goals of specific offerings; comparability of offerings and requirements; compatibility of the educational technology with course goals and content, and the nature and availability of academic support.

9.4A Master of Science in Program Management (MSPM)

MSPM Curriculum Components

The curriculum is designed to produce professionals capable of intelligent, creative analysis and communication, and action in public service. This program is designed for graduate students. Both the core and specialty curriculum components are assessed for their quality and consistency with the stated mission of the program.

MSPM Educational Objectives

The Master of Science in Program Management Curriculum provides civilians and uniformed officers in the Department of Defense (DoD) and other Federal Agencies an advanced education in the concepts, methodologies and analytical techniques necessary for successful management of program/projects within complex organizations. The curriculum is designed to provide civilians with the knowledge, skills and abilities to manage and lead effectively in the Federal Government acquisition environment.

The curriculum focuses on problem solving and decision-making within the acquisition environment, utilizing case studies, teaming exercises, hands-on applications, active participation and other similar activities. Lecture and laboratory tasks require applying critical thinking to problem solving in actual situations. Student inputs include civilians and uniformed officers from all DoD Services and other Federal agencies.

MSPM Background Information

Credit System:	Quarter
Length of term:	12 weeks
Part-time status:	4-8 credits per quarter
Time limitations:	24 months
Class contact hours:	1 credit = 11 contact hours
Numbering system:	0000s = no credit
	1000s = lower division college
	2000s = upper division college
	3000s = upper division or graduate
	4000s = graduate

Course Credits Distribution

Course Level	Req Prereq	Req Grad	Add Comp	Total
Lower Division	0	0	0	0
Upper Division	0	0	0	0
Upper Div & Grad	0	0	0	0
Graduate only	0	15	35.5	50.5
Total	0	15	35.5	50.5

MSPM Graduate Classes

All courses are for graduate students as NPS is exclusively a graduate school and the GSBPP programs only enroll graduate students. NPS academic policy requires a minimum of 12 credit hours in 4000-level ("exclusively graduate") courses for a master's degree.

MSPM Required Prerequisites

A course in accounting principles, similar to MN2155 (Accounting for Management), and a course in management principles, similar to MN3105 (Organization and Management), are required. Students must also attain Defense Acquisition Workforce Improvement Act (DAWIA) Level II Program Management certification (education and training only).

MSPM Program Design

The MSCM degree program is based on the unique managerial skills and competencies that must be possessed by members of the acquisition workforce as required by the Defense Acquisition Workforce Improvement Act (DAWIA). The program is designed for the program management community within the acquisition workforce after attaining a certain level of proficiency as recognized by the DAWIA certification process. The successful completion of MSPM earns the student an

equivalency certificate for DAWIA mandated Program Management Level III (education and training only), required for many upper-level acquisition professional positions. Several individual courses also provide other qualifying DAWIA certificate equivalencies.

It recognizes the need for a broad-based foundation in advanced management principles and a focused comprehensive exposure to acquisition and program management knowledge and abilities. Both of these components are intended to provide the graduate with the critical thinking needed throughout one's managerial career to effectively address the problems and issues faced in the acquisition environment. The acquisition courses are intended to enhance the graduate's problem-solving and decision-making abilities in both the more immediate tactical situations as well as the longer-term strategic environment. The advanced management courses are drawn from those required of students in the MBA resident program. The acquisition courses were constructed reflecting the experience base achieved by students in the curriculum and the more advanced skills needed to effectively perform at the executive levels within the profession.

MSPM Educational Skills Requirements

- **Management Fundamentals** The graduate will understand the theory of and have an ability to apply accounting, economic, mathematical, statistical, managerial and other state-of-the-art management techniques and concepts to problem solving and decision-making responsibilities as Department of Defense managers. The graduate will have the ability to think creatively, addressing issues and problems in a dynamic, challenging environment.

- **Advanced Leadership and Management Concepts** The graduate will have the ability to apply advanced leadership, management and operations research techniques to defense problems. This includes policy formulation and execution, strategic planning, defense resource allocation, project leadership, cost benefit and cost effectiveness analysis, federal fiscal policy, computer-based information and decision support systems, and complex managerial situations requiring comprehensive integrated leadership abilities.

- **Program Leadership and Management Principles** The graduate will have an understanding of and will be able to apply the principles, concepts, and techniques of Program Leadership and Program Management to the acquisition of major defense weapon systems. This includes the principles of risk management and tradeoff decision analysis using Total Ownership Cost, schedule and performance dynamics from a total life cycle management perspective.

- **Program Management Policies** The graduate will have an ability to formulate and execute Defense acquisition policies, strategies, plans and procedures; an understanding of the policy-making roles of various federal agencies of the Executive, Legislative and Judicial branches of the Government, particularly the

Department of Defense (DoD), the General Accounting Office (GAO), Congressional committees, the Office of Management and Budget (OMB); and an understanding of the strategies necessary to influence policy development and implementation.

- **Systems Acquisition Process** The graduate will understand the theory of and have an ability to lead program teams and manage the systems acquisition process. This involves the system life cycle process for requirements determination, research and development, funding and budgeting, procurement, systems engineering, including systems of systems, test and evaluation, manufacturing and quality control, integrated logistics support, ownership and disposal; the interrelationship between reliability, maintainability and logistics support as an element of system effectiveness in Defense system/equipment design; and embedded weapon system software, particularly related to current policies and standards, software metrics, risk management, inspections, testing, integration, and post-deployment software support.

- **Contract Management** The graduate will understand the role of the contracting process within the acquisition environment including financial, legal, statutory, technical and managerial constraints in the process.

- **Business Theory and Practices** The graduate will have an understanding of the business and operating philosophies, concepts, practices and methodologies of the defense industry with regard to major weapon systems acquisition, particularly the application of sound business practices.

- **Government and Industry Budgeting and Financial Management** The graduate will have an understanding of and an ability to apply the principles of government and private organizational financing including corporate financial structures, cost and financial accounting, capital budgeting techniques, financial analysis, and Defense financial management and budgeting processes to include the Government Planning, Programming and Budgeting System (PPBS).

- **Acquisition Workforce** The graduate will satisfy all requirements of the Defense Acquisition Workforce Improvement Act (DAWIA) and mandatory Program Management courses required by the Defense Acquisition University (DAU) at Levels I, II, and III.

- **Ethics and Standards of Conduct** The graduate will have an ability to manage and provide leadership in the ethical considerations of defense acquisition, including the provisions of procurement integrity, and to appropriately apply defense acquisition standards of conduct.

- **Analysis, Problem Solving and Critical Thinking** The graduate will demonstrate the ability to conduct research and analysis, and proficiency in presenting the results in

writing and orally by means of an applied project and a command-oriented briefing appropriate to this curriculum.

MSPM Curriculum Courses

The following courses are required of all students in the MSPM program:

SI4011	Systems Engineering for Acquisition Managers (3-2)
MN3001	Economics for Defense Managers (3-0)
MN3012	Communications Strategies for Effective Leaders (3-0)
MN3155	Financial Management for Acquisition Managers (2-0)
MN3172	Resourcing National Security: Policy and Process (3-0)
MN3302	Advanced Program Management (2-0)
MN3303	Principles of Acquisition and Contracts Management (4-0)
MN3309	Acquisition of Embedded Weapon Systems Software (4-1)
MN3384	Principles of Acquisition Production Quality Mgmt (5-1)
MN4105	Strategic Management (3-0)
MN4307	Program Management Policy and Control (4-0)
MN4470	Strategic Planning & Policy for the Logistics Mgr (4-0)
MN4474	Organizational Analysis (3-1)
MN4602	Test & Evaluation Management (3-0)
MN4090	Joint Applied Project (0-12)

The numbers in parentheses after a course title indicate both the class hours and the credit hours for the course. The first digit indicates lecture hours per week and the second digit, lab hours. One credit hour is granted for each lecture hour, and one half of a credit hour for each lab hour.

MSPM Analysis of Common Courses

With reference to standard 4.21, this section relates MSPM courses to the areas listed in the standard, and provides rough estimates of the proportion of each course that contributes to an area.

Table 9.4A		
RELATIONSHIP OF MSPM CURRICULUM TO STANDARD 4.21		
The Management of Public Service Organizations, the components of which include:		
-Human Resources		
MN3012	Communications Strategies for Effective Leaders	30%
MN3302	Advanced Program Management	10%
MN3303	Principles of Acquisition and Contracts Management	20%

MSPM Project Requirement

Joint Applied Project research provides a capstone experience for analysis, integration and application of the knowledge and skills required.

MSPM Summary – General Competencies

The Master of Science in Program Management (836) consists of three broad phases (advanced management courses, acquisition/program management discipline courses and thesis research)

I. Advanced Management Courses: broad management competencies
    - Public Policy Processes
    - Defense Economics
    - Systems and Organizational Analysis
    - Strategic Management
    - Managerial Communications

II. Acquisition/Program Management Courses: discipline competencies
    - Advanced Program Management
    - Contracts Management
    - Production and Quality Management
    - Test/Evaluation and Systems Engineering Management
    - Systems Software Management
    - Quantitative Tools-Quality Assurance/Reliability Methods
    - Financial and Logistics Management
    - Program Management Policy

III. Joint Applied Project develops competencies for analysis, integration and application

9.4B Master of Science in Contract Management (MSCM)

MSCM Curriculum Components

The curriculum components are designed to produce professionals capable of intelligent, creative analysis and communication and action in public service. This program is designed for graduate students. Curriculum components are assessed for their quality and consistency with the stated mission of the program.

MSCM Education Objectives

The Master of Science in Contract Management (MSCM) Degree is designed to provide civilians in the Department of Defense (DoD) and other Federal Government agencies an advanced education in the concepts, methodologies and analytical techniques necessary for successful management of acquisition and contracting within complex organizations. The curriculum is designed to provide civilians with the knowledge, skills and abilities to manage and lead effectively in hardware systems buying offices, field contracting offices, contract administration offices and contracting policy offices.

The curriculum focuses on problem solving and decision making within the acquisition environment utilizing case studies, teaming exercises, hands-on applications, active participation and other similar activities. Lecture and laboratory tasks require the

application of critical thinking to problem solving within actual situations. Student input includes civilians from all Services and other Federal agencies.

MSCM Background Information

Credit System:	Quarter
Length of term:	12 weeks (distance learning terms)
Part- time status:	4-8 credits per quarter
Time limitations:	24 months
Class contact hours:	1 credit = 11 contact hours
Numbering system:	0000s = no credit
	1000s = lower division college
	2000s = upper division college
	3000s = upper division or graduate
	4000s = graduate

Course Credits Distribution

Course Level	Req Prereq	Req Grad	Add Comp	Total
Lower Division	0	0	0	0
Upper Division	0	0	0	0
Upper Div & Grad	0	0	0	0
Graduate only	0	18.	35.5	53.5
Total	0	18	35.5	53.5

MSCM Graduate Classes

All courses are for graduate students as NPS is exclusively a graduate school and the GSBPP programs only enroll graduate students. NPS academic policy requires a minimum of 12 credit hours in 4000 level ("exclusively graduate") courses for a master's degree.

MSCM Required Prerequisites

A course in accounting principles similar to MN2155 (Accounting for Management) and a course in management principles similar to MN3105 (Organization and Management) are required. Students must also attain Defense Acquisition Workforce Improvement Act (DAWIA) Level II Contract Management certification (education and training only) or have Level I completed with Level II in progress as of the MSCM curriculum start date. Of note, applicants to the program may have completed similar courses and/or may have extensive practitioner background and experiences that may be considered in conjunction with the established prerequisites.

MSCM Program Design

The design of the MSCM degree program is based on the unique managerial skills and competencies that must be possessed by members of the acquisition workforce as required by the Defense Acquisition Workforce Improvement Act (DAWIA). The program is designed for the contracting personnel within the acquisition workforce who have attained a certain level of proficiency as recognized by the DAWIA certification process.

It recognizes the need for a broad-based foundation in advanced management principles and a focused comprehensive exposure to acquisition and contracting knowledge and abilities. Both of these components are intended to provide the graduate with the critical thinking needed throughout one's managerial career to effectively address the problems and issues faced in the acquisition and contracting environment. The acquisition and contracting courses are intended to enhance the graduate's problem-solving and decision-making abilities in both the more immediate tactical situations as well as the longer-term strategic environment. The advanced management courses are drawn from those required of students in the MSM resident program. The acquisition and contracting courses were constructed reflecting the experience base achieved by students in the curriculum and the more advanced skills needed to effectively perform at executive levels within the profession.

MSCM Educational Skill Requirements

Advanced Management Concepts The graduate will have the ability to apply advanced management theory and techniques to problems in both the public and private sectors. This includes policy formulation and execution, strategic planning, resource allocation, Federal fiscal policy, computer-based information and decision support systems, and complex managerial situations requiring comprehensive integrated approaches. The graduate will have the ability to apply state-of-the-art management concepts and practices to problem solving and decision-making responsibilities as middle and senior managers.

2. Acquisition and Contracting Principles The graduate will have an understanding of and will be able to apply the principles and fundamentals of acquisition and contracting within the Federal Government including knowledge of the acquisition laws and regulations, particularly the Federal Acquisition Regulation (FAR) and the Defense FAR Supplement (DFARS); the unique legal principles applied in Government contract law and the Uniform Commercial Code; and the application of sound business principles and practices to Defense contracting problems. Further, the graduate will be able to apply innovative and creative approaches not only to resolve difficult acquisition and contracting issues but to significantly influence the legal and regulatory structure within which acquisition decision-making occurs.

3. Contracting Process The graduate will understand the theory of and have the ability to manage the field contracting, system acquisition and contract administration processes. This involves a knowledge of the defense system life

cycle processes, including requirements determination, funding, contracting, ownership, and disposal; an ability to evaluate military requirements, specifications, and bids and proposals; an ability to utilize the sealed bid, competitive proposals and small purchase contracting methodologies; a comprehensive knowledge of all contract types and their application in Defense acquisition; an ability to conduct cost and price analyses; and an ability to negotiate various contracting actions including new procurement, contract changes and modifications, claims, equitable adjustment settlements, and noncompliance issues.

4. Acquisition and Contracting Policy The graduate will have an ability to formulate and execute acquisition policies, strategies, plans and procedures; a knowledge of the legislative process and an ability to research and analyze acquisition legislation; and a knowledge of the Government organization for acquisition, including Congress, the General Accounting Office, the Office of Federal Procurement Policy, the Federal and military contracting offices, the Boards of Contract Appeals, and the court system.

5. Business Theory and Practices The graduate will have an understanding of the business philosophy, concepts, practices and methodologies of the commercial industrial base (both domestic and global) and the ability to apply these to the Federal Government acquisition environment.

6. Defense Financial Management and Budgeting The graduate will have an ability to apply sound financial management theories, principles and practices to defense acquisition and contracting issues, including fiscal and monetary policy.

7. Production and Quality Management The graduate will have an understanding of the basic principles and fundamentals of Production and Quality Management, with particular emphasis on the Procuring Contracting Officer's and Administrative Contracting Officer's roles and relationships with industry and the Government Program Manager.

8. Analysis and Application The graduate will demonstrate an ability to apply acquisition, contracting and management principles in dealing with the significant issues encountered in managing the contracting process in one of the following areas: (1) major weapon systems acquisition, (2) research and development, (3) field procurement, and (4) facilities contracting.

9. Ethics and Standards of Conduct The graduate will have an ability to manage and provide leadership in the ethical considerations of military acquisition, including the provisions of procurement integrity, and to appropriately apply Defense acquisition standards of conduct.

10. Acquisition Workforce The graduate will satisfy all requirements of the Defense Acquisition Workforce Improvement Act (DAWIA) and mandatory contracting courses required by the Defense Acquisition University (DAU) at Level III.

11. Analysis, Problem Solving and Critical Thinking The graduate will demonstrate the ability to conduct independent research and analysis, and proficiency in presenting the results in writing and orally by means of an applications project and a command-oriented briefing appropriate to this curriculum.

MSCM Common Curriculum Courses

The following courses are required of all students in the MSCM program:

MN3001	Economics for Defense Managers (3-0)
MN4474	Organizational Analysis (3-1)
MN3341	Advanced Contracting Principles (4-2)
MN3155	Financial Management for Acquisition Managers (2-0)
MN3312	Contract Law (4-0)
MN3172	Resourcing National Security: Policy and Process (3-0)
MN3342	Advanced Contract Management (4-1)
MN3012	Communication Strategy for Effective Leaders (3-0)
MN3318	Contingency Contracting (3-1)
MN4304	Defense Systems Contracting (2-0)
MN4105	Strategic Management (3-0)
MN4308	Field Contract Management (2-0)
MN4473	Strategic Acquisition and Contact Management (4-1)
MN4371	Acquisition and Contracting Policy (4-0)
MN4090	Joint Applied Project (0-12)

The numbers in parentheses after a course title indicate both the class hours and the credit hours for the course. The first digit indicates lecture hours per week and the second digit, lab hours. One credit hour is granted for each lecture hour, and one half of a credit hour for each lab hour.

MSCM Analysis of Common Curriculum

With reference to standard 4.21, this section relates MSCM courses to the areas listed in the standard, and provides rough estimates of the proportion of each course that contributes to an area.

MN3342	Advanced Contract Management	30%
MN4371	Acquisition and Contracting Policy	40%
MN4473	Strategic Acquisition and Contract Management	60%

MSCM Joint Applied Project Requirement

Joint Applied Project research provides a capstone experience for analysis, integration and application of the knowledge and skills required.

MSCM Summary – General Competencies

The Master of Science in Contract Management (835) consists of three broad phases: advanced management courses, acquisition/contract management discipline courses, and thesis research.

I. Advanced Management Courses: broad management competencies
   - Public Policy Processes
   - Defense Economics
   - Managerial Communications
   - Systems and Organizational Analysis
   - Strategic Management

II. Acquisition/Contracting Courses: discipline competencies
   - Advanced Contracting Principles and Management
   - Law

Defense Systems Contracting
Contingency Contracting
Field Contracting
Financial Management
Strategic Contract Management
Acquisition/Contracting Policy

III. Joint Applied Project develops competencies for analysis, integration and application

9.4C Executive Master of Business Administration (EMBA)

EMBA Curriculum Component

The curriculum components are designed to produce professionals capable of intelligent, creative analysis and communication and action in public service. This program is designed for graduate students. Curriculum components are assessed for their quality and consistency with the stated mission of the program.

EMBA Education Objectives

The EMBA was developed in 2002 to provide Defense-focused graduate business education to officers in the Unrestricted Line (URL) aviation community whose career paths and operational assignments are not compatible with traditional resident degree programs. The program remains focused on the Navy URL community as the primary student population, but non-URL officers (including the Marine Corps) and DoD civilians are considered on a space-available basis for each new cohort. This program is designed to be a high quality, high DoD relevant educational program that provides a state-of-the-art perspective on "business management approaches" applicable to the DoD arena and with effective decision making tools and techniques appropriate to military planning and policy settings. The curriculum places particular emphasis on financial management since a Navy subspecialty code is awarded in that area.

EMBA Background

Credit System:	Quarter
Length of term:	12 weeks
Part-time status:	6-7 credits per quarter
Time limitations:	24 months
Class contact hours:	1 credit = 11 contact hours
Numbering system:	0000s = no credit
	1000s = lower division college
	2000s = upper division college
	3000s = upper division or graduate
	4000s = graduate

Course Credit Distributions:

Course Level:	Req. Prereq.	Req. Grad.	Add. Comp.	Total
Lower Division	0	0	0	0
Upper Division	0	0	0	0
Upper Div & Grad	0	33	0	33
Graduate only	0	21	0	21
Total	0	54		54

EMBA Graduate Courses

All courses are for graduate students as NPS is exclusively a graduate school and GSBPP programs only enroll graduate students. NPS academic policy requires a minimum of 12 credit hours in 4000 level ("exclusively graduate") courses for a master's degree.

EMBA Required Prerequisites

None

EMBA Program Design

The design of the EMBA program is specifically tailored to meet Navy/DoD resource management challenges—all courses blend best business practices in civilian and military domains and examine them in the context of DoD process to provide critical skills for leaders and decision makers. The curriculum provides the graduate with the perspective and foundation knowledge needed throughout one's managerial career as problems and challenges requiring broad considerations are encountered, especially those faced at senior executive levels. The more focused financial management area is intended to prepare the graduate for the more immediate and anticipated assignment as functional managers or staff experts in that particular discipline.

EMBA Educational Skills Requirements

Business Ethics and Moral Development The graduate will understand the ethical challenges of the global Defense business environment facing senior Navy corporate business leaders and resource managers, and develop the critical thinking and analytical skills required to address complex issues. In addition, the students will develop a personal approach to achieve ethical outcomes in the decision making process.

- **Complex Systems Thinking** The graduate will be able to diagnose complex Navy and DoD problems from a systems perspective and offer solutions that maintain system alignments.

- **Managing and Leading Complex Change** The graduate will understand the managerial and leadership levers required to institute and manage complex change and the implementation strategies necessary to ensure change initiatives reach all organizational levels.

- **Strategic Thinking** The graduate will have knowledge of senior-level decision-making processes under conditions of significant uncertainty within the unique context of DoD organizations. In addition, students will learn how to implement these decisions, evaluate their effectiveness, and determine steps to take if desired outcomes aren't reached.

- **Understanding of Information Technologies** The graduate will be able to analyze critically, from a senior management perspective, their own organizations in light of electronic-business (e-Business) technologies, business models, and managerial techniques. Students also explore the relationship between Information Technologies (e-Business) strategy and Department of Defense Transformation, and how to integrate both theory and application to effectively organize and manage in the networked, paperless, on-line enterprise of today and tomorrow.

- **Analysis for Efficiency and Effectiveness** The graduate will be able to use various statistical methods to solve complex and unstructured problems in which alternatives will be evaluated and selected based on cost and systems analysis factors. This includes the use of probability theory, decision models and decision analysis, decision trees, forecasting, and simulation to make decisions under conditions of uncertainty with competing objectives.

- **Program Management Policies** The graduate will have an ability to execute Defense acquisition policies, strategies, plans and procedures; an understanding of the policy-making roles of various federal agencies of the executive, legislative and judicial branches of the Government, particularly the Department of Defense (DoD), the General Accounting Office (GAO), congressional committees, the Office of Management and Budget (OMB); and an understanding of the strategies necessary to influence policy development and implementation.

- **System Acquisition Process** The graduate will understand the theory of the systems acquisition process. This involves the major system life cycle process for requirements determination, research and development, funding and budgeting, procurement, systems engineering, test and evaluation, manufacturing and quality control, integrated logistics support, ownership and disposal; the interrelationship between reliability, maintainability and logistics support as an element of system effectiveness in Defense system/equipment design; and embedded weapon system software, particularly related to current policies and standards, software metrics, risk management, inspections, testing, integration, and post-deployment software support.

- **Federal and Defense Budgeting** The graduate will understand the roles of the executive and legislative branches in setting Federal/Defense fiscal policy, allocating resources to national defense, budget formulation, negotiation, and execution strategies. In addition, the graduate will have knowledge of all aspects of the Federal, Defense, and Navy budget cycles including the Planning, Programming, Budgeting and Execution (PPBE) process with emphasis on budget formulation and execution of the budget authority provided by Congress in response to DoD budget requests, including an evaluation of the expected benefits to be derived under funded programs.

- **Defense Financial Management** The graduate will understand how appropriated, revolving, and non-appropriated funds are to be managed in compliance with regulations of the Comptroller of the Navy and the federal government. Also, the graduate will understand and be able to review financial reports, ask pointed questions about budget execution against operating and financial plans, assess the quality of alternate plans based on analyses of an activity's financial performance, and determine the quality of recommendations regarding the reallocation or reprogramming of funds. The graduate will be familiar with federal and private sector financial reporting systems, standards, and practices.

- **Cost Management and Analysis** The graduate will be able to understand and evaluate different costing systems encountered within Defense and Navy organizations and activities as well as those found in private sector organizations conducting business with the federal government. In addition to private sector cost management policies and practices, the graduate will understand cost accounting standards applicable to Federal organizations and to private sector suppliers of goods and service to the federal government.

- **Defense Economics** The graduate will be able to apply the fundamental tools of micro- and macroeconomic theory to Defense management and resource allocation decisions. Additionally, the student will understand markets and their interactions with Defense acquisition and contracting processes, the national security implications of globalization, and efficiency in Defense decision making.

- **Operations/Supply Chain Management:** The graduate will understand the management of manufacturing and service operations and how Defense managers can effectively design and control operational processes to achieve world-class performance in these types of operations. The student will also have a knowledge of the use of strategic purchasing initiatives to derive a competitive advantage from Defense procurement and sourcing strategies to achieve increased efficiency and enhanced performance in the global Defense and commercial supply chain management environments.

EMBA Common Curriculum Courses

The following courses are required of all students in the EMBA program:

GE3011	Managing Teams (2-0)
GE3050	Financial Reporting and Analysis (3-0)
GE3109	Ethics and Moral Development (3-0)
GE3051	Cost Management (3-0)
GE3010	Organizations as Systems and Structures (3-0)
GE3070	Economics for Defense Managers (3-0)
GE3221	Systems Acquisition and Program Management I (3-0)
GE3043	Analytical Tools for Decision Making (3-0)
GE3222	Systems Acquisition and Program Management II (3-0)
GE4052	Managerial Finance (3-0)
GE3042	Operations Management (4-0)
GE4053	DoD Mission and Resource Determination (4-0)
GE4460	Military Supply Chain Management (3-0)
GE3510	Defense Financial Management Practice (3-0)
GE4016	Managing Strategic Change (4-0)
GE4100	Collaborative Problem Solving (Capstone Project, 3-8)

The numbers in parentheses after a course title indicate both the class hours and the credit hours for the course. The first digit indicates lecture hours per week and the second digit, lab hours. One credit hour is granted for each lecture hour, and one half of a credit hour for each lab hour.

EMBA Analysis of Common Curriculum Components

With reference to standard 4.21, this section relates EMBA courses to the areas listed in the standard, and provides rough estimates of the proportion of each course that contributes to an area.

Table 9.4C		
RELATIONSHIP OF EMBA CURRICULUM TO STANDARD 4.21		
The Management of Public Service Organizations, the components of which include:		
-Human Resources		
GE3011	Managing Teams	10%

EMBA Project Requirement

Joint Applied Project research provides a capstone experience for analysis, integration and application of the knowledge and skills required. The requirement is provided in GE4100 Collaborative Problem Solving.

EMBA Summary – General Competencies

The Executive Master of Business Administration consists of education in four major competency areas:

1. Advanced management courses: broad management competencies
2. Acquisition/program management courses: discipline competencies
3. Financial management courses: discipline competencies
4. Analytic techniques: tools for analysis, integration, and application

The one area chosen by the current program sponsor for the student's concentration of study is financial management.

9.4D Master of Science in Leadership and Human Resource Development (LEAD)

LEAD Curriculum Components

The curriculum components are designed to produce professionals capable of intelligent, creative analysis and communication and action in public service. This program is designed for graduate students. Curriculum components are assessed for their quality and consistency with the stated mission of the program.

LEAD Educational Objectives

The Leadership Education and Development (LEAD) curriculum prepares officers to develop leadership in others through knowledge of managing organizations, diagnosing individual and group performance, understanding learning processes, motivating subordinates, providing feedback and serving as positive role models. The curriculum was designed in response to a need for graduate education for Company Officers at the United States Naval Academy (USNA). The coursework provides knowledge and skills that officers will use as Company Officers and in other leadership roles as they become more senior in the military.

The Company Officer is a Naval or Marine Corps officer who is the person most closely involved in the development of a company of 130 midshipmen through responsibilities ranging from disciplinarian to role model. He or she must be a leader; a critical analyst of organizational systems, groups and individuals; knowledgeable of education and development processes; a skilled communicator; and an exemplar of Navy and Marine Corps values. The Company Officer's place of business is Bancroft Hall where all 4000 midshipmen live.

LEAD students are United States Naval or Marine Corps officers (at the 0-3 or 0-4 level) who are assigned to the Naval Academy for full-time graduate education for one year followed by a two-year tour of duty as a Company Officer. Students must have a baccalaureate degree earned with above-average academic performance and an APC of 365.

The LEAD curriculum is taught at USNA by Naval Postgraduate School faculty in one- to two-week modularized courses over a one-year period. The accelerated and modularized nature of the courses requires a high level of coordination among faculty for courses to build on others and become integrated into a logical whole. Courses include topics related to ethics, leadership, Department of Defense (DoD) policy and resource analysis, quantitative analysis, educational theory and organizational behavior.

LEAD: Background Information

Credit system:	Modularized courses based on quarter system credit
Length of program:	One year with new classes every one to three weeks
Full-time status:	Every class must be attended throughout the year
Time limitations:	Fixed one-year program
Class contact hours:	1 credit = 11 contact hours
Numbering system:	0000s = no credit
	1000s = lower division college
	2000s = upper division college
	3000s = upper division or graduate
	4000s = graduate

Course credits distribution:

Course Level	Req. Prereq.	Req. Grad.	Add. Com	Total
Lower division	0	.5	4	4.5
Upper division	0	0	0	0
Upper div. & grad	0	31	0	31
Graduate only	0	19	0	19
Total	0	50.5	4	54.5

LEAD Graduate Classes

All courses in all programs are primarily for graduate students as NPS is exclusively a graduate school and GSBPP programs only enroll graduate students. NPS academic policy requires a minimum of 12 credit hours in 4000-level ("exclusively graduate") courses for a master's degree.

LEAD Required Prerequisites

None.

LEAD Program Design

Unlike the resident GSBPP curricula, which are designed for the MBA or MSM degree, the LEAD curriculum awards an MS in Leadership and Human Resources Development. The degrees are different and the design of the programs is fundamentally

different. Unlike our other programs, which include courses that provide the broad-based multi-disciplinary foundation needed for future general management positions and the more focused subspecialty education needed to prepare the officer for the immediate assignments as functional managers and senior staff experts in a particular discipline, the LEAD curriculum does not differentiate the needs of immediate and future assignments. This is due to the nature of academic study and practice in the domain of leadership. All courses provide a broad-based multi-disciplinary foundation of knowledge and skill needed to address the ambiguities of leading and developing leaders at different points in one's career.

The leadership curriculum is designed to create an analytic approach to leading and developing leaders. Effective leaders realize that their knowledge of this topic is never complete. Thus, there is not a body of knowledge that can be transferred to students, which, when mastered, qualifies them as expert leaders. Rather, courses in this curriculum rely on various disciplines, e.g., psychology, sociology, education, and ethics, to prepare officers to continually assess their strengths and weaknesses, to recognize the consequences of their actions, to learn from successes and failures, and to have a mindset toward continual development. The broad analytic approach of this curriculum prepares officers for their immediate work as Company Officers and for future roles as they become more senior.

The broad analytic focus of the program is complemented by specific examples drawn from the work of Company Officers and officers in the Fleet. We are able to do this due to the unique nature of this program. Because all of our students will become Company Officers immediately after graduation, and because their graduate education is physically located with their place of future work, we are able to design specific Company Officer applications into course projects. In so doing, we maintain a direct link between classroom theory and real-life applications.

The program includes a one-week orientation, which is included to "get the students up to speed" as quickly as possible.

LEAD Educational Skills Requirements

1. Management Fundamentals Leadership, Management, and Organization. Officers will have the ability to apply basic management and leadership practices to organizational operations. Officers will understand the fundamental principles of leadership and management in military organizations. They will be able to implement appropriate structures for organizations and jobs; they will understand state-of-the-art information technologies and planning and budgeting tools; they will become skilled in spoken and written communications; and they will understand the higher-level leadership skills and the systems perspective of organizations in which day-to-day organizational operations and strategy formulation occur.

2. Evaluating and Improving Group Performance Officers will become skilled at analyzing and improving group morale, cohesion, and performance. Graduates of the program will have the ability to analyze and improve group effectiveness through leadership practices that also develop the leadership abilities of subordinates. This ability will be based on knowledge of managing people from diverse backgrounds, teambuilding, conflict management, group dynamics and management of change. Officers will be exposed to varied approaches for building strong shared values within the military

3. Motivating Subordinates Officers will effectively motivate subordinates to achieve high standards in all military endeavors. Program graduates will have the ability to motivate subordinates to provide focus and encouragement as they face the rigorous requirements and goals of the military. This ability requires an understanding of how effective leaders use goal setting, equitable discipline, reward systems, analysis of individual needs, empowerment, coaching, and high expectations to achieve peak performance from individuals.

4. Evaluating and Improving Individual Performance Officers will become skilled in analyzing and improving the performance of individuals. The officers will have the ability to evaluate the performance of subordinates and provide appropriate feedback and counseling. This includes activities that range from formal performance appraisal to informal assessment on an ongoing basis. These skills require knowledge of basic performance measurement and giving feedback, as well as knowledge of how to deal with performance outside of the norms that may lead to violations of military rules and regulations.

5. Being a Role Model for Subordinates Officers will model and otherwise communicate the information about the military that subordinates will need to know to successfully transition to Naval and Marine Corps Leaders. Officers will use the operational experience they bring to the job, in addition to a broader base of knowledge created through the program, to visibly embody the high standards and values of Naval and Marine Corps officers. The Officer will communicate knowledge of the military culture, current policy and operations, and future plans for the Navy and joint operations in the Department of Defense. These abilities are based on knowledge of the military in a democratic society, managing organizational cultures, DoD policy, and the behaviors of good role models and mentors.

6. Managing Educational Processes: Officers will have a foundation of knowledge about educational processes that will enable them to effectively teach and develop their subordinates. The program graduate will have the ability to formulate and answer research questions about educational experiences within the Navy and Marine Corps. Through the thesis process, the officer will explore important issues while concurrently broadening his/her knowledge of training and education in the military.

While graduates of this program are sent directly to the Company Officer position, future possible jobs include work in Navy schoolhouses, NROTC units, the Naval Training Center, or on staff for the Navy Training and Education Command for policy or implementation issues. Completion of the program earns the subspecialty code 4500. The curriculum sponsor is USNA.

LEAD Common Curriculum Course

The following courses are required of all students in the LEAD program:

MN3101	Models of Leadership in Complex Organizations (2-0)
MN3109	Ethics and Moral Development (3-0)
MN3160	Methods of Inquiry (3-0)
MN3162	Tools of Inquiry (3-0)
MN3139	Organizational Design (2-0)
MN3104	Motivation and Empowerment (1-0)
MN4129	Performance Assessment (2-0)
MN0163	Thesis Writing Workshop (0-1)
MN3106	Defense Conflict Management (2-0)
MN3135	Educational Theory (3-0)
MN3138	Adult Development (2-0)
MN4143	Defense Manpower and Personnel Analysis (2-0)
MN3333	Managerial Communications (3-0)
MN3103	Group Dynamics and Teambuilding (2-0)
MN3102	Military Leadership (2-0)
MN3112	Counseling (3-0)
MN4113	Military Sociology and Psychology: Leadership Dimensions (2-0)
MN4120	Managing Diversity (3-0)
MN4101	Leadership in the Military Culture (2-0)
MN4104	Strategic Management (3-0)
MN4124	Defense Management of Change (3-0)
IS3181	Integrating and Leveraging Information Tech (3-0)
MN4080	Research Colloquium (2-0)
MN0801	Thesis (0-8)

The numbers in parentheses after a course title indicate both the class hours and the credit hours for the course. The first digit indicates lecture hours per week and the second digit, lab hours. One credit hour is granted for each lecture hour, and one half of a credit hour for each lab hour.

LEAD Analysis of Core Courses

With reference to Standard 4.21, this section relates LEAD courses to the areas listed in the standard, and provides rough estimates of the proportion each course contributes to an area.

Table 9.4D		
RELATIONSHIP OF LEAD CURRICULUM TO STANDARD 4.21

LEAD Thesis Requirement

Thesis research provides a capstone experience for analysis, integration, and application of the knowledge and skills acquired.

LEAD Summary – General Competencies

The Masters of Science in Leadership and Human Resources Development develops broad management competencies in six areas:

Leading and managing organizations
Evaluating and improving group performance
Motivating subordinates
Evaluating and improving individual performance
Serving as a positive role model for subordinates
Understanding and managing learning processes

These competencies are gained by modularized courses taught in one to two week blocks by NPS faculty who travel to Naval Academy for that period of time. All students go through each of the courses. Classroom study is complemented by projects designed to integrate theory with naval officers' future jobs, at USNA and elsewhere. The program also includes a thesis requirement, which develops competencies for analysis, integration, and further application of program concepts.

Standard 9.5 Faculty
The faculty shall be comparable to the faculty in the main campus (parent) program. The program shall demonstrate how: the main campus faculty maintains control over planning, design, delivery, and assessment of curriculum courses, and instruction; off campus and distance education offerings affect faculty workloads and assignments; instruction of off-campus and distance education courses is factored into the institution's retention, promotion and tenure (RPT) and merit review processes and decision criteria; and, policies and practices that promote faculty equity and diversity, and prohibits discrimination in off-campus and distance education, are comparable to those on the main campus.

9.5 Faculty

In regards to off-campus programs, the GSBPP faculty and administrators determine policy within guidelines established by NPS. In 1998, after the Leadership and Human Resources Development program began, GSBPP developed a new policy for the development of new programs that subjects each new program to a rigorous internal review. A copy of the policy is provided in Appendix 3.4C. This process requires each program to undergo a review by an ad hoc committee that makes a recommendation to the school's voting faculty members for final decision. Considerable debate and discussion has occurred with each new program. All programs that have been proposed to the faculty have been approved.

The faculty for off-campus and distance programs are the same faculty who teach in the resident programs for The Graduate School of Business and Public Policy. Faculty who teach in off-campus programs receive teaching load credit that factors into their regular teaching load. A premium of 50 percent is added to standard workload credit for all DL courses. Off-campus and distance courses are factored into merit, promotion, and tenure decisions just as residence courses.

Because of the inherent difficulties in teaching DL courses, new faculty hires are encouraged to teach resident courses, only, initially at GSBPP. This gives them the chance to adapt to our unique environment and students before taking on the additional challenges involved in DL teaching. NPS offers training and assistance for faculty who teach VTC and courses. The NPS Office of Continuous Learning provides excellent instruction, which comes with workload relief for the time spent taking the course.

Standard 9.6 Admission of Students
Admission standards, procedures, and criteria shall be comparable to those used on the main campus.

9.6 Admission of Students

Admission standards for all off-campus programs are the same as for our resident programs. Military officers are selected just as they are in our resident program. Government civilians must meet NPS, GSBPP admission standards, as well as a screening process that occurs at the individual command that evaluates a candidate's work performance. There is one difference in admissions standards for an off-campus program: the EMBA has a higher minimum undergraduate GPA requirement than all other school programs.

Standard 9.7 Student Services
Students shall have access to academic and administrative support services that are comparable to student services available to students on the main campus.

9.7 Student Services

Academic Associates (AA) and Program Managers (PM) work closely with off-campus students to advise them about their program of study. The AA is the key interface with the students. The primary difference between a resident AA and an AA who manages an off-campus program is the significant amount of coordination that is required for a distance program.

Thesis processing, records maintenance, and other functions are handled much the same way as the resident program. Again, the difference is the coordination that is required for the distance sites.

Standard 9.8 Support Services and Facilities
Support services and facilities shall be comparable to those on the main campus. The program should identify contracts and arrangements that assure the on-going availability, access, and performance of services and facilities.

9.8 Support Services and Facilities

Funding: All off-campus and distance programs are currently funded by their respective sponsors. Programs are funded at a level that is both competitive and does not detract from the resident program. Funding includes faculty labor, equipment, technical support, and administration.

Distance-site Support: Programs have a military officer assigned as a liaison for the program as well as technical support personnel at the distance sites.

Library Resources: Off-campus sites have on-line library resource s as well as libraries that are located nearby.

Appendix 9.3
New Programs Policy

Systems Management Department
Guidelines for Development of New Graduate and Executive Development Programs

General Policy:

The Department of Systems Management recognizes the changing environment of graduate education in DoD and the rapid advances in instructional technology. Developing new programs to meet the demands of new customers is encouraged. In order to maintain the high standards and professional reputation of Systems Management Department programs, development of new programs must follow the guidelines discussed below.

Guidelines for New Program Development:

1. New programs include newly created graduate and executive programs for new sponsors and offering of existing programs via media other than the traditional resident graduate programs.

2. The Executive Committee of the Senior Faculty Council shall appoint a three-person ad hoc committee to review a new program proposal and make a recommendation to the department's voting faculty members for final decision. For this purpose, the voting faculty members are defined as tenured and tenure-track faculty and senior lecturers. At least one committee member must be in the specialty area of the proposed new program, and at least one committee member must be from an area different from the proposed program. To facilitate the development work, faculty member(s) responsible for the program development task should seek feedback from the review committee on a regular basis.

3. Keeping the department faculty abreast of program development and progress is essential for eliciting support from the faculty. Faculty member(s) responsible for the program development task should make progress reports to the faculty no less than once a quarter.

4. New program proposals must show adequate support in the areas of faculty expertise, staff support, and technological support, or address the method to correct deficiencies.

5. New courses should be approved by the department's voting faculty members. Proposals for new courses should include the course description and a major topical outline of the course.

6. Funding methods and resource requirements for faculty, staff, course development, and infrastructure support must be addressed by the proposer, reviewed by the voting faculty, and approved by the department chair.

7. Commitment by the department's faculty is essential for the success of a program. Once a program is approved by the department's faculty, participation in a new program by a faculty member, if needed, is considered part of his/her normal workload requirements.

(Adopted March 31, 1998)

NASPAA SITE VISIT REPORT
NAVAL POSTGRADUATE SCHOOL
March 23-26, 2008

SECTION I. INTRODUCTION

A. Summary of Site Visit Activities

1. Members of the site visit team

- W. Earle Klay, Chair, Florida State University.
- George Reed, University of San Diego
- Fred Thompson, Willamette University

2. Dates of the Site Visit.

- March 23-26, 2008

3. Site Visit Schedule

Sunday March 23:

8 PM	Chair of SVT had dinner with Dean Bob Beck

Monday March 24:

8:00 AM	SVT met with Dean Bob Beck and Associate Dean for Academic Operations Chip Franck
9:00	SVT split to do transcript and record reviews and tours
9 – 9:45	Visit to computer lab facilities with Executive Director Christine Cermak and Prof. Doug Brinkley
9:45-10:30	Toured Library with University Librarian Eleanor Uhlinger and Research Assistance and Instruction Manager Ann Jacobson
10:45-11:15	Met with Acquisition Research Program Director Keith Snider
11:45 – 1 PM	Lunch with Faculty
1:00 – 3:30	Met with faculty and administrators on MSM degree
3:30 – 5:00	Met with faculty and administrators on MBA degree
5:30	SVT dinner with Dean Bob Beck, Associate Dean for Academic Operations Chip Franck, and Associate Dean for Research Bill Gates

Tuesday March 25:

8:00 – 9:00AM	SVT met to discuss research activities with: Bill Gates, Keith Snider, and Senior Lecturer John Mutty
9:00 – 10:00	SVT met to discuss faculty and governance issues with Dean Robert Beck, Assoc. Deans Chip Franck and Bill Gates, and Professor Steve Mehay
10:00 – 10:45	SVT met with SSR preparation team
11:00 – 11:30	SVT met with President of the Naval Postgraduate School, Vice Admiral (retired) Daniel T. Oliver
12:00 – 1:15	Lunch with current students
1:15 – 2:00	Met with Alumni
2:00 – 3:00	SVT final exit meting with Dean Bob Beck, Associate Deans Chip Franck and Bill Gates, Prof. Mark Eitelberg, and Assoc. Prof. Doug Moses
3:00	SVT began drafting of report

Wednesday March 26:

SVT departed

B. Summary of basic facts about the institution

1. Type of institution and school

The Naval Postgraduate School is an entity of the Department of the Navy and the Department of Defense, established to provide graduate only education to officers of the US Navy, other US military services, senior federal civilian employees, and officers from allied nations. The NPS has four individual graduate schools, including the Graduate School of Business and Public Policy which offers the MBA and MSM degrees being considered for accreditation.

(NOTE: HEREAFTER THE NAVAL POST GRADUATE SCHOOL WILL BE REFERRED TO AS THE "NPS" AND THE GRADUATE SCHOOL OF BUSINESS AND PUBLIC POLICY WILL BE REFERRED TO AS THE "SCHOOL.")

2. Date the program was established

The Master of Science in Management (MSM) degree was first awarded at the NPS in 1960. The Master of Business Administration (MBA) degree was established in 2002. The MBA degree program evolved from the MSM degree program and both programs are largely based on the same core courses.

3. Undergraduate and graduate degree programs offered

Neither the NPS nor the School offer undergraduate degrees. The School offers several masters degrees, but accreditation is sought only for the MSM and MBA degrees. The MSM degree program was initially accredited by NASPAA in 1980 and reaccredited subsequently, most recently in 2000. Accreditation was apparently extended from the MSM degree to the MBA degree program. This is the first review specifically for the MBA degree program and the fifth such review for the MSM program.

SECTION II. BACKGROUND AND MISSION

The predecessor of the NPS was originally established in 1901 at Annapolis, MD and has been located in Monterey, CA since 1951. Its mission has been essentially the same from its beginning – graduate education for US Navy officers and others whose careers are closely related to the mission of the US Department of Defense (DOD). Most students are mid-career officers of the Navy. Other students come from other US military services, DOD civilian ranks, and allied military forces.

The missions of the MBA and MSM are stated clearly in their respective Self Study documents. The missions for the two degree programs are essentially the same. What separates the two degree programs are the specialization courses taken by students who otherwise take very nearly the same core required courses.

The common mission of the two degrees can be seen in their statements.

- The MBA mission statement indicates that, "*The mission of the Defense-Focused MBA degree program is to prepare graduates for management and leadership roles in the Defense establishment of the United States or allied nations. The program prepares graduates to manage organizations, resources, people, and programs in complex environments.*

- The MSM mission statement indicates that, "*The mission (of the) Master of Science in Management degree program is to prepare graduates for management and leadership roles in the Defense establishment of the United States or allied nations. The program prepares graduates to manage in complex defense organizations and to conduct rigorous analyses of organizational problems, policies and operations."*

SECTION III. ITEM-BY-ITEM ANALYSIS OF CONCERNS RAISED BY COMMISSION ON PEER REVIEW AND ACCREDITATION

The following are the items raised by COPRA in its interim report.

Item 1: Standard 1.3 Professional Education

Standard 1.3 states, "*The primary objective is professional education preparing persons for leadership and management roles in public affairs/policy/administration*."

COPRA wrote. *"... the SSR remains unclear as to the public service orientation of the degree. Preparing graduates for the Defense establishment as an employment sector is one aspect of the program's public service orientation. However, other components of the educational experience must also meet the threshold for public service orientation.*

The Commission requests further clarification from the program on how the Defense-Focused Master of Business Administration addresses the public sector generally, beyond its unique focus on the Defense Establishment. The Commission instructs the Site Visit Team (SVT) to explore the public service orientation of the degree.

SVT Findings:

The two degree programs do focus primarily on the context of public policy making from a Defense Department perspective. However, there is also an extensive focus on the larger milieu of the public decision making process and the institutional settings in which decisions are made.

The SVT learned that the SSR understated the degree to which Naval officer students are taught about the institutional context of public policy decision making. Specifically, there are three additional courses, as part of the curriculum in the Joint Professional Military Education program taken simultaneously by Naval officers in the degree programs, which deal with stakeholders and institutions in the policy making process.

In its meeting with students, it became evident to the SVT that -- as officers in the military services and as career federal civil servants -- they are deeply committed to public service. They reported that the faculty reinforces that commitment, in part, through the faculty's strong commitment to the students as their clients. Teaching students about the ethical context of public service is incorporated in several different courses. Examination of professional ethics, particularly as they pertain to military officers, is extended throughout the curriculum. Self sacrifice on behalf of the public is a basic tenet of military service and these students clearly exhibit a commitment to that ideal.

Item 2: Standard 2.2 Assessment

Standard 2.2 states that each program "*shall develop and use procedures for determining how it carries out its mission*."

COPRA wrote, *"The mission is clearly stated on the SSR; however, the means for external assessment are under development. As stated in the SSR on page 21, "a survey for alumni is in final draft stages."*

The Commission requests information on the progress made towards the development of the alumni survey. Please provide a copy of the survey, if available. The Commission asks the Site Visit Team (SVT) to examine progress towards implementation.

SVT Findings:

The alumni survey is an NPS wide institutional initiative and is beyond the control of the school. It has not yet been finalized and its completion date is now targeted for summer of 2008. The SVT, on the other hand, did learn about some of the several other means used by the faculty for assessing student progress and mission accomplishment. The team was impressed by the way in which the school uses its relationships with its "corporate sponsors," the Naval commands to which students will return, to assess the degree to which the program is addressing students' educational needs. Reviews are conducted every two years with each of those sponsors. These reviews involve key stakeholders outside the NPS. Multiple means are used to assess the progress of each student. Multiple methods are also used to assess the accomplishment of each degree's mission. The methods referred to here for assessing student accomplishment and mission accomplishment are as described in the SSR.

Item 3: Standard 5.2 Professional Qualifications

Standard 5.2 Professional Qualifications requires that "*At least 75% of the professional graduate program's full-time faculty should hold an earned doctorate or other equivalent terminal professional degree in their field…Full-time faculty actively pursuing appropriate terminal degrees are to be included in the 25 percent not holding a terminal degree.*"

COPRA wrote, *"The SSR states, "Seventy percent (43/61 = 70%) of the nucleus full-time faculty hold terminal academic degrees (p.136)." The SSR further explains, "Seven percent (4/61 = 7%) of the nucleus full-time faculty are military instructors, accomplished practitioners in their fields… Military faculty members are sent to the School for 2 - 3 years. GSBPP reviews officers who may be sent to the school as military faculty, but GSBPP does not hire the military faculty in the traditional sense. If military faculty members are excluded from the nucleus faculty, then seventy-five percent (43/57 = 75%) of the nucleus faculty hold terminal academic degrees (p.136)."*

The Commission requests that the Site Visit Team examine the impact of this terminal degree ratio on instruction and program governance, with respect to the program's mission.

SVT Findings:

The findings of the SVT differ somewhat for the two degree programs so they are addressed here separately.

MSM degree program: Data provided indicate that more than 75 percent of courses taught to students in the MSM degree program are taught by faculty members with terminal degrees. As reported in the SSR, it appears that 78% of all courses taught in the MSM are taught by faculty members with terminal degrees. Due to the strong emphasis on quantitative analytical skills in the MSM degree program, the need for terminal degrees is evident and has guided faculty recruitment

MBA Degree Program: The SSR reported that only 66% of all courses taught in the MBA program are taught by faculty members with terminal degrees. Discussion with faculty members verified that this is the case. The problem does not exist in the teaching of the core courses in the MBA degree program, as 86% of the MBA core courses are taught by faculty members with terminal degrees. The problem lies in the teaching of the curriculum specialization courses and, most especially, in the teaching of the Acquisition Management Curriculum specialization.

In the presentation given to us by Dean Beck, and in the SSR, we learned that the acquisition area faculty number 14. Of these 14 members, only one holds a terminal degree, the academic associate responsible for the specialization. Of the 13 remaining faculty members in that specialization, nine are retired military persons, three are active duty military persons, and one is a former DOD civilian acquisition project manager. All are clearly subject matter experts. The school administrators told us that they had attempted to recruit persons with terminal degrees to teach in the acquisitions specialty but have been unsuccessful in doing so. This area has grown rapidly in recent years, due, in part, to the DOD relying far more on contracting out for services as well as goods. Consequently the Navy needs more officers who are well educated in acquisitions, also known as procurement or purchasing in other settings. It is somewhat ironic that there are few potential terminal-degreed faculty candidates in procurement/acquisitions; it is the field of study that is most devoted to operationalizing privatization.

It was reported to us that the MBA degree program will be able to meet the 75% standard if it hires three more members with terminal degrees. One current acquisitions faculty member, an active duty military lecturer, is currently ABD and plans are being made to try to bring him aboard permanently.

Item 4: Standard 4.21 Common Curriculum Components

Standard 4.21 states, "*The common curriculum components shall enhance the student's values, knowledge, and skills to act ethically and effectively:*

> *• In the Management of Public Service Organizations, the components of which include: Human resources; Budgeting and financial processes; Information management, technology applications, and policy.*
> *• In the Application of Quantitative and Qualitative Techniques of Analysis, the components of which include: Policy and program formulation, implementation and evaluation; Decision-making and problem-solving.*
> *• With an Understanding of the Public Policy and Organizational Environment, the components of which include: Political and legal institutions and processes; Economic and social institutions and processes; Organization and management concepts and behavior."*

COPRA wrote, *"The SSR and course syllabi clearly articulate the general management curriculum components of the MBA. What is not clear is how public service organizations, public service values, and the public service environment are specifically addressed.*

The Commission requests clarification on how the common curriculum of the MBA specifically addresses the public service environment for all curriculum components. The Commission instructs the Site Visit Team to seek clarification of how program courses relate to public service organizations and values, and to explore the relationship between the program's curriculum and program mission.

SVT Findings:

The SVT findings addressed in Item 1 above are fully applicable here.

The core curriculum extensively addresses the broader policymaking environment within which defense policy is made. Students deal with issues related to legislative and executive interactions, multiple stakeholders, and conflicts in the political environment.

The SVT members have never encountered a program in which faculty work harder to assure a close alignment between the structure and content of their curriculum and the accomplishment of program mission. The faculty frequently review fit between their curriculum and the needs of students in their future careers. In 2004 they undertook an extensive strategic review process. Regularized course reviews are substantive, not mere pro forma reviews, and such efforts have resulted in substantive curriculum changes.

Item 5: Standard 5.5 Faculty Diversity

Standard 5.5 states, "*There should be evidence that specific plans are being implemented to assure the diversity of the composition of the faculty with respect to the representation of minorities, women, and persons with disabilities.*"

COPRA wrote, *"The SSR (p.160) states, "While GSBPP has no explicitly articulated program targeted to assure diversity in the faculty composition, we nonetheless have a serious commitment to achieving and maintain a high level of faculty diversity." The SSR explains the tenure and promotion process and notes that in the last five years, eight faculty were reviewed for tenure and/or promotion and all cases were successful. However, six of the eight faculty members who have resigned in the last six years were white females. Additionally, it is not clear from the SSR how the diversity for the two programs differs (p.163).*

The Commission requests that the Site Visit Team explore the measures the program is taking to promote faculty diversity with regard to faculty recruitment, supplemental diversity efforts and providing a positive and supportive atmosphere for women, minorities, and persons with disabilities. The Commission requests clarification on the composition of nucleus faculty with regard to diversity.

SVT Findings:

The SVT saw repeated evidence that the administration considers recruitment of a more diverse faculty to be a high priority. Two of the four most recent hires are female. Since 2002, 34 faculty members have been hired. Of these, six (18%) are members of racial or ethnic minorities. Seventeen (50%) are female. The SVT learned that the school has joined the "Ph.D. Project," a consortium of universities dedicated to increase the diversity of business school faculties. They attract minority students to study in graduate programs and provide a network of peer support for minority students.

The NPS recognizes that retention of female faculty members is a particular problem. The NPS has created an Ad Hoc Committee on Recruitment and Retention to develop strategies to improve retention. Short term priorities include strategies such as subsidized spousal visits on recruitment trips and better targeting recruiting. The SVT discussed ways to help female and minority faculty members develop better networking contacts with potential sponsors of their future research. Female and minority members with whom we spoke said they do not perceive discrimination in dealing with employees of sponsoring organizations once they have made contacts.

Twenty seven percent of current students are non-Caucasian. These students are taking masters degrees in topics such as acquisitions that are in short supply at the Ph.D. level.

The SVT is aware that the military services sometimes sponsor members, who have masters degrees, through Ph. D. programs with the requirement that the member

remain on active duty, often in teaching positions. The SVT will recommend that the NPS and Navy consider sending graduates, especially minority active duty alumni, to Ph. D. programs. Since these alumni already have received specialized education at the NPS in the fields needed by the Navy, it is not necessary, nor possibly even advisable, that their doctoral studies be equally specialized.

SECTION IV. STANDARD-BY-STANDARD ASSESSMENT (not covered in Section III above)

STANDARD 1.0 -- ELIGIBILITY FOR PEER REVIEW AND ACCREDITATION

1.1 Eligibility

Is as stated in SSR.

1.2 Institutional Accreditation

Is as stated in SSR.

1.3 Professional Education

See Section III, Item 1 above.

1.4 Program Length

The length of the two degree programs varies according to the specialization. None are less than 18 months of full time intensive study.

STANDARD 2.0 -- PROGRAM MISSION

2.1 Mission Statement

The mission statements of both programs, as stated in the SSRs, are an accurate reflection of what the faculty devotes itself to accomplishing.

2.2 Assessment

See Section III, Item 2 above.

2.3 Guiding Performance

As stated in the SSRs, the faculty members of both programs use an impressive array of mechanisms to obtain information about their performance. They clearly use these to guide revisions to curriculum as well as revise program direction when needed.

STANDARD 3.0 -- PROGRAM JURISDICTION

3.1 Administrative Organization

As stated in the SSR, both degrees are offered by the Graduate School of Business and Public Policy. Nearly all of its more than five dozen faculty members are involved in the teaching of the two degrees. It is clear from our discussions with the faculty that they

feel a high degree of ownership for the two degree programs.

3.2 Identifiable Faculty

The faculty membership is readily identifiable and is as stated in the SSR.

3.3 Program Administration

Primary responsibility for administration rests with the dean who delegates responsibility for administering the core courses, as well as each curriculum specialization area, to designated tenured faculty members.

3.4 Scope of Influence

All three members of the SVT are former US Army officers. We are aware that a military oriented environment can exert substantial hierarchical control on military sponsored organizations. We therefore looked very closely at the degree to which the program faculty exercises control over its curriculum and related functions. We were pleased to find that the faculty have a very substantial amount of discretion and influence over the program planning, degree requirements, curriculum changes, scheduling, teaching assignments, use of resources, and faculty hiring and promotion. As stated in the SSR, the faculty does not control admissions in the usual manner; selection of students is up to their sponsoring military commands. We were pleased to learn that the President of the NPS strongly supports faculty governance which he stated is essential to maintaining the unique nature of the NPS.

STANDARD 4.0 -- CURRICULUM

4.1 Purpose of Curriculum

The purpose of the curriculum is clearly to prepare students for positions of professional leadership in service to the public.

4.2 Curriculum Components

The site review team conducted a sample review of past students' transcripts. It is evident that students do take the courses in the manner described in the SSR.

4.21 Common Curriculum Components

See Section III, Item 4 above.

We reviewed past students' files to determine whether students had, in fact, taken required courses that were stated in the SSR. This review indicated that there is an active advising process in place to advise students regarding their courses. Student completion of required courses is carefully monitored. The courses that comprise the common core curriculum of the two degree programs are carefully designed through a collegial process to fulfill the program mission.

4.22 Additional Curriculum Components

Each of the curriculum specializations is carefully designed and monitored. The SVT was impressed by the detailed attention and care given to each specialization area. A

faculty member is assigned to be a coordinator of each specialization. Each specialization area is carefully reviewed at least every two years through a formal "curriculum review" that involves active participation by representatives of the sponsoring Naval commands who interact with program faculty. The careful attention given to each curriculum specialization area is a singular strength of the school and of both degree programs.

4.3 Minimum Degree Requirements

The MBA degree program requires completion of at least 78 credit hours.
The MSM degree program requires completion of at least 83 credit hours.
No student file reviewed authorized graduation with fewer credits.

4.4 Internships

All students are mid-career; no internships are offered by the school.

STANDARD 5.0 -- THE FACULTY

5.1 Faculty Nucleus

There are more than five dozen full time faculty members in the School. Most of them have significant teaching responsibilities in one or both of the degree programs.

5.2 Professional Qualifications.

See SECTION III, Item 3 above.

5.3 Practitioner Involvement

The degree of practitioner involvement in deliberations with the faculty is extraordinary. Members of the SVT have never observed such extensive institutionalization of relationships with practitioners.

5.4 Faculty Quality

Procedures for promotion and tenure are as stated in the SSR. Peer review and peer voting is central to the promotion and tenure processes. Faculty members from the school have been consistently successful in obtaining promotion and tenure. The SVT was concerned that the self study reported that, in the previous five years, there had only been five promotions and only three tenure decisions among a faculty of 61 or more persons. When we made inquiries we were told that the small numbers were due largely to a lull in hiring years earlier. That explanation does not account for relatively large portions of the faculty remaining at the associate professor and lecturer levels for many years.

5.41 Instruction

As stated in the SSR, efforts to improve the instructional program are supported by extensive feedback mechanisms including surveys, end of course briefings, and curricular reviews. The SVT observed evidence of changes based on such reviews. Student advisement appears to be a notable strength, and our interviews of students provided evidence of an attentive and supportive faculty. Innovation is fostered primarily

by a close association with sponsors and stakeholders, and is motivated in no small part by a strong desire to remain relevant to their needs.

5.42 Research

The School maintains high scholarly standards. Over two-thirds of the faculty members have published at least one refereed journal article in the past three years. Nearly one hundred percent of the faculty have authored or presented work in their fields of specialization between 2002 and 2007. Lecturers have been nearly as active on this dimension as faculty in the academic ranks. Moreover, the School's faculty members include many highly productive scholars, whose work has appeared in the leading journals in their fields.

5.43 Experience and Service

Every member of the faculty has extensive professional experience, either through military service, service with industry, or through their consulting and/or applied analytical assignments.

5.5 Faculty Diversity

See Section III, Item 5 above.

STANDARD 6.0 -- ADMISSION OF STUDENTS

6.1 Admission Goals and Standards

A review of admissions criteria indicated no inconsistency with representations made in the Self-study under Standard 6.0, Admission of Students. As noted, however, the School's admissions authority is restricted.

6.2 Baccalaureate Requirement

A bachelor degree has been a requirement to be an active duty military officer for several decades. All US students admitted to the programs, therefore, have bachelor degrees. We were told that the international admittees must meet the same requirement and that they undergo competitive scrutiny for selection by their sponsoring countries.

6.3 Admission Factors

The SVT file review confirmed that the program abides by its published guidelines and university requirements, consistent with claims made in the Self-Study. Decisions to assign students to the NPS are made by their sponsoring US Navy commands or by comparable sponsors in other services. The data used by those commands will typically include multiple officer fitness and performance reports and undergraduate transcripts. Sponsoring commands seek to select students with strong potential to succeed in their studies at the NPS and to rise to higher levels of responsibility and rank in future years. Failure to complete studies at NPS has significant negative career ramifications so sponsoring commands are motivated to select students who have the potential to succeed at graduate studies.

STANDARD 7.0 -- STUDENT SERVICES

7.1 Advisement and Appraisal.

Our review of student files revealed that students are closely advised and that records are kept of advice given regarding such things as bypassing courses when students have already done similar coursework elsewhere (bypassing is called "validation".) Completion rates in both degree programs consistently exceed 90 percent. Many of the students who fail to graduate on schedule do so because of an emergency deployment prior to graduation.

7.2 Placement Service

Students are mid-career officers and federal civilian employees who return to service upon graduation. No placement service is needed. Most universities' career services offices define their job in terms of helping students focus their job searches, target appropriate employers, implement appropriate contact and follow-up strategies, and build skills in self-marketing. They help students plan their careers, clarify career directions, write resumes and prepare for interviews. Some organize workshops, panels, networking events and receptions relevant to career search. They also organize on- and off-campus recruiting activities and job fairs. In contrast, all of the students at NPS have their next job waiting for them when they leave. Career counseling varies by branch of service. However, it focuses primarily on longer-term career development. It appears to be excellent and competent.

STANDARD 8.0 -- SUPPORTIVE SERVICES AND FACILITIES

8.1 Budget

Control of the program's budget is exercised by the school dean as stated in the SSR. Funding appears sufficient to sustain the program at its current size. Faculty members are quite successful in obtaining outside funding, primarily from the command sponsors of the programs' curriculum specialization areas.

Facilities are adequate, although not elegant. The SVT noted that space is at a premium but events in the immediate future may solve some of the School's problems, including construction of a 10 thousand square-foot annex.

8.2 Library Services

The SVT was very impressed with the campus library and the superior services provided by library staff, as well as the quantity of academic material available for the students and faculty.

8.3 Supportive Personnel

The support staff is as stated in the SSR. The support staff members were especially helpful to the SVT and appear adequate to the needs of the programs.

8.4 Instructional Equipment

Faculty and students indicated that appropriate instructional equipment is available.

8.5 Faculty Offices

Each member of the faculty has an adequate private office with computer as stated in the SSR.

8.6 Classrooms

Classrooms are well equipped with appropriate instructional technology available.

8.7 Meeting Area. A lounge for students is available though sometimes crowded.

STANDARD 9.0 -- OFF-CAMPUS PROGRAMS

Neither the MSM degree nor the MBA degree is offered off-campus. Both are resident degree programs.

SECTION V. COMMENDATIONS AND RECOMMENDATIONS

COMMENDATIONS

- The faculty maintains a close relationship with the practitioner community and demonstrates a high degree of responsiveness to practitioner needs

- Faculty shows a high degree of dedication both to the accomplishment of the programs' missions and to their students.

- Faculty members show a strong commitment to accomplishing research, particularly practitioner relevant research, but also to publish more broadly to a more general academic community. Most tenure track faculty members have published in recent years in refereed outlets. Particularly noteworthy is the degree to which lecturers and senior lecturers have engaged in research, a trend that has steadily increased since 2001.

RECOMMENDATIONS

- Completion of the Joint Professional Military Education courses by most students adds an important dimension of instruction in topics related to public service education, such as policy making in complex, politicized environments. Fuller recognition of completion of that curriculum within students' degree programs will better serve to fully represent what students learn while at the NPS.

- The school is encouraged to strengthen its efforts to recruit minority faculty members. We recommend that consideration be given to identifying minority graduates of the school -- who have gained valuable specialized knowledge that is in short supply at the doctoral level -- for doctoral training and then assignment to the NPS as faculty members.

- The school should consider bolstering its efforts in faculty retention by conducting a faculty climate survey that identifies issues that affect job satisfaction. Considering the problems associated with the very high cost of housing in the Monterey area, as well as the caps on federal pay that create extensive salary compression across ranks, addressing other possible sources of dissatisfaction seems advisable.

- For the most part, NPS did a first-rate job of backing up the claims made in the self study report. One salient exception to this generalization is the section of faculty research and publications. This is not a criticism of faculty research at NPS. By any reasonable standard, NPS has a commendable research program. However, the bibliography of Graduate School of Business and Public Policy publications (2002-2007) we were given was very sloppy. Looking at the citations to refereed journal articles, we found page locations omitted, volume/issues missing, publication dates wrong, etc. In some cases, the articles could be not found at all, whether we searched on article, journal, or author. Finally, many of these articles are not in refereed journals or, if they are in refereed journals, they are not the kind of publications that are refereed (e.g., book reviews). The SVT was told that this list was compiled from information provided by individual faculty members. This should be cleaned up.

- A singular strength of the faculty is derived from the fact that a genuine tenure process exists. It is the impression of the SVT that this enables the faculty to speak to the Navy's sponsoring organizations from a position of strength and relative independence. We were impressed that the president of the NPS is aware of this fact and believes that the NPS' tenured faculty enables the NPS to provide a valuable service to the Navy when "truth needs to be spoken to power."

From this perspective, it is especially important that the school not continue its long-term trend of increasing reliance on non-tenure track faculty, most of whom lack terminal degrees. It is very important, therefore, that the school redoubles its efforts to hire more tenure-track faculty members with terminal degrees. The above strategy recommended for recruiting minority faculty – sending active duty military officer graduates of the NPS to doctoral programs – should be considered for non-minority alumni as well.

We encourage NPS to redouble its efforts to staff 75 percent of its MBA courses with faculty with terminal degrees, and to protect against any possible future slippage below that level for the MSM degree. While NPS's professionally qualified lecturers add valuable knowledge of government policies and applied analysis, over reliance on these personnel threatens to unbalance NPS's professional Masters programs, the ultimate effect of which would be the transformation of graduate degrees into vocational training programs. Maintaining a predominance of faculty members with tenure -- who

understand the problems of the DOD and Navy well -- will help assure that the NPS has the needed institutional presence and independence to tell higher level policy makers what they need to hear.

NAVAL POSTGRADUATE SCHOOL

100 Years of Relevance and Excellence:
Education and Research Serving National Security

The Naval Postgraduate School (NPS) will celebrate its centennial in 2009. In anticipation of this milestone, the over-arching theme of the accreditation review is "100 Years of Relevance and Excellence: Education and Research Serving National Security." Central to the theme is the NPS mission.

Provide relevant and unique advanced education and research programs in order to increase the combat effectiveness of the U.S. and Allied armed forces and enhance the security of the United States.

NPS' mission is unique among higher education institutions. Nowhere else can military officers and federal civilians pursue graduate degrees in a wide range of disciplines while immersed in a defense-oriented community and focused on defense issues. NPS' institutional ability to provide first-rate graduate education with a defense focus has enabled its graduates over the years to bring enormous value to the military services of the United States and its allies.

In pursuing this mission, NPS has mastered the art of balancing creative tensions. One tension is in its research program, in which the NPS maintains a range of projects from pure to applied research. With this mix, NPS is able to advance the state of knowledge while simultaneously producing useful applications. A second creative tension is in its education program, in which NPS provides pathways to master's degrees for many students who have not been in school recently and who do not have undergraduate degrees in the same field as their graduate studies. NPS curricula provide rich mixtures of dual-level courses that review undergraduate material while introducing advanced graduate courses, and a thesis or project that enables every student to demonstrate graduate proficiency. A third creative tension is between academic inquiry, which is deliberate and reflective, and operational readiness, which is immediate, focused and action oriented. NPS must be agile and adaptive to meet the needs of the defense community in its education and research programs, while maintaining academic standards of excellence.

This accreditation effort will focus on NPS mission and how competing requirements are balanced while still meeting WASC academic standards. In particular, this proposal will consider the themes of integrating a campus-wide program of continuous improvement, supporting an evolving academic enterprise and strategic planning for the next NPS centennial. NPS will use the opportunity to look at its past and its successes and consider the future and how NPS may better accomplish its mission.

INSTITUTIONAL CONTEXT

History

The idea for a graduate education program for naval officers first emerged in the late 19th century. Initially, the concept found few advocates. However, great advances in technology, including Marconi's invention of the "wireless" in 1901, the Wright brothers' flight in 1903, and

the global trek of the steam-powered Great White Fleet from 1907 to 1909, turned that around. By 1909, many naval leaders supported advanced education for U.S naval officers.

On June 9, 1909, less than four months after the completion of the record-setting world cruise of the Great White Fleet, Secretary of the Navy George von L. Meyer established a school of marine engineering at Annapolis, Maryland. This small program, consisting of 10 officer students and two Navy instructors, would later become the Naval Postgraduate School. The Navy Secretary's order placed the fledgling school under the direction of the Naval Academy Superintendent, who was charged with "securing ample use of the educational plant of the Naval Academy to students and instructors of the school without interfering with the instruction of midshipmen." This translated into two attic rooms being set aside for the new school's classroom and laboratory space.

On October 31, 1912, Secretary Meyer signed Navy General Order No. 233, which renamed the school the Postgraduate Department of the Naval Academy. The order established courses of study in ordnance and gunnery, electrical engineering, radio telegraphy, naval construction, and civil engineering, and also continued the original program in marine engineering. With the additional curricula, enrollment increased to 25. Officers who attended the school finished their academic programs at accredited civilian institutions such as Yale, Harvard, the Massachusetts Institute of Technology, and Johns Hopkins and Columbia universities.

During World War II, Fleet Admiral Ernest King, Chief of Naval Operations and Commander-in-Chief of both the Atlantic and Pacific fleets, established a commission to review the role of graduate education in the Navy. The recommendations from this group, the Pye Commission, were regarded highly within the Navy and Congress. In 1945, Congress passed legislation to make the school a fully-accredited, degree-granting graduate institution.

In December 1951, in a move virtually unparalleled in the history of the academy, the Postgraduate School moved lock, stock, and wind tunnel across the nation, establishing its current campus in Monterey. The coast-to-coast move involved 500 students, about 100 faculty and staff, and tons of books and research equipment. The move, supervised by Rear Adm. Ernest Edward Herrmann, pumped new vitality into the Navy's efforts to advance naval science and technology. NPS was first accredited in 1955, becoming the first of the nation's military graduate institutions to achieve this status.

Since its move to Monterey, NPS has continued its tradition of relevant, high-quality graduate education programs to serve national security. NPS' programs, the student body, and the customers served have grown over the years. Today, about 1,800 graduate students, including 300 international students, are enrolled in master's and doctoral degree programs in residence in Monterey. They study traditional engineering and physical sciences, as well as operational and information sciences, information security, modeling and simulation, space systems, defense-focused business, security studies programs in civil-military relations, stabilization and reconstruction, and regional studies. Students come from all branches of the U.S. defense community, as well as from the Coast Guard, the National Oceanic and Atmospheric Administration, and the services of more than 58 allied nations. NPS programs are also open to federal and other government civilians, and a limited number of defense contractors. NPS also offers more graduate degree and certificate programs for non-resident students worldwide, delivered in various combinations of online, web-enabled, video tele-education, and visiting faculty members. Non-resident graduate degree and certificate programs include Electrical Engineering, Mechanical Engineering, Systems Engineering, Information Systems and Operations/Technology, Space Systems, and Contract Management. NPS also offers short

courses and other educational programs, both in Monterey and abroad, to more than 49,000 people each year.

NPS has been the first in a number of important areas. It started a master's degree program in military operations analysis (operations research) in the 1950s. It incorporated the concepts of network-centric warfare into the defense analysis curriculum in the 1990s. It created the nation's first master's degree program focused on homeland security in 2002 as part of the response to the 9/11 attacks. NPS has other unique programs in systems engineering, space systems engineering, space systems operations, information warfare, and undersea warfare. The collaboration-rich environment is ready to create new graduate programs in new areas of importance to national security.

Faculty

NPS faculty are accomplished scholars and professionals. The 242 tenure/tenure track faculty members are part of a robust mix that also includes research faculty, lecturers, senior lecturers, military faculty, and visiting faculty. Almost all civilian tenure track faculty members hold doctorates and the military faculty have a minimum of a master's degree and bring extensive operational expertise to the classroom. NPS faculty are the strength of the learning institution. NPS recruits from academic, industry, defense, and government circles. NPS also has 35 Academic Chairs, sponsored by various federal, defense and industry agencies that bring relevance and expertise to degree programs.

Academic Programs

NPS offers degree programs in 43 areas including engineering, science, technology, business, and national security. All programs strive to be both excellent in academic quality and relevant to the needs of the Navy and national security interests. A few of the unique programs are Combat Systems, Defense Analysis for Special Operations, Space Systems Engineering and Space Systems Operations, Joint Command, Control, Communications, Computers and Intelligence, Operational Logistics/Operations Analysis, Manpower Systems Analysis, Information Systems and Operations, Meteorology and Operational Oceanography, Total Ship Systems Engineering, and Undersea Warfare.

Academic Organizations

NPS is organized into fourteen academic departments within four degree-granting graduate schools and three major research institutes.

The Graduate School of Business and Public Policy (GSBPP) offers a unique defense-focused resident MBA program, in addition to master's degrees in five other Department of Defense (DoD)-relevant areas. Faculty teach from the Monterey campus and other Navy and DoD locations around the world through video-teleconferencing and other distributed learning techniques. Faculty research, sponsored largely by Navy and DoD agencies, brings current and relevant issues to the School, and returns valuable results to the sponsors. Continuous entrepreneurial efforts by GSBPP faculty create exciting new educational and research opportunities.

The Graduate School of Engineering and Applied Sciences (GSEAS) has a two part mission. First, it provides cutting-edge graduate technical education to military officers from all services, DoD civilians, and their counterparts from allied countries. Second, it performs relevant, high-quality applied and classified research in the fields of engineering and applied sciences. The Graduate School of Engineering and Applied Sciences offers nine resident curricula leading to traditional Master of Science, Engineer, and Ph.D. degrees. GSEAS also offers several non-resident degree and certificate programs. GSEAS continues to have an outstanding research program supported by the USN, DoD agencies, NSF and a large number of industry firms.

The Graduate School of Operational and Information Sciences (GSOIS) delivers graduate-level education and conducts cutting-edge research responsive to naval and military customers. GSOIS focuses on knowledge domains that have become increasingly important in the last generation: Information Science and Technology, Military Computer Science, Military Operations Analysis and Research, and Special Operations and Defense Analyses. The GSOIS includes graduate resident and non-resident programs consisting of 16 technical curricula and awards Master of Science degrees and Ph.D. degrees across four academic departments.

The School of International Graduate Studies (SIGS) conducts research and offers master's and Ph.D. degrees in international security studies. Its programs seek to identify and address current and emerging security challenges, and to strengthen multi-lateral and bilateral defense cooperation between the United States and other nations. SIGS offers innovative inter-disciplinary curricula—both in-residence and via distributed learning—in regional security studies, strategic studies, civil-military relations, defense resource management, and homeland security.

Three institutes, the Cebrowski Institute for Innovation and Information Superiority, the Wayne E. Meyer Institute of Systems Engineering, and the Modeling, Virtual Environments and Simulation (MOVES) Institute, conduct cutting-edge research activity that is supported and enhanced by the educational, research, and the physical and geographic resources of the surrounding Monterey community. The institutes provide a means to foster cross-disciplinary research on themes of long-standing interest to national security. Through them, the NPS has emerged as one of the most flexible and rapidly adaptable research institutions in the nation.

Governance Structure

The NPS Board of Advisors continues to be the main source of external governance for the Naval Postgraduate School. The Board advises the Secretary of the Navy, the Chief of Naval Operations, and the Commandant of the Marine Corps on the Naval Postgraduate School and graduate education. Upon the recommendation of NPS, the Secretary of the Navy has taken several steps to enhance the membership of the board by making several stakeholders in defense graduate education *ex officio* members of the board. NPS also relies on Navy leadership for graduate education policy and resources. The Navy is currently in the process of realigning its personnel, education, and training functions into a single organization focused on the recruiting, development, and retention of human capital. NPS has been involved in the development of this new organization over the past two years. This reorganization has created better communication among NPS, the United States Naval Academy and the Naval War College.

The NPS Faculty Council serves as the voice of the faculty at NPS and is asked to provide representation on significant NPS councils, committees, and task forces. The Faculty Council has standing committees that govern areas such as professional practices, and provide advice on facilities and other matters of significance. The Faculty Executive Board, together with the

Provost, Deans and Associate Provosts, comprise the Joint Policy Council. The Academic Council, chaired by the Provost with representation from all academic departments, is the authoritative board on academic issues.

Research and Sponsored Programs

NPS has a strong sponsored program that has grown steadily. In the fiscal year ending September 30, 2006, NPS faculty brought in over $140 million in sponsored program funding. The research program at the Naval Postgraduate School supports and is fully integrated into the graduate education of the students. It does so by providing relevant thesis topics that address issues related to today's operations and the science and technology that is required to sustain the long-term effectiveness of the Navy, Department of Defense and other sponsors. It keeps NPS faculty current on Navy/DoD issues, and maintains the content of the upper division courses at the cutting edge of their disciplines.

Resources

The NPS operating budget, which supports the base teaching mission and academic support structures, is approximately $90 million per fiscal year. This funding is provided by the Navy. The total annual funding, including reimbursable research and teaching, tuition, and other funds, is close to $240 million. In keeping with its mission of relevant and advanced education and research, NPS continues to enhance and develop the resources critical to that function. The Dudley Knox Library, named the 2004 Federal Library/Information Center of the Year, provides substantial references both in traditional forms and online. Online reference services were added in 2004 and now handle 20% of all reference questions.

Information Resources has also met the demand for current and relevant technologies. Regional and statewide consortia provide NPS with access to broader network capability, including Internet2. Technology for the classroom ranges from the basic computer and data projector to advanced video teleconferencing.

Facilities are also being upgraded. The most recent upgrades are a $40 million renovation to Herrmann Hall Bachelor Officer Quarters and a $12 million addition to Glasgow Hall, home of the Graduate School of Operational and Information Science. Funding for facilities is provided by the Navy through the Commander of the Navy Region Southwest. Major construction projects are funded through the Congressional Military Construction process.

Worldwide Partnerships

To accomplish its far-reaching mission of education and research, NPS has formed worldwide partnerships with institutions of higher education, research, and defense. These partnerships run the gamut from the U.S. Department of Homeland Security and U.S. Department of Defense to NATO's Partnership for Peace. Faculty and students at NPS work closely with institutions such as the Lawrence Livermore National Laboratory, University of California Santa Barbara, the Air Force Institute of Technology (AFIT), George Mason University, Virginia Tech, and many others.

APPROACH TO THE PROPOSAL

In 2005, an accreditation planning group began to prepare for the drafting of this proposal. This small group established initial timelines and started to familiarize the campus with the upcoming accreditation activities. Key constituencies of the campus, e.g., Executive Council, Deans and Chairs, Faculty Council, President's Student Council, were regularly updated.

Communication was recognized early as critical to successful accreditation. In addition to presentations and updates to major committees, a web site was designed and established on the campus intranet. This site makes available all documentation regarding accreditation to the entire campus – students, staff, faculty and administration. All background documents, WASC publications, meeting minutes and proposal drafts are posted on this site. E-mail, intranet notices and other communication efforts direct the campus to this site for information.

To identify and understand the important issues facing NPS, two major information collection efforts were conducted. In early 2006, the Executive Council, which consists of the President, Provost, Deans and other key administrators, identified and analyzed NPS strengths, weaknesses, opportunities and threats (SWOT). Each area was invited to present their most important issues, which were then combined into one document. Following this effort, a survey was distributed to all faculty and staff asking for input on identifying these same issues. During this timeframe, NPS was also involved in a search for a Provost. Through this search process, the campus had an additional opportunity to identify issues important to the future of NPS.

An NPS Accreditation Steering Committee was appointed by the Provost to provide guidance and direction to the accreditation efforts over the next four years. This committee consists of eight faculty members representing each of the schools, the Faculty Council and Research. There are also administrative representatives from Information Resources, the Library, Comptroller, Human Resources, and the Director of Programs. Students are represented by a member of their operating council. A faculty member and the Associate Provost for Academic Affairs co-chair the committee which is staffed by the Director for Institutional Research.

One of the first tasks of the Steering Committee was to study the results of the two SWOT studies with the goal of identifying issues which would form the basis of the accreditation themes. An initial draft proposal was made available to the campus community through the website. Steering Committee members also sought feedback directly from their constituencies and from various campus groups. The Proposal presented here incorporates comments made by all the various review groups.

RESPONSE TO WASC RECOMMENDATIONS

Following the reaccreditation visit in 1999, the WASC final report contained a number of recommendations for NPS. Since that time, significant progress has been made in each of the areas mentioned in the team report. Some of the highlights are described in the summaries below.

Program Review and Assessment

At the time of the last WASC visit, the main program review activity was the curriculum review by an external Navy or other sponsor. This review provides departments with feedback from the future employers of NPS graduates. During a review, Departments negotiate

Educational Skill Requirements (ESR) with their sponsors and review their performance against the educational outcomes specified in the ESR. This review occurs approximately every two years. The WASC team recommended that NPS also institute program reviews that focus on the quality of education, the faculty, and on fiscal and physical resources inherent in each academic program. This external review, known as Academic Program Review, was developed and implemented over the past year and a half. The two reviews —curricular and academic — bring together assessments of the military and academic approaches in graduate education. How these processes are brought together will be one of the foci of this current accreditation review.

Also recommended by the WASC team was the systematic collection and documentation of the assessment of student learning outcomes. Each curriculum has a set of learning objectives, which is detailed in the NPS catalog. Each degree program requires a thesis, a culminating project, or a comprehensive exam. Departments are moving toward more detailed documentation of how each of these is evaluated for quality. NPS programs are also accredited by specialized accrediting agencies, including ABET (Accreditation Board for Engineering and Technology, NASPAA (National Association of Schools of Public Affairs and Administration, and AACSB (Association to Advance Collegiate Schools of Business). One of NPS' goals is to both leverage assessments developed for these accreditation reviews and assure the creation of complementary tools and assessments.

Distance Learning Programs

NPS recognizes the importance of distance and distributed technologies, which make its programs available to those who cannot come to the Monterey campus. For NPS, this means the ability to deliver programs not just to other land-based sites, but also to the naval fleet and other operational units around the world. Additionally, international security environments and the technological sophistication of defense systems are changing at unprecedented speed. NPS represents a unique repository and source of scientific, technical, management, and security expertise, all of which is shared throughout the defense community. NPS offers a variety of graduate courses and professional development opportunities to students whenever required, wherever they may be located, employing the most efficient and effective distributed learning (DL) methods.

Methods of delivering graduate level courses include visiting NPS faculty (Mobile Education Teams), video tele-education (VTE) systems, and streaming video. NPS is increasing its provision of online learning opportunities through web-based or web-supported education. Schools and departments maintain responsibility for the academic quality of programs. The Office of Continuous Learning (OCL) was chartered to develop, coordinate, and deliver focused, relevant, quality learning opportunities. OCL, through its faculty development role, also assists faculty in further developing the best practices in the assessment of student learning outcomes.

To maintain the high quality programs for which NPS is known, all new degree programs, whether resident or non-resident, are submitted to the Academic Council for approval. This process includes the development of program and course descriptions, scheduling, expected outcomes, and resources.

Strategic Planning and Budgeting

Recognizing that a strong and coherent strategic plan acts to both guide the institution and prioritize its commitments, NPS developed a new strategic plan as a result of the most recent

WASC visit. This plan, called "A View to the Future," specifies four major initiatives by which NPS will achieve its vision. These initiatives are: (1) increase the number of Navy URL (unrestricted line officers) with graduate education; (2) improve the quality and applicability of research and teaching; (3) increase the number of meaningful partnerships and available markets for NPS services; (4) cut the right costs and invest resources in the right things. To the extent possible, NPS utilizes these initiatives to drive budget requests of the Navy and Department of Defense.

At the start of the recent BRAC (Base Realignment and Closure) decisions, NPS recognized the urgency of having data that clearly define the revenues and costs associated with graduate education and research. BRAC is a politically insulated process for closing and realigning military installations in the United States, provided by public law that considers every installation. As a military installation, NPS needed to account for effective and efficient spending of public funds, as well as relevancy to the defense mission. In response to this need, NPS developed and implemented several cost models for education and research that incorporate a high level of detail as to the types and sources of students (by service, by country, by location of instruction, etc), types and sources of funds (military service, grants, other countries, etc.), and faculty workload. These models continue to be refined in order to identify actual (direct and indirect) costs and to streamline them where possible.

The other issue that BRAC brought clearly to the forefront was the need for NPS to better inform its constituents (service officers, Department of the Navy, Department of Defense, alumni, local community, granting agencies, etc.) of the educational and research outcomes it produces. For many public institutions (in particular, for one that has traditionally obtained students through military assignment), the need for marketing and communication was not given high priority. From BRAC, NPS learned that there must be a significantly elevation of efforts to communicate successes and offerings in carrying out the mission. The Office of Institutional Advancement is working on development of a Communications Plan, addressing both internal and external constituents. NPS is also developing a consistent series of publications that tell the NPS story. The new communications stream will improve the understanding and knowledge of NPS across all constituencies.

Faculty Development

The quality of the faculty is central to the NPS mission. Faculty specialties, in research and instruction, are clearly in the forefront of defense-related knowledge. Yet, despite their areas of expertise, many new faculty members come to NPS with limited understanding of military and government structures and functions. Additionally, few graduate schools train future faculty in the various forms and methods of pedagogy and it is incumbent upon the institution to make that development possible. NPS continues to develop and enhance new faculty orientation programs as well as workshops in best teaching and assessment practices.

To assist faculty in the development of courses using advanced technologies in distance learning, the Office of Continuous Learning (OCL) has implemented a training program that introduces faculty to good instructional design and the various support tools available (e.g., Blackboard). Additionally, so that faculty may concentrate their efforts on the more important aspects of course content, a team of technology experts is available to develop web sites, add streaming video, etc. The OCL is preparing a faculty development plan to keep faculty up to date with the best practices in the field.

Governance

The Board of Advisors (BOA) has taken an active role in the governance of NPS. In accordance with WASC recommendations, the Board meets in person twice a year with the spring meeting held on campus. Interactions between campus administration and the Board have increased with attendance of key administrators (President, Provost, Associate Provost for Academic Affairs, Deans, Strategic Planner, Comptroller, and others) at the meetings. The result has been a more informed Board of Advisors. The senior leadership of the Navy and US Marine Corps (USMC) has taken significant interest in NPS and has demonstrated that interest through engagement with the BOA.

APPROACH TO THE CAPACITY AND PREPARATORY REVIEW

In developing an approach to the Capacity and Preparatory Review (CPR), NPS will be guided by its mission and endeavor to demonstrate the foundation of resources and infrastructure that underlie the academic and educational activities, as identified in the WASC standards. In doing so, NPS will depend on the engagement of not only faculty, staff, and students, but also the broader constituencies of alumni, the Navy and DoD, and the local community. NPS will accomplish this through direct consultation surveys and task forces, and by inviting community comment on data and draft reports. Regular reports to established committees such as the Faculty and Student Councils, as well as a newsletter, will help ensure all members are informed and all constituents are given ample opportunity to comment.

The CPR will be divided into two sections. The first will present the general results of the self-study relative to the Criteria for Review. The interwoven data elements will demonstrate the capacity of NPS to carry out its mission and vision. The second section will focus more specifically on the issues that the local community has deemed in need of special attention. Here, with a more thorough examination and analysis, those capacity issues directly related to the themes of the accreditation review and the educational effectiveness review will be addressed:

- Work with departments to ensure that their processes for continuous improvement are effective. Work with departments to ensure that faculty participate in development programs and design curricula that meet the stated learning objectives. Develop an institutional portfolio, which allows departments to track trends such as enrollments, numbers of graduates, graduation rates, student and alumni feedback, etc. Evaluate the progress of Academic Program Reviews, with a resulting report on best practices by departments. (Criteria for Review 2.2, 2.4, 2.7, 2.10, 3.4, 4.4, 4.7)
- Document and evaluate how requirements have changed as the institution has grown in levels of instruction and research. In particular, identify staffing requirements, business processes, and infrastructure, which may no longer be sufficient in size or capability. Document the current organizational structure and decision-making processes. (Criteria for Review 3.1, 3.3, 3.5, 3.8)
- Document evidence regarding how the strategic plan is used at multiple levels of administration to determine budgetary allocations. (Criteria for Review 4.1, 4.2)

The NPS Accreditation Steering Committee and its appointed task forces will conduct the preparation of the CPR. The preparation of data and other evidence will be coordinated through the NPS Accreditation Resources Committee, a group comprised of representatives from every support area (Comptroller, Human Resources, Registrar, Alumni, Institutional Advancement,

Command Evaluation, Staff, etc.). The Director of Institutional Research chairs this committee. The Resources Committee will gather, analyze, and present data, as required by the Task Force and Steering Committee.

APPROACH TO THE EDUCATIONAL EFFECTIVENESS REVIEW

In approaching the Educational Effectiveness Review, approaches suggested in extensive campus conversations and campus opinion surveys were considered, most notably the SWOT surveys described previously in this report, the findings during BRAC data gathering, and results from the Provost search. Steering Committee members also interviewed administrators and faculty from other institutions who had recently completed their own re-accreditation process.

The campus chose a thematic approach to frame the review. This approach provides NPS with an opportunity to choose several areas to explore within a larger framework of assessment and improvement consistent with the WASC Standards.

Three themes were chosen. The choices were made after consideration of those areas that are most responsive to institutional interest. The themes are:

1. Strategic planning for the next NPS centennial
2. Integrating a campus-wide program of continuous improvement
3. Supporting an evolving academic enterprise

These themes represent the central issues in defining an effective educational experience at NPS. The institution must seek to continuously improve the curricula and research programs. It must periodically examine the support structures and services to determine the best configuration and level of support for the mission. Finally, the university community must develop strategic directions to guide the institution as it undertakes program improvements and accommodates an evolving academic enterprise.

Because care was taken to select the themes, based on institutional priorities and campus community interest, the institution is prepared to make a long-term commitment to the thorough and meaningful consideration of the areas in question. Once the institutional proposal is approved, the formal process of identifying appropriate information and groups to conduct the inquiry will occur. The NPS Accreditation Steering Committee will provide general guidance to the process, while a number of subgroups will be named to assist. In guiding this work, the committee decided to agree upon general principles of inquiry:

– Transparency and engagement — Regular reporting and consultation with members of the campus community (faculty, staff, students, alumni, and the Board of Advisors) is a must. Stakeholders and sponsors also need to be engaged — leadership in the local community, Department of the Navy, Navy leaders, Department of Defense, Department of Homeland Security, international sponsors, etc. This will be carried out through regular requests for feedback, re-accreditation status as standing agenda items for major institutional meetings (Provost's Council, Executive Council, Deans/Chairs/Directors, Faculty Council, Student Council, Board of Advisors, etc.), a regular series of newsletters, a web site dedicated to WASC, and other measures.

– Visible institutional support for the Re-accreditation effort — NPS leadership has pledged the resources necessary for the re-accreditation effort for the entire time period of the process.

– Institutional integrity — This is in keeping with the commitment made that the re-accreditation process would maintain an ongoing connection to institutional relevance; that is, current institutional processes.

– Institutional commitment to the sustainability of changes recommended through the re-accreditation process.

THEME ONE: Strategic planning for the next NPS centennial

The last accreditation self-study was an opportunity to update the NPS strategic plan. That effort resulted in the publication of the current strategy, articulated in "A View to the Future," published in 2002. This document has guided institutional actions since that time, and it still provides an inherently sound vision of where the organization is headed.

The Base Realignment and Closure (BRAC) data collection and preparation efforts have, over the past several years, provided significant evidence that this strategy was successful, including the highest scores of any DOD educational institution for military relevance and effectiveness. BRAC was a rallying point for the NPS campus, providing a common goal. As NPS approaches the next few years, however, it is again time to re-evaluate the campus' direction.

The tremendous growth experienced at NPS brings significant challenges in terms of funding, monitoring, planning, and allocating resources. The upcoming NPS Centennial provides an opportunity to celebrate the past and consider the future. NPS can build upon the current plan and either continue in the same direction, or reset it one or more ways. Either way, it will require that there is effective communication and that the plan is articulated and understood by all stakeholders.

In exploring this theme, NPS will address the following questions:

– How are the appropriate stakeholders involved in strategic planning?

– Are resources allocated properly to achieve the vision?

– Is NPS sufficiently focused on the future?

– How well are the competing demands of academic excellence and defense relevance balanced?

NPS anticipates the following outcomes from this inquiry:

– Defined planning that incorporates opportunity for stakeholder input at appropriate and frequent intervals

– Resource allocation linked to planning

– An updated strategic plan

– A communication strategy and plan

THEME TWO: Integrating a campus-wide program of continuous improvement

NPS has a number of mechanisms for assessing the effectiveness of its academic programs and support activities. It is not clear, however, that their use is as effective as it might be, in order to continuously improve the curricula and research programs. NPS curriculum reviews provide

insight into how well the needs of sponsors and students are met. The educational outcomes are refined and validated during these reviews. Academic program reviews validate NPS academic quality. Surveys of students, faculty, alumni, and staff provide valuable information about educational quality and support services. And, faculty members use a variety of methods to assess student learning and achievement of educational outcomes. Nearly every student completes a thesis, or major project, as a culminating experience in his or her degree program. NPS is also expanding the faculty development program to address more effectively the issues of student learning, assessment, and innovation in teaching.

NPS programs are also accredited by AACSB, NASPAA and ABET. Departments and faculty members have developed ways to assess effectiveness in support of these other accreditation self-studies, or in ways to improve their own individual performance. As NPS moved into distributed learning, there have been improvements in the way faculty teach and enable learning in their classrooms, both on campus and in a distributed learning environment. However, currently there is no systematic way of identifying, validating, and sharing good practices. The feedback loop is not documented as effectively as it should. When those experiences are identified and collected, NPS will be far more effective as an institution.

In considering this theme, NPS will address the following questions:

- How are assessments used as a measure of NPS' effectiveness as an institution?
- How well does the faculty development program prepare faculty for the current and future learning environment?
- What isn't known about educational effectiveness and how might it be measured?
- How does NPS better integrate the curriculum and academic program reviews in a way that enhances both relevance and academic excellence?
- Is NPS prepared for the future in terms of students, technology, and innovations in learning?

NPS anticipates the following outcomes from this inquiry:

- The development of a more robust system of assessments and feedback to provide a more complete picture of effectiveness and an integrated framework for aligning resources to improve quality.
- A Faculty Development program that enables faculty to tap into the full system of assessments and understand how to improve student learning.
- Enhancements to current assessment tools and development of new assessment mechanisms.

THEME THREE: Supporting an evolving academic enterprise

NPS has changed significantly over the past 10 years. The institution has grown from a small collection of departments and research areas to the establishment of four academic schools and three major research institutes. While the number of students has increased only nominally, the external research program has doubled in size. Today, fewer than 50% of the students are Navy. All of the U.S. military services are represented, together with a small number of Department of Defense civilians. Approximately 20% of the students are officers or defense ministry personnel from other nations.

The trajectory of change has been significant, and the support services have struggled to maintain adequate support of the academic mission. In considering this theme, NPS will address the following questions:

- How well are administrative support areas serving the academic enterprise?
- How does NPS assess the efficiency and effectiveness of administrative support areas?
- How does NPS take advantage of best practices at other institutions to inform improvements?
- What better mechanisms can be developed to provide ongoing monitoring of service levels, ensuring the appropriate calibration of investments in support areas with programmatic expansion?

NPS anticipates the following outcomes from this inquiry:

- The development and implementation of comprehensive service support assessment tools
- The development and implementation of performance metrics for the major administrative support areas
- Applying benchmarking information from a group of peer institutions
- Development and adoption of an external review process for major administrative areas

TIMELINE

Proposed timetable for the Capacity and Educational Effectiveness (EE) reviews:

November 2006	Appointment of task forces for the themes
January 2006 – December 2007	Collection, review, and analysis of data
January - March 2008	Data analysis continues Steering Committee reviews task force reports & recommendations
April - June 2008	Data analysis continues First Draft of CPR
July - September 2008	Data analysis continues First reading and comment by campus; first revisions
October - December 2008	Data analysis continues CPR Report out to campus for review and comment
January - March 2009	Data analysis continues Final Revision of CPR Report
April - June 2009	Submission of Final CPR Report to WASC and Visit Completion of data analysis for EE Review
July – December 2009	First Draft of EE Review
January - March 2010	First reading and comment by campus; first revisions
April - June 2010	EE Report out to campus for review and comment
July - September 2010	Final Revision of EE Report
October - November 2010	Submission of Final EE Report to WASC and Visit

EFFECTIVENESS OF DATA GATHERING AND ANALYSIS SYSTEMS

Since the 1999 WASC visit, NPS has made substantial progress in data gathering and analysis. In 2002, the Office of Institutional Research (IR) was established to increase University effectiveness by providing and promoting information to enhance understanding of the institution. The office functions to:

a) collect and preserve data, working with other campus offices to ensure data reliability and consistency;

b) analyze and interpret institutional and higher education data, including benchmarking with peer institutions;

c) develop systems, methodologies, and tools for effective analysis;

d) develop print and web-based informational resources, with a schedule of periodical institutional analyses, surveys, and statistical and narrative reports;

e) design and produce routine and ad hoc reports for internal constituencies, federal, and other external agencies;

f) support assessment and accreditation processes by assisting academic areas to develop measures of educational effectiveness and improvement, by providing support in research and survey design and through coordination of accreditation reporting.

Over the past two years, the Office of Institutional Research has worked with the Registrar's Office, Information Technology, and other offices to improve the data integrity and reliability of the student data system. The Office of IR has also instituted a series of standard reports, such as a Factbook, an annual report, and other documents to disseminate institutional data more broadly. Finally, a new series of surveys and analyses have been developed, to collect data from incoming and current students as well as alumni, in order to systematically obtain feedback from those constituents.

Data dissemination from other campus offices has also improved over the past two years. The Registrar's Office enhanced its reporting capabilities through the development of an online analytical processing module that makes enrollment reports more consistent and gives easy access to more detail. In addition, the office has increased the types of reports and established regular timelines for delivery. There is an ongoing effort to enhance the student data system to better accommodate the growing number of students who are obtaining degrees and certificates through distance learning methods.

In response to many external accountability requests, NPS has developed a cost analysis model that is used to determine costs per student within each program. In addition, a data retrieval system is under development, intended to bring together student, faculty, and cost information. This system also provides information to departments on faculty workload and grading for strategic planning purposes.

Finally, NPS is committed to strengthening and enhancing the connection to its alumni. The new Director of Alumni Relations will be developing and implementing new strategies for better alumni tracking.

The high level of expertise and increased collaboration among data collection and analysis offices leads us to conclude that the current NPS data gathering systems are more than adequate to provide information in support of the re-accreditation efforts.

DEPARTMENT OF THE NAVY
NAVAL POSTGRADUATE SCHOOL
1 UNIVERSITY CIR
MONTEREY CA 93943-5000

IN REPLY REFER TO:

Institutional Stipulations

1. The Naval Postgraduate School is using the review process to demonstrate its fulfillment of the two Core Commitments. We will engage in the process with seriousness and candor, present data that are accurate and the Institutional Presentation will fairly present the School.

2. The Naval Postgraduate School has published and made publicly available policies in force as identified by the Commission. Such policies will be available for review on request throughout the period of accreditation. Special attention will be paid to the School's policies and recordkeeping regarding complaints and appeals.

3. The Naval Postgraduate School will abide by procedures adopted by the Commission to meet United States Department of Education (USDE) procedural requirements.

4. The Naval Postgraduate School will submit all regularly required data, and any data specifically requested by the Commission during the period of Accreditation.

5. The Naval Postgraduate School has reviewed its off-campus programs and distance education degree programs to ensure that they have been approved as required by the WASC Substantive Change process.

Colonel David A. Smarsh
United States Air Force
Acting President
Naval Postgraduate School

NAVAL POSTGRADUATE SCHOOL HEADCOUNT ENROLLMENT BY LEVEL (FALL TERM)

Average on Board

The Naval Postgraduate School operates on a modified quarterly school year – every three months new students arrive and new classes begin. Unlike many civilian universities, the summer quarter is a full three-month quarter. These factors combine with traditional military transfers, occurring at two peak times during the year, to create widely varying numbers of student on board (i.e., enrolled) from one quarter to the next. The Average On Board (AOB) student count is derived by averaging enrollments, that is, unduplicated headcounts, from each of the four quarters. AOB is used to describe the annual trends in student numbers, primarily for those seeking a degree.

Degree Program Student by Type of Enrollment
Average on Board Trends Since 2000

Year	2000	2001	2002	2003	2004	2005
Full Time Resident	1,279	1,269	1,244	1,314	1,481	1,560
Distributed Learning	111	180	221	247	322	523
Total	1,390	1,449	1,465	1,561	1,803	2,083

NAVAL POSTGRADUATE SCHOOL DEGREES AND CERTIFICATES GRANTED BY LEVEL (ACADEMIC YEAR)

Year	Total	BS	Post-Baccalaureate*	MS	Ph.D.	BS	Post-Baccalaureate*	MS	Ph.D.
2001	703	4	12	672	15	0.6%	1.7%	95.6%	2.1%
2002	798		3	781	14		0.4%	97.9%	1.8%
2003	674		9	653	12		1.3%	96.9%	1.8%
2004	940	9	6	916	9	1.0%	0.6%	97.4%	1.0%
2005	1057			1049	8			99.2%	0.8%

Percentage entries are all normalized on the first column of the report.

+ NPS is not required to submit IPEDS data; IPEDS Completions data are available only from 2003 and 2005; all other years are from NPS Student Records

* Post-baccaulareate degrees include post-masters certificates as defined by IPEDS

NAVAL POSTGRADUATE SCHOOL KEY FINANCIAL RATIOS

As a Department of Defense institution, NPS financial records are kept in accordance with Federal regulations and laws. As such, the rules used by most institutions, FASB or GASB, do not apply. NPS, as a federal institution without financial aid, is not required and does not submit the IPEDS Financial report. What appears on this chart are a series of ratios that best correspond to the WASC data request.

Return on Net Assets Ratio:

As a Department of Defense (DoD) Navy institution, measuring growth of institutional resources is calculated through growth in sources of funding. Direct allotted funds from the DoD (Navy) for education and sponsored funds for education and research are the sources.

Suggested Direct ratio: Change in Direct Allotted Funds Year 2/Direct Allotted Funds Year 1

Suggested Sponsored ratio: Change in Sponsored Funds Year 2/Sponsored Funds Year 1

Suggested Total Funding ratio: Change in Total Funds Year 2/Total Funds Year 1

Return on Net Assets Ratio (000s)

	FY02	FY03	FY04	FY05	FY06
Direct	48,806	61,732	74,630	76,533	90,126
$chg		12,926	12,898	1,903	13,593
%chg		20.9%	17.3%	2.5%	15.1%
Sponsored	80,578	104,084	107,891	116,593	114,116
$chg		23,506	3,807	8,702	-2,477
%chg		22.6%	3.5%	7.5%	-2.2%
Total	129,384	165,816	182,521	193,126	204,242
$chg		36,432	16,705	10,605	11,116
%chg		22.0%	9.2%	5.5%	5.4%

Net Income Ratio:

The measure of operating within the available resources is governed by Appropriation law as outlined in United States Code Title 31, specifically 31 USC 1517, 1301 and 1341. According to the Anti-Deficiency Act, DoD institutions are prohibited from overspending and can only obligate funds for the intend appropriation. As this is federal law, no ratio meets the definition.

Operating Income Ratio:

The measure of operating activities meeting expenses can be stated in ratio terms: Allotted and Sponsored Funds/Expenses

Operating Income Ratio (000s)

	FY03	FY04	FY05	FY06
funds in	190,816	212,521	223,745	240,067
expenses	165816	182521	193126	204242
%	86.9%	85.9%	86.3%	85.1%

Viability Ratio:

As a Department of Defense (DoD) Navy institution, we do not carry debt, therefore a ratio is not applicable. The US government funds this institution annually through the National Defense Authorization Act each fiscal year. The current Future Year Defense Plan has funding identified through FY2013 to maintain this institution.

Instructional Expense per Student:

FY03 = $26,313

FY04 = $25,621

FY05 = $26,017

FY06 = $26,000 (estimated, as final cost/student not calculated)

Net Tuition per Student:

As a DoD funded entity, this Institution does not charge a "per student" tuition as practiced by civilian universities. For comparison purposes, the Instructional Expense per Student can be considered for this category.

FY03 = $26,313

FY04 = $25,621

FY05 = $26,017

FY06 = $26,000 (estimated, as final cost/student not calculated)

Naval Postgraduate School Faculty by Employment Status

Year+	Total Headcount	Full-Time Faculty*	Part-Time Faculty	Total Faculty FTE
2001	398	398		398.0
2002	448	448		448.0
2003	454	454		454.0
2004	509	434	75	471.5
2005	513	488	25	500.5

Percentage entries are all normalized on the first column of the report.

+ NPS is not required to submit IPEDS data; IPEDS Staff data are available only from 2003, 2004 and 2005; all other years are from NPS Academic Planning

Military and contractor faculty are not included here as IPEDS does not collect this data.

* Faculty include both tenure/tenure track and non-tenure track which includes research faculty. Administrative faculty are not included.

BARRIERS TO SUCCESS

Governance Issues

- **NPS/SW Region/NETC/Navy Issues.** General negative climate. The answer is readily "no" rather than how can we innovatively find a way to do this (if it makes good business sense?) Everyone is supportive of accountability but numerous audits and an environment where no one can be trusted makes people almost not want to do anything because they fear they will be accused of something that will then take a great deal of time and effort to unravel.

- **Regionalization** has made work more difficult. San Diego has a high volume of work and it is generally understood that NPS is low on their priority list, so many support actions (PW, HRO, etc.) are more difficult to obtain and take longer.

- **Visibility of NPS** – need closer relationship with the Foundation. Acknowledgment that we are a research university that must be able to communicate with constituents, stakeholders, industry, civilian universities. This means support for communications vehicles (publications, a professional web operation, local conference support, stronger ties with other universities, etc.). Often told that NPS cannot engage in promotional initiatives – that work with other agencies, universities is not a priority supported by Navy/NETC/region.

Financial Issues

- **Contracts.** The contracting process is difficult, confusing, restrictive, and more time-consuming than it needs to be. In addition, the rules seem to be constantly changing. Using FISC has proven problematic for ITACS in the past. Please see attached *Contracting Issue* that documents the problem.
- **Funding issues.**
    - Timing of funding is often problematic – not receiving funds until well into fiscal year. At times, not until very late in the fiscal year.
    - Not being able to roll-over funds into subsequent years sometimes makes for bad purchasing decisions and ones not in the best interest of the institution.
    - Multiple budget planning requests. Requests for information are often redundant, deadlines are unrealistic, and follow-through information not provided.
    - Unfunded mandates. For example, we are told to follow industry best practices but not funded for these. IPv6 mandated but not funded. Life cycle management of networks, of IT equipment, etc.

IT Issues

- **Department of Defense, Department of Navy governance issues in IT.** Governance seems to be the focus rather than improvement of IT services. Over the past 2 years, there has been a significant increase in tasking, data calls and additional

requirements. Many data calls may not be applicable to NPS but we are required to go through the drill. Many data calls (including IT inventory requests) overlap. It is never clear in what tasking NPS needs to participate. When we do participate, we rarely hear the outcome, how it relates to the improvement of Navy IT services, impact, etc.

- **Responding to DOD**. Other commands complained to the new ACNO-IT during a recent phone conference about the same thing. Many feel uncomfortable responding to DoD without going through DoN and asked if Navy commands could respond to calls from Navy only and then ACNO-IT would coordinate responses to DoD. Also, there are many IT authorities within DoN – some, at times, seem to suggest lack of coordination (DoN CIO, NETWARCOM, NETC, etc.).

- **NMCI/FAM process** has overwhelmed with data calls, inventories, multiple rules, changing rules, conferences, VTCs, etc. The higher education IT environment includes requirements that are predicated on assumptions of flexibility, agility, innovation, and responsiveness. Our reputation with our faculty and students depends on our quick response, being able to provide the right technology support to the right research problem, being able to support the right technology to the educational program, etc.

- **Network Access** – not permitting foreign nationals on DoD networks. Nearly 1/3 of our students are foreign nationals. Short course enrollments have higher percentages. Not permitting access to certain sites; firewall rules not permitting access to certain networks/resources. Our academic programs involve contact with countries, resources, networks that are not permitted access in standard DoN networks.

- **NETC.** Recent IT spending freeze paralyzed ITACS operations for a time. Replaced with $25K limit on IT expenditures and mandated NETC review process. Submitted two waiver requests on March 11, 2004 (money identified for an academic program: $50K for laptops for EMBA and $150K for EMBA VTC facility) – no response until May 13, 2004 when waivers were granted. This kind of delay is unsatisfactory and unacceptable for execution of our mission.

- **Life cycle management** of equipment is mandated but not funded.

Human Resources Issues

- **Personnel processes.** The hiring process is lengthy and confusing. Programs permitting hiring of certain positions open and close. Programs permitting special pay provisions open and close. Example, developed service level agreement for Homeland Security Digital Library. The library required 2 hours response time. Instead of adding staff, we wanted to offer "stand-by" pay. Or retention bonuses when told "stand-by" was not permitted. Both were denied.

- **Training.** Training for certain levels of administrative support positions should be standardized and regularly available. Too often, staff members are thrown into

positions where they have to learn complex procedures, use awkward and unfriendly software and have little or no training to accomplish the tasks. This sends a message of inefficient and insensitive management.

- **Documentation.** In addition to training, all positions should have written documentation which lists clearly and in enough detail the various job processes for each position. This should include timelines of when these processes should occur.

- **Orientation.** Incoming Faculty, Staff and Administration need a more comprehensive introduction to the campus, its environment and its processes.

- **Organization Chart.** New personnel are hired, new positions are created without communication to the entire campus. As a result, it is difficult to know the parties responsible for various activities.

- **Clarification of Faculty and Staff Roles.** Much confusion exists on campus regarding identification of faculty. All personnel who are have faculty status should be clearly identified and be processed through Academic Planning. Other personnel who are eligible to teach courses should also be clearly identified.

Facilities Issues

- **Quality of work environment.** Lack of adequate space for type of work performed. Janitorial services. Quality of air conditioning/heating. Due to lack of space and basic services (heat, janitorial, etc.), the QOL of employees has considerably declined so productivity and general morale are adversely affected.

- **Condition of classrooms, laboratories.** Ongoing complaints about overflowing trashcans in classrooms met with a recent NPS-wide email announcing that all trashcans would be removed from classrooms. Lack of ongoing, sustainable funding for life-cycle management of physical conditions of classrooms as well as electronic and audio-visual equipment has created an end result of unacceptable conditions in NPS classrooms.
    - ITACS conducts an annual inventory of classrooms, which documents the condition of NPS classrooms. Photographs are included as part of the inventory, as well as detailed information about the age of equipment, estimates of the last time the rooms were painted, recarpeted, new window coverings installed, HVAC upgraded, etc.

Administrative Issues

- **Internal Communications**. While a number of emails are sent out to the campus regarding various events, there is no regular communications stream, either electronic or in hardcopy. There needs to be a method by which all personnel are informed of major changes on campus, new personnel, highlights of events, major accomplishments, etc.

- **Administrative systems.** Administrative systems are generally geared to reporting up to larger Navy organizations rather than to NPS departments. As a result, a great deal of time is spent in reconciliation of accounting processes. Using a database structure, with management information reporting could improve a number of business processes.

- **Travel.** Travel authorizations have to be done by department heads rather than administrative assistants within departments. The amount of time this takes is inconsistent with efficient management practice. Conference fees are now handled through a separate process – creating another level of bureaucratic process for departments.

    - Put ITOs (Invitational Travel Orders) on DTS. Eliminate the time consuming task of manually filling out paperwork, signatures by individuals around campus, and routing. Why can't it be handled as though it were an NPS traveler?

- **Paperwork audit.** A comprehensive audit of paperwork should be completed. NPS for two reasons: 1) to identify those processes that can be eliminated entirely due to redundancy or automating many current processes that are currently manual; 2) use of social security numbers and other privacy act information can be better safeguarded. A case study example for both of the above reasons is timekeeping.

Academic Processing Issues

- **Student Database systems.** The current system needs to be fully supported and updated to accommodate both the expanding certificate and short course programs.

- **Academic Processes.** With new programs and certificates in all schools, a review of admissions, registration, enrollment, transcript and degree awarding procedures should be conducted so that all degrees, programs, certificates, etc. are processed in the same manner.

    - The guidelines and regulations regarding PhD students needs to be reviewed and upgraded so that the numbers of these students and their progress toward degree can be clearly identified.

- **Information Capture and General Processing**. There is little formal documentation regarding various business processes which involve correctly processing students as they move through the system. At each level, the proper offices are not always known; data entry into the student system is not always consistent; data entry at all levels – schools and programs, student, administration – needs to be clearly specified with appropriate timelines and staffing.

POSSIBLE SOLUTIONS:

- Change financial/authority alignment away from NETC.

- Explore special charter status within Navy and/or DoD. A number of institutions nationally are state universities with special charters with their respective states. Rutgers, The State University of New Jersey, has a charter that established it as a public university in 1956. As such, it is exempted from certain state regulations and policies. The UC system has a similar charter. Similar charter status for NPS would underscore the distinctive requirements of a research university.

  The Navy Higher Education IT Consortium (NHEITC) was formed to document the IT requirements of the Navy's higher education institutions. We did that and submitted a report with concomitant recommendations to the VCNO in August 2004. Since then, we have worked to identify common processes, to leverage investments, and find ways to set some common goals. It would be helpful to have the Navy acknowledge the distinct mission of higher education institutions and provide the flexibility to permit more effective and efficient execution of our mission. Working with the other Navy higher education institutions has reinforced our position, and provided additional political voice to our recommendations.

  Including USNA and NWC is a possibility that might reinforce the argument regarding higher education mission requirements more generally. The charter could be proposed for a term (e.g. ten years) that could then be evaluated. Progress on a number of institutional goals could be accelerated if NPS did not have to respond to the relentless numbers of regulations, data calls and inventories, and documentation about compliance to said regulations.

- Strengthen Board of Advisors

- Restore local authority for currently "regionalized" services/functions

- Create a database structure for administrative systems with management information reporting capabilities.

Naval Postgraduate School
Report on the WASC Survey
Summer 2006

Introduction

On October 15, 2006, NPS submitted its proposal to the Western Association of Schools and Colleges (WASC), the organization responsible for regional accreditation. This proposal outlines the themes and issues which the campus will explore as it proceeds with accreditation. The submission of the proposal precedes a campus visit in 2009 by a WASC team, comprised of appointed representatives from various institutions of higher education, who will conduct thorough inquiries into various aspects of NPS to certify that the institution has a clear mission, can demonstrate fiscal stability, and maintains high levels of academic quality, institutional integrity and educational standards.

Methodology

In July 2006, the WASC survey was distributed campus-wide, via email and the WASC website, to the faculty and the staff of NPS. The survey took the form of open-ended SWOT questions (Strengths, Weaknesses, Opportunities and Threats). Strengths and weaknesses are generally considered to be internal factors, opportunities and threats external (see appendix for survey). Two email requests from the Provost and one from the President were sent to all faculty and staff, and a posting was placed on the NPS Intranet Home Page requesting participation in the survey. The purpose of the survey was to gather feedback from campus constituents on the key issues facing NPS, and to incorporate that information into the themes of the WASC proposal.

Results

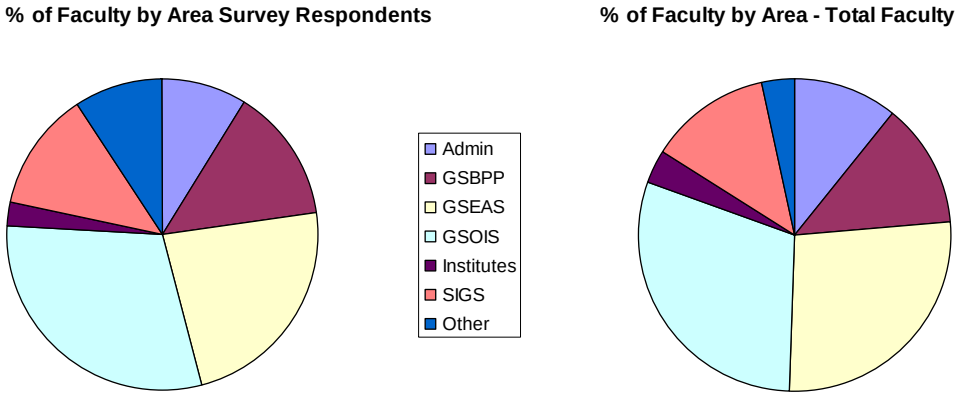
Of 1,521 surveys distributed, 398 responses were collected for a 26% response rate. Within those respondents, faculty response rate was 35% (229 responses from 650 distributed surveys).

The distribution of all respondents by area and employment type is noted below.

Area	Total Number of Respondents	% of Total
Administration	60	15%
GSBPP	42	11%
GSEAS	75	19%
GSOIS	86	22%
SIGS	36	9%
Institutes	7	2%
Tenant	14	4%
Unknown/Other	78	20%
Grand Total	398	100%

Status	Total	% of Total
Contractor	24	6%
Faculty	229	58%
Non-Supervisory GS	77	19%
Supervisory GS	41	10%
WG	8	2%
Other	19	5%
Grand Total	398	100%

Faculty respondents, the largest single group to answer the survey, matched the overall faculty population in representation of schools, institutes and administration.



Members of the Steering Committee analyzed the data from the SWOT surveys. Survey responses were grouped into more general descriptions and then grouped again so that each area (strengths, weaknesses, opportunities and threats) was reduced to five or six major factors. The survey results can be found on the tables that follow.

In the category of Strengths, the SWOT survey reflected the following responses:

Rank	Strengths – SWOT Survey (WASC)	Number of Responses
1	**GRADUATE EDUCATION**	**239**
	Military relevance/Tackle problems of national importance	
	Agility/Responsiveness to stakeholders needs	
	High-quality programs/High-quality and prestigious degree	
	Excellent Distance Learning programs	
	Interdisciplinary	
2	**FACULTY**	**213**
	High-quality/Committed/Talented	
	Knowledgeable/Innovative thinkers/Motivated to excel	
	High percentage with prior military experience	
3	**STUDENTS**	**158**
	Dedicated/Diverse/Motivated	
	Highly competent/Mature/High-quality	
	Strong work ethic	
	International students	
4	**RESEARCH**	**147**
	Defense-oriented/Flexible/Strong	
	Adaptive/Leading-edge	
	Linked with DoD and other high level institutions	
5	**STAFF**	**50**
	High-quality/Technical/Dedicated	
	Professional/Concerned for the students	
	Strong IT staff support	
	Leadership/Dedicated/Forward-thinking	
6	**MISCELLANEOUS**	**49**
	Location	
	Outstanding facilities	
	Premium service to military families	
	OJT and job advancement	
	Relationship with community	

In the category of Weaknesses, the SWOT survey reflected the following responses:

Rank	Weaknesses – SWOT Survey (WASC)	Number of Reponses
1	**BUSINESS PROCESSES**	**217**
	Budgeting/Contracting processes/Unpredictability	
	Bureaucracy/Paperwork	
	Faculty workload	
	Delays in hiring process	
	DTS	
2	**LEADERSHIP**	**150**
	Vision	
	Low morale	
	Favoritism	
	Internal politics	
	Lack of support for faculty research/publishing	
	No clear articulation of priorities/lack of SOPs	
	Unqualified faculty/bad tenured faculty/too many contractors	
	Lack of incentives rewards (inadequate pay)	
3	**ORGANIZATIONAL STRUCTURE**	**93**
	Governance	
	School "stovepipes"	
	Erosion of Academic Standards	
4	**COMMUNICATION**	**89**
	Lack of communication	
	Lack of support for faculty research/publishing	
5	**REGIONAL SUPPORT**	**61**
	Regional support	
	Poor/lacking facilities (labs, classrooms, library)	
	Parking-not enough	

In the category of Opportunities, the SWOT survey reflected the following responses:

Rank	Opportunities – SWOT Survey (WASC)	Number of Reponses
1	**PARTNERSHIPS**	**305**
	W/industry	
	W/universities	
	W/federal, non-DoD agencies, including federal labs	
	W/international	
	W/local	
2	**NPS TRANSFORMATION TO DOD U (FOCUS ON RESEARCH GRANTS)**	**122**
	Grow in area research grants and non-Navy funds	
	Make Foundation a true Foundation working for researchers	
	Focus more on becoming DoD U/Less focus on Navy, more on DoD/Create strength via "Naval University" concept	
3	**NPS STRENGTHS AND FOCUS AREAS TO CAPITALIZE**	**111**
	Distance/Distributed Learning	
	Homeland Security	
	GWOT	
	Irregular Warfare, Counter-Terrorism and Insurgency, IED, etc.	
	DoD need for science and technology (including IT)	
	Joint forces applications from curricula to field and career	
	Policy and Think tanks	
	Civilians and Contractors	
4	**SOURCE AND TYPE OF STUDENTS**	**105**
	More emphasis on joint forces -- not just Navy	
	Train and recruit federal/civilians, including DoD and non-DoD	
	More international	
	Specifically - Increase PhD students (not just Masters)	
5	**IMPROVE COMMUNICATIONS (INTERNAL AND EXTERNAL)**	**59**
	IP/Patents	
	Alerting leadership about value of NPS	
	Media/local involvement	
	Alumni Relations	
	Branding and Institutional Advancement	

In the category of Threats, the SWOT survey reflected the following responses:

RANK	WASC -- Threats	
1	**LACK OF VISIBILITY/IGNORANCE OF NPS IMPACT**	100
	NPS means "National Park Service"	
	Not getting the message out to DoD and DoN	
	Ignorance of NPS' potential and value	
	Lack of partnership w/ City of Monterey and surroundings	
	Lack of reputation as research facility	
2	**LACK OF NAVY/DOD SUPPORT**	92
	Lack of support for graduate education	
	Lack of understanding of the importance of graduate education	
	Lack of understanding of the difference between education and training	
	Lack of Navy Support for Applied AND Basic Research	
	Seen in budget as well as policy directives	
	Competition between graduate education and JPME/ESRs	
3	**LACK OF STUDENTS**	77
	Fewer students because of GWOT and force reduction	
	Fewer Navy students because degree not a career boost	
	NPS not open to other students such as civilians, other government	
	Lack of PhD students hurts research program	
	Reduced interest in true science and engineering education	
	Weak admissions criteria (eg GRE) means less qualified students	
	Perception of being Navy keeps other services away	
	Commands have relationships w/ local universities rather than send to NPS	
4	**COMPETITION FOR DOD FUNDING**	70
	Budget uncertainties because of lack of DoD support	
	Budget uncertainties because of war efforts	
	Need for more infrastructure support	
	Minimal linkage to alumni and other fundraising sources	
	Increased competition for grants	
	Lack of outside funding sources	
5	**DECREASING FACULTY QUALITY**	56
	Low salaries due to caps	
	High cost of living locally	
	Upcoming retirements	
	Reduced quality of faculty due to poor hiring decisions	

6	INTERNAL WEAKNESSES RESULT IN EXTERNAL THREATS	43

Lack of president, provost means no representation in DC or DoD
Lack of strategic plan
Too much passivity and doing things the same way
Low morale
Too much administrative overhead weakens NPS budgetarily
Not maintaining relevance/chasing after the latest thing
Not keeping teaching the primary focus/balance

Summary

As the major themes were developed for the WASC proposal, the survey results provided evidence and guidance as to the campus community's viewpoints. Other sources of information (standing committees, past surveys) were also utilized. How the categories of responses from the SWOT surveys were used as a foundation for each theme is noted below. Responses will be utilized further as each theme is more fully developed across the accreditation process.

Theme One: Strategic planning for the next NPS centennial

Strengths noted in the SWOT surveys under this category include the military relevance and problems of national importance that are tackled by NPS, the high-quality of faculty, students, staff and research at NPS, and the many opportunities and services offered by NPS to military students and their families. Partnerships with industry, universities, other federal, non-DoD, local and international agencies scored the highest on the SWOT surveys in the category of Opportunities. Threats to long term planning come from lack of Navy support, ignorance of NPS value, lack of students, and diminishing faculty quality.

Theme Two: Integrating a campus-wide program of continuous improvement

Strengths emphasized in the SWOT surveys in this category include knowledgeable, dedicated, talented and highly-motivated faculty coupled with adaptive, leading-edge research produced by NPS agility, responding to stakeholder needs In the category of Opportunities, responses were distributed almost equally in the areas of academic programs and delivery methods such as distributed learning and Homeland Security, as well as the capacity to expand in areas related to funding outside of the Navy, growth in research grants and partnership opportunities. Identified threats included a lack of students, faculty workload, and a lack of Navy support and understanding of the importance of graduate education.

Theme Three: Supporting an evolving academic enterprise

Strengths in the area of support included high quality and dedicated staff and strong IT staff support. High levels of weaknesses were noted in the SWOT surveys in this area, including budgeting, contracting and hiring processes, problems with leadership, issues of governance, poor facilities, lack of communication and bureaucratic gridlock. Opportunities included improved communications in the areas of alumni relations, branding, institutional advancement, and expansion of the NPS Foundation. Threats included need for infrastructure support, continuing budget uncertainties.

January 22, 2008

From: President, Naval Postgraduate School
To: Mr. Pete Dausen, Director of Base Operations
Captain Kathryn Hobbs, Dean of Students
Mr. Kevin Little, Comptroller
Ms. Lynn Murch, Command Evaluation

Subj: STRATEGIC PLAN

The NPS Strategic Plan is now finalized and is being prepared for publication. We will be discussing the metrics framework at our January 25, 2008 meeting of the Academic Policies and Plans group. The Provost and I will review the final proposed framework and move to implementation. We now have a strategic plan in place, endorsed by our Board of Advisors, the Chief of Naval Operations, and the Secretary of the Navy. It was vetted through Faculty Council and numerous committees on campus with nearly everyone given the opportunity to comment. We have made good progress in this last year and I thank you for your contributions to that process.

I would like to take the planning process to the next level of campus engagement by asking each of you to align your areas' plans with the institutional plan. Some of you already have formal strategic plans, while others have more informal mechanisms for planning. Each of the key administrative and academic support areas of NPS should have a formal strategic plan that should be aligned with the four goals of the institutional plan. For those of you who already have strategic plans, please take this as an opportunity to review your plans and update as necessary.

Each plan should be responsive and tailored to your unique challenges and opportunities, while at the same time using common touchstones from the NPS plan: Reference to our mission statement, direct reference to each of the four strategic goals of the university plan, and a common framework of goals, metrics or milestones, engagement with your stakeholders, assessment, and improvement. As with our institutional planning process, the process in each of your areas should embody principles of collegial consultation, management effectiveness, and aspirations that are both realistic and inspire NPS to a greater level of accomplishment.

I would like to proceed using a phased approach which will begin with submission of a strategic planning outline. This will give us an opportunity to discuss the process you have defined, and our expectations for next steps. If needed, I will be glad to meet with you to discuss any questions you might have. Please send Dr. Christine Cermak your plan outline by February 29, 2008.

The final plans for your areas should be completed by May 30, 2008. Thank you again for contributions in setting the course for NPS' future.

DANIEL T. OLIVER

C: Provost Ferrari
Chief of Staff Smarsh

The San Francisco Chronicle (California) - May 18, 2008 Sunday FINAL Edition

Navy's Monterey school is lab for terror war

Jim Doyle, Chronicle Staff Writer
Sunday, May 18, 2008

(05-18) 04:00 PDT Monterey --

In the 1920s and 1930s, silent film stars Charlie Chaplin and Jean Harlow threw lavish parties and skinny-dipped in the Roman plunge of the Hotel Del Monte near the Pacific's sandy shores.

The hotel's swimming pool has long since been filled with sand, and Marine sentries stand guard at the gates of what is now the Naval Postgraduate School - an institution that since 9/11 has expanded rapidly as a think tank, laboratory and testing ground in the war against global terrorism.

"Ten years ago, people thought of us as the school that gives master's degrees to naval officers. We're so much more than that," said Provost Leonard Ferrari. "Even our own Navy doesn't understand all the things that we do."

The school has become a major research facility with laboratories embedding artificial intelligence in aerial drones, building electromagnetic railguns that allow warships to fire projectiles farther and faster than any ship in today's fleet, testing robots that dock in space to help refuel satellites, and developing space-based lasers that are reminiscent of "Star Wars" gunships.

Researchers are field testing unmanned vehicles, pint-size subs and fast boats in Monterey County's hilly terrain and reservoirs, and working closely with Lawrence Livermore National Laboratory to test a new generation of radiation detectors capable of spotting "dirty bomb" components in cargo containers.

And that's just the stuff they can talk about.

In recent years, the Pentagon and private defense contractors have poured hundreds of millions of dollars into research projects at the school - through low-key funding that has grown 20 percent annually - reaching more than $85 million this year.

"Today, the Naval Postgraduate School touches every continent on the globe," said retired Vice Adm. Daniel Oliver, the school's first civilian president. "We have become one of the nation's top 100 research institutions."

Diverse array of disciplines

The school's scientists and experts are at the forefront of many disciplines - not only creating futuristic combat systems, but also focusing on such pressing issues as how to rebuild failed states and how to best deliver humanitarian relief.

Wieslaw Maslowski, an oceanographer, recently predicted that global warming will cause the Arctic to experience ice-free summers as early as 2013. William Colson, a physicist, is exploring the potential use of free electron lasers on warships to shoot down incoming missiles. Cynthia Levine is a leading practitioner of computer security. Nancy Haegel developed a "friend-or-foe" patch for soldiers that emits an infrared signature to deter friendly fire incidents during nighttime operations.

One of the school's joint projects with Lawrence Livermore lab involves work on establishing a wireless network around San Francisco Bay, enabling Coast Guard boarding teams to transmit sensor data to scientists at the lab who can analyze spectrographs to determine whether ship cargo poses a threat. They are also experimenting with "drive-by detection" methods to determine from a distance whether a vessel is carrying a nuclear device. Similar work is being done to deploy radiation detectors on the U.S.-Mexico border.

Still other researchers are exploring the use of ultra-wideband, a radar imaging technology that enables remote sensors and other surveillance equipment to see through walls. One plan is to detect electromagnetic emissions, no matter how small, from nuclear fission-related activity by North Korea and other nuclear states.

Historic setting

The Naval Postgraduate School was founded in June 1909 as the Naval Academy's school of marine engineering in Annapolis, Md. It moved to Monterey in 1952, in part to distance itself from the influence of Washington politics.

It now is on the site of the Hotel Del Monte, built in 1880 by railroad pioneer Charles Crocker as a resort that became popular among industrialists, business executives and celebrities. Destroyed twice by fire, the resort was rebuilt in 1924 in a Spanish Revival architectural style. Part of the hotel currently serves as the school's administration offices.

The school's 627-acre campus, whose clusters of classroom and laboratory buildings echo the hotel's red-tile ambiance, is a stone's throw from downtown Monterey. And its lush, botanical gardens are still full of exotic, tropical plants and Canada geese.

School's expanding role

Since its founding almost 100 years ago, the Naval Postgraduate School's primary mission has been to enhance the technical competence of naval officers. But the school is moving beyond its traditional role and is opening its doors to civilians from key government contractors as well as from federal agencies such as the Department of Homeland Security, the State Department and various intelligence-gathering operations.

It was the first university to offer a master's in homeland security. Among its 1,800 students are 250 from the armed services of other nations. Its faculty boasts not only meteorologists and aeronautical engineers, but also historians, political scientists and economists. Offerings include seminars on guerrilla warfare and terrorist financing, cyber-defense, undersea warfare and Islamic fundamentalism, along with crash courses focusing on hot spots where officers will be deployed.

Andrew Marshall, the Pentagon's futurist, has asked the school to ponder such weighty questions as: In what direction as a society and world power is China going?

"We are all very conscious that it's not just an academic exercise," said David Tucker, a former Foreign Service officer for the State Department who teaches courses on terrorism at the Monterey campus. "We apply academic research to the type of real problems that no other institution's students have. For our students, it's a very practical business of fighting terrorism. It's something that distinguishes us as an institution."

Faculty and students who specialize in "hastily formed networks" were among the first to respond to Hurricane Katrina, setting up a communications web for emergency officials when phone and computer lines in New Orleans faltered.

"Our Ph.D.s are growing, our civilian enrollments are growing. Our research is growing," Oliver said. "We are here to ensure that our future leaders in national and global security have the knowledge to prevent wars if possible, but to win wars if necessary."

High-tech applications

But it's the school's commitment to research with high-tech applications that is most eye-catching.

One major effort involves collaborating with Lawrence Livermore lab to establish the National Security Institute to pursue research and development - with a focus on surveillance, remote sensing, and defeating improvised explosive devices. UC Santa Barbara, a leader in

nanotechnology and basic research for the military, is also participating in this joint venture.

The Monterey researchers have also increased their projects for U.S. intelligence agencies. For example, they are exploring ways to protect computer networks, including methods to "harden" critical infrastructures such as power grids against terrorist attacks. And they have worked with the National Security Agency to develop computer search algorithms to monitor suspected terrorists. They are also examining various scenarios forecast by the intelligence community.

On the 'bleeding edge'

"Over the last few years, we've been branching out into new areas that we haven't pursued in the past," said Dan Boger, the school's dean of research.

He said the school has developed "bleeding-edge technologies" for the Army's Special Forces and the Navy SEALs - producing reliable communications that have a low chance of being intercepted, and sensors that provide real-time data that is relayed to battlefield decision-makers. Students who have served as military officers in Afghanistan and Iraq have also devised warlike scenarios in which new or custom equipment such as small, handheld communications devices are field tested and evaluated.

During a recent tour of the school by The Chronicle, a Navy lieutenant could be seen testing a virtual-environment training tool that simulates a terrorist attack on a naval warship.

He was trying to determine whether an approaching vessel was a combatant with a rocket-propelled grenade or a fisherman before squeezing off any rounds from a virtual 50-caliber machine gun.

Other researchers are studying the ways that acoustic waves propagate underwater and can be used by submarines to hide.

They are also examining the effects of low-frequency active sonar used to detect submarines, and exploring whether there are other methods for Navy warships to train while reducing the risk to marine mammals.

In another laboratory, researchers are adding artificial intelligence to an unmanned submarine the size of a golf bag that can detect the shapes of explosive mines in a harbor. By embedding the sub with autonomy, its sensors can help it avoid underwater obstacles.

"What allows this stuff is the miniaturization of computers," said Doug Horner, a former Navy SEAL who serves as the associate director of the autonomous vehicles laboratory. "We're able to do things that we couldn't have done 10 years ago."

One of Horner's key projects is a modified Scan Eagle, an aerial drone with a 10-foot wingspan and a streaming video camera that is being designed to provide surveillance on land and river patrols and covert operations.

Anthony Healey, who chairs the school's department of mechanical and aeronautical engineering, said the pilotless aircraft are useful "any time you want an eye in the sky to help you."

"This is not made in China, but the Chinese would love to get their hands on it," he said.

Space-based lasers

In another area of the facility, scientists are conducting futuristic research on space-based laser technology, with the aim of being able to identify and hit any target with pinpoint accuracy as well as to improve satellite imagery and laser communications, using high bandwidths to relay vast amounts of sensor data.

If the research ever becomes reality, field commanders envision a network of twin-mirror satellites that can relay the high-energy beams of ground-based lasers to any corner of the globe.

The Bifocal Relay Mirror Spacecraft project's potential military applications include detecting and identifying the use of chemical warfare agents, spotting installations that have been camouflaged, lighting up a battlefield at night, and detecting aircraft as well as emissions from underground structures and bunkers.

Headed by spacecraft designer Brij Agrawal, it is being funded by the National Reconnaissance Office and the Missile Defense Agency, and enables researchers to use a $10 million "inertial reference unit" to simulate spaceflight and find ways to correct jitters on fast-moving satellites. They are also focusing on laser beam control, using adaptive optics to correct for disturbances in the atmosphere that can compromise either the fine-point accuracy of a laser beam, or the imagery it transmits.

In a basement lab, researchers are creating docking mechanisms for small robots that are roughly the size of the robot R2-D2 in filmmaker George Lucas' mythical "Star Wars" franchise. The robots, once joined, can multiply their power to communicate, transmit images and attend to other chores. Powered by lithium-ion batteries, the robots use compressed-air thrusters and gyros to navigate on an epoxy floor made for race car pit stops. The docking devices were used last year on the military's Orbital Express satellite, a test flight for robotically refueling satellites.

School's value questioned

A decade ago, politicians and developers eyed the Monterey campus' pricey real estate, questioning the school's purpose and the value of its programs.

Some critics question the school's new direction and quiet transition, calling it a duplication of programs already offered by the Department of Defense and civilian institutions.

They point out that the Navy already has the Naval War College in Newport, R.I., where midcareer and senior officers can pursue a graduate program in international studies, policy and conflict.

Provost Ferrari and the Navy's top brass defend the school's courses and research programs.

"This is a highly specialized education," Ferrari said. "It's a lean situation. We don't have a football stadium. When all is said and done, I think we're pretty cost-efficient."

"This is an important part of the Navy's future," said Adm. Patrick Walsh, vice chief of naval operations.

Walsh, a former Navy fighter pilot whose deployments have included tours of duty in the Middle East, said today's naval officers need not only the technical skills to operate electronic warfare systems, but also in-depth knowledge of the world's flash points.

"We can be the force that kicks the door down if necessary," he said. "We're also capable of providing humanitarian aid."

The San Francisco Chronicle (California) - May 18, 2008 Sunday FINAL Edition

Old hotel that houses school was high-class hideaway

BYLINE: Jim Doyle

SECTION: Main News; Pg. A15

LENGTH: 429 words

In its heyday, the Hotel Del Monte encompassed 20,000 acres of botanical gardens, mystical beaches and undeveloped forests on the Monterey Peninsula.

It was touted as California's largest resort complex and one of the world's pre-eminent luxury destinations for travelers and sports aficionados.

The fabled resort, whose original property covered portions of what is now the city of Monterey and all of Pebble Beach, drew Hollywood legends Clark Gable, Carole Lombard and Marlene Dietrich, President Theodore Roosevelt, aviation pioneers Amelia Earhart and Charles Lindbergh, and novelist and adventurer Ernest Hemingway.

The hotel, built in 1880 by railroad pioneer Charles Crocker as a wooden Gothic structure, was destroyed by fire in 1887. It was rebuilt, but it would burn again in 1924. Its latest incarnation in Spanish Revival architecture still stands - as Herrmann Hall of the Naval Postgraduate School.

The old Hotel Del Monte was the beginning and endpoint of a wondrous 17-mile driving and horseback riding excursion that passed Cannery Row and Pacific Grove before winding through deep groves of Monterey pines and cypress trees in the fog-ridden Del Monte Forest, and then along the rocky shoreline in sight of shallow tide pools to the exclusive Hotel Del Monte Park Reservation - the precursor to the Pebble Beach Lodge.

By 1915, the hotel had fallen on lean times. Samuel F.B. Morse, a former All-American quarterback for Yale University, was hired by the Pacific Improvement Co. to liquidate the hotel and other railroad properties.

Instead, he created an unrivaled sports empire with facilities for equestrians, fishermen, yachtsmen, golfers and race car drivers, along with tennis courts, polo fields and swimming pools.

Morse built the world-renowned Pebble Beach Golf Course and bought the Hotel Del Monte himself, with the backing of San Francisco banker Herbert Fleishhacker. He subsequently built more golf courses including Cypress Point and the Monterey Peninsula Country Club.

The Hotel Del Monte reached its zenith during the Jazz Age and the Roaring Twenties, and its popularity continued into the 1940s. Frequent guests included Mary Pickford, Charlie Chaplin, Bob Hope, Bing Crosby and Ginger Rogers.

In the late 1940s, Morse sold the once-famous hotel and more than 600 acres of surrounding land to the U.S. Navy and focused his business operations on Pebble Beach, where he further developed the Del Monte Forest into an enclave of luxury homes.

The Naval Postgraduate School, formerly in Annapolis, Md., moved in 1952 to the old Hotel Del Monte site.

Monterey County Herald (California) - May 18, 2008 Sunday

Memorial Day concert set at Naval Postgraduate School

BYLINE: The Monterey County Herald

SECTION: BREAKING

LENGTH: 169 words

The Naval Postgraduate School joins the Monterey Bay Symphony, Monterey Symphony and Monterey Opera in hosting a free Memorial Day concert on the lawn beginning at 2 p.m. May 26.

This concert will be the first time the two symphonies have ever performed together. Both Dr. Carl Christensen, music director of Monterey Bay Symphony, and Max Bragado-Darman, music director of the Monterey Symphony, will conduct parts of the concert. The program will include Robert Padgett's "Fanfare for the Eagles," which won the Monterey Symphony competition for fanfare compositions, with Padgett joining the orchestra on violin.

Monterey Opera is sponsoring baritone-magician Patrick Bell, who will simultaneously perform two arias and magic tricks. Bell will also open the concert by singing the national anthem.

NPS gates open at 10 a.m. for the general public, which is asked to use the Third Street entrance. Parking is limited and attendees are encouraged to arrive early. Photo ID will be required of everyone over the age of 15.

From The Lexington Herald Leader (Kentucky) - May 18, 2008 Sunday

7 Democrats seek shot at McConnell

SECTION: CITY & REGION; Pg. B3

LENGTH: 1469 words

1. How will you address the difficult issue of illegal immigration? 2. How long should the U.S. maintain significant numbers of troops in Iraq? 3. What should Congress do about the escalating cost of gasoline?4. What should Congress do to make health care more accessible and affordable?5. How would you influence the funding and timeline for disposal of aging chemical weapons at the Bluegrass Army Depot in Richmond?

Michael G. Cassaro Born: Feb. 7, 1956 Residence: Prospect Occupation: Physician Education: Bachelor's degree in civil engineering, University of Louisville; medical school, U of L Family: Wife, Donna; two children. Public office: None Web site: www.cassaroforsenate.com
Illegal immigration is costly to American taxpayers. I would support legislation to provide law enforcement agencies with the means to prosecute employers that hire illegal immigrants and to streamline the process for immigrants to come legally to America. We should be there for the shortest amount of time that is logistically possible. The Iraqis are selling their oil by which they can fund Iraqi security forces. I would have voted in 2003 against funding this war. Congress needs to stop the economic policies of Bush and McConnell that have devalued our dollar. The weaker the dollar, the higher the cost of gasoline. Instead of legislating a gas holiday, Congress must distance itself from oil interests. We must improve our health insurance environment. Congress should enact legislation that makes health insurance policies portable, tailors health insurance policies to meet individual health care needs and holds insurance companies accountable for denying medical care. As a Democratic senator, I will see to it that this project remains a top priority with the new Democratic administration. I will fight to see that Kentucky companies get the remaining contracts, hire Kentucky workers and pay prevailing wage.

Greg Fischer Born: Jan. 14, 1958 Residence: Louisville Occupation: Chief executive officer of Dant Clayton Corp., which makes aluminum bleachers; founder and chairman of Iceberg Ventures, a Louisville investment firm Education: Bachelor's degree in economics, Vanderbilt University Family: Wife, Alexandra; four children Public office: None Web site: www.gregfischer.com

America is a land of immigrants, and we must have fair, consistent policies for those who wish to legally pursue citizenship. At the same time, we must secure our borders against those who wish to enter illegally. There is no military solution to Iraq, and the United States cannot maintain an endless campaign in Iraq. Our troops have done everything we've asked them to do. Now we must immediately begin to withdraw troops. Long-term, we must raise automobile fuel efficiency standards, provide incentives for energy conservation and launch a crash program to develop new, renewable, non-polluting sources of energy, such as solar, wind, bio-fuel,

hydrogen, geothermal and others. Congress must reform our health care delivery system to insure that every citizen has access to affordable, high-quality health care. Reforms should be aimed at reducing the administrative cost of health care and increasing the focus on preventative care. Expediting the disposal of chemical weapons at the Bluegrass Army Depot would be one of my first priorities. I will impress upon the president, my colleagues in Congress and the Department of Defense just how important this issue is.

William Bruce Lunsford Born: Nov. 11, 1947 Residence: Louisville Education: Bachelor of arts degree, University of Kentucky; law degree, Northern Kentucky University Occupation: President of Lunsford Capital, which invests in small companies; has $5 million to $25 million in Thoroughbreds and produces movies through Hart-Lunsford Pictures Public office: None Family: Divorced; three daughters, three grandchildren Web site: www.bruce2008.com

I support comprehensive immigration reform that secures our borders and cracks down on employers who hire illegal immigrants. Undocumented workers in good standing must pay fines, learn English and get at the back of the line to become citizens. We must put pressure on the Iraqis to police themselves so we can redeploy our combat troops as soon as it can be done adequately and safely. The Iraqis must understand that maintaining law and order is their responsibility. We must implement both short- and long-term strategies to reduce energy prices. I support a gas tax holiday paid for by oil companies. We must also push companies toward using less oil through incentives and develop alternative energy technology. Congress needs to enact universal health care coverage so all Americans can afford medical care. We must work to expand access to quality health care in rural Kentucky and give Medicare the ability to negotiate for lower prescription drug prices. Mitch McConnell has been promising to dispose of the weapons for years and has yet to deliver. I will proactively work to secure the funds to complete the disposal of these chemical weapons ahead of the current 2017 deadline.

James E. Rice Born: Feb. 9, 1968 Residence: Campbellsville Occupation: Warehouse worker for Amazon.com Education: Bachelor's degree, Eastern Kentucky University Family: Single Public office: None Web site: www.jamesrice.org

We need to close the borders. It's a matter of national security. We have looked away for years to get cheap labor. Illegal immigrants already are here; we may have to find a pathway for leadership. We're to the point of where we may need to put more money in the training of Iraqi soldiers and police. Once they are fully trained, we can withdraw our troops. We can't afford to pull out at once. Short-term, we need to drill in Alaska and the Gulf of Mexico to put more oil on the market. Long-term, we need to get our scientists and universities involved so we are not dependent on OPEC. I'd like to see more education to promote good health. We have to bring everyone involved together and find ways to make it more affordable. We have the best health care in the world, and it's not accessible to anyone. They need to be destroyed in a safe manner. The No. 1 priority is to keep the safety of the citizens in mind.

Kenneth Stepp Born: Sept. 8, 1947 Residence: Manchester Occupation: Lawyer **Education: Law degree, University of Georgia; master's degree, Naval Postgraduate School** Family: Wife, Wilma; three children Public office: None Web site: www.steppforcongress.blogspot.com

Immigration must have strict law enforcement. People with special knowledge should have special immigration quotas. Any "path to citizenship" should require 100 hours of community service. We should withdraw all U.S. troops from Iraq quickly. Iraq has cost over 4,000 American lives, tens of thousands of Iraqi lives, left Iraq divided,and has cost the U.S. over $500 billion. We should encourage more refineries and more drilling. We should quit cooperating with OPEC and keep oil receipts secret. We should expand existing programs such as Medicaid, Medicare, VA, children's medical services, K-CHIP and S-CHIP. I would try to speed up the disposal of aging chemical weapons at the Bluegrass Army Depot with more funding and a shorter timeline.

David Lynn Williams Born: July 3, 1938 Residence: Barren County Occupation: Retired; was co-owner of now-defunct Williams Construction Education: Hiseville High School Family: Wife Joann; five children Public office: None Web site: None

I believe treating everyone fairly. We shouldn't run anyone down. I'd bring them home in 30 days. We should build cars with natural gas. We have plenty of natural gas. I'd work with insurance companies to make treatments and drugs available for everyone at cheaper prices. I'd get rid of them as soon I could.

David Wylie Born: Aug. 14, 1968 Residence: Harrodsburg Occupation: Former U.S. Postal Service employee. Education: Ohio School for the Deaf Family: Single Public office: None Web site: www.wylieforsenate.com

I don't have any problem that they come to America as long as illegal immigrants bring their green cards. If they want to work in America then I think they should pay taxes just like our American citizens. I will vote to bring home the vast majority of U.S. troops now. All our troops should be out in less than a year. I oppose a gas-tax suspension. I prefer the gas tax 365 days a year until we get our economy back on track. Congress needs to set up a subcommittee to develop issues on how to fix the cost of gasoline. We need to improve our health care coverage for every American by lowering costs. Congress should set up a subcommittee to develop ways to do this. We need to set up a subcommittee on this to set a time frame to do this.

FACULTY HANDBOOK

Naval Postgraduate School
Monterey California

June 2006

Page 14 & 15 of Faculty Handbook

Some faculty members hold dual appointments. In such cases, one of the Department/Group Chairs (or Dean of the GSBPP) is assigned the primary responsibility for supervisory tasks such as mentoring and making recommendations for pay raises and promotion. The Department/Group/GSBPP is called the "home" Department/Group of the faculty member.

Return to TableOfContents Return to Index

Support Faculty Support faculty are non-tenure track faculty who provide a professional-level service function that supports the teaching and research mission of NPS and the administrative duties central to these functions. Support faculty can perform a wide range of activities such as distance learning instruction, research, public service, academic support duties in such areas as student services, student recordkeeping, library functions, and administrative oversight of the business and academic operations of NPS.

Support Faculty positions generally require a Master's degree in an appropriate field, relevant experience, and personal skills specific to the particular appointment. Support faculty appointments are made by the Provost after a written application from the appropriate Dean, Institute Director, or Associate Provost, containing a position description (including the proposed position title); a description of the duties of the position; a clear description of why the duties cannot be done by a Federal civilian staff member, a contractor, or a term employee. Terms for Support Faculty shall not exceed three years, with reappointment possible with satisfactory performance. (Formal evaluation must be done before requesting a reappointment.) Only the Provost can approve the establishment or filling of a Support Faculty position. Positions must be approved in writing by the Provost *before* recruiting can begin.

There are two types of support faculty:

- Academic Support Faculty. Academic support faculty provide professional support in the instructional or research activities of NPS.
- Administrative Support Faculty. The administrative support faculty provide professional support to students and faculty , and perform administrative duties that relate directly to management policies and procedures, or the general business and administrative operations of NPS. Administrative Support Faculty report directly to a Dean, an Institute Director, Associate Provost or the Provost. They are not members of a specific Department/Group.

Return to TableOfContents Return to Index

Program Officers/Academic Associates. The Program Officer/Academic Associate team is an organizational entity unique to the Postgraduate School. The team is responsible for developing, maintaining, and updating curricula to accommodate the needs and academic requirements of the Navy and the Department of Defense and for monitoring the planning and progress of individual students through a program of study.

A military officer of suitable experience and rank is assigned as the Program Officer, serving as the executive director of the office. One or more assistant program officers may also be assigned to a Program Office and responsibility for a curriculum may be delegated to an assistant.

The part-time duty as the Academic Associate is assigned to a civilian member of the faculty thoroughly familiar with the Naval Postgraduate School, the Navy, DoD, and other sponsoring agencies. Where the Program Office supports multiple curricula, more than one Academic Associate may be appointed and assigned responsibility for specific curricula. (On occasion, the Academic Associate may be a military officer.)

The Program Officers are responsible to the Director of Programs for the overall operation of their respective Program Offices. The Academic Associates are responsible to the Associate Provost for Academic Affairs, through their Department or Group Chair, for the integrity of the academic features of the Program Office operation. As a consequence of this parallel arrangement, the Program Officers and Academic Associates are close professional associates and their relationship should develop accordingly.

Academic Associates are appointed to this duty by the Provost, on the recommendation of the Associate Provost for Academic Affairs and the Director of Programs, for specific terms not in excess of three years. (Reappointments are possible.) The budgeted time allotted to perform the duties of Academic Associate are determined by the Associate Provost for Academic Affairs.

General responsibilities associated with the Program Offices are described below. Specific responsibilities of the individuals are covered in either Naval Postgraduate School Instructions or policy directives. Their general responsibilities are:

- Curriculum Sponsor Liaison. The Program Officer/Academic Associate team works with program sponsors and consultants to define pertinent sponsor needs, including professional objectives; to delineate projected utilization of program graduates; and to consult with Department/Group Chairs (or Dean of the GSBPP) and faculty to propose useful courses and curricula. These plans and projections consider the impact of developing technology, evolving bodies of knowledge, and changing mission of the Navy and other sponsors. They are prepared, reviewed, and updated during sponsor reviews of curricula.
- Curriculum Development and Management.
    - The Program Officer/Academic Associate team, working with the NPS faculty and staff, develops and maintains a statement of professional objectives for each curricular program under their purview. Consistent with these objectives, they establish and keep current appropriate standard curricula.
    - Ensuring that the curriculum meets the professional needs of the Navy or other sponsors rests primarily with the Program Officer. Ensuring that each student's curriculum meets curriculum degree requirements and that the selection and sequence of courses are in accordance with Department/Group or degree requirements rests primarily with the Academic Associate.
    - The Program Officer/Academic Associate team develops and maintains procedures for effectively monitoring programs for their continuing adherence to professional and academic requirements. These procedures may be partially standardized for all programs. The Program Officer holds primary responsibility for collaborating with the Naval Postgraduate School staff, sponsors, and OPNAV and for adopting general procedures to meet the particular needs of individual programs. The Academic Associate is responsible for maintaining liaison with academic Departments/Groups, sustaining the relevance of current course content, and fostering faculty participation in the development of useful new courses and programs.
    - In the development of new curricula or major revision of existing ones, the Program Officer/Academic Associate team includes each concerned academic Department or Group in the deliberations leading to formulating each proposal.
    - Both the Program Officer and Academic Associate are knowledgeable with respect to “transfer field” programs, i.e., other graduate programs appropriately related to those

FACULTY HANDBOOK

Naval Postgraduate School
Monterey California

June 2006

Page 14 & 15 of Faculty Handbook

Some faculty members hold dual appointments. In such cases, one of the Department/Group Chairs (or Dean of the GSBPP) is assigned the primary responsibility for supervisory tasks such as mentoring and making recommendations for pay raises and promotion. The Department/Group/GSBPP is called the "home" Department/Group of the faculty member.

Return to TableOfContents Return to Index

Support Faculty Support faculty are non-tenure track faculty who provide a professional-level service function that supports the teaching and research mission of NPS and the administrative duties central to these functions. Support faculty can perform a wide range of activities such as distance learning instruction, research, public service, academic support duties in such areas as student services, student recordkeeping, library functions, and administrative oversight of the business and academic operations of NPS.

Support Faculty positions generally require a Master's degree in an appropriate field, relevant experience, and personal skills specific to the particular appointment. Support faculty appointments are made by the Provost after a written application from the appropriate Dean, Institute Director, or Associate Provost, containing a position description (including the proposed position title); a description of the duties of the position; a clear description of why the duties cannot be done by a Federal civilian staff member, a contractor, or a term employee. Terms for Support Faculty shall not exceed three years, with reappointment possible with satisfactory performance. (Formal evaluation must be done before requesting a reappointment.) Only the Provost can approve the establishment or filling of a Support Faculty position. Positions must be approved in writing by the Provost *before* recruiting can begin.

There are two types of support faculty:

- Academic Support Faculty. Academic support faculty provide professional support in the instructional or research activities of NPS.
- Administrative Support Faculty. The administrative support faculty provide professional support to students and faculty , and perform administrative duties that relate directly to management policies and procedures, or the general business and administrative operations of NPS. Administrative Support Faculty report directly to a Dean, an Institute Director, Associate Provost or the Provost. They are not members of a specific Department/Group.

Return to TableOfContents Return to Index

Program Officers/Academic Associates. The Program Officer/Academic Associate team is an organizational entity unique to the Postgraduate School. The team is responsible for developing, maintaining, and updating curricula to accommodate the needs and academic requirements of the Navy and the Department of Defense and for monitoring the planning and progress of individual students through a program of study.

A military officer of suitable experience and rank is assigned as the Program Officer, serving as the executive director of the office. One or more assistant program officers may also be assigned to a Program Office and responsibility for a curriculum may be delegated to an assistant.

The part-time duty as the Academic Associate is assigned to a civilian member of the faculty thoroughly familiar with the Naval Postgraduate School, the Navy, DoD, and other sponsoring agencies. Where the Program Office supports multiple curricula, more than one Academic Associate may be appointed and assigned responsibility for specific curricula. (On occasion, the Academic Associate may be a military officer.)

The Program Officers are responsible to the Director of Programs for the overall operation of their respective Program Offices. The Academic Associates are responsible to the Associate Provost for Academic Affairs, through their Department or Group Chair, for the integrity of the academic features of the Program Office operation. As a consequence of this parallel arrangement, the Program Officers and Academic Associates are close professional associates and their relationship should develop accordingly.

Academic Associates are appointed to this duty by the Provost, on the recommendation of the Associate Provost for Academic Affairs and the Director of Programs, for specific terms not in excess of three years. (Reappointments are possible.) The budgeted time allotted to perform the duties of Academic Associate are determined by the Associate Provost for Academic Affairs.

General responsibilities associated with the Program Offices are described below. Specific responsibilities of the individuals are covered in either Naval Postgraduate School Instructions or policy directives. Their general responsibilities are:

- Curriculum Sponsor Liaison. The Program Officer/Academic Associate team works with program sponsors and consultants to define pertinent sponsor needs, including professional objectives; to delineate projected utilization of program graduates; and to consult with Department/Group Chairs (or Dean of the GSBPP) and faculty to propose useful courses and curricula. These plans and projections consider the impact of developing technology, evolving bodies of knowledge, and changing mission of the Navy and other sponsors. They are prepared, reviewed, and updated during sponsor reviews of curricula.
- Curriculum Development and Management.
    - The Program Officer/Academic Associate team, working with the NPS faculty and staff, develops and maintains a statement of professional objectives for each curricular program under their purview. Consistent with these objectives, they establish and keep current appropriate standard curricula.
    - Ensuring that the curriculum meets the professional needs of the Navy or other sponsors rests primarily with the Program Officer. Ensuring that each student's curriculum meets curriculum degree requirements and that the selection and sequence of courses are in accordance with Department/Group or degree requirements rests primarily with the Academic Associate.
    - The Program Officer/Academic Associate team develops and maintains procedures for effectively monitoring programs for their continuing adherence to professional and academic requirements. These procedures may be partially standardized for all programs. The Program Officer holds primary responsibility for collaborating with the Naval Postgraduate School staff, sponsors, and OPNAV and for adopting general procedures to meet the particular needs of individual programs. The Academic Associate is responsible for maintaining liaison with academic Departments/Groups, sustaining the relevance of current course content, and fostering faculty participation in the development of useful new courses and programs.
    - In the development of new curricula or major revision of existing ones, the Program Officer/Academic Associate team includes each concerned academic Department or Group in the deliberations leading to formulating each proposal.
    - Both the Program Officer and Academic Associate are knowledgeable with respect to “transfer field” programs, i.e., other graduate programs appropriately related to those

NAVPGSCOL INSTRUCTION 1550.1D

Subj: GUIDELINES FOR CONDUCTING CURRICULAR REVIEWS

Ref: (a) SECNAVINST 1524.2B

Encl: (1) Curricular Review Summary Brief
(2) Curricular Review Report

1. Purpose. To provide guidance for the conduct of biennial reviews of Navy sponsored fully funded graduate educational programs at the Naval Postgraduate School (NPS) and Civilian Institutions (CIVINS).

2. Cancellation. NAVPGSCOLINST 1550.1C. This instruction has been revised and should be read in its entirety.

3. Background. The mission of NPS is to provide high-quality, relevant and unique and advanced education and research programs to increase the combat effectiveness of U.S., Allied, and Partner armed forces and enhance the security of the United States. To accomplish this goal, educational programs are structured around curricula of study that fulfill the present and future needs of the Navy and other stakeholders for technical and managerial education. The various curricula are designed to educate officers by means of specific Educational Skill Requirements (ESRs). Educational Skill Requirements define a set of skills and abilities that officers should possess to function effectively in a given subspecialty-coded billet. The ESRs are developed by the curriculum's Sponsor and/or the designated Subject Matter Expert (SME) in coordination with NPS. Considering the diverse enrollment of NPS as both the Navy's Corporate University and one of the Department of Defense's (DoD's) critical research universities, joint stakeholders play an increasingly important role in defining the requirements for certain curricula. These special joint needs are considered and evaluated as part of defining overall curricula content. Additionally, the curricular review process serves to meet the overall need for continuous improvement of the curriculum and its contents. Reference (a) directs biennial curricular reviews to ensure continued quality of education, and provides guidance to be used as a touchstone during each curricula review. This instruction assigns responsibility for specific curricular review actions and outlines a structured sequence of events that comprise this continuing cycle of review.

4. Responsibilities. The President is charged with implementing the Navy's graduate level education programs; acting as academic coordinator for all Navy graduate education programs and maintaining

approved curricula. The President and Sponsor/SME will jointly recommend approval of ESR's and validate curricula at the completion of the formal review. The Sponsor/SME is responsible for defining the current and future community needs in terms of ESRs. Joint stakeholders are invited to attend the formal review and make recommendations to ESR content. NPS staff and faculty will carry out the following curricular review actions for Navy sponsored programs taught at NPS. (Paragraph 5.b. applies to programs taught at civilian universities.):

a. The Director of Programs is responsible for coordinating and standardizing all curricular reviews.

b. The Graduate School Deans are responsible for the direct oversight of the curricular review process and leadership of the curricular review team within their school, which includes the Military Associate Dean, Associate Dean(s), Department Chair(s), Academic Associate(s) and Program Officer(s). The Dean and the Department Chair(s) are responsible for carrying out specific curriculum improvements identified during the review process.

c. Academic Associates and Program Officers work as a team providing the primary interface between the curriculum Sponsor/SME/Stakeholders and NPS.

(1) Academic Associates are responsible for reviewing and matching the delivery of education to SME requirements as outlined in the ESRs. The Academic Associate ensures the curriculum meets NPS degree requirements and is consistent with accreditation standards.

(2) Program Officers will maintain regular communication with the Sponsor/SME/Stakeholders as the NPS representative. Program Officers are responsible for initiating action and assembling data for the curricular review process. If a Program Officer is not assigned to the curriculum, then the Academic Associate will perform this function.

5. Procedures.

a. Curricular reviews will be conducted biannually. These reviews should focus on providing the highest quality advanced education tailored to meet specific ESRs for a given curriculum. The curricular review process includes revision and validation of ESR's by NPS and the Sponsor/SME, and incorporates the recommendations of the joint stakeholders when possible. Participants will develop ESRs that reflect current and future graduate education needs of officer communities and DoD personnel. The curricular review process occurs throughout the two-year period between formal reviews and includes the collection of appropriate data, such as accreditation documents.

Additionally, the following milestones establish a structured approach to accomplishing required tasks in a timely manner:

(1) Twelve Months Prior. Program Officers and Academic Associates begin coordination with the Sponsor/SME/Joint Stakeholders on issues for the next curricular review. All action items from previous reviews should be complete or become discussion/action items for the next review. Dialogue with the Sponsor/SME should occur on a regular basis.

(2) Eleven Months Prior. Program Officers and Academic Associates will review and examine subspecialty coding related to curricula to determine strategic planning guidelines and initiatives with the Sponsor/SME and major manpower claimants. This review will identify graduate education requirements in the short and long terms. The Program Officers and Academic Associates will begin collecting required internal data such as exit and alumni interviews, accreditation results, and course content for analysis.

(3) Seven Months Prior. The school Dean chairs the internal curricular review. The Director of Programs, the school's Military Associate Dean, Program Officer, Academic Associate and Department/Group Chair(s) assess the quality and relevancy of the curriculum. This assessment is the objective of the internal curricular review and basis for the upcoming formal curricular review.

(4) Two Months Prior. Program Officer and Academic Associate consult with the Sponsor/SME/Stakeholders on the status of the review and gather expected issues. This consultation may be done via VTC, but it is recommended that the Program Officer and Academic Associate visit the Sponsor/SME/Stakeholders. Action plans will be drafted for the expected issues.

(5) One Month Prior. Program Officer and Academic Associate pre-brief the President, Provost, Associate Provost for Academic Affairs, and the Director of Programs. The pre-brief will include a review of issues and the proposed presentation to the Sponsor/SME. Issues should be clearly defined and coordinated with the Sponsor/SME. Enclosure (1) is a guideline for developing the presentation.

(6) Formal Curricular Review. The formal curricular review will be held at NPS and will include:

(a) Tour of the school's classrooms, laboratories, and research facilities, as appropriate;

(b) Meeting with students (to include thesis briefs as appropriate);

(c) Meeting with faculty, and;

(d) A final summary brief of the curriculum status given to the Sponsoring Flag Officer and the President.

(7) The objectives for the above events are listed below:

(a) The tour of the school's classrooms, laboratories, and research facilities allow the Sponsor/SME/Stakeholders to examine equipment and facilities that support the curriculum. The Department Chair, Academic Associate, Program Officer and the research faculty will attend this tour.

(b) The meeting between the students and the Sponsor/SME/Stakeholders allows the Sponsor/SME/Stakeholder(s) to gauge the quality of NPS students, get direct student feedback on the curriculum, and have an opportunity to mentor the students. The Program Officer and Academic Associate will attend this meeting.

(c) There are several objectives for the Faculty/Sponsor/SME/Stakeholder meeting. The Program Officer will lead the meeting. The Dean, Military Associate Dean, Department Chair, Academic Associate, and select faculty will also attend the meeting. The specific objectives are outlined in enclosure (1) and are the basis for the final summary brief.

(d) Lastly, the summary brief will present the President and MAS/SME an overview of the issues discussed during the above events and obtain the President's and Sponsor/SME's final decision on any issues that may need to be resolved. These decisions should be documented in action items.

(8) Within one month after curricular review: Program Officer originates post review letter/report to Chief of Naval Operations (N127) via the Sponsor/SME, and copy to N13. For joint service curricula, NPS will ensure a copy of the post curricular review is also sent to requisite stakeholders. The letter should be structured similar to enclosure (2) and include, as a minimum, general overview, list of attendees, summary of action items and restatement of ESRs. Action items will identify party responsible for action and due date.

(a) The Director of Programs will maintain an up-to-date schedule of curricular review milestones.

b. Civilian Institution (CIVINS) Programs. The Sponsor/SME will review curricula offered through the CIVINS program with the assistance of the Director of Programs and the CIVINS Program Manager. Factors to be considered include a review of the ESRs, how well the universities on the approved list of schools are meeting the ESRs, additions or deletions to the approved list of schools, budgetary constraints and student administrative issues.

The following guidelines are provided to assist in the curricular review process.

(1) Site Visits. In order to assess how well universities are meeting ESRs, and to meet with the students, the Sponsor/SME often conducts site-visits to one or more of the universities on the approved list of schools. These site-visits can be made at any time during the curricular review cycle. NPS will generally send the CIVINS Program Manager and, if desired by the Sponsor/SME, an NPS faculty member, to assist in these site-visits. Coordination with the Commanding Officer, NROTC or other administrative unit, which provides student support, is recommended.

(2) Location. The formal curricular review will be conducted at a location determined by the Sponsor/SME. For programs with a single approved university, it will often be done at that university. Curricula offered through CIVINS, which have a common Sponsor/SME with NPS programs, may be formally reviewed at NPS at the same time as review of NPS resident programs.

(3) Results. The SME will forward results of the review to N00T via NPS within one month after completion of the review. The results should include a general overview of the review, list of attendees, status of new and old action items, a copy of the ESRs and a list of approved universities. For programs reviewed in conjunction with NPS programs, results may be forwarded by NPS to N00T via the primary consultant.

(4) Changes to Approved List of Schools. Changes to the approved list of universities may be made at any time during the review cycle. The Sponsor/SME should forward recommended additions or deletions to the list to 7 via NPS. Justification for changes should address how the university meets (or does not meet) the ESRs, availability of year-round study, proximity to Naval activities that can provide administrative support, and budget considerations.

DAVID A. SMARSH
Chief of Staff

Distribution:
http://intranet.nps.edu/Code00/Instructions/IndexNew.html

SUMMARY REPORT

1. The following is a recommended structure for the Flag Officer, Executive Review presentation to the President, the Sponsor/Subject Matter Expert, and stakeholders. This guidance is provided in the interest of standardizing presentations to the Sponsors/SMEs and stakeholders, and to aid in preparing for preliminary reviews. This list is not intended to be limiting in any way.

a. Provide Summary of Last Curricular Review:

(1) Date of last curriculum review;

(2) Status of former action items;

(3) Any other information relevant to the current review.

b. Issues from Qualitative Curricular Review:

(1) Validate existing ESRs/propose new ESRs, as relevant;

(2) Validate any existing joint stakeholder, i.e. (USMC/USA/USAF/CIV) requirements;

(3) Propose new requirements, as relevant;

(4) Review degree requirements that may be independent of the ESR's.

c. Issues from Quantitative Curricular Review Aspect:

(1) Validate quantitative billet/quota function;

(2) Examine subspecialty inventory versus requirements;

(3) Examine subspecialty code utilization and payback;

(4) Examine joint stakeholder utilization.

d. Issues from Sponsor/SME, Stakeholder and Faculty Curriculum Assessment for:

(1) Design and Execution. The brief should only contain the top-level issues only:

(a) Does execution of curriculum support customer needs;

(b) Quality Metrics/measures (Student surveys);

(c) Accreditation status;

(d) Examine thesis quality and relevance;

(e) Does the curriculum have sufficient resources?

(f) Faculty - quantity and expertise;

(g) Examine internal and sponsor funding;

(h) Evaluate support staff (administrative and technical);

(i) Evaluate equipment and facilities that support the curriculum;

(j) Review research being done by curriculum faculty:

(1) Thesis research;

(2) Faculty research;

(3) Present summary of research capabilities of NPS schools/institutes;

(4) Solicit input from SME/Sponsor/Stakeholder for research opportunities;

e. Examine all new initiatives in view of meeting customer needs from one year to ten years in the future:

(1) Provide status on any Distance/Distributive learning initiatives within the curriculum;

(2) Provide status on any initiatives pertaining to the Learning Continuum as it applies to the curriculum;

(3) Other topics as appropriate (i.e. Centers of Excellence, institute interfacing, industry partnering).

f. Conclusion:

(1) Action item assignment and review;

(2) Summary of assessment;

(3) Required documentation;

2. Course matrices and other details/data pertaining to the curriculum, students, research, etc., should be available at the Executive Summary and all preparatory meetings.

NPS ACADEMIC PROGRAM REVIEW
APPENDIX A

DEPARTMENT SELF-STUDY

The self-study is prepared by the department (department faculty) and is descriptive, evaluative and aspirational. It provides basic information on the department, its faculty and programs, gives the faculty's assessment of the department's strengths and weaknesses, and presents the faculty's vision for the future. The self-study is the department's opportunity to scrutinize itself, to acknowledge its accomplishments, assess its flaws, and examine future directions.

The department self-study shall consist of a narrative, generally not to exceed 20 pages, accompanied by appendices with tabular material and supporting documents. The narrative and the appendices shall be designed and organized to cover the following areas:

1. Mission / Strategy / Organization
2. Faculty
3. Research / Scholarship Accomplishments
4. Education Programs
5. Students
6. Resources
7. Assessment and Review

MISSION, STRATEGY, ORGANIZATION

The self-study should describe and discuss the department's mission, its strategy for accomplishing that mission, and how the department is organized to fulfill its mission. The self-study would normally include information and discussion related to the following:

Mission and purpose of the department: What does the department do? Why do you do it? Does the department have a stated mission for itself? How does the department contribute to the university's mission?

Strategy: Does the department have a strategic or operational plan?

Organization: Where is the department located within NPS and the NPS schools? What is the department's internal organizational structure? What are the leadership and administrative positions within the department? Does the current organizational structure align with and support the department's mission and strategy? Provide the history of department chair appointments (since last review) and plans for succession.

Future directions: Are there plans for any significant new departmental initiatives? Describe plans related to faculty hiring, new program or curricula development, new facilities, new research programs or thrusts. What does the department plan to do differently in the future?

FACULTY

The self-study should describe the department faculty, the work activities and accomplishments of the faculty, and department policies and practices related to faculty. The self-study would normally include information and assessment related to the following:

Profile of the Faculty: Number and list of the faculty. Classification of faculty (full/part time, tenure/non-tenure track, academic rank/title, regular/associate/adjunct). Faculty qualifications (masters or PhD degree). Changes in the composition of the faculty over the past five years (new hires, departures, retiring faculty). Faculty demographics (gender, ethnicity, age, citizenship)

Faculty recruitment plan: Identification of future faculty requirements. Specific plans for faculty hiring, including discipline areas, type and level of appointment, hiring schedule.

Faculty contributions to graduate programs: Description of faculty involvement in the graduate education mission of the department, including data related to faulty/student ratios, courses delivered and average course load per faculty, average thesis/dissertation load per faculty, and distribution across department; analysis of department teaching evaluation (e.g., SOF) information.

Faculty development and support: Description of the department's programs and practices to support faculty success. May include practices related to faculty orientation, faculty mentoring and advising, faculty development, faculty review and assessment.

Faculty work policies: Description of the department's polices and practices related to faculty work activities. May include practices related to faculty workload, faculty teaching or course loads, expectations regarding participation in scholarship activities and resultant accomplishments, policies and expectations concerning reimbursable activities.

Faculty vita or data sheets: In an appendix, for each individual full-time department faculty member, provide a biography-bibliography, including employment, education, professional experience and competence, scholarship accomplishments (research activities, publications and presentations, other creative activities).

RESEARCH AND SCHOLARSHIP

The self-study should describe and evaluate the research and scholarship accomplishments of the department over the past five years. The self-study would normally include information and assessment related to the following:

Profile of the research and scholarship accomplishments of the department: Description of faculty research, scholarship and other creative activity. Includes full identification of publications and other scholarship output of the department (faculty and students) during the preceding five years. . Indicators of the academic productivity of the department, such as publications/faculty, trends in scholarship output, type of scholarship products.

Academic orientation: Discussion of the specific intellectual strengths of the department. Description of particular specializations and areas of recognized expertise of the department, including research programs and/or research centers. Assessment of the department in relation to nationally ranked public and private research universities.

Profile of sponsored activities: List of sponsored projects completed. External grants submitted and funded. Reimbursable funds created per faculty.

Involvement of faculty in external academic and professional community: Contributions of the faculty beyond the bounds of NPS, including service and positions in academic associations, boards, committees, professional societies, government or DoD organizations.

GRADUATE PROGRAM

The self-study should describe the graduate education programs of the department, including masters and PhD degree programs, curricula and academic certificate programs. The self-study would normally include information and evaluation related to the following:

Program Objectives: Discuss the objectives of the department's educational program(s), individually and collectively. Are there broad, general goals that determine or influence the specific educational programs the department offers, and the composition and content of those programs?

Curriculum and degree programs structure: Describe all graduate programs offered by the department. Delineate all relevant aspect of program/curriculum structure, including different degrees, tracks, curriculum matrices, core courses, thesis or capstone events, degree requirements, etc. If applicable, describe the philosophy and structure of any qualifying, candidacy, and/or comprehensive examinations used by the department within their programs.

Program sponsorship and delivery: Describe and distinguish among the department's programs with respect to sponsors and sponsorship, resources and funding sources, program delivery mode and location.

Current program profile: Provide a description of the graduate program offered during the most recent academic year in terms of courses provided. The description should delineate the delivery of courses by degree program, location (resident or DL), instructor type (tenure-track, non-tenure-track), instructor qualifications (academic degree level), class size.

Program initiatives: Describe new education programs the department is planning for the future.

NPS Catalog: Departments should make available excerpts of the NPS catalog applicable to their programs. It would be expected that the NPS catalog would be an accurate and up to date source for much department program information.

Course syllabi file: A file shall be maintained in the department and made available to

external reviewers or the administration, if requested. A satisfactory department file of course journals would be expected to serve this purpose.

STUDENTS

The self-study should describe the number, composition and accomplishments of students enrolled in the department's graduate programs, including masters, PhD and academic certificate programs. The self-study would normally include information and evaluation related to the following:

Profile of students: Numbers enrolled, by program. Student type (military/civilian, service, navy community/designator, US/international). Student demographics (age, gender, ethnicity). Enrollment status (part-time, fulltime). Distribution of types of undergraduate degrees obtained. Enrollment trends and/or changes in number and composition of students over past five year.

Preparation of students: Please address the background and level of preparation of the graduate students to pursue a graduate degree within the department. State any steps that are being taken to improve the level of student preparation. Does the department offer any programs to address student preparation (refresher quarter; assessment and remediation of student capabilities related to writing, computer or math skills; guidance to students prior to arrival).

Student support**:** Teaching and research assistantships, if relevant.

Student productivity: Number of theses and dissertations last five years. Assessment of thesis/dissertation quality. Student publications and presentations, Degree completion rate. average time to degree

Graduate profile: Number of degrees granted, graduates by degree program. Subspecialty code utilization. Post-graduation accomplishments of graduates.

RESOURCES

The self-study should address the resources of the department and the adequacy of the resources to sustain a quality academic program. The self-study would normally include information and evaluation related to the following:

Administrative staffing: Identify administrative and support staff personnel/positions in the department and of direct support to the department. Address the adequacy of administrative support both at the department and NPS wide level, including staffing.

Facilities and equipment: Identify space (classroom, research, office, laboratory) and equipment (instructional technology, computer resources, IT, laboratory equipment) resources available to the department. Address the adequacy of space and equipment to the department's needs.

Financial resources: Provide a summary profile of the financial resources of the department during the past five years. The profile should identify

- Total budget
- Sources of budget (NPS mission funds, reimbursable sources, indirect funds, etc.)
- Major expense areas (faculty labor, staff, non-labor)
- Budget associated with major identifiable programs or subunits within the department (e.g., a research center, separate reimbursable education programs, etc.)
- Total departmental externally funded (reimbursable) research and education
- Portion of budget used for graduate programs

ASSESSMENT AND REVIEW

The self-study should describe procedures and practices of the department related to assessment and review of its academic programs, and document the changes and improvements to programs that result. The self-study would normally include information and evaluation related to the following:

Previous Academic Program Review: Provide, summarize and review the records and lessons learned from the department's previous APR. Expected elements include: the External Review report, the Campus Closure report, and the Department Follow-up report

Curriculum Review Process: Provide a history of the department's curriculum reviews during the past five years, assembling significant curriculum review documents (briefs, close-out letter, follow-on action items). Review the outcomes of curriculum reviews and any resulting changes to the department and/or its programs.

ACADEMIC PROGRAM REVIEW PROCEDURES
NAVAL POSTGRADUATE SCHOOL

Updated: December 19, 2005

TABLE OF CONTENTS

1. Objectives

All academic departments and other entities that oversee degree programs at the Naval Postgraduate School shall conduct Academic Program Reviews (APR) every six (6) years. The purpose of a program review is to foster academic excellence, to improve quality of every department, and to provide guidance for administrative decisions in support of continual improvement. Each department will examine the state of their department and degree program(s) with a self-study and create a departmental strategic plan that will provide the foundation for further evaluation from an external review board. These boards will provide input as to the quality of the program, the progress made in the previous few years, and the appropriateness of directions outlined in the department's strategic plan. The objective of the review process is to inform the administration, the faculty, the Navy, Department of Defense, other sponsoring agencies, and public agencies of the following:

1. The overall quality and direction of the research, scholarship, and creative activity of the faculty, in comparison with departments at other nationally ranked research universities.

2. The overall quality and direction of the department's graduate programs, including curriculum, teaching, research, laboratories, and service activities. Reviews are forward looking. While assessment of a program's current status is important, priorities for continual improvement are of prime concern.

3. The advisability and efficacy of changes in the short-term and long-term resource allocations within the department or other academic unit under study. This should not be viewed by departments as an unrestrained request for resources. If additional resources are contemplated, the additional amounts and the specific benefits must be quantified.

4. The progress the department has made over the previous 6 years and provide feedback on the goals and implementation outlined in the strategic plan for the subsequent 6 years.

The APRs should emphasize the department's plans for improvement of instruction and scholarship, in the context of its current strengths and recent accomplishments. Reviews should also address any issues of departmental governance that bear upon the department's ability to conduct its core mission.

In addition to the APRs outlined in this document, NPS will continue to conduct Curricula Reviews with program sponsors on a biannual basis in accordance with Navy instructions (OPNVAVINST 1520.23 series). The primary functions of Curricula Reviews are to ensure the relevance of the academic program, update Educational Skill Requirements (ESRs), consider specific educational goals for students to support the subspecialty code requirements for billeting purposes, and to ensure the graduates satisfy the needs of the Navy and other Services. The APRs have a much broader purpose and focus on the academic and scholarly life of the department and less on the specific subject matter supplied in the various courses.

A successful program must be viewed as critically important to the Navy, Department of Defense or other sponsoring agency. Additionally, the programs will be a recognized leader among academic institutions, maintain currency in its field, and provide inquiry-based education.

2. Scope

All departments or academic units that own graduate degree programs will conduct an APR on a six (6) year cycle. These reviews will consist of a self-study, generation of a strategic plan, and an external program review. This external review will not occur in the same year as the Curriculum Review, which is done biannually. The department's self-study, the strategic plan, and the external review will be organized into three broad areas:

1. Faculty research, scholarship, and creative activity

2. Graduate programs

3. Administrative staffing, equipment, and space

A program review begins with the academic unit undertaking a comprehensive self-study (Appendix A) and creating a strategic planning document (Appendix B) that serve as the basis for self-assessment and for identifying future directions and opportunities. With the approval of the Provost, the timing and cycle of the review as well as the required documentation, such as the self study report, can be altered to better align with, departmental/specialized accreditation review(s), such as the Accreditation Board for Engineering and Technology (ABET). The self-study process is intended to assist the department faculty in establishing the state of the department and the strategic plan builds on this to outline the developmental priorities and identifying strategies for achieving the goal of academic excellence or eminence in the field.

The strategic plan should seek to bring about significant improvement in the relevant rankings or other comparisons factors. Department chairs/deans should identify institutions against which they plan to benchmark their quality, and delineate the sequence of steps the unit will use to attain its desired increase in reputation. The time horizon of the strategic plan will generally be five to seven years.

Both the self-study and strategic plan should be concise. Neither should exceed 20 pages, and data and descriptive material should be placed in appendices.

The next step in the review is the visit by an external review committee. The external reviewers will be asked to respond to a standard charge (Appendix C), which will be reviewed annually by the Provost. The external review committee shall prepare a closure report that will be submitted to the Provost, Dean and Department Chair within one month of the visit.

No later than three (3) months following the closure report, the academic unit under review will submit a follow-up report to the Dean and Academic Review Committee indicating how the unit has responded to the recommendations made in the closure report. Generally the departmental strategic plan should be modified to incorporate suggestions made by the external review board.

Where appropriate, the department's self-study and the external review should consider the potential for prospective graduate programs. If an academic unit administers an interdisciplinary program or teaches a significant number of service courses for other units, advice from all participating departments and divisions will be sought.

3. Conduct of Review; Roles and Responsibilities

The Provost is the Chair of Program Review Committee (PRC) consisting of the academic school deans, the Dean of Research, the Associate Provost for Academic Affairs, the Faculty Chairman, and two (2) at large tenured faculty members appointed by the Provost. The Provost is responsible for general oversight of the review process, approves the slate of external reviewers, extends requests to the external review committee members, chairs meetings of the PRC, and informs the NPS President of the results of each academic program review. The Associate Provost for Academic Affairs administers the program, including keeping track of the review cycle, facilitating communication among participants, and alerts a unit to be reviewed of its upcoming review at least one year preceding the review.

The divisional dean over the department under review is responsible for the day-to-day management of the review. This includes notifying the department, nominating and soliciting review committee members, and scheduling the external review committee meetings, transmitting the review report, and submitting comments.

The department chair, on behalf of the faculty, is responsible for preparing the self-study and strategic plan and responding to the closure report. The Office of Institutional Research will provide staff support for the review, as well as the data requested by the dean and the department chair.

4. External Review Committee

4.1 Configuration

The external review committee shall be comprised of least three distinguished scholars or experts in the relevant field of study, who are not closely affiliated with NPS. The members should have significant diversity in background. It is recommended that two members be from academia and one member be drawn from either DoD/government or the business/industry community.

1. Senior Faculty or Academic Administrator. Generally an eminent scholar or administrator at a well respected, graduate research university from a similar department or college as being reviewed.

2. Senior Navy, DoD, or Government Official. Generally this person should be at the Flag, General Officer, or SES level. This person cannot be the curriculum sponsor or from the same organization as the sponsor. It may be advantageous to have this member from a DoD university or college, or at least someone having significant experience at such an institution. Other possible candidates would be technical directors of labs, service research organizations, or senior DoD staff. This person could be from an intelligence agency, Department of State, Department of Homeland Security, or similar Government organizations. The person must have the credentials and experience to evaluate the academic programs.

3. Industrial or Business Executive. Personnel from non-profits or non-governmental organizations (NGOs) can also be considered. This should be a senior manager with familiarity with the technical or business issues related to the department being reviewed.

4.2 Appointment
The divisional dean may invite the department chair to propose candidates for the review team. The divisional dean shall recommend to the Provost a slate of at least six (6) candidates, having a minimum of two (2) in each category, perhaps with a preferred and an alternate, from which the Provost may choose. A brief biography of each candidate must be included. The Provost will select among the candidates or return the slate to the dean and chair for additional candidate(s).

4.3 Standard Charge
All academic department reviews shall respond to a standard charge (see Appendix C). At their discretion, the Provost and the dean may add to the charge to include specific areas of inquiry. The standard charge is intended to provide comparable assessment for all academic units.

5. Self-study

The unit under review will prepare a self-study typically following the outline in Appendix B. The self-study comprises a narrative description of the department's scholarly and creative direction and graduate program, followed by tabular material provided by the department, the school, the Registrar and the Office of Institutional Research. These appendices shall include, among other things, pending proposals for new degree programs, the previous external review report, closure report, and department follow-up report. For academic units that are accredited by specialized agencies, the most recent documents regarding that accreditation should also be included as appendices to the self-study.

6. Departmental Strategic Plan

Following the self study, every academic unit will draft a strategic plan that describes the future directions and new policies the unit will follow over the subsequent six-year period. Appendix C. describes the elements that the plan should contain. The department chair is responsible for the plan, but it should be a document that reflects a consensus view of the department. The narrative description should document the department's strengths, shortcomings, and perceived opportunities for growth or improvement. This plan will be distributed along with the self study to the review board. The plan should be amended based on feedback from the external review committee.

7. Campus Visit

The Provost will extend the requests for membership on external review committees. The Associate Provost for Academic Affairs shall coordinate with external review committees, the school dean, and department chair for scheduling the campus visit, including all meetings. The external review team shall meet jointly with the dean and the Provost in an entrance interview prior to meeting with members of the department. If practicable, this meeting should be held the evening prior to the formal departmental meeting. Following the entrance interview, the review committee shall meet, at a minimum, with the following representatives, in no particular order:

1. Department chair

2. Department faculty (individuals or groups as appropriate)

3. Department Instruction Committee (if any)
4. Department Research Committee (if any)
5. Students in the department
6. Chairs of departments served by the unit (where relevant)
7. Senior department staff representative

A single exit interview shall be scheduled, with the Provost and the PRC. It is usually good practice to set aside at least an hour and a half on each day of the visit for the team to prepare the draft report.

8. Review Committee Report

The dean shall ask the review committee to submit a report within one (1) month of its visit. The report, based upon the self-study and the interviews, should address the issues described in the standard charge**.**

9. Action on the Report

9.1 Reviewers' Report
The review committee's report shall be submitted to the divisional dean. The dean is responsible for immediately distributing copies to the department chair and the Provost.

9.2 Department's Response
The department shall submit to the dean a written response to the review report within one (1) month. The chair's report should represent a consensus of the department. All tenure track faculty within a department have the right to supply, individually or in groups, additional concurring or dissenting opinions to the chair's report.

9.3 Dean's Response
Within one (1) month of receiving the department response, the divisional dean shall prepare and submit the divisional response, along with the departmental response, to the Provost and PRC.

9.4 Closure Meeting
The Associate Provost for Academic Affairs' office is responsible for scheduling the closure meeting of the PRC upon receipt of the departmental and divisional responses. The closure meeting will ordinarily include the department chair, in addition to the PRC.

The closure meeting will provide an opportunity for a candid discussion of the results of the external review. The meeting agenda shall address the three key areas: (1) Faculty research, scholarship, and creative activity; (2) graduate program; and (3) administrative staffing, equipment, and space. Specifically, the following matters shall be addressed:

1. Factual matters that are in dispute

2. Perspective on priorities as viewed by each agency

3. Prospects for achieving the review recommendations

9.5 Closure Report
The conclusions reached in the course of the discussion shall be summarized in a closure report approved by the PRC and signed by the Provost within one month of the meeting. The closure report shall include a list of questions or action items addressing any outstanding concerns raised in the review.

The Provost shall transmit the closure report to the President and the relevant units. The department chair shall make the report available to all department faculty members.

10. Implementation and Review Follow-up Report

The divisional dean shall implement or otherwise address recommended actions and monitor conditions placed by the administration on the department. Twelve (12) months subsequent to the closure report, the dean shall submit a departmental follow-up report addressing the specific questions appended to the closure report. The follow-up report is submitted to the Provost with a copy to the Associate Provost for Academic Affairs.

11. **Schedule for Program Reviews**

The review closure report will stipulate when the next review will occur. Three years after their establishment, new degree programs will be asked to provide interim self-assessments which subsequently will be incorporated into their administering department's review schedule. The Associate Provost for Academic Affairs' office will transmit an updated list of the department review schedule every fall quarter. Suggestions for procedural changes that improve the overall usefulness of reviews, or that reduce workload without compromising value, may be submitted by the deans to the Provost at any time. Subsequent changes to review procedures, approved by the PRC, will be announced in the annual fall-quarter schedule transmittal.

In isolated cases where there is a justifiable need to defer, accelerate, or otherwise reschedule an external review, the department chair will make a written request to the divisional dean that sets out the justification for deferment or acceleration. Requests for postponement or acceleration may also originate with the divisional dean. The divisional dean will forward the request in writing, together with his or her independent opinion and recommendation, to the Provost. The Provost will consider such requests on their merits, consult with the PRC, take into account the institutional need to maintain the regularity and timeliness of the review process, and will make the final determination regarding whether and how the review will be rescheduled.

APPENDIX A. DEPARTMENT SELF-STUDY

The department shall provide a narrative self-study, generally not to exceed 20 pages, followed by appendices with tabular material. The narrative and the appendices shall be organized by:

1. Faculty research, scholarship, creative activity
2. Graduate program
3. Administrative staffing, equipment, and space

1. RESEARCH AND SCHOLARSHIP

Please describe the research and scholarship accomplishments of the department over the past five (5) years including sponsored research and publications record of all faculty members and students. The specific intellectual strengths of the department, in relation to nationally ranked public and private research universities, should be clearly identified.

2. GRADUATE PROGRAM

Curriculum and degree programs

Please describe all graduate programs offered by the department. The core courses and all available tracks within the program should be delineated.

Examinations

Briefly describe the philosophy and structure of any qualifying, candidacy, and/or comprehensive examination used by the department.

Graduate Students

Please address the background, number, and level of preparation of the graduate-student cohort to pursue a graduate degree within the department. State any steps that are being taken to improve the level of student preparation.

3. ADMINISTRATIVE STAFFING, EQUIPMENT, AND SPACE

Please address the adequacy of administrative support both at the department and NPS wide level, including staffing, IT, equipment, and space.

SELF-STUDY APPENDICES

The self-study will include a table of contents including appendices. Appendices will be grouped to provide separate faculty and student profiles.

Appendix I – Overall Faculty Profile

The department will provide for each of the past five years, where applicable:

1. For each tenured faculty member, a biography-bibliography, including employment, education, professional competence and activity, and published writings and creative activities. Information on teaching, university seminars, public seminars, etc., may be omitted.

2. Total departmental extramural research and education funding awarded (public and private) by year.

3. List of external seminar and colloquium speakers by year.

4. History of department chair appointments (at least since the previous review) and plans for succession.

5. Department course-load policy

6. Faculty recruitment plan (intellectual areas, level of appointment, schedule)

7. External review report from previous review

8. Campus closure report from previous review

9. Department follow-up report from previous review

The Office of Institutional Research will provide for each of the past five years, where applicable:

1. NRC ranking of department in comparison with peer institutions.

2. Tenured-faculty roster and age, gender, and ethnicity distribution

3. Average faculty payroll history by rank

4. Student/faculty ratio history

5. Tenured-faculty course load history

Appendix II – Overall Student Profile

The department will provide:

1. Catalog copy

2. Course syllabi file (A file shall be maintained in the department and made available to

external reviewers or the administration, if requested)

3. Graduate profile (five-year history for each graduate):
    a. Thesis title
    b. Principal adviser
    c. Year of degree award
    d. Job or billet placement

The Office of Institutional Research will provide for each of the past five years, if applicable:

1. Most recent NRC ranking of graduate program, in comparison with peer institutions

2. Number of degrees granted by degree name

3. Graduation rates

4. Results of student surveys for students seeking department degrees

5. Average class size

6. Distribution of types of undergraduate degrees obtained

The Office of Institutional Research will also provide boiler-plate institutional data, as appropriate.

APPENDIX B. GUIDELINES FOR DEPARTMETNAL STRATEGIC PLANS

A departmental strategic plan is intended to provide a road map that is approved by the department faculty, which serves to guide decisions in hiring and resource allocation. A six (6) year time horizon will generally be used, since it coincides with the review cycle, but a department can take a longer view if justified. The plan should generally be short and concise, perhaps 10 pages. The plan should contain:

1. Summary of recommendations

2. State of the department, including strengths, weaknesses and an evaluation of the potential for new educational or research programs.

3. Projection of the number of students and anticipated growth in reimbursable funding.

4. Number and type of faculty that will need to be hired over the six years.

5. Number and type of staff that will be needed along with any changes in organization, training, and compensation.

6. New curricula or degree programs. The need for such programs and a short description are required.

7. New or changing tracks within existing degree programs.

8. Changes in facility requirements.

9. New business practices.

10. Strategic partnerships. State the organizations with which the department plans to form alliances and the nature of the interaction(s).

The plan should have a zero top line growth in budget for the baseline plan. New programs that require additional resources can be outlined. However, the resource requirements in terms of new faculty, departmental staff, other support required outside of the department, and additional office and laboratory space requirements must be clearly stated. These new programs should be itemized and the additional cost and benefits quantified.

APPENDIX C. SAMPLE TRANSMITTAL LETTER AND STANDARD CHARGE

SAMPLE TRANSMITTAL LETTER

Dear Professor Smith:

Thank you very much for agreeing to review the Physics Department at the Naval Postgraduate School in Monterey, California. The department oversees the following graduate programs: M.S. and PhD in Physics.

We request that you address the areas listed in the enclosed charge. To inform your review, we also enclose the department's self-study, its recent academic planning documents, previous review reports, and other information that may be helpful to you. If you have any questions, please contact me at telephone number or e-mail address.

We appreciate the time and effort that it takes to serve on such a review panel, and we are very grateful to you for agreeing to join us. The importance of the external review process to the NPS administration and Faculty Council cannot be overestimated, and we will take your report very seriously. Since time is of the essence, we request that we receive your final report within four weeks of your visit to the campus. Logistics for this committee and your visit will be arranged by name and contact info.

With best regards,

Provost

Enclosures:
Standard Charge

Dean
Program Review Committee Members
Director, Office of Institutional Research

STANDARD CHARGE TO EXTERNAL REVIEW COMMITTEE

Based upon the department's previous external review, its self-study, and interviews with faculty, students, staff, and the administration, please evaluate the following elements of the department:

1. The overall quality and direction of the research, scholarship, and creative activity of the faculty, in comparison with nationally ranked public and private research universities of comparable size.

2. The overall quality and direction of its graduate programs, including curriculum, teaching, and co-curricular activities.

3. The appropriateness of the level of resource allocation to matters of administrative staffing, equipment, and space.

Program reviews should emphasize the department's plans for growth and improvement of instruction and research, in the context of its current strengths, weaknesses, opportunities, challenges, and recent accomplishments. Program reviews should also address any issues of departmental governance that inhibit the conduct of collegial discourse.

I. Department Faculty and Scholarly Direction

1. Please evaluate the overall quality of the research, scholarship, and creative activity of the department faculty in relation to both the department's scholarly mission and nationally ranked public and private research universities of comparable size. Describe faculty collaborative efforts, awards, and success in obtaining external funding. Include a one-page curriculum vitae for each faculty member of the department.

2. With respect to faculty renewal and growth, in both the national and international context, are the proposed intellectual directions appropriate and well thought out?

3. Please evaluate the degree and nature of the department's structured exchanges with external scholars via colloquia and seminar series and visiting-scholar programs.

4. Is the overall level of extramural support appropriate for a department of this size and mission?

5. Identify measures used to evaluate the instructional effectiveness of faculty, including exit and alumni surveys, and describe instructional resources, including any incentive structure used to encourage faculty attention to instruction. What is the faculty teaching load overall and for each professorial level?

6. Please comment on the quality and effectiveness of departmental governance.

II. Graduate Program

1. Please evaluate the depth, breadth, and structural coherence of the graduate curriculum, particularly in comparison with similar programs at comparable institutions.

2. Please evaluate the quality of the instruction in the graduate curriculum.

3. Evaluate the appropriateness and quality of the departmental doctoral procedures and their implementation (e.g., qualifying exam, advancement to candidacy, and dissertation defense) appropriate?

4. Evaluate the quality of the learning experience, retention rates, time-to-degree, placement, and morale of the graduate students, as well as any plans for improvement.

5. Describe admission procedures and standards, and identify any competition for graduate students with other institutions.

6. If the department plans to increase the size of the graduate program, are the plans realistic? Is the average size of the program limited by financial support, number of qualified applicants, availability of faculty resources for thesis supervision, staff, or other constraints?

7. Evaluate the availability and quality of resources for student development, including faculty mentoring, career preparation, teaching- assistant training, and student assessment.

III. Administrative Staffing, Equipment, and Space

Please evaluate the adequacy of the following:

1. Administrative and technical staffing, including staff morale.

2. Department resources for seminars, recruiting, and materials and supplies.

3. Administrative and instructional equipment.

4. Office, research, and administrative space.

IV. Other

Please address the specific issues raised in the attached letters from the dean and the Provost. Also, please comment on any additional items that you feel are relevant to the research, academic, and service mission of the department.

GRADUATE SCHOOL OF BUSINESS AND PUBLIC POLICY

EDUCATION PROGRAM EVALUATION CRITERIA

Criteria to Assess Whether GSBPP Offers or Develops a Program

July 2007

Customer Need: The program meets a well defined stakeholder need:

Core Expertise: The program should be an extension of, and related to, GSBPP's vision and core mission of Defense Business Management graduate degree education and research:

Comparative Advantage: GSBPP should possess an identifiable comparative advantage in providing the program over existing providers or competitors:

Faculty Capability: GSBPP faculty should have the capability (both expertise and capacity) to deliver the program:

Control: GSBPP should be assured sufficient control to maintain academic quality and standards and influence admissions criteria:

Financial Viability: The program pricing must be expected to at least breakeven on all costs (direct and indirect):

Leveraged Benefit / Risk: New programs have consequences that extend beyond the program itself. Mere recovery of costs does not warrant developing or offering a new program. GSBPP should benefit from the program in other ways such as additional financial resources to support GSBPP activities, significant recognition within the defense community for developing and/or offering the program, academic/professional development of faculty, or establishing valuable relationships within academic or professional communities. New programs shouldn't put existing programs at risk, although risks of other sorts are relevant to consider also.

NAVAL POSTGRADUATE SCHOOL

OFFICE OF ACADEMIC ADMINISTRATION
REQUEST FOR A NEW CURRICULUM

I. Routing Information

From	David Olwell	Chair, Department of	SE
Via:	Jim Kays	Dean School of	GSEAS
Via:	Vice Provost	Academic Affairs	
To:	Chair	Curriculum Certificate & Degree Requirements Committee	
Copy:	Office of Academic Administration, All Departments, Program Offices, and Deans		

II. General Information

Requestor's Name: David Olwell		Date: 6/1/2008	
Curriculum Number:	***TBD - Assigned by the Office of Academic Administration***		
Curriculum Name:	Systems Engineering (580)		
Curriculum Type:	☒ Degree ☐ Academic Certificate		
Degree/Cert Type	☐ PhD ☐ Engineers ☒ MS ☐ MA ☐ MBA ☐ Cert of Compl		
Degree/Cert Title:	MS Systems Engineering		
DL, Resident or Both:	☐ DL ☒ Resident ☐ Both		
Required APC:	3-2-3	Length (months):	21
Program Office:	Code 76		
Convenes:	☒ Fall ☐ Summer ☐ Spring ☐ Winter		
Educational Skill Requirement:	**See AC Exhibit.** If not included, the requestor must provide this information to the Office of Academic Administration for catalog entry.		
General Description:	**See AC Exhibit.** If not included, the requestor must provide this information to the Office of Academic Administration for catalog entry.		
Requirements for Entry:	**See AC Exhibit.** If not included, the requestor must provide this information to the Office of Academic Administration for catalog entry.		
Program Officer(s):	CDR James Melvin		
Program Manager (DL only):			
Academic Associate(s):	Dr. Cliff Whitcomb		
EdTech(s):	Sandra Stephens		

III. Action Taken by Academic Administration

☐ Submitted to AC for review and approval (CC&DRC). **Date Approved:**

☐ Requested changes completed by:

Python/Curric No.	**Asst Registrar(s)**	**Initials:**	**Date:**

June 10, 2008

Memorandum for the Academic Council

From: Dave Olwell, Chair, SE Department
Via: Jim Kays, Dean, GSEAS
Doug Moses, Associate Provost for Academic Affairs
To: Wendell Nuss, Chair, Curriculum, Certificates, and Degrees Committee

Subject: Approval of curriculum 580: Systems Engineering

1. Request approval of the resident 580 curriculum, Systems Engineering.
    a. The curriculum will award the existing Master of Science in Systems Engineering degree (MSSE).
    b. The curriculum satisfies the requirements of 5800 series personnel subspecialty code, Systems Engineering, approved 21 November 2006 by N1.

2. Supporting appendices include:
    a. Appendix A: Background and curriculum rationale
    b. Appendix B: ESRs
    c. Appendix C: Catalog Description

3. By endorsement of this memorandum, the Dean of GSEAS attests that the curriculum is supportable with respect to facilities and faculty.

4. The point of contact for the 580 curriculum is Dave Olwell, x3583.

David H. Olwell
Chair

Appendix A: Background and rationale

Background:

NPS currently has three academic council approved curricula and one certificate program for systems engineering.

Curriculum 308 is the Systems Engineering Analysis curriculum for unrestricted line officers. It is offered in residence only. The SEACC awards the MSSEA degree.

Curriculum 311 is the Distance Learning Systems Engineering curriculum for Navy and DoD civilians. It is offered non-resident only. SE awards the MSSE degree.

Curriculum 721 is the Product Development for the 21st Century curriculum for senior Navy and DoD personnel. It is offered non-resident only. SE awards the MSSE or MSPD degree.

Curriculum 282 is the academic certificate in systems engineering. It is offered to resident and non-resident students. The SE department awards the certificate.

The NAVSEA-NPS board of flag advisors recognized a need in 2004 for a residential curriculum at NPS that produced systems engineers with a strong understanding of a domain or a discipline. N1 established a P-code for those officers (5800) and in July 2006 the first students reported for the new curriculum 580 that supports that P-code. The curriculum and courses were briefed several times to the flag board in 2004, 2005, and 2006, and a mini-curricular review chaired by RDML Benedict was conducted in June 2007 to finalize the structure of the curriculum. In accordance with paragraph 8.3 of the NPS academic council policy manual, this request for approval was originally circulated one year prior to the graduation of the first class of students in this program (September 08), but was reworked based on institutional and sponsor input and is now being submitted for approval.

NAVSEA desires a portfolio of officer competencies. EDOs will continue to be assigned to the Naval Architecture program at MIT and to the 533, 570, and 590 curricula at NPS. However, NAVSEA wants about 25% of the EDO community to have the 5800 P-Code and is assigning officers to the curricula to achieve that goal. NAVSEA desires those officers to be system engineers with basic a foundation in a domain or discipline. The other EDOs will be domain engineers with a basic foundation in SE.

The curriculum consists of one quarter refresher and seven quarters of academic work. In accordance with the ESRs, it calls for both a capstone project and a thesis. Seven courses are reserved for a domain or discipline track. For the first two years, three tracks will be offered: ships systems engineering, combats systems engineering, and network centric systems engineering. Discipline tracks in electrical and mechanical engineering (drawing courses from those departments) are available if student demand develops for them.

The generic matrix is listed below:

SE3100 Fundamentals of SE		OS3130 Prob & Stats for SE	CS2800 Intro to Objects and Programming	SI3810 SE Seminar	**Fall**
SE3302 Systems Suitability	SE3011 Engineering Economics and Cost Estimation		SE3250 Capability Engineering	SI3810 SE Seminar	**Winter**

SE0811 Thesis	SE4350 Logistics Engineering		SE4151 Systems Integration & Development	SI3810 SE Seminar	**Fall**
SE0811 Thesis	SE4354 Systems Test & Evaluation			SI3810 SE Seminar	**Winter**
SE0811 Thesis	SE0811 Thesis			SI3810 SE Seminar	**Spring**

Figure 1. 580 standard matrix.

There are three domain tracks. Two of them (ship systems engineering and combat systems engineering) make heavy use of the existing TSSE courses. The third, Network-centric systems engineering, makes use of several ECE and IS courses. The tracks are tailorable to student needs and desires, as long as they do not require unique courses and the track representative concurs.

The track matrices are listed below in Figures 2 - 4. Table 1 lists the track electives for the ship systems track.

Figure 4: Net-centric systems engineering track

Additional tracks have been developed for disciplines, such as electrical engineering, and will be offered if student demand appears and once student numbers increase.

Each domain track has a flag sponsor. RDML Kevin McCoy (NAVSEA) is the ships systems sponsor, RDML Chuck Goddard (PEO Ships) is the combat systems track sponsor, and RDML Will Rodriquez (SPAWAR) is the network-centric track sponsor. RADM Steven Johnson (SSP) is the overall sponsor. No sponsors have been identified for the possible discipline tracks.

Resource impact:

This curriculum has been under development for several years. Lab improvements to support it were budgeted in the FY06 POM request and begin September 2007. The SE department is funding the course development with no additional DT requested. Four courses in the tracks remain to be developed and one core course is being developed fall quarter. All remaining courses have been developed.

This curriculum anticipated the SECNAV and CNO requests to NPS to assist with SE revitalization in the Navy. Even if there were a significant financial impact, the mission requires it.

	TSSE Option
TS3000	Electrical Power Engineering

Table 1: Track electives for the Ship Systems Track

Appendix B: Educational Skill Requirements

Officers entering into the Systems Engineering curriculum will be offered the necessary preparatory level courses to enable them to satisfy the equivalent of a baccalaureate degree in Engineering. By the time they complete the curriculum, they shall meet, as a minimum, the requirements set forth by the Accreditation Board for Engineering and Technology (ABET). In the context of systems engineering, the term "systems" shall be used to include both systems and systems-of-systems (SoS). At the graduate level, the officer will acquire the competence to effectively contribute as a systems engineer to naval systems research, design, development, maintenance and acquisition. The officer will gain the ability to effectively integrate future technological, engineering, and acquisition approaches with existing practice through a combination of core systems engineering courses, specialization studies, and project/thesis research. An officer will meet the below-listed ESRs through the completion of a program of study determined by the officer, the curricular officer and the academic associate. Individual programs and how they support the officer's attainment of the ESRs will be specifically designed to meet the needs of the Navy and the officer's interests.

1. [UNDERGRADUATE MATHEMATICS AND BASIC SCIENCES] Understand and apply engineering-baccalaureate-equivalent mathematics and basic sciences. For mathematics, this includes single and multi-variable differential and integral calculus, ordinary differential equations, probability, and statistics. Basic sciences include physics, chemistry, and terrestrial sciences. This can be met by the appropriate undergraduate work.

2. [CAPABILITY ENGINEERING] Model and analyze military operations in the context of achieving needed capability. Apply model-based systems engineering approaches, based on UML or SysML, and modeling and simulation techniques, and be able to assess legacy systems, emerging technological concepts, and as-yet-to-be-developed concepts into the joint warfighting environment considering technology readiness levels, effectiveness, cost, and risk. Understand the process from warfighting gaps to synthesis of as-yet-realized system concepts to meet emerging capability needs. Understand and apply modeling and simulation to include deterministic and stochastic modeling of systems, economic models, cost models, and life-cycle suitability analyses. This includes the ability to develop original discrete-event and continuous run-time simulations, as well some familiarity with large-scale government and commercial warfighting simulations.

3. [SYSTEM ARCHITECTING] Perform system architecting, applying and integrating methods for both software and hardware aspects. Construct feasible system functional and physical architectures that represent a balanced approach to meeting stakeholder needs and expectations, stated, implied, and derived system requirements, and suitability objectives such as being open, modular, extensible, maintainable, and reusable. Understand system architecture frameworks and their role in architecture development. Use model-based systems engineering techniques, based on UML or SySML to create, define, and develop system architectures. Develop, analyze, and compare alternative architectures against appropriate, system-level evaluation criteria and select the best based on quantitative and qualitative analysis, as appropriate.

4. [SYSTEM DESIGN] Understand and apply the system design process in a holistic context, applying and integrating methods for both software and hardware aspects including identifying capability need, defining requirements, conducting functional analysis and allocation to hardware, software, and human elements, creating a system functional design, designing a system, deriving and defining requirement specifications, allocating requirement specifications to sub-systems (for hardware, software, and human elements), design for suitability, including reliability, availability, maintainability, operability, and logistical supportability, perform system assessment by conducting trade-off studies, evaluating system design alternatives against system capability need expressed as military effectiveness, estimating and analyzing the system cost and risk, including risk mitigation strategies, integrating human elements into the system design, and analyzing and planning for system testing and evaluation.

5. [ENGINEERING DESIGN ANALYSIS] Understand and apply core qualitative and quantitative methods of engineering design analysis, to include problem formulation, alternatives development, alternatives modeling and evaluation, alternatives comparison, optimization, decision analysis, failure analysis, risk analysis, and futures analysis. Mathematical techniques may include multiple criteria optimization, design of experiments, response surface methods, set-based design, real options, systems dynamics, and probabilistic analyses.

6. [SYSTEM INTEGRATION AND DEVELOPMENT] Apply the core skills of system integration and development to include integrating relevant technological disciplines that bear on the system effectiveness and cost, including weapons, sensor and information systems, while being responsive to realistic military capability need and warfighting effectiveness, requirements, functions, specifications, cost, and risk. Integrate systems and analyze aspects during the entire life-cycle. Understand system realization methods and processes, including prototyping and production. Apply production quality methods for continuous process improvement, such as statistical process control, lean, and six sigma .

7. [SYSTEM TEST & EVALUATION] Apply the core skills of system test and evaluation to include system effectiveness while being responsive to realistic military capability need and warfighting effectiveness, requirements, functions, and specifications. Evaluate systems and analyze test and evaluation aspects during the entire life-cycle using inferential statistics methods, including design of experiments (DOE) and analysis of variance (ANOVA). Apply fundamental verification and validation principles to systems development methods.

8. [HUMAN SYSTEMS INTEGRATION] Address human factors during requirements definition, as well as workload, safety, training, operability and ergonomics during design. Conduct functional analysis and allocation to human elements, performing cost-risk-effectiveness trade-offs among hardware, software, and human elements. Evaluate proposed designs for man-machine

integration, human performance testing, and usability during development test and evaluation. Understand basic human biology as applied to human systems.

9. [PROJECT MANAGEMENT] Work as a team member or leader on a military systems engineering project. Demonstrate an understanding of project management principles. Demonstrate competence in the planning and management of complex projects. Understand the principles of and apply current industry approaches and technology to manage systems design, integration, test, and evaluation for large engineering projects.

10. [SPECIALIZATION] Demonstrate in-depth understanding of the principles, technologies, and systems used in at least one major specialty area. These areas can be specific warfare areas, such as combat systems, total ship systems, EW, IW, avionics, undersea warfare, or net-centric systems,, a single traditional engineering specialty, such as mechanical, electrical, software, aerospace engineering, or naval architecture, or specialized disciplines such as human factors, availability, or safety. Demonstrate in-depth understanding of the scientific and engineering principles of the respective specialty, such as sensors, weapons, C4I systems, information systems, ship structures, hydrodynamics, power systems, and reliability. Demonstrate broad understanding of systems context of the specialization. Apply that understanding to the design of system components, sub-systems, and interfaces in the holistic context of the engineering of systems.

11. [JOINT AND MARITIME STRATEGIC PLANNING] American and world military history and joint and maritime planning including the origins and evolution of national and allied strategy; current American and allied military strategies which address the entire spectrum of conflict; the U.S. maritime component of national military strategy; the organizational structure of the U.S. defense establishment; the role of the commanders of unified and specified commands in strategic planning, the process of strategic planning; joint and service doctrine, and the roles and missions of each in meeting national strategy.

12. [THESIS] Conduct independent analysis and research in the area of Systems Engineering, and show proficiency in presenting the results in writing and orally by means of a thesis and command-oriented briefing appropriate to this curriculum.

Brief Overview
Systems Engineering at NPS provides a broad education in systems engineering methods and tools, and depth in a particular domain of application. Several domain tracks are offered, including combat systems engineering, ship systems engineering, and network-centric systems engineering. Other tracks are added based on sponsor and student demand. The tracks consist of eight or more courses to gain depth in the domain area. These tracks complement the standard set of systems engineering courses. The curriculum is interdisciplinary and draws on courses from across campus.

Students come from the uniformed services, civilian members of government, and from foreign military services. Navy Engineering Duty Officers constitute a substantial portion of the students.

Requirements for Entry
Students must have an academic profile code of 323. That implies a 2.2 or better undergraduate GPA, a calculus sequence with a C+ or better grade, and a calculus-based physics sequence with a C+ or better grade.

Entry Dates
Students may enter this curriculum once a year, in ~~July~~ Fall. Students requiring a refresher quarter to meet entrance requirements will begin in ~~April~~ Summer. For further information, contact the Program Officer or Academic Associate for this curriculum.

Subspecialty
Completion of this curriculum qualifies a naval officer as a systems engineering sub-specialist, subspecialty code 5800. The curriculum sponsor is The Commander, Naval Sea Systems Command.

Typical Course of Study
Students have a wide set of options for their specialization tracks. Below is a typical course matrix for the ship systems track.

Refresher Quarter

Quarter 1		
OS3180	(3-2)	Probability and Statistics for Systems Engineering
SE3100	(3-2)	Fundamentals of Systems Engineering
CS2900	(4-2)	Introduction to Object Oriented Programming
NW320	(4-2)	Strategy and Policy
SE3810	(0-2)	Systems Engineering Seminar
Quarter 2		
SE3011	(3-0)	Engineering Economics and Cost Estimation
SE3302	(3-2)	System Suitability
SE3250	(3-2)	Capability Engineering
TS3001	(3-2)	Naval Architecture
SE3810	(0-2)	Systems Engineering Seminar
Quarter 3		
SE3303	(3-2)	Systems Assessment

SE3351	(3-2)	Human Systems Engineering
SE4352	(4-0)	Engineering Systems Analysis
SE4150	(3-2)	Systems Architecting and Design
SE3810	(0-2)	Systems Engineering Seminar

Quarter 4

SE4353	(3-2)	Systems Risk Engineering
SE4003	(3-2)	Computer and Software Systems Engineering
SI3400	(3-2)	Fundamentals of Eng. Project Management
Track elective		
SE3810	(0-2)	Systems Engineering Seminar

Quarter 5

SE4350	(4-0)	Logistics Systems Engineering
SE4151	(4-2)	Systems Integration and Development
Track Elective		
SE0811	(0-8)	Thesis
SE3810	(0-2)	Systems Engineering Seminar

Quarter 6

SE4354	(4-0)	Systems Test and Evaluation
Track Elective		
Track Elective		
SI0811	(0-8)	Systems Engineering Thesis
SE3810	(0-2)	Systems Engineering Seminar

Quarter 7

Track Elective		
Track Elective		
SE0811	(0-8)	Systems Engineering Thesis
SE3810	(0-2)	Systems Engineering Seminar

Educational Skill Requirements
Systems Engineering Curriculum 580
Subspecialty Code 5800P

Officers entering into the Systems Engineering curriculum will be offered the necessary preparatory level courses to enable them to satisfy the equivalent of a baccalaureate degree in Engineering. By the time they complete the curriculum, they shall meet, as a minimum, the requirements set forth by the Accreditation Board for Engineering and Technology (ABET). In the context of systems engineering, the term "systems" shall be used to include both systems and systems-of-systems (SoS). At the graduate level, the officer will acquire the competence to effectively contribute as a systems engineer to naval systems research, design, development, maintenance and acquisition. The officer will gain the ability to effectively integrate future technological, engineering, and acquisition approaches with existing practice through a combination of core systems engineering courses, specialization studies, and project/thesis research. An officer will meet the below-listed ESRs through the completion of a program of study determined by the officer, the curricular officer and the academic associate. Individual programs and how they support the officer's attainment of the ESRs will be specifically designed to meet the needs of the Navy and the officer's interests.

1. [UNDERGRADUATE MATHEMATICS AND BASIC SCIENCES] Understand and apply engineering-baccalaureate-equivalent mathematics and basic sciences. For mathematics, this includes single and multi-variable differential and integral calculus, ordinary differential equations, probability, and statistics. Basic sciences include physics,

chemistry, and terrestrial sciences. This can be met by the appropriate undergraduate work.

2. [CAPABILITY ENGINEERING] Model and analyze military operations in the context of achieving needed capability. Apply model-based systems engineering approaches, based on UML or SysML, and modeling and simulation techniques, and be able to assess legacy systems, emerging technological concepts, and as-yet-to-be-developed concepts into the joint warfighting environment considering technology readiness levels, effectiveness, cost, and risk. Understand the process of warfighting gaps to synthesis of as-yet-realized system concepts to meet emerging capability needs. Understand and apply modeling and simulation to include deterministic and stochastic modeling of systems, economic models, cost models, and life-cycle suitability analyses. This includes the ability to develop original discrete-event and continuous run-time simulations, as well some familiarity with large-scale government and commercial warfighting simulations.

3. [SYSTEM ARCHITECTING] Perform system architecting, applying and integrating methods for both software and hardware aspects. Construct feasible system functional and physical architectures that represent a balanced approach to meeting stakeholder needs and expectations, stated, implied, and derived system requirements, and suitability objectives such as being open, modular, extensible, maintainable, and reusable. Understand system architecture frameworks and their role in architecture development. Use model-based systems engineering techniques, based on UML or SySML to create, define, and develop system architectures. Develop, analyze, and compare alternative architectures against appropriate, system-level evaluation criteria and select the best based on quantitative and qualitative analysis, as appropriate.

4. [SYSTEM DESIGN] Understand and apply the system design process in a holistic context, applying and integrating methods for both software and hardware aspects including identifying capability need, defining requirements, conducting functional analysis and allocation to hardware, software, and human elements, creating a system functional design, designing a system, deriving and defining requirement specifications, allocating requirement specifications to sub-systems (for hardware, software, and human elements), design for suitability, including reliability, availability, maintainability, operability, and logistical supportability, perform system assessment by conducting trade-off studies, evaluating system design alternatives against system capability need expressed as military effectiveness, estimating and analyzing the system cost and risk, including risk mitigation strategies, integrating human elements into the system design, and analyzing and planning for system testing and evaluation.

5. [ENGINEERING DESIGN ANALYSIS] Understand and apply core qualitative and quantitative methods of engineering design analysis, to include problem formulation, alternatives development, alternatives modeling and evaluation, alternatives comparison, optimization, decision analysis, failure analysis, risk analysis, and futures analysis. Mathematical techniques may include multiple criteria optimization, design of experiments, response surface methods, set-based design, real options, systems dynamics, and probabilistic analyses.

6. [SYSTEM INTEGRATION AND DEVELOPMENT] Apply the core skills of system integration and development to include integrating relevant technological disciplines that

bear on the system effectiveness and cost, including weapons, sensor and information systems, while being responsive to realistic military capability need and warfighting effectiveness, requirements, functions, specifications, cost, and risk. Integrate systems and analyze aspects during the entire life-cycle. Understand system realization methods and processes, including prototyping and production. Apply production quality methods for continuous process improvement, such as statistical process control, lean, and six sigma .

7. [SYSTEM TEST & EVALUATION] Apply the core skills of system test and evaluation to include system effectiveness while being responsive to realistic military capability need and warfighting effectiveness, requirements, functions, and specifications. Evaluate systems and analyze test and evaluation aspects during the entire life-cycle using inferential statistics methods, including design of experiments (DOE) and analysis of variance (ANOVA). Apply fundamental verification and validation principles to systems development methods.

8. [HUMAN SYSTEMS INTEGRATION] Address human factors during requirements definition, as well as workload, safety, training, operability and ergonomics during design. Conduct functional analysis and allocation to human elements, performing cost-risk-effectiveness trade-offs among hardware, software, and human elements. Evaluate proposed designs for man-machine integration, human performance testing, and usability during development test and evaluation. Understand basic human biology as applied to human systems.

9. [PROJECT MANAGEMENT] Work as a team member or leader on a military systems engineering project. Demonstrate an understanding of project management principles. Demonstrate competence in the planning and management of complex projects. Understand the principles of and apply current industry approaches and technology to manage systems design, integration, test, and evaluation for large engineering projects.

10. [SPECIALIZATION] Demonstrate in-depth understanding of the principles, technologies, and systems used in at least one major specialty area. These areas can be specific warfare areas, such as combat systems, total ship systems, EW, IW, avionics, undersea warfare, or net-centric systems,, a single traditional engineering specialty, such as mechanical, electrical, software, aerospace engineering, or naval architecture, or specialized disciplines such as human factors, availability, or safety. Demonstrate in-depth understanding of the scientific and engineering principles of the respective specialty, such as sensors, weapons, C4I systems, information systems, ship structures, hydrodynamics, power systems, and reliability. Demonstrate broad understanding of systems context of the specialization. Apply that understanding to the design of system components, sub-systems, and interfaces in the holistic context of the engineering of systems.

11. [JOINT AND MARITIME STRATEGIC PLANNING] American and world military history and joint and maritime planning including the origins and evolution of national and allied strategy; current American and allied military strategies which address the entire spectrum of conflict; the U.S. maritime component of national military strategy; the organizational structure of the U.S. defense establishment; the role of the commanders of unified and specified commands in strategic planning, the process of strategic planning; joint and service doctrine, and the roles and missions of each in meeting national strategy.

12. [THESIS] Conduct independent analysis and research in the area of Systems Engineering, and show proficiency in presenting the results in writing and orally by means of a thesis and command-oriented briefing appropriate to this curriculum.

Subject: Modification of the 311 Curriculum

Ms. Jeane Kays
Secretary, Academic Council
Naval Postgraduate School

1. Under paragraph 8.3 of the academic council policy manual, I am required to notify you of minor changes to departmental degree programs.

2. Upon approval of the course requests submitted in June to the AC, curriculum 311 will be revised for cohorts that commence fall quarter, AY09, to follow the matrix at enclosure one. This does not change the degree requirements for the degree, and is not considered a 'major change in emphasis.'

3. Appropriate catalog language is included in enclosure two.

4. I am the point of contact for this action.

David H. Olwell, Ph.D.
Chair

cawhitco@nps.edu

Brief Overview

The Master of Science in Systems Engineering DL degree program is designed for Navy System Commands and DoD organizations involved in a wide range of systems engineering and integration challenges. These commands can partner with NPS to educate and train engineers with tools and technologies relevant to their work, resulting in employees with greater knowledge and expertise to enable them to better meet the needs of their customers.

DoD organizations or sponsors provide the students, and the Department of Systems Engineering provides the instruction, course materials, and hands-on experience. Courses are delivered at the students' local site using a combination of on-site instruction, video teleconferencing, and Web-enhanced on-line courses. The program can begin any academic quarter, in accordance with the sponsor's needs.

Students normally take two courses per quarter over a two-year period. There are nine core courses and a three course capstone project sequence in the 16-course program. The remaining four courses can be tailored to meet the sponsor's need. Students must participate in a capstone design project in lieu of writing a thesis.

Students receive an NPS degree, may receive NPS Systems Engineering certificates of accomplishment, and earn DAU equivalency certificates for all SPRDE Level III training requirements.

The program manager will help establish partnership arrangements with other organizations if desired. Additional information on the program can be found at www.nps.navy.mil/se/msse

Requirements for Entry

An entering student must possess a Bachelor of Science degree in an engineering discipline with at least a 2.2 undergraduate grade point average. Students must have completed ACQ101 and ACQ 102 if they wish to receive SPRDE credit.

Entry Dates

This is an eight-quarter curriculum that may start any quarter chosen by the sponsor.

Degree

Master of Science in Systems Engineering

To be considered for this degree, a student must enter the curriculum with an ABET accreditable engineering BS degree or establish equivalency with an ABET degree, and complete all the requirements of curriculum #311.

Master of Science in Engineering Science

Students who enter without an ABET accreditable engineering BS degree and cannot establish equivalency, and who complete all the requirements of curriculum #311, will earn a Master of Science in Engineering Science degree.

Typical Course of Study

The typical course of study for curriculum 311 involves a nine course core systems engineering sequence, a three-course project, and an agreed-upon emphasis or domain track. This track is selected by the sponsor, program manager, and academic associate.

NAVAL POSTGRADUATE SCHOOL

Department of Systems Engineering
777 Dyer Road
Monterey, CA 93943

30 June 2008

Subject: Request to award the degree Master of Science in Engineering Systems

Memorandum from: Chair, SE department DH 6/30/08
Memorandum through: Dean, GSEAS SK
Associate Provost for Academic Affairs
Memorandum for: Chair, Curriculum, Certificate, and Degree Requirements Committee, NPS Academic Council

1. The Department of Systems Engineering intends to restrict the award of the MS in Systems Engineering to students who meet the standards of the Accreditation Board for Engineering and Technology (ABET), effective summer quarter 2008. The Department requests authority to award a new degree named the Master of Science in Engineering Systems to other students who complete the course of study in curricula 580 and 311 but who do not possess an ABET undergraduate engineering degree.

2. We propose the following catalog language and degree requirements:

   a. A candidate shall have earned the Bachelor of Science or Bachelor of Arts degree.
   b. The Master of Science in Engineering Systems requires a minimum of 48 quarter-hours of graduate level work.
   c. The candidate must take all courses in an approved study program, which must satisfy the following requirements: there must be a minimum of 36 quarter-hours of credits in 3000 and 4000 level courses, including a minimum of 16 quarter-hours at the 4000 level. The course work must include a four-course core consisting of one course each in systems engineering methods.
   d. The candidate must complete either a 12-hour equivalent team systems engineering project or an individual thesis.

3. This degree will be offered to both resident and non-resident students.

4. There is a negligible resource implication with this proposal that centers on the administrative costs to adjust NPS publications to reflect the new degree.

David H. Olwell
Chair

DRAFT – NOT FOR DISTRIBUTION

NAVPGSCOLINST XXXX

Date 200X

NAVPGSCOL INSTRUCTION XXXX

Subj: GUIDELINES FOR ESTABLISHING NEW PROGRAMS

Ref: (a) SECNAVINST 1524.2B of 27 Oct 05
(b) NAVPGSCOL Academic Council Policy Manual
(c) Navy Officer Manpower and Classification Instruction (NAVPERSINST 15839 Series, Vol I)
(d) NAVPGSCOLINST 3900.1C of 26 Apr 01 Subj: Administration and Management of Academic Sponsored Programs at the Naval Postgraduate School
(e) Western Association of Schools and Colleges (WASC) Substantive Change Manual

Encl: (1) Format for Internal NPS submission
(2) Issues for Consideration of a New Program
(3) WASC Substantive Change Review Process Checklist
(4) WASC Substantive Change Proposal Template

1. **Purpose.** To provide procedures for a rational and effective method of new program development, consideration and approval.

2. Discussion. The Naval Postgraduate School (NPS) provides relevant and unique graduate and other education al programs to meet general and specific needs of the Naval Services, and is agile and flexible in doing so. It responds to the challenges of Joint Vision 2010 and 2020 by aligning its education and supporting research programs with the three major goals of: 1) nationally recognized academic programs and research that support current and future operations of the Navy and Marine Corps, our sister services, and our allies; 2) focus on the integration of teaching and research in direct support of the four pillars of Joint Vision 2010 and 2020 and their enabling technologies in our Institutes; and 3) supporting continuous intellectual innovation and growth throughout a career through executive and continuing education programs. In providing the highest quality naval and defense related graduate education, NPS must balance quality and value to the Navy, cost and benefits, and access and availability for students. This instruction provides the mechanisms for ensuring that consistent and coordinated decisions are made concerning program development and resource allocation.

3. **Scope.** This instruction applies to degree and academic certificate programs, whether delivered via non-resident, Distance Learning (DL) or hybrid means. For purposes of

this instruction, the term program is defined as a set of related courses, often in a specialized field of study that leads to a degree or academic certificate in that field, and includes the term curriculum when a curriculum leads to a degree.

4. **Policy.** The program approval process is designed to encourage collegial discussion at all levels of the NPS, with full and open discussion among all relevant parties at the departmental, graduate school and institution levels. New program proposals will be consistent with the mission of the NPS, and not proposed if civilian universities (including such organizations as the Air Force Institute of Technology (AFIT)) offer programs of comparable cost, quality and focus, in accordance with reference (a).

5. **Procedures.**

a. Overview. The internal process usually begins at the faculty/departmental level, involves all relevant parties at the individual graduate school level, is presented to the Academic Council, the Provost's Council and culminates with the President. If the program will be a Navy program, the proposal will serve as the basis for the sponsor's request for approval of the subspecialty code and establishment in the graduate education quota plan in accordance with reference (c).

b. Submission to NPS Academic Council. Department submits application for a new program, with endorsement by the School Dean, to the Academic Council in accordance with reference (b), in the format of enclosure (1) and considering such issues as listed in enclosure (3). (Additional criteria are required in the request to offer a Ph.D. program.)

(1) The following types of new programs requests include:

(2) There is no requirement to submit requests for to the Academic Council.

c. Upon academic approval by the NPS Academic Council, the Department/School must request approval of the new program from the President, via the Provost's Council. While there is no set formula for approval or disapproval of programs, the decision will be based on findings that reflect a systematic, coherent, and long-term vision of the academic institution.

d. Once approved by the President, a determination must be made as to whether the new program is a substantive change in accordance with reference (e) and guided by enclosures (3) and (4) or not. The NPS WASC Accreditation Liaison Officer (ALO) can assist with the determination and submission of a substantive change. If the new program is a substantive change, enclosure (4) must be prepared and submitted to WASC. Even if the new program is not a substantive change, WASC must be notified in NPS' annual report of the minor change. **In no instance will a new, substantive program, either resident or DL, commence or accept students prior to WASC approval.**

e. If the approved program will be sponsored by an organization other than the Navy, refer to reference (d) for the management and administration of academic

sponsored programs.

f. If the approved program will be sponsored by a Navy organization, assist the sponsor with preparation of the recommendation to establish a subspecialty code in accordance with (c). Aside from billet information, most of the information prepared for internal NPS approval will be used in the recommendation to establish the subspecialty code.

6. **Responsibilities.**

a. Department Chairs are responsible for the proper preparation of any request to establish a new program.

b. Deans are responsible for ensuring their respective request is complete and endorsed.

c. The Academic Council is responsible for ensuring a proposed program meets appropriate academic criteria and degree requirements for the type of program being proposed prior to any recommendation of approval.

d. The Director of Programs will provide assistance as requested with respect to the Navy subspecialty code, Joint Professional Military Education, and other Navy personnel and education issues.

e. The Vice Provost for Academic Affairs will provide assistance as required.

f. The Accreditation Liaison Officer will provide assistance as required.

g. The Provost's Council will recommend approval/disapproval of the request for new programs to the President who is the final approval authority.

7. **Action.** All requests to establish new programs will be in accordance with the above procedures.

DANIEL OLIVER
President

ACADEMIC PROGRAM REVIEW PROCEDURES
NAVAL POSTGRADUATE SCHOOL

Updated: December 19, 2005

TABLE OF CONTENTS

1. Objectives

All academic departments and other entities that oversee degree programs at the Naval Postgraduate School shall conduct Academic Program Reviews (APR) every six (6) years. The purpose of a program review is to foster academic excellence, to improve quality of every department, and to provide guidance for administrative decisions in support of continual improvement. Each department will examine the state of their department and degree program(s) with a self-study and create a departmental strategic plan that will provide the foundation for further evaluation from an external review board. These boards will provide input as to the quality of the program, the progress made in the previous few years, and the appropriateness of directions outlined in the department's strategic plan. The objective of the review process is to inform the administration, the faculty, the Navy, Department of Defense, other sponsoring agencies, and public agencies of the following:

1. The overall quality and direction of the research, scholarship, and creative activity of the faculty, in comparison with departments at other nationally ranked research universities.

2. The overall quality and direction of the department's graduate programs, including curriculum, teaching, research, laboratories, and service activities. Reviews are forward looking. While assessment of a program's current status is important, priorities for continual improvement are of prime concern.

3. The advisability and efficacy of changes in the short-term and long-term resource allocations within the department or other academic unit under study. This should not be viewed by departments as an unrestrained request for resources. If additional resources are contemplated, the additional amounts and the specific benefits must be quantified.

4. The progress the department has made over the previous 6 years and provide feedback on the goals and implementation outlined in the strategic plan for the subsequent 6 years.

The APRs should emphasize the department's plans for improvement of instruction and scholarship, in the context of its current strengths and recent accomplishments. Reviews should also address any issues of departmental governance that bear upon the department's ability to conduct its core mission.

In addition to the APRs outlined in this document, NPS will continue to conduct Curricula Reviews with program sponsors on a biannual basis in accordance with Navy instructions (OPNVAVINST 1520.23 series). The primary functions of Curricula Reviews are to ensure the relevance of the academic program, update Educational Skill Requirements (ESRs), consider specific educational goals for students to support the subspecialty code requirements for billeting purposes, and to ensure the graduates satisfy the needs of the Navy and other Services. The APRs have a much broader purpose and focus on the academic and scholarly life of the department and less on the specific subject matter supplied in the various courses.

A successful program must be viewed as critically important to the Navy, Department of Defense or other sponsoring agency. Additionally, the programs will be a recognized leader among academic institutions, maintain currency in its field, and provide inquiry-based education.

2. Scope

All departments or academic units that own graduate degree programs will conduct an APR on a six (6) year cycle. These reviews will consist of a self-study, generation of a strategic plan, and an external program review. This external review will not occur in the same year as the Curriculum Review, which is done biannually. The department's self-study, the strategic plan, and the external review will be organized into three broad areas:

1. Faculty research, scholarship, and creative activity

2. Graduate programs

3. Administrative staffing, equipment, and space

A program review begins with the academic unit undertaking a comprehensive self-study (Appendix A) and creating a strategic planning document (Appendix B) that serve as the basis for self-assessment and for identifying future directions and opportunities. With the approval of the Provost, the timing and cycle of the review as well as the required documentation, such as the self study report, can be altered to better align with, departmental/specialized accreditation review(s), such as the Accreditation Board for Engineering and Technology (ABET). The self-study process is intended to assist the department faculty in establishing the state of the department and the strategic plan builds on this to outline the developmental priorities and identifying strategies for achieving the goal of academic excellence or eminence in the field.

The strategic plan should seek to bring about significant improvement in the relevant rankings or other comparisons factors. Department chairs/deans should identify institutions against which they plan to benchmark their quality, and delineate the sequence of steps the unit will use to attain its desired increase in reputation. The time horizon of the strategic plan will generally be five to seven years.

Both the self-study and strategic plan should be concise. Neither should exceed 20 pages, and data and descriptive material should be placed in appendices.

The next step in the review is the visit by an external review committee. The external reviewers will be asked to respond to a standard charge (Appendix C), which will be reviewed annually by the Provost. The external review committee shall prepare a closure report that will be submitted to the Provost, Dean and Department Chair within one month of the visit.

No later than three (3) months following the closure report, the academic unit under review will submit a follow-up report to the Dean and Academic Review Committee indicating how the unit has responded to the recommendations made in the closure report. Generally the departmental strategic plan should be modified to incorporate suggestions made by the external review board.

Where appropriate, the department's self-study and the external review should consider the potential for prospective graduate programs. If an academic unit administers an interdisciplinary program or teaches a significant number of service courses for other units, advice from all participating departments and divisions will be sought.

3. Conduct of Review; Roles and Responsibilities

The Provost is the Chair of Program Review Committee (PRC) consisting of the academic school deans, the Dean of Research, the Associate Provost for Academic Affairs, the Faculty Chairman, and two (2) at large tenured faculty members appointed by the Provost. The Provost is responsible for general oversight of the review process, approves the slate of external reviewers, extends requests to the external review committee members, chairs meetings of the PRC, and informs the NPS President of the results of each academic program review. The Associate Provost for Academic Affairs administers the program, including keeping track of the review cycle, facilitating communication among participants, and alerts a unit to be reviewed of its upcoming review at least one year preceding the review.

The divisional dean over the department under review is responsible for the day-to-day management of the review. This includes notifying the department, nominating and soliciting review committee members, and scheduling the external review committee meetings, transmitting the review report, and submitting comments.

The department chair, on behalf of the faculty, is responsible for preparing the self-study and strategic plan and responding to the closure report. The Office of Institutional Research will provide staff support for the review, as well as the data requested by the dean and the department chair.

4. External Review Committee

4.1 Configuration

The external review committee shall be comprised of least three distinguished scholars or experts in the relevant field of study, who are not closely affiliated with NPS. The members should have significant diversity in background. It is recommended that two members be from academia and one member be drawn from either DoD/government or the business/industry community.

1. Senior Faculty or Academic Administrator. Generally an eminent scholar or administrator at a well respected, graduate research university from a similar department or college as being reviewed.

2. Senior Navy, DoD, or Government Official. Generally this person should be at the Flag, General Officer, or SES level. This person cannot be the curriculum sponsor or from the same organization as the sponsor. It may be advantageous to have this member from a DoD university or college, or at least someone having significant experience at such an institution. Other possible candidates would be technical directors of labs, service research organizations, or senior DoD staff. This person could be from an intelligence agency, Department of State, Department of Homeland Security, or similar Government organizations. The person must have the credentials and experience to evaluate the academic programs.

3. Industrial or Business Executive. Personnel from non-profits or non-governmental organizations (NGOs) can also be considered. This should be a senior manager with familiarity with the technical or business issues related to the department being reviewed.

4.2 Appointment
The divisional dean may invite the department chair to propose candidates for the review team. The divisional dean shall recommend to the Provost a slate of at least six (6) candidates, having a minimum of two (2) in each category, perhaps with a preferred and an alternate, from which the Provost may choose. A brief biography of each candidate must be included. The Provost will select among the candidates or return the slate to the dean and chair for additional candidate(s).

4.3 Standard Charge
All academic department reviews shall respond to a standard charge (see Appendix C). At their discretion, the Provost and the dean may add to the charge to include specific areas of inquiry. The standard charge is intended to provide comparable assessment for all academic units.

5. Self-study

The unit under review will prepare a self-study typically following the outline in Appendix B. The self-study comprises a narrative description of the department's scholarly and creative direction and graduate program, followed by tabular material provided by the department, the school, the Registrar and the Office of Institutional Research. These appendices shall include, among other things, pending proposals for new degree programs, the previous external review report, closure report, and department follow-up report. For academic units that are accredited by specialized agencies, the most recent documents regarding that accreditation should also be included as appendices to the self-study.

6. Departmental Strategic Plan

Following the self study, every academic unit will draft a strategic plan that describes the future directions and new policies the unit will follow over the subsequent six-year period. Appendix C. describes the elements that the plan should contain. The department chair is responsible for the plan, but it should be a document that reflects a consensus view of the department. The narrative description should document the department's strengths, shortcomings, and perceived opportunities for growth or improvement. This plan will be distributed along with the self study to the review board. The plan should be amended based on feedback from the external review committee.

7. Campus Visit

The Provost will extend the requests for membership on external review committees. The Associate Provost for Academic Affairs shall coordinate with external review committees, the school dean, and department chair for scheduling the campus visit, including all meetings. The external review team shall meet jointly with the dean and the Provost in an entrance interview prior to meeting with members of the department. If practicable, this meeting should be held the evening prior to the formal departmental meeting. Following the entrance interview, the review committee shall meet, at a minimum, with the following representatives, in no particular order:

1. Department chair

2. Department faculty (individuals or groups as appropriate)

3. Department Instruction Committee (if any)
4. Department Research Committee (if any)
5. Students in the department
6. Chairs of departments served by the unit (where relevant)
7. Senior department staff representative

A single exit interview shall be scheduled, with the Provost and the PRC. It is usually good practice to set aside at least an hour and a half on each day of the visit for the team to prepare the draft report.

8. Review Committee Report

The dean shall ask the review committee to submit a report within one (1) month of its visit. The report, based upon the self-study and the interviews, should address the issues described in the standard charge**.**

9. Action on the Report

9.1 Reviewers' Report
The review committee's report shall be submitted to the divisional dean. The dean is responsible for immediately distributing copies to the department chair and the Provost.

9.2 Department's Response
The department shall submit to the dean a written response to the review report within one (1) month. The chair's report should represent a consensus of the department. All tenure track faculty within a department have the right to supply, individually or in groups, additional concurring or dissenting opinions to the chair's report.

9.3 Dean's Response
Within one (1) month of receiving the department response, the divisional dean shall prepare and submit the divisional response, along with the departmental response, to the Provost and PRC.

9.4 Closure Meeting
The Associate Provost for Academic Affairs' office is responsible for scheduling the closure meeting of the PRC upon receipt of the departmental and divisional responses. The closure meeting will ordinarily include the department chair, in addition to the PRC.

The closure meeting will provide an opportunity for a candid discussion of the results of the external review. The meeting agenda shall address the three key areas: (1) Faculty research, scholarship, and creative activity; (2) graduate program; and (3) administrative staffing, equipment, and space. Specifically, the following matters shall be addressed:

1. Factual matters that are in dispute

2. Perspective on priorities as viewed by each agency

3. Prospects for achieving the review recommendations

9.5 Closure Report
The conclusions reached in the course of the discussion shall be summarized in a closure report approved by the PRC and signed by the Provost within one month of the meeting. The closure report shall include a list of questions or action items addressing any outstanding concerns raised in the review.

The Provost shall transmit the closure report to the President and the relevant units. The department chair shall make the report available to all department faculty members.

10. Implementation and Review Follow-up Report

The divisional dean shall implement or otherwise address recommended actions and monitor conditions placed by the administration on the department. Twelve (12) months subsequent to the closure report, the dean shall submit a departmental follow-up report addressing the specific questions appended to the closure report. The follow-up report is submitted to the Provost with a copy to the Associate Provost for Academic Affairs.

11. **Schedule for Program Reviews**

The review closure report will stipulate when the next review will occur. Three years after their establishment, new degree programs will be asked to provide interim self-assessments which subsequently will be incorporated into their administering department's review schedule. The Associate Provost for Academic Affairs' office will transmit an updated list of the department review schedule every fall quarter. Suggestions for procedural changes that improve the overall usefulness of reviews, or that reduce workload without compromising value, may be submitted by the deans to the Provost at any time. Subsequent changes to review procedures, approved by the PRC, will be announced in the annual fall-quarter schedule transmittal.

In isolated cases where there is a justifiable need to defer, accelerate, or otherwise reschedule an external review, the department chair will make a written request to the divisional dean that sets out the justification for deferment or acceleration. Requests for postponement or acceleration may also originate with the divisional dean. The divisional dean will forward the request in writing, together with his or her independent opinion and recommendation, to the Provost. The Provost will consider such requests on their merits, consult with the PRC, take into account the institutional need to maintain the regularity and timeliness of the review process, and will make the final determination regarding whether and how the review will be rescheduled.

APPENDIX A. DEPARTMENT SELF-STUDY

The department shall provide a narrative self-study, generally not to exceed 20 pages, followed by appendices with tabular material. The narrative and the appendices shall be organized by:

1. Faculty research, scholarship, creative activity
2. Graduate program
3. Administrative staffing, equipment, and space

1. RESEARCH AND SCHOLARSHIP

Please describe the research and scholarship accomplishments of the department over the past five (5) years including sponsored research and publications record of all faculty members and students. The specific intellectual strengths of the department, in relation to nationally ranked public and private research universities, should be clearly identified.

2. GRADUATE PROGRAM

Curriculum and degree programs

Please describe all graduate programs offered by the department. The core courses and all available tracks within the program should be delineated.

Examinations

Briefly describe the philosophy and structure of any qualifying, candidacy, and/or comprehensive examination used by the department.

Graduate Students

Please address the background, number, and level of preparation of the graduate-student cohort to pursue a graduate degree within the department. State any steps that are being taken to improve the level of student preparation.

3. ADMINISTRATIVE STAFFING, EQUIPMENT, AND SPACE

Please address the adequacy of administrative support both at the department and NPS wide level, including staffing, IT, equipment, and space.

SELF-STUDY APPENDICES

The self-study will include a table of contents including appendices. Appendices will be grouped to provide separate faculty and student profiles.

Appendix I – Overall Faculty Profile

The department will provide for each of the past five years, where applicable:

1. For each tenured faculty member, a biography-bibliography, including employment, education, professional competence and activity, and published writings and creative activities. Information on teaching, university seminars, public seminars, etc., may be omitted.

2. Total departmental extramural research and education funding awarded (public and private) by year.

3. List of external seminar and colloquium speakers by year.

4. History of department chair appointments (at least since the previous review) and plans for succession.

5. Department course-load policy

6. Faculty recruitment plan (intellectual areas, level of appointment, schedule)

7. External review report from previous review

8. Campus closure report from previous review

9. Department follow-up report from previous review

The Office of Institutional Research will provide for each of the past five years, where applicable:

1. NRC ranking of department in comparison with peer institutions.

2. Tenured-faculty roster and age, gender, and ethnicity distribution

3. Average faculty payroll history by rank

4. Student/faculty ratio history

5. Tenured-faculty course load history

Appendix II – Overall Student Profile

The department will provide:

1. Catalog copy

2. Course syllabi file (A file shall be maintained in the department and made available to

external reviewers or the administration, if requested)

3. Graduate profile (five-year history for each graduate):
    a. Thesis title
    b. Principal adviser
    c. Year of degree award
    d. Job or billet placement

The Office of Institutional Research will provide for each of the past five years, if applicable:

1. Most recent NRC ranking of graduate program, in comparison with peer institutions

2. Number of degrees granted by degree name

3. Graduation rates

4. Results of student surveys for students seeking department degrees

5. Average class size

6. Distribution of types of undergraduate degrees obtained

The Office of Institutional Research will also provide boiler-plate institutional data, as appropriate.

APPENDIX B. GUIDELINES FOR DEPARTMETNAL STRATEGIC PLANS

A departmental strategic plan is intended to provide a road map that is approved by the department faculty, which serves to guide decisions in hiring and resource allocation. A six (6) year time horizon will generally be used, since it coincides with the review cycle, but a department can take a longer view if justified. The plan should generally be short and concise, perhaps 10 pages. The plan should contain:

1. Summary of recommendations

2. State of the department, including strengths, weaknesses and an evaluation of the potential for new educational or research programs.

3. Projection of the number of students and anticipated growth in reimbursable funding.

4. Number and type of faculty that will need to be hired over the six years.

5. Number and type of staff that will be needed along with any changes in organization, training, and compensation.

6. New curricula or degree programs. The need for such programs and a short description are required.

7. New or changing tracks within existing degree programs.

8. Changes in facility requirements.

9. New business practices.

10. Strategic partnerships. State the organizations with which the department plans to form alliances and the nature of the interaction(s).

The plan should have a zero top line growth in budget for the baseline plan. New programs that require additional resources can be outlined. However, the resource requirements in terms of new faculty, departmental staff, other support required outside of the department, and additional office and laboratory space requirements must be clearly stated. These new programs should be itemized and the additional cost and benefits quantified.

APPENDIX C. SAMPLE TRANSMITTAL LETTER AND STANDARD CHARGE

SAMPLE TRANSMITTAL LETTER

Dear Professor Smith:

Thank you very much for agreeing to review the Physics Department at the Naval Postgraduate School in Monterey, California. The department oversees the following graduate programs: M.S. and PhD in Physics.

We request that you address the areas listed in the enclosed charge. To inform your review, we also enclose the department's self-study, its recent academic planning documents, previous review reports, and other information that may be helpful to you. If you have any questions, please contact me at telephone number or e-mail address.

We appreciate the time and effort that it takes to serve on such a review panel, and we are very grateful to you for agreeing to join us. The importance of the external review process to the NPS administration and Faculty Council cannot be overestimated, and we will take your report very seriously. Since time is of the essence, we request that we receive your final report within four weeks of your visit to the campus. Logistics for this committee and your visit will be arranged by name and contact info.

With best regards,

Provost

STANDARD CHARGE TO EXTERNAL REVIEW COMMITTEE

Based upon the department's previous external review, its self-study, and interviews with faculty, students, staff, and the administration, please evaluate the following elements of the department:

1. The overall quality and direction of the research, scholarship, and creative activity of the faculty, in comparison with nationally ranked public and private research universities of comparable size.

2. The overall quality and direction of its graduate programs, including curriculum, teaching, and co-curricular activities.

3. The appropriateness of the level of resource allocation to matters of administrative staffing, equipment, and space.

Program reviews should emphasize the department's plans for growth and improvement of instruction and research, in the context of its current strengths, weaknesses, opportunities, challenges, and recent accomplishments. Program reviews should also address any issues of departmental governance that inhibit the conduct of collegial discourse.

I. Department Faculty and Scholarly Direction

1. Please evaluate the overall quality of the research, scholarship, and creative activity of the department faculty in relation to both the department's scholarly mission and nationally ranked public and private research universities of comparable size. Describe faculty collaborative efforts, awards, and success in obtaining external funding. Include a one-page curriculum vitae for each faculty member of the department.

2. With respect to faculty renewal and growth, in both the national and international context, are the proposed intellectual directions appropriate and well thought out?

3. Please evaluate the degree and nature of the department's structured exchanges with external scholars via colloquia and seminar series and visiting-scholar programs.

4. Is the overall level of extramural support appropriate for a department of this size and mission?

5. Identify measures used to evaluate the instructional effectiveness of faculty, including exit and alumni surveys, and describe instructional resources, including any incentive structure used to encourage faculty attention to instruction. What is the faculty teaching load overall and for each professorial level?

6. Please comment on the quality and effectiveness of departmental governance.

II. Graduate Program

1. Please evaluate the depth, breadth, and structural coherence of the graduate curriculum, particularly in comparison with similar programs at comparable institutions.

2. Please evaluate the quality of the instruction in the graduate curriculum.

3. Evaluate the appropriateness and quality of the departmental doctoral procedures and their implementation (e.g., qualifying exam, advancement to candidacy, and dissertation defense) appropriate?

4. Evaluate the quality of the learning experience, retention rates, time-to-degree, placement, and morale of the graduate students, as well as any plans for improvement.

5. Describe admission procedures and standards, and identify any competition for graduate students with other institutions.

6. If the department plans to increase the size of the graduate program, are the plans realistic? Is the average size of the program limited by financial support, number of qualified applicants, availability of faculty resources for thesis supervision, staff, or other constraints?

7. Evaluate the availability and quality of resources for student development, including faculty mentoring, career preparation, teaching- assistant training, and student assessment.

III. Administrative Staffing, Equipment, and Space

Please evaluate the adequacy of the following:

1. Administrative and technical staffing, including staff morale.

2. Department resources for seminars, recruiting, and materials and supplies.

3. Administrative and instructional equipment.

4. Office, research, and administrative space.

IV. Other

Please address the specific issues raised in the attached letters from the dean and the Provost. Also, please comment on any additional items that you feel are relevant to the research, academic, and service mission of the department.

Survey Questions

You have been selected to participate in a survey of Naval Postgraduate School (NPS) alumni. Answering these questions will provide you the opportunity to evaluate and comment on the educational processes you experienced at NPS now that you are out in the field.

The results of the survey will be used by the NPS leadership to improve NPS. This is your opportunity to provide NPS with frank feedback on what worked well and what did not.

No tangible compensation will be given for participation in the survey. If you agree to participate, you are free to withdraw at any time without prejudice. Upon completion of the research, a copy of the final report will be available from Dr. Fran Horvath, Director of Institutional Planning and Communications. Your participation in this survey is voluntary, although your input is extremely valuable for the improvement of NPS.

Please note that all survey records and data will be kept strictly confidential. Your participation in the survey and your responses to the survey will not be disclosed outside of the research team. Survey results will only be reported in the aggregate so that individual responses cannot be determined. Upon completion of the survey, all records identifying your participation in the survey will be destroyed.

If you have any questions or comments regarding this survey, please contact Dr. Fran Horvath, Director of Institutional Planning and Communications at 831-656-2228 or rfhorvat@nps.edu.

1. Statement of Consent. I have read the above information. I agree to participate in NPS ALumni Survey.

- ◯ YES
- ◯ NO

Please note: throughout the survey, an asterisk (*) in front of the question indicates a mandatory question. All mandatory questions must be answered to submit the survey correctly. Please answer all questions as completely as possible. The scroll bar at the top keeps you updated on how much of the survey you've completed.

Military Questions

* 2. While enrolled at NPS what was your branch of service?

- ◯ U.S. Air Force
- ◯ U.S. Army
- ◯ U.S. Coast Guard
- ◯ U.S. Marine Corps
- ◯ U.S. Navy
- ◯ Other Non-Military Service
- ◯ Non-U.S. Service

* 3. What is your current status?

- ◯ Active Duty Military
- ◯ Retired Military
- ◯ Civilian employed by Federal Government
- ◯ Civilian employed elsewhere
- ◯ Other (please specify)

MILITARY SERVICE

MILITARY SERVICE

* 4. What is your current rank or grade?

- ◯ 06
- ◯ 05
- ◯ 04
- ◯ 03
- ◯ 02
- ◯ 01
- ◯ Other (please specify)

* 5. How many years have you been an officer?

- ☐ 20 or more
- ☐ 11 to 19
- ☐ 10 or fewer

RETIRED OFFICER

RETIRED OFFICER

6. What was your highest rank or grade?

- ◯ 06
- ◯ 05
- ◯ 04
- ◯ 03
- ◯ 02
- ◯ 01

7. How many years were you an officer?

- ◯ 10 or fewer
- ◯ 11 to 19
- ◯ 20 or more

Survey

* 8. At what college or university did you receive your bachelor's degree? (If more than one, please indicate them all.)

* 9. Did you have a post-baccalaureate degree before enrolling at NPS?

- ◯ Yes
- ◯ No

* 10. As a student at NPS, were you in-residence or distance learning?

- ◯ Resident only
- ◯ Distance Learning only
- ◯ Both
- ◯ Other (please specify)

11. For how many months were you enrolled as a student at NPS? (Respond for highest NPS degree)

	1-Certificate	2-Bachelor	3-Master	4-Engineer	5-PhD
18 or fewer	◯	◯	◯	◯	◯
19-24	◯	◯	◯	◯	◯
25 or more	◯	◯	◯	◯	◯

* 12. What was your primary curriculum as a student at NPS?

* 13. What is the highest degree that you received from NPS?

- ◯ Certificate
- ◯ Bachelor
- ◯ Engineer
- ◯ Master
- ◯ PhD
- ◯ No Degree
- ◯ Other (please specify)

* 14. In what field was your highest NPS degree? (If other, please specify in lower block)

* 15. In what year did you receive that degree?

* 16. What was your average grade as an UNDERGRADUATE?

* 17. What was your average grade at NPS?

* 18. Was it relatively difficult or relatively easy for you to transition SOCIALLY from military or other government duty to student life at NPS?

- ◯ Relatively difficult
- ◯ Relatively easy

* 19. Was it relatively difficult or relatively easy for you to transition ACADEMICALLY from military or other government duty to student life at NPS?

- ◯ Relatively difficult
- ◯ Relatively easy

* 20. Did the amount of your NPS course work seem generally appropriate to the requirements of your degree(s) or certificate(s)?

- ◯ Yes
- ◯ No

21. Please skip if not military. If military, to what extend did you find your course work at NPS relevant to your military career?

◯ Low relevance ◯ Moderate relevance ◯ High relevance

* 22. Did you have a satisfactory relationship with your NPS curricular/program officer or officers?

◯ Yes

◯ No (Please comment)

* 23. How would you generally rate faculty relationships with students at NPS?

◯ Cool ◯ Indifferent ◯ Warm

* 24. While a student at NPS, approximately how many hours in a typical week of about 100 active hours did you spend on each of the following? (Please respond with one answer for each activity)

	10 or less	11-20	21-30	31-40	41 or more
Class attendance	◯	◯	◯	◯	◯
Homework	◯	◯	◯	◯	◯
Research	◯	◯	◯	◯	◯
Community service	◯	◯	◯	◯	◯
Outside employment	◯	◯	◯	◯	◯
Family or other personal	◯	◯	◯	◯	◯

* 25. What best describes the FREQUENCY with which you used the following NPS facilities or services? (Please respond with one answer for each service)

	At least once a day	At least once a week	At least once a month	At least once a quarter	Never	Other
Library	◯	◯	◯	◯	◯	◯
Computer Labs	◯	◯	◯	◯	◯	◯
Bookstore	◯	◯	◯	◯	◯	◯
Registration	◯	◯	◯	◯	◯	◯
Academic counseling	◯	◯	◯	◯	◯	◯
Laboratories	◯	◯	◯	◯	◯	◯

* 26. How would you generally rate the QUALITY of the following NPS services or facilities? (Please respond with one answer for each service)

	Less than adequate	Adequate	More than adequate
Library	◯	◯	◯
Computer services	◯	◯	◯
Computer access	◯	◯	◯
Bookstore	◯	◯	◯
Registration	◯	◯	◯
Academic counseling	◯	◯	◯
Laboratories	◯	◯	◯

* 27. Generally rate the following at NPS (Please respond with one answer for each):

	Less than adequate	Adequate	More than adequate
Overall quality of instruction	◯	◯	◯
Overall quality of faculty	◯	◯	◯
Amount of contact with faculty	◯	◯	◯
Currency of course content	◯	◯	◯
Relevance of education to national security and/or defense	◯	◯	◯
Overall experience	◯	◯	◯

* 28. How would you rate the advising you received for your thesis, dissertation, or terminal-project at NPS?

◯ Poor

◯ Fair

◯ Good

◯ Excellent

◯ Did not seek advisement

* 29. How would you rate the overall relevance of your thesis, dissertation, or terminal-project to your career after departing NPS?

◯ Low relevance ◯ Moderate relevance ◯ High relevance

30. If a recipient of an NPS doctorate, how helpful were your advisors in preparing you for successive academic hurdles on the way to your degree?

◯ Less than helpful ◯ Helpful ◯ More than helpful

* 31. Did you attend any workshops to help you write your thesis or dissertation?

◯ Yes

◯ No

* 32. Indicate the "importance" to your career of the following abilities:

	Low importance	Moderate importance	High importance
Decicison-making	◯	◯	◯
Analytical skills	◯	◯	◯
Leadership	◯	◯	◯
Teamwork	◯	◯	◯
Writing	◯	◯	◯
Research	◯	◯	◯
Ethics	◯	◯	◯

* 33. Indicate the extent to which your experience at NPS has enhanced the following abilities:

	Low Enhancement	Moderate Enhancement	High Enhancement
Decicison-making	◯	◯	◯
Analytical skills	◯	◯	◯
Leadership	◯	◯	◯
Teamwork	◯	◯	◯
Writing	◯	◯	◯
Research	◯	◯	◯
Ethics	◯	◯	◯

* 34. Would you recommend attendance at NPS to any other service members or Department of Defense employees?

◯ Yes

◯ No

* 35. What one thing did you value most about NPS?

* 36. What one thing did you value least about NPS?

37. What changes would you recommend at NPS?

* 38. Have you served in a position which was, or is, appropriate to your NPS certificate or degree?

◯ Yes

◯ No

39. If military, to what extent have you found your NPS education useful in any of your subsequent OPERATIONAL assignments?

◯ Less than useful ◯ Useful ◯ More than useful

40. If military, which one of your NPS courses, if any, have you found most useful in your OPERATIONAL assignments after NPS?

41. If you are a civilian now, to what extent have you found your NPS education to be useful in your current employment?

- ◯ Less than useful
- ◯ Useful
- ◯ More than useful

42. Is it true that your education in GSBPP provided advanced knowledge so that you are/were confident that you understand/understood the capabilities and limitations of current/future technologies for your career?

- ◯ clearly true
- ◯ mostly true
- ◯ mostly false
- ◯ clearly false
- ◯ no opinion/not observed

43. Is it true that your education in GSBPP provided advanced knowledge so that you are/were confident in your ability to apply emerging and advanced knowledge to meet on-the-job challenges?

- ◯ clearly true
- ◯ mostly true
- ◯ mostly false
- ◯ clearly false
- ◯ no opinion/not observed

44. Is it true that your education in GSBPP provided advanced knowledge so that you are/were confident in your ability to anticipate, respond and lead in future complex, rapidly changing environments?

- ◯ clearly true
- ◯ mostly true
- ◯ mostly false
- ◯ clearly false
- ◯ no opinion/not observed

45. Is it true that your education in GSBPP provided advanced knowledge so that you are/were confident in your ability to represent the needs and interests of your service both within your service, as well as to other services, constituencies and communities (including OSD, Joint Staff and industry)?

- ◯ clearly true
- ◯ mostly true
- ◯ mostly false
- ◯ clearly false
- ◯ no opinion/not observed

THANK YOU!

Thank you for your responses. Your efforts will assist NPS in evaluating its programs for future military and defense personnel.

A summary of results, when completed, will be placed on the NPS website (www.nps.edu).

Please check out the new website designed just for you as an Alumnus of NPS. Catch up with old friends through the onine community, view the most recent videos, find yourself in one of the "historical photos", plus much more. (www.nps.edu/alumni)

GRADUATE SCHOOL OF BUSINESS AND PUBLIC POLICY

MBA / MSM Core Curriculum Survey

Below are the GSBPP Core Curriculum Survey Questions. All surveys are created and administered in Zoomerang, at the completion the core courses within the MBA/MSM program, typically the 4th quarter. All surveys are anonymous and confidential.

1. Please indicate your Service:

2. Please indicate your curriculum:

3. Please indicate your rank:

4. Please enter your approximate QPR (also known as your Grade Point Average):

5. How would you describe your overall level of satisfaction with your FM or Defense Systems Analysis program at NPS? How would you describe your overall level of satisfaction with your FM or Defense Systems Analysis program at NPS?

6. Ratings of Individual Courses

This part asks you to rate each of the MBA core courses along each of three dimensions:

- Value of the course in your future career
- Degree of Defense relevant content in the course
- Overall satisfaction with the course

Each of these is discussed a bit more here:

A. Value in your Future Career:

We intend the education in the MBA core to have value to you in both your military and, perhaps later, civilian career, both by providing specific knowledge and skills and also developing analytical and critical thinking abilities. How do you perceive each course in terms of its value in your future career? The scale will be:

"I perceive this course as having…"

4 = High value in my future career
3 = Moderate value in my future career
2 = Little value in my future career
1 = No value in my future career

Course Number	Course Title	VALUE
GB3010	Managing for Organizational Effectiveness	
GB3012	Communication for Managers	
GB3013	Problem Analysis and Ethical Dilemmas	
GB3020	Fundamentals of Information Technology	
GB3040	Managerial Statistics	
GB3042	Operations Management	
GB3050	Financial Reporting and Analysis	
GB3051	Cost Management	
GB3070	Economics of the Global Defense Environment	
GB4014	Strategic Management	
GB4043	Business Modeling and Analysis	
GB4052	Managerial Finance*	
GB4053	Defense Budget and Financial Management Policy	
GB4071	Economic Analysis and Defense Resource Allocation	
GB3031	Acquisition and Program Management**	
GBxxxx	Core Elective***	
NW3230	Strategy and Policy: The American Experience****	

B. **Defense Relevant Content of Individual Courses**:

It is our intent that the "Defense-Focused MBA" lives up to its name. It should provide a graduate level education that is unique and of particular relevance to individuals within the Defense community. Clearly, the Specialization part of the MBA program is designed with this intent.
The MBA Core courses are also designed to contribute to the Defense relevance of the program, although different courses may contribute to different degrees.

This asks you to score the specific courses in the MBA Core in terms of the degree to which each course was Defense-focused and/or contained Defense-specific content. The scale will be:

"I would assess this course as having...."

4 = High Defense focus or Defense content
3 = Moderate Defense focus or Defense content
2 = Little Defense focus or Defense content
1 = No Defense focus or Defense content

Course Number	Course Title	DEFENSE RELEVANCE
GB3010	Managing for Organizational Effectiveness	
GB3012	Communication for Managers	
GB3013	Problem Analysis and Ethical Dilemmas	
GB3020	Fundamentals of Information Technology	
GB3040	Managerial Statistics	
GB3042	Operations Management	
GB3050	Financial Reporting and Analysis	
GB3051	Cost Management	
GB3070	Economics of the Global Defense Environment	
GB4014	Strategic Management	
GB4043	Business Modeling and Analysis	
GB4052	Managerial Finance*	
GB4053	Defense Budget and Financial Management Policy	
GB4071	Economic Analysis and Defense Resource Allocation	
GB3031	Acquisition and Program Management**	
GBxxxx	Core Elective***	
NW3230	Strategy and Policy: The American Experience****	

C. Overall Satisfaction with individual courses:

On the SOFs that you have filled out at the end of each quarter, one question asked to rate "the course". We would like to get your impression again now, having completed all of the courses within the MBA Core. The scale will be:

"Overall, I would rate this course...."

4 = Outstanding
3 = Very Good
2 = Fair
1 = Poor

Course Number	Course Title	SATISFACTION
GB3010	Managing for Organizational Effectiveness	
GB3012	Communication for Managers	
GB3013	Problem Analysis and Ethical Dilemmas	
GB3020	Fundamentals of Information Technology	
GB3040	Managerial Statistics	
GB3042	Operations Management	
GB3050	Financial Reporting and Analysis	
GB3051	Cost Management	
GB3070	Economics of the Global Defense Environment	
GB4014	Strategic Management	
GB4043	Business Modeling and Analysis	
GB4052	Managerial Finance*	
GB4053	Defense Budget and Financial Management Policy	
GB4071	Economic Analysis and Defense Resource Allocation	
GB3031	Acquisition and Program Management**	
GBxxxx	Core Elective***	
NW3230	Strategy and Policy: The American Experience****	

Additional Questions:

7. Identify three courses that you were MOST SATISFIED with, and briefly explain why:

8. Identify three courses that you were MOST DISSATISFIED with, and briefly explain why:

9. In the following space please make any comments you wish concerning the Curriculum. Do not feel constrained, but in thinking about comments you may make, you might consider the following general question: "What changes to the curriculum at NPS do you believe might have made your experience here more valuable to you in your subsequent career?"

10. For USN: Did you complete JPME? If not, why?

11. For USMC: Did you complete Command & Staff? If not, why?

BENCHMARK INITIATIVE AY08-09

COMMUNICATION & FRAMEWORK

MESSAGE TO SCHOOL (GSEAS)

From: Moses, Orrin (Doug) (CIV)
Sent: Thursday, October 16, 2008 1:52 PM
To: Sritharan, Sivaguru (Sri) (CIV); Luscombe, James (CIV); Paduan, Jeffrey (CIV); Durkee, Philip (Phil) (CIV); Millsaps, Knox (CIV); Panholzer, Rudolf (Rudy) (CIV); Borges, Carlos (CIV); Knorr, Jeffrey (Jeff) (CIV); Olwell, David (Dave) (CIV); Katz, Scott (CAPT)
Cc: Moses, Orrin (Doug) (CIV); Rodgers, Ali (CIV); DiFranco, Michael (Mike) Contractor, GDIT; Pasadilla, Josephine (Jhoie) (CIV)
Subject: FW: BENCHMARK Projects - GSEAS

Hi Sri,

This follows up on the Benchmark Project initiative we circulated a couple of weeks ago (email below) to arrange a meeting to take the next step related to a Benchmark Project in GSEAS. There has been lots of good accreditation/WASC/assessment/ABET email communication recently, all related.

Under this Benchmark initiative, we're trying to make progress on three related things:

1. Document current practices: Need to identify the existing assessment-related activities that are going on currently in the Schools/Departments, collecting examples of guidelines, instruments, surveys, etc currently used. The need/goal for WASC is to assemble a comprehensive portfolio of the practices across NPS.
2. Start a next step: Work with the Schools/Departments to have them design projects that will advance assessment practice in their School. Lots of good things could happen here and obviously what best and most beneficial to the individual School/Dept, will depend on what's already in place and what they'll want to do. I don't want to pre-determine what Schools should do, but there are "best practices" already happening on campus and extending some of those practices more widely could be a useful effort. Resources are always tight, but these initiatives in the Schools shouldn't have to be taken out of hide, so some support should be available.
3. Educational Effectiveness Task Force (EETF): NPS needs to put together an EETF for WASC and for coordinating EE/Assessment efforts on campus. The going-in notion is we need 1 rep from each School (perhaps 2 from a big School). This EETF will have the lead, over the next two years, for taking NPS through the EE phase of the accreditation process.

Can I set up a meeting with you (and the GSEAS chairs?)? Purpose would be for me to explain more where we're headed with this initiative and see how best to coordinate with GSEAS efforts.

Thanks
DougM

Subject: BENCHMARK Projects

Deans, Chairs,

This is to re-engage with you on the subject of Benchmark Projects. The name, Benchmark Projects, is newly-coined so perhaps unfamiliar. But the idea is one that has been discussed and previewed in recent months in the Provost Council and other campus meetings (most often using the label Educational Effectiveness projects).

Reprinted at the bottom is an excerpt from the WASC CPR Report that provides some broader background, but the Cliff Notes summary is this:

- **Educational Effectiveness**: The fundamental thing that WASC accreditation is about is Educational Effectiveness. Is NPS effective in providing education consistent with its mission? More to the point, do we have institutional systems and processes in place to provide the evidence to conclude that we are effective or provide the basis for improving?
- **Integrating Improvement**: "Integrating a Campus-Wide Program of Improvement" toward Educational Effectiveness is one of the three themes selected by NPS during the current WASC reaccreditation process. Integrating, coordinating and enhancing the educational assessment practices of the university is the core of this theme.
- **Where do we stand?**: Through a number of avenues, AY08 has been a year of documenting where NPS stands with respect to educational assessment practices (there's more on this in the excerpt below). Oversimplifying, it's a good news, bad news story. Good news: There's wide-spread use of educational assessment techniques and practices in NPS' Schools and Departments, much that's excellent, particularly in those parts of the campus that are subject to separate accreditation processes for their discipline. Bad news: There's wide difference in practice -- range, depth, type, effort, attention – across the Schools and Departments, with some lack of coordination. Few of our efforts focus directly on assessing student learning. And we're not as strong or systematic as we could be in documenting what we do, what we learn from it, and how we improve as a result.
- **Where we're headed**: The picture we need to present to WASC, and the reality we need to achieve, is a university that studies itself – in a systematic and coordinated manner – concerning how it does education and what our students learn. And improves itself when the need or opportunity arises.
- **In AY09**: The approach adopted for AY09 is the initiative of Benchmark Projects. Academic Affairs will work with each School/Department to design (and resource) projects directed toward advancing educational assessment practices and tailored to the needs and benefit of the individual School/Department. Again, more on this is in the excerpt below.

What's next: We'll try to set up separate meetings with each Dean, with Chairs, to discuss further and start planning a Benchmark effort appropriate for, and desired by, the School.

Thanks

DougM

Douglas Moses
Vice Provost,
Academic Affairs
x3218

WASC CPR Report Excerpt*: Towards Enhanced Educational Effectiveness*

Our WASC proposal theme calls for Integrating a Campus-wide Program of Improvement, directed centrally toward the enhancement of educational effectiveness at the university. This challenge to ourselves has motivated our attention to the wide range of academic systems, processes and practices - both in place and potential - that we have within our control to improve the educational programs at NPS.

NPS has initiated a number of steps directed toward advancing and coordinating academic assessment at the university.

Learning Assessments Task Force: As an initial step, a Learning Assessments Task Force (LATF) was established in March 2007 to provide an initial review of academic assessment practices across the university. Reporting out in November 2007, the LATF addressed four broad questions with respect to our educational processes:

- How do we know we are teaching the right material?
- How do we know we are teaching it well?
- How do we know our students are learning it?
- Are our feedback mechanisms adequate and do they work?

The LATF provided an initial picture of the range, variety and scope of NPS's assessment practices.

Ad Hoc Educational Effectiveness Group: In February 2008, NPS assembled an Educational Effectiveness group to develop further the university's approach to enhancing its educational assessment systems. The group identified additional steps forward for the university, with the first step being a more comprehensive inventory of NPS's current academic assessment systems and practices. An effort related to this followed with an Academic Policies Survey conducted in May 2008. Survey findings document academic practices across the NPS schools and departments related to faculty policies, program review and learning assessment.

Broad findings following from the efforts of the LATF, the EE Group and the Academic Policies survey would characterize NPS's academic assessments program as follows:

- Breadth: There is wide-spread use of assessment techniques and practices across all schools and academic departments in the university.
- Variety: There is similarity across the schools and academic departments in the sources of assessment information (from students, alumni, program sponsors, employers, faculty), but wide variety in individual assessment practices (wide variety in the breadth and depth of the effort, the processes and instruments employed, and the utilization of assessment information).
- Indirect Measures: With respect to student learning assessment, current practices (with some notable exceptions) rely heavily on indirect rather direct measures of learning outcomes.
- Excellence: There are strong areas of excellence in assessment, most notably in those department in the university subject to discipline-specific accreditation (ABET, AACSB, NASPAA).
- Distributed: While there is wide-spread practice of assessment across the university, many aspects of the assessment practices are distributed and idiosyncratic, rather than more centrally coordinated and integrated.
- Follow-up: Follow-on improvement activities that are to result from assessing educational effectiveness tend to be unsystematic and not well-documented.

Initiatives for Academic Year 2009: Benchmark Projects: Starting with an understanding of the existing foundation of assessment processes at NPS, the university has initiated a program, titled "Benchmark Projects" for the coming academic year. Since a wide variety of assessment practices have developed at NPS -- motivated by, and tailored to, the needs of the separate schools and departments -- the Benchmark Projects will attempt to build on the particular strengths of the individual schools. The approach NPS has adopted is one of "centralized responsibility to

assure that effective decentralized assessment practices occur". Benchmark Projects are to be conducted as a joint effort of NPS Academic Affairs with each of the NPS graduate schools (or departments).

University objectives of the Benchmark Projects include:

- Extension of assessment best practices more widely across campus
- Progress toward additional direct assessments of student learning
- Systematize feedback and improvement activities from assessment evidence

Each school will be able to identify its particular strengths and weaknesses with respect assessment practices and educational improvement feedback processes, and design an effort to advance. Each school will be able to identify where and how it most wishes to move forward with its assessment activities, to its greatest benefit.

ACADEMIC PRACTICES SURVEY (5/08)
(Framework for Educational Effectiveness)

Deans, Chairs,

WASC Accreditation: As you know NPS is engaged in the WASC re-accreditation process, which will be ongoing through 2010. Two major phases of the WASC process are the Capacity and Preparatory Review (CPR) and the Educational Effectiveness Review (EER). Each review requires a self-study of NPS, broadly documenting how NPS operates and how effective education is achieved at NPS. The core objective of the two reviews is to show that…

- **Capacity Review (CPR)**: The institution functions with clear purposes, high levels of institutional integrity, fiscal stability, and organizational structures and processes to fulfill its purposes.

- **Effectiveness Review (ERR)**: The institution evidences clear and appropriate educational objectives and design at the institutional and program levels, and employs processes of review that assure the delivery of programs and learner accomplishments at a level of performance appropriate for the degree of certificate awarded

The CPR is about showing capability -- showing that NPS has the organizational structures, policies and processes in place to be able to provide quality academic programs consistent with its mission. The EER is about showing outcomes -- showing that NPS does achieve the quality academic programs it proclaims and that NPS systematically reviews and improves itself toward that end.

Purpose of this Survey: In support of the CPR, the purpose of this survey is begin to document the special academic polices, processes and practices that may exist within each of NPS's schools and academic departments. The survey asks for input from each department concerning practices in three broad academic areas:

- **Faculty Development**: What processes do you have in place designed to support and review faculty achievement?
- **Education Program Review**: What processes do you have in place designed to assure the quality and effectiveness of education programs?
- **Student Learning**: What processes do you have in place designed to document and improve learning achieved by students?

SURVEY QUESTIONS:

Faculty Development:

1. Faculty Orientation: Does your department have an orientation program, formal or informal, for newly hired faculty? What steps are taken to assist new faculty toward success upon arrival at NPS?

2. Faculty Mentoring: Is there a formal or informal program of faculty mentoring within your department? Please describe.

3. Faculty Review: Beyond the NPS institutional Promotion and Tenure (P&T) process, does your department have any systematic processes for the review and evaluation of faculty accomplishments? (e.g., Such processes might be related to teaching performance, research accomplishments, reappointment decisions, annual paystep actions, etc.) Please describe.

4. Faculty Activities: All NPS faculty complete annual work plans, outlining planned activities for an upcoming year, and Faculty Activity Reports (FARs) summarizing accomplishments for the previous year. Beyond these two mechanisms, are there are additional systematic processes by which your department tracks faculty accomplishments? Please describe.

5. Faculty Development: Please mention any other policies or processes, not mentioned above, that are practices in your department for supporting and assessing the success of your faculty.

Education Program Review:

1. Curriculum Reviews: NPS has a long-established process of formal curriculum reviews with sponsors, which nominally occurs biannually. Does this process cover all of the degrees, curricula or programs in your department? How often, and by what means, are your curricula reviewed (formally or informally) in consultation with curriculum sponsors or stakeholders?

2. Academic Reviews: NPS has instituted a program of "Academic Program Review" (APR), the purpose of which is to support and facilitate external "peer" review of NPS degree programs by qualified academics. This APR program is not yet wide-spread across campus and so has touched few departments. Beyond APRs, does your department engage in any process, formal or informal, by which academics external to your department have provided assessments or critiques of your programs? External observers [e.g. visiting committees]?

3. Internal Reviews: Do you also have periodic or ad hoc procedures for reviewing and adjusting the contents of your curricula internally, e.g. during annual course planning? If so please describe.

4. New Programs and Courses: How does your department develop new curricula? New courses? In particular, does your department have an acknowledged curriculum committee (or analogous group) whose purpose includes the review and/or initiation of new curricula?

5. Program Quality Data: Apart from SOFs, does your department regularly collect information (from students, alumni, faculty, sponsors, visitors, etc.) for the purpose of monitoring program quality? If so, please describe. How is this information used to validate or improve current programs?

6. Program Accreditation: Some individual academic units and degree programs at NPS have separate accreditations by ABET, NASPAA or AACSB. Those three are know and need not be repeated here. Beyond that, are there individual academic or professional accreditations or certifications that are available to academic programs within your department? Please identify the potential accreditation or certification and indicate its applicability to your program(s).

7. Program Ratings: Program ratings exist in various forms. There are program or school ratings that exist in the popular press (e.g., US News). Some professional societies assess and rate programs in their discipline. On occasion academic research studies conduct assessments or rating of schools or programs. Do you know of external assessments or ratings that are applicable to your department or programs? Please mention.

Student Learning:

1. Learning Outcomes: Apart from the ESRs negotiated with your curriculum sponsors, does your department have written learning outcomes for its degree programs? If so, where are they located? Are your programs designed to satisfy the requirements of external professional licensing or certification organizations? If so, please describe.

2. Outcomes Assessment: Does your department have written procedures for determining if students have achieved the learning outcomes described in your answer to question 1? If so, where are they located? If these procedures are not written but there is a common practice, please describe.

3. Teaching Effectiveness: The NPS SOF process provides one indicator of teaching effectiveness. Beyond the SOFs, does your department engage in any systematic practices designed to appraise and/or improve teaching? (Examples might include classroom visits, review of course syllabi, peer review of teaching by colleagues, student surveys, etc.). Please describe.

4. Student Feedback: Please describe formal or informal mechanisms within your department designed to capture student feedback concerning their experience in their graduate program. (Examples might include student interviews either during the program or upon graduation, periodic student surveys, meetings with academic associates or program officers, etc.)

5. Course Journals: A "Course Journal" refers to an organized collection of course materials (e.g., course outline, syllabus, schedule, list of assignments) assembled at the completion of a course that provides a record of the course as taught. Submission of Course Journals by instructors and maintenance of the collection of Course Journals by the department was once common practice at NPS. Are Course Journals, or other similar sets of course records, submitted and maintained in your department, and used for assessment.

6. Thesis Assessment: How is the quality of theses or capstone projects ensured? Does your department have a systematic process that evaluates the quality and competencies demonstrated in theses or capstones? If there are written procedures, where are they located? If there is a common practice, please describe.

7. Distance Learning Assessment: Is the process of evaluating student learning different for resident versus distance programs? If so, please describe how.

Educational Effectiveness
FY '09
Rodgers 091208

Benchmark Projects:

Building a culture for continuous improvement and academic excellence is central to supporting the academic mission of the Naval Postgraduate School. In this process, NPS must systematically engage in comprehensive self-study and reflection about teaching, learning and assessment that lead to ongoing and formative improvements in academic programs, instruction and the assessment of student learning. This process requires a commitment to cooperation, flexibility, peer review, transparency, and responsiveness to address the emerging and strategic needs of the DoD, sponsors and the military.

The WASC accreditation process provides a meaningful context for self-study and to lay a foundation for ongoing professional development and continuous improvement. A byproduct of this process will lead to the implementation of innovative programs and projects that establish a baseline from which continuous improvement can be benchmarked and shared. Within schools, benchmark projects may be designed for diagnostic, prescriptive, formative or summative purposes. Benchmark projects will be faculty led and determined by peer consensus to be of sufficient rigor and merit to:

1. Fully investigate the research questions associated with the project
2. Measure the effectiveness of existing or newly developed educational programs.
3. Evaluate the alignment of programs with institutional goals
4. Implement and assess programs that contribute to continuous improvement of teaching, earning, and assessment
5. Data collection to assess and document growth, anticipate change and to validate student improvement.
6. Result in findings or products that can be adapted for campus wide and or distributed educational uses.

During FY'09 Academic Affairs will sponsor faculty led teams, within each school to collect and interpret relevant data and provide leadership for the design and implementation of benchmark projects and programs.

Phase One
Convene a team to define current practices, collect and interpret data

1. What are the indicators that will confirm or question the quality of education within specific degree and certificate programs?
2. How is educational effectiveness defined and documented in your school or program(s)?
    - Sponsors
    - Programs
    - Faculty
    - Students
    - List the "value adds" that strengthen the effectiveness of programs, faculty, and students? How were these identified and monitored?

3. What is the role of assessment in improving instruction and informing department and institutional decision-making?

4. What processes, measures, and feedback systems are in place to improve teaching and learning?

5. Define the major strengths of your school or program(s) and if/how these strengths are documented.

    - Give examples of indirect and direct measures.

6. Define weaknesses and areas for improvement and how these areas were identified.
    - Do you have a formal/informal plan for improvement?
    - Describe if/how (frequently) these issues are being monitored and the type of feedback that will validate improvement.

Phase Two: Using the results obtained in the phase one review process, design (obtain approval) to implement a benchmark project that is:

- Developed as a diagnostic or prescriptive treatment to improve current programs and enhance teaching, learning and multi factored assessment of student achievement, or
- Designed to evaluate (formative or summative) the alignment of teaching, learning, and assessments, or
- Define and assess qualitative/quantitative differences associated the use of instructional technologies for distance learning and evaluate their impact on teaching, learning and student achievement.

Phase Three: Disseminate results in faculty forums and seminars and in publications posted on the Academic Affairs website. Select and convene a new team to collect data and develop and implement benchmark program during FY'10.

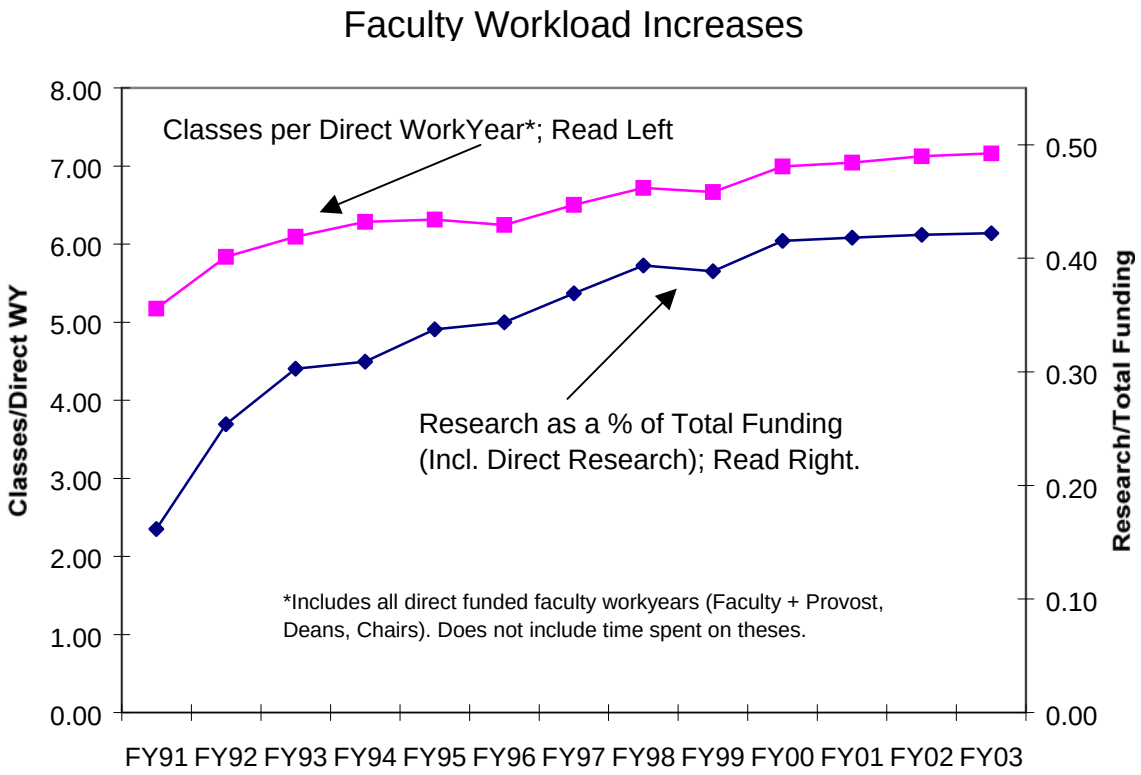
Report of the Ad-Hoc Committee on Faculty Workload

Introduction

The NPS has a unique educational mission as the Navy's Corporate University. In fulfilling this mission the School's tenure track faculty members engage in professional activities that span the areas of instruction, research and service, and they are evaluated for professional advancement based on their contributions in all of these areas. Thus, NPS faculty members routinely function in much the same manner as they would in any of the Nation's civilian research universities or in other graduate-level Federal educational institutions. In addition, NPS faculty members must develop and maintain a thorough understanding of national defense in order to be able to contribute effectively to fulfillment of the School's mission.

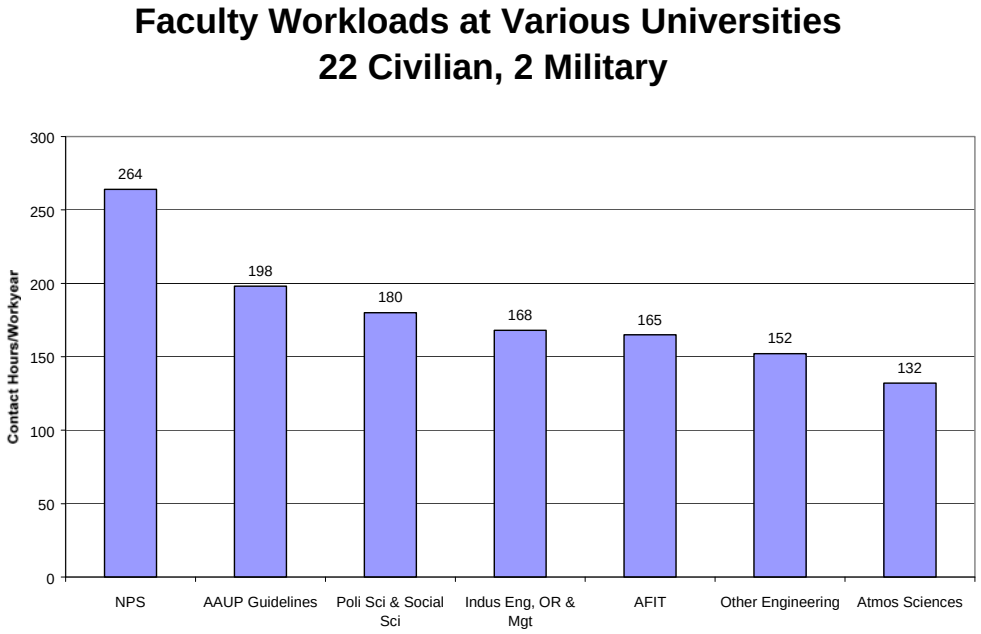
The decade-long decline in funding for NPS has made it impossible to support the faculty in meeting the requirements in all of these areas. Currently, only two activities of non-administrative tenure-track faculty members are explicitly recognized in the School's allocation of direct teaching budget to the departments: (1) course sections taught, and (2) thesis students advised. Furthermore, the compensation provided for these two activities has declined as the School's budget has eroded. Between FY91 and FY01the number of class sections taught for each twelve-month work year of faculty labor increased from about 5.2 to about 7.2 (see the graph below). While some might wish to interpret this as a reflection of increased efficiency, in reality it represents a *de facto* 40% cut in the compensation to a faculty member for teaching a course section.



A further effect of the decline in direct funds has been an increasing pressure to obtain reimbursable research funds and an increasing reliance on these funds to cover tenure-track faculty salary during the 10-month academic year as well as during the two-month intercessional period. This is also documented in the graph: the proportion of tenure-track faculty labor charged against research accounts more than doubled over this same time interval and reached 41% in FY01 – most of this in the form of external reimbursable research funds. While the effects of the declining budget have been largely negative, it must be recognized that the current budget allocation model has also had beneficial side effects. The emphasis on reimbursable research funding has resulted in a great expansion of entrepreneurial activity and a strong focus on sponsored research by the faculty. On the other side of the coin there has been an institution-wide reduction in emphasis on classroom teaching, and on course and curriculum development.

Request for Additional Funding

Beginning in FY03 additional funding will enable the School to restore support for a wider range of requirements that the tenure-track faculty are expected to meet. The request for this additional funding was based on a comparison of NPS teaching loads, measured in contact hours, with teaching loads at 22 civilian research universities as well as at two graduate-level military educational institutions (as shown in the bar graph below). The comparison showed that a tenure-track faculty member at NPS would be expected to teach six courses, equivalent to 264 contact hours, in order to receive full compensation from the School for the 10-month academic year. Teaching loads were lower than this at all of the civilian universities as well as at the other military institutions in the comparison, and generally corresponded to four (or fewer) courses in order for a



faculty member to receive full compensation for an academic year. For the most part, these lower teaching loads reflect institutional support for research activities of the tenure-track faculty that are conducted during the academic year.

While non-administrative tenure-track faculty members at NPS are guaranteed compensation only for the 10-month academic year a large majority is paid for a full 12-month work year by a combination of institutional (Direct) funds and reimbursable research (RR) funds. Direct funds are internally subdivided into Direct Teaching (DT) and Direct Research (DR, currently distributed as NPS Institutionally Funded Research (NIFR) funds); both direct labor and RR labor generate paid leave and holiday (LH) funds through labor acceleration. The following table shows that, on the average, four months (33%) of non-administrative, tenure-track faculty labor was charged against reimbursable accounts during FY01 (see the total for Departments under the RR column). Typically, such faculty members also receive an allocation of one month (0.08 of a work year) under Direct Research and so the proportion of total labor that is charged against research accounts comes out to 41%.

The typical non-administrative tenure-track faculty member currently fills the 10-month academic year with six months of teaching, one month of DR, two months of RR, and one month of paid leave and holidays. This faculty member also funds the two-month intercessional period with RR. For such a faculty member to be completely support by NPS direct funds during the 10-month academic year, NPS must buy back two months of RR while keeping teaching loads level and maintaining DR support. This will move the institution toward a workload model that agrees more closely with workload models in research universities. The amount of funding required for this purpose was determined to be $5.2M and this amount has been included in the School's FY03 budget.

TENURE TRACK FACULTY LABOR IN DAYS, FY01

						FRACTION CHARGED TO:

TOTAL	26763.52	3135.83	13462.65	7168.33	50530.33	0.62	0.31	0.07

This new funding brings with it an immediate obligation to clarify the NPS workload model and the expectations that apply to the tenure-track faculty regarding their professional activities. This new funding also provides a unique, longer-term opportunity to rethink how NPS should determine, schedule and compensate the annual workload of the tenure-track faculty.

Current Teaching Data

In the request for additional funding it was assumed that the overall teaching load at NPS would remain level. Data for four consecutive quarters (FY00 Quarter 3 through FY01 Quarter 2) are summarized in the following table.

Teaching Data (FY00 Quarter 3 through FY01 Quarter2)

Courses Taught			Who Taught Them		
Class Section Size	No. Sections	Cumulative Total	Faculty Category	Number of Sections	% of Total
>29	67	67	Non TT	288	23
25-29	91	158	TT (Tenured)	569	46
20-24	152	310	TT (Not Tenured)	135	11
15-19	267	577	Contractor	12	1
10-14	321	898	Military Faculty	156	13
9	89	987	Other	87	7
8	77	1064			
7	72	1136	Total	1287	100
6	59	1195			
5	52	1247	Tenure-Track Faculty		
4	34	1281	Total/Non-Admin		Sect./AY
3	31	1312	208/181	704	3.9
2	32	1344			(non-admin)

For this time period 181 non-administrative tenure track faculty members averaged teaching 3.9 sections per year. On this basis, the $5.2M funding increment could be viewed as providing two months of institutional (Direct) salary support offsetting RR salary charges *but only if non-administrative tenure-track faculty members continue to teach at about the current level*. Underlying this discussion is the question: what are the activities that the NPS should compensate its tenure-track faculty to perform; and, what are the obligations of the individuals who receive such compensation?

Faculty Activities

The full range of activities and responsibilities of a faculty member can neither be defined simply nor summarized easily. Instructional activities include obligations above and beyond regular classroom duties and include, but are not limited to, academic advising and counseling, the supervision of master's and doctoral students, direction of individual study programs, student group projects, and curriculum development. Research is a fundamental obligation of the tenure-track faculty in a research university and may include activities as diverse as investigation leading to the discovery of new phenomena, the application of new methodologies to existing problems or the transmission of knowledge. Research encompasses efforts that are reimbursable activities funded by an external sponsor; mechanisms for cost sharing of these activities must be included in any workload model. It must also be kept in mind that research is more than just reimbursable research; these activities are *not* one and the same. In a vibrant research university environment instruction and research activities necessarily overlap and blend into one another. In addition, faculty members have many service obligations including

internal support to the institution and external activities in support of the Navy, the DoD or other public entities.

Workload Committee Recommendations

The Workload Committee recommends that the common areas of faculty activity outlined below be adopted as applicable across the NPS campus. Specific measures of these activities and of output will differ by academic department, discipline and school. Therefore, each individual department must define specific requirements and the regulation of workload will be the responsibility of the appropriate department chair and dean. It will be especially important to inform new faculty of discipline-specific workload requirements at the time of hiring into the department or school.

The Workload Committee further recommends that participation by tenure-track faculty members in any or all of these activity areas will qualify for compensation during the 10-month academic year from Direct labor. The extent of participation in these areas will vary widely among individuals. However, the Schools and Departments should adhere closely to the following categories in delineating specific requirements and regulations for faculty activities:

- Instruction
  - Teaching
    - Resident courses (lecture, seminar and laboratory)
    - Non-resident courses via DL (VTC, WBL, etc.)
    - Non-resident courses offered off campus (on ships, to reserve units, etc.)
    - Directed study
  - Continuing Education
    - Refresher courses
    - Executive education, short courses
  - Advising
    - Theses and dissertations
    - Non-thesis projects
  - Instructional Development
    - Curriculum development
    - Course development
  - Faculty Development
    - Gain new expertise
    - Familiarization with new contexts (e.g., work in other DoD activities)
- Research
  - Research Initiation
    - Scholarly development or reorientation
    - Developing sponsorship
    - Proposal preparation and submission
  - Research Administration
    - Recruiting and supervision of research personnel

Facility acquisition and management
Financial management of research programs

Conduct of Research
Theory, concept, methodology and model development
Design and conduct of experiments and field research
Data collection and analysis
Modeling, simulation and application

Dissemination of Research
Publication (e.g., journals, books, technical reports, etc.)
Conference presentations
Sponsor reports

Service

Internal service
To Departments / Schools (Chair, Associate Chairs, Associate Dean, Academic Associate, committees, etc.)
To NPS (Councils, Executive Board, ad-hoc committees, special projects, promotion of NPS)

External service
To the Navy, DoD, or US Government (Service on review boards, panels, etc.; consulting support; organizing of meetings)
To the profession (Paper, proposal review; participation in review panels; editorship of journals; conference organization; leadership in academic societies)

Within these areas the wide variety of faculty activities necessary for effective functioning of the NPS makes it necessary to include qualitative as well as quantitative measures of faculty workload. Also, metrics of faculty workload may include factors in addition to credit hours of teaching, such as section size, distance learning delivery, or project courses. Each department will define workload metrics to accompany its requirements and regulations, and the administration of the faculty workload will be the responsibility of the appropriate department chair and dean.

The Workload Committee also recommends the following goals and steps to achieve them in establishing a general workload model applicable to the non-administrative tenure-track faculty:

Goals for the Faculty Workload Model

1. All non-administrative tenure-track faculty members to be fully funded for the 10-month academic year (including one month of paid leave and holidays).

Then, during each 10-month academic year, non-administrative tenure-track faculty members will accomplish, on average:

2. the equivalent of two quarters (six months) of instructional activities, to include teaching that is nominally equivalent to four 4-credit courses and supervision of theses
3. the equivalent of one quarter (three months) of research
4. service obligations to the institution, the Navy/DoD, and their profession.

The intent in establishing these goals is to provide academic units with direct funds at least sufficient to support tenure-track faculty for 10 months per academic year. The committee recognizes that a comprehensive model for the resourcing of academic units from NPS institutional funds will need to incorporate factors beyond the number of tenure-track faculty, including consideration of factors such as non-tenure track faculty, the nature and scope of instructional programs and faculty administrative positions. Heads of academic units would then be responsible for the allocation of these direct funds to support the unit's required instructional, institutionally supported research, and service activities. Under this procedure, an academic unit's following year's direct budget would not be determined solely by the current year's DT execution. This represents a departure from current NPS practice to procedures that are closer to those of civilian research universities. The committee envisions that eventually, dedicated cost sharing programs such as NIFR will not be required. Instead, three months of institutional research support (in addition to six months of support for instructional activities) will incorporate cost sharing as an activity appropriate for NPS funding and which will be managed mainly at the academic unit level.

As of this writing it is not known whether the $5.2M increment in the FY03 budget is sufficient to fully fund the recommended faculty workload model. It appears to the Committee that current funds will not be sufficient without significant course consolidation and 'right sizing' among the departments. As the NPS moves toward the recommended model great care must be taken to insure that all required coursework continues to be provided to the students.

Funding beyond the current $5.2M may be required to hire instructors when some tenure-track faculty members reduce currently high teaching loads toward a load that is more nearly equivalent to four 4-credit courses envisioned in the model. Also, the recommended model assumes that current NIFR funding plus the $5.2M increment will provide the necessary three months of support for each non-administrative tenure-track faculty member. This is probably not the case and suggests that full implementation of the recommended model will require additional funding.

<u>How Do We Get There? Recommendations for FY03</u>

1. For FY03 budgeting, distribute sufficient DT to each academic unit to support all required teaching, administration and thesis supervision. This is intended to ensure that all academic units have sufficient budget to maintain current (FY02) program levels. The tenure-track faculty in each academic unit will accomplish, on the average, teaching that is nominally equivalent to four 4-credit

classes and thesis supervision for each 10 months of tenure track faculty labor.

2. For each non-administrative tenure-track faculty member expected to have the 44-day intercessional period fully funded, provide an additional one-month of institutional funding.
3. Distribute the $5.2M increment to academic units, in proportion to the number of tenure track faculty members in each unit, for the purpose of funding two months, on the average, of faculty labor. These funds represent further institutional support for the instruction, research and service activities that tenure-track faculty members are obligated to provide.
4. For academic units in which the nominal four 4-credit course load represents a reduction in teaching load for some faculty and results in unstaffed courses, authorize and approve hiring.

<u>How Do We Get There? Recommendations for FY03 and beyond.</u>

5. Academic units will review programs with a view toward consolidating courses and improving program efficiency.
6. In conjunction with the academic units of the School the administration will review the number of tenure-track faculty positions assigned to each unit. Considerations for this will include such factors as;
    a) current and projected numbers of students
    b) scope of the unit's academic program as defined by program sponsors
    c) recognition of differences in cost to maintain high-quality programs in the different disciplines represented across the NPS campus
    d) recognition of different kinds of instructional programs (e.g., VTE, web-based)
    e) recognition of strategic growth areas
    f) composition of academic units' faculty (e.g., tenture-track, non-tenure-track, administrative)
    g) NPS recognition of research as an integral part of a tenure-track faculty member's activities eligible for institutional salary support.
7. Budget allocations for support of tenure-track faculty members will include:
    a) institutional support for research;
    b) institutional cost sharing of sponsored research.

9 Month Model

World Peace … or Ho Hum?

9MM = Rorschach Test

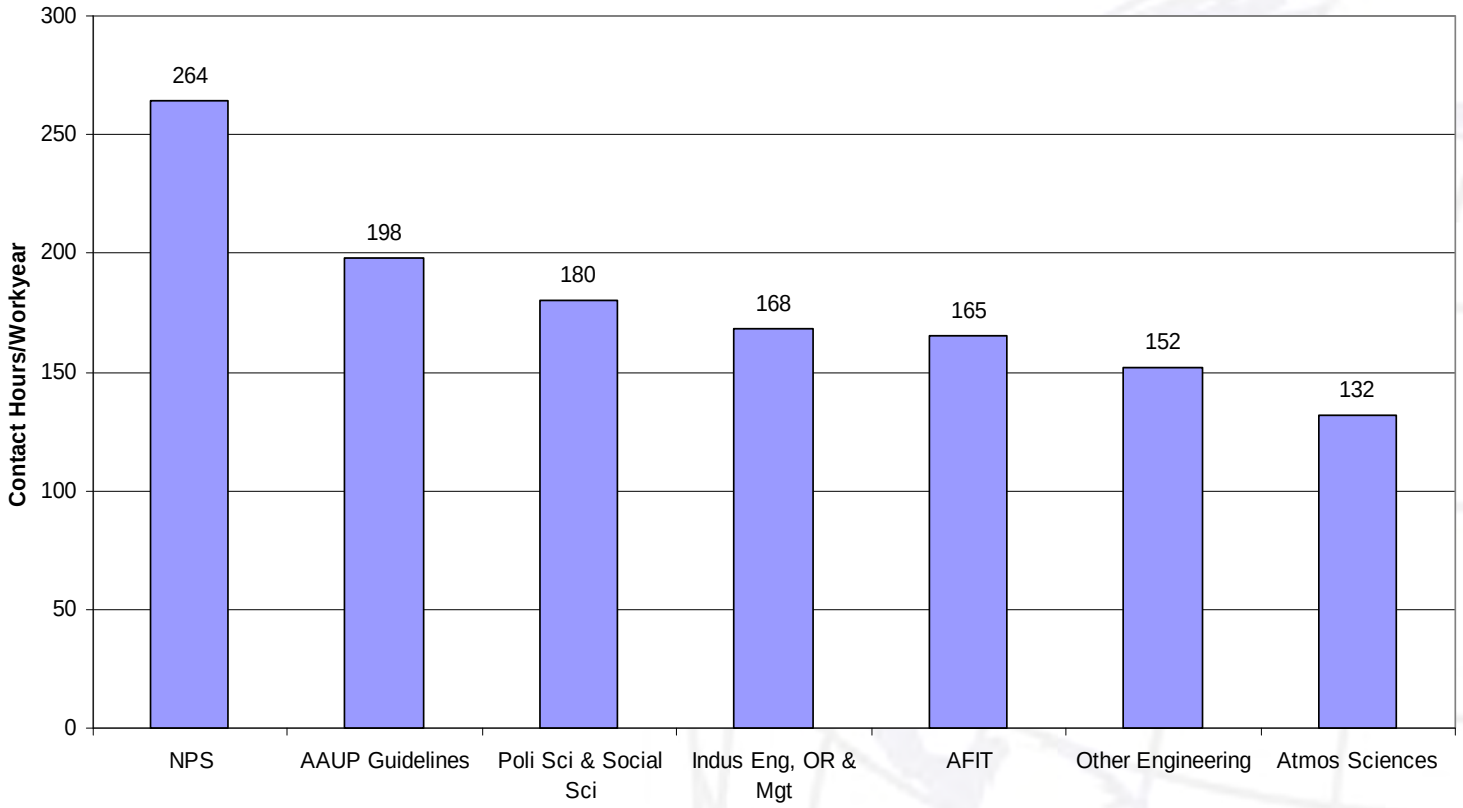
The “9MM” has become so laden with people’s aspirations, agendas, concerns and fears…

Leap of Faith

Just do it!

Faculty Workload

Faculty Workloads at Various Universities
22 Civilian, 2 Military



Faculty Workload Committees

- *McNelley Committee – 2002*
  - *$5M Workload Fund*
  - *"8 Month Model" instituted*
  - *Gradual slippage*
- *Purdue Committee – 2006*
- *Filizetti Committee – 2007*
- *Moses Committee – 2008*
- *~F6 Committee – 2008*

Why Bother?

MOTIVATIONS FOR 9MM

- **Strategic Plan:**
  - **Research University**
  - **Faculty Workload Picture → Like other Univs.**
- **Quality of Faculty Life:**
  - **Opportunity for Scholarship**
  - **Recruiting & Retention**
- **Culture Change:**
  - **Commitment & Service to the Academy**
  - **Reverse the billable hours mindset**

What is "It"?

BASIC CORE ISSUES: Workload & Funding

- Individual TT Faculty Workload Model
- Funding Mechanism to Schools/Depts.

EXTENSION ISSUES: Academic Operations

- Curriculum Restructuring / Rightsizing / Efficiency
- Faculty Rightsizing / Planning / Mix
- Instruction Funding Domain
- Dean/Chair/Department/Faculty Management
- Labor Accounting System
- Scheduling / Length of Quarter
- DL Operations / Administration / Tuition Model
- Financing NPS Academic Programs

TT Faculty Workload: Nominal 9 Month Work Activities

Instruction Oriented:

- Course Teaching: 4 sections
- Thesis / Project Advising
- Course Maintenance & Development

Research Oriented:

- Research (DFR)
- Thesis / Project Advising

Service Oriented:

- Faculty Administrative roles (Assoc Chairs, Acad Assoc.)
- Service (member of NPS & NPS faculty community)
- Special Projects (ad hoc)

(9 Months sorta = 2 "Teaching" Qtrs + 1 "Research" qtr)

9MM Funding Objectives

- More mission funds in total into schools & departments than currently

- More mission funds to TT faculty for non-teach activities (e.g., research)

9MM Funding Mechanism

Faculty labor in Schools & Depts. will be resourced for 2 Elements:

1. TT Faculty Time (Academic Year):

- Concept: f (TT faculty)
- Method: 3 qtr funding per each TT faculty / 4 sections taught

2. Remaining Instruction:

- Concept: f (uncovered for-credit teaching requirements)
- Method: 1 qtr faculty labor funding per 2 sections of "instructional requirements"

3. Academic Operations Support

- Components: Administration, Staff, Non-Labor
- Concept???: f (Level of academic operations; # Faculty FTEs)
- Method: # Faculty FTEs = (DFR Qtrs + Inst Qtrs)/4 →TBD

Devil in the Details: "Instructional Requirement"

How do we carry out Instruction? Some Variables and Sensitivities:

Sections of small class-size:

- **~15% of resident sections are <= 7 students → Cost $3.7M**

Constraint on resident instruction

- **5% change in # sections taught → $1.2M**

MilFac teaching contribution

- **Increase from 2 → 4 sections → $1.4M**

NTT teaching contribution

- **Increase from 8 → 9 sections → $1M**

TT teaching contribution

- **Increase from 4 → 4.4 sections → $1.8M**

TT Faculty Workload: Chair's Management

Flexibility: Funding to Deans/Chairs with some discretion / flexibility / Obligation to manage across departments, while being faithful to the 9MM workload guidelines

Annual Faculty Work Plans: Annual work plans for all TT faculty are essential to implementation of the 9MM.

Deviations from the Average: The department chair, with individual faculty, may agree to assign a faculty member more or less than 4 sections depending on department needs and faculty member strengths, but subject to the department's direct budget constraint.

Example deviations:

- More teaching: Assigned where teaching is a faculty member's preference or research productivity is slight.
- More teaching: Because of Dept needs to cover courses. This is greatly discouraged. Chairs should seek other-than-TT means of staffing courses.
- Less teaching: Where an acceptable teaching "buyout" is arranged (via RR).
- Less teaching: Non-teach time funded in recognition of, or support of, exceptional research productivity
- 10 Month "Contract": Nominal 10 months of direct funding / 5 section teach load

TT Faculty Workload: 9-Month Model vs 10-Month "Contract"

9MM speaks to institutional funding of TTs from Mez to Schools/Depts

- 9 months of compensation funds per TT, with assumed 4 section teach load
- Individual TT faculty work profiles may vary from the assumed average

- 10-Month "contract" refers to a specific work/pay profile implied by NPS when hiring
  - Individual TT may chose to be funded from institutional funds for 10 months.
  - Assumed average teaching load would be 5 sections

How Much $$?

Necessary adjustment from the current DT resourcing model = ?

How Much $$?

Necessary adjustment from the current DT resourcing model = $5.5M

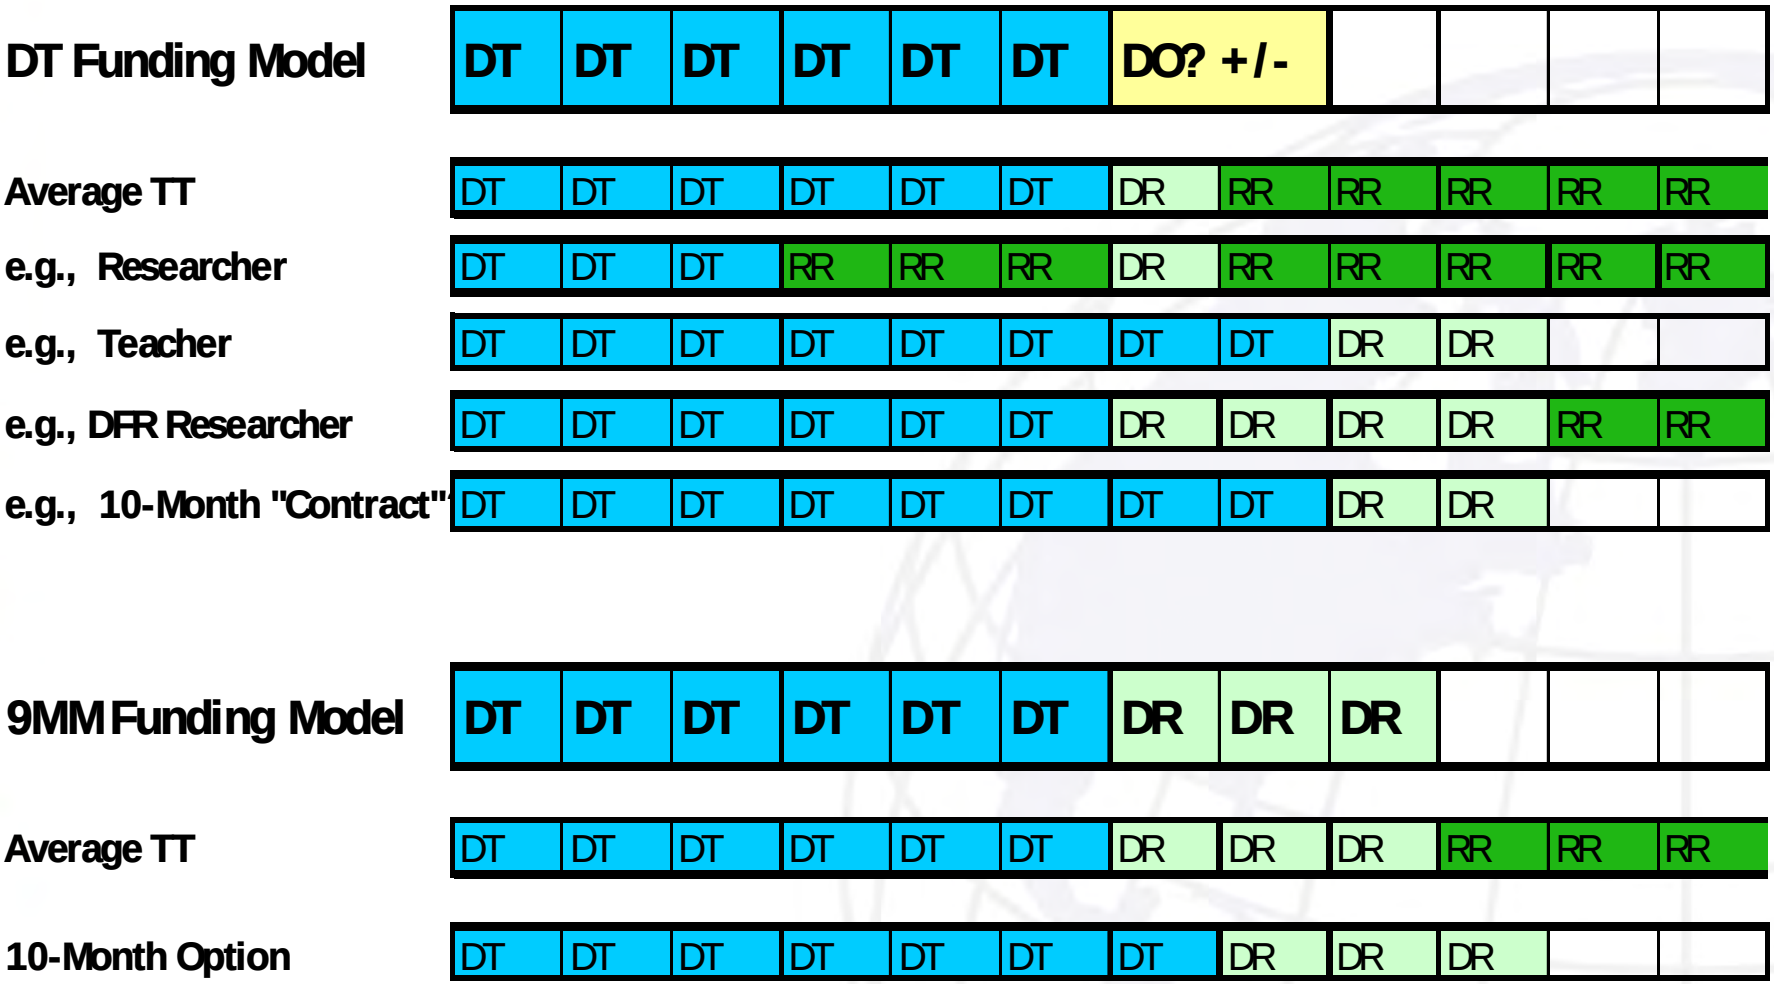
Sources ?

- **Less mission funds spent on overhead?**
  - **e.g.: Replaced by Indirect = guess $2M**
- **Recovery from FY07 mission cut?**
  - **e.g.: -6M →-2M = + $4M**
- **Growth of Reimbursables?**
  - **e.g.: $10M x 25% indirect → $2.5M**
- **Reduce Reserves?**
  - **e.g.: → $1M**
- **etc.**

Backup

Odds & Ends

TT Faculty Workload:
TT Faculty Work & Funding Profiles



Basic Funding Structure → To Schools

Schools (Depts.) will be resourced for 3 Elements: (version 1)

1. **DFR** (Direct-funded research):
   - Concept: f (TT faculty)
   - Method: 1 qtr faculty labor funding per each TT faculty

2. **Instruction**:
   - Concept: f (for-credit teaching requirements)
   - Method: 1 qtr faculty labor funding per "2 sections" of approved instructional requirements

3. **Academic Operations Support**
   - Components: Administration, Staff, Non-Labor
   - Concept???: f (Level of academic operations; # Faculty FTEs)
   - Method: # Faculty FTEs = (DFR Qtrs + Inst Qtrs)/4 →TBD

Basic Funding Structure: DFR

1. **DFR** (Direct-funded research):
   - Concept: f (TT faculty)
   - Method: 1 qtr faculty labor funding per each TT faculty

- **Simple count of # TT faculty in school/dept**
- **Includes chairs in count**
- **Includes new TT hires in count**
- **Includes planned RIP (Add 1 extra qtr per TT during first two years)**

Basic Funding Structure: Instruction

2. Instruction:

- Concept: f (for-credit teaching requirements)
- Method: 1 qtr faculty labor funding per “2 sections” of approved instructional requirements

Three basic issues:

- Process: How to determine requirements
- Measure: Metric for measure of requirements
- Domain: Are Resident Instruction / Designated Mission Instruction / Reimbursable Instruction included “in the model”?

What will happen to Reimbursables?

Multiple Scenarios:

- **Falling Reimbursables:**
  - **More TT time directly funded → Less need for RR for salary → Fewer RR projects → Falling RR $s**
- **Constant Reimbursables:**
  - **More TT time directly funded → Less need for RR for salary → Redirect RR funds raised to support PhDs or others → Sponsor funds received maintained.**
- **Growth in number of**
  - **→ increased reimbursables → increased indirect → free up mission $s**
- **Etc. Etc.**

Instruction Domain: If Including "Designated Mission" Programs

"Designated Mission" Instruction Programs:

- Funded with mission funds, separately identified (POMed) from general mission
- Current programs include: EMBA (GSBPP), NUC (GSEAS), MSA (GSOIS)
- Get $$ by school

If included "in the model", this implies:

- Designated funds are merged into general NPS mission pool
- Corresponding teaching requirement are merged into the school/dept's total requirements
- Funds for faculty instruction compensation for the program flow to schools/depts in accordance with the standard workload model (e.g., 2 sections = 1 qtr)---see if this is affordable??
- As with resident instruction under the standard model, academic associate & program manager compensation is not separate, is included as work accomplished under the standard workload model
- Program specific non-faculty costs (i.e., staff, travel, optar, etc.) are planned and negotiated with the school/dept.

Instruction Domain: If Including "Reimbursable" Programs

"Reimbursable Education" Programs:

- Funded outside of mission funds, by sponsors' funds, separately identified
- Current programs include: GSBPP (MSPM, MSCM, AAP, AMDLP), GSEAS (xxxxxxxxxx?
- Get $$ by school

If included "in the model", this *could* imply:

- NPS uses consistent pricing structure for RE programs: "Tuition" model
- Price is expressed on a per student, per course (or per credit hr?) basis
- Price consists of two components: Tuition (standard across NPS) and Fees (may be program-specific)
- Tuition component is designed to cover 1) all faculty labor and 2) indirect costs
- Fees component is designed to cover program-specific non-faculty direct costs (e.g., program staff, travel, optar)

- Tuition funds are collected into a tuition pool and merged into general NPS mission pool
- Corresponding teaching requirement are merged into the school/dept's total requirements
- Funds for faculty instruction compensation for the program flow to schools/depts in accordance with the standard workload model (e.g., 2 sections = 1 qtr)---see if this is affordable?? Tuition will need to be too high?
- As with resident instruction under the standard model, academic associate & program manager compensation is not separate, but is included as work accomplished under the standard workload model
- Fees component (for program-specific, non-faculty costs) are managed by the school/dept./program

Executive Summary

Significant changes for FY09

- **9MM**
- **Direct-Funded Research**
- **Pre-planned instruction programs**
- **Reduced resident instruction**
- **All “for-credit” instruction treated similarly**
- **Increased Dean responsibility**
- **New instruction program review**
- **Managed faculty size and composition**
- **Etc.**

Instruction: Determining Requirements

Three Step Process

Past Requirements

- Determine actual instruction provided during most recent year
- Assumes a random walk. Serves as starting reference

Forecast Requirements

- Schools/Depts complete a qtr-by-qtr FY09 course plan
- Schools/Depts identify/justify any changes from the past: Increase in students? New curriculum was approved?
- Requirements adjusted for defendable changes

Reduced Requirements

- NPS will set level of resident teaching requirements it will fund in FY09
- Requirements are expected to be funded at a level that will result in an average 5% (?) reduction in resident instruction from FY08
- Deans/Schools have responsibility and discretion to achieve reduced goal

Instruction: Measuring Requirements

Multiple metrics available

- Each to be incorporated (or not) into a measure of requirements
- Each reflects a different aspect of the amount of instruction "work"
- Each causes positive and negative incentives
- Each is biased for or against particular departments

Possible metrics:

- Number of Students on board (AOB)
- Number of sections
- Course credit hours
- Class size
- Student credit hours
- Others…
- Exclusions: e.g., don't count 1-credit courses; don't count sections below 10 students

Principle past metric(s):

- ECH: Equivalent Credit Hours
- ECH = f (# sections, # credit hrs per section, # students in section, # theses)
- (For DL: Various = f (course, # credits, #contact hrs, premium markup))

Assumed 9MM metric(?):

- # sections

Instruction: Managing Requirements

Responsibility to Deans. Schools determine how.

Approaches:

- Reduce courses in matrix
- Reduce electives delivered
- Reduce number of tracks
- Increase section size, class size
- Reduce student credit load
- Reduce number of starts per year
- Redesign matrices to combine small student groups
- Etc.

Competing Objectives:

- Reduce resident instruction by 5% (?)
- Guideline: Maximum required students credit hours in qtr of 18 credits
- Meet minimum requirements to satisfy degree, sponsor and accreditation standards

Course Development Plan

The following table defines important considerations to assist you in planning and developing your course. Complete your plan in three stages as you clarify your thinking throughout the ITL course. Included in each stage of the course development planning cycle are specific questions that you must answer in detail. The different segments reinforce learner outcomes, course content, interactions, learning activities, assessment strategies, and guide your through an integrated process to analyze, design, develop, implement, and evaluate new or re-purposed course content.

Directions for creating your course development plan:

1. Conceptualization and Analysis:

This stage carefully considers the big picture and assists with organizing and prioritizing complex content. Create a Word document and develop answers for each of the questions in as much detail as possible.

Bring a print copy of your CD Plan, completed through the Conceptualization and Analysis stage, to the first seminar on Friday, 3 October.

2. Context for Instruction:

Continue building the Word document you initiated during the Conceptualization and Analysis stage. Consider the following elements as you examine the context for instruction and how technology can enhance the delivery of your course to achieve course outcomes.

- Your responses to the previous questions,
- A descriptive profile of your current and potential students,
- ITL online module topics on critical thinking and the ADDIE instructional design process,
- ITL seminar discussions to date.

Responses in this section should logically connect with the previous questions and align your learning outcomes, course content, assessment strategy, and the sequence of instruction as a preliminary step for writing your course syllabus.

Post your updated CD Plan as an attachment to your first Blog entry in the ITL course site by 10 October. Specific instructions for creating your Blog are included in the ITL Phase I Assignments Description.

3. Course Development Schedule:

This stage of the planning process requires important task identification at the course and individual module levels. Considering the ITL online module content, seminar discussions, and your consultation with the instructional design staff, create a schedule to accomplish the tasks defined in this section. Review the entire course development plan to ensure that there is alignment of learner outcomes with the content, instructional processes, and assessment strategy.

Post your final Course Development Plan as attachment to your Blog in the ITL course site by 5 December. Specific instructions are included in the ITL Phase III Assignments Description.

stages of course development planning

Conceptualization & Analysis	Context for Instruction	Course Development Schedule
• Define the fundamental learning goals, basic concepts, and key questions that this subject matter/discipline seeks to answer. • How do you develop and cultivate expert reasoning and thinking within the subject matter of your course? • What information and knowledge is most relevant to this course within the context of its certificate or degree program? • How do you integrate opposing and discrepant points of view with respect to this content to establish relevance for your students? • What are the relevant areas of investigation and study that provide compelling opportunity for applied learning and research in this course?	• Define in detail the key elements that determine the context for course development that guide your decisions for delivery format • Target Audience • Course Learning Goal • Learner Outcomes • Course Format • Instructional strategies (discussion, lecture, group work, problem-based learning, self-directed learning contracts, other) • Plan for balanced learner interactions (learner to instructor, learner to content, learner to learner) • Identify source content, materials, media, and technology to achieve learner outcomes.	• Select materials to enhance balanced learner interactions • Copyright permission needs • Interactive media elements • Technology tools for synchronous and/or asynchronous delivery • Assessments • Create a table to identify tasks, resources needed, and a timeline including milestones

Interactive Teaching and Learning (ITL)

Course Map

Fall 2009 AY

Phase I: Duration: 22 September – 17 October

- Pre-ITL preparations and planning to include an individual consultation with ITL facilitator, orientation activities in Blackboard (Bb) from student perspective, and initial preparation of your individual Course Development (CD) Plan for the course you will work on during ITL
- Overview of Teaching and Learning to include online readings and participation in discussions and activities through the ITL Blackboard course site and in seminar sessions
- Course Analysis and Design steps of the ADDIE instructional design process to include drafting your distributed learning course syllabus, consultations with colleagues in your discipline, and contributions to a personal reflection blog in the ITL Blackboard course site

course activities summary

Attend Seminar Sessions	Read Online Segments	Complete Applied Learning Activities	
Seminar 1: • CD Plan Activity • Review Bb ITL structure • Learner-centered instruction *Friday, 3 October, 0830-1030* *KN 151* **Seminar 2:** • Critical thinking framework • ADDIE instructional design model • Principles of Good Teaching Practice *Friday, 10 October, 0830-1030* *KN 151* **Web Conference:** • Elluminate tools • Techniques for synchronous sessions • Benefits & challenges to Web conferencing *Monday, 17 October, 1200-1330* *Online*	1.1 Overview of Teaching and Learning 1.2 Tools for Course Planning 1.3 Analysis – The First Step 2.1 Design – Building a course framework 2.2 Developing a Module	**Pre-course preparation (9/22 – 10/2):** • Individual consultation with course facilitator..... • Complete Bb Orientation tutorial activities..... • Create Course Development Plan (stage 1)..... **Milestone 1* • Participate in seminar and online discussions..... • Read Module 1 & 2 online segments..... • Refine learner-centered course goal and outcomes..... • Shop for ideas with colleagues..... • Begin Personal Reflection Blog and post Course Development Plan (stage 2)..... • Develop a syllabus inclusive of critical thinking framework and recommended components..... **Milestone 2* *Meeting a milestone means you have attended scheduled sessions, participated in online activities, and completed learning activities.	**Complete by:** Appointment 10/1 10/2 10/3-17 10/8 10/8 10/9-14 10/10 10/17

Phase II: Duration: 20 October – 14 November

- Development stage of the ADDIE instructional design process to create a learning module as a template for other modules in your course
- Instructional Methods and Learning Activities to include principles of good teaching practice, assessment approaches, interaction among students with you, the course content, and other learners
- Research and discovery of instructional media to include in your content, consultation with instructional designers in OCL, and development of a storyboard for media production

course activities summary

Attend Seminar Sessions	Read Online Segments	Complete Applied Learning Activities	Complete by:
Seminar 3: • Panel presentation and discussion with other NPS instructors *Friday, 24 October, 0830-1130* *KN 151* **Blackboard Workshop 1 (choice)** *Wednesday, 29 October, 1300-1500* *KN 151* *Tuesday, 4 November, 1200-1400* *KN 154* **Blackboard Workshop 2 (choice)** *Friday, 31 October, 1300-1500* *KN 151* *Thursday, 6 November, 1200-1400* *KN 154* **Seminar 4:** • Media design & examples • Blackboard course architecture & examples *Friday, 7 November, 0830-1030* *KN 151*	3.1 Assessments 3.2 Interaction 3.3 Media Selection 3.3 Group Work	• Participate in seminar and online discussions..... • Read Module 3 online segments..... • Select and complete two assignments from a menu of optional activities designed to assist you in developing your course..... • Research media choices, meet with instructional designer, plan media development project..... • Continue Personal Reflection Blog..... • Prepare a module including student learning objectives, content, interaction plan, and assessment strategy..... **Milestone 3* Select from available dates to attend Blackboard Workshops 1 and 2..... *Meeting a milestone means you have attended scheduled sessions, participated in online activities, and completed learning activities.	10/20-11/14 10/22 10/29 11/10-14 10/20-11/14 11/14 10/29-11/6

Phase III: Duration: 17 November – 12 December

- Blackboard construction to include creating your course site, uploading materials, selecting tools and features, and inviting participants to review your site and materials
- Implementation stage of the ADDIE instructional process to include Learner and Faculty Support considerations, accessibility issues, creating welcome messages and announcements for students, and NPS library and technology support
- Course Management including copyright considerations and processes, evaluation and feedback, scenarios to plan for and manage student issues in distributed settings
- Sharing your results in a peer review process online and through presentations at the culminating seminar session

course activities summary

Attend Seminar Sessions	Read Online Segments	Complete Applied Learning Activities	
Web conference: • Group breakout activity *Monday, 1 December 1200-1330* **Seminar 5:** • Individual 5-8 minute presentations *Friday, 12 December 0830-1230* *KN 151*	**Blackboard Construction Zone: (11/17 – 11/21)** • Create Blackboard course site • Design course architecture • Upload course materials • Enroll group members 4.1 Faculty & Learner Support 4.2 Accessibility Issues 4.3 Implementation Plan 5.1 Course Management 5.2 Copyright 5.3 Evaluation	• Participate in seminars and online discussions..... • Read Modules 4 & 5 online segments..... • Create learner support communications and protocols..... • Post completed Course Development Plan (stage 3)..... • Complete Time on Task Analysis..... • Analyze and provide specific feedback and qualitative suggestions to improve the course site, syllabus, and module of 2 group member's through the application of alignment rubrics, criterion for interaction, and elements of course development and critical thinking..... • Complete Personal Reflection Blog.....	**Complete by:** 11/17-12/12 11/26 12/5 12/5 12/9 11/24-12/5 12/19

Course Facilitators

Ali Rodgers, Manager
Faculty Development Programs
Email: arodgers@nps.edu
Telephone: 831.656-7696

Maureen Bowman, Instructional Designer
E-mail: msbowman@nps.edu
Telephone: 541.942-7424

The NPS Office of Continuous Learning (OCL) instructional design and multimedia production team also facilitate your course development efforts. Information about the OCL team is located in the Staff Information area of the ITL online course site, http://nps.blackboard.com (login & password required and course site becomes available prior to course start date).

Course Description

This course prepares you to develop and teach a distributed learning (online) course, and/or to enhance classroom-based instruction through the application of principles of teaching and learning and the use of technology tools. This is a hybrid course featuring seminar sessions, and asynchronous and synchronous technology-enabled components. You create the syllabus and a module or unit of learning for a specific course you teach, using either new materials or adapting current materials for technology-enabled delivery.

Learning Outcomes

Upon successful completion of this course, you will be able to:

1. Design a course framework that incorporates elements and standards of critical thought, teaching and learning principles of good practice, and processes in instructional design as demonstrated in ITL.
2. Apply a systematic instructional design process to create course content including a syllabus and one learning module.
3. Develop interactive and learner-centered approaches to meet course outcomes and module objectives.
4. Use a variety of NPS instructional management and learning support technology tools for delivery of course materials and learning activities.
5. Develop a strategy to enhance instructional effectiveness through learner support strategies.
6. Apply guidelines for copyright permission and intellectual property to your course content.
7. Conduct an analysis to assess the instructional value and time-on-task from the student and instructor perspectives for the unit of learning (module) developed during ITL.

Course Format

This distributed learning course is divided into three phases that integrate five content modules and relevant applied learning activities. The first phase includes pre-course consultation and planning activities, an overview of teaching and learning, and a systematic process for course conceptualization and course design. The second phase applies principles and instructional methods of teaching and learning to the development of a learning module. During seminars and individual consultation, important criteria for media selection and course architecture are considered within the context of course and module development plans. The third phase builds the course site in the Blackboard learning support system, and focuses on important course management and support tools for both the learner and the instructor. Each phase incorporates four instructional elements:

- **Classroom seminar and Web conferencing sessions** (7) where you discuss teaching and learning concepts and strategies, and work collaboratively with other NPS faculty course participants.
- **Online content modules** (5) that include reading, collaboration with colleagues in discussion forums, and applied learning activities to develop materials for your course with review and feedback from peers and the ITL facilitators.
- **Individual consultations** with the ITL facilitators and OCL instructional designers to discuss your teaching and learning plans and to formulate ideas for integrating media into your course.
- **Technology** tutorials and workshop sessions for the NPS Blackboard learning support system and the Elluminate Web conferencing application.

To be successful course participants must be able to devote six to eight hours weekly to this course **and** be available to attend all the seminar sessions. Dates for seminar sessions, topic descriptions for the module segments, and applied learning activities are summarized on the *ITL Course Map,* and the Blackboard course site provides detailed instructions for all course activities. Time required for ITL is generally **6-8 hours per**

week, in *addition* to time required to attend the seminar and Web conference sessions and to complete technology tools requirements. Study and time to complete applied learning activities may vary depending on the course materials you already have created and your comfort in the technology-enabled environment.

Three "milestones" are identified in the course schedule. Meeting the milestones means you have participated in seminars and online activities, and submitted assignments to date*. Completion of requirements at the milestones helps you stay on track and helps us jointly insure your successful completion of ITL. This is a "student-centered" and group-paced course that requires your timely participation, peer interaction and feedback.

*This course builds upon previous learning activities and interactions; failure to achieve scheduled milestones may result in being dropped from ITL.

We learn from each other in this model, it's not just an "info download!"

Technical Prerequisites and Requirements

Intermediate level of experience using a computer, defined as the ability to:

- Organize and manage files and folders in your operating system;
- Receive and submit electronic course materials;
- Effectively use (create, format, edit, save, and distribute documents) word processing and presentation programs, typically using MS Word and PowerPoint or compatible formats;
- Send and receive e-mail (including attachments); and,
- Navigate, search, and download and execute files from the Internet.

Recommended technical specifications: You will be able to access the course materials in the ITL Blackboard course site using your campus or home computer as long as you are able to connect to the Internet. Once registration is confirmed and you receive a "getting started" e-mail message, log in to Blackboard at http://nps.blackboard.com.

It is recommended that you have a PC with a minimum of 512 Megabytes of system memory (RAM) and a current operating system version. We also recommend using the most current version of your preferred Web browser to access the online portions of the course delivered through the Blackboard learning support system. The Mac platform is compliant with the Blackboard learning system and Elluminate Live application. The Elluminate Live Web conferencing application is a real-time virtual classroom environment and requires Java 1.5. To test your system, visit the "Getting Started with Elluminate at NPS" site (http://www.nps.edu/Technology/Elluminate/GettingStarted.html).

Some materials are provided in Adobe portable document format (PDF) and require you to have the free "Acrobat Reader 7.0" on your computer. Interactive components in the online modules require the current Flash player. Both plug-ins are available for free at the Adobe Download site (http://www.adobe.com/downloads/index.html).

If you have software issues or need instruction to meet the prerequisite technical experience, contact Information Technology & Academic Computing Support (ITACS) Technology Assistance Center (TAC) for assistance.

Blended Learning Participation Criteria

Participation is a critical part of a dynamic and interactive learning experience. In addition to attending and engaging in activities during the seminar sessions, you are expected to engage with the online content and participate in asynchronous and synchronous discussions. We recommend logging on to the Blackboard course site at least 3 of 5 days each week. This strategy of frequent participation is found to be most effective in improving retention and completion rates in technology-enabled courses. It assists students in time management, providing a structure and incentive to remain "connected" to the class.

Evaluation

The evaluation scheme of this course emphasizes self-assessment to a supplied criteria and adherence to specified due dates. Additional feedback from peers and course instructors also provide important perspective and insight for consideration in the course development process.

At the conclusion of each phase you are asked to complete a *self-assessment checklist* that reflects on your meeting the learning objectives and completion of the activities, and allocates scores. Rating totals are verified and used for certification of your successful completion of course requirements. Successful completion (85% minimum, or 425 points) is the basis for receiving the ITL Certificate of Completion **and** workload reimbursement from the OCL.

As a part of the self-assessments for each phase, you will conduct a participation self-assessment for the seminar and online discussion activities based on the following criteria:

Seminars and online discussion forum activities are each worth 5 points. Considering the criteria below, assess how effectively you integrated ITL course content and personal experiences in posts and discussions. Award yourself 1 point for each of the following criteria that is evidenced in your work.

1. **Completeness:** Did you accurately and clearly address the essence of the topic or discussion question?
2. **Evidence of insight and reflection**: Did your comment/answer add a new insight or something useful to the discussion and relate to experiences that illuminate additional aspects of the topic. Don't be afraid to state dilemmas or areas that you are leaving open to further exploration -- that indicates an open mind. We will be learning about tools and knowledge in the context of larger values, and your experiences and opinions are vital. Everyone in this class is called upon to be a student AND a teacher, a leader and an enthusiastic part of a learning community.

3. **Supporting examples**: Are your comments supported by, and connected to, examples and/or references in the module materials, articles, other research, or your experience? The more you can make connections between resources and your experience and opinion, the more transformational your learning becomes.

Feedback & Interaction: Award yourself up to 2 points per seminar session or discussion question for contributions you make that comment on other participants' responses, such as answers to a question, or remarks on a point raised.

Grading: There are 500 possible points. The evaluation is divided up as follows:
Applied Learning Exercises
60 Points – Course development plan (completed in 3 stages)
50 Points – Syllabus development
50 Points – Module development
40 Points – Media selection project
30 Points – Learner support instruments development
40 Points – Blackboard course site construction
40 Points – Selection of two learning strategies to design
310 Points Total

Interactive Learning Exercises
75 Points – Blackboard course site, Syllabus, and module peer review
35 Points – Seminar participation and attendance (7)
30 Points – Online participation in asynchronous discussions (6)
140 Points Total

Personal Reflection Exercises
20 Points – ITL Course personal reflection blog (minimum of 4 entries)
30 Points – Time on task analysis and personal reflection about the content and the implications for the teacher and the student
50 Points Total

Late Policy

Applied learning activities in ITL include specific due dates to facilitate the pacing and interaction in the course. Your attention to the dates contributes to an effective learning community and insures that you and your colleagues are able to help one another build and improve your interactive learning course materials and techniques. Unless pre-approved, assignments that are not submitted by the requested dates do not receive credit.

As described in the Course Format section, **three "milestones" are identified in the course schedule.** Meeting the milestones means you have participated in seminars and online activities, and turned in assignments to date. Completion of activities at each milestone is required to continue to the next phase of the ITL course.

Appendix A

AD-HOC COMMITTEE ON ADMINISTRATIVE AFFAIRS
COMMITTEE CHARTER

Dear Colleagues:

During the interview process for Provost, many faculty members suggested that the first order of priority for the incoming Provost would be an examination and possible restructuring of centralized administrative support. Several faculty were present at several of these discussions. Given our current budget situation, I have decided to form an Ad Hoc Committee on Administrative Affairs to review and make suggestions on the central administrative support functions. I would recommend that the committee meet once or twice to review the current status and that we then convene a retreat, in the very near future, to develop a plan and any modifications to the current administrative support structure. I would like to attend the first meeting of the committee for a few minutes and then attend the retreat.

The Committee Membership:

Dr. Julie Filizetti, Associate Provost for Academic Affairs, Chair
Dean Ord, SIGS
Dean Purdue, GSOIS
Dean Beck, GSBPP
Dean Kays, GSEAS
George Conner, Strategic Planning
Dr. Dan Boger, Chair IS, (Chair Provost Search Committee)
Dr. Tom Housel, (Faculty Representative)
Dr. Christine M. Cermak, Executive Director, Information Resources and CIO, *ex officio*

An incomplete list of issues, in no particular order:

- What are the critical admin functions?
- Is there functional duplication?
- Is there a better way to organize administrative functions and reporting structures?
- Are there individuals within schools who also support central admin functions?
- Are faculty utilized effectively in service functions?
- Where is there dysfunction in the administrative support organization?
- What other issues should the committee tackle related to admin support?

I do not expect the group to examine the internal structure of major support organizations. At this point in time, I am primarily interested in examining the central admin support organization for effectiveness and duplication. Please feel free to call me at any time to discuss the role of this important committee. Let me know the data you need from the Provost Office. I could have added several other individuals to this

committee but I want to keep the group as small as possible but still able to cover most aspects of central admin. If there is someone who needs to be added please let me know ASAP. Thanks for your support and willingness to work with me on this important issue.

Best regards,

Leonard Ferrari, PhD
Acting Provost
Associate Provost/Dean of Research
Naval Postgraduate School

Administrative Affairs Implementation Task Force
Report to the Provost, November 2006

Introduction

The Provost's *Ad Hoc* Committee on Administrative Affairs completed its work in September 2006 (http://intranet.nps.navy.mil/Code01/Default.htm). Once the report was completed, Provost Ferrari established an Administrative Affairs Implementation Task Force to provide guidance on implementation of the Committee's report recommendations. The composition of the Task Force included:

Dr. Dan Boger, Interim Dean of Research
Dr. Christine Cermak, Executive Director of Information Resources and CIO
Dr. Tom Housel, Professor, Information Sciences
Dr. Gil Howard, Director, Academic Planning

The Task Force was convened and met seven times over a six week period, and met with the Provost several times.

In what follows, the recommendations from the Provost's *Ad Hoc* Committee on Administrative Affairs are listed in numerical order in bold, *verbatim* from the report itself. It should be noted that report recommendations 6 and 7 were consolidated into one recommendation, Number 6. The Implementation Task Force proposed implementation actions follow each numbered recommendation.

To briefly summarize, the Provost's *Ad Hoc* Committee on Administrative Affairs Report provided an outline of six general categories of proposed change for NPS:

1. The need for an academic strategic vision of NPS.
2. A redefinition of meetings and decision-making at NPS
3. A clear definition of organizational structure, management principles and practices – including a streamlined academic organizational structure.
4. The development of a formal Communications Plan for NPS.
5. Review of finance and administration functions required to support the academic mission.
6. Development of organizational charts, positions descriptions, and resource assessments for all areas reporting to the Provost.

The original report suggested timelines for each of the recommendations. The work of the Implementation Task Force is responsive to each of the recommendations although modifications to certain timelines were necessary – those are noted below.

Recommendations

1. **Develop and articulate an academic strategic vision for NPS. Develop a long-range plan to achieve the vision. Establish a multi-level task team to develop the strategy that can then be reviewed by the Provost Council. Due by 15 January.**

   Suggestions for membership (and chair):
   Chris Olsen, Faculty Council
   Phil Durkee, Meteorology
   Vali Nasr, National Security Affairs
   Jim Eagle, Operations Research
   Douglas Fouts, Associate Dean of Research
   Frank Barrett, Graduate School of Business and Public Policy
   Tom Housel, Information Sciences and proposed chair of the Committee

   Please see Appendix A for Draft charge to Strategic Vision Committee. The timeline for completion of the work of the Committee is adjusted to March 2007, since the Committee has not yet been established.

2. **Re-define the role and membership of the Executive Council. Map the decision-making process at NPS so that a more thorough review can be made. Formalize the role of the Provost Council. Define the role of the Faculty Council in the decision-making process. Due by 15 December**.

   Five major groups are recommended to sustain an academic governance structure with effective and efficient consultation and decision-making:

   - Administrative Staff – The AS is advisory to the president and provost on all enterprise-level plans and policies, and provides a monthly venue for information appropriate for executive leadership.
     Composition includes the president, provost, comptroller, executive director of base operations & services, campus planning and development services, chief of staff, CIO, and chair of the faculty council.
   - Provost Council (PC) – advisory to the provost on all plans and policies having to do with the academic mission, and provides weekly venue for status updates, consultation, and decision-making.
     Composition includes the provost, deans, associate provost for academic affairs, director of academic planning, director of library resources, CIO, special assistant to the provost.
   - Administrative Assembly (AA) – President and provost's quarterly meeting with deans and directors of major administrative areas. Presentations of major projects and initiatives for information to the administrative leadership of the institution. Venue for consultation and comment on issues to be considered for decision by the president and provost.

Composition includes the provost, chief of staff, deans, chair of Faculty Council, associate provost for academic affairs, director of academic planning, CIO, director of library resources, director of institutional research, public works officer, dean of students; human resources director, director of sponsored programs, special assistant to the provost, comptroller, command evaluation, and executive director of base operations & services, campus planning and development services.

- Deans and chairs – Provost's monthly meeting with deans and chairs to provide status updates on matters of institutional priority, an opportunity for consultation on academic and administrative matters.
- Faculty Council (FC) – Primary locus of faculty governance, the FC is the body where all issues pertaining to faculty work are reviewed. Its mission:

> The object of the faculty organization is to promote understanding and communication between members of the faculty and members of the administrative staff, to advance the quality of the school programs, to protect and promote the professional stature of the members, and to assist the administration in accomplishing the goals of the Naval Postgraduate School. The Faculty Council is advisory to the NPS administration, and all major policies of the institutions should be reviewed by the Faculty Council. Where possible, all major committees of the institution should include Faculty Council representation.

Please see Appendix B for the proposed Executive Governance chart. Once changes are made, this is responsive to Recommendation 2.

3. **Define the end-state for management of NPS. This may include organizational structures, the principles for organizations discussed above and outcome measures. Establish roles and responsibilities, procedures and processes to clarify, guide and enable the organizational structures. Develop a transition plan for getting to that end-state. Establish a Task Team to develop and bring forward the plan. Task Team should report out by 15 December.**

Please note that further detail regarding end-state management for NPS is provided in Recommendation 6.

Organizational Principles

NPS should be guided by general principles of administration structure and process.

1. NPS should focus on improving support of the core NPS mission: graduate education and research.

2. NPS business practices should be characterized by efforts to increase efficiency, reduce redundancies, to improve communication, and responsiveness with customers.
3. NPS administrative processes should have customer service as a demonstrable priority.
4. Internal NPS organization, policies, processes and programs must be rationalized in terms of their effective and efficient support of NPS mission requirements. Feedback as to the effectiveness of policies processes and programs should be routine.
5. NPS business practices should maximize accountability at the appropriate level within the organization.
6. NPS should ensure sustainability of improvement measures.
7. NPS must be professional in our hiring, management, development and transition practices.
    a. Position descriptions must be developed.
    b. Positions should be advertised and competed in open searches whenever practical.
    c. Performance measures must be developed and implemented.
    d. Performance should be formally assessed and feedback clearly communicated.
8. NPS should use standards of professionalism to guide administrative/business processes (responsible and responsive management, communication, accountability, professional development and training, customer service, efficiency, measurement of appropriate performance indicators, and external review).
9. Faculty should have a defined role in the governance of NPS.

Organizational Structure

NPS is a relatively small organization. Its administrative structure should be straightforward and parsimonious. The University of California campuses, while significantly larger in budget and population, provide a useful organizational model and one that is used here for NPS consideration:

The president and provost are the executive leadership of the institution, responsible for the plans, policies, and operations of NPS.

The president, consistent with roles seen at other research universities, focuses on external responsibilities of budget and policy advocacy, alumni relations, liaison with the NPS Foundation, Department of Navy, Department of Defense, and other federal agency leadership. The president is the official representative of the institution with state and local government leaders, as well as higher education presidents, chancellors, and professional associations throughout the region and nationally.

The provost has responsibility for the overall management of the academic enterprise of the institution. As the chief academic officer, the provost focuses responsibility of the operations of the institution in support of the academic mission, as well as plans

and policies relevant to graduate education and research. The provost has direct responsibility for academic schools, departments, centers, and institutes, planning, finance, academic and administrative services. The provost also assists the president in matters of external communications and advocacy.

The president and provost appear in the same box on the NPS organizational chart, with everyone reporting through the provost to the president. This ensures two things: (1) a clear message about the alignment of NPS activities in direct support of the core mission of graduate education and research, and (2) an unmistakable executive leadership team, the president position directed outwardly at the external relations of the institution, and the provost directed internally to the academic enterprise.

There are a number of positions that require direct access to the president, by Navy or DoD direction, for specific reasons (e.g. CIO for network security issues). These positions can continue that access through dotted line relationships to the President, as appropriate.

Please see Appendices C and D for current and proposed organizational charts. Once changes are made and organizational principles are adopted and institutionalized by NPS leadership, action for Recommendation 3 is complete.

4. **Appoint a Communications Task Team to develop a strategic communications plan and to develop the appropriate organization and reporting structure. Assess the current organizational assets to determine capability to achieve the goals to support the mission. Task Team should report out by November 15.**

   Associate Provost Julie Filizetti distributed the draft NPS Communications Plan for comment on September 12, 2006. The draft Plan, while still under the comment and revision period, provides a valuable starting point for moving to renewed institutional attention to this area as strategic to NPS' core mission. Together with the Provost's decision to reorganize Institutional Advancement under the Executive Director of Information Resources and CIO, these actions are responsive to Recommendation #4 concerning the Communications Task Team. It is essential that a thorough assessment of resources be conducted to ensure successful plan implementation.

5. **Assign a Task Team to consider the functions of Finance and Administration required to support the academic mission. This might incorporate some functions currently being performed within Academic Planning, Strategic Planning, HR, and Comptroller and in other areas at NPS. Once the function is better defined, and in accordance with the management plan, consider the best reporting structure. Task Team should report out by November 15**.

   Provost Ferrari will work this year with the Provost's Council to revise the budgeting process. He plans to work closely with the Director of Academic Planning, Dr. Gil

Howard, Associate Provost for Academic Affairs, Dr. Julie Filizetti, and Director of Sponsored Programs, Ms. Danielle Kuska on matters having to do with budgeting, expenditures, and administrative services. Provost Ferrari would like to revise the budgeting process first, and then move to a consolidation of budgeting/planning/expenditure tracking/administrative services in stages. A proposed position description is provided as Appendix E.

6. **Develop position descriptions for all key positions by 15 December**.
   a. **For those individuals assigned to new program development, assign specific performance metrics and/or require that after some specified period of time, some percentage of their salary will be obtained from reimbursable research or education. Many currently have projects that support some or most of their salary.**
   b. **Charge the managers of all key organizations, including the schools and the departments, to identify how their mission, goals, resources and organizations support the NPS mission by 15 December. They should critically assess what level of resources are required using benchmarks from other relevant organizations as well as NPS information. They should also develop appropriate performance metrics and ways in which these findings can be routinely reported to the university community.**
   c. **Formalize the role of the NPS leadership in discussions and prioritization of activities and resources.**

      Regarding Recommendation 6a -- Provost Ferrari will have individual meetings with the individuals assigned to new program development and with their supervisors to discuss performance expectations and resourcing.

      Regarding Recommendation 6b -- please see Appendix F for draft memorandum from Provost to Deans, Associate Provost for Academic Affairs, Special Assistant to the Provost, Director of Academic Planning, Executive Director of Information Resources and CIO, Director of Library Resources.

      Regarding Recommendation 6c – it is recommended that a two staged planning and accountability process is implemented. Each of the Provost's direct reports should provide an annual plan for the year, including budget, goals, and expected outcomes. The plan should e reviewed and endorsed by the Provost. At the end of each year, an annual report should be provided, outlining performance, support of NPS mission, progress metrics, use of resources, etc.

Conclusion

During the course of the Task Force's work, the Provost has taken a number of steps to streamline the academic organization, revamp the budgeting process, and improve communications. We commend these efforts and urge continued energy in implementing the remaining steps. The sooner the Academic Strategic Vision Committee is charged and begins its work, the sooner the campus will have a clear blueprint for improvement of

our academic programs. The sooner we ask our administrators for organizational charts, position descriptions, and resource justifications, the sooner we can report accountability to the campus community. The sooner we begin implementation of the Communications Plan, the sooner we will see improvement in both our internal and external communications programs.

As was the case with the original two reports, sustainability and visibility are the linchpins for continued progress. Once these report recommendations are implemented, we suggest continued engagement with the campus community through the Business Practices Implementation Task Force. This group can provide ongoing leadership for addressing campus concerns, suggestions for enhancement, and facilitating regular campus conversations about improving the level of support for NPS' core mission of graduate education and research.

DRAFT charge to Strategic Vision Committee

November 13, 2006

FROM: Leonard Ferrari, Provost
TO: Frank Barrett, Graduate School of Business and Public Policy
Phil Durkee, Meteorology
Vali Nasr, National Security Affairs
Jim Eagle, Operations Research
Douglas Fouts, Associate Dean of Research
Tom Housel, Information Sciences and proposed chair of the Committee
Chris Olsen, Faculty Council
SUBJECT: Strategic Vision Committee

The Provost's Ad Hoc Committee on Administrative Affairs recently submitted its final report to me. The report is posted on the intranet site, http://www.nps.navy.mil/strat/Index.htm .
The first recommendation of the report urges establishment of a committee to develop and articulate a strategic vision for the university. I heartily endorse this recommendation and would like to ask you to serve on this important committee. We currently have a strategic plan, and this can serve as a basis for the Committee's work. A View to the Future (enclosed) has served us well since its development in 2001, however it is time to formally review and update the document. The plan provides a general outline of our aspirations, and principles for implementation. However, it is time to take a fresh look at its currency and relevance to where we are today as an institution. The Strategic Vision Committee's work will provide the academic priorities and longer term academic vision in support of the NPS/BOA strategic planning process.

Specifically, I would ask you to consider the development of an academic vision for the institution – framing the process with the assumption of NPS as a research university. Our external research program has increased more than 400 percent in the past five years and has become a hallmark of our contributions to the Navy and the nation. It is time that we recognize this important dimension to our mission.

Our academic vision should include goals, priorities, and recommendations for strategic investments in order to ensure continuing improvement of academic quality. A more explicit relationship with actual resource planning and allocation decisions should be included. I would appreciate your tackling this thorny issue and finding a way of linking planning with resources without being too restrictive or weakening our ability to respond to emerging requirements and opportunities.

Finally, I would ask that the committee include some recommendations about comparisons with peer and reference group institutions, in order that we might be able to develop operational metrics with which we can compare NPS with other research universities. This will provide us with an ongoing context within which we can assess our progress.

I will convene the first meeting of the committee in the next week or two so that we can discuss any questions that you may have about the process. Consistent with the Committee on Administrative Affairs report recommendation, I would like to have the academic strategic vision developed by the end of March 2007. Thank you and I look forward to our first meeting.

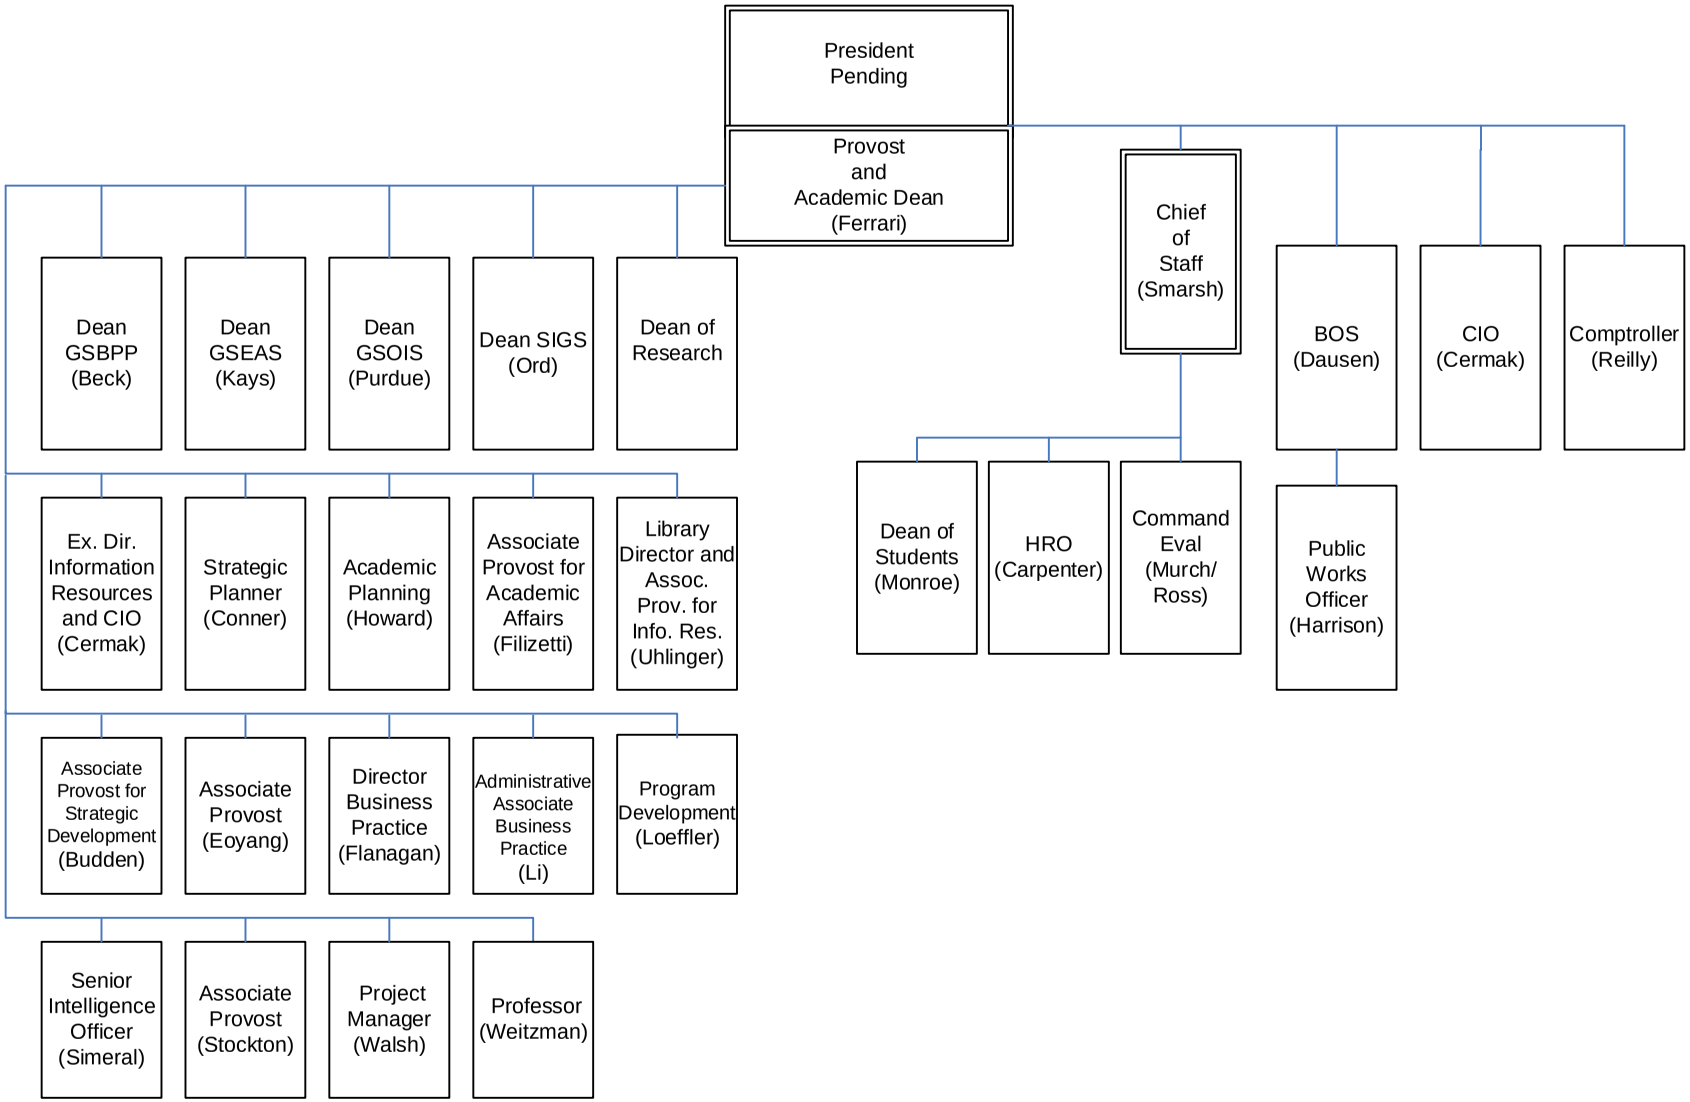
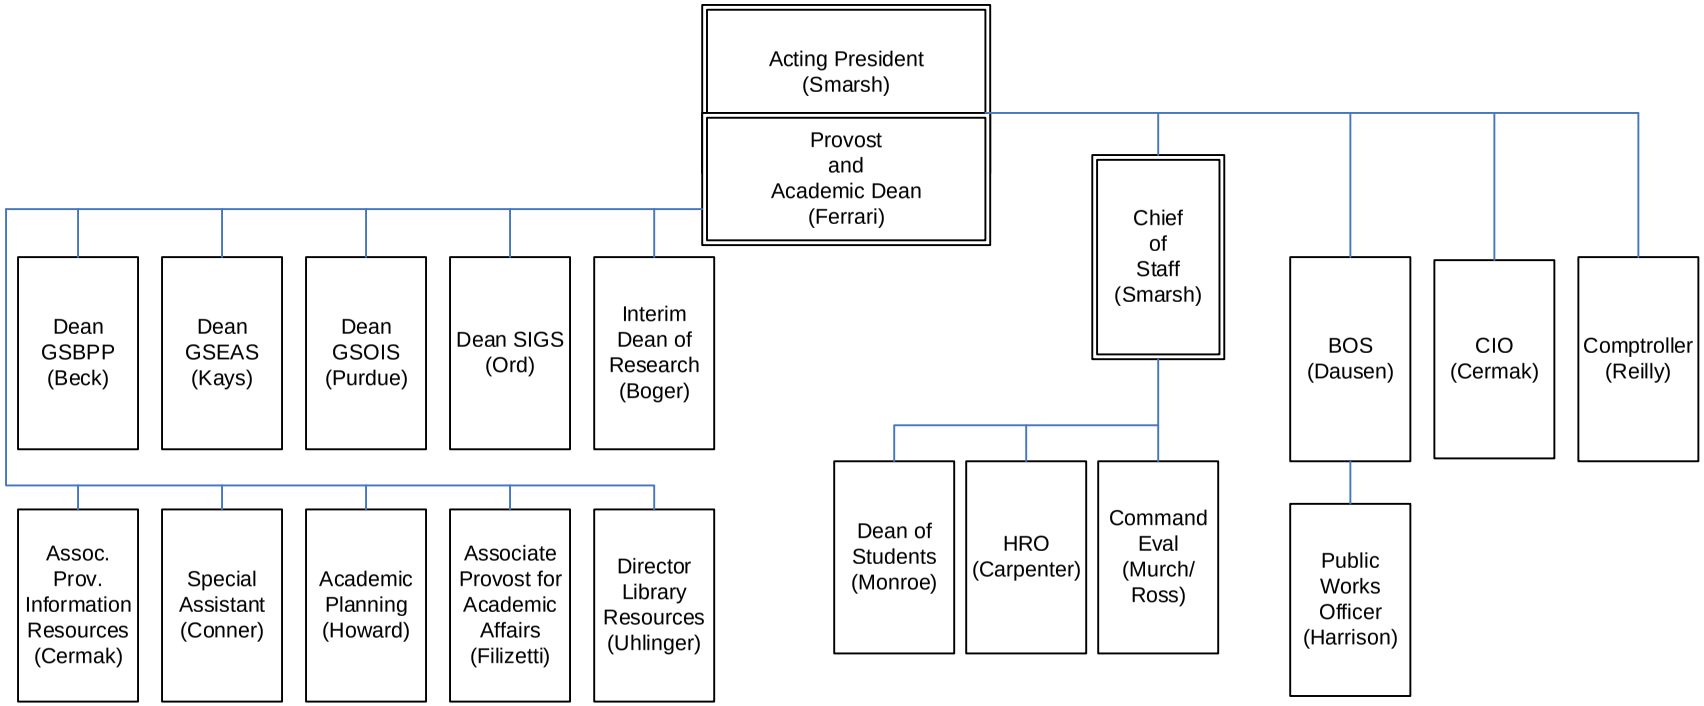
Appendix C: July 2006 Organizational Chart



Appendix D: Proposed Organizational Chart

Naval Postgraduate School
Executive Level
11/7/2006



Appendix E

Naval Postgraduate School
Monterey, California

Associate Provost for Finance and Administration
Position Description

Associate Provost for Finance and Administration: The Naval Postgraduate School seeks an Associate Provost for Finance and Administration to provide dynamic leadership for the financial and administrative areas of the university. As the chief academic financial officer, directs and oversees the institution's business and other support functions, to include Budget Office, Business Policies, Faculty Personnel, Comptroller's Office and other treasury functions (Payroll, General Accounting, Contracts and Grants, Cashiering, etc), Purchasing. Ensures that business transactions and policies and procedures meet the University's short- and long-term goals and objectives. Responsibilities of this position include development and oversight of financial data systems, and reporting tools for effective analysis; and coordination of internal/external information reporting. The scope of this position also includes development of close working relationships with the academic and administrative areas of the institution, including providing management information to ensure budget transparency and accountability.

Duties and responsibilities:

1. Oversees the budgeting, finance, and administrative service areas.
2. Interacts with the university community and NPS stakeholders regarding institutional financial plans and policies.
3. Participates with the Provost and other senior officers in institutional planning, policy development, and priority-setting.
4. Ensures compliance with all regulatory and funding agencies and the rules of accrediting bodies by continually monitoring operations, programs, and physical properties; initiates changes where required.
5. Through the Provost, works with the Board of Advisors on financial issues of the institution.
6. Reviews and analyzes major contractual obligations of the institution.
7. Develops and carries out the mission statement of the business and finance division; formulates goals and objectives for the division in accordance with the goals of the university.
8. Provides leadership and direction to the units which report to and/or are a part of the division.
9. Other job-related duties as assigned.
10. Developing fiducially responsible budgetary models and procedures to empower achievement of the goals of academic and administrative units.

11. Working with faculty and staff in a transparent and open manner.
12. Cultivating an environment of committed, top-quality service to meet student, faculty and staff expectations and to achieve NPS goals.

Knowledge, skills, and abilities required:

- Knowledge of the goals, objectives, structure and operations of a research university.
- Ability to establish, direct, and integrate the business, finance, and human resources operations and programs of a research university.
- Ability to foster a cooperative work environment.
- Knowledge and understanding of the mission, goals, organization, and operational/financial infrastructure of a research university.
- Knowledge of human resources concepts, practices, policies, and procedures.
- Knowledge of institutional policies and procedures, regulations and bylaws, and the legal environment within which they operate.
- Skill in examining and re-engineering operations and procedures, formulating policy, and developing and implementing new strategies and procedures.
- Knowledge of accreditation and certification requirements and standards.
- Strategic planning skills.
- Strong interpersonal and communication skills and the ability to work effectively with a wide range of constituencies in a diverse community.
- Ability to analyze and solve problems.
- Ability to review and assess the operational and financial viability of new and existing contractual arrangements and grant proposals.
- Knowledge of the structure, operations and requirements of federal financial regulatory and funding agencies.
- Ability to develop, plan, and implement short- and long-range goals.
- Employee development and performance management skills.
- Knowledge of investment strategies and techniques.

Education and experience: An advanced degree in a relevant field (e.g. MBA) and five years of experience (preferably in higher education) in administrative positions of substantial responsibility in resource management: personnel, budget, finance, and administrative services. Knowledge of Department of Defense contracting, budgeting, financial operations, personnel, accounting helpful. Experience in development, and implementation of administrative systems desired. Leadership skills and strong presentation and communication skills are a must. Strong statistical and analytical skills and knowledge of continuous improvement processes are essential.

Type of Appointment:
The Associate Provost for Finance and Administration reports directly to the Provost.

Salary:
Salary commensurate with education and experience. Excellent health and retirement benefits.

The Naval Postgraduate School: NPS is a graduate and research-intensive university offering Masters and Ph.D. degrees in the sciences, business, engineering, and international studies. Students include Department of Defense employees and military officers from the U.S. and 56 foreign countries. NPS is located on the Monterey Peninsula, about 120 miles south of San Francisco. Further information about NPS can be found on the school's Web page: http://www.nps.edu .

Applicants should submit a letter of interest, current resume/ vita and complete contact information for three references by mail to Erin M. Elizondo, Office of the Provost, Naval Postgraduate School, 1 University Circle, Monterey, CA, 93943, emelizon@nps.edu

The Naval Postgraduate School is an Equal Opportunity Employer. U.S. Citizenship is required.

Appendix F

DRAFT

FROM: Provost Leonard Ferrari
TO: Deans, Associate Provost for Academic Affairs, Special Assistant to the Provost, Director of Academic Planning, Executive Director of Information Resources and CIO, Director of Library Resources
SUBJECT: Organizational Clarity

One of the recommendations in the Administrative Affairs Report of last month had to do with the lack of perceived clarity in our organizational structure. To address this concern, the Administrative Affairs Implementation Task Force has recommended that the institution develop and/or update current organizational charts and position descriptions for the major academic and administrative areas of NPS. As leaders of one or more of these areas, please provide a current organizational chart for the area(s) within your purview. In addition, please provide a position description for your position as well as for each of your direct reports, including contractors.

Since we need to have some common elements in our position descriptions, I am providing the template below for your consideration. The "organization and management principles" are an amalgamation of recommended principles by both the Business Practices and Administrative Affairs Committees. Feel free to modify it, as appropriate, but please use as many of the elements below as possible. Please send your submission by December 10 to Dr. Fran Horvath, Director of the Office of Institutional Research, who will compile and summarize the institution-wide information for your final review before posting.

In addition, please prepare a description of how the goals, resources, and operations of your area (s) support the NPS mission. Please provide a critical assessment of what level of resources is required, using benchmarks from other relevant organizations. Include definition of appropriate performance metrics and ways in which these findings can be routinely reported to the university community. Please send me your reports by January 10.

Thank you.

Position Description Template

Position title. Brief description of duties and responsibilities.

Organization and management principles:

1. Provides leadership and direction to the units which report to and/or are a part of the division.
2. Responsible for aligning divisional goals and objectives with those of the larger institutional mission of education and research.
3. Development of plans and policies within the division consistent with NPS plans and policies.
4. Development of performance indicators that describe the division's operations and progress. To the extent possible, research university comparison groups should be used to provide reference and context. Periodic reporting to the campus community on the division's contributions to supporting the institutional mission.
5. Managing business practices that maximize accountability at the appropriate level within the organization. Demonstrating commitment to continuous improvement practices. Rationalizing policies, processes and programs in terms of their effective and efficient support of NPS mission requirements. Feedback as to the effectiveness of policies, process, and programs should be routine.
6. Responsibility for professionalism in hiring, management, development and transition practices:
    a. position descriptions must be developed.
    b. positions should be advertised and competed in open searches whenever practical.
    c. performance measures must be developed and implemented.
    d. performance should be formally assessed and feedback clearly communicated.
7. Communications. Communicating regularly within the division as well as across the institution about plans, current events, etc. Enlisting consultation with major constituent and stakeholder groups on a regular basis. Supporting NPS-wide communication efforts.
8. Working with faculty and staff in a transparent, open, and collegial manner.
9. Cultivating an environment of committed, top-quality service to meet student, faculty and staff expectations and to achieve NPS goals.

Knowledge and skills required: brief description of knowledge, skills and abilities required

Education and experience: description of educational background, degree level, certification, etc. and professional experience (years of experience, levels of experience, range of experience, etc.).

Type of appointment: Faculty, staff, contract -- reporting to which position.

Salary: GS level or commensurate with education and experience.

18 September 2006

AD-HOC COMMITTEE ON ADMINISTRATIVE AFFAIRS
REPORT TO THE PROVOST

BACKGROUND

Provost Leonard Ferrari established two committees in July 2006 to advise him regarding the improvement of administrative structure and processes at the Naval Postgraduate School (NPS). The Provost's Ad Hoc Committee on Administrative Affairs was established to advise the Provost on matters of administrative structure of NPS. The second committee, the Provost's Ad Hoc Committee on Business Practices, was established to provide recommendations regarding the improvement of business practices at NPS. A copy of the charge to the Administrative Affairs Committee is provided in Appendix A, together with a list of Committee members.

During the NPS Provost Search process, the Provost heard the campus community voice concerns about a number of issues relating to administrative structure and processes. Specifically, questions were often raised about the number of administrative positions at NPS and how they are created and filled. Concerns were also voiced about the resource allocation process - how priorities are set, how allocation final decisions are made, etc. In addition, members of the NPS community raised questions about the complexity of business practices at NPS and the need to improve customer service.

The Naval Postgraduate School has changed significantly over the past five years. The institution established four academic schools and three major research institutes. The external research program has increased more than 400 percent. Our direct support from the Navy has also increased and will continue to do so in the next two years. Fewer than 50 percent of the residential students are Navy, and there are more than 800 students enrolled in graduate certificate and degree programs. NPS teaches thousands of U.S and international students in its short courses. NPS supports many sponsors of research and education programs not only in the Navy and Department of Defense, but in all military branches and many federal agencies. Many base support functions are now performed by the Commander Naval Region Southwest. Despite this tremendous growth and significant change, little attention has been paid to our business processes and the support organization to ensure that it remains properly sized and aligned with the change in mission and focus. The Committee questioned whether we have created expectations that exceed what can be delivered.

Additionally, it is apparent that we may not have communicated well enough about the changes that have been made in the organization to adopt to this rapid growth. Thus, the Committee believes that it is both important and appropriate that NPS now turn our attention to ensuring that the administrative organization is sized properly to meet the mission needs of the school. The organization and our business processes need to be streamlined, effective, and efficient to support the academic mission.

COMMITTEE CHARTER

In accordance with our charter (Appendix A) the Committee considered the following questions.

a. What are the critical admin functions?
b. Is there functional duplication?
c. Is there a better way to organize administrative functions and reporting structures?
d. Are there individuals within schools who also support central admin functions?
e. Are faculty utilized effectively in service functions
f. Where is there dysfunction in the administrative support organization
g. What other issues should the committee tackle related to admin support?

The Committee focused its attention on questions a. and c. above. This report makes specific findings and recommendations in these two areas. A set of principles for a properly functioning organization as well as recommendations about how best to address the other questions within a specified timeline are proposed.

The Committee first examined the people and organizations that reported directly to the Provost as of 30 June 2006 with a view towards streamlining the organization, creating a more effective structure, and reducing cost. From there, based on the existing organizational chart and knowledge of the academic mission, the Committee identified the critical administrative functions that are required to most effectively and efficiently support the efforts of the four schools to accomplish the NPS mission. In cases where there appeared to be duplication or overlap of function in positions that directly report to the Provost, we recommended alignment of like functions. This will permit follow on review to determine if some activities can be consolidated and eliminated. The Committee was not able in the time frame allowed to do an in-depth review of the organizational structures and on-going activities of the people in them within the functional areas or within the Schools. The Committee believes that its recommendations for aligning people with the key functions will allow these organizations to find cost savings and/or more effective operations. The Committee recommends that those organizations be charged with identifying how their mission, goals, resources and organizations are aligned with and support the NPS mission. The Committee also recommends that those organizations critically asses the level of resources required and the skills of the people that they currently have to meet the requirements. An action plan to resolve any issues can then be reviewed with the Deans and Provost. This assessment should include using benchmarks from other relevant organizations, the development of appropriate performance metrics and ways in which these findings can be routinely reported to the Provost, Deans and the broader university community.

The Committee also considered the decision-making process at NPS and makes recommendations for better alignment, structure and processes related to decision-making. This included redefining the purpose and membership of the Executive Council and formalizing the Provost Council.

The Committee supports a resource allocation and budgeting process aligned with the NPS strategic plan. The Committee considers a total review of the operational budgeting process as a very high priority. The ability of NPS to maintain meaningful financial management, live within budgets, establish resource allocations in the best interest of the University, provide management tools at the Department chair and Dean levels, and establish credibility with the faculty is dependent on making these improvements as soon as practical.

The following are the findings and recommendations of the Committee for the Provost's consideration.

FINDINGS

- Despite the tremendous growth identified above, little has been done to significantly transform the organizational processes, structures, roles and responsibilities and alignment to respond to the growth in mission. It is time to ensure that all services and organizations are properly aligned and resourced to provide effective, efficient support to the four schools and the NPS mission. Services and functions that are duplicative, redundant or not aligned with the NPS mission must be eliminated.
- We have not always invested in the development of the people and skills to perform or support the NPS mission. In general, we acknowledge that we have good people who are trying to do the right thing, but the "system" does not always allow them to be successful. A proper review of the skills and talents that each person has to achieve their goals needs to be done and a development program established.
- Communication is critical, particularly in times of growth and change. Some of the perception about growth in the administrative functions and organizations may be attributed to a lack of understanding and effective communication. External communication is vital to the various audiences that NPS must work with and depends on continued support for the university. Internal communications is vital to enabling change to take place in a positive way. In addition, good communications will help the Provost achieve the overall goals of NPS, create a since of pride and camaraderie among all the employees of NPS, and encourage employees to participate in the continual improvement process.
- The following are the major functions that are essential to the accomplishment of the NPS mission.
    - School Deans
    - Research Dean
    - Academic Affairs
    - Finance and Administration (Academics)
        - May include some facilities coordination functions
        - Academic business processes
        - Should have oversight of all sources of funding
        - Human Resources (was viewed as critical however it may be best aligned with Finance and Administration due to the Region/HRO organization at NPS)
    - Strategic Planning
    - Information Resources

    - Library
    - Communications
- There are a number of people charged with working across schools to develop new research and education programs, either for a customer group (e.g., HLD/S) and/or a focus area (e.g., Intel, HLS/D) and/or a geographic region (e.g., Washington DC area). These people report to Deans, Associate Provosts, and the Provost. Many have this tasking as a type of collateral duty in addition to their role in teaching, research or service.
- The existing decision-making structure, consisting primarily of the Executive Council, does not lend itself to the appropriate discussion of important initiatives and strategic direction for the academic mission. The membership, structure and purpose of the committee must be updated and documented.
- The role of the Faculty in decision-making is not clearly defined or understood.
- We found that while we all understand principles of good organizational design and functioning, we do not always practice them due to extenuating circumstances.

PRINCIPLES FOR GOOD MANAGEMENT AT NPS

The Committee developed principles for good organizational design and management that it believes must be adhered to at NPS provided in Appendix B. The Committee acknowledges that these should be inherently obvious. However, as they are not always routinely and consistently followed at NPS, the Committee wants to emphasize their importance. The Committee's recommendations are consistent with these principles, and the members of the Committee are committed to following them within their own organizations.

RECOMMENDATIONS

These recommendations are made in priority order and are generally sequential. Although work may be done on them simultaneously, many require one or more of the preceding recommendations to be completed before they can be done.

- Develop and articulate an academic strategic vision for NPS. Develop a long-range plan to achieve the vision. Establish a multi-level task team to develop the strategy that can then be reviewed by the Provost Council. Due by 15 January.
- Re-define the role and membership of the Executive Council. Map the decision-making process at NPS so that a more thorough review can be made. Formalize the role of the Provost Council. Define the role of the Faculty Council in the decision-making process. Due by 15 December.
- Define the end-state for management of NPS. This may include organizational structures, the principles for organizations discussed above and outcome measures. Establish roles and responsibilities, procedures and processes to clarify, guide and enable the organizational structures. Develop a transition plan for getting to that end-state. Establish a Task Team to develop and bring forward the plan. Task Team should report out by 15 December.
- Appoint a Communications Task Team to develop a strategic communications plan and to develop the appropriate organization and reporting structure. Assess the current organizational assets to determine capability to achieve the goals to support the mission. Task Team should report out by November 15.

- Assign a Task Team to consider the functions of Finance and Administration required to support the academic mission. This might incorporate some functions currently being performed within Academic Planning, Strategic Planning, HR, and Comptroller and in other areas at NPS. Once the function is better defined, and in accordance with the management plan, consider the best reporting structure. Task Team should report out by November 15.
- Develop position descriptions for all key positions by 15 December.
    - For those individuals assigned to new program development, assign specific performance metrics and/or require that after some specified period of time, some percentage of their salary will be obtained from reimbursable research or education. Many currently have projects that support some or most of their salary.
- Charge the managers of all key organizations, including the schools and the departments, to identify how their mission, goals, resources and organizations support the NPS mission by 15 December. They should critically assess what level of resources are required using benchmarks from other relevant organizations as well as NPS information. They should also develop appropriate performance metrics and ways in which these findings can be routinely reported to the university community. Formalize the role of the NPS leadership in discussions and prioritization of activities and resources.

CONCLUSION

As a result of the recommended realignments and elimination of duplication, the Committee estimates that approximately ten positions could be eliminated immediately from the Provost's staff resulting in a potential savings of more than $1 million per year. This reduction in overhead in the Provost's staff will provide the impetus for other support function leadership to reduce duplication or unnecessary positions within their areas.

The Committee believes that if NPS leadership accepts these recommendations and acts on them in the suggested timeframe, then NPS will be better able to function and to respond to the growth and change that is sure to continue. The Committee recognizes that it has been a considerable time since a thorough review has been done like the one we are proposing. There is no intent on the part of the Committee to suggest anyone has done anything wrong. As mentioned in the opening of this report, a very large amount of change at NPS has taken place. This review is timely and welcomed for everyone to make NPS a better place to work for all. The Committee also understands that this is a lot of work that will take institutional support and commitment. The Committee fully supports the Provost as he makes these changes and looks forward to taking the next steps.

Appendix A

AD-HOC COMMITTEE ON ADMINISTRATIVE AFFAIRS
COMMITTEE CHARTER

Dear Colleagues:

During the interview process for Provost, many faculty members suggested that the first order of priority for the incoming Provost would be an examination and possible restructuring of centralized administrative support. Several faculty were present at several of these discussions. Given our current budget situation, I have decided to form an Ad Hoc Committee on Administrative Affairs to review and make suggestions on the central administrative support functions. I would recommend that the committee meet once or twice to review the current status and that we then convene a retreat, in the very near future, to develop a plan and any modifications to the current administrative support structure. I would like to attend the first meeting of the committee for a few minutes and then attend the retreat.

The Committee Membership:

Dr. Julie Filizetti, Associate Provost for Academic Affairs, Chair
Dean Ord, SIGS
Dean Purdue, GSOIS
Dean Beck, GSBPP
Dean Kays, GSEAS
George Conner, Strategic Planning
Dr. Dan Boger, Chair IS, (Chair Provost Search Committee)
Dr. Tom Housel, (Faculty Representative)
Dr. Christine M. Cermak, Executive Director, Information Resources and CIO, *ex officio*

An incomplete list of issues, in no particular order:

- What are the critical admin functions?
- Is there functional duplication?
- Is there a better way to organize administrative functions and reporting structures?
- Are there individuals within schools who also support central admin functions?
- Are faculty utilized effectively in service functions?
- Where is there dysfunction in the administrative support organization?
- What other issues should the committee tackle related to admin support?

I do not expect the group to examine the internal structure of major support organizations. At this point in time, I am primarily interested in examining the central admin support organization for effectiveness and duplication. Please feel free to call me at any time to discuss the role of this important committee. Let me know the data you need from the Provost Office. I could have added several other individuals to this

committee but I want to keep the group as small as possible but still able to cover most aspects of central admin. If there is someone who needs to be added please let me know ASAP. Thanks for your support and willingness to work with me on this important issue.

Best regards,

Leonard Ferrari, PhD
Acting Provost
Associate Provost/Dean of Research
Naval Postgraduate School

Appendix B

AD-HOC COMMITTEE ON ADMINISTRATIVE AFFAIRS
PRINCIPLES FOR GOOD MANAGEMENT AT NPS

Developed by the Provost Committee on Administrative Affairs
September 2006

- Internal NPS organization, policies, processes and programs must be rationalized in terms of their effective and efficient support of NPS mission requirements. Feedback as to the effectiveness of policies, processes and programs should be routine.
- Policies/services must be aligned with NPS mission needs.
- People deserve to have only one boss and to be accountable for their responsibilities.
- Span of control at every level must be manageable.
- Organizations should be designed to be effective and efficient.
- Faculty should have a clear role in the governance of NPS.
- NPS must be professional in our hiring, management, development and transition practices.
    - Position descriptions must be developed.
    - Positions should be advertised and competed in open searches whenever practical.
    - Performance measures must be developed and implemented.
    - Performance should be formally assessed and feedback clearly communicated.
- NPS must be committed to professional practices at all levels in the organization: effective communications, planning, accountability, customer service, continuous improvement and recognition.

SUBJECT: LMI Organizational Structure Analysis Report

Enclosed please find LMI's final report on the Organizational Structure Analysis for NPS. As you know, President Oliver and Provost Ferrari have asked that we move ahead with implementation of the report's recommendations.

A brief description of the consulting engagement and subsequent report will be posted on the intranet with a link to the report and organizational chart under Administration.

A modified version of administrative meetings follows:

President's Senior Staff – This is a weekly meeting chaired by the President, consisting of the administrative decision-making body for the institution: President, Executive Vice President and Provost, Vice Provost for Academic Affairs, Vice President and Dean for Research, Dean of Students, Vice President for Finance and Administration, Senior Military Assistant, Vice President for information Resources and CIO, Director of Human Resources.

President's Advisory Committee – existing Cabinet Lunch (currently on Thursdays) will be renamed and serve as the President's Advisory Committee. The Dean of Students will be added to the group and the Committee will continue to meet at lunch on Thursdays.

Executive Council – the existing Executive Assembly will be renamed the Executive Council and will meet monthly. Meeting summaries will be posted on the intranet.

Provost's Council – This Council will meet weekly and is chaired by the Executive Vice President and Provost. This is the decision-making body for academic programs, plans and processes. Its membership includes the Deans, Vice Provost for Academic Affairs, University Librarian, Vice President and Dean for Research, Executive Associate to the Provost, Vice President Information Resources and CIO, and other administrators as appropriate. Meeting summaries will be posted on the intranet.

Resource Advisory Committee – This committee meets bi-monthly to provide the President and Executive Vice President and Provost updates on the financial status of the institution. Membership

also includes the VP and Dean for Research, Vice President for Finance and Administration, and Vice Provost for Academic Affairs.

A search for the Vice President for Finance and Administration will be conducted soon. Once that position is filled, a Business Services Task Force will be formed and will meet weekly to address issues of NPS business processes. The Vice President for Finance and Administration and the Senior Military Assistant/Chief of Staff will chair the committee. Membership will include Comptroller, Faculty Council representative, faculty representation from the major academic areas, contracting, purchasing, facilities, security, personnel, command evaluation, and other directors, as appropriate. Meeting summaries will be posted on the intranet.

If you have any questions, please let me know. Also, if you have any suggestions about how we might better communicate the changes to the campus, please let me know.

DRAFT

LMI
GOVERNMENT CONSULTING

MARCH 2008

NOTICE:

THE VIEWS, OPINIONS, AND FINDINGS CONTAINED IN THIS REPORT ARE THOSE OF LMI AND SHOULD NOT BE CONSTRUED AS AN OFFICIAL AGENCY POSITION, POLICY, OR DECISION, UNLESS SO DESIGNATED BY OTHER OFFICIAL DOCUMENTATION.

Executive Summary

The Naval Postgraduate School (NPS) is a Department of Defense (DoD) graduate education institution operated by the Department of the Navy (DoN). The NPS's mission is to provide high-quality, relevant, and unique advanced education and research programs to military officers and defense civilians.

Unlike many government and defense organizations, NPS faces the dual challenge of operating as a military organization while supporting its mission as an educational and research institution. NPS has taken a very pro-active, consultative, approach to its challenges including completing an institutional strategic plan, *A New Vision for the Future*, which defines ambitious goals and clear metrics to measure progress. This strategic plan been endorsed by the Board of Advisors, the Chief of Naval Operations, and the Secretary of the Navy. NPS has conducted internal studies of their organization and formed an implementation task force to address a number of changes in both structure and executive level meetings on the campus.

NPS contracted with LMI to review the NPS organizational structure to determine the most efficient organization to support both the graduate education and research missions, while maintaining the statutory requirements of the DoN. The objective of the study was to determine if positions should be redesigned, realigned or renamed to more effectively conduct and describe the functions performed. Due to time and resources constraints, the LMI study was limited to focusing on the direct reports to the President and the Provost; conducting a thorough analysis of the organizational structure of the upper management of the Naval Postgraduate School; and, conducting interviews, reviewing current policies/directives, as necessary.

To assist NPS in meeting their challenges, LMI examined the strategic, business, and organizational challenges that face NPS. The study concluded NPS needs to ensure that its administrative governance structure is organizationally aligned to support its mission effectively, while at the same time meeting its DoN requirements.

We identified four major factors that impact NPS current operating environment:

1. NPS has recently reorganized from an advanced educational institution with one dean of academics to that of five deans who serve as both academic heads of schools and business managers. While the deans play an important role at NPS as leaders of the academic mission, the management structure is relatively new and NPS is still adjusting to this change in organizational alignment and responsibilities.

2. NPS is undergoing significant growth, particularly in the area of research and sponsored programs. While academics can play a vital entrepreneur role in developing new research, there is always the potential to bring in large research projects with little administrative oversight, thus resulting in an NPS infrastructure that cannot easily keep up with the new demands.

3. NPS has dual culture as it is comprised of a primarily civilian academic staff with the primary mission of educating Military Officers, and at the same time, it is a Department of the Navy military organization. This can lead to tension between those at NPS who relate more to the military mission side and those who relate more to the civilian academic side. This is exacerbated by faculty and research staff who may not understand government rules and business environment.

4. The Office of the President of NPS has undergone significant change in roles, responsibilities, personalities, and the position of the President changing from being an active duty Admiral to a retired Admiral. All these changes have resulted in an Air Force Colonel being the ranking military officer at NPS, highlighting the need to ensure that the President's role and those in the Office of the President are clearly defined.

Based on the results of our study, and building upon the excellent prior work of the internal review team and broad consensus on the vision of the strategic plan, we concluded that NPS should reorganize and clearly define the responsibilities of some senior administrative positions, and those reporting directly to the Office of the President, in order to enable it to achieve the organizational effectiveness and efficiency envisioned by the strategic plan.

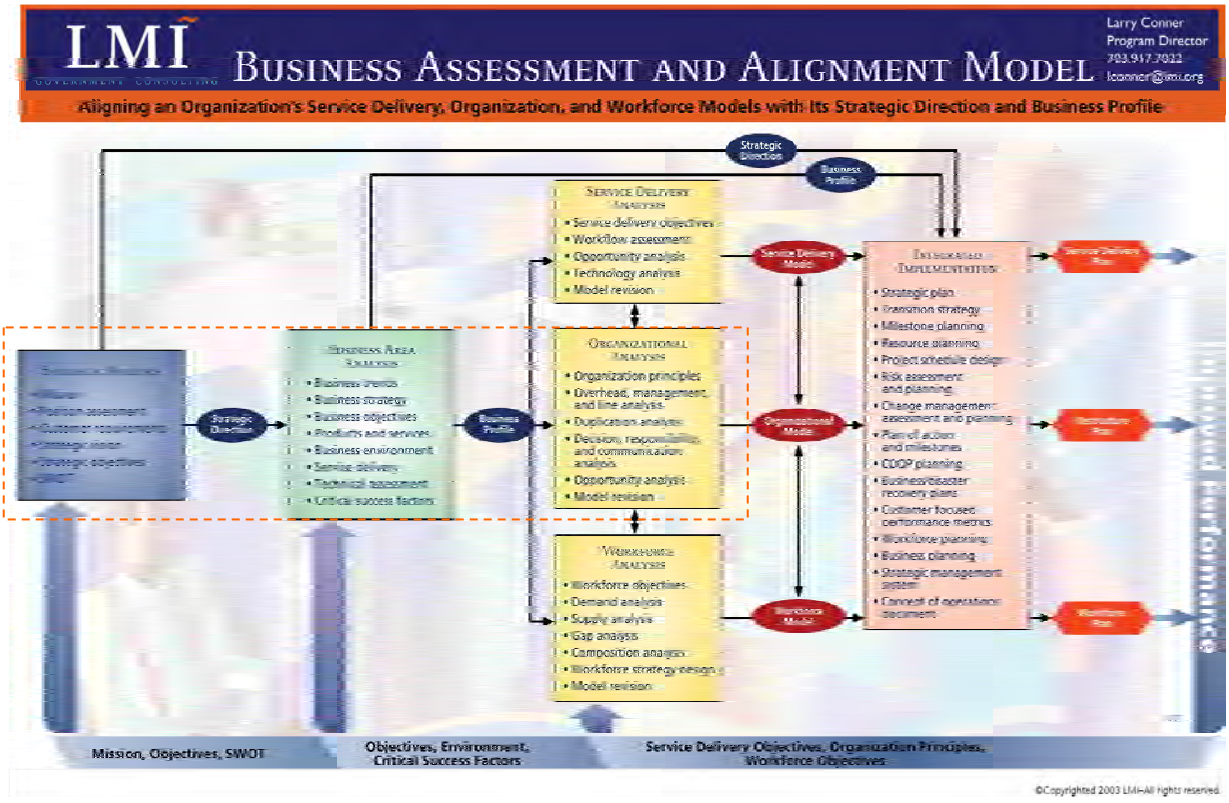
Figure

Chapter 1
Analytical Approach

BUSINESS ASSESSMENT AND ALIGNMENT MODEL

LMI used elements of the Business Assessment and Alignment Model (BAAM) to assess the organizational effectiveness of Naval Postgraduate School (NPS) shown in Figure 1-1. BAAM is a systematic and integrated approach to assessing the effectiveness and efficiency of organizational structures. By following the steps in the BAAM—analyzing strategy, business areas, and organizational structure—we gathered information for addressing NPS's need to improve its organizational structure. These steps further ensure that the recommended strategies are based on the strategic direction and business profile of the organization.

Figure 1-1. Business Assessment and Alignment Model



We integrated the BAAM framework into a tailored approach to analyzing the NPS structure, which we describe in the following subsections.

Strategic Analysis

In any organizational assessment, we need to understand where the organization is today and where it is going, its strengths and weaknesses, and the requirements of its customers. A strategic direction sets the starting point or baseline for the assessment and guards against achieving short-term objectives at the expense of long-term success. It also begins to build the baseline that guides the remaining BAAM assessments.

Our strategic assessment of NPS included understanding the current environment in which it operates, identifying significant changes in the past 3 to 5 years, understanding external constraints, and documenting its strategic direction.

Business Area Analysis

The BAAM provides an understanding how an organization functions as a business, particularly its essential business lines and its products and services. It also supports an understanding of the core and supporting business processes in the organization, relationships with other supported or supporting organizations, and functions performed. This description supports an outcome- or product-focused assessment and reveals key business factors that drive the nature and operations of the organization.

To determine how NPS functions as a business, we identified its primary functions and validated its essential business lines, products, and services. We also assessed whether NPS has the appropriate supporting business processes.

Organizational Analysis

The purpose of an organizational analysis is to identify and diagnose organizational problems (opportunities for improvement) and find methods to mitigate or eliminate them. Introduction of new technologies, changes in products and services, and business process initiatives are usually opportunities to streamline and improve the organizational model. The BAAM structure ensures that the analysis is business driven and fully integrated, and that all relevant aspects of the business are addressed.

At NPS, we focused on the organizational structure of its administration, particularly the roles and functions of the Office of the President and those that report directly to the Office. We also sought to determine if the structure effectively supports the required business processes.

METHODOLOGY

We began by conducting background research on NPS and other military and academic organizations. That research included an environmental scan of NPS as well as benchmarking similar organizations. We accessed several sources for information:

- NPS public website for processes, procedures, and history.
- Previous NPS studies that focused on the changes affecting its organization and how it could use those changes to NPS's advantage. In those studies, NPS identified key questions and potential suggestions on how it could be more successful in the future.
- Academic and government best practices. We analyzed the executive-level organizational structures and operational processes in other defense academic organizations, public universities, and Federal agencies.

Additionally, we conducted qualitative analyses using information gained from in-depth interviews with senior NPS leaders. These interviews focused on the strategy, business, and organizational aspects of NPS. (See Appendixes A and B for our interview schedule and questions.)

Analysis

This section presents the findings that emerged from our research and interviews. It addresses the topics of strategy, business, and organization from the perspective of the academic, administrative, and executive components in NPS.

Strategy

Although NPS is operating during a time of transition, it has a clear vision of how to move forward. The results below suggest that NPS has articulated a coherent and sound strategy for moving the organization forward in the right direction, and that it should continue to pursue that strategy.

Operating Environment

NPS provides unique, professional, military-relevant graduate education that meets the highest academic standard while also responding to the dynamic educational and research needs of the Department of Defense (DoD).

NPS provides education to a diverse student body. As of 2006, nearly 2000 students attend NPS in residence, and 850 additional students were enrolled in off-campus degree or certification programs. Approximately half of the students at NPS are Naval officers, and the rest of the student body is composed of officers

from the other branches of the military, civil employees of the United States federal, state and local government, as well as officers and civilian employees from over 20 other countries.

NPS fulfills its teaching and research needs through its graduate schools and research institutes. NPS consists of four graduate schools (International Graduate Studies, Business and Public Policy, Operational and Information Sciences, and Science and Engineering). The four research and education institutes at NPS are National Security Institute, Meyer Institute of Systems Engineering, Cebrowski Institute, and the Modeling Virtual Environments and Simulation Institute. NPS also has numerous additional education and research centers.

NPS faces the dual challenge of operating as a military organization while supporting its mission as an educational and research institution. As such, it works within two distinct cultures. NPS strives to be recognized not only as an academic leader among peers in the academic community, but also as a leader in the military educational community. Those we interviewed stated that the research at NPS is nationally recognized as high-quality by its academic peers. At the same time, some at NPS suggested that the Navy does not treat NPS like a flagship program, and expressed the desire to have a higher standing within the Navy, particularly as it relates to resource allocation. This has operational implications as well. On the one hand, NPS must follow the statutory obligations placed on it as a military institution. At the same time, it attempts to follow academic standards and processes typical to a high-level academic research institution. This is complicated by the fact that NPS is funded by the DoN to provide graduate education to Naval Officers, but it also receives tuition from the other uniformed services, DoD Civilians, and international countries as well as research funding from non-government agencies and organizations.

NPS has recently undergone significant changes, and is moving forward after a time of relative turbulence. The leadership of NPS has also undergone a significant shift. Historically, NPS was led by a Navy Admiral serving as it superintendent, who rotated after his or her term ended. NPS revised the leadership model, and now a civilian acts as President of NPS. This brought about several changes in the leadership at NPS:

- During the shift both the current Executive Vice President as well as the current Chief of Staff served as Acting President of NPS.
- The senior military official at NPS is no longer a Navy Admiral, but an Air Force Colonel on rotation to the NPS as part of a Memorandum of Understanding between the Navy and the Air Force.

Other near recent events at NPS contributed to the turbulence felt on campus. First, the leadership of all the graduate schools fell under one dean, but a recent shift assigned each school an academic dean as its head. Second, NPS continued growing its research portfolio, and is requiring more of the people and facilities

that support its research. Third, NPS had been reviewed for Base Realignment and Closure (BRAC), and the Memorandum of Understanding with the Air Force helped dispel the BRAC threat.

NPS Strategy Forward

The different groups of individuals that we interviewed had a unified view of the NPS strategy. Everyone agreed that the NPS Strategic Plan points in the right direction. Several suggested that the plan was an important step in unifying NPS to move forward, but NPS must focus on implementing the plan. Most suggested that the plan could be implemented by ensuring the proper resources are allocated to the strategic priorities and by linking the strategic plan to the operating plan and budget.

Business

The NPS staff clearly understands that its core business is academics, and that everything else at NPS exists to support this mission. The administrative and business processes that support the academic side of NPS, particularly the budget processes, are less understood. To be fully successful, NPS needs to define its business processes more clearly, particularly in terms of the budget and resource allocation processes.

Core Business

The core business of NPS is academics, which includes teaching and research. All of the other functions at NPS serve to support this mission. All individuals we interviewed clearly support this view.

Financial and Budgetary Process

The individuals we interviewed expressed concern about the apparent lack of clarity in the decision-making process in general, but in the resource allocation and budgetary processes in particular. Some suggested that transparent and simpler processes would lead others to perceive fairness in the decision-making process. Some even noted that there is no incentive to manage to a budget because a few individuals will reconcile all the budgetary issues. Finally, others commented on the problem with apparent “haves” and “have nots.”

Most agreed that financial and budgetary processes are an area for improvement, and suggested specific solutions. Some suggested that NPS should clearly define its program, planning, and budgeting system cycle. Others suggested programmatics should precede the budget, and a few even suggested that NPS needs a financial model for academic activities, which includes nine months of funded teaching. Some stated the deans do not appear to be involved in some decision

making and business processes. A few indicated the deans should be empowered for business and financial management.

Other Internal Process Issues

During the interviews, some individuals noted other elements of business processes as areas of concern, but not to the same extent as the budget process. For example, a few commented that the confusion about the processes could be because NPS does not have set processes despite being nearly 100 years old. Some stated NPS needs internal processes to control, manage, and obtain support for administrative support functions. This might be attributed to the two distinct cultures that exist at NPS, which places tension between the academic business processes and the required military/government business processes. A few commented that NPS lacks a centralized policy on distance learning.

Resources

The individuals interviewed suggested that NPS does not have enough resources to enable success, though some explicitly stated that resources are not a problem. Some mentioned the difficulty in attracting high-quality, mid-level managers to NPS, while others suggested that the administrative staff is not customer focused. Others expressed frustration with the culture of the Comptroller's office, stating that it seems the rules and procedures change frequently.

Organization

The interviewees expressed a desire for NPS to have an organizational structure that accounts for its business processes, with clearly defined roles and responsibilities. To be successful, NPS must clearly define the senior administrative roles as well as those of the Office of the President.

Roles and responsibilities

Most of the individuals we interviewed agreed that there is confusion and lack of clarity about the roles and responsibilities of many NPS positions, especially those involved in the budgetary process. Most stated they would like to see an enduring organizational structure for NPS with clearly defined roles, though many in the academic side of NPS expressed concern about losing stature. Many stated that at times it is unclear who is in charge: "We in this room are all walking on each other's shoes." A few noted concern about the Chief of Staff in the academic decision-making structure; they want that position to be responsible for handling "military issues." Some stated explicitly that there should be a military leader for military matters.

Chapter 2
Alternatives

The primary findings that emerged from our interviews of NPS personnel was that NPS needs greater clarity in its financial and budget processes, and NPS should clarify the roles of senior administrative leaders and relationship to the Office of the President. In this chapter, we present several alternatives for redressing these issues. The first set of alternatives addresses the macro-level issues surrounding the senior administrative organization of NPS, and clarifies roles in that organizational structure. The second set of alternatives focuses on the Office of the President: it addresses the need to clarify roles in that office.

Before examining the alternatives, we briefly review the role of the deans at NPS. The core mission of NPS is academics, and all other functions serve to support that mission. As such, the administrative organizational alternatives leave the academic side of NPS largely untouched. In all of the organizational alternatives that we describe, the deans continue to serve in their crucial roles. As academic leaders of their assigned schools, the deans ensure the success of NPS. As such, their roles and responsibilities continue to impact and direct the core mission of NPS.

Within each of the alternatives described in this chapter, the deans have the following specific responsibilities as has been codified in a memorandum from the Provost dated January 29, 2008:

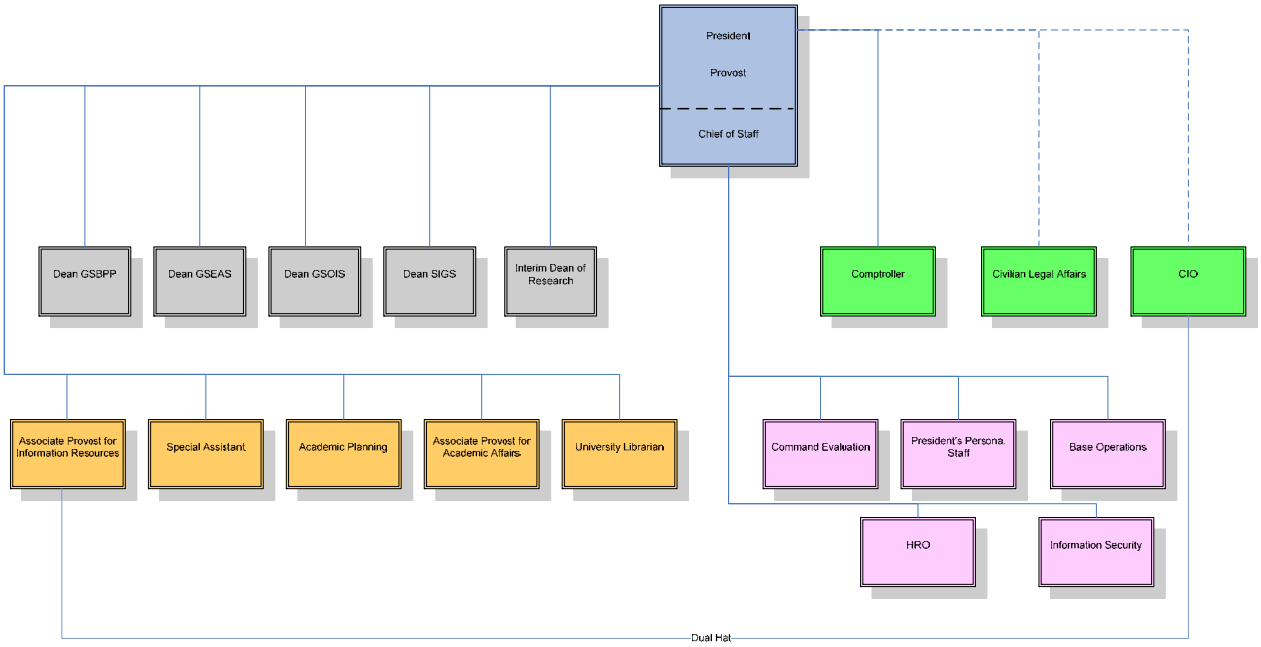
- Leadership
- Accreditation
- Budget
- Supervise and counsel
- Policy
- Liaison
- Personnel actions: hiring and promotion
- Development of curricula and programs
- Staff and faculty development
- Communication

- Meetings
- Office duties
- Other duties as assigned.

For further elaboration of the role of the deans, please see Appendix D.

ADMINISTRATIVE ORGANIZATION ALTERNATIVES

Alternative 1: As-Is



This alternative is NPS's current organizational structure. It is the baseline for assessing alternatives for improving the administrative functions at NPS.

ROLES AND RESPONSIBILITIES

In this alternative, the current roles and responsibilities at NPS are as they exist today.

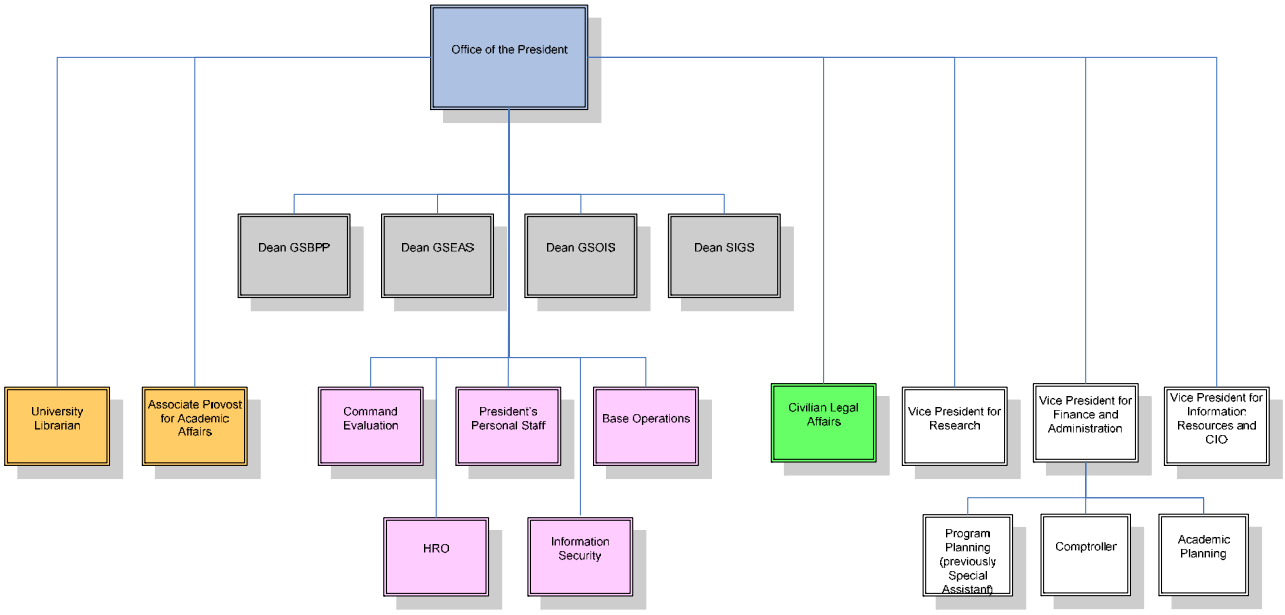
BENEFITS OF AS-IS

- No change in roles and responsibilities
- Little cultural adjustment required
- Maintains organizational stability.

CHALLENGES TO AS-IS

- Does not address perceived lack of clarity in roles and responsibilities
- Does not solidify the dual military and academic nature of NPS
- Does not address the current financial business processes.

Alternative 2: Vice President for Finance and Administration



This alternative is designed to clarify and strengthen the financial management roles and responsibilities at NPS by creating the position of Vice President for Finance and Administration. This alternative also creates a new title of Vice President for Information Resources and Chief Information Officer (CIO) as well as a Vice President for Research. It maintains the dual nature of the CIO and Associate Provost for Information Resources, but combines both duties into one title and in one location on the organizational chart, providing a simpler organizational representation of the position. In this alternative, the Vice Presidents are clearly the administrative support to the academic mission of NPS, and the deans are the leaders of that academic mission.

ROLES AND RESPONSIBILITIES

Vice President for Finance and Administration

The Vice President for Finance and Administration articulates the strategic resource direction at NPS and serves as the focal point for the financial and administrative functions at NPS. The Vice President for Finance and Administration ensures that NPS's financial decisions, business transactions and policies, and

procedures are transparent, and meet NPS's strategic goals. This person also serves as the chief financial officer for NPS, overseeing all business and supporting functions, including development of strategic resourcing plans. Those responsibilities include budget submissions, business policies, and purchasing. The Vice President for Finance and Administration also directs the business administration of NPS, overseeing the budget execution in the Comptroller's Office, Purchasing, and other treasury functions (such as Payroll, General Accounting, and Contracts and Grants). This person also works closely with the academic side and others in administrative roles at NPS. The Vice President for Finance and Administration reports to the Office of the President.

Vice President for Information Resources and CIO

The Vice President for Information Resources and CIO has a dual role at NPS: overseeing all information technology and communications services and instructional technology at NPS, and all voice, video, and data communication infrastructure and services for resident and non-resident instruction. As Vice President for Information Resources, this person oversees institutional research and institutional advancement at NPS, including alumni affairs, media relations, publications, marketing, and community relations. This person also directs the institutional research program with a central data collection and analysis function role for NPS, including responsibility for accreditation. The Vice President for Information Resources and CIO coordinates the strategic information resources at NPS, including Information Technology and Communication Services, Instructional Technology, Institutional Research, and Institutional Advancement. The Vice President for Information Resources and CIO reports to the Office of the President.

Vice President for Research

The Vice President for Research promotes, supports, and facilitates the research mission of NPS. That responsibility includes oversight of the multidisciplinary NPS institutes sponsored programs, grants and contract administration, technology transfer, as well as cooperative relationships with industry, other higher education, and Government institutions. The Vice President for Research defines and communicates the NPS research vision, programs, and achievements to internal and external audiences at the local, regional, national, and international levels. The Vice President for Research is also responsible for the NPS-wide future research trajectory, including increasing external funding and leveraging current research capabilities. The Vice President for Research reports to the Office of the President.

Associate Provost for Academic Affairs

The Associate Provost for Academic Affairs assists the Provost in the oversight of the academic mission of NPS. This person helps the Provost oversee the schools, coordinate internal academic and support department budgets, prepare and

coordinate the academic budget requirements, and support budget issue papers. The Associate Provost for Academic Affairs focuses on the academic budget, helping the Provost manage the academic budget of all the schools, and provide budgetary oversight of the deans, as needed. This person works closely with the Vice President for Finance and Administration to ensure the Academic Budget is in line with NPS's financial strategic budget. The Associate Provost for Academic Affairs reports to the Office of the President. The Associate Provost for Academic Affairs also assists the Provost in matters of faculty hiring, curriculum development, program and curriculum reviews, academic support services, distributed education programs.

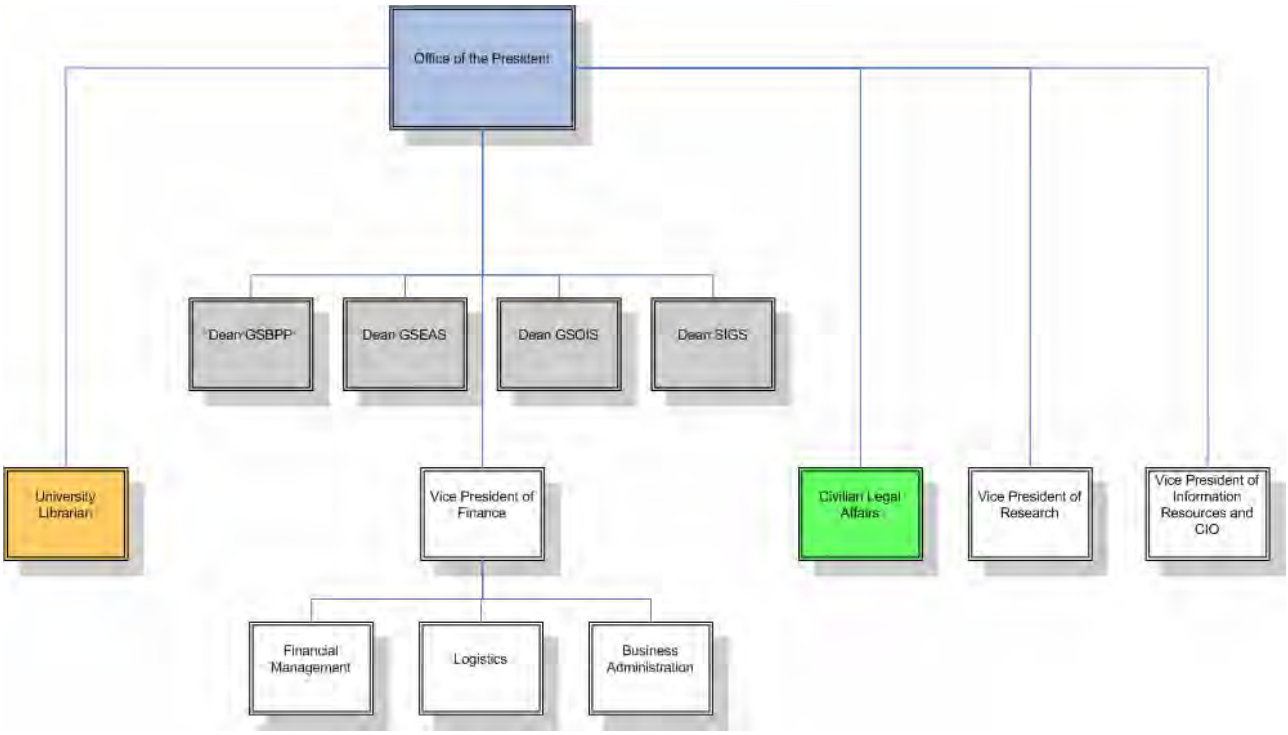
BENEFITS OF ALTERNATIVE 2

- Centralizes the financial business processes
- Establishes a clear line of authority on financial decisions
- Clarifies roles and responsibilities in financial decision making
- Increases efficiency and effectiveness
- Provides organizational checks and balances
- Builds upon a proposal made by the Government Accountability Office to create this position as a direct report to the executor.

CHALLENGES TO ALTERNATIVE 2

- Requires processes and cultural adjustments
- Requires resources to make the change.

Alternative 3: Vice President of Finance



This alternative creates a Vice President of Finance with a single financial voice for the organization. This person would be responsible for all financial, logistics, and business administration functions at NPS, which would clarify and strengthen those functions. The Vice President of Finance would report directly to the Office of the President.

ROLES AND RESPONSIBILITIES

Vice President for Information Resources and CIO

Same as in Alternative 2.

Vice President for Research

Same as in Alternative 2.

Vice President of Finance

The Vice President of Finance provides a strategic view of the financial matters at NPS and serves as the focal point for all financial, logistical, and administrative functions. This person is the chief financial, administrative, and logistics officer for NPS, and oversees NPS's financial management and resources, including budget submissions, activity-based cost analyses, payroll, budgeting, and accounting. The Vice President of Finance also manages logistics at NPS, including contracting, procurement, invoicing, unauthorized commitment management, and

property receipt, as well as serves as the Fleet Industrial Support Center (FISC) liaison. The Vice President for Finance oversees the business administration of NPS, including Internal Management Control, property management, conference coordination, labor force management, and the travel office. This person also ensures that NPS's business transactions, policies, and procedures meet its strategic goals, and assures budget transparency and accountability across NPS. The Vice President of Finance works closely with the academic and other administrative areas at NPS, and reports to the Office of the President.

BENEFITS OF ALTERNATIVE 3

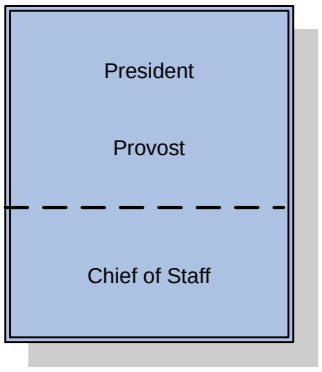
- This alternative has the same benefits as those of Alternative 2 with the additional functions of logistics and business administration
- Greater standardization opportunities than that of the Alternative 2.

CHALLENGES TO ALTERNATIVE 3

- Same as those of the Alternative 2 with the additional functions of logistics and business administration
- Greater cultural and institutional resistance than that of Alternative 2
- Fewer organizational checks and balances
- Larger and more diverse functional span of control.

OFFICE OF THE PRESIDENT ORGANIZATION ALTERNATIVES

Alternative 1: As-Is



This alternative retains the current organization of the Office of the President.

ROLES AND RESPONSIBILITIES

The roles and responsibilities for the Office of the President remain unchanged.

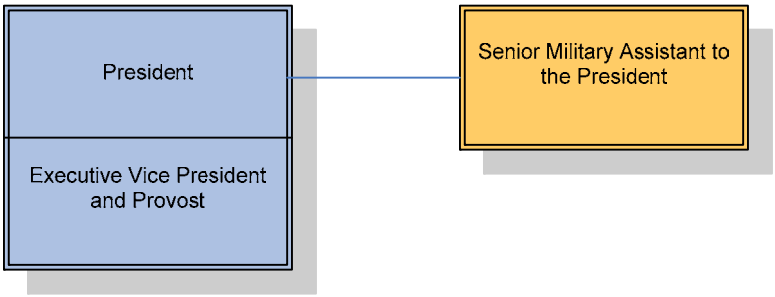
BENEFITS OF AS-IS

Provides a military presence in the Office of the President.

CHALLENGES TO AS-IS

- Retains current working relationships
- Fails to maximize experience or capabilities of senior military officer.

Alternative 2: Reduced Military Role



This alternative reduces the senior military person's role to that of advisor to the President of NPS. It also clarifies that the senior military person does not oversee academic, administrative, or support functions.

ROLES AND RESPONSIBILITIES

President

The President remains the executor of the school.

Executive Vice President and Provost

In keeping with best practices of other premier academic and research universities and to properly recognize that the Provost has both academic and business responsibilities for the School, the title Executive Vice President is more appropriate and descriptive title for this position. The Executive Vice President and Provost remains the academic head of the school and oversees all aspects of the academic operations. The Executive Vice President and Provost can speak on behalf of the President, reports to the President, and is located in the Office of the President.

Senior Military Assistant to the President

The Senior Military Assistant to the President is the Senior Military Officer on campus, and as such is NPS's leading military authority. This person advises the President on all military matters at NPS, providing counsel on policy and procedure requirements, budget preparation and submission, military disciplinary procedures, military curriculum requirements, and military protocol. The Senior Military Assistant to the President is involved with the academic and administrative functions at NPS only when advice is needed from a military perspective. The Senior Military Assistant to the President can speak on behalf of the President. This person reports directly to the President, but is not part of the Office of the President.

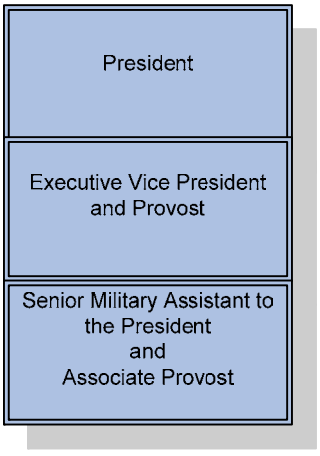
BENEFITS TO ALTERNATIVE 2

- Clear roles and responsibilities
- Senior military person advisor seen as having voice of the President.

CHALLENGES TO ALTERNATIVE 2

- Not consistent with the intent of Air Force and Navy memorandum of understanding
- Limits the voice of the customer to that of an advisor to the President
- Limits roles and responsibilities, and therefore assistance the senior military officer at NPS could provide to both the President and Provost.

Alternative 3: Integrated Military Role



The intent of this alternative is to integrate a senior military officer into the Office of the President in a supporting role to both the President and Provost.

ROLES AND RESPONSIBILITIES

President

The President remains the executor of the school.

Executive Vice President and Provost

The Executive Vice President and Provost remains the academic head of the school and oversees all aspects of the academic operations. The Executive Vice President and Provost can speak on behalf of the President, reports to the President, and is located in the Office of the President.

Senior Military Assistant to the President

The Senior Military Assistant to the President is the Senior Military Officer at NPS, and as such is the leading military authority on campus. This person advises the President on all military matters, and provides counsel on policy and procedure requirements, budget preparation and submission, military disciplinary procedures, military curriculum requirements, and military protocol. The Senior Military Assistant to the President is involved with the academic and administrative functions at NPS as coordinated by the Provost. The Senior Military Assistant to the President can speak on behalf of the President, reports directly to the President and the Provost, and is considered part of the Office of the President.

BENEFITS TO ALTERNATIVE 3

- Aligns with Defense and service models of ‘shared’ organizational leadership (military and civilian)
- Similar to structure at Naval War College, Naval Academy, and several state university models
- Leverages the necessity of a senior military person working for the President.

CHALLENGES TO ALTERNATIVE 3

- Cultural and organizational resistance to change
- Implementation challenges of shared leadership model.

Chapter 3
Recommendation and Conclusions

In order to achieve the goals of the NPS Strategic Plan, implementation requires a talented, well-organized, and motivated administrative team. When assessing the effectiveness of organizational structure and its alignment with institutional goals, three factors are important to consider:

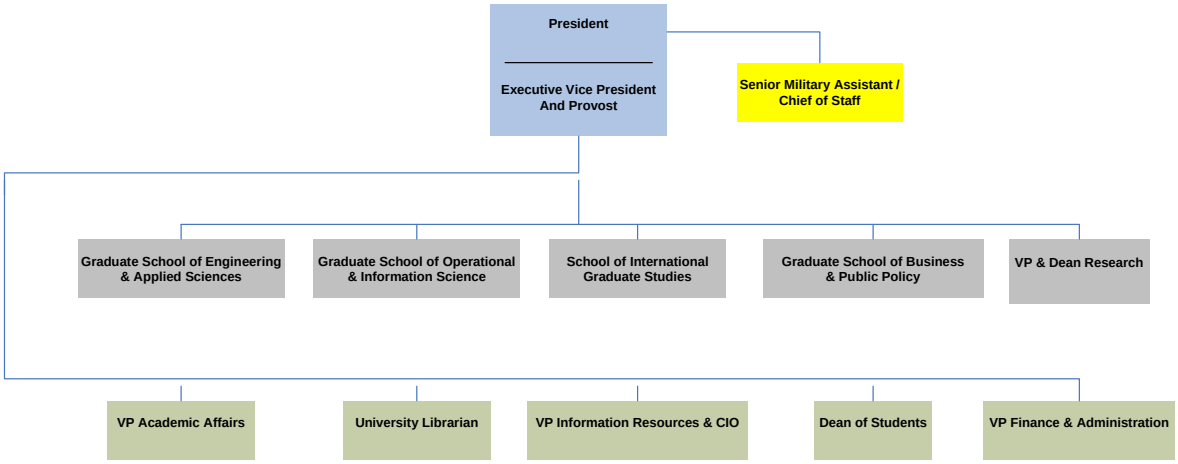
- Organizational structure that supports efficient and effective decision-making
- Clarity of roles and responsibilities
- Administrator quality (credentials and experience), morale and motivation, and appropriate alignment with function

The Naval Postgraduate School has a solid administrative leadership team. The President and Provost have impressive credentials and experience and have worked well together in completion of the strategic plan. The management team of deans, directors and associate provosts also works well to support the institution, but a few issues require attention:

1. Recruitment and retention of the most talented administrators should be a priority.
2. Roles and responsibilities are not always clear–particularly with regard to financial matters and with regard to the chief of staff's current portfolio.
3. Meeting structure is unclear with regard to purpose and where decisions are made.
4. Accountability should be uniformly demonstrated across administrative areas.
5. Given the amount of institutional changes over the past ten years, stability and sustainability should be priorities.

In the previous chapter, we examined several alternatives that NPS could adopt to clarify its processes, roles, and responsibilities. While the NPS leadership has articulated a clear strategic direction for the university, NPS faces some challenges to moving forward. Its business processes as well as individual roles and responsibilities are not clearly articulated or understood, particularly in the financial area. In order to enhance its effectiveness and efficiency, we offer the following recommendations to attaining clear lines of authority and responsibility in the Administrative Structure and Office of the President at the Naval Postgraduate School.

We recommend that NPS adopt the following model:



This alternative organizational structure has several benefits:

- Centralizes the financial business processes
- Establishes a clear line of authority on financial decisions
- Clarifies the roles and responsibilities both in financial decision making and in the Office of the President
- Increases effectiveness and efficiency
- Builds upon a proposal made by the Governmental Accountability Office to create a leadership position for Finance and Administration who reports directly to the executor.
- Allows the Senior Military Assistant to speak with the voice of the President

While this alternative addresses all the major areas we identified in our analysis, there are some potential enhancements that should be considered as the organization matures with time and cultural changes occur. Although not critical, we offer the following as potential incremental enhancements and points for reflection as NPS moves forward to the proposed organizational structure model.

- Change the title of the position of Vice President and Dean of Research to Vice President of Research. This would draw a clear line between this position and the academic deans, communicating the Vice President of Research as one of administrative supporting the Academic Deans, as do the Vice President for Information Resources and CIO and Vice President for Finance and Administration for example.

- Change the title of Vice President for Academic Affairs to Associate Provost for Academic Affairs. This could help clarify that the position works directly in the academic arena of NPS and not in an outside supporting role. It could also help clarify that this person serves to assist the Provost.

- Change the title of the Senior Military Assistant/Chief of Staff to Senior Military Assistant and reassign administrative responsibilities to the new Vice President for Finance and Administration. Separating these functions under two separate positions would more clearly distinguish the financial and administrative duties from the military duties. It would also communicate the military role more clearly, and allow the Senior Military Assistant to focus entirely on the wide-ranging military issues at NPS.

The proposed roles, responsibilities and position descriptions for the recommended alternative are provided in Appendix E.

Though it is beyond the scope of this report, we recognize that, as with any change in organizational structure, NPS should adjust its meeting structure as needed to reflect its new organizational structure. This meeting structure should be streamlined, and could be divided into two main groups: Executive Level Meetings and Management Meetings. A potential detailed meetings structure for consideration is provided in Appendix F.

In summary, we believe these recommendations will position the NPS to: achieve the goals of the NPS Strategic Plan; improve efficient and effective decision-making; clarity roles and responsibilities; and, improve the administrative support of the organization to enable NPS to become the flagship advanced educational institution its leaders think it has the potential to become.

Appendix A
Schedule for Management Consultants Visit

ORGANIZATIONAL STRUCTURE ASSESSMENT

February 27, 2008

DAY 1:

8:00-8:45am	Meet with President and Provost
8:45-9:00am	Break
9:00-10:45am	Meet with Associate Provosts and Academic Deans
	Robert Beck, Dean of the Graduate School of Business and Public Policy
	Dr. Dan Boger, Interim Dean of Research
	Dr. James Kays, Dean of Graduate School of Engineering and Applied Sciences
	Dr. James Wirtz, Dean of School of International Graduate Studies
	Dr. Peter Purdue, Dean of Graduate School of Operations and Information Sciences
	Dr. Christine Cermak, Associate Provost for Information Re sources/CIO
	Dr. Douglas Moses, Associate Provost for Academic Affairs
10:45-11:00am	Break
11:00-11:45am	Meet with Financial Managers
	Dr. G. T. Howard, Academic Budgeting
	Mr. Kevin Little, Comptroller

	Ms. Danielle Kuska, Director of Research and Sponsored Pro grams
	Dr. Douglas Moses, Associate Provost for Academic Affairs
12:00-1:00pm	Lunch with Provost and Managers of Academic Support Areas
1:00-1:45pm	Meet with Chief of Staff (COL David Smarsh); Ms. Paula Jordanek, Executive Associate to the Provost; and, Kathryn Hobbs, Dean of Students
2:00-3:00pm	Follow-up meeting with President
3:00-4:00pm	Follow-up meeting with Provost

February 28, 2008

DAY 2:

8:00-9:00am	Exit meeting with President and Provost

Appendix B
Interview Questions

ACADEMIC INTERVIEWS:

General

1. What is your desired outcome of this study?

Strategic

1. Does the NPS strategic plan provide a clear view to the future? Why/why not?

2. Does NPS strike the right balance between academic, research, and administrative functions to ensure it is heading in the right direction?

Business

1. Are there functions/services you are performing that you should not be? Conversely, are there others you should be performing but are not?

2. Do you have the appropriate resources to do your job?

3. Do you get the support you need to fulfill your strategic objectives and goals?

4. What role (if any) do you play in the executive decision making process? Is it the right role?

5. What one thing would you change at NPS?

Organizational

1. What are the major academic roles and functions in NPS?

2. What is working well at NPS in terms of processes, organization structure, communication, and decision-making? What is not working well?

ADMINISTRATIVE QUESTIONS

General

1. What is your desired outcome of this study?

Strategic

1. Does the NPS strategic plan provide a clear view to the future? Why/why not?
2. Does NPS strike the right balance between academic, research, and administrative functions to ensure it is heading in the right direction?

1. Does NPS strike the right balance between academic, research, and administrative functions to ensure it is heading in the right direction?

What is working well at NPS in terms of processes, organization structure, communication, and decision-making? What is not working well?

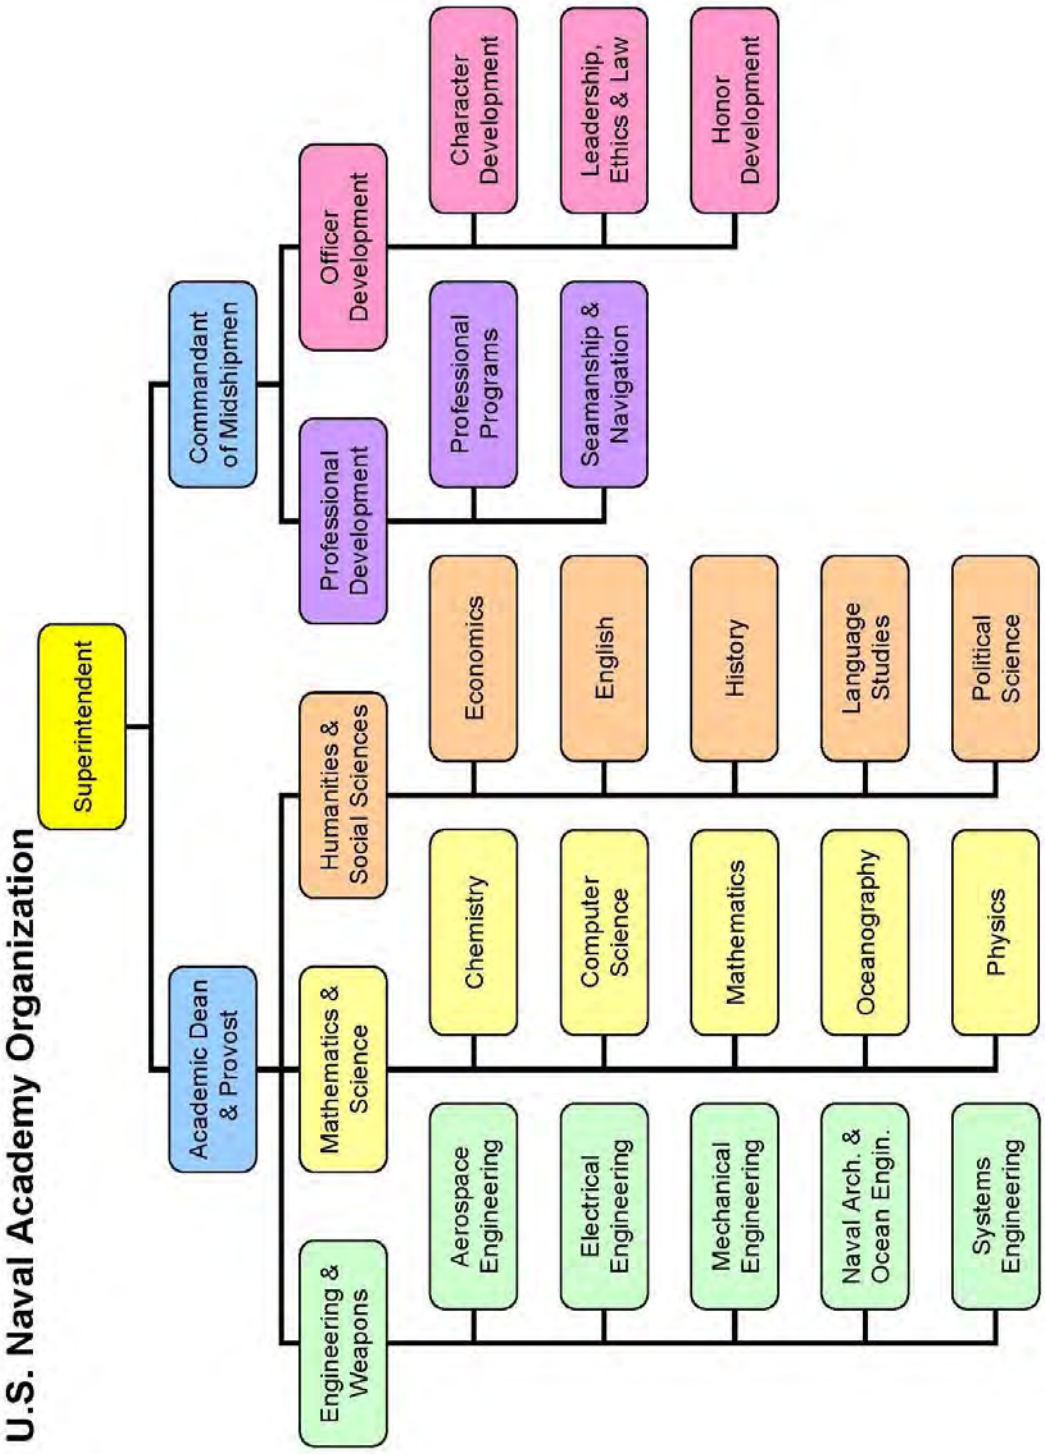
Appendix C
Benchmark Organizations

As part of our over-all methodology, we routinely try to identify and analyze organizations that are performing the same or similar type work as the organization we are studying. We use these benchmark organizations to help add both quantitative and qualitative judgments about an organization's effectiveness, provide alternative organizations options, and contrast the organization to other institutions with similar missions.

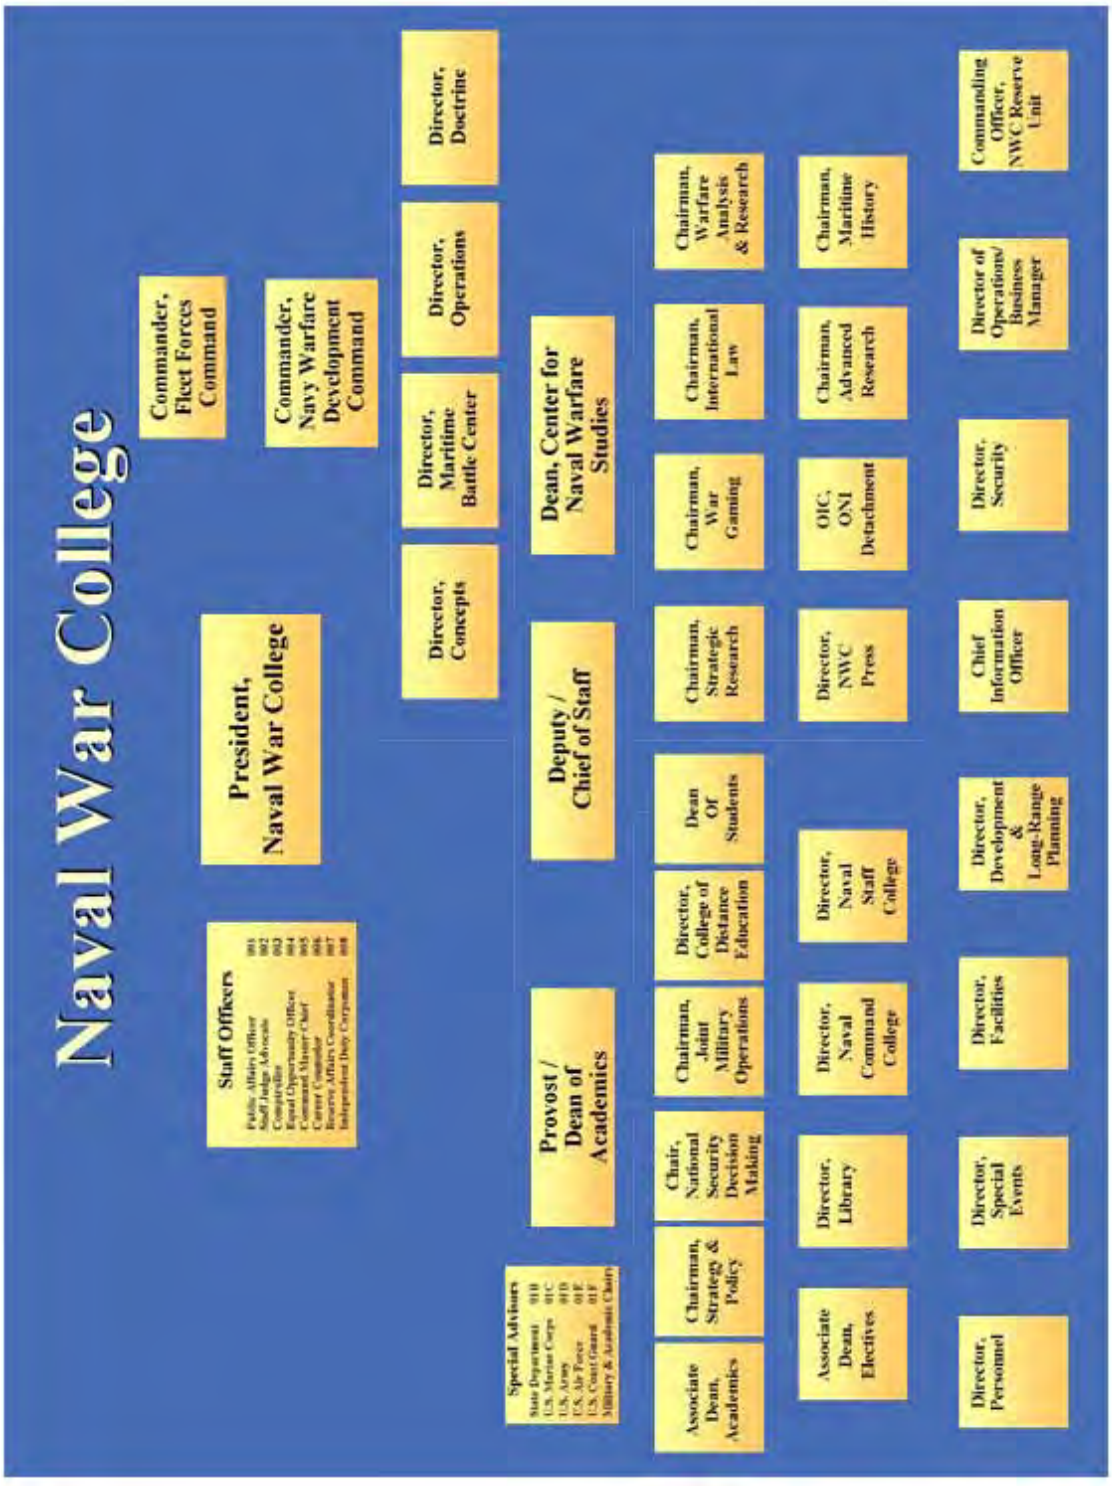
We used the following mix of military, private, public, and both research and education institutions as benchmarks in our analysis of NPS, copies of their organizational charts are provided in the order shown:

- United States Naval Academy
- Naval War College
- Air Force Institute of Technology
- University of California Santa Cruz
- University of California, Irvine
- University of California, Los Angeles
- University of California, Riverside
- University of California, Davis
- Rensselaer Polytechnic Institute
- George Mason University
- Virginia Polytechnic Institute and State University

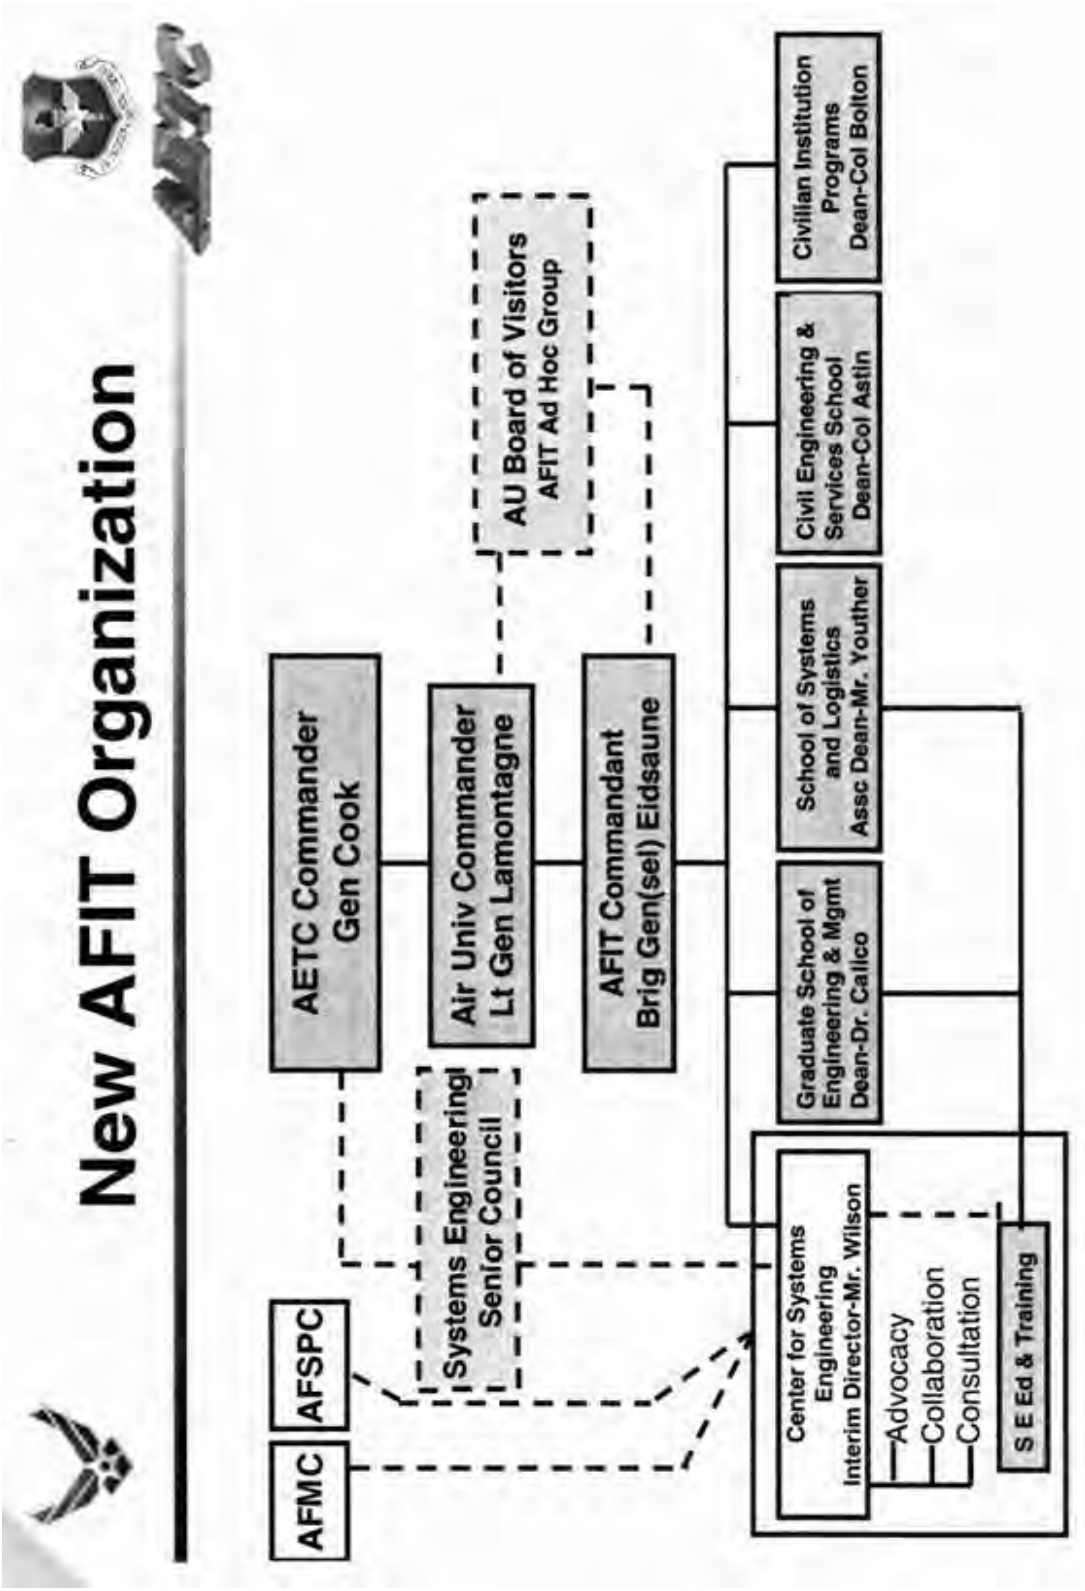
United States Naval Academy–Academic Dean & Provost; and, Commandant of Midshipmen report to Superintendent.



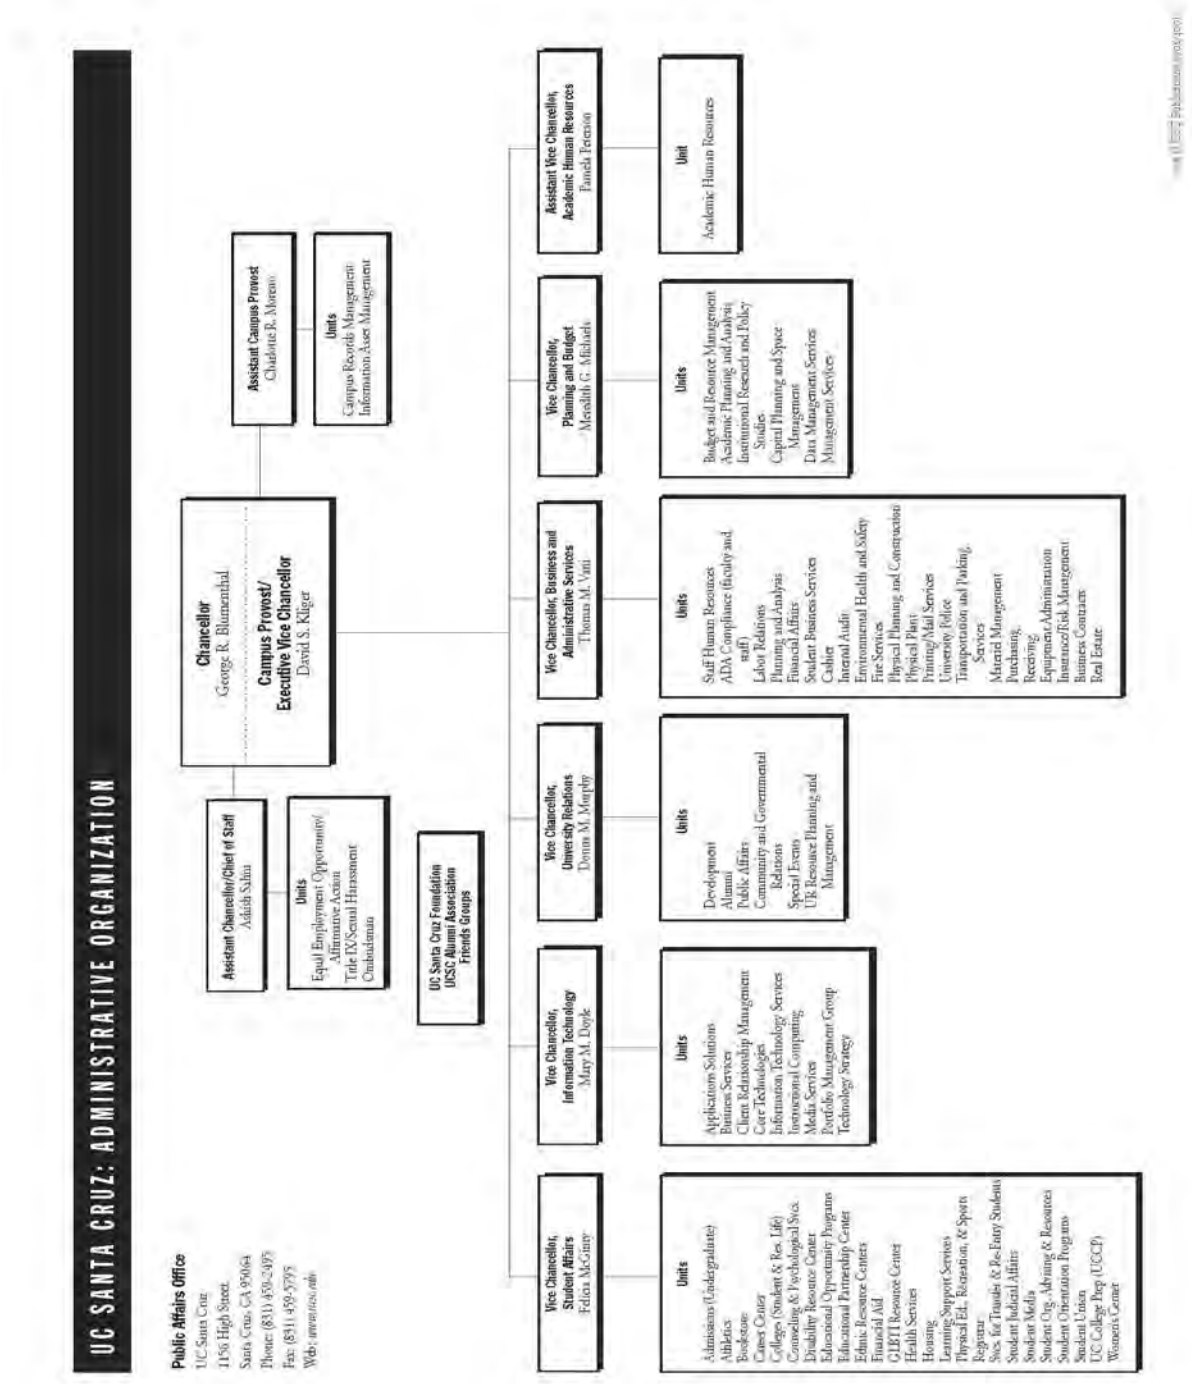
Naval War College–Deputy/Chief of Staff, Provost/Dean of Academics, and Dean, Center for Naval Warfare Studies; and, staff officer and special advisors report to President.



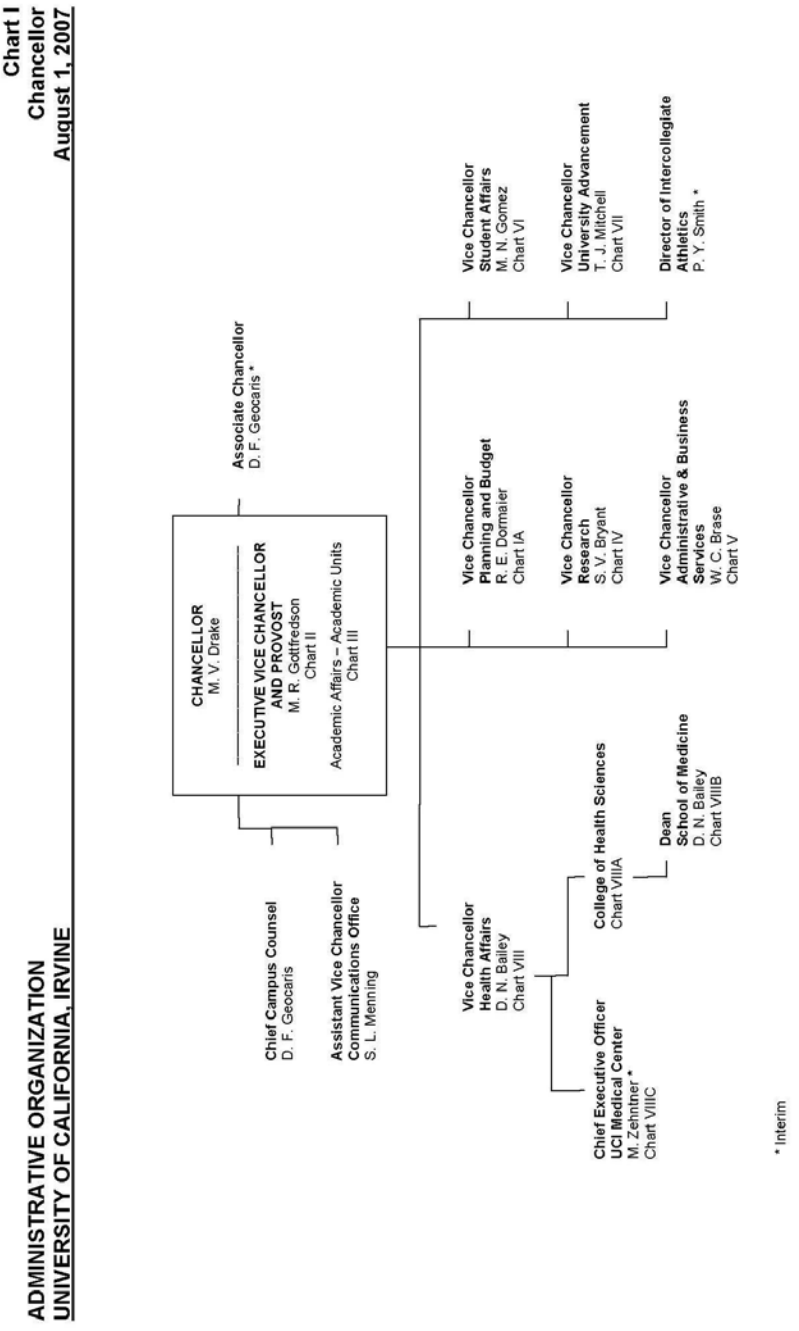
Air Force Institute of Technology–Deans, Associate Deans, and Center Directors report to AFIT Commandant.



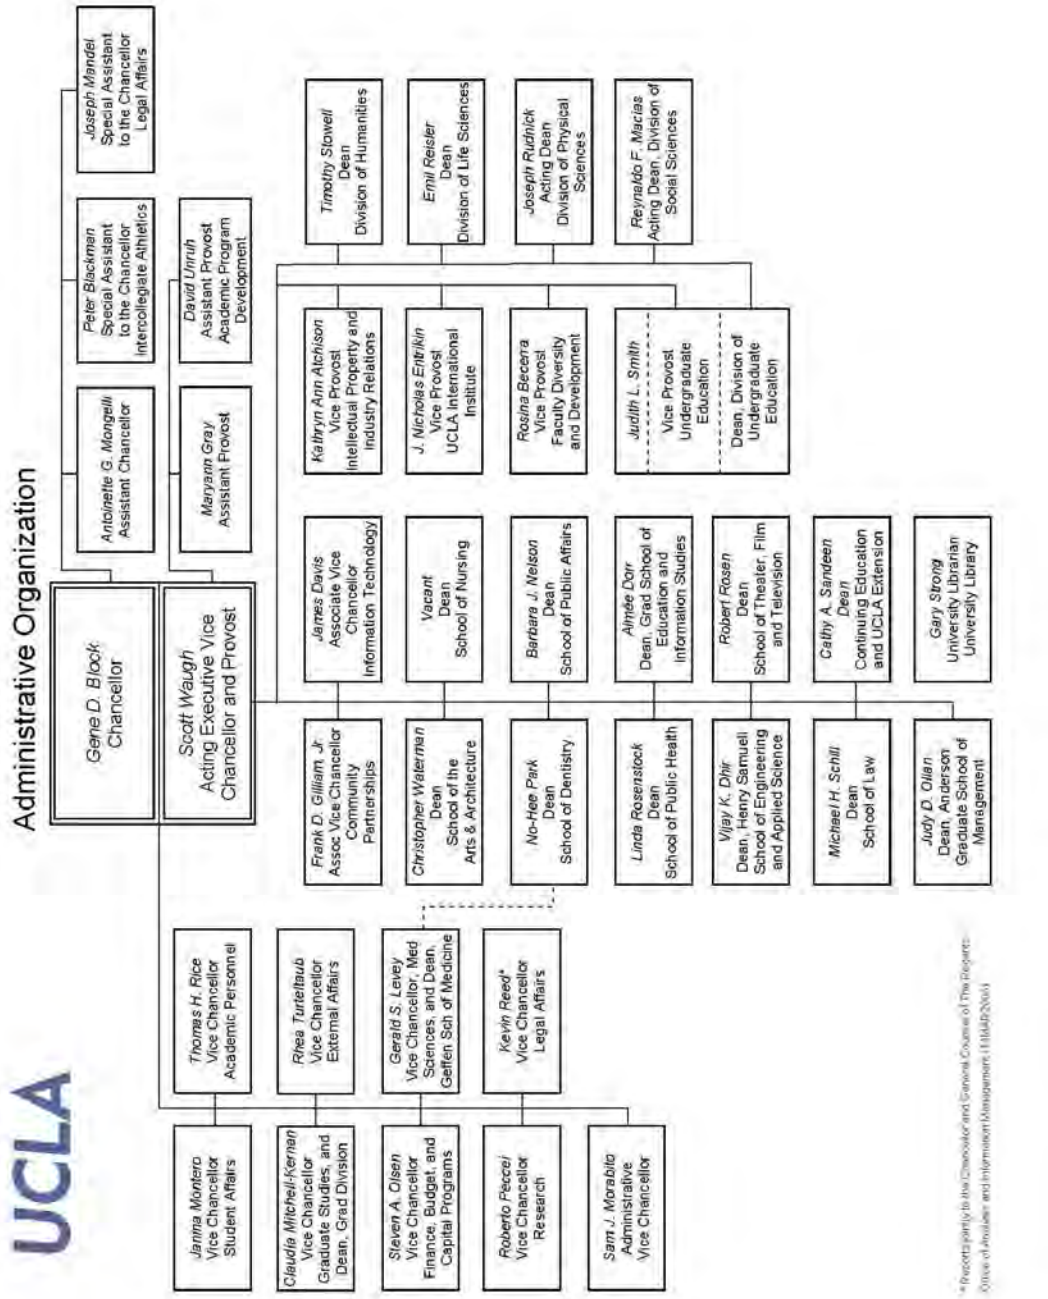
University of California Santa Cruz: Administrative Organization–Vice Chancellors report to Chancellor and Assistant Chancellor/Chief of Staff report to Chancellor.



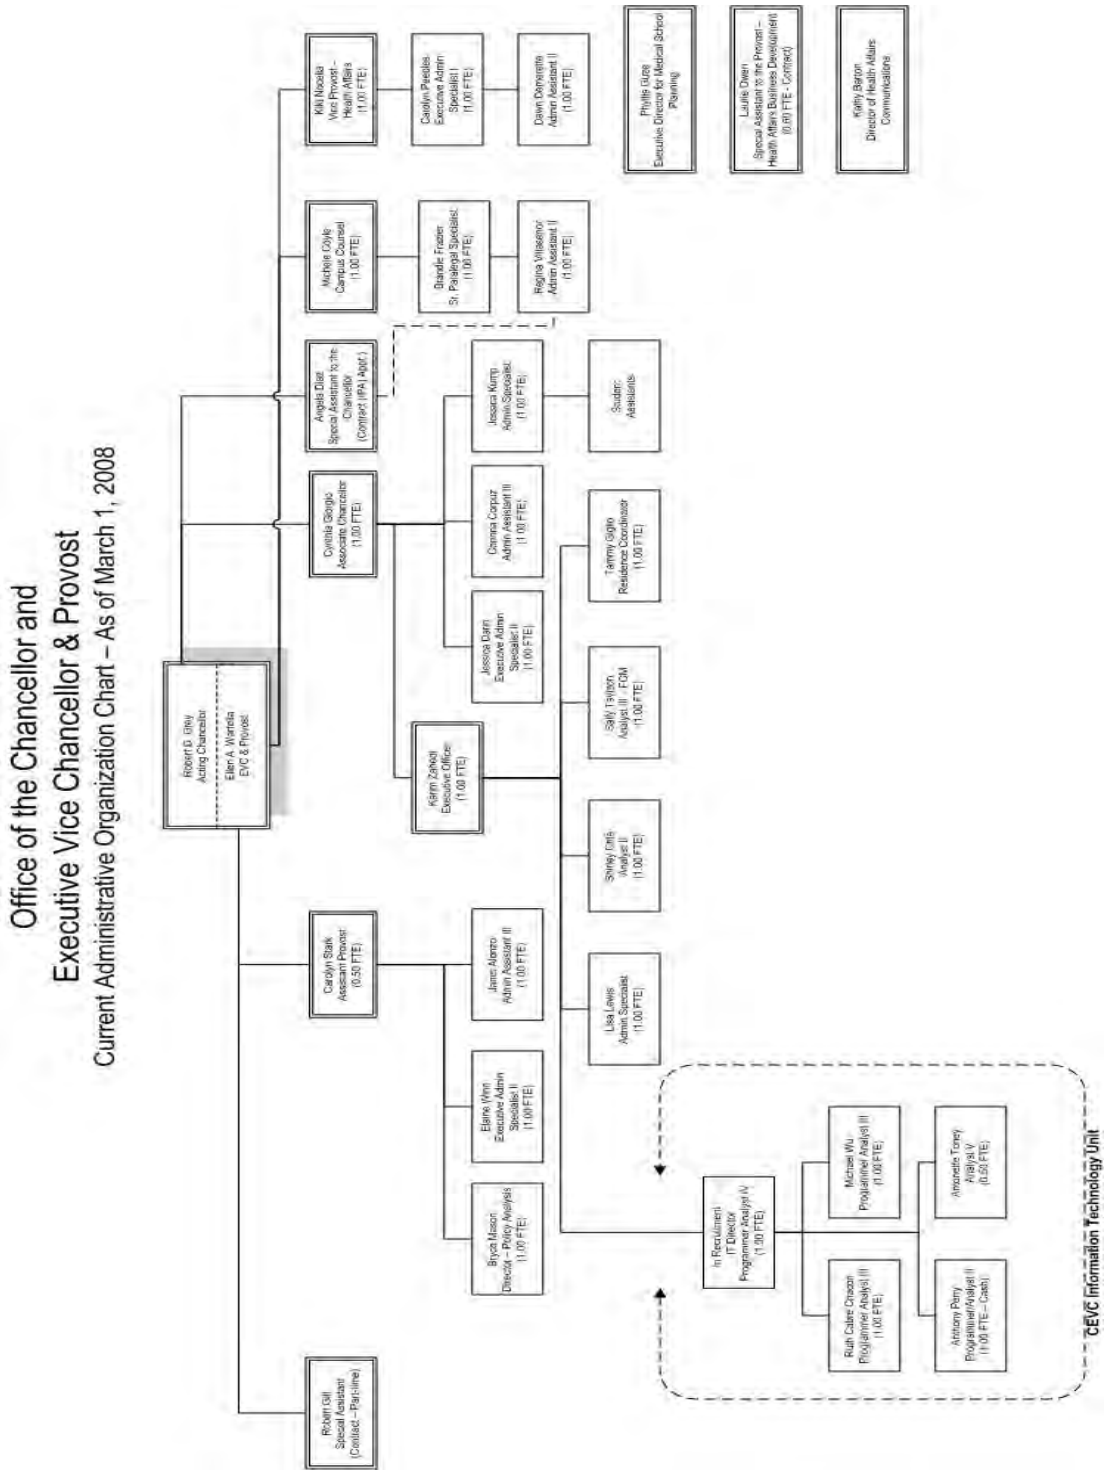
University of California, Irvine: Administrative Organization–Vice Chancellors report to Executive Vice Chancellor and Provost.



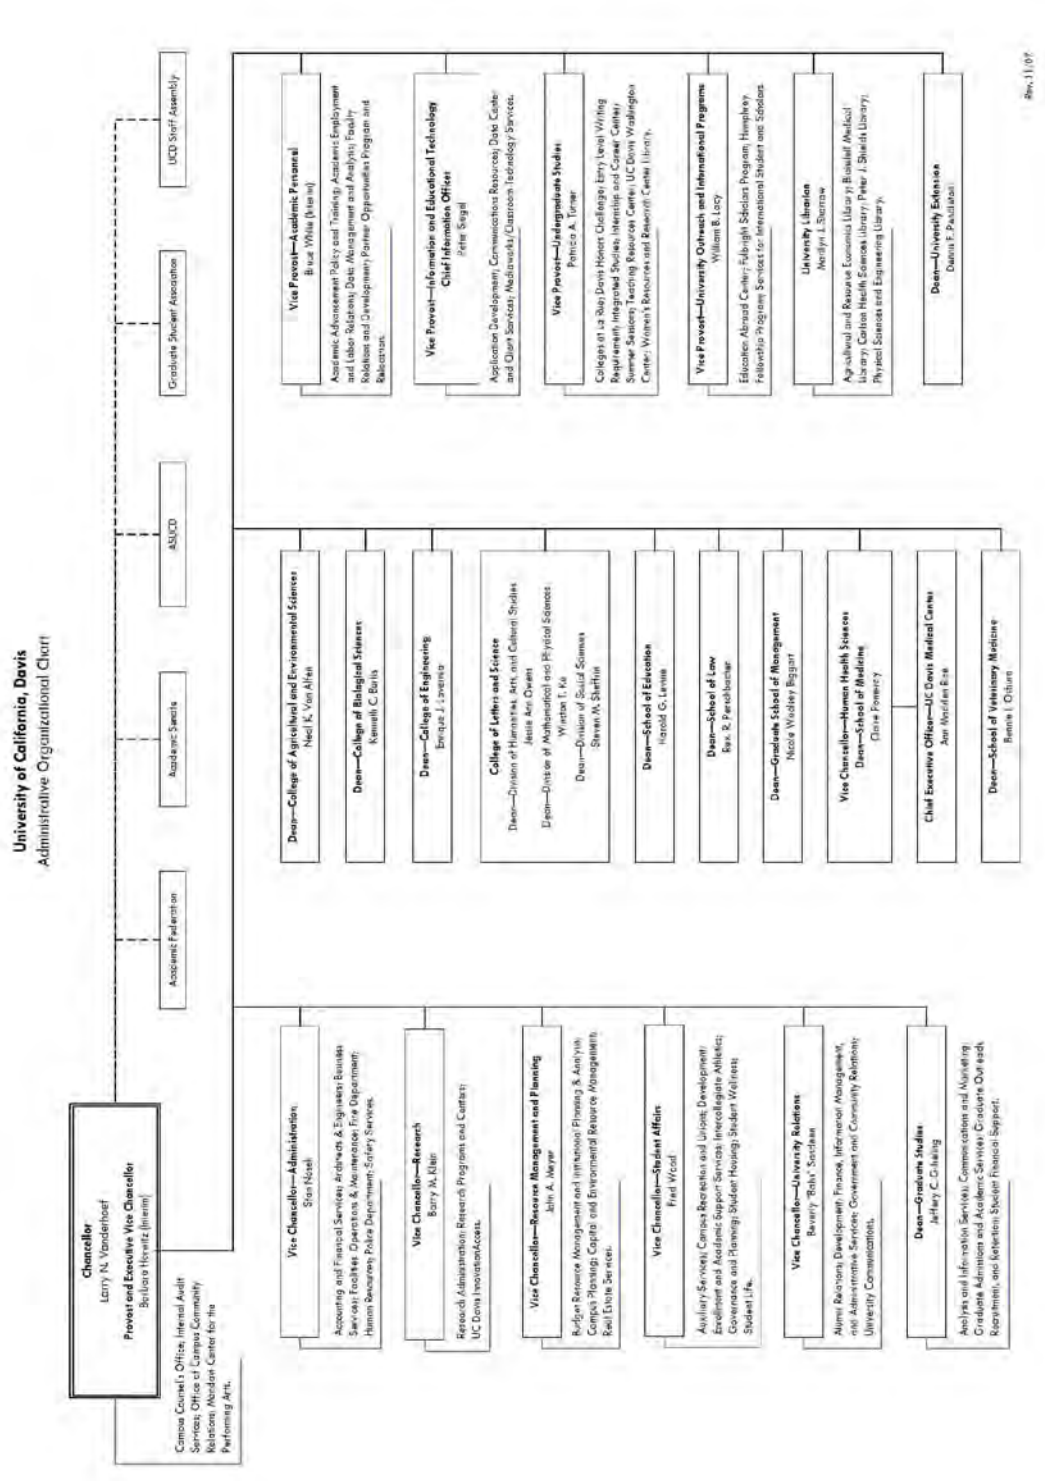
University of California, Los Angeles: Administrative Organization–Associate Vice Chancellors, Deans, Assistant Provosts, and Executive Deans to Executive Vice Chancellor and Provost.



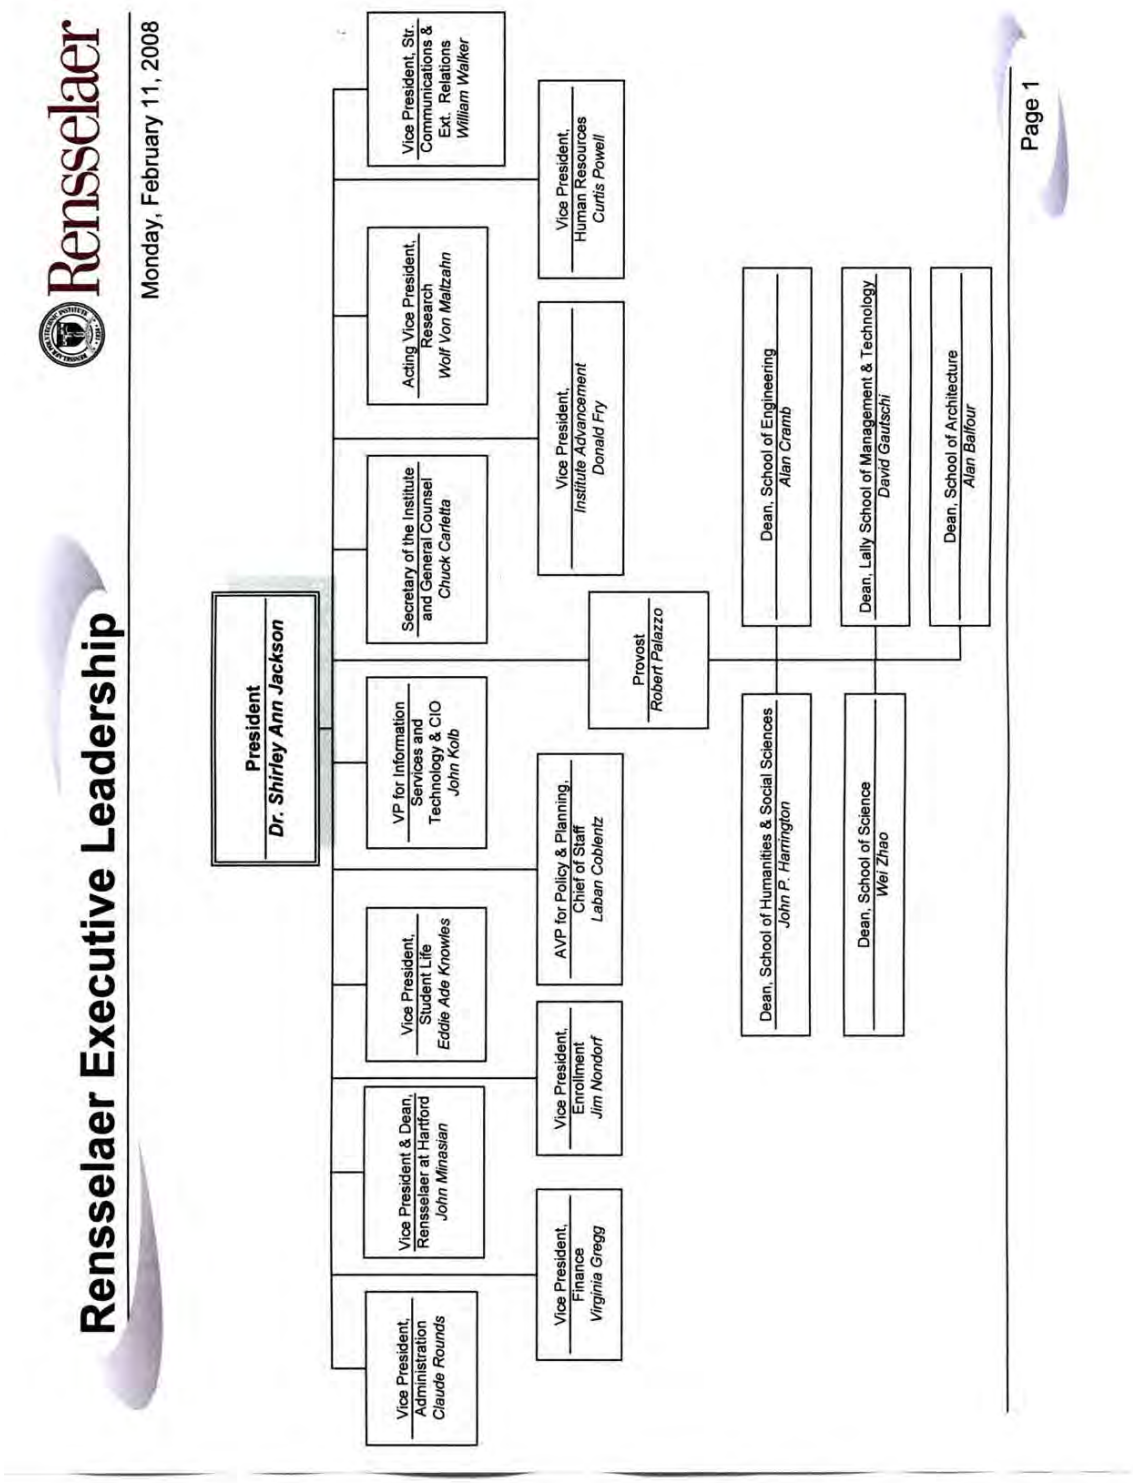
University of California, Riverside–Vice Chancellors, Vice Provost and Dean's report to Executive Vice Chancellor & Provost.



University of California, Davis–Vice Chancellors, Vice Provost and Dean's report to Provost and Executive Vice Chancellor President.



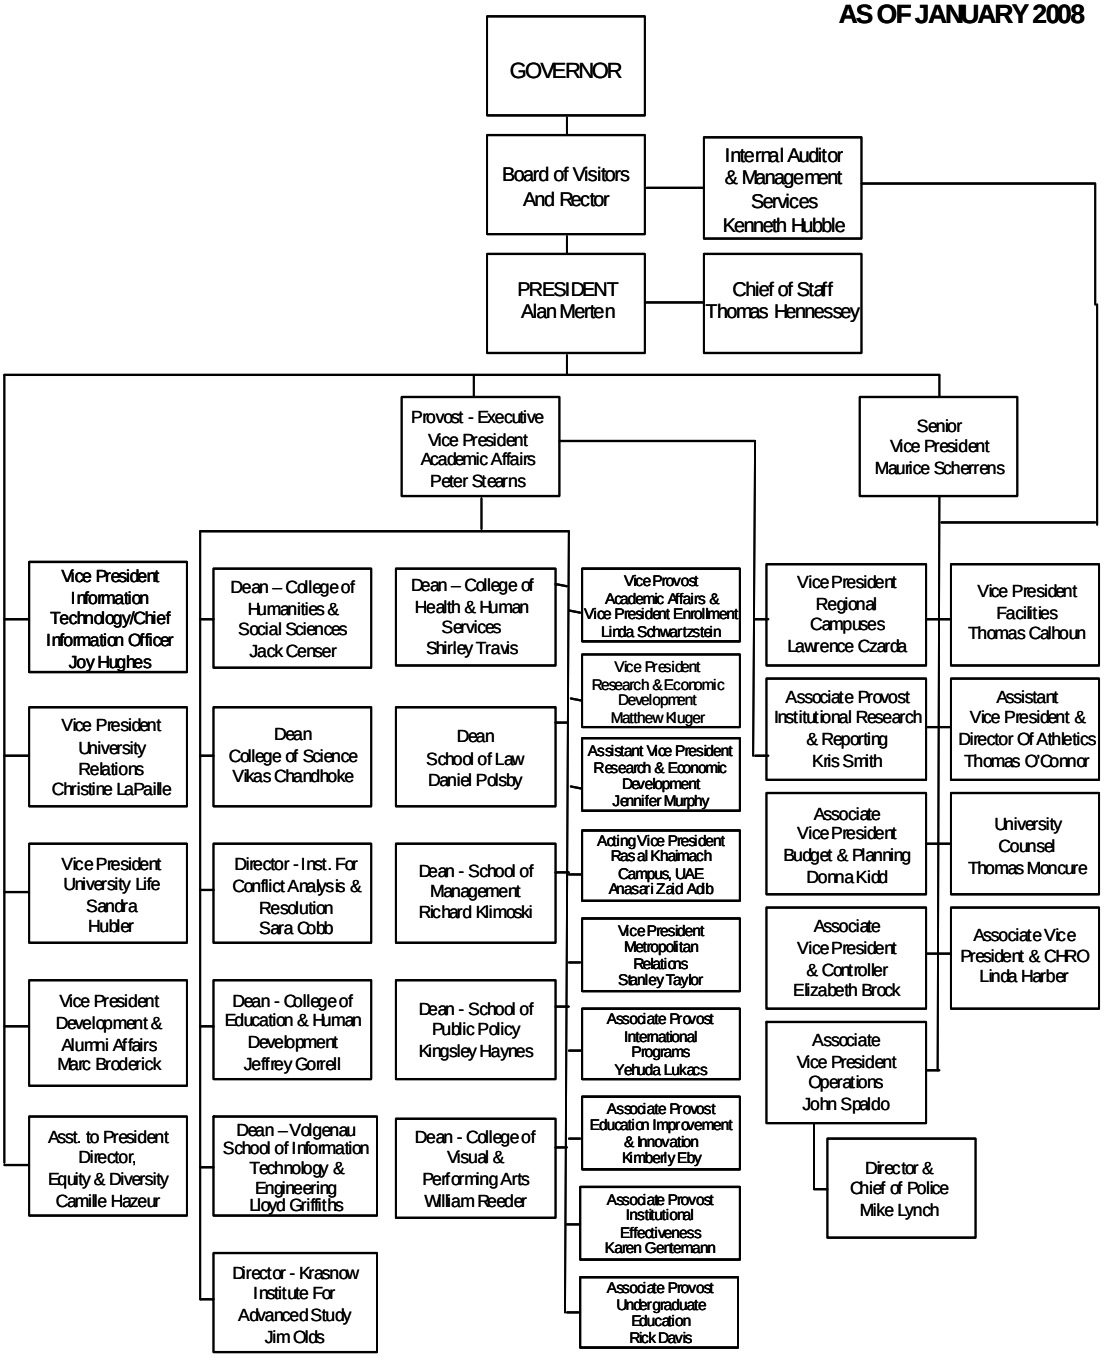
Rensselaer Polytechnic Institute–Deans report to Provost; Vice Presidents, Vice Presidents & Deans, Chief of Staff Provost report to President.



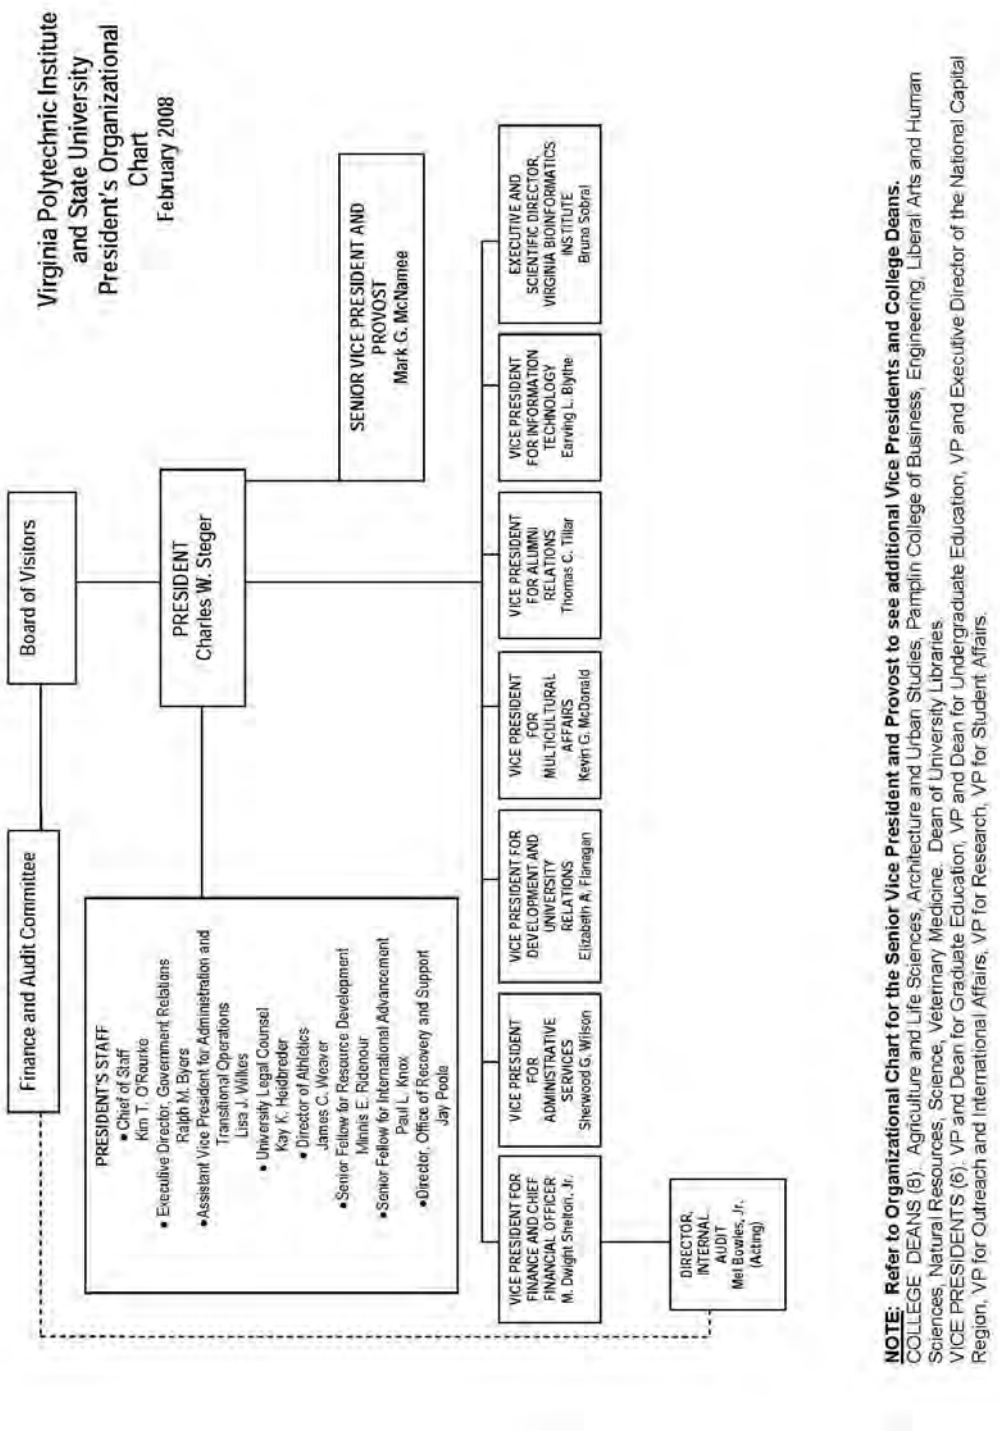
George Mason University–Vice Provosts and Deans report to Provost/Executive Vice President and Vice Presidents report to Senior Vice President. Senior VP, Provost; and, Chief of Staff report to President.

ADMINISTRATION

ADMINISTRATION ORGANIZATIONAL CHART
AS OF JANUARY 2008



Virginia Polytechnic Institute and State University– President's staff, selected Vice Presidents, including CFO, CIO, and Administration, along with Senior Vice President and Provost report to the President. Deans, Vice President for Research and other selected VPs and Assistant Provosts report to Senior Vice President and Provost.



NOTE: Refer to Organizational Chart for the Senior Vice President and Provost to see additional Vice Presidents and College Deans.
COLLEGE DEANS (8): Agriculture and Life Sciences, Architecture and Urban Studies, Pamplin College of Business, Engineering, Liberal Arts and Human Sciences, Natural Resources, Science, Veterinary Medicine. Dean of University Libraries.
VICE PRESIDENTS (6): VP and Dean for Graduate Education, VP and Dean for Undergraduate Education, VP and Executive Director of the National Capital Region, VP for Outreach and International Affairs, VP for Research, VP for Student Affairs

Appendix D
School Deans' Authorities and Responsibilities

29 January 08
Code 01

MEMORANDUM

To: NPS Faculty and Staff
From: Provost

Subj: School Deans' Authorities and Responsibilities

Encl: (1) Authorities and Responsibilities

1. The School Deans are senior executives of the Naval Postgraduate School and report to the Office of the President under the supervision of the Provost. They review and approve all matters that affect their Schools and programs.

2. The School Deans are active members of the Naval Postgraduate School Executive Team and address campus-wide issues, concerns, and planning to promote and sustain an environment of academic excellence and relevance. Therefore, they are delegated the authority to execute the responsibilities as specified in the attached enclosure.

3. Enclosed are the specific Authorities and Responsibilities of the Deans:

    a. Leadership
    b. Accreditation
    c. Budget
    d. Supervise / Counsel
    e. Policy
    f. Liaison
    g. Personnel Actions Hiring / Promotion
    h. Development of Curricula / Programs
    i. Staff / Faculty Development
    j. Communication
    k. Meetings
    l. Deans Office Duties
    m. Other Duties Assigned.

4. This directive is effective immediately.

Leonard A. Ferrari
Provost and Vice President

Enclosure 1: Authorities and Responsibilities

1. Leadership

a. Provide leadership, management, and development for their appointed School.*
b. Provide vision; ethical leadership; and advocacy in academic affairs, research, scholarly activities, and curricular matters in the School and for NPS, including development of innovative and interdisciplinary programs.
c. Lead the faculty in developing and updating an academic and strategic plan for the School within the larger framework of NPS strategic planning.

2. Accreditation

a. Formulate and implement academic policies and programs consistent with accreditation standards.

3. Budget

a. Work with the Provost to prepare and submit an annual budget for the School and to administer optimum expenditure of funds in accordance with NPS's planning, programming, budgeting and execution system.
b. Exercise leadership in NPS and School budget preparation, funding priorities, budget execution; and resource development and allocation.
c. Manage all resources assigned, including budgets, people, and physical facilities.

4. Supervise / Counsel

a. Supervise and evaluate all "Direct Reports."
b. Provide leadership in staff and faculty development.

5. Policy

a. Interpret policy, adjudicate appeals and exceptions, ensure that the academic unit's policies and practices are consistent with those of the NPS, and articulate NPS policy and procedures to members of the School.
b. Participate in NPS policy development.
c. Develop and monitor implementation of the NPS Strategic Plan in consultation with faculty and staff.

* Unless otherwise noted, a Dean's authorities and responsibilities are within his/her School.

6. Liaison

a. Provide liaison in education and administrative affairs with appropriate agencies, activities, and societies.
b. Advise the NPS President and Vice President / Provost on all matters affecting the NPS.
c. Enhance ties with DON/DOD/DOS/DHS and other government agencies, industry, peer institutions, professional organizations, and local civilian communities to stimulate support for NPS.

7. Awards

a. Act as the approving official for all awards within their Schools with authority to approve cash awards up to $5,000.[†]
b. Act as the approving authority within their Schools for time-off awards not to exceed 80 hours. The total amount of time-off that may be granted to any one individual in any one leave-year is 80 hours.[‡]

8. Personnel Actions Hiring / Promotion

a. Recommend individuals to the Provost for appointment/reappointment to the faculty, after receiving the recommendation of the Department Chairs.[§]
b. Oversee all hiring, performance, disciplinary actions, and EEO matters.
c. Make recommendations on personnel actions as appropriate.
d. Exercise responsibility for all personnel matters involving academic and non-academic employees including recruiting, appointment, reappointment, termination and dismissal; faculty evaluation, tenure promotion and merit.
e. Recommend individual faculty to the Provost for promotion, tenure, merit pay raises, awards and commendations where such a recommendation has been made by the Department Chair.
f. Participate fully as a voting member in the NPS-wide Promotion and Tenure process.
g. Fully support the NPS Equal Employment Opportunity (EEO) policy and programs.

9. Development of Curricula / Programs

a. Oversee the Department Chairs in planning, conducting and administering educational programs.
b. Provide leadership for departmental program reviews.

[†] Requires change to NAVPGSCOLINST Instruction 12000.1, 12 April 99.
[‡] NAVPGSCOLINST Instruction 12000.1, 12 April 99.
[§] In this document, Department "Chair" includes Group Chair, Area Chair, and Director.

c. Support the development of research plans and programs.
d. Recommend to the Provost new curricula and modifications to existing curricula.
e. Review and approve all reimbursable funding proposals for the School.
f. Manage all aspects of the academic programs and facilities.

10. Staff/Faculty Development

a. In coordination with the Associate Provost for Academic Affairs, administer programs for faculty orientation, development, and mentoring.
b. Promote high performance standards of the faculty.
c. Support Chairs in developing and implementing personal development programs for staff members.
d. Is an ex-officio attendee of all faculty meetings, participate in such meetings as desired.

11. Communication

a. As a NPS advocate, communicate effectively with various constituencies within the university, local, state and federal communities.
b. Promote effective communication among students, faculty and chairpersons within the School.

12. Meetings

a. Serve as an active member of the NPS Executive Team to address campus-wide issues, concerns, and planning.
b. Serve as a member of the Academic Policy and Planning Committee, the Executive Assembly and other boards and committees as assigned.

13. Deans Office Duties

a. Administer a complex organization within the environment of the Department of Defense.
b. Organize and manage the operations of the Office of the Dean.
c. Coordinate the use of facilities assigned to the School.

14. Other Duties as Assigned

a. Perform additional authorities and responsibilities as assigned by the NPS President and Vice President / Provost.

Appendix E
Roles and Responsibilities

PROPOSED STRUCTURE

We propose a structure that consists of small, easily convened, senior leadership team that is focused on a university-wide agenda in support of the President and Provost, and on implementing all the provisions of NPS's Strategic Plan.

NPS Leadership team

The proposed NPS leadership team consists of the following positions.

President

The President provides the executive leadership of NPS.

Executive Vice President and Provost

The Executive Vice President and Provost provide the academic leadership of the university. The Executive Vice President and Provost is the chief executive officer in the absence of the President.

Vice President for Finance and Administration

The Vice President for Finance and Administration is responsible for the human and financial resource management as well as oversight of the following business services that support NPS's core processes:

- Comptroller
- Human resources
- Finance and accounting
- Payroll
- Budgeting
- Resource planning and programming
- E-commerce
- Travel
- Command evaluation
- Procurement.

Vice President for Research

The Vice President for Research is responsible for the NPS research enterprise (advocacy and liaison for funding organizations and agencies) and associated business services: Sponsored programs, Strategic and Interdisciplinary initiatives, Technology transfer, Regulatory affairs (oversight of all policies and procedures required by funding agencies), Research administration, and Institutes Contracting.

Vice President for Academic Affairs

The Vice President for Academic Affairs has oversight of the following academic administration, programs, and services:

- Academic budget
- Continuing education and distance learning
- International programs
- Academic programs
- Admissions
- Registrar
- Enrollment management
- Academic council
- Student services.

Vice President for Information Resources and CIO

The Vice President for Information Resources and CIO is responsible for information resources (institutional research and institutional advancement); institutional research (planning, accreditation, internal and external requests for information, and institution-wide surveys); information technology and communications (voice, video, data, network operations, administrative and academic computing services); educational technology (audio-visual, videoconferencing, classroom technology); and institutional advancement (alumni relations, media relations, publications, photography/videography, marketing, and conference coordination).

POSITION DESCRIPTIONS

Vice President for Research

The Vice President for Research shares with the Executive Vice President and Provost oversight of the academic and research enterprise. The Vice President for Research also promotes, supports, and facilitates NPS's research mission and the infrastructure required of a top research institution. As a key member of the NPS leadership, the Vice President reports directly to the Executive Vice President and

Provost and represents the university at the campus, local, state, national, and international levels.

Roles and responsibilities. The Vice President for Research is responsible for all matters related to the research mission of NPS, including oversight of the multidisciplinary NPS institutes, sponsored programs, grants and contract administration, technology transfer, and cooperative relationships with industry, other higher education and Government institutions. The Vice President is also responsible for the NPS research agenda, and defines and communicates NPS's research vision, programs, achievements, and aspiration to internal constituencies and external audiences at the local, regional, and national levels. The Vice President for Research further assists the President in matters of external communications and advocacy.

Education and experience. The Vice President for Research should have a Ph.D.; 5 to 10 years of experience in academic leadership positions; a scholarly and teaching record appropriate for a position as a full professor at a research university; and experience with development and oversight of academic programs, financial management, administrative support areas, and planning.

Reporting. The Vice President for Research reports directly to the Office of the President.

Vice President for Academic Affairs

The Vice President for Academic Affairs shares with the Executive Vice President and Provost responsibility for oversight of the academic enterprise. The Vice President for Academic Affairs promotes, supports, and facilitates NPS's academic mission and the infrastructure required of a top research institution. As a key member of NPS's leadership, the Vice President reports directly to the Executive Vice President and Provost and represents the university at the campus, local, state, national, and international levels.

Roles and responsibilities. The Vice President for Academic Affairs is responsible for all matters related to NPS's academic mission, including oversight of the schools; coordination of internal academic and support department budgets; preparation and helping coordinate the academic budget requirements and supporting issue papers; faculty hiring; curriculum development; program and curriculum reviews; academic support services; distributed education programs; and director of programs, dean of students, admissions, registrar. The Vice President for Academic Affairs is responsible for NPS's academic programs that are central to building academic quality and advances NPS as a major research university. The Vice President defines and communicates NPS's academic vision, programs, achievements, and aspirations to internal constituencies and external audiences at the local, regional, and national levels. The Vice President for Academic Affairs also assists the President and Provost in matters of external communications and advocacy.

Education and experience. The Vice President for Academic Affairs should have a Ph.D.; 5 to 10 years of experience in academic leadership positions; a scholarly and teaching record appropriate for a position as a full professor at a research university; and experience with development and oversight of academic programs, financial management, administrative support areas, and planning.

Reporting. The Vice President for Academic Affairs reports directly to the Office of the President and works in direct support of the Provost.

VICE PRESIDENT FOR FINANCE AND ADMINISTRATION

The Vice President for Finance and Administration serves as the chief financial officer and directs and oversees NPS's business and other support functions, including budget submissions, business policies, faculty personnel, Comptroller's Office and other treasury functions. The Vice President further ensures that business transactions, policies, and procedures meet NPS's short- and long-term goals and objectives; and develops close working relationships with NPS's academic and administrative areas

Duties and responsibilities. The Vice President for Finance and Administration oversees budget submissions, finance, and administrative service areas; interacts with the NPS community and NPS stakeholders regarding institutional financial plans, strategic plan and policies. The Vice President further participates with the President, Executive Vice President and Provost, and other senior officers in institutional planning, policy development, and priority setting; ensures compliance with all regulatory and funding agencies and the rules of accrediting bodies by continually monitoring operations, programs, and physical properties; and initiates changes, where required. Through the President and Executive Vice President and Provost, the Vice President for Finance and Administration works with the Board of Advisors on NPS's financial issues; reviews and analyzes major contractual obligations; develops and executes the mission statement of the business and finance division; formulates goals and objectives for the division in accordance with NPS's goals; provides leadership and direction to the units that report to or are a part of the division; and performs other job-related duties, as assigned. The Vice President also develops fiducially responsible budgetary models and procedures to empower achievement of the goals of academic and administrative units; works with faculty and staff in a transparent and open manner; and cultivates an environment of committed, top-quality service to meet student, faculty, and staff expectations, and to achieve NPS goals.

Education and experience. The Vice President for Finance and Administration should have an advanced degree in a relevant field (such as an MBA) and 5 years of experience (preferably in higher education) in administrative positions of substantial responsibility in resource management: personnel, budget, finance, and administrative services. The Vice President should also be knowledgeable of DoD contracting, budgeting, financial, personnel, and accounting practices; experienced in development and implementation of administrative systems; strong

leadership, presentation, and communication skills; and demonstrated statistical and analytical skills, and knowledge of continuous improvement processes.
Reporting. The Vice President for Finance and Administration reports directly to the Office of the President.

Vice President for Information Resources and Chief Information Officer

The Vice President for Information Resources and CIO oversees all information technology and communication services, instructional technology, institutional research, and institutional advancement at NPS. As CIO, the Vice President oversees all voice, video and data communications infrastructure and services, and technology for resident and non-resident instruction. The Vice President for Information Resources and CIO oversees institutional advancement, which includes alumni affairs, media relations, publications, marketing, and community relations. This position also establishes close working relationships with NPS's academic and administrative areas to fully serve the academic mission.

Roles and responsibilities. The Vice President for Information Resources and CIO is responsible for the coordination of strategic information resources at NPS: Information Technology and Communication Services, instructional technology, institutional research, and institutional advancement.

Education and experience. The Vice President for Information Resources and CIO should have a Ph.D. in a relevant field (such as information technology); 5 to 10 years of experience in overseeing information technology, communication services (voice, video and data), instructional technology, institutional research, and institutional advancement; and strong analytical skills, experience with continuous improvement processes, and effective communications ability.

Reporting. The Vice President, Information Resources and CIO reports directly to the Office of the President.

Appendix F
NPS Meeting Structure

NPS MEETING STRUCTURE

Management meetings should be consultative, representative of the major areas on campus, and report to the President's Senior Staff officers for recommended actions, as appropriate.

Executive level meetings should be few in number, although the President and Executive Vice President and Provost may elect to attend other meetings, as invited or appropriate to agendas.

Management meetings should be consultative, representative of the major areas on campus, and report to the President's Senior Staff officers for recommended actions, as appropriate.

Executive Meetings

President's Senior Staff–This is a weekly meeting chaired by the President, consisting of the administrative decision-making body for the institution. It is comprised of the following members**:** President, Executive Vice President and Provost, Vice President for Academic Affairs, Vice President and Dean for Research, Dean of Students, Vice President for Finance and Administration, Senior Military Assistant/Chief of Staff, Vice President for Information Resources and CIO

President's Advisory Committee–This senior forum includes the Executive Vice President and Provost, Senior Military Assistant/Chief of Staff, the academic deans, Dean of Students, and the Vice President and Dean for Research. This information-sharing forum advises the President and Provost and meets as called by the President.

Executive Council–The President chairs the Executive Council in monthly meetings. It is an opportunity for the executive leadership at NPS to communicate with membership. Special agenda items can be presented by others, as requested by the President/Provost. The membership includes the President's Senior Staff, Deans, University Librarian, Base Director, Faculty Council representative, Senior Military Assistant/Chief of Staff, others as appropriate. Meeting summaries will be posted on the intranet.

Provost's Council–This Council meets weekly and is chaired by the Executive Vice President and Provost. This is the decision-making body for academic

programs, plans, processes. Its membership includes the Deans, Associate Provosts, University Librarian, VP and Dean for Research, VP Information Resources and CIO, VP Academic Affairs, Director of Programs, and other administrators as appropriate. Meeting summaries are posted on the intranet.

Resource Advisory Committee–This committee meets bi-monthly to provide the President and Executive Vice President and Provost updates on the financial status of the institution. In addition to NPS leadership, membership includes the VP and Dean for Research, VP for Finance and Administration and VP for Academic Affairs.

Management Meetings

Business Services Committee–This committee meets weekly and is chaired by the VP for Finance and Administration. Its membership includes the comptroller, Faculty Council representative, faculty representation from the major academic areas, contracting, purchasing, facilities, security, personnel, command evaluation, other directors as appropriate. Meeting summaries are posted on the intranet.

Research Advisory Board–The Board meets monthly and is chaired by the VP and Dean for Research. Membership includes faculty representation from all major academic areas. Meeting summaries are posted on the intranet.

Academic Council–The council meets monthly and is chaired by the VP Academic Affairs. Membership includes faculty representation from all major academic areas. Meeting summaries are posted on the intranet.

IT Task Force–This task force meets bi-monthly and chaired by the VP Information Resources and CIO. Membership includes representation from all major academic areas, comptroller, research, distributed learning, and other areas as appropriate. Meeting summaries are posted on the intranet.

Institutional Advancement Advisory Committee–This committee is chaired by the Director of Institutional Planning and Communications. Membership includes representation from all major academic areas and other areas, as appropriate. Meeting summaries are posted on the intranet.

Provost's *Ad Hoc* Committee on Business Practices

Charge to the Committee and Committee Membership

Dear Colleagues

As you are all aware, NPS has been having some difficulties in the area of "business practices." This is an area of considerable concern for the faculty and staff at NPS. It was mentioned often while I was being interviewed for the Provost position this year. I would like to have a small Ad Hoc Committee for Business Activities examine major business processes and our business organizational structure to determine where we can make improvements. The faculty complain about delays, complex processes and the staff are often overworked and under great stress. I suggest that the committee meet once or twice to discuss the issues and that we then convene a retreat, in the very near future, to develop a plan and any modifications to the current administrative support structure. I would like to meet with you for a few minutes at the first meeting and would attend the retreat.

The Committee Membership:

Dr. Christine Cermak, Chair, Executive Director, Information Resources and CIO
Ms. Laura Cole, Strategic Planning
Dr. Rudy Darken, Director, MOVES Institute
Mr. Pat Flanagan, Graduate School of Business and Public Policy
Mr. Scott Jasper, Chief Operating Officer, CCMR
Ms. Danielle Kuska, Director Sponsored Programs
Ms. Sue Netzorg, Administrative Officer, Graduate School of Engineering and Applied Sciences
Ms. Megan Reilly, Comptroller
Dr. Clyde Scandrett, Chair, Mathematics Department (representative to Faculty Council)
Dr. Tim Stanton, Professor, Oceanography Department
Dr. Harold Trinkunas, Associate Professor, National Security Affairs
Ms. Eleanor Uhlinger, Associate Provost and Director, DKL
Dr. Cris White, Human Systems

An incomplete list of issues, in no particular order:

- What are the primary business functions/

- Are we efficiently organized?
- Are there duplications of functions?
- Are we properly staffed?
- Are government regulations and processes appropriate for a research university?
- Do we need exemptions to certain processes?
- What is the status of contracting?
- How can we improve contracting further?
- What is the status of purchasing?
- How do we improve purchasing?
- What do we mean by a business office?
- How does a business office interact with the Comptroller and Sponsored Programs?
- What is a preferred organizational structure?

Please feel free to call me at any time to discuss the role of this important committee. Let me know the data you need from the Provost Office. I could have added several other individuals to this committee but I want to keep the group as small as possible but still able to cover most aspects of central admin. If there is someone who needs to be added please let me know ASAP. Thanks for your support and willingness to work with me on this important issue.

Best regards,

Leonard Ferrari, PhD
Associate Provost/Dean of Research
Naval Postgraduate School
220 Halligan hall
Monterey, CA, 93943

August 30, 2006

Dr. Leonard Ferrari
Acting Provost
Naval Postgraduate School
1 University Circle
Monterey, California 93943

Dear Dr. Ferrari:

Enclosed is the final report of the Provost's *Ad Hoc* Committee on Business Practices. If we could summarize our efforts into one sentence it would be that our report is focused on the need to rededicate the efforts of our institution in support of our core mission of graduate education and research. Everything flows from that over-arching proposition.

The report is divided into 7 general areas: Background, Method, Principles to frame the Committee's work, General campus climate issues, Recommendations, Other relevant issues, and Conclusions. The "campus climate issues" section identifies work atmosphere issues that are important in setting the context for our recommendations. In the "principles" section, we report business practice principles that we agreed should frame our Committee's work, but are also useful for adoption by all of the service organizations within NPS. The enclosed report also identifies 15 recommendations that are clearly responsive to the concerns you heard raised by faculty and staff during the Provost search process. Some of the recommendations may appear less impactful than others, but taken as a whole, the list represents a body of recommendations that provides an ambitious and meaningful agenda for change at NPS.

We have provided general estimates of implementation costs, but we urge that more detailed estimates should be developed soon. A small group of individuals experienced in this area can provide these estimates quickly. This will ensure that the individuals and offices tasked with implementation of recommendations have the requisite resources to be successful.

The Committee recognizes that the real challenge will be oversight of the implementation of each of these recommendations, reporting regular progress to the university community, celebrating achievements, and underscoring why these efforts are important to our overall mission. We have provided as much flexibility as possible in terms of your prerogative of how you will charge some of these tasks or perhaps modify the existing organization to best mobilize effort to accomplish this work.

We believe that NPS is at an important decision point and we would like to underscore the importance of (1) the sustainability of any changes that are made, and (2) the visibility that these changes are given by the administration. To the second, point, it may be appropriate to have a standing committee oversee the business practice improvement process or perhaps an *ad hoc* committee should be appointed to periodically assess progress. In either case, results should be reported to the university community.

Thank you for the opportunity to participate in this important process and we stand ready to support your leadership in implementing the recommendations of our report.

Sincerely,

Provost's *Ad Hoc* Committe on Business Practices

Dr. Christine Cermak, Chair (Executive Director of Information Resources/CIO)
Ms. Laura Cole, Deputy to the Strategic Planner
Dr. Rudy Darken, Director, MOVES Institute
Mr. Pat Flannagan, GSBPP
Mr. Scott Jasper, Chief Operating Officer, CCMR
Ms. Danielle Kuska, Director, Sponsored Programs
Ms. Sue Netzorg, Administrative Officer, GSEAS
Ms. Megan Reilly, Comptroller
Dr. Clyde Scandrett, Chair, Mathematics Department (and representative to Faculty Council)
Dr. Tim Stanton, Professor, Oceanography
Dr. Harold Trinkunas, Associate Professor, SIGS
Ms. Eleanor Uhlinger, Associate Provost for Library and Information Resources
Dr. Chris White, Human Performance Center

C: Ms. Kathleen Cain, Deputy Director of Sponsored Programs
Mr. Sean Harrigan, Administrative Officer, MOVES Institute

Provost's *Ad Hoc* Committee on Business Practices

Improvement of Business Practices at NPS
August 30, 2006

Background

Provost Leonard Ferrari established two committees in July 2006 to advise him regarding the improvement of administrative structure and processes at the Naval Postgraduate School (NPS). The first committee, the Provost's *Ad Hoc* Committee on Administrative Affairs, was established to advise the Provost on matters of administrative structure and the resource allocation process. The second committee, the Provost's *Ad Hoc* Committee on Business Practices, was established to provide recommendations regarding the improvement of business practices at NPS. A copy of the charge to the Business Practices Committee is provided in Appendix A, together with a list of Committee members. It should be noted that Ms. Kathie Cain (Associate Director, Sponsored Programs) and Mr. Sean Harrigan (Administrative Officer, MOVES Institute) also participated in Committee meetings, and provided valuable contributions to the work of the Committee.

The first committee continues to meet at the time of the writing of this report. However, information regarding the work of that group was shared to inform the work of the Business Practices Committee.

Method

The Business Practices Committee met twice – once on July 28 to review the charge, and develop an action plan. The second meeting was an all-day retreat on August 16.

The Committee requested feedback from faculty and staff through a variety of different methods. First, the Committee members themselves were asked to query their colleagues in their respective departments. Second, the Chair sent emails to deans, chairs, and directors, requesting their comments and recommendations. Finally, the recent SWOT (Strengths, Weakness, Opportunities, and Threats) survey results were reviewed by the Committee. The SWOT survey was undertaken to assist in the development of the institutional proposal to WASC, the regional accrediting body. Student input was not formally requested since students regularly are surveyed about their experiences at NPS and the results are published by the Office of Institutional Research.

Principles to frame the Committee's work

The Committee decided at its first meeting that its work should be guided by general principles of administrative structure and process. Those principles were further refined

at the second meeting, and the Committee urges that these be adopted by the entire institution:

1. NPS should focus on improving support of the core NPS mission: graduate education and research.

2. NPS business practices should be characterized by efforts to increase efficiency, reduce redundancies, to improve communication, and responsiveness with customers.

3. NPS administrative processes should have customer service as a demonstrable priority.

4. NPS business practices should maximize accountability at the appropriate level within the organization.

5. NPS should ensure sustainability of improvement measures.

6. NPS should use standards of professionalism to guide administrative/business processes (responsible and responsive management, communication, accountability, professional development and training, customer service, efficiency, measurement of appropriate performance indicators, and external review).

General campus climate issues

As the Committee began its discussions, it was clear that there were a number of climate issues that needed to be described in order for the group's recommendations to be understood. Listed below are the climate issues discussed by the Committee as most relevant:

- After various efficiency exercises, BRAC processes, increases in requirements, flat budgets effectively creating reductions in operating capabilities, audits, etc., the overall climate at NPS is one often marked by discouragement with what are sometimes viewed as redundant and difficult bureaucratic processes.

- There is a general feeling, held by many on campus that NPS has established Committees like this in the past, and no sustainable actions were taken. Minimal organizational learning has taken place that is supported. As new programs, processes, and general improvements have arisen, socialization efforts have waned or were lacking. This has contributed to frustration among personnel –and perceptions of duplication of efforts, trial-and-error processes, delayed outcomes, and increasing roadblocks.

- Administrative processes and practices are not clearly aligned with support of NPS' core mission of graduate education and research.

- The regionalization of key support areas has created a perception that campus authority to assign priorities and allocate resources to these areas has been undermined. It is generally believed that support for certain service areas is less than it was when the offices reported to the NPS leadership.

- A number of key NPS practices could be automated if the managers of the business processes worked with IT to do so.

- For a number of individual business offices, customer service needs improvement.

- Positions have been added to administrative areas without campus community understanding about purpose, cost-benefit.

- Resource allocation decisions are made without communication of a clear link with institutional goals and priorities.

Recommendations

Many recommendations to improve NPS business practices were received from the campus community. They were thoughtful, carefully considered, and represented a sincere effort to provide useful input to the Committee's work. A summary of those recommendations is included in Appendix B. The Committee recommends that the Provost consider those recommendations as part of a longer term agenda to improve business practices at NPS.

The Committee decided to provide a shorter list to the Provost in order to convey a sense of urgency about priorities and short-term actions necessary to improve campus processes now. After considering the overall campus climate, it is important to implement changes that are doable in the near term and address those issues that our faculty and staff have raised as the thorniest and most frustrating impediments to effective processes. Some of these issues may appear less visible than others, but taken as a whole, they represent a body of recommendations that will substantially improve the quality of work life at NPS:

1. **Provide better system for tracking budgeting and expenditures.**
    a. Integrate DORS-DMAS systems to provide one page snapshot of reimbursable budget-expenditure data. Include reconciliation within one month. Project lead: Danielle Kuska. Project timeline: 90 days
    b. Input job orders into ETAC for timekeeping information incorporation for CCMR. Project lead: Megan Reilly. Project timeline: 6-18 months.
    c. Input job orders into DTS. Project lead: Megan Reilly. Project timeline: 90 days.
    d. Integrate labor planning into DMAS (reimbursable and direct). Project lead: Academic Planning. Project timeline: 6-18 months.
    e. Complete integration of DORS and DMAS into one system providing one-page snapshot of all budget-expenditure data (reimbursable, indirect, and direct). Project lead: Danielle Kuska and Megan Reilly. Project timeline: 12 months.

2. **Reduce requirements for budget page modifications (requiring less paperwork for Principal Investigators).** Project lead: Danielle Kuska. Project timeline: 90 days.
3. **Principal Investigator indirect rollover for continuing project accounts – portion of indirect allowed to rollover to include those projects that are executed in multiple years.** Project lead: Danielle Kuska and Megan Reilly: Project timeline: 90 days. In addition, the team will explore indirect rollover for single year projects since A21 permits rollover of these funds for civilian universities. The team will explore a waiver to use A21 as a guide rather than DoD FMAR and will report findings to the Provost.
4. **Travel voucher review and approval will be moved to Travel Office (if selected departments wish to keep this responsibility, they can do so).** Lead: Megan Reilly. Project timeline: 90 days
5. **Improve effort reporting to "after-the-fact" reporting to eliminate the need for "supplementals" – paperwork that burden faculty and staff members' time.** Project lead: Megan Reilly and Danielle Kuska. Project timeline: 90 days
6. **Development of Standard Operating Procedures (SOPs), flow charts, and timelines for ITOs (Invitational Travel Orders), Honoraria, Purchasing, 1610s (manual travel orders for government-employee civilians), MIPRs (Military Interdepartmental Purchase Request), Contracts, Conference Planning, Hiring and Personnel Actions, Individual Force Protection Plans.** The development of a type of job aid, (e.g. cheat sheets) that describes who to go to for specific inquiries, should supplement the SOPs. Project lead: Danielle Kuska and Megan Reilly (and others, as appropriate). Project timelines: 90 days for all but Purchasing and Contracting. Latter to be 6-12 months and Project Lead to be determined by Provost.
7. **Establishing a formal orientation program and expanding funding for staff training.**
    a. Development of quarterly formal orientation program for new faculty and staff. This should include a meeting session, a campus tour, introductions to relevant offices, written materials describing major business practices, guides to relevant websites that must be kept current, contact information, etc. Project lead: Associate Provost for Academic Affairs. Project timeline: 90 days.
    b. Doubling of institutional budget for staff training from $50,000 to $100,000 annually. Project lead: Provost and President. Project timeline: 90 days.
    c. Encourage cross-training of staff in critical service areas to ensure coverage when staff members are on leave. Encourage mentorship of staff, were possible. Project lead: Provost and President. Project timeline: immediate and ongoing.
8. **Improve contracting process**
    a. Formally request permanent assignment of FISC staff to NPS. Project lead: Provost and President. Project timeline: 90 days.

b. Fill 2 vacant contracting positions. Project lead: Danielle Kuska. Project timeline: 90 days.
c. Begin formal tracking of contracting data (volume, how long it takes, customer satisfaction). Project lead: To be determined by Provost. Project timeline: 90 days.
d. Move focus of contracting service at NPS from rule-enforcement orientation to advising-orientation. Help faculty accomplish what needs to be done in a helpful, customer-service manner. Implement customer satisfaction surveys to measure progress. Project lead: To be determined by Provost. Project timeline: 90 days and ongoing.

9. Improve purchasing process. Because of the decentralized nature of this process, it is recommended that coordination of purchasing processes be formalized by the appointment of a person with the following responsibilities:

a. Training and subsequent socialization of any changes in relevant policies or procedures,
b. Developing the appropriate SOPs,
c. Establishing performance metrics,
d. Holding regular meetings with purchasing staff to ensure questions are answered and they have the information they need to do a good job.
e. Developing customer feedback mechanisms.
f. Exploring a mechanism for more efficient management of cell phone procurement and billing.
g. Reporting to the academic departments/institutes/schools regarding purchasing processes (volume, how long it takes, how well the customer is served, etc.) Project lead: Provost. Project timeline: 90 days.

10. Strengthen NPS commitment to customer service.

a. Demonstrate leadership commitment to this as a priority (Project lead: Provost. Project timeline: 90 days and ongoing).
    i. Incorporate into speeches, meeting agendas, and annual report to the community (State of the University address).
    ii. Commit funds for customer service training.
    iii. Set expectations for business units to provide annual accountability reporting, performance measures, customer satisfaction surveys.
    iv. Business process managers should take responsibility for accountability and customer service within their organizations – these managerial responsibilities should be included in performance reviews.
    v. Implement periodic external reviews of business units to ensure outside assessment of current operations and to ensure access to new ideas and methods by other universities known for good practices in the relevant administrative areas.

11. Demonstrate management information transparency.

a. Show financial information transparency on a regular basis by providing budget/expenditure data, and information about the resource allocation (including indirect funds) and planning processes to the campus

community via website. Project lead: Megan Reilly, Gil Howard, Danielle Kuska. Project timeline: 90 days.

b. Show hiring transparency by having a standard process for all hires for significant areas of responsibility including: justification for the position, position description, open search and interview process, search committee, and public communication of search results. Project lead: Provost and President. Project timeline: immediate and ongoing.

12. Improve campus communications. Project lead: Provost. Project timeline: 90 days and ongoing.

a. Post announcement of committees on the intranet. Include committee charge and membership and any reports that result from the groups' work.
b. Post announcement of major new appointments, administrative areas.
c. Develop an NPS organizational chart.
d. Dissemination of job aids throughout the community (SOPs, flow charts of business processes, who to go to for assistance, etc.).
e. Adopt a protocol for meetings that includes posting of agendas and meeting summaries.
f. Charge Institutional Advancement with the development of a Communications Plan which includes performance metrics.
g. Help support service staff develop an understanding of the importance of NPS mission of graduate education and research.
h. All administrative areas should have easy to navigate and understand websites with relevant information (new directions, implementation plans, business process descriptions, SOPs, flow charts, appropriate statistics and other performance metrics, etc.).
i. Enhance efforts to communicate legal obligations to monitor and authorize check expenditures on reimbursable accounts.
j. Give visibility to how support service areas help to make NPS successful.

13. Automate processes, where cost-benefit indicates.

a. Web-accessible standard forms and procedures for all comptroller, travel, purchasing and contract processes. Research Office does an excellent job on this for research proposal pages – this should be used as best practice for other offices. Comptroller or contracting staff could rapidly propagate new procedures and ensure they get the right paperwork the first time.
b. Use digital signatures for review/approvals where possible to reduce the time it takes to complete a business process (e.g. research proposals).
c. Automated feedback from key business processes such as comptroller, contracts, purchasing, etc. so staff know where paperwork is in the process (received, reviewed, rejected, accepted, paid, etc.). Development of service level agreements with customers so that expectations are clearly defined about what information is required and how long processes can be expected to take. What factors accelerate processing, what factors constitute obstacles, etc. Project lead: Megan Reilly, Danielle Kuska. Project timeline: 6-12 months.

14. **Explore possibility of reversing regionalization for NPS in order to improve responsiveness to campus priorities.** Project lead: Provost and President. Project timeline: 90 days.
15. **Explore flagship status within the Department of Navy.** Many of the regulatory issues NPS faces are a direct result of the "round peg in the square hole" syndrome. As a research university, we are often a special case or extraordinary application of a general Navy rule. As a result, much time is spent documenting the extent of our distinctive situation or purpose, and requesting a special consideration of NPS circumstances. This takes inordinate time on both sides and results in little or no value added. If there is a way to request a special charter status with the Department of Navy, this should be pursued with the understanding that appropriate accountability will continue to be in place. Project lead: Provost and President. Project timeline: 90 days.

Other relevant issues

Improvement of management practices. Many of the above recommendations speak to the need for the improvement of overall management practices at NPS. Standards of professionalism should guide administrative/business processes. Responsible and responsive management includes:

- regular communications with NPS leadership and customers,
- accountability for the expenditure of funds and looking for ways to improve efficiency and effectiveness of services provided,
- use of business process data to evaluate the management of business processes. Results should be incorporated into regular performance evaluations.
- establishing appropriate performance indicators to monitor progress,
- providing for professional development and training of staff,
- demonstrating a commitment to customer service by having a customer advisory group, asking customers for their opinions about the quality of service provided, etc.
- having an external review process.

Need for project planning to ensure sustainability. Often the Committee heard discouragement about the number of initiatives begun at NPS, but not sustained. New projects are often undertaken without a project plan and clear definition of resources required, roles and responsibilities. Often life cycle maintenance, licensing, subscription and other costs are not considered. Also long term support of the project is not considered sufficiently so it is "add-on" to already full staff workloads. NPS should adopt project planning as a requirement for new projects. This will ensure resource requirements are planned more carefully. As a result, projects and initiatives have a greater probability of being sustained over the longer term. Regular progress reporting is part of effective project planning and execution and this will also ensure appropriate momentum is maintained to completion of the project.

As a whole, the outcome or improvements we are suggesting represent a substantial change from current practice. We must supplement our efforts with the incorporation of best practices for change management.

Costs. All of the above recommendations do not have associated costs specified, however there are three general categories of expenditures recommended:

- $50K for training
- Salary support for one purchasing coordinator (this may be mitigated by asking one of the senior purchasing agents to take on additional responsibilities for coordination)
- Contracting support for specific systems projects: integration of financial systems, digital signature processing, and web development.

Costs for contracting systems support can be estimated more specifically in the individual project plans. Most involve short-term funding for specific programming efforts.

Benefits. The benefits of implementing the above 15 recommendations will have both qualitative and quantitative elements. The Committee recommends describing the "as is" state before beginning work on improvements in order to clearly document the institutional benefits. It will be important to publicize the implementation of the recommendations, giving visibility and support to the effort, and celebrating the accomplishments. This process will provide evidence to the community that NPS is able to respond to concerns of its constituents in constructive and effective ways and is engaged in a process of continuous improvement.

Conclusions

Most of the recommendations in this report have been voiced many times over in past years, and, for various reasons, were not implemented or, in some cases, not completed or sustained. It is important that this time leadership visibility be given to these efforts as well as concomitant resources. Periodic progress reporting to NPS faculty, students, and staff would also be helpful in enlisting community support for implementation efforts.

The Committee appreciates the opportunity to provide input to improving business practices at NPS, and stands ready to assist those tasked with implementation in any way that would be useful.

Appendix A

Provost's *Ad Hoc* Committee on Business Practices

Charge to the Committee and Committee Membership

Dear Colleagues

As you are all aware, NPS has been having some difficulties in the area of "business practices." This is an area of considerable concern for the faculty and staff at NPS. It was mentioned often while I was being interviewed for the Provost position this year. I would like to have a small Ad Hoc Committee for Business Activities examine major business processes and our business organizational structure to determine where we can make improvements. The faculty complain about delays, complex processes and the staff are often overworked and under great stress. I suggest that the committee meet once or twice to discuss the issues and that we then convene a retreat, in the very near future, to develop a plan and any modifications to the current administrative support structure. I would like to meet with you for a few minutes at the first meeting and would attend the retreat.

The Committee Membership:

Dr. Christine Cermak, Chair, Executive Director, Information Resources and CIO
Ms. Laura Cole, Strategic Planning
Dr. Rudy Darken, Director, MOVES Institute
Mr. Pat Flanagan, Graduate School of Business and Public Policy
Mr. Scott Jasper, Chief Operating Officer, CCMR
Ms. Danielle Kuska, Director Sponsored Programs
Ms. Sue Netzorg, Administrative Officer, Graduate School of Engineering and Applied Sciences
Ms. Megan Reilly, Comptroller
Dr. Clyde Scandrett, Chair, Mathematics Department (representative to Faculty Council)
Dr. Tim Stanton, Professor, Oceanography Department
Dr. Harold Trinkunas, Associate Professor, National Security Affairs
Ms. Eleanor Uhlinger, Associate Provost and Director, DKL
Dr. Cris White, Human Systems

An incomplete list of issues, in no particular order:

- What are the primary business functions/

- Are we efficiently organized?
- Are there duplications of functions?
- Are we properly staffed?
- Are government regulations and processes appropriate for a research university?
- Do we need exemptions to certain processes?
- What is the status of contracting?
- How can we improve contracting further?
- What is the status of purchasing?
- How do we improve purchasing?
- What do we mean by a business office?
- How does a business office interact with the Comptroller and Sponsored Programs?
- What is a preferred organizational structure?

Please feel free to call me at any time to discuss the role of this important committee. Let me know the data you need from the Provost Office. I could have added several other individuals to this committee but I want to keep the group as small as possible but still able to cover most aspects of central admin. If there is someone who needs to be added please let me know ASAP. Thanks for your support and willingness to work with me on this important issue.

Best regards,

Leonard Ferrari, PhD
Associate Provost/Dean of Research
Naval Postgraduate School
220 Halligan hall
Monterey, CA, 93943

Appendix B

Business Practice Recommendations

(August 15, 2006 – recommendations provided by numerous NPS offices and individuals)

1. General climate issues:
   a. After various efficiency exercises, BRAC processes, increases in requirements, flat budgets effectively creating reductions in operating capabilities, audits, etc., the general climate is one often marked by discouragement with what are sometimes viewed as redundant and difficult bureaucratic processes.
   b. It is unclear whether regionalization has benefited the campus and there are a number of examples where it may have undermined the integrity of the campus.
   c. There is a general feeling, held by many on campus, that NPS has had Committees like this in the past, and no actions were taken.
   d. A number of key NPS practices could be automated if the managers of the business processes worked with IT to do so.
   e. NPS should refocus its administrative efforts more directly in support of its core mission of graduate education and research.
   f. For a number of individual business offices, customer service needs improvement.
   g. Positions have been added to administrative areas without campus community understanding about purpose, cost-benefit.

2. Communications
   a. Short Term
      i. More visibility of the resource allocation process; how decisions are made, priorities are set; what revenues are received by the university, how funds are expended.
      ii. Faculty and Staff Newsletter – both print and electronic versions to include campus events and happenings (like construction), new personnel, staff announcements, celebrate achievements, etc.
      iii. Agendas and meeting summaries to be shared, as appropriate
      iv. Who owns communication? Currently, seems unclear. The COS owns bulk email and must approve all messages. Institutional Advancement has another role in communication. The Provost disseminates academic messages. Pat Paulson has an email group. Etc, etc… Bottom line: Communication is fragmented and reaches some of the people some of the time.

v. Communicate the fact of this committee, invite comments/suggestions. Communicate final report of the committee, when endorsed by the Provost.
vi. Communicate the results of the first committee (Provost's *Ad Hoc* Committee on Administrative Affairs) – again, when endorsed by the Provost.

Immediate consideration: Do we need a formal communications plan? Should someone be assigned to develop the plan – with an advisory committee? In this day of instant electronic communication that there could a focal point for the dissemination of information?

b. Long Term
   i. Develop complete communications strategy for both on and off campus – determine exactly what forms of communication will be developed and on what time frame and to what audience
   ii. Include an Annual Report (General), Annual Report (Research)
   iii. Change the Quarterly Report to perhaps a monthly version that highlights a different area each time – no more than two sides of a page
   iv. Update Intranet more frequently
   v. Have an online calendar of events as opposed to emails listing events
   vi. Reduce the number of all-hands emails distributed, if possible
   vii. Establish a quarterly NPS magazine that can be distributed locally, to alumni, etc.
   viii. Identify method of getting documents published more efficiently (cost and time) than through the DAPS process – move on to campus if necessary
   ix. Provide responsibility and resources to IA to coordinate all materials going off campus
   x. Revise web site (both intra and inter) for improving format and content – acquire content management system to assist with automatically updating content

3. Business Process
   a. Short Term
      i. Publicize the results of this Committee's work and the work of the Provost's *Ad Hoc* Committee on Administrative Affairs.
      ii. Correct the check-in process for faculty and staff – more uniform; change the name of the office conducting the check in (is Student Services the appropriate location?)
      iii. Provost to instruct all schools that faculty must have appointment letter through Gil Howard's office

iv. Definition of pilferable property needs to be modified to avoid onerous cost of oversight and administration.
v. Provost to instruct Registrar to permit only those vetted by Gil Howard to teach classes
vi. Automation of time and attendance/leave, etc.
vii. Move accountability for research grant/contract purchases from the Research Office to the PI.
viii. Keep contracting for research principal investigators with the Research Office – move all other contracting to another office.
ix. Travel, leave forms, others?
x. Identify data fields in Python where integrity would be upgraded by requiring student input (e.g. thesis topic and title) and where integrity would be upgraded by not permitting input (rank, title)
xi. Let individual departments post occasional visitor cones in local parking lots (discontinue the Herrmann hall oversight office)
xii. Role of attorneys in CRADA development, other advisory roles
xiii. Need for a digital signature accepted for all NPS forms, especially those that involve the comptroller since they require multiple signatures. Our AOs and PIs are frequently on travel so it would be helpful to the staff if this part of the business process could be conducted electronically and remotely.

b. Longer Term
i. Administration should do what it can to streamline business processes, reduce administrative costs, and improve customer service.
ii. Require each administrative level to produce correct org chart (by position not person)
iii. Require each administrative level to provide up-to-date position descriptions
iv. Require each administrative level to create written and electronic documentation of business processes conducted by each position
v. Investigate possibility of streamlining/expediting contracting process
vi. Train travel staff thoroughly and return all travel paperwork to that office
vii. Scheduling process requires attention -- some changes in the works (rewriting of instruction and request for POM or other funding to address long-range solution).
viii. New projects are often undertaken without a project plan and clear definition if resources required, roles and responsibilities. Often life cycle maintenance, licensing, subscription and other costs are not considered. Also long term support of the project is not considered so it is “add-on” to already full staff workloads. NPS should adopt project planning as a requirement for new projects.

ix. Explore redundancy in certain support areas – e.g. support for DL programs (technical, marketing, etc.). Encourage departments to have a menu of services with pricing so actual costs can be determined and planned.
x. Require cost-benefit analyses as part of project plans to identify where the project fits into the NPS Strategic Plan and if added costs are worth it.
xi. Web-based database of all NPS DL and resident courses.
xii. Implement "lead" admin officers all over NPS. They would be the group to get briefed on new procedures, policies.
xiii. Web-accessible standard forms and procedures for all comptroller, travel, and contract offices. SOWs, honoraria, ITOs, -- all examples of practices that have high do-over rates. Research Office does great job on this for research proposal pages – should be used as best practice for other offices. Comptroller or contracts office could rapidly propagate new procedures and ensure they get the right paperwork the first time.
xiv. Improved feedback, perhaps automated; from key business processes such as comptroller, contracts, etc. so staff can know where paperwork is in the process (received, reviewed, rejected, accepted, paid, etc.). DTS does a pretty good job of this.
xv. Sustain the highest level of NPS contracting expertise in the 09 research office. Formally establish a 09 Contracts office based on demonstrated knowledge and past performance in facilitating solutions to never ending FISC SD generated dilemmas in contract types, funding allocation methods and approval procedures.
xvi. Expand 09 contract staff to handle the high volume of NPS contracts and allow back-up when key personnel are absent. Establish a FISC SD contract detachment at NPS with Contracting Officer authority to enable the timelier processing of contract orders and modifications.
xvii. Move the SATO office back to NPS to allow for personal interactions and ticket issue. Connect SATO systems to DTS for processing of AO travel related messages and alerts.
xviii. Establish routine Check cashing capacity at NEX and create surge capacity for higher volume of funds for short course reimbursement.
xix. Establish centralized control for allocation of all large capacity conference rooms on campus, to include Spanagel 101A, Ingersol 122, ME Auditorium, Glasgow 102 and 109.
xx. Centralize purchasing authority and simplify procedures for Cell phone service
xxi. The funding logarithm does not reward faculty for resident teaching. Faculty find reimbursable funding to "buy themselves out" of resident teaching since it requires far more effort to prepare for and deliver resident teaching than the Academic Planning

compensation model provides in terms of faculty workload. The end result is fewer faculty who have incentive to teach resident students.

xxii. Schools/faculty should be incentivized to adopt a business model that supports interdisciplinary programs (research and education). Current budget model is broken since it requires faculty to find 50% of his/her salary at the beginning of the fiscal year. End result is loss of focus on core mission (excellence in teaching and research).

xxiii. Too many *ad hoc* policies and processes. Instructions should be updated and published – by an office that can respond to questions.

xxiv. Create performance metrics for each service organization on campus.

xxv. Establish a re-engineering process at NPS – purpose to streamline administrative burden on faculty, students, and staff.

4. Hiring/Orientation/Training for faculty/staff
    a. Short Term
        i. All hires for significant areas of responsibility should go through a process that includes: position description, open search an interview process, search committee, and public communication of search results.
        ii. Identify areas of training and orientation needed: how the federal government works – structure of GS system, etc; how the military works; basic info on what students, faculty, staff are here at NPS
        iii. There does not appear to be NPS commitment, managerially or monetarily, to staff training. Training and development of our own people is a lower priority than custodial requirements. Of particular concern as the new personnel system, NSPS, begin to be implemented.
        iv. Institutional budget under the Provost for training. Deans and Chairs, Institute Directors, etc. need to be helped to understand that commitment and have some level of accountability for ensuring that each and every staff member have training plans and a path for developing their job skills.
        v. Orientation program for faculty is needed.
        vi. Mentorship program to engage GS staff. Job shadowing for cross-functional departments.
        vii. Orientation program for staff is needed.

    b. Long Term
        i. Update the web based training now on the web

ii. Provide training for those not familiar with military and federal processes
iii. Each major administrative area should have ongoing training programs – at least on quarterly basis.
iv. Plan to change the culture at NPS. Develop techniques to get NPSers more involved with the institution, re-establish a team atmosphere on campus. Break down stovepipes and increase collaboration.

5. Funding/Budget/Resources
   a. Short Term
      i. Provide easier, single system for tracking expenditures
      ii. Require schools to be responsible for balanced budget
      iii. Create a proposed budget and disseminate on campus for review
      iv. Tie budget clearly to strategic goals – use new monies (POMs, etc) for projects which further the goals
      v. Explore possibility of doing away with requiring "budget pages."
      vi. Change business practices from a "policing" or "gatekeeping" approach to one driven by quality customer service.
      vii. The purchase card program. Who really owns it? The Comptroller has a position with responsibility for being the "Agency Purchase Card Coordinator." Is there an SOP (standard operating procedure) that is provided to all new purchase card holders? Training seems to be uneven for new purchase card holders. The Agency coordinator is knowledgeable but is that position also the "go-to" person?

         Immediate action to consider: Select an owner and provide funding to operate and staff the program. Establish that the purchase card program is a business function with operating procedures, orientation and training for users, and an owner who has responsibility would be something to consider.

      vi. We are told to bring in other revenue since Navy funding is decreasing (MIIS, CSUMB, etc.), yet when we do, there is no method to provide services and accept funds. There are even issues with whether or not it is legal to provide the services.

         Also need to coordinate efforts. One department might be forming a partnership with an organization or institution just to fnd out other NPS departments already have separate agreements.

         Suggestion: provide source of information that explains:
         - What we are allowed to do and what we are not allowed to do (e.g. defense contractors or faculty from CSUMB or MIIS requesting NPS courses)

- List of partnerships publicized on the web – one office to handle oversight
- Listing of the different types of agreements (CRADA, MOU, MOA, Educational Partnership Agreements, Technical Services Agreements, etc.) that explains which ones should be used for which circumstance.

Suggestion: process to accept funds from other institutions.

b. Longer term
   i. Seems that chronic end-of-year labor shortfall can be better managed. Shortages should be discovered earlier and dealt with prior to EOFY.
   ii. Explore a way to "roll-over" funding at the end of each fiscal year.
   iii. Explore "grant" authority for NPS. Will provide greater flexibility for receiving activity (partner university).
   iv. Create NPS Strategic Plan and ensure that department plans and actions fall within the NPS plan (accountability).
   v. Review current space allocation. Are there non-NPS groups occupying NPS space? If so, do they take priority over NPS needs?
   vi. Property management system needs improvement. Should have a process that includes: processing the order, tracking the order until it arrives, tracking the property over its lifetime and excessing it when no longer needed.
   vii. Explore use of temporary buildings.
   viii. Explore use of leasing buildings off-campus.
   ix. Provide near real time interfaces between disparate systems to enable accurate and timely allocation and tracking of expenditures
   x. Electronically connect DORS labor entries into ETAC for full use of JONs in timekeeping processing
   xi. Electronically connect DORS travel allocations into DTS for rapid use of JONs for booking
   xii. Improve DORS cycle time for Contract and Purchase order updates to depict true financial status
   xiii. Correct the long delay in DFAS payments of Honorariums that deny this payment method as an acceptable compensation option
   xiv. Many NPS research programs rely on "incremental funding" from multiple sources. Is it possible to collect these funds and voice the need to have multiple options on FISC contracts since full funding is not available to cover the annual costs?
   xv. Timekeeping – reduce labor required to track timekeeping. Planning PI labor for the year, for example.

6. Accountability, reporting, and responsiveness

a. All assistant provosts and executive directors should have a faculty advisory committee.
b. Information reporting should be done in a more efficient way. Data calls should be answered in a consistent way. NPS should have, as most universities do, a central coordinating point for most requests for information.
c. Create a new office of Administrative Services or Business Services.
d. Provide regular reporting of NPS financial information – revenues, expenditures.

Business Processes Implementation Task Force
Report to NPS Leadership
November 2007

The Nation's Premier Defense Research University

Monterey, California
WWW.NPS.EDU

Business Processes Implementation Task Force

- Julie Filizetti, Chair
- Terri Brutzman
- Christine Cermak
- Gil Howard
- Danielle Kuska
- Megan Reilly / Kevin Little

A Brief History

- Business Processes Implementation Task Force (BPITF)
  - Formed as a recommendation of the Business Processes Ad-Hoc Committee
  - Chartered by Provost in October 2006
  - Given a list of 16 recommendations to address
  - Has given 90 and 180 day updates to campus community

Purpose of Today's Meeting

- Describe successes
- Discuss challenges TF has had along the way
- Determine the way ahead
  - TF has a series of recommendations that include:
    - Moving responsibilities from TF to institutionalized structure
    - Pursuit of a few key initiatives that will set NPS on new course
      - But that require NPS Leadership support

Business Processes Focus Areas

- 16 Recommendations in 8 areas
  - Financial Systems and Processes (1, 2, 3, 4, 6, 12)
  - Travel Voucher Centralization (5)
  - Support for Business Processes – SOPs (7)
  - Staff Development (8)
  - Procurement and Contracting (9, 10)
  - Customer Service and Communication (7, 11,13,14)
  - Regionalization (15)
  - Flagship status for NPS (16)

Major Successes

- DORS-DMAS Integration
- PI Indirect rollover (limited)
- Focus on “flagship” status
- Staff Development Advisory Committee
  - Training Budget
- Contracting
  - IDIQ’s
  - FISC Relationship
  - Director of Grants and Contracts
- Travel Voucher Centralization
- SOP and Process Mapping
- Some enhancement of administrative pride
- Improved communication

Ongoing Challenges

- Lack of defined “ownership” of key activities and processes
  - Procurement
  - Staff Development
  - Systems
- Focus
  - Competing requirements that are not always consistent with management goals
    - Management Internal Control program and Business Processes
- Resources
  - Resource allocation
  - Sustained commitment to initiatives

Ongoing Challenges (continued)

- Skepticism regarding improvement
- Lack of “standardized” management practices across all activities, processes
  - Benchmarking data
- Change processes
  - Not well defined and communicated
  - Documentation
  - Adequate Training
  - Clear lines of authority and notification at proper levels
  - Examples:
    - Paris to CitiDirect
    - Travel Voucher Centralization
    - New and revised NPS instructions

Reasons for Optimism

- Strategic Plan
- Leadership stability (at the top)
- New NPS Decision Making Structure
  - Business Processes, Facilities and Infrastructure Committee
- Director of Financial Systems
- NPS Staff
  - They want improvement and are willing to work on it
- “Kuali”

KUALI Business Systems

- Designed for a university business model
- Able to interface with Government systems
- Modular design allows iterative implementation as well as a customized product.
- Cost – Palatable
  - Low membership fee
  - No license fee
  - Expenditures are for tangible assets

"NPS should take on the persona of a University in the way business is conducted, yet be able to interface with Navy processes."

General Recommendations

- Declare success of Business Processes Implementation TF effort
- Institutionalize changes and improvements
- Assign unfinished actions to key managers

Specific Recommendations

- Create a comprehensive picture of NPS systems
- Pursue Kuali as a framework for financial, student management, sponsored programs and other systems
  - Establish a Kuali Advisory Committee to keep this initiative on track
  - Establish and execute a project plan that includes resource commitments
- Staff Development Advisory Committee report to Associate Provost for Academic Affairs
  - Establish this as standing NPS committee
- SOP and Process Mapping Task Force
  - Co-chair appointment expires 31 Dec 2007
  - Will deliver a project plan and budget for creation of a web-based administrator's "how to" guide
  - Work is critical
  - Needs champion and continued funding
    - Web Advisory Committee will have some oversight
    - Associate Provost for Academic Affairs to continue until different ownership established

Specific Recommendations

- Require IPEDS submission
  - Key benchmarking data
    - Finance, Students, Faculty
    - IR can lead, others must provide information
- Investment in systems, databases, etc. should be properly staffed and approved by NPS decision making structure
  - ITACS involvement
  - Legal, PII aspects
  - Long-term staffing and resource commitments
  - All stakeholders participate
- Require external review of all administrative areas
  - Establish appropriate staffing levels (update of prior studies)
  - Benchmark with other universities

Detailed Success Stories

Financial Management Reporting Systems (DORS/DMAS)

- DORS – DMAS Integration
  - DORS/DMAS reports were deployed for sponsored projects in FY07
    - Provides PI/PM detailed information on individual transactions
    - Provides projected expenditures/projected balance
    - Current info is available to PI/PM on their desktop
- FY08 projected deployment for web-enabled DORS/DMAS reports:
  - Department Indirect (IXXSL accounts)
  - PI Indirect
    - Detailed reports on accrual
    - Detailed reports on expenditures
  - NIFR/RIP Accounts (B accounts)
  - Dynamic vs. Static Research/Sponsored Activity Reports with drill-down capability

PI/PM Indirect Rollover

- PI/PM indirect accounts now cross the fiscal year boundary
- Eligible indirect is "rolled" to the following fiscal year
- Allows PI/PM to more efficiently utilize indirect funding
- Improved detailed report provides:
  - Accrual to Date
  - Expenditures to Date
  - Balance to Date
  - Balance Available for Rollover
- Reports currently disseminated via email; migration to web-based on line report for FY08

Travel Voucher Approval Centralization

- Long History
  - Travel hotline email address established in FY05 for customer input on travel issues
  - Beta test of voucher processing on a specific department conducted in FY06 to assess impact of new approach
- FY07 - Selected departmental input and critique
  - Workload assessment conducted
  - SOPs developed for centralization desk
  - Centralized AO positions hired with travel expertise
- Current Status:
  - Processing vouchers for all Department Chairs except SIGS departments (requested to process their own)
  - Initial back log cleared and vouchers processed within 48 hours
  - Timely responses & performance measures are tracked

Business and Administrative Processes Website

- Single website cataloging all NPS business and administrative processes
  - Over 300 topics identified for inclusion
- Each site will include:
  - References (policy/instructions)
  - Definition of terms/acronyms
  - Explanation of "subject" being presented
  - SOP for processing
    - Flowchart of Process
  - Links to other related sites and/or forms
  - Organization responsible/technical point-of-contact
  - Date of last update
- Characteristics for each site
  - Prior knowledge will not be assumed
  - Consistency in presentation
  - Image (quality of design) and substance (quality of content) imperative
  - Google-like search engine
  - Quick links for lateral topics, i.e. organizational responsibility, forms, instructions

Administrative Website Advisory Committee

- Danielle Kuska, Chair
- Megan Heath
- Susan Hudson
- Christine Kays
- Kathi Noyes
- Nancy Weigle

Staff Development

- Doubled staff development budget from $50K to $100K
  - Professionalism Training for over 100 staff members and managers
  - Basic Appropriation Law training for 26 staff from around the campus
  - San Diego Purchase Card Conference attended by about 19 staff from around the campus
  - Seven Comptroller staff earned their Certified Defense Financial Manager (CDFM) credentials
- Formed Staff Development Advisory Committee
- Sustainability

Staff Development Advisory Committee

- Sue Dooley, Chair
- Toni Dickenson
- Mike DiFranco
- Jodie Dodge
- Megan Heath
- Robbie Johnson
- Pete Randazzo
- Ben Roberts
- Liza Rosa

Improving Campus Communications

- Monthly campus newspaper, *Update NPS*
- *In Review* magazine now issued quarterly with expanded distribution
- Letters from the President to the campus every other month
- Restructuring of meetings on campus -- with agendas and meeting summaries
- Posted to the Intranet:
  - Provost's monthly newsletter
  - NPS organizational chart
  - NPS Catalog and Academic Policy Manual and curriculum chart
  - Ad Hoc committee appointments, charges and progress reports
  - Financial information
  - WASC Steering Committee minutes and documents
  - Fact Book, In Review magazine, Command History
- Web Advisory Committee selected and charged with improving intranet and internet content and navigation
- Institutional Advancement Advisory Committee selected and charged with improving communications
- Comptroller Advisory Board of School Admin Officers

Web Advisory Committee

- Fran Horvath, Chair
- Doug Brinkley
- Terri Brutzman
- Andy Hernandez
- Daphne Kapolka
- Danielle Kuska
- Val Moulé
- Alan Pires
- Judit Sedillos

Institutional Advancement Advisory Committee

- Fran Horvath, Chair
- Tom Hazard
- Vicki Hoy
- Paula Jordanek
- Danielle Kuska
- Cynthia Irvine
- Jim Suchan
- Tim Stanton
- Merrill Ruck

Contracts and Grants

- Successes in making processes better and easier
  - Simplified documentation
  - Reduce time to award
- Three IDIQ contracts in place to support NPS requirements
  - Administrative and Instruction
  - Research
  - Information Technology
- Assistance Agreement (grants and cooperative agreements) authority now in place with FISC.
  - NPS has issued a Broad Agency Announcement
  - Appropriate mechanism for working with other universities, collaborating with NGOs when NPS is providing funding
- NPS website being updated with details

Procurement

- Ad Hoc Committee on Procurement
  - Define the current processes
  - Assess the effectiveness of current protocols in terms of how the customer is served
  - Evaluate accountability issues; how transactions get posted, the timing of postings, inventory control
  - Examine procurement training issues & how these can be improved to improve customer service
  - Examine procurement documents & how they are utilized, and by whom
  - Evaluate the use of a website to aide all who wish to make a purchase
  - Evaluate performance metrics that will be useful in measuring the effectiveness of procurement activities
- Procurement Oversight Board formed
  - Coordination with / between Ad Hoc committee, FISC & Internal program stakeholders

Ad-Hoc Committee on Procurement

- Jack Shishido, Chair
- LT Heath Alvarez
- Kathie Cain
- Ken Davidson
- Tracy Hammond
- Scott Jasper
- Kevin Little
- Sue Netzorg

Web Content Management (WCM)

IA/ITACS Project Team

The Nation's Premier Defense Research University

Monterey, California
WWW.NPS.EDU

Web Content Management – Needs Assessment

NPS website needs to be

- **a key element of communication, information dissemination, and NPS knowledge creation**
- **a reflection of how we want to be perceived by our customers and others, both internally and externally**
- **capable of supporting our academic mission and business processes with integrated, user-centered, web-based applications**

Web Content Management - Background

- **FY04 - NPS website upgrade effort launched with the company 2020 LLC**
- **FY05 - Content Management System (CMS) committee selects vendor but funds not available for purchase**
- **FY05 - Manual CMS implemented and upper levels of NPS web migrated from www.nps.navy.mil to www.nps.edu**
- **FY06 – DKL and ITACS run pilot to demonstrate web redesign project and CMS capabilities**
- **FY06 – Several NPS organizations express interest in having their web sites managed by the CMS (WCM)**

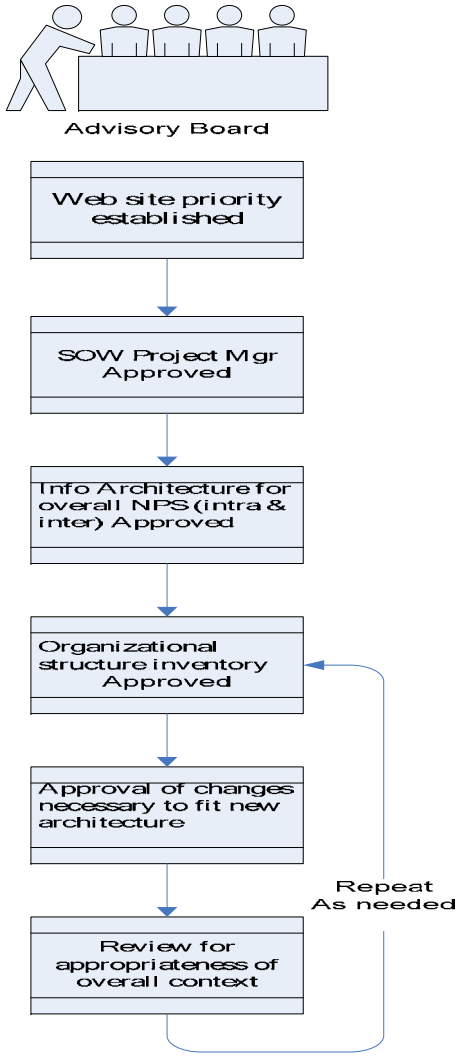
Web Content Management – Next Steps

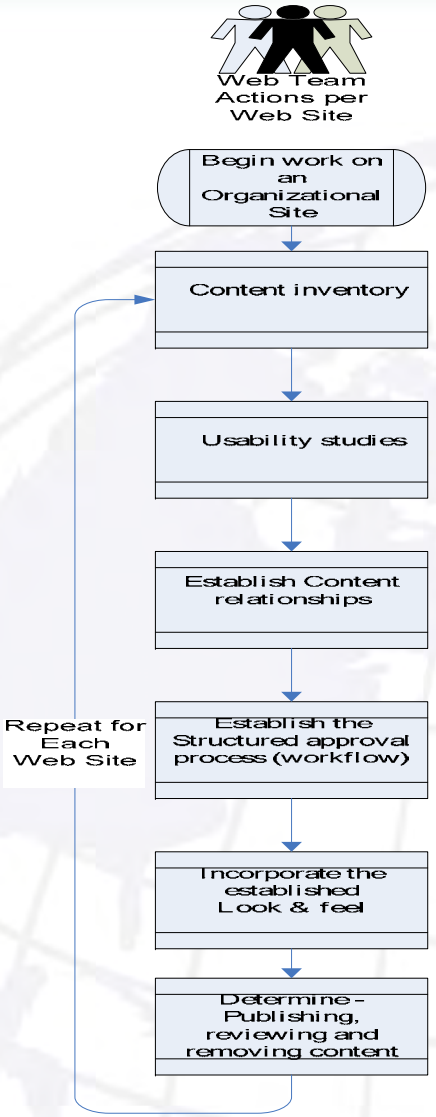
- **Objective: Migrate remainder of www.nps.edu web content into WCM and migrate intranet.nps.edu into WCM**

- **Advisory Committee Charge:**
  - **Develop and prioritize list of web sites to migrate to Web Content Management**
  - **Approve timeline and receive progress reports**
  - **Represent and give campus input on information architecture and appropriateness of content**
  - **Work with NPS organizations to integrate individual web domains into the www.nps.edu domain**
  - **Assist with identification of available technical support and content managers, content owners, and content authors**

- **Advisory Committee Membership: representatives from across the campus**

Web Content Management – Process





WCM – Cost Estimate

WCM (Web Content Management) Costs

	FY07	FY08**	FY09**
Rhythmyx Enterprise Edition (Upgrade)	$125,000.00	$0.00	$0.00
Support and Maintenance *	$25,000.00	$27,000.00	$27,000.00
Rhythmyx 6 Developer Training for 4 Developers	$18,000.00	$0.00	$0.00
Upgrade credit	($44,500.00)		
One-time only discount on license ***	($50,000.00)		
Rhythmyx Total	**$73,500.00**	**$27,000.00**	**$27,000.00**
Server Refresh for WCM Server	$0.00	$0.00	$9,800.00
Web Server Farm	$0.00	$32,000.00	
WCM Database SAN			$31,000.00
Hardware Total	**$0.00**	**$32,000.00**	**$40,800.00**
Web developer supplies (books, software, etc.)	**$5,000.00**		
Project Management (contract)	$30,000.00		
Web Manager (IA)		$120,000.00	$124,800.00
Content Manager (IA)		$100,000.00	$104,000.00
Labor Total	**$30,000.00**	**$220,000.00**	**$228,800.00**
Overall Total	**$108,500.00**	**$279,000.00**	**$296,600.00**

NPS Enterprise Web Initiative

Story beneath the Story

Monterey, California
WWW.NPS.EDU

Enterprise Web

- What it is…
  - Publicly facing websites that market NPS
  - Internal websites that provide business services
- What it is not…
  - Web based applications
    - Python, Blackboard, Student Check-in,…etc
  - Faculty Research websites
  - Student web development sites

Project Goals

1. Identify and categorize web services
2. Consolidate web servers
3. Transition from Mil to ERN web sites
4. Implement enterprise-wide Web Content Management (WCM) system

1. Identify Web Services Goals

- Inventory and categorize web service types
  - Faculty
  - Student Development Server
  - NPS marketing (nps.edu)
    - 2,575 Web pages on www.nps.edu
    - 21 million hits last quarter
  - Internal (intranet.nps.edu)
    - 1,244 Web pages on intranet.nps.edu
    - 5 million hits last quarter

2. Web Servers Consolidation Goals

- Reduce NPS overhead for maintaining multiple servers
  - Increase management and control over cost of hardware and licensing
  - Decrease supporting staff hours
  - Decrease need for professional skill set at the departmental level

3. MIL to ERN Transition Goals

- Enables use of more flexible research and instructional tools
- Present NPS as an academic/research institution on the .edu domain
  - Leverage educational status of NPS
- Create consistency in presentation

4. WCM Implementation Goals

- Assess the state of the enterprise web
- Align websites with mission and goals of NPS
- Improve NPS marketing to prospective students, faculty and industry sponsors
- Assure that web content is relevant and timely
- Create a cohesive look and feel for both external and internal NPS websites
- Empower NPS content owners
- Gain increased efficiencies in ITACS

Previous (.mil) State

- Enterprise web undefined
- Publishing bottleneck
- Diffuse presentation, weak marketing
- Inefficient use of resources
- Regulatory noncompliance
- Increased organically grown sub-sites

Ideal State

- Purposeful alignment with Strategic Plan
- Clearly-defined business goals and boundaries for enterprise web
- Streamlined publishing of fresh content
- Consistent branding
- Leveraged enterprise resources
- Regulatory compliance

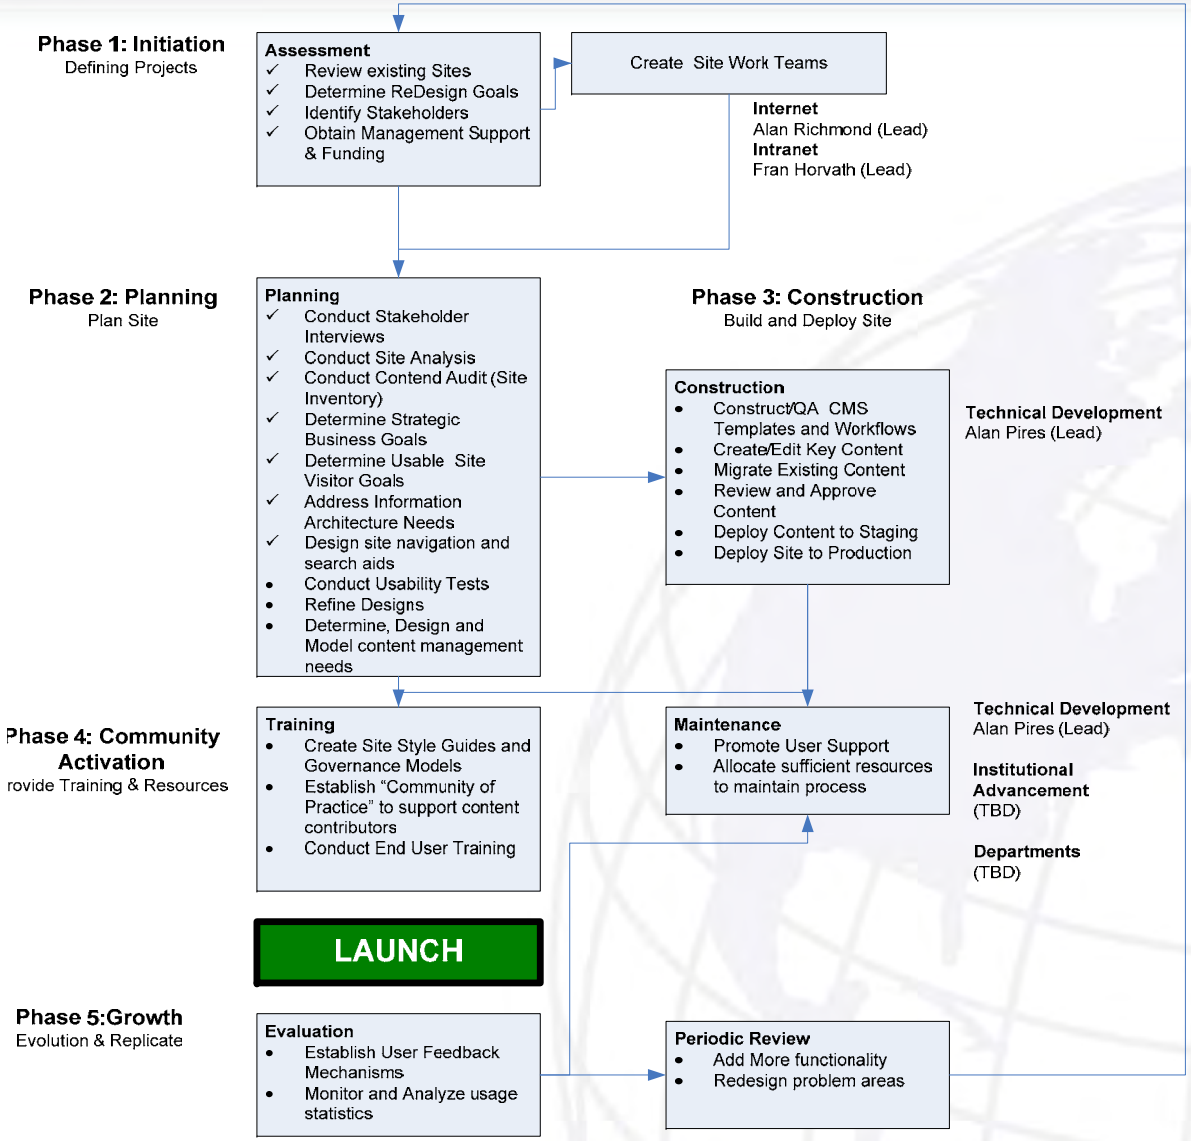
Current Accomplishments

- Completed MIL to ERN migration
- Completed WCM pilot (DKL)
- Completed inventory of web services
  - Consolidated sites
- Identified missing content
- Identified stakeholders
- Established business goals for internal and external websites
- Created functional, technical, compliance, and end user training
- Trained Web Operations staff for Web Content Management system
- Implemented Communities of Practice (Sharepoint)

Current Accomplishments (continued)

- Creating repeatable processes (currently being documented for widespread access)
  - Determined strategic goals of NPS internal/external websites including business goals, user goals
    - Defined external and internal appropriate content guidelines
    - Defined audiences and their information needs
  - Conducted full site analysis of currently existing sites
  - Conducted site audits and created content inventories of currently existing sites
  - Established process for implementing information architecture for campus websites
  - Established framework for usability testing
- Implementing style guide policies

Internet/Intranet Redesign Roadmap



Visible Results?

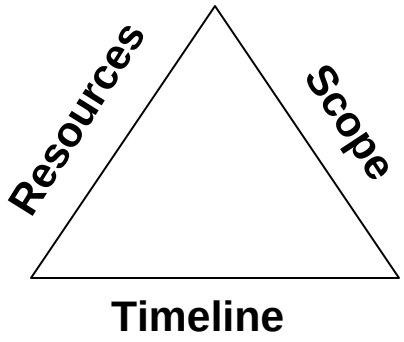
Challenges

- Unstable Staffing
  - Enterprise web initiative short two positions in Institutional Advancement
  - Lack of dedicated resources
- Communication
  - Managing expectations
  - Complexity
- Paradigm Shift
  - Content ownership
  - Lack of experience, vocabulary, common reference

Application of Lessons Learned

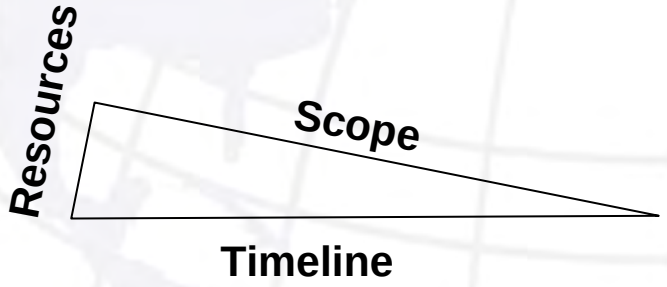
DKL Pilot Project

- Committed Resources
- 100% Dedication
- Committed Content Manager/Advisor (Judit)



Current Project

- Committed Resources
- 10% Dedication
- Unstaffed IA positions



Recommendations for WCM

- Option 1 – Hire new dedicated resources
- Option 2 – Reassign NPS resources to project
- Option 3 – Accept the glacial pace (chilling!)

Naval Postgraduate School
SOP and Process Mapping Group
Charter
Fall 2007

Purpose:
The Business Processes Implementation Task Force has identified customer service and communication and support for business processes as two focus areas to improve business practices at NPS. Therefore the next steps for the Task Force are to ensure that adequate SOPs, process maps and associated flow charts are developed. These documents will serve as the bulk of the content of the Administrative/Business Processes webpage. They will also identify areas in need of management controls in support of the Management Internal Control (MIC) program at NPS.

Scope:
The SOP and Process Mapping Group will take charge of the content development for the Administrative/Business Processes webpage. The Group will work with the process owners identified by the Business Processes Implementation Task Force, to establish NPS SOPs, process maps and flow charts for all relevant NPS administrative processes.

Once a significant portion of this content has been developed, the Group will work with the Web Advisory Group to organize and post the content in a way that will be accessible and meaningful to website users campus-wide. The Group will also seek assistance as needed from NPS experts in process improvement and Operations Risk Management (ORM) experts as well as from Command Evaluation to ensure that the processes are efficient and effective.

Membership:
Membership of the Group will include staff members who collectively are knowledgeable of NPS administrative operations and functional areas and adept at ORM.

Priorities:
The first priority of the Group will be to establish process maps and necessary flow charts for key administrative processes. These can also serve as a basis for MIC program review.

Responsibilities:
The Group will meet regularly as needed and will report monthly on its progress to the Business Processes Implementation Task Force. The Group will work with the NPS Web Advisory Group to ensure that the appropriate material is used to develop the Administrative/Business Processes Website. Line managers and process owners are responsible for providing support to the Committee.

Naval Postgraduate School
SOP and Processes Mapping
Membership*
Fall 2007

Members:

Kathie Cain, Chair
LT Jocelyn Porzel, Co-chair

SOP and Process Mapping Group
Final Report - Content Development for the Administrative Web Pages
12/21/07

Tasking (from the group's charter)

> The SOP and Process Mapping Group will take charge of the content development for the Administrative/Business Processes web page. The Group will work with the process owners identified by the Business Processes Implementation Task Force, to establish NPS SOPs, process maps and flow charts for all relevant NPS administrative processes.
>
> Once a significant portion of this content has been developed, the Group will work with the Web Advisory Group to organize and post the content in a way that will be accessible and meaningful to website users campus-wide. The Group will also seek assistance as needed from NPS experts in process improvement and Operations Risk Management (ORM) experts as well as from Command Evaluation to ensure that the processes are efficient and effective.

The group was given a draft list of topics to include in the website. The list was compiled during the spring and summer of 2007 by a group of administrative-support assistants (ASAs) chaired by Danielle Kuska. This initial list had approximately 340 lines, divided into ten categories, and is presented in Appendix A.

Overall description of the group's work

The group appreciated that the development of an administrative website is a large-scale and time-consuming effort, and devoted the fall quarter to formulating an overall project plan.

In initial meetings, the group gave priority to the three categories of greatest impact on everyday business or possible management-control issues: labor, procurement, and financial systems. A meeting was held with the administrative officers (AOs) of the schools, who concurred with these priorities.

The group reorganized as three subgroups, to flowchart the process (or systems), and identify existing materials to use as web content. The efforts of the subgroups are described later in this report.

One subgroup met with a few ASAs to review sample websites (developed by ITACS) and similar university websites. The ASAs' feedback has been incorporated into the findings and recommendations of this report and the sites reviewed are listed in Appendix B.

In its recommendations, the committee will suggest both general qualities and specific elements that the website should have as content development continues in the future. The design will be determined by ITACS; but it should contain a few basic elements recommended by the SOP and process-mapping group.

The next phase of the work should include prioritizing all topical areas on the master sheet (beyond the top three included in the first phase). Input from ASAs and AOs should be incorporated when the priorities are set.

Labor subgroup

The labor process was flowcharted, using "swim-lane" style, for that segment of the process visible to a department administrator (such as an ASA). The flowcharts are displayed in Appendix C.

The subgroup also made minor adjustments to the topics to be included on the administrative website. The changes were limited to the categories of personnel and labor/timekeeping.

The group incorporated some of the elements recommended above into a mock-website structure provided by ITACS, which is in Appendix D. The subcategories for labor and timekeeping are displayed on the mock site, as are links to related resources. No narratives, background, explanations, etc. are included in this sample site, since the process owners will be writing that material.

Financial systems subgroup

The subgroup created material that describes and depicts the various financial systems used in the basic business processes at NPS: labor and timekeeping, purchasing, travel, and contracting. Financial-reporting systems are also identified and explained.

The flow of data and business process for each function are laid out, from transaction initiation to upload into the official accounting system. Dataflow is presented in traditional flowchart format, while processes are displayed using swim lanes.

This material is in Appendix E.

Procurement subgroup

The Ad Hoc Committee on Procurement was chartered in the spring of 2007 to assess NPS' procurement process and make recommendations for change. This committee produced a number of flowcharts related to procurement and is shown in Appendix F.

The SOP and Process Mapping procurement subgroup is reviewing the existing flowcharts, and will make any needed changes.

Collaboration with the Web Content Management Project for the Intranet (Institutional Advancement) and ITACS Web Operations:

Process owners and SOP process-mapping-group members will work closely with both of these entities on this project. They will provide a common format, website design and technical expertise. They may be able to provide advice and tools for specific tasks within the project, such as content inventories and usability tests.

In order for Web operations to be properly staffed for the admin website project, the SOP and Process Mapping group should plan a schedule for the web development work, by section.

The Web Operations staff have prepared the following communication plan to be used when the website content project gets underway:

The SOP Process and Mapping Group will provide ITACS a projected project plan for the entire project. The project plan will include a detailed schedule with an estimated date each topic will be worked on.

At the start of each topic, the process owner will provide ITACS an individual project plan. The project plan will include dates in which ITACS will be expected to provide assistance for each process topic.

The following outlines the projected amount of time ITACS will need to complete each step identified in the SOP Process and Mapping Group project plan that ITACS is responsible for.

- Identify existing content for each topic.
  - ITACS will provide a list of established URLs in identified websites for each topic.
    - Projected Time Needed: 5 - 7 business days.
- ITACS places content into existing web infrastructure.

- Projected Time Needed: 7 – 21 business days.
  - Time required by ITACS needed to complete this step will vary from topic to topic depending on the amount of identified missing content or content reorganization needed.
  - ITACS will provide process owners and/or group with projected date of completion upon receiving requested work.

· Adjust site as needed after draft review by process owner and/or group.
- Projected Time Needed: 7 – 14 business days.

· Adjust site as needed after user testing.
- Projected Time Needed 7 -14 business days.

*Note: Projected time needed to complete each step may/may not be adjusted based on ITACS workload and amount or detail of work requested by group. ITACS will provide an estimated date of completion for each step identified above at the start of each step.

ITACS will work individually with each process owner; email correspondence and meeting schedules while working through each topic will be addressed to the personal NPS inbox for the ITACS employee. Initial emails should be addressed to webmaster@nps.edu prior to working with ITACS employee independently.

Upon completion of the entire project, any necessary changes to the site will be emailed to webmaster@nps.edu and carbon copy the ITACS employee the process owner worked individually with.

General comments/recommendations

1. If this effort is going to continue and be successful, the committee feels strongly that it must have public backing of senior leadership at NPS. The new Associate Provost for Academic Affairs has indicated his intention to assume ownership of the SOP and Process Mapping Group. That is important. Public support and backing from any other leadership entity (such as the recent, but now disbanded, Business Process Implementation Task Force) would be welcome.

2. Web content should be written with the assumption that the user has no knowledge of the subject matter. Information should be clear, logical, and sequential. Acronyms should be spelled out on initial use.

3. All contributors should use standardized formats to the extent possible, to create a consistent look and feel.

4. Process/function owners are the subject matter experts; they will be very involved with the development of content (facilitated by mapping-group members). After initial releases, owners will be responsible for updates to web material.

5. As appropriate, each support organization should include a listing of functional areas, relevant policy guidance and regulations, definitions or explanations, standard operating procedures, and step-by-step instructions on its website. Contact information (names, phones, office locations) should also be included.

6. Website sections should be released as they are finished.

7. The committee believes it would be a good idea to continue their work for another quarter. The additional time would be used to select a single topic area, and execute the steps in the proposed project plan to develop and release an admin website. The project plan could then be revised as needed, including lessons learned during the actual development of a site that will be used by NPS staff and faculty.

8. When it comes time to execute the project plan, hiring a professional project manager should be considered. Perhaps an NPS faculty member with relevant experience, or even an outside contractor could be retained. The committee feels that bringing in someone with the right skills and experience in project management would be critical to the success of the effort.

Website look and feel

The website should look professional, uncluttered, and direct, with helpful links such to policy guidance, 'who does what', process flowcharts, forms, sample documents, and other types of resource information.

Here are some sample web pages.

1. A sample web page for the home page of the administrative website:

NPS Administrative Resources

This site has been developed to provide the standard processes for NPS business functions. Each section will have an email link to the process owner if additional information is required from customer. Where appropriate, a flow chart for the process is provided. References for each business practice are provided as well as a glossary of terms.

Our goals are to:

- improve support of core mission of graduate education and research;
- increase efficiency;
- reduce redundancy;
- improve communication and responsiveness as goals of all business processes;
- encourage customer service as demonstrable priority;
- ensure accountability at right level;
- create sustainability;
- uphoald standards of professionalism

Below is a list of project the Task Force will be focusing on:

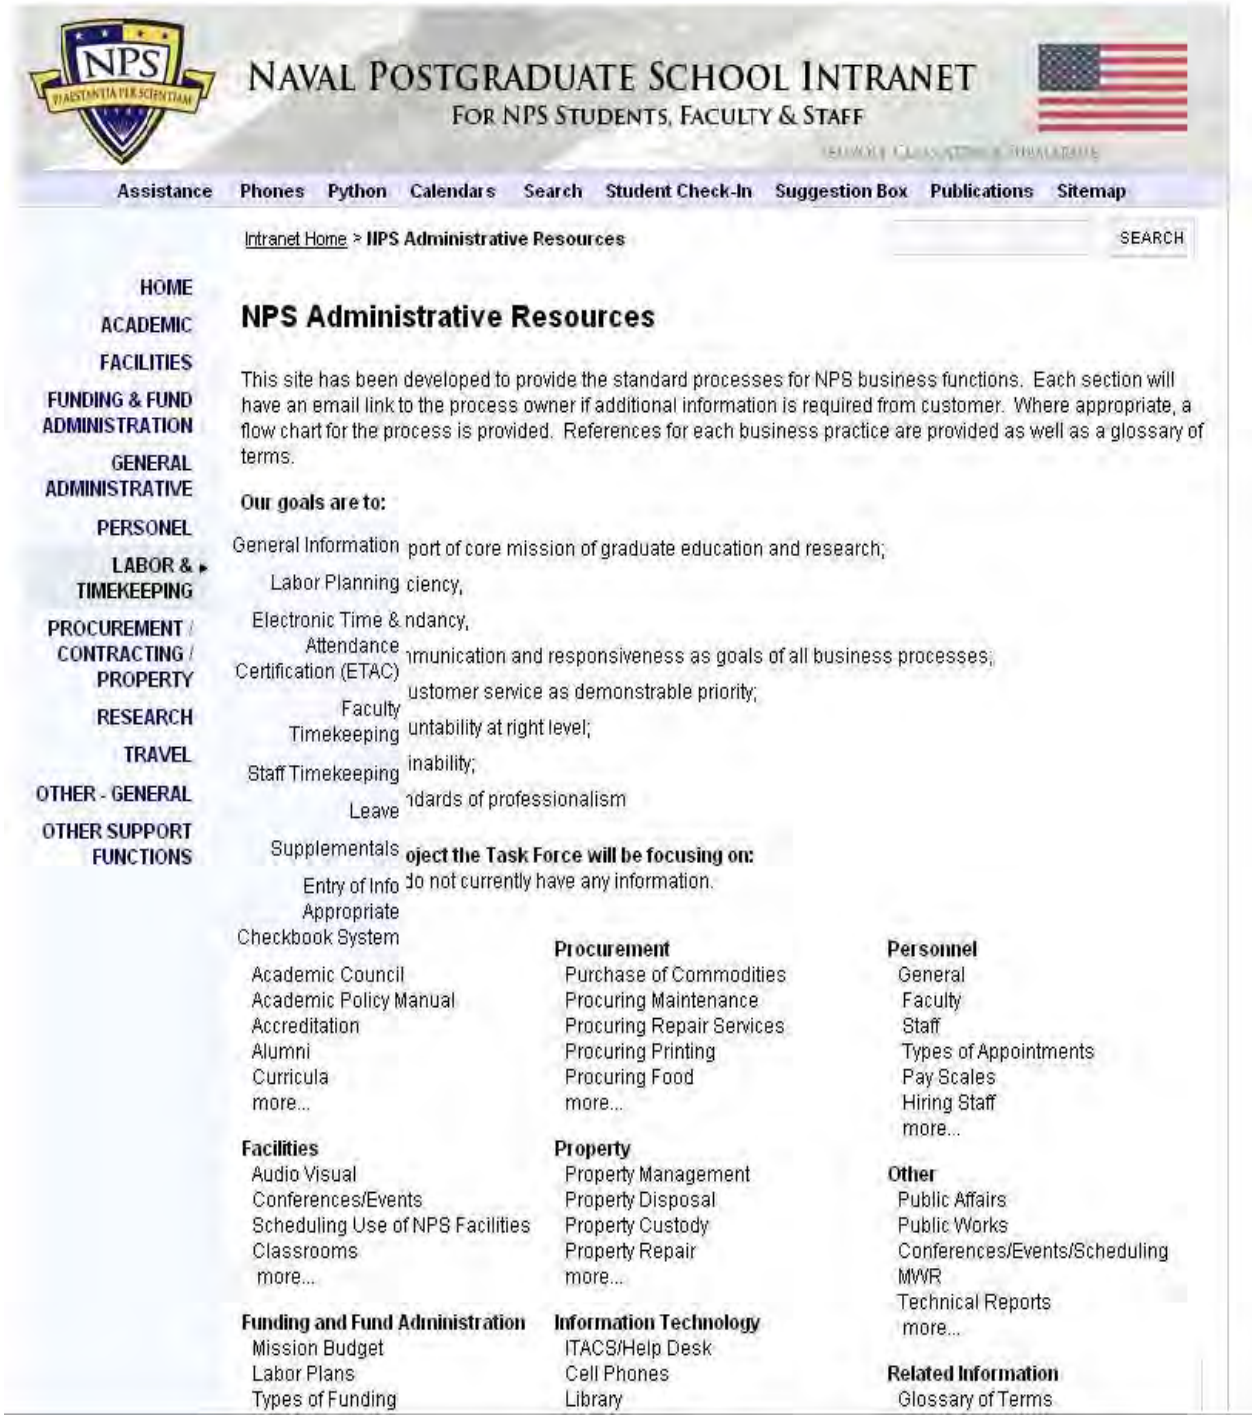
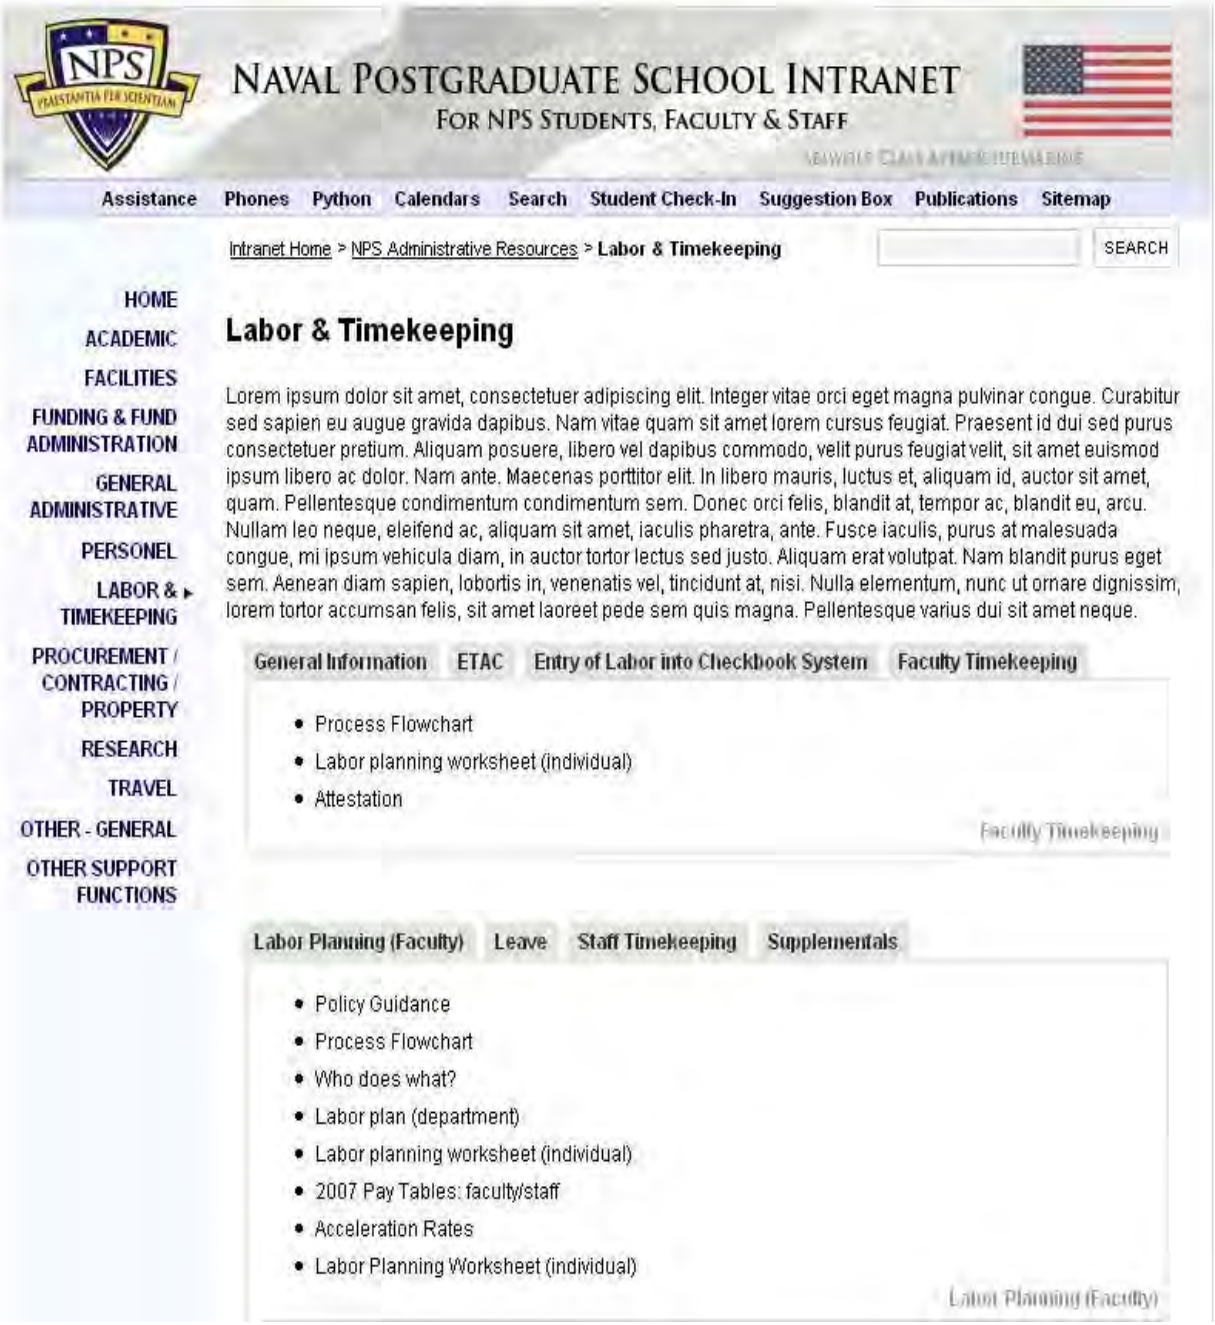
Glossary of Terms

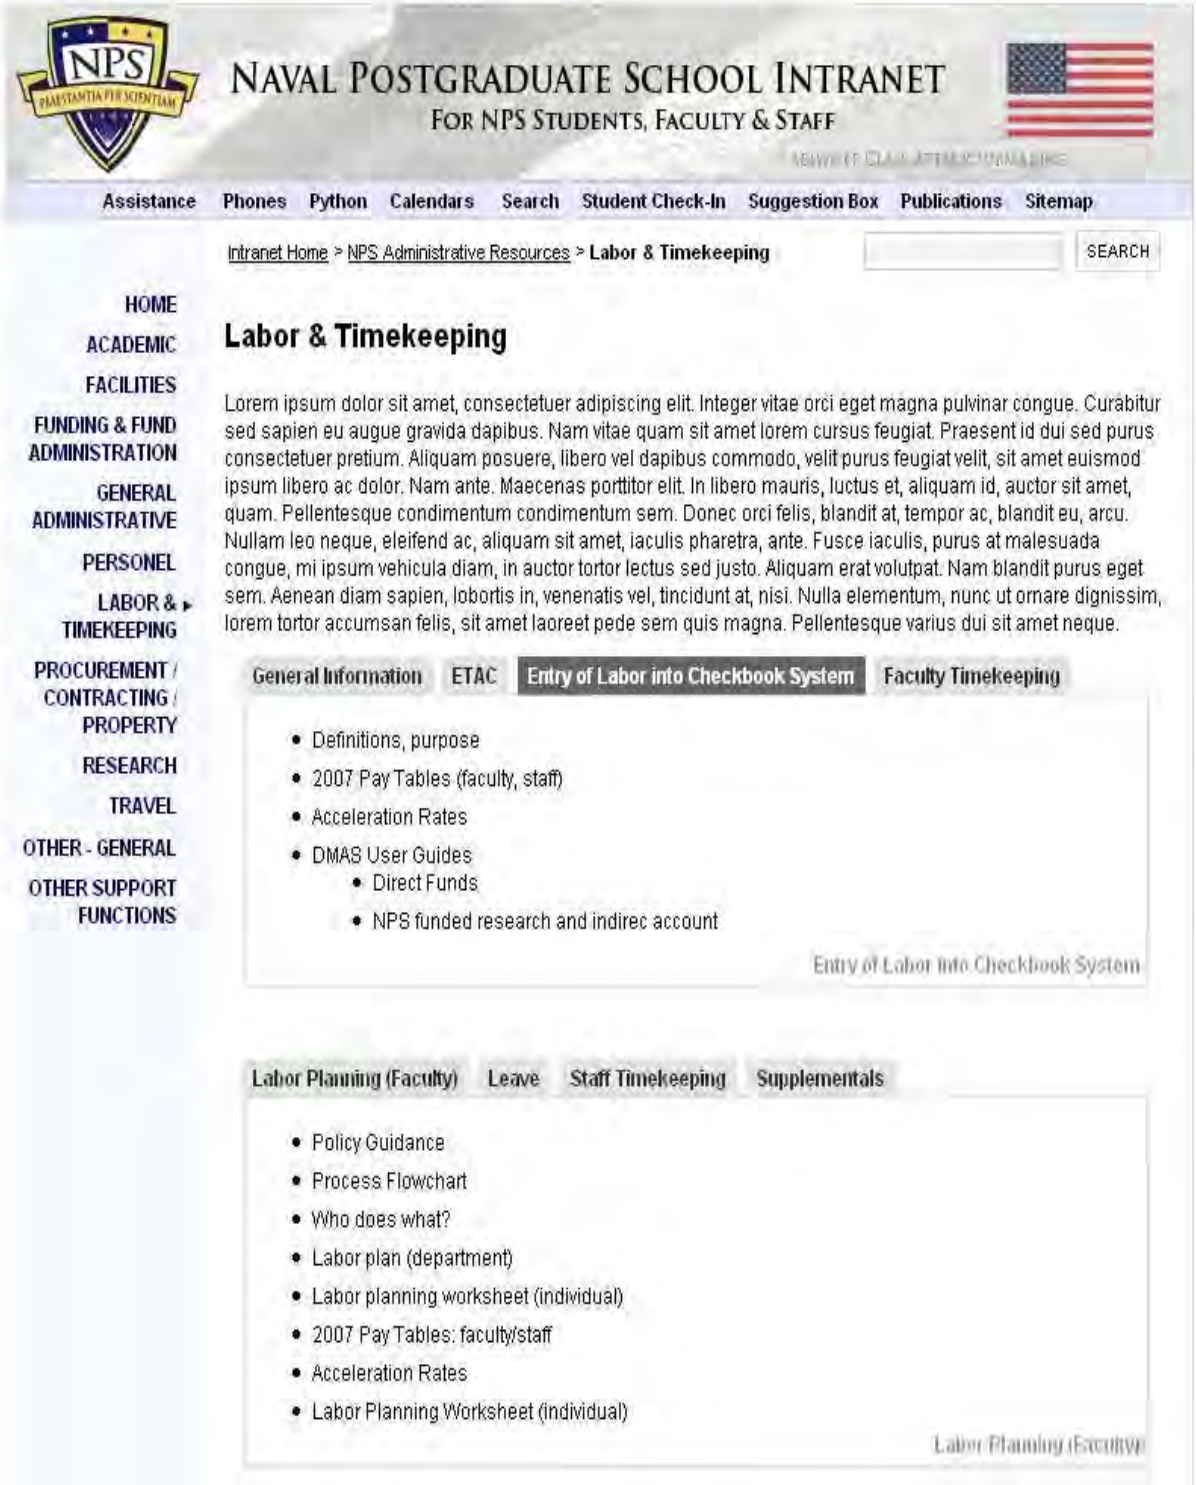
2. A sample web page for the home page of the administrative website, with the sub-categories for the Labor/Timekeeping displayed:



3. A sample web page for the home page of the Labor/Timekeeping page of the administrative website:



4. A sample web page for the home page of the Labor/Timekeeping page of the administrative website, with the links for the Entry of Labor into Checkbook System category:



Generally, text can be submitted to Web Operations in Word document format. During development, process owners and mapping-group members will communicate with web staff in cases where another format is preferred.

Project plan

As mentioned, the list of subject-matter areas to be included in the website is broken down into eleven areas. As each area is addressed (that is, content is identified, written, and organized), the following project plan should be followed. This work will be accomplished by process owners, assisted by group members and coordinating with ITACS web staff.

1. Within a general category, review topics and add or remove as needed. Group the topics logically for comprehension.
2. Create content for the opening page of the subject area. Provide policy guidance and regulations, descriptions, background information, introduction, and process or system flowcharts. Support organizations should include a section that defines who does what, along with contact information. The purpose of this page is to welcome the user and provide navigation to the information needed.
3. Organize the information in a simple, logical way with the user audience in mind. Include descriptions, explanations, step-by-step instructions, standard operating procedures (SOP), forms, and links to related topics and resources.
4. Identify existing content to be included in the organizational structure; review content and revise as needed.
5. For areas without existing content, create content to complete background, SOP, process flowcharts, etc.
6. Distribute draft site to users and incorporate feedback into site.
7. Release site to users and notify users of its availability. Provide tours of new sites at sessions open to all interested parties. Facilitate review of admin websites (and/or subsets) at appropriate training sessions offered by various entities at NPS.
8. After initial release of their own segments, process owners will assume ownership of their content. This includes updates and maintenance.

Please see the spreadsheet labeled Appendix A, which can be used to track project progress.

NPS Administrative Resources

This site has been developed to provide the standard processes for NPS business functions. Each section will have an email link to the process owner if additional information is required from customer. Where appropriate, a flow chart for the process is provided. References for each business practice are provided as well as a glossary of terms.

Our goals are to:

- improve support of core mission of graduate education and research;
- increase efficiency,
- reduce redundancy,
- improve communication and responsiveness as goals of all business processes;
- encourage customer service as demonstrable priority;
- ensure accountability at right level;
- create sustainability;
- uphoald standards of professionalism

Below is a list of project the Task Force will be focusing on:

Financial Systems Flow

29 November 2007

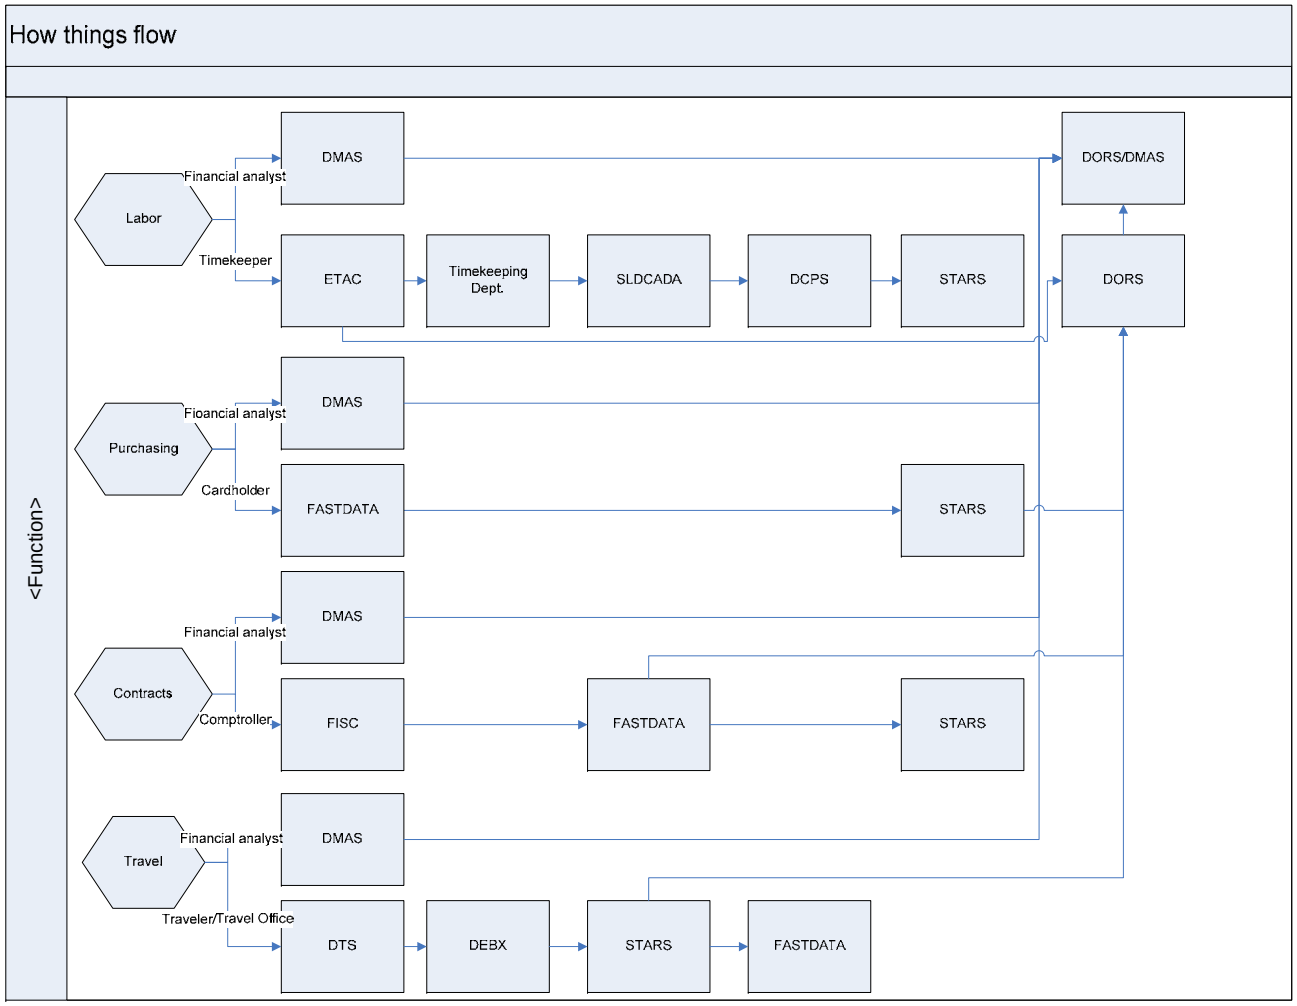
NAVAL POSTGRADUATE SCHOOL

I. The Overall Process

- Labor
- Purchasing
- Contracts
- Travel

NAVAL POSTGRADUATE SCHOOL

How Things Flow

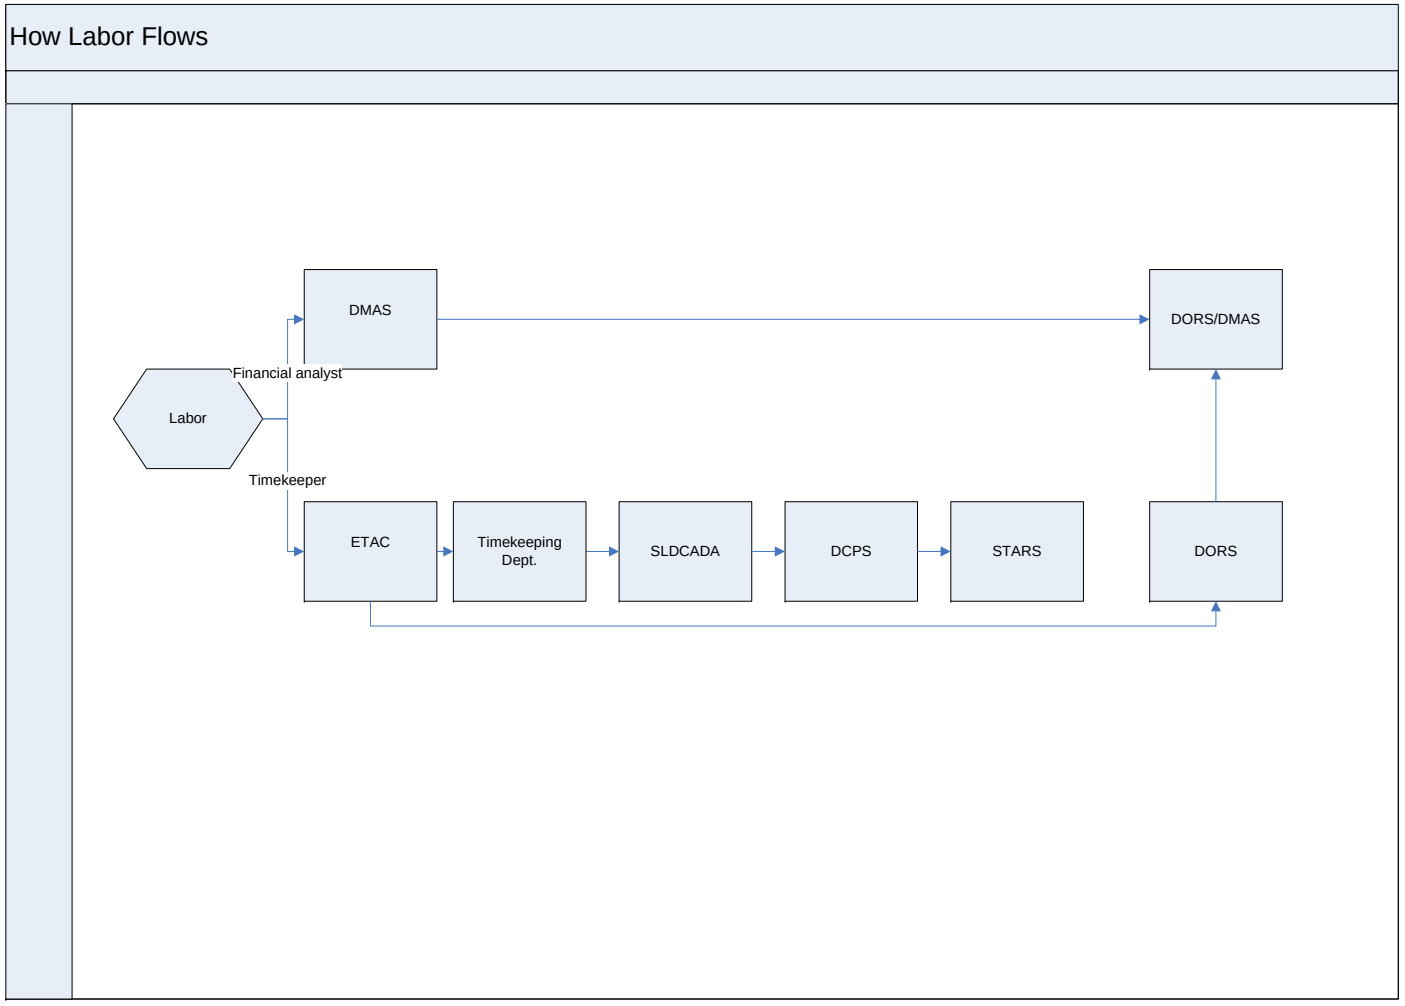


NAVAL POSTGRADUATE SCHOOL

II. Labor

NAVAL POSTGRADUATE SCHOOL

How Labor Flows



NAVAL POSTGRADUATE SCHOOL

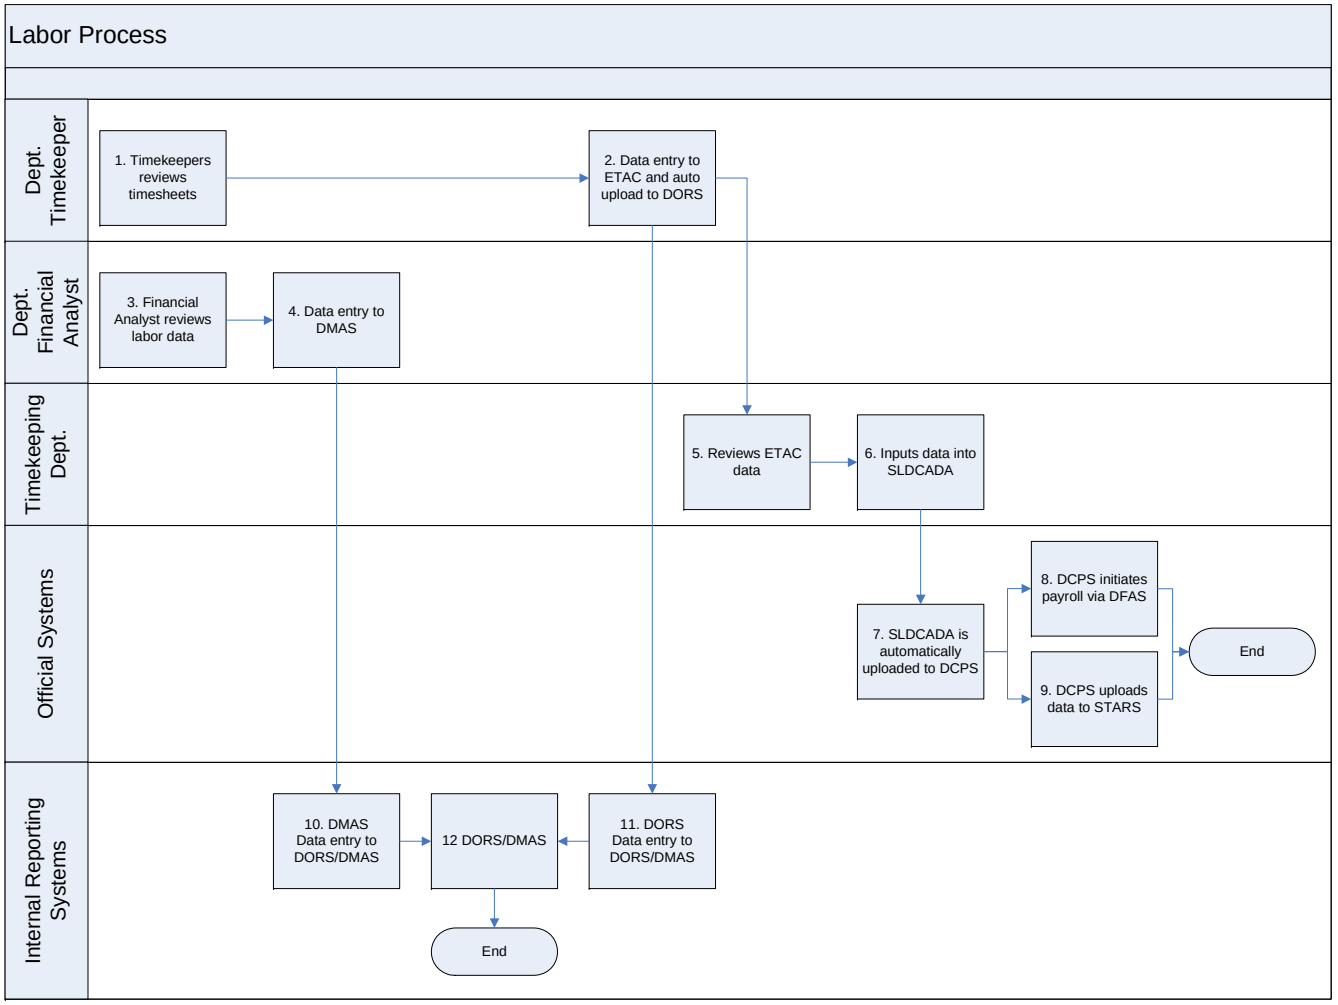
How Labor Works

- Dept. financial analysts load data into DMAS
- DMAS data flows into DORS/DMAS
- Dept. timekeepers load data into ETAC (same as below)
- ETAC data flows to DORS
- DORS data flows to DORS/DMAS

- Dept. timekeepers load data into ETAC (same as above)
- Timekeeping Dept. reviews ETAC data, then inputs data into SLDCADA
- SLDCADA is uploaded automatically into DCPS
- DCPS initiates payroll via DFAS
- DCPS uploads data into STARS

NAVAL POSTGRADUATE SCHOOL

Labor Process

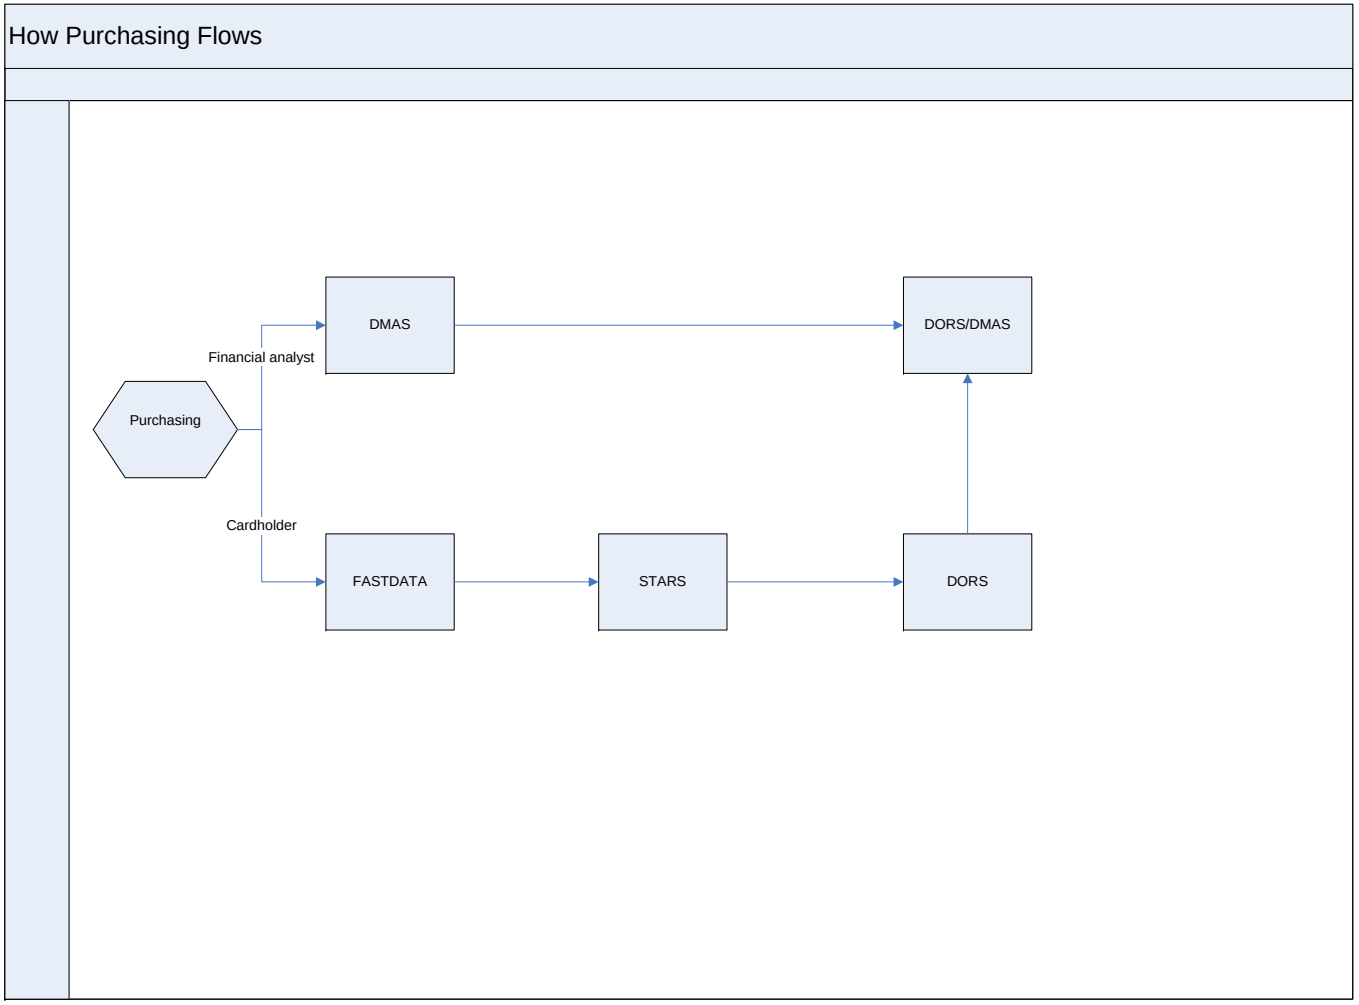


NAVAL POSTGRADUATE SCHOOL

III. Purchasing

NAVAL POSTGRADUATE SCHOOL

How Purchasing Flows



NAVAL POSTGRADUATE SCHOOL

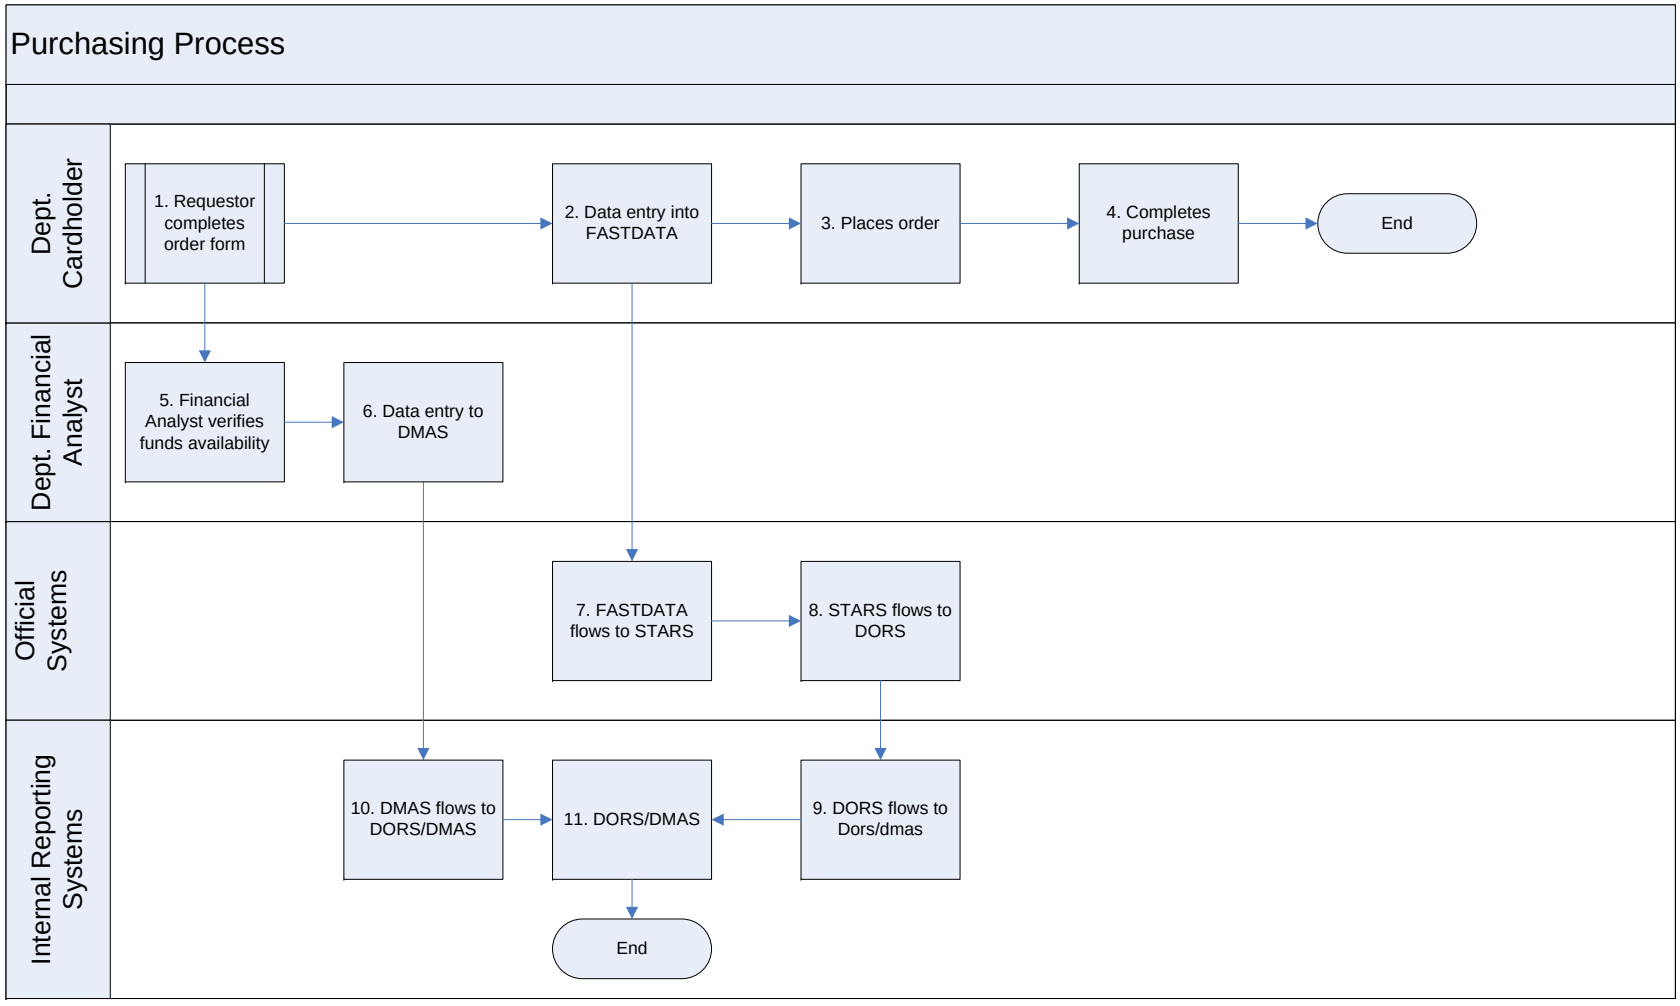
How Purchasing Works

- Dept. financial analysts load data into DMAS
- DMAS data flows into DORS/DMAS

- Dept. cardholder loads data into FASTDATA
- FASTDATA is uploaded by Comptroller to STARS
- STARS is downloaded to DORS
- DORS flows to DORS/DMAS

NAVAL POSTGRADUATE SCHOOL

Purchasing Process

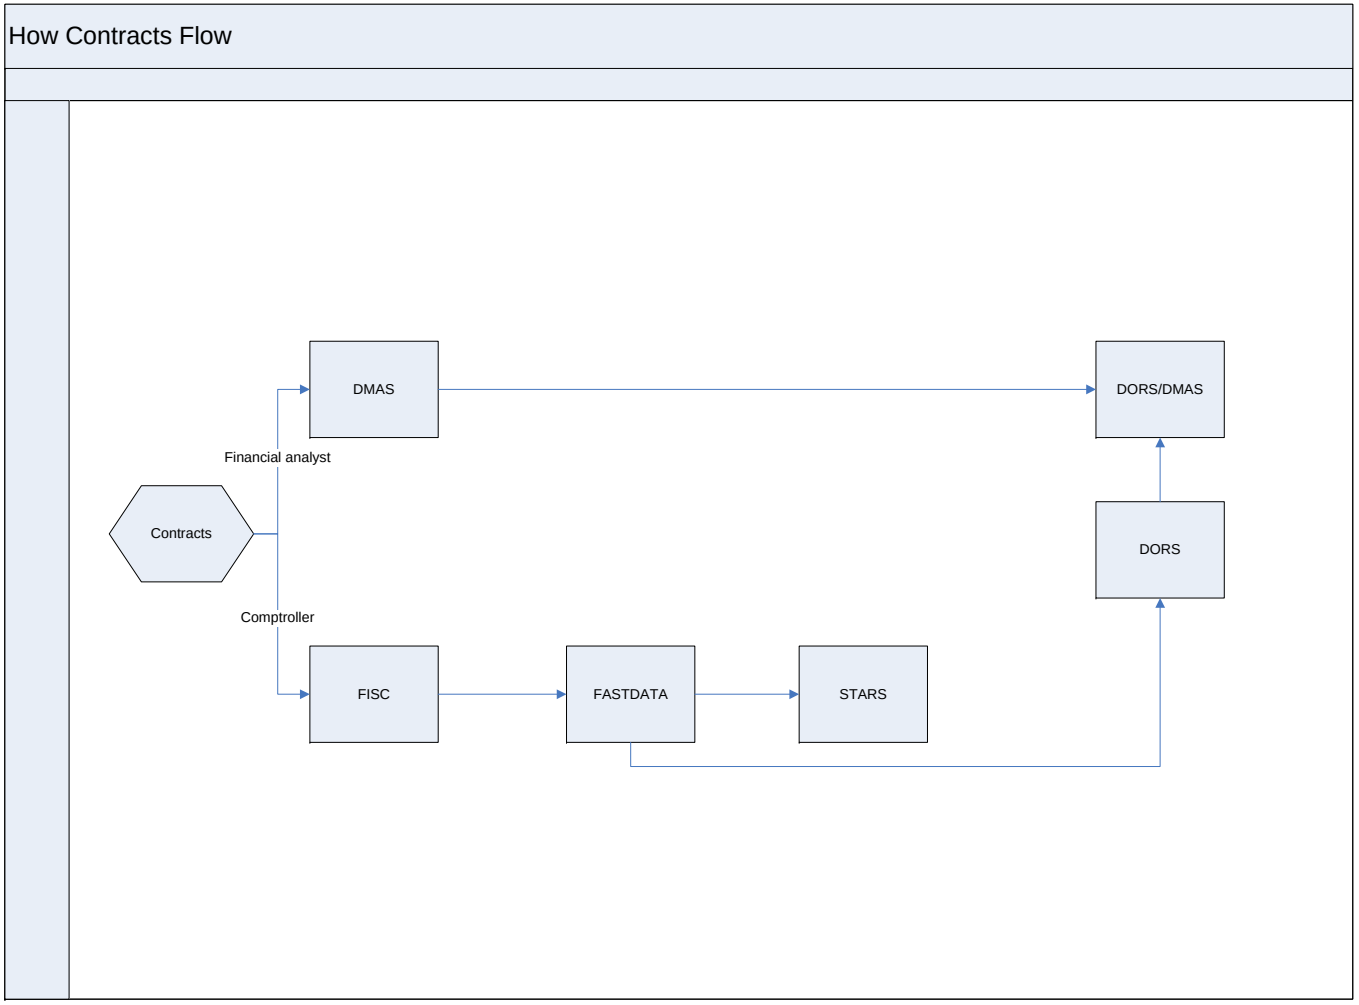


NAVAL POSTGRADUATE SCHOOL

IV. Contracts

NAVAL POSTGRADUATE SCHOOL

How Contracts Flow



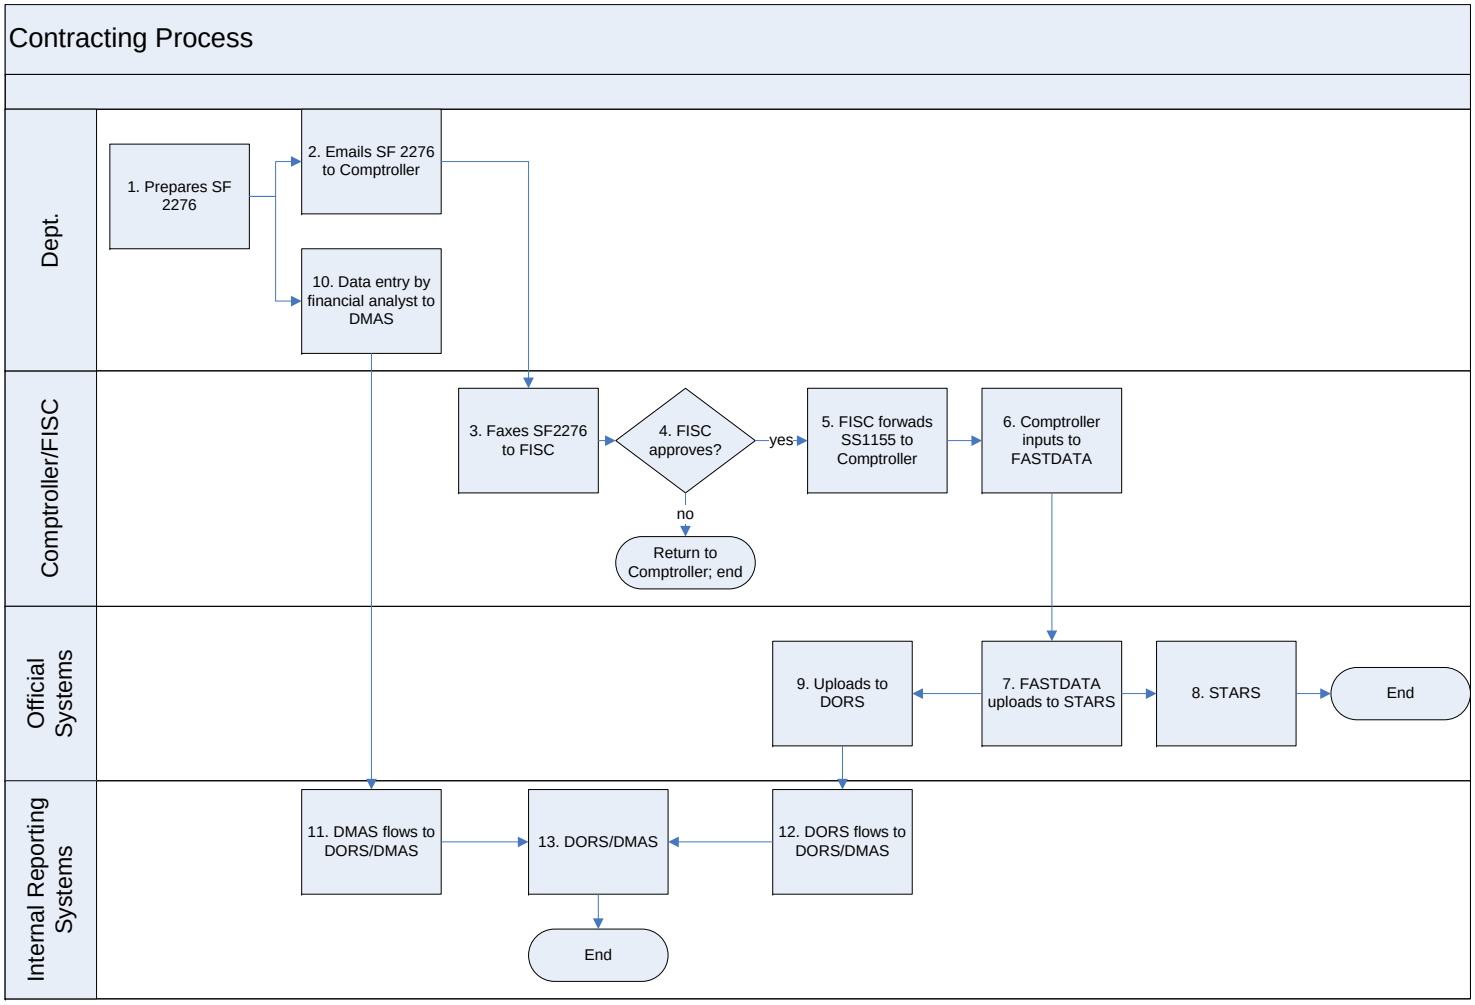
NAVAL POSTGRADUATE SCHOOL

How Contracting Works

- Requestor prepares Standard Form (SF) 2276
- Information and costs are input into DMAS by Financial Analyst
- Requestor emails completed form to Comptroller
- Comptroller faxes data to Fleet and Industrial Supply Center (FISC)
- FISC reviews request
- If FISC approves, it forwards information to Comptroller
- Comptroller inputs to FASTDATA
- FASTDATA uploads to STARS
- FASTDATA uploads to DORS
- DORS and DMAS upload to DORS/DMAS

NAVAL POSTGRADUATE SCHOOL

Contracting Process

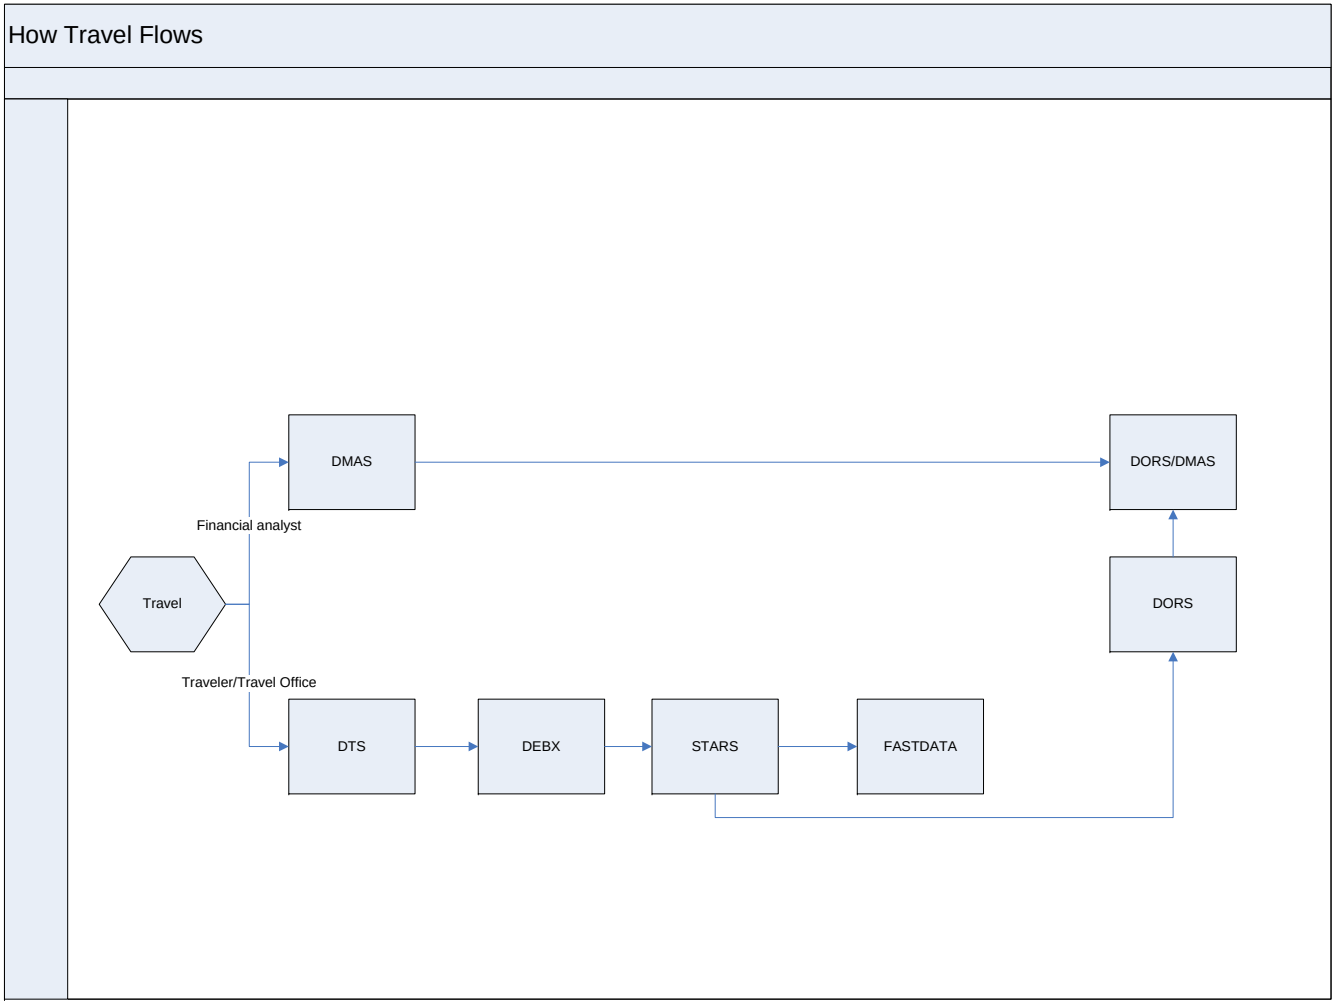


NAVAL POSTGRADUATE SCHOOL

V. Travel

NAVAL POSTGRADUATE SCHOOL

How Travel Flows



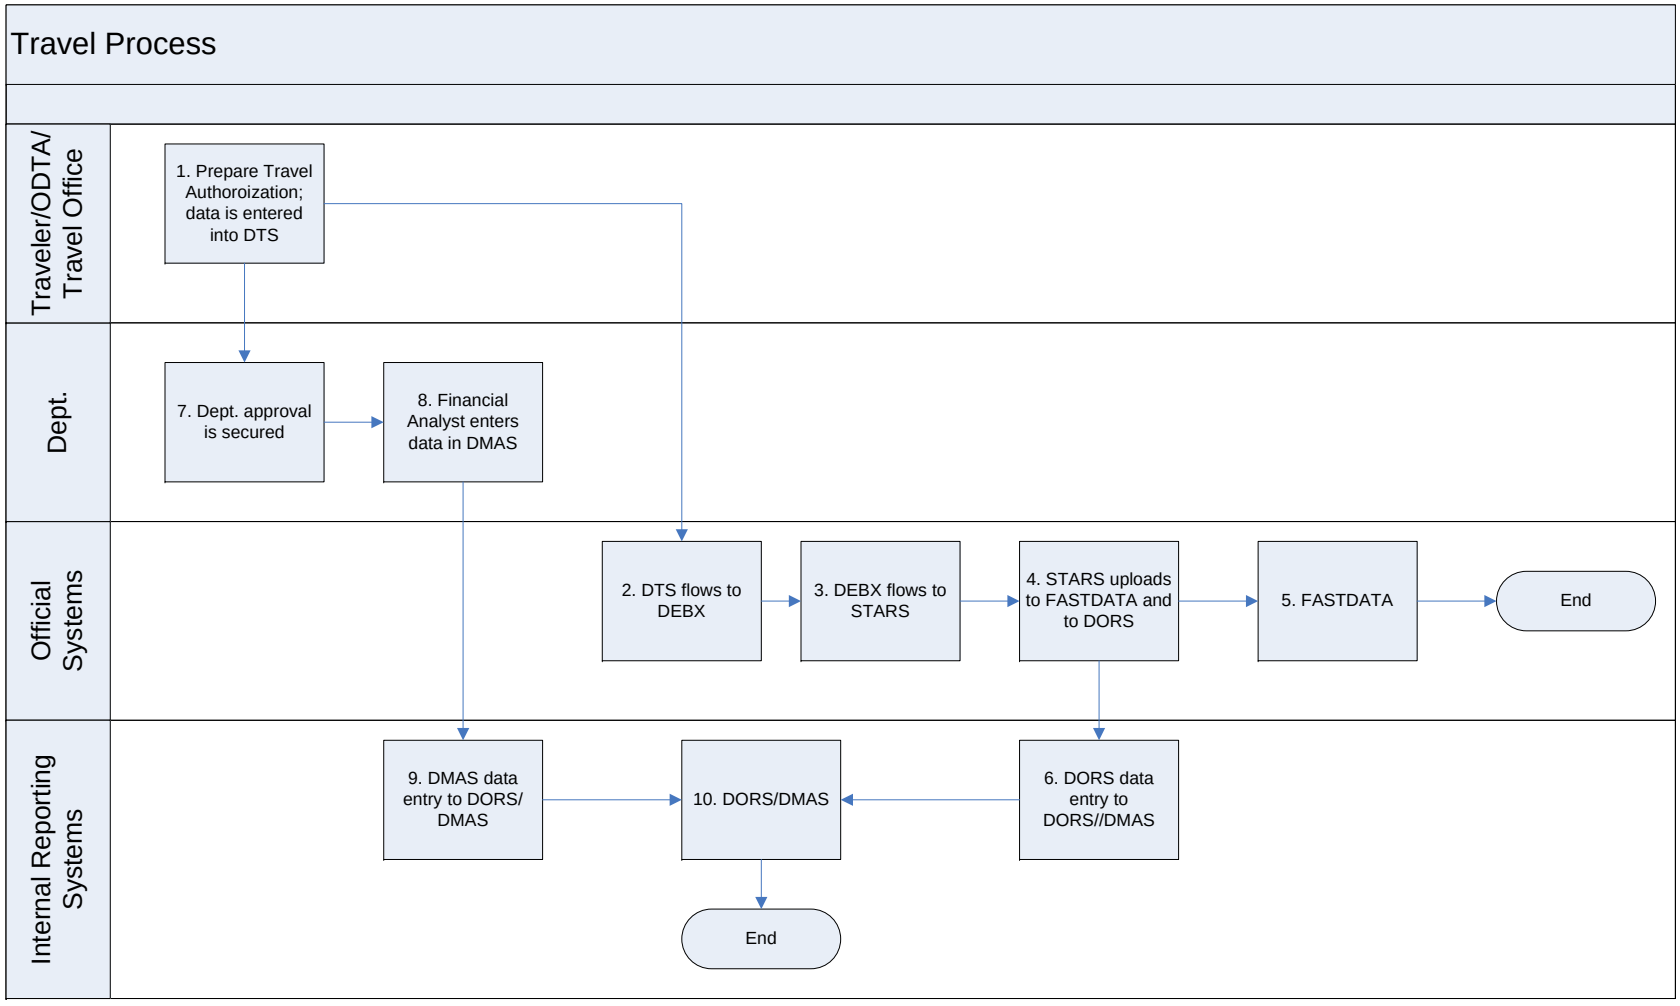
NAVAL POSTGRADUATE SCHOOL

How Travel Works

- Traveler or ODTA or Travel Office completes Travel Request form
- Data is entered into DTS
- Departmental approval is secured
- Financial Analyst enters data into DMAS
- DMAS flows to DORS/DMAS
- DTS data flows to DEBX
- DEBX flows to STARS
- STARS uploads to FASTDATA and to DORS
- DORS flows to DORS/DMAS

NAVAL POSTGRADUATE SCHOOL

Travel Process



NAVAL POSTGRADUATE SCHOOL

VI. Systems

NAVAL POSTGRADUATE SCHOOL

Systems Used by ASAs

- DORS
- DMAS
- DORS/DMAS
- ETAC

NAVAL POSTGRADUATE SCHOOL

VII. Financial Reports

NAVAL POSTGRADUATE SCHOOL

DORS Reports

- Reports can contain the following elements
  - Annual Plan
  - Actual Cost
  - Balance
  - Authorizations by Quarter
  - JONs
  - Account description
  - Department
- Reports can be by specific type of funding (i.e. indirect, direct, reimbursable)

NAVAL POSTGRADUATE SCHOOL

DORS/DMAS Reports

- Accounts by PI (currently only Reimbursable)
- Account Summary
- Transaction Reports
  - Faculty Labor
  - Travel
  - Equipment/Supplies
  - Contracts
  - Reconciling Items Detail

NAVAL POSTGRADUATE SCHOOL

NAVAL POSTGRADUATE SCHOOL

IX. Glossary

NAVAL POSTGRADUATE SCHOOL

ETAC (Labor)

What is ETAC?

- **E**lectronic **T**ime And **A**ttendance **C**ertification
- It provides NPS a means to ensure that accounts are valid and not over expended in labor.

NAVAL POSTGRADUATE SCHOOL

How ETAC works (Labor)

- A department inputs its labor into ETAC
- ETAC determines if there are sufficient funds to meet this obligation
- If not, department is informed of how many hours can be charged
- This assures compliance with Title 31, United States Code, Section 1517, Obligation of Expenditure Limits

- After review by Timekeeping, labor data is input to SLDCADA

NAVAL POSTGRADUATE SCHOOL

SLDCADA (Labor)

What is SLDCADA?

- **S**tandard **L**abor **D**ata **C**ollection **A**nd **D**istribution **A**pplication
- Timekeeping system that provides ability to track labor hours (not dollars) against job order numbers (JONs) for financial reporting purposes, and against type hour codes for pay purposes.
- Data automatically uploads to DCPS

NAVAL POSTGRADUATE SCHOOL

DCPS (Labor)

What is DCPS?

- **D**efense **C**ivilian **P**ay **S**ystem
- Provides bi-weekly payroll processing and support to all DoD civilian employees

NAVAL POSTGRADUATE SCHOOL

STARS (All)

What is STARS?

- **St**andard **A**ccounting and **R**eporting **S**ystem
- STARS is the official online accounting system that provides real-time processing of all financial activities at NPS.

NAVAL POSTGRADUATE SCHOOL

FASTDATA (All)

What is FASTDATA?

- **F**und **A**dministration and **St**andardized **D**ocument **A**utomation
- It is a PC-based, menu driven, “one-time” data input system.

NAVAL POSTGRADUATE SCHOOL

DMAS (All)

What is DMAS?

- **D**epartmental **M**emorandum **A**ccounting **S**ystem
- An Excel or Access ‘checkbook’ system developed for tracking and monitoring expenditures on a sponsored project account

NAVAL POSTGRADUATE SCHOOL

DORS (All)

What is DORS?

- **D**epartmental **O**nline **R**eporting **S**ystem
- A data warehouse-based software application that pulls data from various systems and builds a central database
- It reflects expenditures/balances for sponsored project accounts

NAVAL POSTGRADUATE SCHOOL

DORS/DMAS (All)

What is DORS/DMAS?

- A financial report that the PI can view online that compares figures in DMAS and DORS.
- This report will identify any variances that need to be corrected

NAVAL POSTGRADUATE SCHOOL

FISC (Contracts)

What is FISC?

- Fleet and Industrial Supply Center
- Provides logistics, business and support services to fleet, shore, and industrial commands of the Navy, Coast Guard and Military Sealift Command, and other Joint and Allied Forces.

NAVAL POSTGRADUATE SCHOOL

DEBX (Travel)

What is DEBX?

- **D**efense **E**lectronic **B**usiness E**x**change

- A third party system that translates DTS financial transactions into the language of the special financial systems and sends the transactions to those targets.

NAVAL POSTGRADUATE SCHOOL

DTS (Travel)

What is DTS?

- **D**efense **T**ravel **S**ystem
- Official DoD travel system that allows travelers to arrange their own travel plans

12/21/07

Charter Tasking

- The SOP and Process Mapping Group will take charge of the content development for the Administrative/Business Processes webpage. The Group will work with the process owners identified by the Business Processes Implementation Task Force, to establish NPS SOPs, process maps and flow charts for all relevant NPS administrative processes.
- Once a significant portion of this content has been developed, the Group will work with the Web Advisory Group to organize and post the content in a way that will be accessible and meaningful to website users campus-wide. The Group will also seek assistance as needed from NPS experts in process improvement and Operations Risk Management (ORM) experts as well as from Command Evaluation to ensure that the processes are efficient and effective.

Set Priorities

- Prioritized topical areas based on spreadsheet input from Business Practices Group
- Developed three subgroups and starting points
  - Labor
  - Financial Systems
  - Procurement

Important Aspects for Project Success

- Must have public backing of senior leadership at NPS.
- Web content should be written with the assumption that the user has no knowledge of the subject matter. Information should be **clear, logical, and sequential**. Acronyms should be spelled out. Web content should follow a template and include all contact info.
- Must be in standardized format to create a consistent look and feel.
- Process/function owners are subject matter experts; they need be very involved with the development of content (facilitated by mapping-group members).
- Owners will be responsible for updates to web material after initial release.
- Release all website section as they are finished.

Project Plan

1. Review topics from master list and add or remove as needed. Group the topics logically for comprehension.
2. Identify existing content to be included in the organizational structure; review content and revise as needed.
3. For areas without existing content, create content to complete background, SOP, process flowcharts, etc.
4. Create content for the opening page of the subject area. Provide:
    1. Introduction
    2. Description of task
    3. Related policy guidance, regulations and instructions
    4. Background information
    5. Process or system flowcharts.

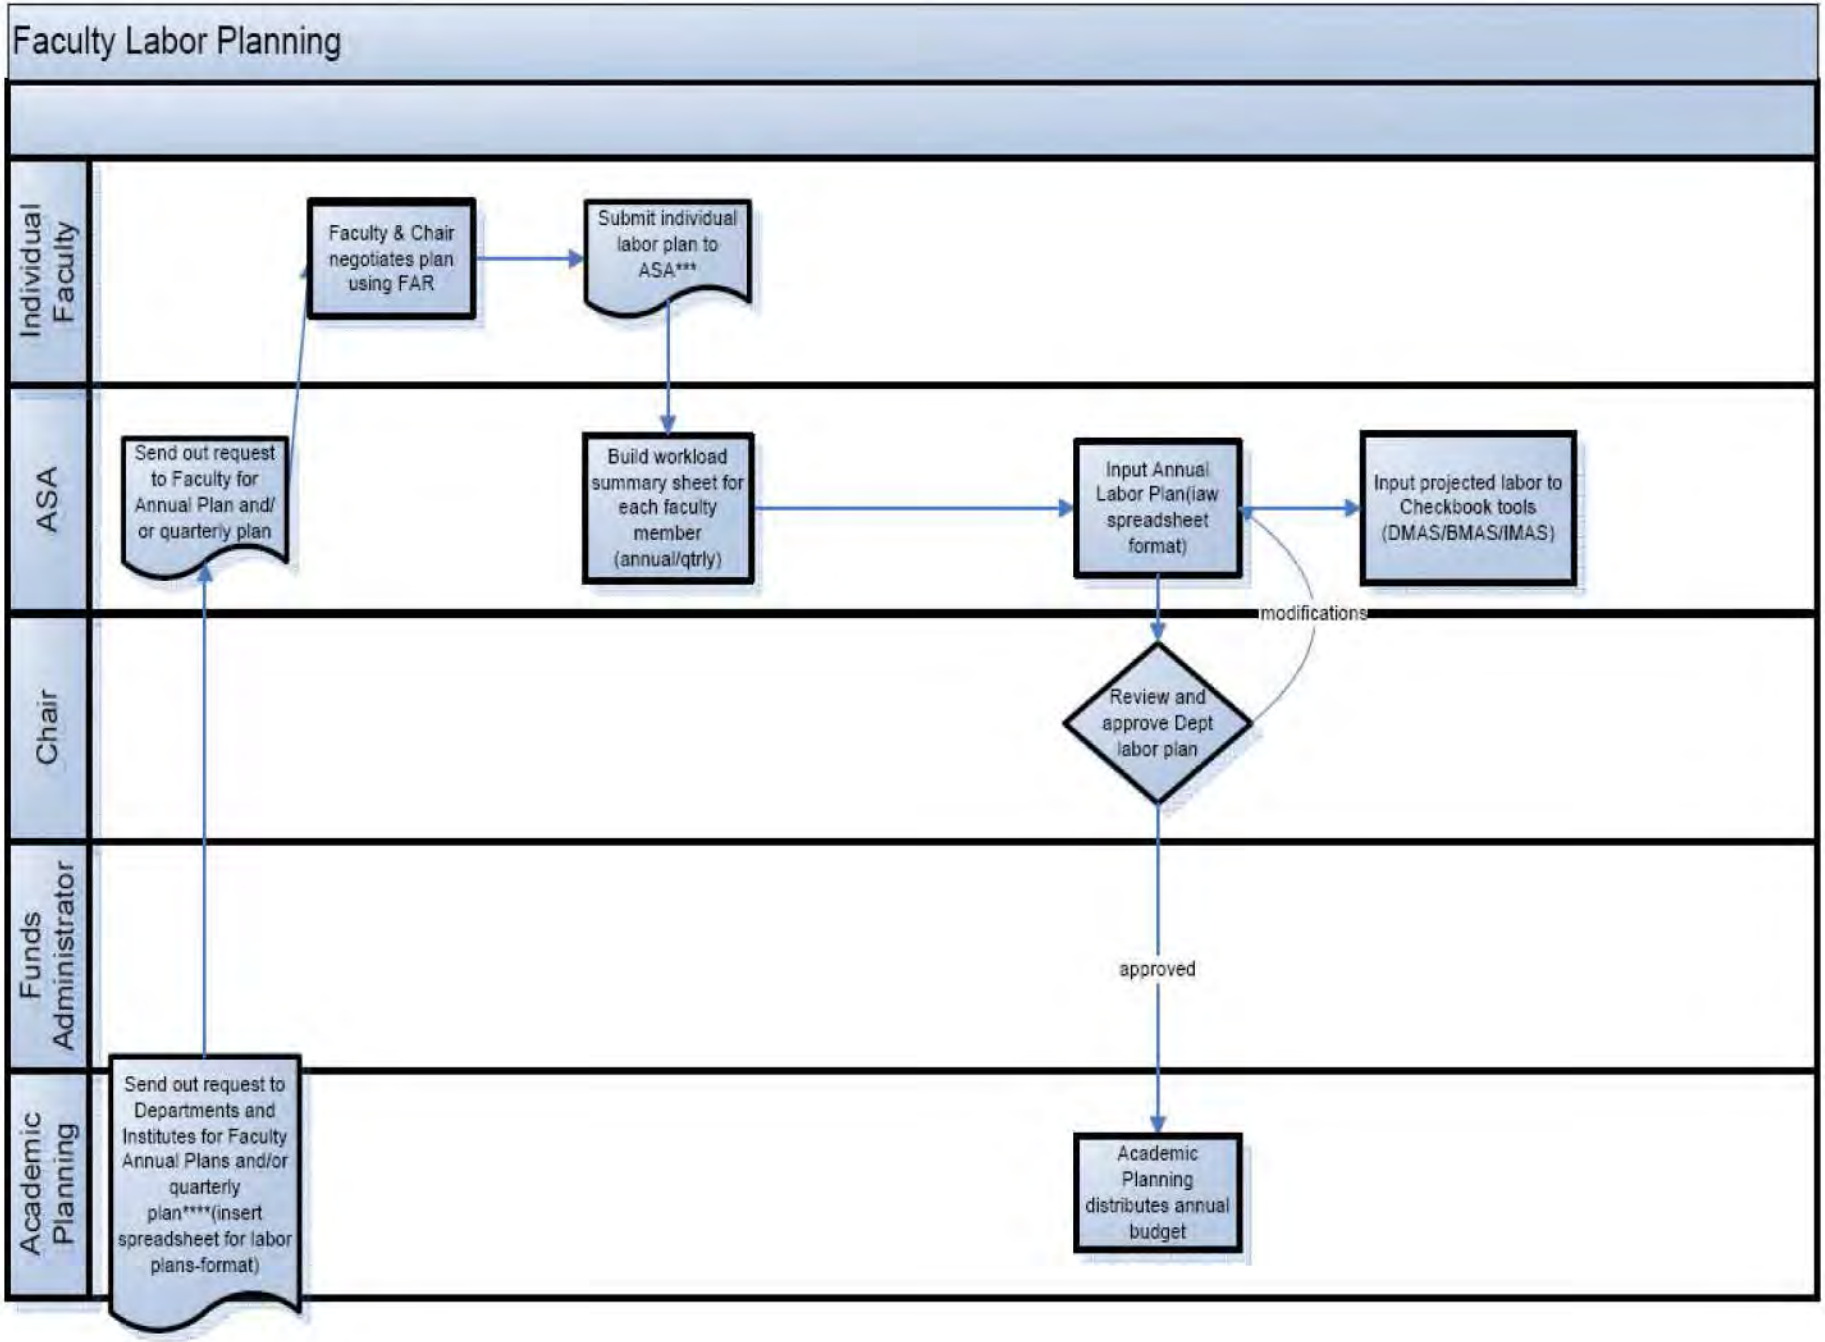
    Support organizations should include a section with POC, CoC and contact information.

Project Plan

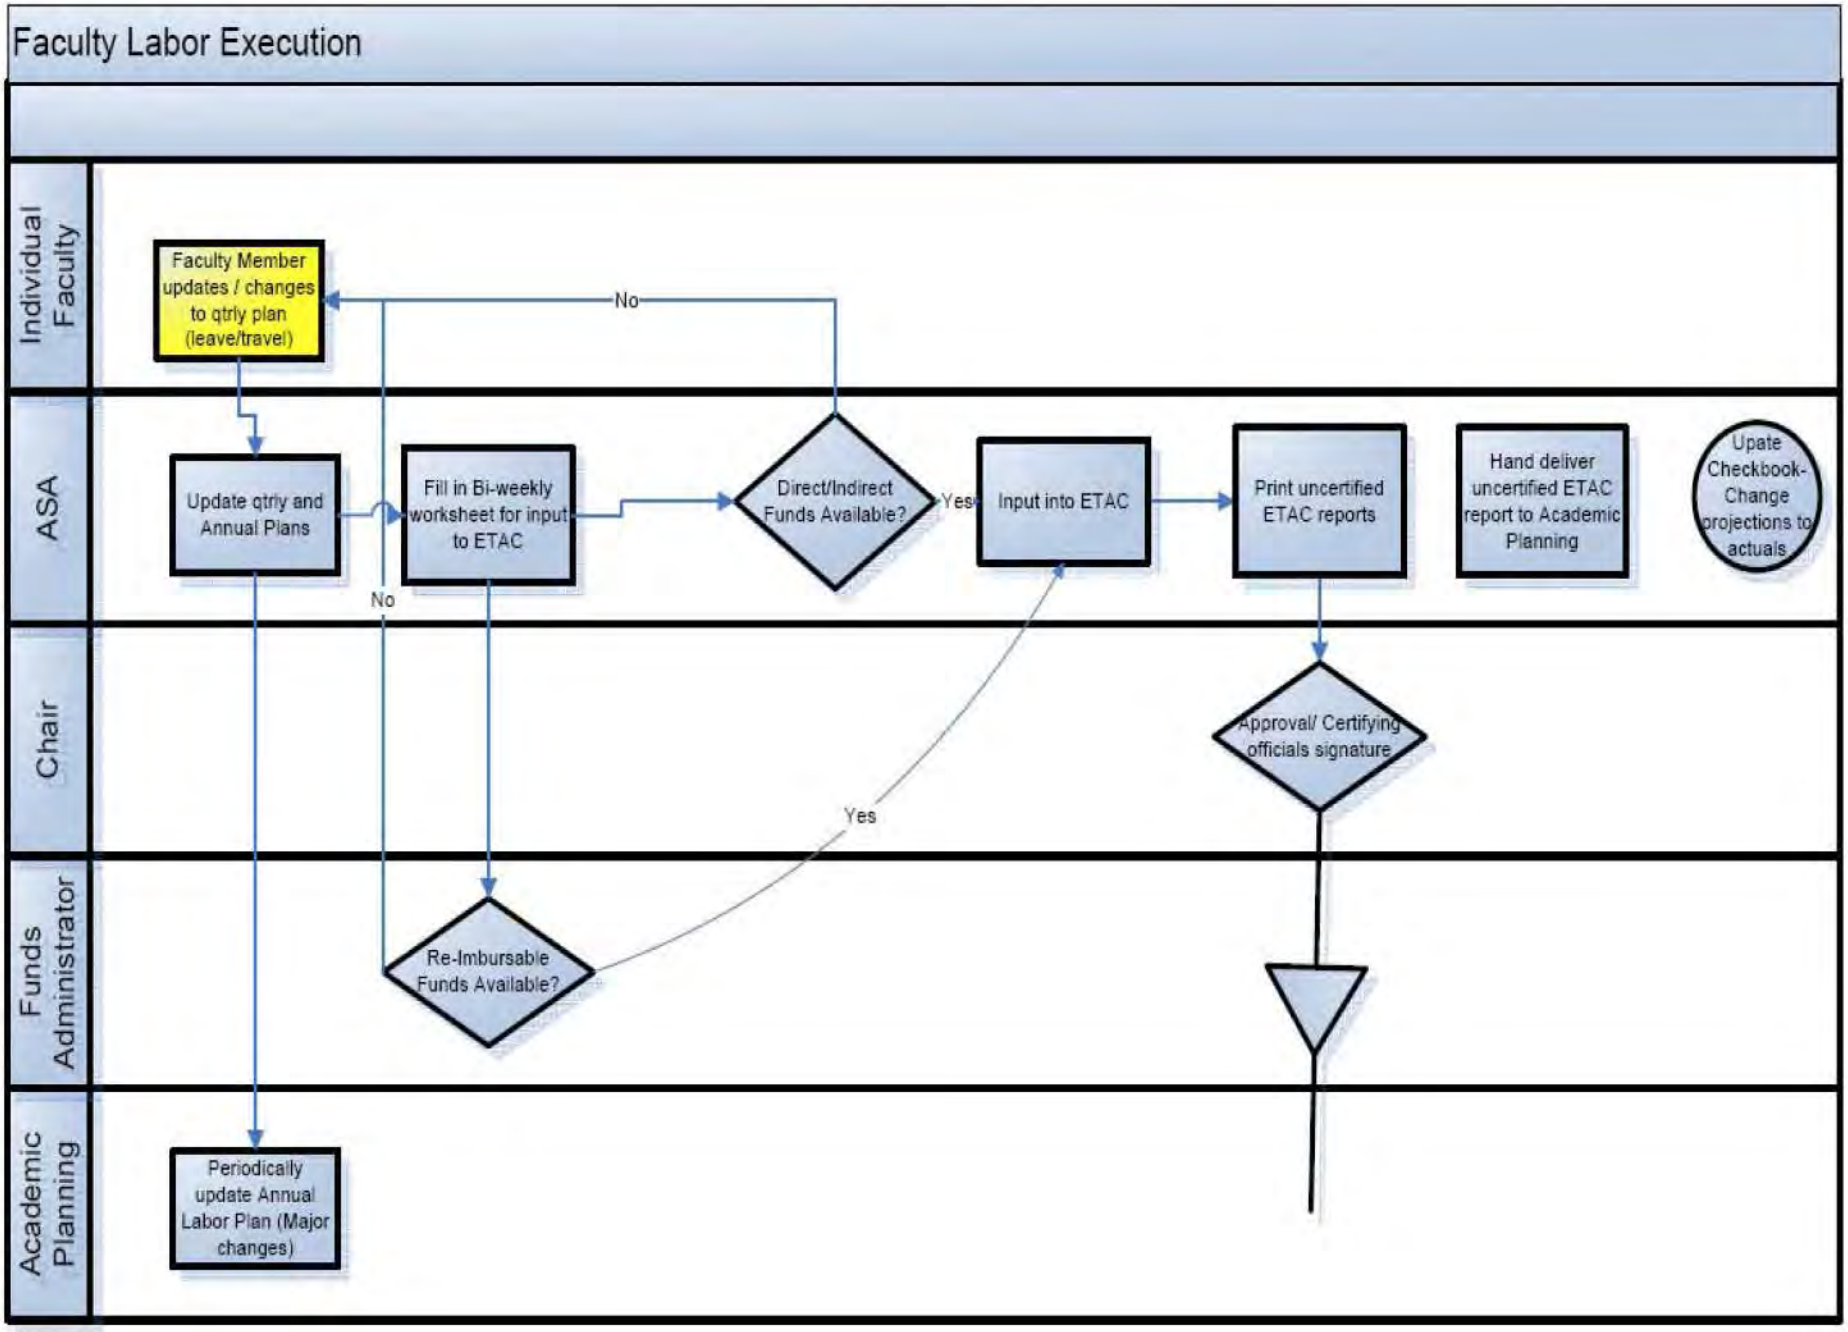
5. Organize the information in a simple, logical way with the user audience in mind. Include descriptions, explanations, step-by-step instructions, standard operating procedures (SOP), forms, and links to related topics and resources.
6. Create draft site with collected and created information
7. Distribute draft site to primary intended user group; collect and incorporate feedback into site.
8. Release site to users and notify users of its availability.
9. Process owners will assume ownership of their content after initial release of their segments. This includes updates and maintenance.

Labor

- The labor process was flowcharted, using “swim-lane” style, for that segment of the process visible to a department administrator (such as an ASA).
- The subgroup reviewed and modified the website topics list.
- The group incorporated some of the elements recommended above into a mock-website structure provided by ITACS

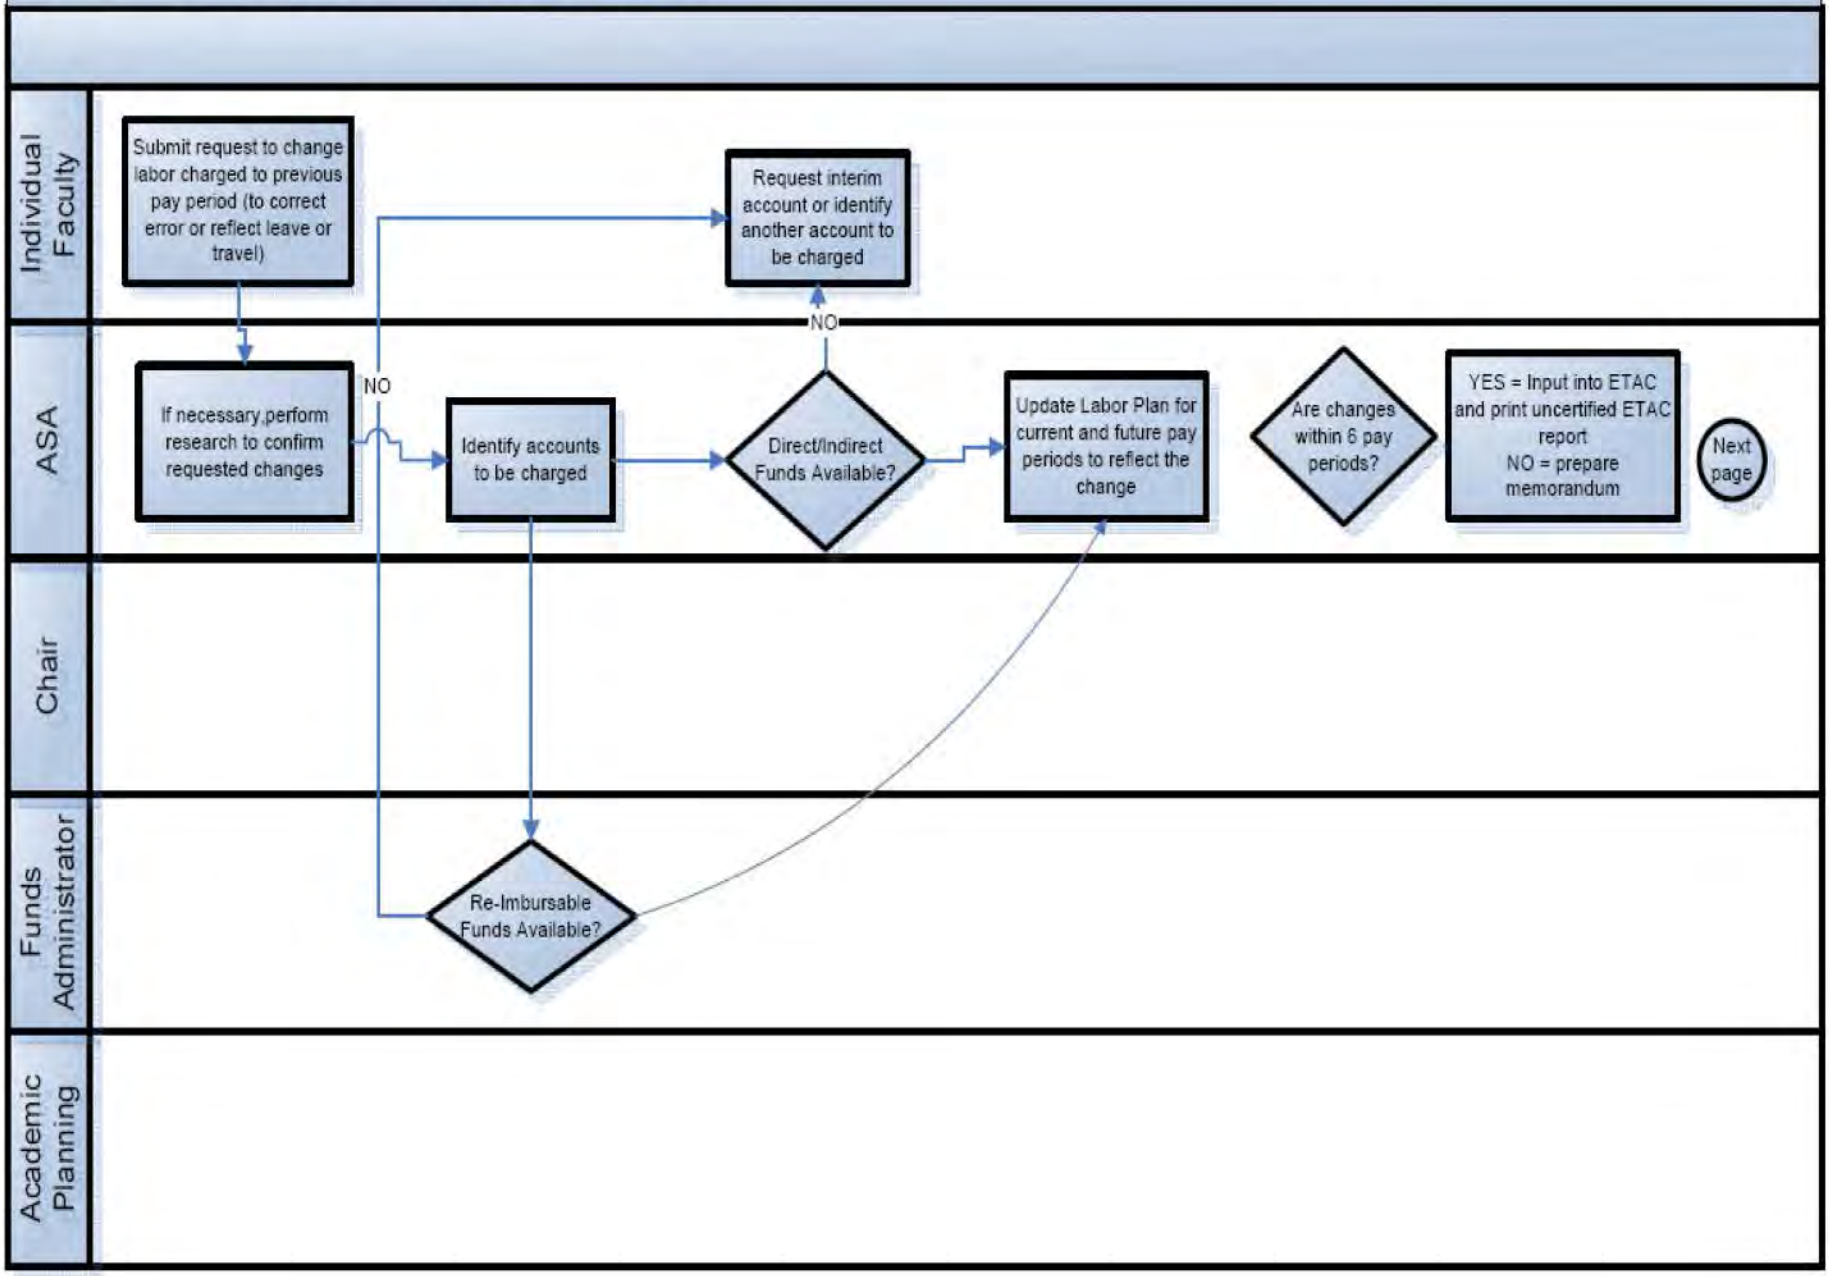


Faculty Labor Planning
Individual Faculty
ASA
Chair
Funds Administrator
Academic Planning
Faculty & Chair negotiates plan using FAR
Submit individual labor plan to ASA***
Send out request to Faculty for Annual Plan and/ or quarterly plan
Build workload summary sheet for each faculty member (annual/qtrly)
Input Annual Labor Plan(iaw spreadsheet format)
Input projected labor to Checkbook tools (DMAS/BMAS/IMAS)
modifications
Review and approve Dept labor plan
approved
Send out request to Departments and Institutes for Faculty Annual Plans and/or quarterly plan****(insert spreadsheet for labor plans-format)
Academic Planning distributes annual budget



Faculty Labor Execution
Individual Faculty
ASA
Chair
Funds Administrator
Academic Planning
Faculty Member updates / changes to qtrly plan (leave/travel)
No
Update qtrly and Annual Plans
Fill in Bi-weekly worksheet for input to ETAC
Direct/Indirect Funds Available?
Yes
Input into ETAC
Print uncertified ETAC reports
Hand deliver uncertified ETAC report to Academic Planning
Upate Checkbook-Change projections to actuals
No
Approval/ Certifying officials signature
Yes
Re-Imbursable Funds Available?
Periodically update Annual Labor Plan (Major changes)

SUPPLEMENTALS FOR FACULTY AND STAFF



Sample Website Development

- NPS Administrative Resources

ITACS Proposed SOP and Estimated Timeline

- Estimated time to collect information for each subsection: 2-8 weeks
- ITACS will provide a list of established URLs in identified websites for each topic (this can be concurrent with initial collection time): 1-3 weeks
- Map processes- probably 3-5 meetings for a working copy: 3-12 weeks
- Decide what must be covered in the web content (all resource material); compare this to existing content, and then determine the 'gaps': 3-12 weeks
- Revise existing content as needed; create content and materials from scratch: 4-24 weeks

- Turnover information to ITACS for posting: 2-3 weeks
  - ITACS places content into existing web infrastructure
- Draft Review by process owner and SOP Group: 2-8 weeks
- Adjust site as needed after draft review: 2-3 weeks
- Test site with select process users: 2-5 weeks
- Adjust site as needed after user testing: 2-5 weeks
- Follow-up and Updates: ITACS will work individually with each process owner to maintain currency and adjust site as needed.

Conclusion

- Development needs to continue for at least another quarter
- Hiring a professional project manager should be considered.
- Coordinate with the Web Content Management Project for the Intranet to ensure that the group's work is in line with standards set for the NPS Intranet

NPS Financial System Plan

Introduction

The functionality of existing enterprise financial information systems are insufficient to meet the on-going needs of the campus. The systems do not provide managers and executives with the data necessary to proactively manage, and the systems represent a technical risk because of the aging architecture. Procuring a commercial product to replace the existing financial management suite is not feasible for the campus. Because of staffing and ongoing maintenance concerns, building a replacement internally is not a sound approach organizationally. In recent years, the community source Kuali Financial System (KFS) has emerged as the collaborative product of many research universities including the University of California (UC). KFS offers a new approach to replacing the internal financial management systems that does not incur the level of cost associated with a commercial product while also mitigating the organizational risk associated with locally developed products. This document describes an approach to moving the NPS enterprise financial systems toward a KFS solution.

Description of KFS

The Kuali Financial System is a full featured financial information system that is intended specifically to meet the financial needs of research universities. It is the result of the collaborative efforts of many universities led by Indiana University and based upon a product that has been serving the needs of Indiana University and UC Davis for several years. KFS is a Community Source project with oversight from the Kuali Foundation. Community Source means that there is a defined group of institutions (partners) that contribute development and functional staff collaboratively to create and enhance the system. While institutions such as UC that are members of the Kuali Foundation pay a yearly support fee, there is no license cost to obtain the product. The future direction and functionality of KFS is determined and managed by the community partners, with input from all user institutions, and each is empowered to influence the future direction.

Currently there are seven core members of the KFS community (Indiana University, Michigan State University, University of Arizona, the University of Southern California, Cornell University, San Joaquin Delta College, and University of California) that have invested significant resources to do the initial development. A measure of the confidence in this initiative is the $2,500,000 grant given by the Andrew W. Mellon foundation to augment the effort. The Kuali Foundation has been formally incorporated as a non-profit corporation, so the organizational support structure for the product is reasonably assured for the long term.

The following reflects the functions that the completed KFS project will provide to NPS.

- General Ledger
- Chart of Accounts
- General Accounting
- Capital Asset Management
- Purchasing
- Accounts Payable
- Non-Student Accounts Receivable
- Post Award Contract and Grant Administration (Pre-Award is an option but not included in this project)
- Budget Construction/Management
- Data interchange with GUS/Major Shadow Financial Systems
- UCOP and campus financial reporting
- Financial Data Warehouse

Project Approach

Phased Project

The approach that will be taken with the NPS KFS project will be a phased approach that will begin with project preparation tasks. As preparation tasks finish up, the project will flow into a phase where major work concentrates on migration of NPS data to KFS and KFS is run in parallel with existing applications to provide assurance that KFS workflows and processes are structured properly to achieve the correct data results. Finally, interfaces to other campus systems will be implemented and business intelligence reporting and data warehouse functions will be addressed to complete the initial KFS implementation. Throughout all phases of the project, the NPS KFS project team, with support and guidance from project oversight committees, will communicate project direction and status to campus constituencies.

Description of Project Phases

Migrating from NPS's existing financial system to a replacement suite in a phased project approach allows the campus to evolve toward the target rather than experience large changes over a short period of time. Given that the Kuali baseline that would be most appropriate for NPS use will not be ready for operational use until 2009, we have the opportunity to begin the organizational, functional, and technical tasks associated with that evolution now so that we will be prepared for a smooth, well organized, well understood transition of business processes and functions beginning some time in 2009. The following sections provide an overview of the project phases.

- The initial phase, Project Start Up, will likely proceed for a year and a half to two years. The reason for the extended project startup is to allow the full KFS baseline to be developed and tested. This phase will involve

extensive organization and communication efforts and preliminary technical tasks. The anticipated tasks associated with this phase are described in subsequent paragraphs.

- The second phase, KFS implementation, will begin once the full KFS suite has passed rigorous quality assurance by the Kuali Foundation. This phase will see the initial implementation and testing of KFS within the NPS context. We will run a local version of KFS in parallel with existing systems to ensure that business processes and data results can be validated in a test environment. In addition, the following tasks will take place; initial rollout of KFS functionality to the campus, initial campus training for the new systems and work processes, and continued communication to gather feedback.
- The third phase, reporting and data warehouse implementation, will address the campus needs for reports and data exchanges, and will continue campus training for the new systems and work processes. It is highly likely that some of the tasks in this phase will run concurrently with tasks that are part of the second phase.
- The final phase of the project will be on-going operational support and minor tailoring as necessary to meet evolving NPS needs.

Project Schedule Overview

As mentioned, the KFS baseline that is most appropriate to NPS needs will be available in early 2009. The project schedule that we are proposing has project startup tasks beginning in 2008 so that solid communications and project personnel and resources can be put in place before that actual system migration tasks are schedule to begin. We anticipate beginning activities to start the migration from the existing NPS financial systems to KFS during the fall of 2009 and anticipate completing the migration by late 2011. Training is anticipated to complete during the first quarter of 2012 with full system operational status at approximately the same time. UC Davis has targeted an implementation date of 2010, so NPS will be able to work with UCD and learn from UCD experiences in order to minimize risk.

Anticipated Phase I (Project Startup) Tasks

The near term (2008 thru mid summer 2009) tasks associated with migration from our existing financial systems to KFS are intended to:

- establish the necessary project organization
- allow the campus to understand the KFS product through communication and demonstrations,
- introduce KFS to the campus,

As we accomplish these tasks over the early phase of the project, we will introduce Kuali to the campus in low risk, low impact stages to establish the base for full migration during the later phases of the project. This approach will allow

us to minimize business process disruption and minimize the need to train the entire campus in a short period of time.

Organizational Tasks

The following tasks will be accomplished over the near term future and will be ongoing at least through the end of KFS implementation. Where noted, the resulting organization may be retained after full implementation to provide ongoing guidance and support.

- **Executive Steering Committee**: This organization will be formed as soon as possible and will include campus executive leaders. This committee will be expected to provide campus level guidance with regard to staffing, budget, schedule, policy, and subordinate organization. This committee will also be expected to provide campus level strategic direction and guidance, help manage scope, and resolve conflicts where necessary.
- **Project Oversight Board**: This organization will be formed as soon as possible and will include business leaders from major campus departments and organizations. This committee will be expected to provide guidance/buy-in with regard to project task schedules and scope, department level requirements, department level resource allocations, and product deployment coordination. This committee will likely continue to serve a valuable purpose after the KFS implementation is complete.
- **Subject Matter Expert (SME) Committees**: SME committees have previously been formed to address requirements within specific functional areas of the KFS. These committees will be expected to assess current NPS business process with regard to KFS functionality, identify where KFS fits NPS requirements, identify where there are gaps between NPS requirements and KFS functionality, and recommend methods for addressing gaps where possible. In addition, these committees will support testing of the KFS in relation to NPS requirements as the KFS functionality becomes available. These committees will likely continue to serve a valuable purpose after the KFS implementation is complete.
- **Technical Committees**: The technical committees will be formed and dissolved on an ad hoc basis to address technical details such as data migration, network issues, security, and authorization. These committees may continue to serve a valuable purpose and may continue to be formed after the KFS implementation is complete.

Functional Tasks

The following functional tasks will begin in 2008. Where noted some of these tasks will continue after KFS implementation is complete as part of the ongoing support and maintenance of KFS.

- **Town Hall Meetings**: These meetings will take place throughout the duration of the project and will allow us to introduce the concepts of the project plan to the campus and introduce the campus to the KFS functionality. These meetings will also serve a valuable purpose in

beginning the conversations of business process migration and/or modification and providing guidance regarding follow-on tasks. These meetings will likely continue through the final implementation of KFS.

- **KFS Demonstrations/Testing**: These activities have already begun and will continue through the final implementation of KFS. KFS will be run in parallel with existing NPS financial systems to ensure that business process, workflows, and support data are properly implemented to achieve the proper processing results. The scope of the demonstrations and testing will expand to include department level managers and users to a far greater degree as KFS implementation ramps up and continues to completion. Execution of these tasks will require functional experts in several administrative departments to spend significant time on the KFS project. Therefore resources to backfill those experts will be required.

Technical Tasks

The following technical tasks will begin in the near-term. Where noted some of these tasks will continue after KFS implementation is complete as part of the ongoing support and maintenance of KFS.

- **Kuali Foundation participation**:
- **NPS KFS Installation**: NPS has obtained installations of KFS and associated databases to support local testing, demonstration and development efforts.

Tasks Associated with Successive Project Phases

As previously stated, the full KFS product is expected to be released in early 2009. At that time, the NPS KFS project team will begin the activities required to migrate from the existing financial systems to the KFS replacements. The following is a list of major tasks that will be accomplished to complete the migration.

- Identify, coordinate, and test business process changes identified by fit-gap analysis tasks,
- Integration of KFS with NPS -- Identity and authentication infrastructure,
- Identify, implement, and test interfaces between KFS and other systems
- Plan, implement, and test migration of existing legacy data to KFS database,
- Implement and test external interfaces to support rollup testing,
- Plan and implement workflows,
- Plan, implement, and test reporting requirements,
- Define and staff system support tasks such as help desk, operational maintenance, on-going training,
- Train campus users.

A complete NPS KFS Project Gantt Chart providing detailed tasks and schedule is contained in Appendix I of this document.

Required Resources

The following table depicts the resources that are anticipated to support the NPS KFS project. The resources reflected in this table are a combination of resources that already exist at NPS and resources that must be added over time. The Estimated Cost section contains details regarding level of support required from each resource and which resources must be added to existing staffing.

Resource Type	Number Needed	Anticipated Tasks	When Needed
Senior Functional Experts	10 (existing) AP, Extramural Funds, GL/COA, Procurement, Capital Assets, Vendor Management, Financial Controls, Accounts Receivable, Budget	Functional project management, KFS assessment, fit/gap, process re-engineering, process validation, data validation, project coordination, UC KFS collaboration	Project Start
Functional Support Personnel	15 (new hires)	Backfill for senior functional experts, project management support, business process validation, data validation, training, test support,	Project Start with phase in of resources according to the project plan
Technical Support	8 (5 existing + 3 new hires)	Technical project management, Kuali Foundation support, UC KFS support, business process re-engineering, data migration, interface development/test, report	Late Phase I

		development/test, system test	

Expertise of the following functional experts will be critical to the success of the NPS KFS project. As these experts allocate their time to the KFS project, backfill will be required to address the tasks they currently accomplish on a daily basis.

Functional Expert	Critical Area of Expertise
	Extramural Funds/GL
	Plant Accounting/GL
	Financial Transactions, Financial Controls
	Accounts Payable/GL
	Accounts Receivable
	Chart of Accounts/GL
	GL/UCOP Data Reporting
	Budget/Staffing
	Procurement, Vendor Management
	Capital Assets

Anticipated Schedule

The NPS KFS project is anticipated to begin in the summer of 2008 with project startup tasks. Implementation of KFS at NPS is anticipated to begin in late-summer 2009 and continue through mid 2012. On-going functional and technical support will persist through the lifecycle of the KFS product at NPS. A project Gantt chart which depicts the major project tasks and estimated task durations is attached to this document.

Estimated Cost

New and existing resources, hosting costs, test server, travel. Costs by year with totals.

NOTE: There will be ongoing support and maintenance costs associated with running KFS once this project concludes in 2012. The recurring cost items beyond 2012 will be existing and newly hired functional and technical personnel, help desk costs. The estimated cost of the first year of support (FY2012/13) is ???????????

COMMAND CLIMATE SURVEY

2008

PREPARED BY:
DEBORAH A. BAITY
COMMAND DEPUTY EEO OFFICER
AND THE
COMMAND ASSESSMENT TEAM
(CAT)

Survey Date: 04/03/08
Survey Completion Date: 04/17/08
Released Date: 12/01/08

TABLE OF CONTENTS

BACKGROUND

In early January 2008, the Naval Postgraduate School's (NPS) President requested a Command Climate Survey be conducted in accordance with OPNAVINST 5354.1F, Navy Equal Opportunity Policy. This instruction states the Commanding Officer should ensure the establishment of a Command Assessment Team (CAT) to assist in the implementation and analysis of the results of the survey. NPS' major claimant the Chief of Naval Operations (CNO) Command Deputy EEO Officer recommended we utilize the Defense Equal Opportunity Management Institute (DEOMI) Organizational Climate Survey (DEOCS) because this survey would provide an effective analysis and comparison to the Department of the Navy's data. The DEOMI Survey measures climate factors associated with military equal opportunity (EO) programs, civilian equal employment opportunity (EEO) programs, and organizational effectiveness (OE) issues.

The actual launch date of the survey was 3 April 2008 and ended 17 April 2008.

The CAT used a "Triangulation Method" to determine the "health" and functional effectiveness of the organization by identifying areas of concern or issues related by funding areas of commonality in three of the six areas.

Climate Survey*	Review of records and reports*
Observations*	Individual interviews
Focus Groups	Other methods identified

* Areas used by NPS CAT.

ESTABLISHMENT OF THE "CAT"

The purpose of the CAT is to evaluate the command climate to determine morale, if there exists an environment in which all personnel can perform to their maximum ability, and work in an environment unimpeded by institutional or individual biases of race, color, ethnicity, national origin, sex or religious stereotypes. This tool will allow the NPS President to proactively assess critical organization climate dimensions that can have an impact on effectiveness within the organization.

The Command Deputy Equal Opportunity Officer extended an invitation to all major NPS departments requesting a representative to serve on the CAT. The following individuals were nominated and are serving on the Command Assessment Team (CAT).

COL David Smarsh	Chief of Staff/Executive Officer Reviewer/Advisor to CAT Team
Lynn Murch	Internal Control, Civilian Staff
Denise Ross	Internal Control, Civilian Staff
SCPO Jacqueline Kiel	Public Affairs Office, Code 004
John Sanders	Local 1690 Representative
PO1 Clifton Cates	EO Representative
LT Kevin Albertsen	03/Student Council Representative
Professor Curt Collins	Faculty Council Representative
Professor Val Moule	Continuous Learning Faculty
CDR Troy Johnson	Code 38 Military Staff
Jeffrey Calhoon	Code 21 Civilian Staff
Rikki Panis	Code 04 Civilian Staff
Dr. (Professor) Fran Horvath	Code 25 Faculty
Richard Mastowski	Code 06 Civilian Staff
LCDR Steve Tackett	Code 07 Military Staff
Vickie Fishell-Frantz	Code 08 Civilian Staff
Kathi Noyes	Code 09 Civilian Staff
Deborah A. Baity	NPS Survey Administrator Command Deputy EEO Officer

This committee serves as an advisory panel to the President of the Naval Postgraduate School. As the EEO Officer, he retains responsibility and authority for final decisions regarding the climate survey.

The first meeting held with the committee was 25 February 2008 which consisted of required mandatory training for the NPS CAT, and reviewed all of the

survey requirements and responsibilities. Numerous additional meetings were held during the months of March through June 2008, and will continue throughout the year.

METHODOLOGY

The DEOCS was administered in an Internet version through NPS Information Technology Center. It uses a race-ethnic classification system and is consistent with the Office of Management and Budget guidelines for classification of racial groups and multi-ranking designations.

The questionnaire contained 63 items. The military only complete 56 items on the survey. Half of the questions address EO/EEO issues; the remainder addressed organizational and demographic areas.

The DEOCS is a climate assessment instrument, designed to access the "shared perceptions" of respondents about formal or informal policies, practices, and procedures likely to occur in the organization. It uses a statistical technique known as "factor analysis"; items that measure the same perceptual domain are combined into 14 "scales."

The Climate Survey Reporting Sections included in the report are:

1. Demographic Breakdown
2. Perceptions of Discrimination and the Complaint Process
    a. Experiences of Discrimination during the past 12 months
3. Subgroups Factor Comparisons
    a. EO/EEO Factors
    b. Organizational Effectiveness Factors
4. Overall Unit Summary
5. Locally Developed Questions (10 questions)
6. Short Answer Questions (5 questions)
7. Written Comments for the Organization

The Demographic Breakdown data shown in the charts are computer-generated, and based on the inputs received from the survey respondents.

The Perceptions of Discrimination and the Complaint Process data are based on three specific areas expressed by the respondents. These areas are:

1. Who Experienced an Incident of Discrimination?

2. What Action Did You Take Following the Incident of Discrimination?
3. Are You Satisfied with the Issue and its Resolution?

Under the Subgroups Factor Comparisons there are 14 Climate Scales of EO/EEO Behaviors and Organizational Effectiveness that were reviewed. Those scales included:

Eight (8) EO/EEO Behaviors:

1. Sexual Harassment and (Sex) Discrimination
2. Differential Command Behavior
3. Positive Equal Opportunity Behavior
4. Racist Behavior
5. Age Discrimination
6. Religious Discrimination
7. Disability Discrimination
8. Overall EO Climate

Six (6) Organizational Effectiveness Areas:

1. Organizational Commitment
2. Trust in the Organization
3. Perceived Work Group Effectiveness
4. Work Group Cohesion
5. Leadership
6. Job Satisfaction

Also included in the survey were 10 Locally Developed Questions that were added to the Survey from a list of selected questions that DEOMI provided.

1. An atmosphere of respect exists in my work area.
2. I view contract employees as a part of the team.
3. Communication flows freely from senior leadership to all levels of the organization.
4. I have sufficient time in my duty day to conduct my core duties.
5. The leaders in my command show a real interest in the welfare of single service members.
6. I can raise concerns about issues that affect my job without fear of reprisal.
7. I receive periodic formal feedback from my rater.

8. I trust management to handle complaints, problems, or issues seriously.
9. I experience a high level of stress in this command
10. Rules, regulations and policies are enforced in this command, I experience a high level of stress in this command.

These questions were presented so individuals could respond using a five- point response scale.

#1	-	Totally Agree
#2	-	Moderately Agree
#3	-	Neither Agree nor Disagree
#4	-	Moderately Disagree
#5	-	Totally Disagree

The next part of the survey asked five (5) Short Answer Open-ended Questions.

1. Are there adequate recruitment sources, promotion opportunities, and/or retention incentives for minority and female members? Explain.
2. Are enlisted personnel being adequately utilized? Explain.
3. Do you work in a hostile and/or offensive work environment? Explain.
4. As an NPS student, do you feel your needs are being met and you have the tools to be a successful NPS graduate? Explain.
5. Are there other equal opportunity issues, concerns or problems at the command that were not included in the survey that should be addressed? Explain.

The last section was dedicated to open written comments from all survey participants.

The CAT was divided into six (6) groups with designated color codes:

Civilian Staff	-	**Green**
Students	-	**Purple**
Civilian Faculty	-	**Blue**

Officers	-	**Brown**
Enlisted	-	**Black**
Contractors	-	**Red**

The team reviewed, compared, tallied, and analyzed the results of the Locally Developed Questions, Short Answer Open-ended Questions and the Written Comments Section. The team compared each specific group to determine percentage results compared to Navy and Overall NPS Totals.

The five Short Answer Open-ended Questions responses were reviewed by category with the CAT determining the top 5-10 Positive Findings and 5-10 Areas of Concern.

The Written Comments were reviewed and separated into eight categories per Population Group. Within each category the top ten comments were identified and listed for review.

1. Personnel Management (HR)
2. Leadership/Management
3. Faculty Concerns
4. Communication
5. Student Concerns
6. Overall Climate
7. EEO/EO
8. Miscellaneous

The Final Step by the CAT was to review all categories and to determine NPS Areas of Concern and Positive Findings.

WHAT'S NEXT?

1. Brief the Preliminary Report to the President and Executive Vice President then to other senior leaders.
2. Develop a Plan of Action & Milestones (POA&M).
3. Provide briefs on the results of the survey.
4. Publicize the results on Internet/Intranet with a link to the report.
5. Follow-up with condensed survey within six months of final report.

FINDINGS

I. DEMOGRAPHIC BREAKDOWN

A. Survey Population

	Surveys Distributed	Surveys Completed	Percentage (%) Completed
FACULTY	589	233	40%
STUDENTS	2327	830	36%
CONTRACTORS	261	86	33%
CIVILIAN STAFF	498	262	53%
ENLISTED	45	17	38%
OFFICER STAFF	85	32	38%
TOTALS	3805	1460	39.7%

B. Overall Climate Survey Responses

DEMOGRAPHIC BREAKDOWN

Minority 24.81%
Majority 75.19%
Missing Responses 3.35%

Race

American Indian 0.43%
Asian 8.70%
Black 5.58%
Native Hawaiian 0.72%
White 81.52%
Two or More 3.04%
Missing Responses 5.47%

Gender

Women 23.22%
Men 76.78%

C. Overall Climate Survey Responses - Continued

Military	
Officer	97.89%
Enlisted	2.11%
Military	58.49%
Civilian	41.51%
Civilians	
Other Civilian Employee	17.33%
Federal Civilian Employee	82.67%
Military	
Other Military	1.41%
US Military	98.59%

II. PERCEPTIONS OF DISCRIMINATION AND THE COMPLAINT PROCESS

Experienced an Incident of Discrimination

TYPE OF DISCRIMINATION	NUMBER / PERCENTAGE (%)	
Race/National Origin/Color	30	19.11%
Gender (Sex)	50	31.85%
Age	23	14.65%
Disability	4	2.55%
Religion	13	8.28%
Two or More	37	23.57%
TOTAL INCIDENTS	157	

What Action Did You Take Following the Incident of Discrimination?

CATEGORY	NUMBER / PERCENTAGE (%)	
Filed Formal Discrimination Complaint	6	7.50%
Reported to EO/EEO	7	8.75%
Reported to Supervisor	27	33.75%
Confronted Individual	40	50.00%
TOTAL CASES REPORTED	80	

Satisfied With Issue/Resolution

CATEGORY	NUMBER / PERCENTAGE (%)	
Very Satisfied	7	17.50%
Moderately Satisfied	13	32.50%
Moderately Dissatisfied	9	22.50%
Very Dissatisfied	11	27.50%
TOTAL CASES	40	

III. Overall Unit Summary

The Overall Unit Summary is based on NPS scores using the actual survey response scales. The categories are compared to the DEOMI data base for NPS, Navy, and all services for the last six months. Reviewing the Areas of Concern, highlighted in yellow, the following are areas of interest:

- Under Positive EO Behavior, the Enlisted with a score of 3.82% were below the Overall Navy percentage of 4.04%.
- Under Age Discrimination, Civilian Staff (3.97%) believe age discrimination exists compared to Navy's 4.14 percentage rate.
- NPS Enlisted score of 3.45% indicated some concern under Organizational Commitment (3.50%).

- Three (3) out of the 6 groups {Staff (3.49%), Faculty (3.32%) and Officers (3.33%)} strongly believe there are Leadership Cohesion issues when compared to Navy's goal of 3.52%.

Based on the results of the Unit Summary 4 of the 13 categories have groups that fall below the Navy's average for specific areas. These low percentage areas are problematic throughout the survey including the open-ended and written comment section.

TEAM CLIMATE GROUP

OVERALL UNIT SUMMARY

(Note: Data taken from DEOMI COMMAND CLIMATE SURVEY 2008, DEOMI Report)

	Overall Navy	NPS	NPS Staff	NPS Students	NPS Faculty	NPS Officers	NPS Enlisted	NPS Contractors
Sexual Harassment/ Discrimination	% 4.12	% 4.37	% 4.30	% 4.38	% 4.37	% 4.50	% 4.51	% 4.42
Differential Command Behavior Towards Minorities	4.48	4.67	4.52	4.69	4.77	4.71	4.87	4.68
Positive EO Behavior	4.04	4.29	4.08	4.38	4.28	4.42	3.82	4.24
Racist Behavior	3.93	4.43	4.39	4.36	4.64	4.55	4.35	4.63
Age Discrimination	4.14	4.41	3.97	4.59	4.27	4.64	4.53	4.29
Religious Discrimination	4.45	4.52	4.49	4.52	4.53	4.65	4.75	4.55
Disability Discrimination	4.40	4.63	4.44	4.69	4.65	4.78	4.78	4.60
Organizational Commitment	3.50	4.06	3.81	4.18	3.98	3.93	3.45	3.96

IV. LOCALLY DEVELOPED QUESTIONS

From a list of 150 DEOMI generated questions, the CAT Team selected additional questions specifically not addressed in the main portion of the survey. The yellow hi-lighted percentages are those areas when combining Totally Agree and Moderately Agree are below the Overall NPS Totals for the top two categories. The following chart identifies the percentages based on each question asked of the individual groups.

TEAM CLIMATE GROUP							
LOCALLY DEVELOPED QUESTIONS							
(Note: Data taken from DEOMI COMMAND SURVEY 2008-2 BRIEF and Appendix A, DEOMI Report 4)							
	Overall NPS	**NPS Staff**	**NPS Students**	**NPS Faculty**	**NPS Officers**	**NPS Enlisted**	**NPS Contractors**
1. An atmosphere of respect exists in my work area.							
• **Totally Agree**	**51.4%**	39.7%	55.7%	49.4%	**56.3%**	52.9%	48.8%
• **Moderately Agree**	**35.6%**	37.8%	34.8%	36.1%	**34.4%**	29.4%	37.2%
• **Neither Agree nor Disagree**	**7.4%**	10.3%	6.7%	8.6%	**3.1%**	17.6%	7.0%
• **Moderately Disagree**	**3.9%**	8.4%	1.8%	4.3%	---	---	5.8%
• **Totally Disagree**	**1.7%**	3.8%	1%	1.7%	**6.3%**	---	1.2%
2. I view contract employees as a part of the team.							
• **Totally Agree**	**51.3%**	55.7%	43.5%	62.2%	**68.8%**	52.9%	76.7%
• **Moderately Agree**	**28.1%**	23.3%	32.2%	27.0%	**21.9%**	23.5%	9.3%
• **Neither Agree nor Disagree**	**14.5%**	4.2%	17.6%	7.7%	**6.3%**	23.5%	8.1%
• **Moderately Disagree**	**3.6%**	13.4%	4%	2.1%	---	---	3.5%
• **Totally Disagree**	**2.5%**	3.4%	2.8%	0.9%	**3.1%**	---	2.3%
3. Communication flows freely from senior leadership to all levels of the organization.							
• **Totally Agree**	**20.3%**	11.1%	25.3%	11.2%	**9.4%**	11.8%	30.2%
• **Moderately Agree**	**35.5%**	27.9%	39.6%	30.9%	**34.4%**	41.2%	30.2%
• **Neither Agree nor Disagree**	**17.9%**	19.1%	19.3%	17.6%	**12.5%**	5.9%	10.5%
• **Moderately Disagree**	**15.3%**	17.9%	10.6%	25.3%	**25.0%**	17.6%	18.6%
• **Totally Disagree**	**11.0%**	24.0%	5.2%	15.0%	**18.8%**	23.5%	10.5%
4. I have sufficient time in my duty day to conduct my core duties.							
• **Totally Agree**	**31.8%**	29.8%	32.2%	26.6%	**34.4%**	35.3%	47.7%
• **Moderately Agree**	**36.2%**	36.3%	36.7%	33.5%	**43.8%**	52.9%	32.6%
• **Neither Agree nor Disagree**	**13.4%**	15.3%	15.7%	12.4%	**3.1%**	---	9.3%
• **Moderately Disagree**	**12.7%**	10.7%	11.2%	17.2%	**12.5%**	11.8%	8.1%
• **Totally Disagree**	**5.8%**	8.0%	4.2%	10.3%	**6.3%**	---	2.3%

5. The leaders in my command show a real interest in the welfare of single service members.							
• **Totally Agree**	**23.2%**	16.8%	25.5%	20.2%	**15.6%**	17.6%	31.4%
• **Moderately Agree**	**25.7%**	16.4%	30.7%	19.3%	**18.8%**	41.2%	22.1%
• **Neither Agree nor Disagree**	**39.5%**	8.0%	32%	48.9%	**56.3%**	17.6%	38.4%
• **Moderately Disagree**	**8.1%**	54.6%	8.3%	7.7%	**6.3%**	17.6%	5.8%
• **Totally Disagree**	**3.6%**	4.2%	3.4%	3.9%	**3.1%**	5.9%	2.3%
6. I can raise concerns about issues that affect my job without fear of reprisal.							
• **Totally Agree**	**36.0%**	30.9%	36.5%	33.5%	**43.8%**	35.3%	50.0%
• **Moderately Agree**	**34.6%**	35.5%	35.5%	33.0%	**31.3%**	35.3%	27.9%
• **Neither Agree nor Disagree**	**15.8%**	10.7%	16.7%	16.3%	**12.5%**	17.6%	9.3%
• **Moderately Disagree**	**9.2%**	14.5%	8.2%	12.0%	**9.4%**	5.9%	7.0%
• **Totally Disagree**	**4.5%**	8.4%	3%	5.2%	**3.1%**	5.9%	5.8%
7. I receive periodic formal feedback from my rater.							
• **Totally Agree**	**25.7%**	30.5%	20.5%	33.0%	**50.0%**	23.5%	32.6%
• **Moderately Agree**	**24.8%**	29.0%	22.5%	26.2%	**12.5%**	29.4%	33.7%
• **Neither Agree nor Disagree**	**29.0%**	10.3%	37.5%	18.5%	**21.9%**	17.6%	18.6%
• **Moderately Disagree**	**8.8%**	16.8%	7.8%	11.2%	**3.1%**	17.6%	8.1%
• **Totally Disagree**	**11.6%**	13.4%	11.7%	11.2%	**12.5%**	11.8%	7.0%
8. I trust management to handle complaints, problems, or issues seriously.							
• **Totally Agree**	**32.1%**	26.0%	35.3%	25.8%	**31.3%**	35.3%	36.0%
• **Moderately Agree**	**35.1%**	29.0%	37.3%	34.8%	**46.9%**	17.6%	32.6%
• **Neither Agree nor Disagree**	**16.2%**	17.6%	15.1%	17.6%	**12.5%**	29.4%	17.4%
• **Moderately Disagree**	**11.0%**	17.6%	8.3%	15.0%	**3.1%**	11.8%	9.3%
• **Totally Disagree**	**5.6%**	9.9%	4%	6.9%	**6.3%**	5.9%	4.7%
9. I experience a high level of stress in this command.							
• **Totally Agree**	**11.4%**	12.2%	11.2%	12.4%	**6.3%**	5.9%	10.5%
• **Moderately Agree**	**30.5%**	34.0%	29.5%	32.6%	**31.3%**	35.3%	23.3%
• **Neither Agree nor Disagree**	**23.8%**	15.3%	24.5%	22.3%	**15.6%**	17.6%	19.8%
• **Moderately Disagree**	**20.8%**	26.0%	21.6%	17.6%	**37.5%**	29.4%	31.4%
• **Totally Disagree**	**13.4%**	12.6%	13.3%	15.0%	**9.4%**	11.8%	15.1%
10. Rules, regulations and policies are enforced in this command.							
• **Totally Agree**	**29.4%**	21.0%	33.5%	23.6%	**15.6%**	5.9%	40.7%
• **Moderately Agree**	**38.8%**	34.4%	39.8%	44.6%	**40.6%**	41.2%	26.7%
• **Neither Agree nor Disagree**	**17.1%**	18.3%	15.9%	19.3%	**28.1%**	23.5%	17.4%
• **Moderately Disagree**	**10.7%**	16.8%	7.7%	10.3%	**9.4%**	29.4%	14.0%
• **Totally Disagree**	**4.0%**	9.5%	3.1%	2.1%	**6.3%**		1.2%

The specific questions with low scores, when compared to NPS overall averages, are in the areas of:

- Respect in the work area
- Communication with senior leadership
- Time to complete major duties
- Fear of reprisal
- Trust in management to handle work place issues
- High level of stress in command.

POSITIVE COMMENTS/FINDINGS

There was quite an extended list of positive comments provided by the survey participants but the CAT Team narrowed them down to the following.

* No signs of racist behavior.

* Contract workers viewed as team players.

* Enlisted and officers view single service members programs as exceeding Navy's percentage.

* Employees like their jobs, very satisfied with actual duties – strong organizational commitment.

* Professional opportunities are available.

* Discrimination not identified in the following protected classes: disability, national origin, race, religion, sexual harassment, and gender.

* Command Behavior and relationship with minorities are excellent.

* Enlisted personnel are professional, steps up to the plate and complete assignments.

* Within departments/work group, employees believe they work as a team.

* NPS overall has multi-ethnic groups

* Supportive and encouraging working environment

* NPS classes are great.

* Faculty are superb.

NPS AREAS OF CONCERN (AOC)

Through extensive discussion and review of the documented survey results by the CAT, the following seven (7) areas of concern have been identified for action by the President and NPS Executive Leadership.

AOC #1: Communication/Leadership

AOC #2: Lack of respect

AOC #3: Workload – Lack of time

AOC #4: Fear of reprisal

AOC #5: Lack of trust in management

AOC #6: High level of stress

AOC #7: Recruitment of faculty (minorities and women)

There were four (4) other areas that were identified as significant but not listed as Areas of Concern for action.

Secretary of the Navy Guest Lecturer (SGL)
(POC: Student Council)
Senior Military and Enlisted being underutilized
Lack of training of personnel
(POC: Staff Development Committee)
Building maintenance – Poor

Identified within each AOC are possible "Causes" for that particular area and "Recommended Improvements." The Recommendations will serve as the basis for developing a Plan of Action to remedy the identified Areas of Concern (AOC).

Recommendations for Improvement will be provided under separate cover.

Any questions should be directed to Deborah A. Baity, NPS Survey Administrator/ Command Deputy EEO Officer, Herrmann Hall, Room 139h, Tel No.: (831) 656-2480 or email: dbaity@nps.edu.
